## Cedar Lane Water Service

2020 Annual Report

#### **INTRODUCTION**

This report provides a summary of the Cedar Lane Water Service for 2020. It includes a description of the service, summary of the water supply, demand and production, drinking water quality, operations highlights, capital project updates and financial report.

#### **SERVICE DESCRIPTION**

The Cedar Lane Water Utility is a rural residential community located on Salt Spring Island. The service was created in 1970 and became a CRD service in 2007. The Cedar Lane Water Utility (Figure 1) is comprised of 37 parcels of land of which all are connected to the system.

Figure 1: Cedar Lane Water Service

The Cedar Lane water system is primarily comprised of:

- two ground water source wells (#1 and #5);
- a water treatment plant (WTP) that provides primary disinfection with ultraviolet (UV) radiation and residual disinfection using sodium hypochlorite;
- 1 water reservoir 136 m³ (30,000 lg);
- 1,260 metres of water distribution pipe;
- fire hydrant, standpipes, and gate valves;
- water service connections complete with water meters.

#### WATER PRODUCTION AND DEMAND

Referring to Figure 2, 3,410 cubic meters (m³) of water was extracted (water production) from two ground water wells in 2020; a 2% decrease from the previous year and is a 9% decrease from the five year rolling average. Water demand (customer water billing) for the service totaled 3,370 m³ of water; a 4% increase from the previous year and a 3% decrease from the five year rolling average.

Figure 2: Cedar Lane Water Service Annual Water Production and Demand

Water production by month for the past five years is shown in Figure 3. Water consumption, for most water systems, is greatest during the summer months. Water usage for Cedar Lane is fairly consistent throughout the year likely the result of conservative indoor and outdoor water use.

Figure 3: Cedar Lane Water Service Monthly Water Production

The Cedar Lane Water System is fully metered, and water meters are read quarterly. Water meter information enables water production and consumption to be compared in order to estimate leakage losses in the distribution system. The difference between water produced and water demand (total metered consumption) is called non-revenue water and includes distribution leaks, meter error, and unmetered uses such as fire hydrant usage, distribution system maintenance and process water for the treatment plant. Non-revenue water is approximately 1.2%. Water loss is estimated to be slightly lower than this but is considered to be negligible for Cedar Lane.

#### WATER QUALITY

The analytical results (biological, chemical and physical parameters) of water samples collected in 2020from the Cedar Lane Water System indicated that the water was safe to drink, with the exception of naturally high manganeseconcentrations in the well water which remain insufficiently treated and regularly exceeded the aesthetic limits andoccasionally the health limits established in the Guidelines for Canadian Drinking Water Quality (GCDWQ). Particularly, areas immediately downstream from the treatment plant are vulnerable to manganese concentrations in exceedance of the health limit. Iron and manganese precipitates have been a significant nuisance problem in parts of the Cedar Lane water system and caused discolouration of the drinking water. In order to meet the newly introduced health limit for manganese concentrations in drinking water, the existing treatment system must be upgraded or a new water source must be found.

Both wells ran very low during the dry summer months. Well #1 exhibited repeatedly elevated turbidity following heavy rainfall events.

Typical Cedar Lane Water System drinking water quality characteristics for 2020 are summarized as follows:

- Source water from both wells was free of any total coliform or *E. coli* bacteria.
- Well #1 registered periods with elevated turbidity throughout the year. The periods
  were predominantly during the winter months. These raw water turbidity excursions
  reached levels of up to 21 NTU on August 10, 2020. This event was likely related to
  extremely low water levels in the well during the late summer period. The treated water
  turbidity remained under 1 NTU throughout this particular short-term event and also
  during other raw water turbidity spike events. Therefore, these events have not been a
  public health concern yet.
- Source water is characterized as hard (143 mg/L CaCO<sub>3</sub>).
- Both wells exhibited elevated iron and especially high manganese concentrations.
- Treated water was safe to drink and contained no total coliform or *E. coli* bacteria.
- Free chlorine residual concentrations were acceptable and within the desired range (i.e., 0.33 – 1.23 mg/L)
- Disinfection by-products: trihalomethanes (THM) were well below (35.25  $\mu$ g/L) the GCDWQ limit of 100  $\mu$ g/L, haloacetic acids (HAA) were not tested in 2020 due to a history of very low concentrations in this system.
- Metals were typically below limits except for elevated manganese concentrations. The median annual manganese concentration of 60.15 μg /L in the treated water was consistently above the aesthetic objective in the GCDWQ (20 μg/L) and led regularly to discoloration of the drinking water. But it was also occasionally above the maximum health limit of 120 μg/L, especially in parts of the system that are immediately downstream of the treatment plant. CRD staff are working on mitigation strategies for this issue.

Table 1 and 2 below provide a summary of the 2020 raw and treated water test results.

Water Quality data collected from this drinking water system can be reviewed on the CRD website: https://www.crd.bc.ca/about/data/drinking-water-quality-reports

#### OPERATIONAL HIGHLIGHTS AND CAPITAL IMPROVEMENTS

The following is a summary of the major capital improvements including year ending spending for 2020:

<u>Asset Management Plan (CE.642.4501)</u>: A prioritized list of infrastructure replacements, which will serve as the basis for future capital spending plans.

Project	Spending
Budget	\$5,000
Project Management	(\$4)
Contract	(\$4597)
Project Closed Balance Returned to CWF	\$399

<u>Safe Work Procedures (CE.699.4505)</u>: The work scope includes reviewing and developing safe work procedures for operational and maintenance tasks

Project	Spending
Budget	\$5,000
Contract	(\$930)

Supplies/Materials	(\$148)
Balance Remaining	\$3,922

Back-up Power Design (735.4503): Complete electrical designs for new onsite back-up power.

Project	Spending
Budget	\$5,000
Project Management	(\$49)
Balance Remaining	\$4,951

Electronic Equipment Replacement (CE.750): Pressure transmitter replacement.

Project	Spending
Budget	15,163
Well #1 Pressure Transmitter Replacement	(\$6,455)
Well #5 Pressure Transmitter Replacement	(\$3,302)
Water Tank Trans and RTU Replacement	(\$5,408)
Project Closed Balance Remaining	\$0

Well #5 Pump Replacement (CE.747): Pump not operating and required replacement.

Project	Spending
Budget	\$3,590
Well #5 Pump Replacement	(\$3,590)
Project Closed Balance Remaining	\$0

#### **2020 FINANCIAL REPORT**

Please refer to the attached 2020 Financial Report. Revenue includes parcel taxes (Transfers from Government), fixed user fees (User Charges), Water Sales (Sale-Water), interest on savings (Interest Earnings), and miscellaneous revenue such as late payment charges (Other Revenue).

Expenses includes all costs of providing the service. General Government Services includes budget preparation, financial management, utility billing and risk management services. CRD Labour and Operating Costs includes CRD staff time as well as the costs of equipment, tools and vehicles. Debt servicing costs are interest and principal payments on long term debt. Other Expenses includes all other costs to administer and operate the water system, including insurance, supplies, water testing and electricity.

The difference between Revenue and Expenses is reported as Net Revenue (expenses). Any transfers to or from capital or reserve funds for the service (Transfers to Own Funds) are deducted from this amount and it is then added to any surplus or deficit carry forward from the prior year, yielding an Accumulated Surplus (or deficit) that is carried forward to the following year.

#### **WATER SYSTEM PROBLEMS - WHO TO CALL:**

To report any event or to leave a message regarding the Cedar Lane water system, call either:

CRD water system emergency call centre: 1-855-822-4426 (toll free)
CRD water system emergency call centre: 1-250-474-9630 (toll)
CRD water system general enquiries: 1-800-663-4425 (toll free)

When phoning with respect to an emergency, please specify to the operator, the service area in which the emergency has occurred.

Submitted by:	Matthew McCrank, MSc., P.Eng, Senior Manager, Wastewater Infrastructure Operations
	Rianna Lachance, BCom, CPA, CA, Senior Manager Financial Services
	Glenn Harris, Ph.D., R.P.Bio., Senior Manager, Environmental Protection
	Karla Campbell, BPA, Senior Manager, Salt Spring Island Electoral Area
Concurrence	Ted Robbins, BSc, C.Tech, General Manager, Integrated Water Services
