Capital Regional District

625 Fisgard St.,
Victoria, BC V8W 1R7

Notice of Meeting and Meeting Agenda
Capital Regional District Board

Wednesday, May 12, 2021 | **1:10 PM** | **6th Floor Boardroom, 625 Fisgard Street, Victoria, BC**

The Capital Regional District strives to be a place where inclusion is paramount and all people are treated with dignity. We pledge to make our meetings a place where all feel welcome and respected.

1. TERRITORIAL ACKNOWLEDGEMENT

2. APPROVAL OF THE AGENDA

3. ADOPTION OF MINUTES

3.1. 21-371 Minutes of the April 14, 2021 Capital Regional District Board Meeting

Recommendation: That the minutes of the Capital Regional District Board meeting of April 14, 2021 be adopted as circulated.

Attachments: Minutes - April 14, 2021

4. REPORT OF THE CHAIR

5. PRESENTATIONS/DELEGATIONS

In keeping with directives from the Province of BC, this meeting will be held by Live Webcast without the public present.

To participate electronically, complete the online application for "Addressing the Board" on our website. Alternatively, you may email the CRD Board at crdboard@crd.bc.ca.

5.1. Presentations

5.2. Delegations

5.2.1. **21-406** Delegation - Eric Doherty; Representing Greater Victoria Acting Together Climate Action Research Team: Re: Agenda Item 8.4.: Identification of Regional Transportation Priorities

5.2.2. **21-374** Delegation - Alastair Craighead; Resident of Victoria: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines

5.2.3. **21-376** Delegation - Alison Spriggs; Resident of Victoria: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines

5.2.4.	**21-377**	Delegation - Nitya Harris; Representing Coexisting with Carnivores: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines
5.2.5.	**21-408**	Delegation - Peter Gose; Resident of Highlands: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines
5.2.6.	**21-409**	Delegation - Sarah Gose; Resident of Highlands: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines
5.2.7.	**21-410**	Delegation - Seamus McGrath; Resident of Colwood: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines
5.2.8.	**21-411**	Delegation - Vicky Husband; Resident of Victoria: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines and Agenda Item 10.1.: Partnerships to Protect Fairy Creek and Other At-Risk Old-Growth Forests
5.2.9.	**21-412**	Delegation - Hugh Stephens; Representing Mount Work Coalition: Re: 8.1.: Finalizing the Solid Waste Management Plan
5.2.10.	**21-413**	Delegation - Eric Diller; Representing Island Transformations Organization: Re: Agenda Item 8.4.: Identification of Regional Transportation Priorities
5.2.11.	**21-414**	Delegation - Salome Waters; Representing Saanich Eco Advocates: Re: Agenda Item 8.1.: Finalizing the Solid Waste Management Plan
5.2.12.	**21-415**	Delegation - Ray Zimmerman; Resident of Victoria: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines
5.2.13.	**21-416**	Delegation - Jane Welton; Representing Climate Action Research Team of Greater Victoria Acting Together: Re: 10.1.: Partnerships to Protect Fairy Creek and Other At-Risk Old-Growth Forests
5.2.14.	**21-417**	Delegation - Corey Burger; Representing Capital Bike: Re: Agenda Item 8.4.: Identification of Regional Transportation Priorities
5.2.15.	**21-431**	Delegation - Lydia Young; Resident of Central Saanich: Re: 10.1.: Partnerships to Protect Fairy Creek and Other At-Risk Old-Growth Forests
5.2.16.	**21-432**	Delegation - Jon O' Riordan; Representing Creatively United for the Planet: Re: 8.1.: Finalizing the Solid Waste Management Plan
5.2.17.	**21-418**	Delegation - David Lacey; Resident of Colwood: Re: Agenda Item 8.4.: Identification of Regional Transportation Priorities
5.2.18.	**21-419**	Delegation - Hugh Aitken; Resident of Oak Bay: Re: 10.1.: Partnerships to Protect Fairy Creek and Other At-Risk Old-Growth Forests
5.2.19.	**21-420**	Delegation - Alon Soraya; Representing South Island Mountain Biking Society: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines

5.2.20. **21-433** Delegation - Mandy Farmer; Resident of Victoria: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines

5.2.21. **21-434** Delegation - Lister Farrar; Resident of Victoria: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines

5.2.22. **21-421** Delegation - Michael Meagher; Representing Thetis Park Nature Sanctuary Association: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines

5.2.23. **21-423** Delegation - Yvonne Mendel; Representing Topaz Bike Club: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines

5.2.24. **21-424** Delegation - Cathie Blanchard; Resident of View Royal: Re: 8.1.: Finalizing the Solid Waste Management Plan

5.2.25. **21-425** Delegation - Jessica Fudge; Representing Nolan Riding: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines

5.2.26. **21-426** Delegation - Mahon Lamont; Representing The Cycling Co.: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines

5.2.27. **21-427** Delegation - Sohad Kadum; Resident of Victoria: Re: 10.1.: Partnerships to Protect Fairy Creek and Other At-Risk Old-Growth Forests

5.2.28. **21-428** Delegation - Rose Stanton; Resident of Highlands: Re: Agenda Item 8.3.: CRD Regional Parks Mountain Biking Guidelines

5.2.29. **21-429** Delegation - Shannon Soroka; Representing Action Committee of People with Disabilities: Re: Agenda Item 8.4.: Identification of Regional Transportation Priorities

5.2.30. **21-430** Delegation - Catherine Culley; Representing SI-CAN: Re: 8.1.: Finalizing the Solid Waste Management Plan

6. CONSENT AGENDA

6.1. 21-355 2019-2022 Board Strategic Priorities - Annual Check-In

Recommendation: The Committee of the Whole recommends to the Capital Regional District Board:
1. That the current level of effort on CRD Board Priorities be maintained; and
2. That staff, through the service planning process, provide recommendations on funding, timing and service levels for 2022 in accordance with the approved 2019-2022 Board Strategic Priorities.
(NWA)

Attachments: Staff Report: 2019-2022 Board Strategic Priorities - Annual Check-In

Presentation: 2019-2022 Board Strategic Priorities - Annual Check-In

Appendix A: CRD Board Strategic Priorities

Appendix B: CRD Board Strategic Priorities Progress report

Appendix C: Progress Update (2021) CRD Corporate Plan 2019-2022

6.2. 21-328 Appointment of Officers

Recommendation: The Electoral Areas Committee recommends to the Capital Regional District Board: That for the purpose of Section 233 of the Local Government Act and Section 28(3) of the Offence Act and in accordance with Capital Regional District Bylaw No. 2681, Rick Sutherland, Spencer Navarrete, Morgan Shott, Kim Misick, Jeremy Restall and Barry Holland be appointed as Assistant Bylaw Officers.
(NWA)

Attachments: Staff Report: Appointments of Officers

6.3. 21-329 Community Emergency Preparedness Fund: Emergency Operations Centres and Training Grant - Motion of Support

Recommendation: The Electoral Areas Committee recommends to the Capital Regional District Board: That the Board support an application to Union of British Columbia Municipalities Community Emergency Preparedness Fund for the Emergency Operations Centres and Training Grant and direct staff to provide overall grant management.
(NWA)

Attachments: Staff Report: CEPF: EOC & Training Grant-Motion of Support

6.4. 21-330 Community Resiliency Initiative Grant: FireSmart Economic Recovery Fund

Recommendation: The Electoral Areas Committee recommends to the Capital Regional District Board: That the Board support an application to the Union of British Columbia Municipalities Community Resiliency Initiative Fund for the FireSmart Economic Recovery Fund and direct staff to provide overall grant management.
(NWA)

Attachments: Staff Report: CRIG-FireSmart Economic Recovery Fund-Support

Appendix A: UBCM FireSmart Economic Recovery Fund Application

6.5. 21-255 2020 Electoral Areas Grants-in-Aid Annual Report

Recommendation: The Electoral Areas Committee recommends to the Capital Regional District Board: That the 2020 Electoral Areas Grants-In-Aid Annual Report be received for information.
(NWA)

Attachments: Staff Report: 2020 Electoral Areas Grants-in-Aid Annual Report

Appendix A: 2020 Electoral Areas Grants-In-Aid Awarded

6.6. 21-256 2020 Community Works Fund Annual Report

Recommendation: The Electoral Areas Committee recommends to the Capital Regional District Board: That the 2020 Community Works Fund Annual Report be received for information.
(NWA)

Attachments: Staff Report: 2020 Community Works Fund Annual Report

Appendix A: 2020 CWF Balance Remaining

Appendix B: 2020 CWF Grants Awarded

Appendix C: 2020 CWF Detailed Breakdown by Electoral Area

6.7. 21-396 Alternate Approval Process for Bylaw 4408 - Southern Gulf Islands Harbours Service Loan Authorization

Recommendation: That the Electoral Areas Committee recommends to the Capital Regional District Board:
1. That in accordance with section 86(3) of the Community Charter, the date of July 5, 2021 be confirmed as the deadline by which electoral response, under the Alternate Approval process for CRD Bylaw No. 4408, must be submitted to the Capital Regional District by the qualified electors of Southern Gulf Islands Electoral Area;
2. That the attached Notice of Alternative Approval Process (Appendix B) and the Elector Response Form (Appendix C) be approved; and
3. That the total number of registered electors within the service area is 5,224 and that 10% of that number is 523 electors.
(NWA)

Attachments: Staff Report: AAP for Bylaw 4408 - SGI Harbours Service Loan Authorization

Appendix A: Bylaw No. 4408

Appendix B: Notice AAP Bylaw 4408

Appendix C: Elector Response Form SGIHarbours AAP

6.8. 21-382 Southern Gulf Islands Community Economic Sustainability Commission Bylaw Amendment

Recommendation: The Electoral Areas Committee recommends to the Capital Regional District Board:
That staff be directed to report back with amendments to Bylaw 3038, the "Southern Gulf Islands Community Economic Sustainability Commission Bylaw No. 1, 2012" to increase the number of commissioners from five (5) to nine (9), with the additional members considered commissioners at large to represent the Southern Gulf Islands Electoral Area as a whole, and to enable the commissioners at large to be appointed for one (1) or two (2) year terms.
(NWA)

Attachments: Staff Report: SGICESC Bylaw Amendment

Appendix A: Bylaw 3038, SGICESC Bylaw No. 1, 2012

6.9. 21-274 Organics Processing Next Steps

Recommendation: That the Environmental Services Committee recommends to the Capital Regional District Board:
That the Capital Regional District continue with the status quo of hauling and processing organics to private sector facilities on lower/mid-island, and signal to the market, through this resolution, that should the private sector establish an in-region facility, the Capital Regional District would consider working with municipalities to commit feedstock, pending pricing, greenhouse gas reductions, odour, location, and other environmental considerations.
(NWA)

Attachments: Staff Report: Organics Processing Next Steps

Appendix A: Organics Processing Options: Screening Report

6.10. 21-273 Landfill Gas Emissions Quantification at Hartland Landfill

Recommendation: That the Environmental Services Committee recommends to the Capital Regional District Board:
That this report be received for information.
(NWA)

Attachments: Staff Report: Landfill Gas Emissions Quantification at Hartland Landfill

Appendix A: Hartland Landfill GHG Emissions Quantification January 2021

6.11. 21-275 Environmental Resource Management - 2020 Progress Report

Recommendation: That the Environmental Services Committee recommends to the Capital Regional District Board:
That the Environmental Resource Management 2020 Progress Report be received for information.
(NWA)

Attachments: Staff Report: Environmental Resource Management - 2020 Progress Report

Appendix A: Environmental Resource Management - 2020 Progress Report

6.12. 21-290 Capital Regional District Climate Action - 2020 Annual Report

Recommendation: That the Environmental Services Committee recommends to the Capital Regional District Board:
1. That the 2020 Climate Action Annual Report be received for information; and
2. That staff complete all Climate Action Revenue Incentive Program reporting requirements and submit to the Province by the reporting deadline (currently June 1, 2021) and post on the CRD website.
(NWA)

Attachments: Staff Report: CRD Climate Action - 2020 Annual Report

Appendix A: Capital Regional District 2020 Climate Action Annual Report

6.13. 21-245 Capital Regional District 2020 Audit Findings Report and Statement of Financial Information

Recommendation: The Finance Committee recommends to the Capital Regional District Board:
That the Capital Regional District 2020 Audit Findings Report be received and the Capital Regional District 2020 Statement of Financial Information be approved.
(NWA)

Attachments: Staff Report: CRD 2020 Audit Report & Statement of Financial Info

Presentation: CRD Statement of Financial Information

Appendix A: 2020 Statement of Financial Information

Appendix B: 2020 Unaudited Financial Statements

Appendix C: Other Financial Statement Analysis

Appendix D: DBRS Rating Methodology

Appendix E: 2020 Additional Financial Analysis

Appendix F: 2020 Audit Findings Report

Appendix G: KPMG Management Letter

6.14. 21-246 Capital Regional District External Grants Update

Recommendation: The Finance Committee recommends to the Capital Regional District Board:
That the Capital Regional District External Grants Update be received for information.
(NWA)

Attachments: Staff Report: CRD External Grants Update

Appendix A: CRD External Grants Dashboard

6.15. 21-247 Capital Regional District External Grants 2020 Annual Report

Recommendation: The Finance Committee recommends to the Capital Regional District Board:
That the Capital Regional District External Grants 2020 Annual Report be received for information.
(NWA)

Attachments: Staff Report: CRD External Grants 2020 Annual Report

Appendix A: CRD External Grants Activity 2020

Appendix B: Grant Programs by Category

6.16. 21-248 2022 Service and Financial Planning Guidelines

Recommendation: The Finance Committee recommends to the Capital Regional District Board:
That the financial planning guidelines as presented be approved and that staff be directed to prepare the draft financial plan review based on the timeline presented.
(NWA)

Attachments: Staff Report: 2022 Service and Financial Planning Guidelines

Appendix A: 2022 Corporate Planning Framework

Appendix B: 2022 Financial Planning Timetable

6.17. 21-363 2021 Provincial Budget Highlights

Recommendation: The Finance Committee recommends to the Capital Regional District Board:
That the 2021 Provincial Budget Highlights be received for information.
(NWA)

Attachments: Staff Report: 2021 Provincial Budget Highlights

Appendix A: Provincial Budget Highlights

Appendix B: Ministry of Finance Provincial Budget and Fiscal Plan

6.18. 21-367 2021 Federal Budget Highlights

Recommendation: The Finance Committee recommends to the Capital Regional District Board:
That the 2021 Federal Budget Highlights report be received for information.
(NWA)

Attachments: Staff Report: 2021 Federal Budget Highlights

Appendix A: 2021 Federal Budget Highlights

Appendix B: Ministry of Finance - Federal Budget and Fiscal Plan

6.19. 21-325 Panorama Recreation Main Electrical Transformer

Recommendation: The Peninsula Recreation Commission recommends to the Capital Regional District Board:
That the approved Panorama Recreation project 19-02-Main Electrical Transformer Upgrade be amended by $52,100 to accommodate for the emergency replacement of the main electrical transformer, and to proceed with the purchase of the transformer.
(WP - Central Saanich, North Saanich, Sidney)

Attachments: Staff Report: Panorama Recreation Main Electrical Transformer

6.20. 21-324 2021/2022 Fees and Charges - Panorama Recreation Services

Recommendation: The Peninsula Recreation Commission recommend to the Capital Regional District Board:
That the proposed fees and charges be approved for inclusion in the 2021/2022 Fees and Charges Bylaw for Panorama Recreation Services.
(WP - Central Saanich, North Saanich, Sidney)

Attachments: Staff Report: 2021/2022 Fees and Charges – Panorama Recreation Services

Appendix A: Options for 2021/2022 Fee Charges

6.21. 21-307 Sustainable Funding Model for Future Land Acquisitions

Recommendation: The Regional Parks Committee recommends to the Capital Regional District Board:
1. That all future recommended regional park land acquisition purchases include a detailed unique operating cost schedule until a management plan is completed, and all draft management plans presented to the Regional Parks Committee will identify a cost schedule for plan implementation.
2. That costs required for future property acquisitions be identified within the subsequent Capital Regional District Regional Parks Financial Plan.
(NWA)

Attachments: Staff Report: Sustainable Funding for Future Land Acquisitions

Appendix A: Cost Estimates for New Land Purchases

Appendix B: Cost Estimates for Mgmt Plan Implementation

6.22. 21-392 Governance Committee Terms of Reference - Addition of Appointment Advisory Committee

Recommendation: That the updated Terms of Reference for the Governance Committee be approved.
(NWA)

Attachments: 2021 Governance Committee Terms of Reference

7. ADMINISTRATION REPORTS

7.1. 21-326 Capital Regional District 2020 Annual Report

Recommendation: That the Capital Regional District 2020 Annual Report be received for information.
(NWA)

Attachments: Staff Report: Capital Regional District 2020 Annual Report

Appendix A: Capital Regional District 2020 Annual Report

7.2. 21-332 Capital Region Housing Corporation Annual General Meeting

Recommendation: That the unanimous shareholder's resolution attached as Appendix A to the Capital Region Housing Corporation Annual General Meeting report be adopted, and the Chair and Corporate Officer execute it on behalf of the Capital Regional District.
(NWA)

Attachments: Staff Report: CRHC Annual General Meeting

Appendix A: Unanimous Resolution of CRHC Shareholders

Appendix B: Audited Financial Statements

Appendix C: Annual Report

7.3. 21-356 Bylaw No. 4372: Development Cost Charges Transfer to Capital Reserve

Recommendation: 1. That Bylaw No. 4372 cited as "Saanich Peninsula Water and Wastewater Development Cost Charges Transfer to Capital Reserve Bylaw No. 1, 2020" be abandoned.
2. That the transfer of development cost charge funds be approved in the amount of $1.7 million from the Saanich Peninsula Water and Wastewater Development Cost Charge fund, under Bylaw No. 3208, to the Saanich Peninsula Wastewater Capital Reserve Fund, established under Bylaw No. 2760, to be used to fund capital improvements and capital debt servicing for projects covered by the DCC program.
(WA)

Attachments: Staff Report: Bylaw 4372 DCC Transfer to Capital Reserve

Appendix A: Staff Report October 15, 2020, including Bylaw 4372

7.4. 21-366 CRD Bylaw No. 4397 to Amend Ticket Information Authorization Bylaw No. 1857 - Saanich Peninsula Stormwater Source Control Bylaw

Recommendation: 1. That Bylaw No. 4397, "Capital Regional District Ticket Information Authorization Bylaw, 1990, Amendment Bylaw No. 69, 2021" be introduced, and read a first, second and third time; and
2. That Bylaw No. 4397 be adopted.
(WP - Central Saanich, North Saanich, Sidney, and 2/3rd on adoption)

Attachments: Staff Report: CRD Bylaw No. 4397 to Amend Bylaw 1857

Appendix A: Bylaw No. 4397

7.5. 21-397 Alternate Approval Process for Bylaws 4393 and 4394 - Florence Lake Improvement District Conversion to CRD Service

Recommendation: 1. That in accordance with section 86(3) of the Community Charter, the date of July 5, 2021 be confirmed as the deadline by which electoral response, under the Alternate Approval process for CRD Bylaw No. 4393 and 4394, must be submitted to the Capital Regional District by qualified electors within the Florence Lake Improvement District;
2. That the attached Notice of Alternative Approval Process (Appendix B) and the Elector Response Form (Appendix C) be approved; and
3. That the total number of registered electors within the service area is 32 and that 10% of that number is 4 electors.
(NWA)

Attachments: Staff Report: AAP for BL. 4393 & 4394 – Florence Lake Imp. Dist.

Appendix A: Bylaws 4393 and 4394

Appendix B: Notice AAP Bylaws 4393 and 4394

Appendix C: Elector Response Form Florence Lake

7.6. 21-398 City of Langford Request to Withdraw from Bylaw No. 3854: A Bylaw to Establish an Emergency Communication Dispatch Service

Recommendation: 1. That Bylaw No. 4426, "Emergency Communication Dispatch Service Establishment Bylaw No. 1, 2012, Amendment Bylaw No. 1, 2021", be introduced and read a first, second, and third time; and
2. That elector approval for Bylaw No. 4426 be obtained via municipal consent and electoral area director consent, as applicable, and if successful, referred to the Inspector of Municipalities for approval.
(NWA)

Attachments: Staff Report: Langford Request to Withdraw from Bylaw 3854

Appendix A: Langford Svc Review & Withdrawal Letter-April 22, 2021

Appendix B: Bylaw No. 4426

8. REPORTS OF COMMITTEES

Environmental Services Committee

8.1. 21-314 Finalizing the Solid Waste Management Plan

Recommendation: That the Environmental Services Committee recommends to the Capital Regional District Board:
1. That the final draft Solid Waste Management Plan be approved, that the final draft plan be submitted to the Ministry of Environment and Climate Change Strategy for regulatory approval, that staff immediately begin implementing the Solid Waste Management Plan, and that the Solid Waste Advisory Committee begins to function as the Plan Monitoring Advisory Committee;
2. That staff work with the WSANEC Leadership Council to implement recommendations from their February 9, 2021 letter, including establishing a WSANEC Leadership Council/Capital Regional District negotiation table and related meeting schedule, and providing information regarding the Solid Waste Management Plan; and,
3. That staff prepare a package of Hartland area road access mitigation options costing up to $4 million funded by the Capital Regional District's Environmental Resource Management division, review these options with District of Saanich staff and area residents, and return to the CRD Board for direction on next steps.
(WA)

[At the April 14, 2021 meeting, the CRD Board referred the Zero Waste BC Input on the SWMP motion with notice to the Environmental Services Committee for consideration. On April 21, 2021, the Environmental Services Committee recommended the first and second part of the motion, and defeated the third part (For reference: c) Direct staff to strengthen the emphasis on the principles of Zero Waste and Circular Economy in the Solid Waste Management Plan, including in the waste-reduction targets within the plan):]
That the Environmental Services Committee recommends:
4. That the Board:
a) Refer the attached report from Zero Waste British Columbia dated February 10, 2021 to staff, to inform revisions to the Solid Waste Management Plan.
b) Endorse the goal of the CRD becoming a national leader in Zero Waste and the Circular Economy in solid waste management.
(WA)

Attachments:

- Appendix E: Hartland Access Consultation
- Appendix F: Solid Waste Advisory Committee April 9, 2021 Motions

Finance Committee

8.2. 21-252 Bylaw No. 4421: Financial Plan Amendment No. 1, 2021

Recommendation: The Finance Committee recommends to the Capital Regional District Board:
1. That Bylaw No. 4421, "2021 to 2025 Financial Plan Bylaw, 2021, Amendment Bylaw No. 1, 2021" be introduced and read a first, second, and third time; and
2. That Bylaw No. 4421 be adopted.
(WA, 2/3rd on adoption)

Attachments: Staff Report: Bylaw 4421 Financial Plan Amendment No1, 2021

Appendix A: Bylaw 4421 Financial Plan Amendment 1-With Sch. A-B

Regional Parks Committee

8.3. 21-296 CRD Regional Parks Mountain Biking Guidelines

Recommendation: [At the April 28, 2021 Regional Parks Committee meeting, the recommendation carried as amended:]
The Regional Parks Committee recommends to the Capital Regional District Board:
1. That the CRD Regional Parks Mountain Biking Guidelines and the Short-term Actions to support the Mountain Biking Advisory Committee Advice and Guidance Report be approved.
2. That the CRD Regional Parks Mountain Biking Guidelines be reviewed in the context of the Regional Parks Strategy Plan update.
(WA)

[Furthermore, the Regional Parks Committee also carried the following motion arising:]
That the Regional Parks committee recommend to the Capital Regional District Board:
3. That the CRD Board develop a mountain bike policy for CRD Regional Parks.
(WA)

Attachments: Staff Report: Mountain Biking Guidelines

Appendix A: CRD Regional Parks Mountain Biking Guidelines

Appendix B: MBAC Mountain Bike Guidelines Report

Appendix C: Short-term Actions to support MBAC Report

Transportation Committee

8.4. 21-306 Identification of Regional Transportation Priorities

Recommendation: [At the April 21, 2021 Transportation Committee meeting, the following motion arising carried:]
The Transportation Committee recommends to the Capital Regional District Board:
A. That we move to the advocacy options that the Province proceed with 1) a feasibility study of the Westshore ferry; and 2) maintenance/upgrade of the rail corridor.
(NWA)

[Furthermore, the Transportation Committee amended recommendations 1 and 3. The following motions carried as amended:]
The Transportation Committee recommends to the Capital Regional District Board:
1. That the categorized priority areas listed in Appendix A be confirmed as amended, subject to clarification of the description of the 'Highway Safety Improvements' priority to ensure alignment with the Mode Share targets in the report."
2. That the list of confirmed regional transportation priority areas be shared with the Minister of Transportation and Infrastructure, all CRD municipalities, CRD electoral areas and agency partners; and
3. That staff be directed to develop implementation strategies for each of the approved transportation priority areas and report back to the Committee on the findings, including a consideration of cooperation mechanisms.
(NWA)

- Staff Report: Identification of Regional Transportation Priorities
- Presentation: Identification of Regional Transportation Priorities
- Appendix A (Revised/committee): Summary of Partner Input and Priority Setting
- Appendix A: Summary of Partner Input and Priority Setting Process
- Appendix B: Regional Transportation Priority Areas
- Appendix C: Transportation and Climate Action Policy Context
- Appendix D: Summary of Regional Priorities by Transportation Function

9 BYLAWS

10. NOTICE(S) OF MOTION

10.1. 21-316 Partnerships to Protect Fairy Creek and Other At-Risk Old-Growth Forests

Recommendation: That the Board endorse the following resolution and direct staff to forward copies to the Premier of British Columbia, Members of the Legislative Assembly representing constituencies on Vancouver Island, the Capital Regional District Board, municipalities in the Capital Region, and the Association of Vancouver Island and Coastal Communities, requesting favourable consideration:

Resolution: Partnerships to Protect Fairy Creek and Other At-Risk Old-Growth Forests on Vancouver Island

WHEREAS Ancient high productivity old-growth ecosystems are globally one of the most valuable climate mitigation and resiliency assets in terms of carbon storage, sequestration, protection against wildfire, storage of water and preservation of biological diversity;

AND WHEREAS Less than 3% of the original high productivity (big tree) old-growth forests in British Columbia remain standing, and of this residual land base, 75% is slated to be eliminated through industrial logging operations;

AND WHEREAS Alternatives exist to increase protection of biological diversity and employment, through the immediate and just transition to sustainable management of second-growth forests with expanded value-added processing and manufacturing;

THEREFORE BE IT RESOLVED THAT the Capital Regional District expresses its willingness to work with the Pacheedaht First Nation, the Government of British Columbia and other entities to protect Fairy Creek and other at-risk old-growth forests on southern Vancouver Island, including consideration of establishing Indigenous Protected and Conserved Areas;

AND BE IT FURTHER RESOLVED THAT the Capital Regional District calls on the Government of British Columbia to defer logging in high-productivity old-growth forests on Vancouver Island, as recommended by the Old Growth Strategic Review, until the panel's 14 recommendations have been implemented;

AND BE IT FURTHER RESOLVED THAT the Capital Regional District calls on the Government of British Columbia to allocate funding to enact deferrals in an economically just manner, in the full spirit of reconciliation and to support the economic transition of affected First Nations and non-First Nation workers, communities and companies from unsustainable old-growth logging toward the development of long-term sustainable local economies.
(NWA)

Isitt (EP), J. Loveday (EP), C. McNeil-Smith (EP), D. Kobayashi (for R. Martin) (EP), R. Mersereau, K. Murdoch (EP), G. Orr (EP), J. Ranns (EP), D. Screech, L. Seaton, M. Tait (EP), N. Taylor, K. Williams, R. Windsor (EP), G. Young

Staff: R. Lapham, Chief Administrative Officer; N. Chan, Chief Financial Officer; L. Hutcheson, General Manager, Parks and Environmental Services; K. Lorette, General Manager, Planning and Protective Services; K. Morley, General Manager, Corporate Services; T. Robbins, General Manager, Integrated Water Services; G. Harris, Senior Manager, Environmental Protection; M. Lagoa, Deputy Corporate Officer; S. Orr, Senior Committee Clerk, T. Pillipow, Committee Clerk (Recorder)

EP – Electronic Participation

Regrets: Directors D. Howe, R. Martin

The meeting was called to order at 1:35 pm.

1. TERRITORIAL ACKNOWLEDGEMENT

A Territorial Acknowledgement was provided in the preceding meeting.

2. APPROVAL OF THE AGENDA

MOVED by Director Mersereau, SECONDED by Director Blackwell,
That the agenda for the April 14, 2021 Session of the Capital Regional District Board be approved.
CARRIED

3. ADOPTION OF MINUTES

3.1. 21-292 Minutes of the March 10, 2021 and March 24, 2021 Capital Regional District Board Meetings

MOVED by Director Blackwell, SECONDED by Director Mersereau,
That the minutes of the Capital Regional District Board meetings of March 10, 2021 and March 24, 2021 be adopted as circulated.
CARRIED

4. REPORT OF THE CHAIR

The Chair acknowledged that while it is not ideal that we are not all in the room together, we are taking the Provincial Health Officer's advice to heart. He advised the Board that at next month's meeting we will be reviewing a revised Solid Waste Management Plan and doing our annual check-in of the Board strategic priorities.

5. PRESENTATIONS/DELEGATIONS

5.1. Presentations

There were no presentations.

5.2. Delegations

5.2.1. 21-297 Delegation - Salome Waters: Representing Saanich Eco Advocates: Re: Agenda Item 10.2.: Motion with Notice: Zero Waste British Columbia Input on Solid Waste Management Plan

Salome Waters spoke in favour of Item 10.2.

5.2.2. 21-298 Delegation - Shannon Graham: Representing Surfrider Foundation Vancouver Island: Re: Agenda Item 10.2.: Motion with Notice: Zero Waste British Columbia Input on Solid Waste Management Plan

Shannon Graham spoke in favour of Item 10.2.

5.2.3. 21-299 Delegation - Jane Devonshire: Representing South Island Climate Action Network: Re: Agenda Item 10.2.: Motion with Notice: Zero Waste British Columbia Input on Solid Waste Management Plan

Jane Devonshire spoke in favour of Item 10.2.

5.2.4. 21-300 Delegation - Jonathan O'Riordan: Representing Mount Work Coalition: Re: Agenda Item 10.2.: Motion with Notice: Zero Waste British Columbia Input on Solid Waste Management Plan

Jonathan O'Riordan spoke in favour of Item 10.2.

6. CONSENT AGENDA

Consent agenda item 6.6. was removed from the consent agenda and moved to be considered under Reports of Committees as agenda item 8.7.

Consent agenda item 6.5. was removed from the consent agenda and moved to be considered under Reports of Committees as agenda item 8.8.

MOVED by Director Helps, SECONDED by Director Mersereau,
That consent agenda items 6.1. through 6.7., with the exception of consent agenda items 6.5. and 6.6., be approved.
CARRIED

6.1. 21-129 Review of Separation of Building Inspection Services for Each Electoral Area

That the Building Inspection service to the three Electoral Areas remain as a single shared service with a single budget.
CARRIED

6.2. 21-270 Community Emergency Preparedness Fund: Emergency Operations Centres and Training Grant - Motion of Support

That the CRD Board support an application to Union of British Columbia Municipalities Community Emergency Preparedness Fund for the Emergency Operations Centres and Training grant and direct staff to provide overall grant management.

6.3. 21-279 AGMs and Nomination Procedures for Local Service Committees & Commissions

1. That the bylaw requirement that CRD local service committees and commissions hold Annual General Meetings be waived for 2021.
2. That new appointments to local service committees and commissions be made by the CRD Board based on the Electoral Area Director recommendation for 2021.
CARRIED

6.4. 21-265 CRD Appointment of Public Members to External Boards Policy

1. That Board Policy "CRD Appointment of Public Members to External Boards" be adopted.
2. That the Terms of Reference for the Governance Committee be updated to allow for the establishment of an Appointment Advisory Committee, on an as-and-when needed basis, responsible for reviewing applications and making recommendation for appointments to external boards.
3. That the Appointment Advisory Committee be permitted to meet in closed when evaluating public member applications.
CARRIED

6.7. 21-235 2021 Committee and External Membership Appointments - Update #3

That the Board receive for information the updated 2021 Appointments to Board and Committees as attached.

7. ADMINISTRATION REPORTS

7.1. 21-241 CAO Quarterly Progress Report No. 1 - 2021

R. Lapham spoke to Item 7.1.

Discussion ensued on the following:
- reporting on the methane capture at Hartland landfill
- rapid housing projects and federal funding
- engaging residents for the Reaching Home program

MOVED by Director Helps, SECONDED by Director Blackwell,
That the CAO Quarterly Progress Report No. 1 - 2021 be received for information.
CARRIED

7.2. 21-266 City of Victoria MRDT Renewal

N. Chan spoke to Item 7.2.

MOVED by Director Helps, SECONDED by Director Young,
That the Capital Regional District Board supports the City of Victoria's five-year renewal for the Municipal and Regional District Tax (MRDT) and Destination Greater Victoria as an eligible entity from 2022-2026, as well as the new incremental MRDT from Airbnb for affordable housing initiatives.
CARRIED

7.3. 21-237 Additional COVID-19 Safe Restart Grants for Local Governments

N. Chan spoke to Item 7.3.

Discussion ensued on the allocation of grant funds.

MOVED by Director Hicks, SECONDED by Director Blackwell,
1. That staff allocate the $575,000 CRD COVID-19 Safe Restart Grants for Local Government in alignment with the Provincial allocation formulae to Regional Services and Local Area Services as summarized in Appendix E;
2. That the Regional Services allocation be distributed to the Regional Corporate Emergency Service Budget;
3. That the Local Area Services allocation be apportioned to the respective Electoral Areas where staff will engage Electoral Area Directors to determine allocation to specific services.
CARRIED

8. REPORTS OF COMMITTEES

Electoral Areas Committee

8.1. 21-128 Amendments to CRD Ticket Information Authorization Bylaw, 1990, Bylaw No. 1857

MOVED by Director Hicks, SECONDED by Director Holman,
1) That Bylaw No. 4401, "Capital Regional District Ticket information Authorization Bylaw 1990, Amendment Bylaw No. 70, 2021" be introduced and read a first, second, and third time; and
CARRIED

MOVED by Director Hicks, SECONDED by Director Holman,
2) That Bylaw No. 4401 be adopted.
CARRIED

Juan de Fuca Land Use Committee

8.2. 21-230 Public Hearing Report on Bylaw No. 4380, "Juan de Fuca Land Use Bylaw, 1992, Amendment Bylaw No. 148, 2020"

MOVED by Director Hicks, SECONDED by Director Blackwell,
a) That the minutes that form the Report of the Public Hearing for Bylaw No. 4380, "Juan de Fuca Land Use Bylaw, 1992, Amendment Bylaw No. 148, 2020", which are certified as a fair and accurate summary of the representations that were made at the public hearing held on March 9, 2021, for Bylaw No. 4380, be received;
CARRIED

MOVED by Director Hicks, SECONDED by Director Blackwell,
b) That Bylaw No. 4380 be read a third time; and
CARRIED

MOVED by Director Hicks, SECONDED by Director Blackwell,
c) That Bylaw No. 4380 be adopted.
CARRIED

Peninsula Recreation Commission

8.3. 21-231 Canadian Tire Jumpstart Charities Inclusive Play Project

MOVED by Director Windsor, SECONDED by Director Orr,
That the approved Panorama Recreation Service 2021-2025 capital plan and budget be amended in accordance with the revised plan and budget for Project No. 21-07 as presented, and to proceed with the Canadian Tire Jumpstart multi-sport court and relocation of the playground.
CARRIED

Planning & Protective Services Committee

8.4. 21-212 Esquimalt Regional Context Statement Consideration

MOVED by Director McNeil-Smith, SECONDED by Director Desjardins,
That the Township of Esquimalt regional context statement be considered in relation to the 2018 Regional Growth Strategy (Bylaw No. 4017) and be accepted in accordance with the requirements of section 448 of the Local Government Act.
CARRIED

8.5. 21-213 Adoption of Regional Growth Strategy Amendment Bylaw No. 4328

MOVED by Director McNeil-Smith, SECONDED by Director Mersereau,
1) That Bylaw No. 4328 be amended to correct the bylaw title and citation;
CARRIED

MOVED by Director McNeil-Smith, SECONDED by Director Mersereau,
2) That Bylaw No. 4328, "Capital Regional District Regional Growth Strategy Bylaw No. 1, 2016, Amendment Bylaw No. 1, 2019", be read a third time as amended; and
CARRIED

MOVED by Director McNeil-Smith, SECONDED by Director Mersereau,
3) That Bylaw No. 4328 be adopted.
CARRIED

Regional Housing Trust Fund Commission

8.6. 21-239 Additional Grant Request for Michigan Square

MOVED by Director Screech, SECONDED by Director Holman,
That a grant in the amount of $525,000 to the Capital Region Housing Corporation be approved to support the development of 35 additional units of affordable rental housing at 330 Michigan Street, Victoria, subject to meeting the terms of the Regional Housing Trust Fund Grant Funding Agreement.
CARRIED

8.7. 21-244 Reaching Home and Canadian Medical Association Foundation COVID-19 Funding

Director Isitt declared a personal conflict and recused himself from the meeting at 2:36 pm.

Director Loveday declared a personal conflict and recused himself from the meeting at 2:36 pm.

MOVED by Director Helps, SECONDED by Director Screech,
That the Reaching Home and Canadian Medical Association Foundation COVID-19 Funding report be received for information.
CARRIED

Directors Isitt and Loveday returned to the meeting at 2:37 pm.

8.8. 21-251 Creation of a Committee to Oversee Development of a Regional Performing Arts Facilities Service

MOVED by Director Murdoch, SECONDED by Director Williams,
1. That the creation of a Performing Arts Facilities Select Committee whose purpose will be to define the scope and functions of a regional service that will lead to the drafting of an establishing bylaw for the Performing Arts Facilities Service be approved.
2. That the Performing Arts Facilities Select Committee Terms of Reference be approved.
CARRIED
OPPOSED: Blackwell, Hicks, Holman, Seaton

9. BYLAWS

There were no bylaws for consideration.

10. NOTICE(S) OF MOTION

10.1. 20-034 Motion with Notice: Kings Road - Director Holman

This Motion with Notice was withdrawn.

[At the September 9, 2020 meeting the Capital Regional District Board tabled the below Notice of Motion to April 14, 2021:]

That CRD staff provide a report to the Hospitals and Housing Committee examining options for the purchase of a small portion of the Kings Road property in Saanich, at a cost of up to $2 million, for the purposes of affordable housing while still protecting all of the undeveloped portion of the parcel, including the forested riparian corridor.
(NWA)

10.2. 21-278 Motion with Notice: Zero Waste British Columbia Input on Solid Waste Management Plan (Directors Isitt, Loveday, and Taylor)

Director Loveday spoke to Item 10.2.

Discussion ensued on the following:
- reviewing the Solid Waste Management before this motion is put to the Board
- the opportunity for staff to thoroughly review the submission
- implications to the Solid Waste Management Plan should this move forward

MOVED by Director Loveday, SECONDED by Director Taylor,
That the Board:
1. Refer the attached report from Zero Waste British Columbia dated February 10, 2021 to staff, to inform revisions to the Solid Waste Management Plan.
2. Endorse the goal of the CRD becoming a national leader in Zero Waste and the Circular Economy in solid waste management; and
3. Direct staff to strengthen the emphasis on the principles of Zero Waste and Circular Economy in the Solid Waste Management Plan, including in the waste-reduction targets within the plan.

MOVED by Director Desjardins, SECONDED by Director Screech,
That this item be referred to the April 21, 2021 meeting of the Environmental Services Committee.
CARRIED

11. NEW BUSINESS

Director Isitt Notice of Motion for consideration at the May 12, 2021 meeting of the Capital Regional District Board:

That the Board endorse the following resolution and direct staff to forward copies to the Premier of British Columbia, Members of the Legislative Assembly representing constituencies on Vancouver Island, the Capital Regional District Board, municipalities in the Capital Region, and the Association of Vancouver Island and Coastal Communities, requesting favourable consideration:

Resolution: Partnerships to Protect Fairy Creek and Other At-Risk Old-Growth Forests on Vancouver Island

WHEREAS Ancient high productivity old-growth ecosystems are globally one of the most valuable climate mitigation and resiliency assets in terms of carbon storage, sequestration, protection against wildfire, storage of water and preservation of biological diversity;

AND WHEREAS Less than 3% of the original high productivity (big tree) old-growth forests in British Columbia remain standing, and of this residual land base, 75% is slated to be eliminated through industrial logging operations;

AND WHEREAS Alternatives exist to increase protection of biological diversity and employment, through the immediate and just transition to sustainable management of second-growth forests with expanded value-added processing and manufacturing;

THEREFORE BE IT RESOLVED THAT the Capital Regional District expresses its willingness to work with the Pacheedaht First Nation, the Government of British Columbia and other entities to protect Fairy Creek and other at-risk old-growth forests on southern Vancouver Island, including consideration of establishing Indigenous Protected and Conserved Areas;

AND BE IT FURTHER RESOLVED THAT the Capital Regional District calls on the Government of British Columbia to defer logging in high-productivity old-growth forests on Vancouver Island, as recommended by the Old Growth Strategic Review, until the panel’s 14 recommendations have been implemented;

AND BE IT FURTHER RESOLVED THAT the Capital Regional District calls on the Government of British Columbia to allocate funding to enact deferrals in an economically just manner, in the full spirit of reconciliation and to support the economic transition of affected First Nations and non-First Nation workers, communities and companies from unsustainable old-growth logging toward the development of long-term sustainable local economies.

12. MOTION TO CLOSE THE MEETING

12.1. 21-291 Motion to Close the Meeting

MOVED by Director Mersereau, SECONDED by Director Blackwell,
1. That the meeting be closed for Appointments in accordance with Section 90(1)(a) of the Community Charter.
CARRIED

MOVED by Director Mersereau, SECONDED by Director Blackwell,
2. That the meeting be closed for Labour Relations under Section (90)(1)(c) of the Community Charter.
CARRIED

MOVED by Director Mersereau, SECONDED by Director Blackwell,
3. That the meeting be closed for Land Acquisition in accordance with Section 90(1)(e) of the Community Charter.
CARRIED

MOVED by Director Mersereau, SECONDED by Director Blackwell,
4. That such disclosures could reasonably be expected to harm the interests of the Regional District.
CARRIED

MOVED by Director Mersereau, SECONDED by Director Blackwell,
5. That the meeting be closed for a Legal Update in accordance with Section 90(1)(g) of the Community Charter.
CARRIED

MOVED by Director Mersereau, SECONDED by Director Blackwell,
6. That the meeting be closed for Intergovernmental Negotiations in accordance with Section 90(2)(b) of the Community Charter.
CARRIED

13. RISE AND REPORT

The Capital Regional District Board rose from the closed session at 4:12 pm.

and reported on the following item:

3.3. - Appointments to CRD Committees and Commissions

In accordance with Bylaw No. 2945, that the following person be appointed to the Shirley/Jordan River Advisory Planning Commission for a term to expire December 31, 2022: E. Anderson

14. ADJOURNMENT

MOVED by Director Mersereau, SECONDED by Director Blackwell,
That the April 14, 2021 Capital Regional District Board meeting be adjourned at 4:12 pm.
CARRIED

REPORT TO COMMITTEE OF THE WHOLE
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **2019-2022 Board Strategic Priorities – Annual Check-In**

ISSUE SUMMARY

To report on progress made to deliver the 2019-2022 Corporate Plan and Board Priorities.

BACKGROUND

The Capital Regional District (CRD) Board identified its Board Strategic Priorities in early 2019 (see Appendix A). They are:
1. Community Wellbeing – Transportation & Housing;
2. Climate Action & Environmental Stewardship;
3. First Nations Reconciliation; and
4. Advocacy, Governance & Accountability.

Subsequently, staff prepared the 2019-2022 CRD Corporate Plan to align with this direction. The CRD Corporate Plan presents the work the CRD needs to deliver over the Board term to meet the region's 15 most important needs (community needs). These initiatives are delivered in conjunction with the mandated core services and regulatory requirements that the CRD is accountable for delivering.

The Board meets in the spring of every year to discuss and confirm the direction for the four Board Strategic Priorities. This report has been produced to facilitate this discussion and provide evidence of the CRD's progress over the last year.

Board direction shapes the service planning process that identifies recommended funding, timing and service levels to deliver the next year's work. Staff will prepare these recommendations through the summer and for review by standing committees and commissions in the fall. The Board provides approval at the Provisional Budget meeting in October 2021.

It is important to note that the Corporate Plan is an ambitious and future-looking document. Delivering the outcome for each community need, while providing mandated core services and meeting regulatory requirements, has taken all of the CRD's work effort and capacity since 2019. Any changes to the Board-endorsed Strategic Priorities will necessarily result in a thorough review of the CRD Corporate Plan, its initiatives and budgets to re-align CRD resources and work plans to a new direction.

ALTERNATIVES

Alternative 1
The Committee of the Whole recommends to the Capital Regional District Board:
1. That the current level of effort on CRD Board Priorities be maintained; and
2. That staff, through the service planning process, provide recommendations on funding, timing and service levels for 2022 in accordance with the approved 2019-2022 Board Strategic Priorities.

Alternative 2
The Committee of the Whole recommends to the Capital Regional District Board:
1. That the level of effort on CRD Board Priorities be adjusted as directed by the Committee of the Whole; and
2. That staff, through the service planning process, provide recommendations on funding, timing and service levels for 2022 in accordance with direction from the Committee of the Whole.

IMPLICATIONS

Financial Implications
Any change in strategic direction will have to be addressed and reflected through the 2022 service planning and financial planning processes. Such change includes, but is not limited to, Board direction to include new initiative(s), expand the scope of the initiatives, and/or accelerate or decelerate effort on existing initiative(s). Resource implications would be identified in the preliminary budget, brought forward by staff in October 2021.

Service Delivery Implications
The CRD reports on the progress of its initiatives and services on a regular basis. The Board oversees the Board Strategic Priorities through the Quarterly Board Priorities Dashboard which accompanies the Chief Administrative Officer's Quarterly Progress Reports. The Board also receives a progress report on the entirety of the CRD Corporate Plan initiatives twice a year at the Board Strategic Check-in and Provisional Budget meetings, which take place in the spring and fall respectively. During the course of the year, standing committees and commissions also fulfil an oversight and advisory role in relation to advancing this work.

This layered oversight ensures that there is transparency over the organization's progress year round and that adjustments can be made to policy in close consultation with the Board, where necessary.

Appendix B reports on progress made toward the CRD Board Strategic Priorities. Appendix C reports on progress made toward the 2019-2022 CRD Corporate Plan. Both highlight that staff have been able to navigate what was for many a tumultuous year and make decisions that ensured the continued delivery of CRD services. Staff have maintained efforts delivering mandated and essential services for the region, while also adjusting operations as directed in the Corporate Plan. Approximately half of the initiatives delivered to date have resulted in an adjustment to operational activities. Staff have also progressed or completed a range of one-off initiatives. Overall, the vast majority (around 95%) of initiatives identified in the CRD Corporate Plan have already been actioned.

As demand for operational service delivery increase, so does demand on the corporate divisions which support them with organization-wide functions. These divisions have also had to increase their capacity to support requirements driven by population growth.

The COVID-19 health emergency impacted pockets of services and the organization's ability to deliver usual engagement and volunteer-led work. However, these impacts have not materialized into significant delays or deterioration of outputs and workflows. In some cases, logistical challenges emerged resulting in staff having to adapt by amending their processes, engagement approaches or re-phasing their 2020 work plan to carry on into 2021. This was reflected in the final budget which was approved in March 2021.

As the CRD prepares for 2022, staff are in a good position to meet the expectations that have been set at the start of the Board's term. The Board's leadership has enabled the CRD to make great strides towards delivering meaningful work for the region. The focus over the coming year is to finish the work that has been started.

Alignment with Board & Corporate Priorities
The 2019-2022 CRD Corporate Plan identifies and prioritizes initiatives that advance Board Priorities and deliver the CRD's core services. Together, the initiatives and actions in the corporate plan respond to the region's collective community needs in consideration of Board priorities, within the CRD's established service mandates, approved plans and corporate priorities.

CONCLUSION

Staff have been progressing initiatives and actions identified in the CRD Corporate Plan, including Board Strategic Priorities. The Board determines resourcing through its annual review and approval of financial plans. To support the Board's decision-making, staff will provide recommendations on funding, timing and service levels through the service and financial planning processes. These will be reviewed through the standing committees and commissions and form the basis of the Provisional Budget.

RECOMMENDATION

The Committee of the Whole recommends to the Capital Regional District Board:
1. That the current level of effort on CRD Board Priorities be maintained; and
2. That staff, through the service planning process, provide recommendations on funding, timing and service levels for 2022 in accordance with the approved 2019-2022 Board Strategic Priorities.

2019-2022 Board Strategic Priorities Annual Check-In

Capital Regional District Board
May 12, 2021

Bob Lapham MCIP RPP
Chief Administrative Officer

Kevin Lorette P.Eng. MBA
General Manager, Planning & Protective Services

Session outline

1. **Current Context** — Bob Lapham

   Objective of today's session and overview

2. **CRD Planning Framework** — Kevin Lorette

   Review service planning and Board strategic planning processes

3. **Delivering the CRD Corporate Plan 2019-2022** — Kevin Lorette

   Overview of progress to date

4. **Facilitated Discussion and Board Direction** — Board Chair

   For discussion:

   - ❑ Is progress on the Board Strategic Priorities meeting expectations?
   - ❑ If not, where would the Board like to see additional effort to advance priorities?

1. Current Context

Operating Environment Scan

External Context

- Local and national key performance indicators continue to reflect the impact of COVID-19 on the economy
- Given the sectors that drive economic activity in the region, economic performance and growth continue at pace and are high when compared across the province and nationally
- Demand and utilization of CRD services remain strong

Internal Context

- The CRD has experienced an increase in demand for regional services in key sectors, including parks, landfill and service connections
- As demand for our operational staff's time and services increase, so does demand on the corporate divisions that provide organization-wide functions

Corporate Context

- The CRD has dedicated significant time and effort to address the changing demands arising from the COVID-19 pandemic
- Management and staff have shown flexibility and adapted their ways of working to continue delivering against Board and corporate priorities and to meet increased regional demand for services

2. CRD Planning Framework

Four-year Board planning cycle

2019

Identify Board Strategic Priorities and community needs with Board

Align CRD Corporate Plan and resources to strategic direction

2020

Initiate the work on the bulk of the initiatives

Maintain momentum on mandated and core service delivery

2021

Keep up high level of effort to deliver approved initiatives that are progressing and initiate additional new initiatives

Ensure mandated and core services continue to be delivered in line with expectations

2022

Initiate final remaining initiatives

Initiatives that have been progressing over the course of the Board term are either operationalized (i.e. absorbed into day-to-day activities and service level adjusted to accommodate) or, if they were a one-off piece of work, completed and brought to a close

2. CRD Planning Framework

Service planning framework

The CRD's service planning framework is a multi-step coordinated process involving the whole organization.

1. The CRD Board meets annually in late spring to confirm the strategic direction for the following year.

2. This strategic direction, along with direction from committees about advancing corporate priorities, informs the recommendations brought forward by staff for new initiatives, resourcing and core service delivery adjustments.

3. The outputs of this work – Community Need Summaries – are routed for approval through standing committees and commissions during the fall. The CRD Board completes the process by approving proposed resourcing and service adjustments at provisional budget in October.

Today's session is the first stage in this multi-step coordinated process.

2. Delivering the CRD Corporate Plan 2019-2022

CRD Board Strategic Priorities Progress Report

Community Wellbeing – Transportation & Housing	We envision that residents have access to affordable housing and convenient, green and affordable multi-modal transportation systems that enhance community wellbeing.

On track · Delayed · Operationalized · Not started

Initiatives	Description	Status	Key deliverables as of May 2021
1a Multi-Modal Transportation	Work with government / community partners to plan for and deliver an effective, long-term multi-modal transportation system and to increase use of public transit, walking and cycling.	19 20 21 22	MOTI's South Island Transportation Strategy (SITS) was published in Q3 2020. Staff brought a report on gaps in regional transportation functions and options for next steps to the Committee of the Whole. Based on the gaps, the Board directed that staff prepare a list of transportation priorities for Board prioritization, in close collaboration with regional partners and agencies, and the reinstatement of the Transportation Committee to provide oversight on this work going forward.
1b E&N Corridor	Protect the E&N corridor as a transportation corridor and participate in a Provincial working group to come to agreement on the future use of the E&N corridor.	19 20 21 22	**Operationalized.** SITS considered the E&N Corridor in its recommendations and will continue to protect it as a transportation corridor.
1c Affordable Housing	Create and deliver more affordable housing across the region in a manner aligned with the Regional Growth Strategy in order to address the needs of a diverse and growing population, including vulnerable residents.	19 20 21 22	Housing and Transportation Cost Estimate Study was released in Q3 2020, exploring the impact of transportation costs on household affordability in the region. CRD awarded three Regional Housing Trust Fund grants to support the construction of over 100 affordable rental units in Q4 2020. Through the Regional Housing First program: • 282 new affordable housing units opened for rental in the Westshore (Spencer Close and West Park) in Q4 2020 • 120 new affordable homes opened in Langford (Hockley House) in Q1 2021 Government of Canada announced $13.1m in federal funds for the Rapid Housing Initiative to create up to 91 new affordable homes. CRD received $1.9m in the fall in additional COVID-19 emergency response funding from Reaching Home to support the region's response capacity for those experiencing homelessness.

2. Delivering the CRD Corporate Plan 2019-2022

Making a difference...together

CRD Board Strategic Priorities Progress Report

Climate Action & Environmental Stewardship	We envision reduced greenhouse gas (GHG) emissions, triple-bottom line solutions and progress on adaptation.

On track · Delayed · Operationalized · Not started

Initiatives	Description	Status	Key Deliverables as of May 2021
2a Climate Emergency	Declare a Climate Emergency and take a leadership role to pursue regional carbon neutrality by 2030.	19 20 21 22	CRD Residential (Energy) Retrofit Acceleration Strategy was completed in Q2 2020, with more rebates offered. Completed the Climate Action Revenue Incentive Program reporting in Q2 2020 and the regional GHG inventory and associated municipal study in Q3 2020. Update of the CRD Climate Action Strategy is underway.
2b GHG from buildings, transportation and solid waste	Work with local governments to further reduce emissions from buildings, transportation and solid waste.	19 20 21 22	Implemented the neighborhood Transition 2050 'Bring It Home 4 Climate' Program to encourage residential energy retrofit in Q4 2020. The program has been extended. Working in partnership with Saanich and Victoria on a social media campaign to increase Electric Vehicle awareness and take-up in the region.
2c Environmental Resource Management	Explore additional opportunities for resource recovery and identify best practices to further reduce waste, increase recycling and find beneficial uses for waste.	19 20 21 22	Completed the community and local government consultation on the draft Solid Waste Management Plan, including targeted engagement with First Nations groups and residents in the Hartland Landfill area. The Board is considering the final draft in May. CRD announced biosolids trucking contract with K'ENES Transportation in Q4 2020. Process started to design and construct a new facility to upgrade the biogas generated at Hartland Landfill to renewable gas. Supply contract with FortisBC to purchase this gas for distribution submitted to BC Utilities Commissions in spring.
2d Regional Parks	Ensure appropriate funding for parks and trails infrastructure, improvements and maintenance by updating the Regional Parks Strategy.	19 20 21 22	Regional Parks 2020 to 2021 Land Acquisition Criteria was approved in Q2 2020. CRD has acquired further parkland in Saanich, Mount Parke and Mount Work Regional Parks. Mountain Biking Guidelines expected in spring 2021. Regional Trails Widening Study received by Board in Q1 2021 and staff directed to conduct public engagement. After a review of the appropriateness of property tax requisition as primary revenue source for regional parks operating costs, Board directed staff to consider additional parking revenue options as part of the Regional Parks strategic planning process.
2e Environmental Protection	Develop model bylaws and best practices for use by municipalities and electoral areas.	19 20 21 22	Completed the Region Coastal Flood Inundation Mapping Project in Q3 2020 and the Regional Electric Vehicle Charging Roadmap in Q1 2021. Engaged with the province on opportunities related to the BC Recycling Regulations amendments.

2. Delivering the CRD Corporate Plan 2019-2022

CRD Board Strategic Priorities Progress Report

First Nations Reconciliation	We envision strong relationships with First Nations based on trust and mutual respect, partnerships and working together on shared goals.

On track · Delayed · Operationalized · Not started

Initiatives	Description	Status	Key Deliverables as of May 2021
3a First Nations Leadership	Look to First Nations for leadership in understanding how to create new regional planning and decision-making systems together on their Traditional Territories.	19 20 21 22	CRD Board approved inclusion of First Nations in regional governance and decision making in Q1 2021. Amendments were approved and made to *CRD Procedures Bylaw* (to include First Nations Members on CRD Committees), *Terms of Reference* for various CRD Standing Committees (to allow for First Nation Member participation at their leisure in accordance with CRD Procedures Bylaw) and *CRD Board Remuneration and Travel Expense Reimbursement Policy*. CRD Board Chair and CRD CAO met with Nations' Chiefs and Council to present proposed changes and receive feedback ahead of amendments being made. Outreach to the Nations to determine their identified elected representatives is ongoing, with orientation to take place once they have been identified.
3b Service Delivery	Seek partnerships, share information and deliver fair and equitable services in working with First Nations on achieving their economic goals.	19 20 21 22	Completed First Nations Economic Development Partnership Model Feasibility Study in Q3 2020. Through the Economic Partnership Model from the Indigenomics Institute, staff are working to establish a First Nations Economic Opportunity Portal, advance procurement opportunities for First Nations, and support First Nations employment through an Indigenous Internship Program. Outreach in Q4 2020 to local First Nations informing them of additional Reaching Home COVID-19 Funding available. To date, three First Nations have projects underway.
3c First Nations Traditional Practices	Work with First Nations on taking care of the land and water while providing space for cultural and ceremonial use, food and medicine harvesting, traditional management practices and reclaiming Indigenous place names.	19 20 21 22	Corporate wide training to support the new Protection and Conservation of Heritage Sites underway. Training will be made available to staff bi-annually going forward. Board approved draft Land Altering Works MOU between WSÁNEC Leadership Council and CRD. Quarterly meetings began in Q4 2020 to review upcoming works taking place in WSÁNEC Territory and receive feedback from the Nations on the proposed works. Engagement and consultations ongoing with First Nations on parks management plans for Mount Work Park and East Sooke Park, water and wastewater service agreements.
3d First Nations Ecological Asset Management	Prepare an ecological asset management plan.	19 20 21 22	Ecological Asset Management Plan project scoping ongoing with multiple CRD divisions. Report expected in Q3 2021.

2. Delivering the CRD Corporate Plan 2019-2022

CRD Board Strategic Priorities Progress Report

Advocacy, Governance & Accountability	We envision effective advocacy, coordinated, collaborative and transparent governance of our committees and commissions, and fiscal/corporate accountability.

On track · Delayed · Operationalized · Not started

Initiatives	Description	Status	Key Deliverables as of May 2021
4a Electoral Area Advocacy	Develop an advocacy strategy to ensure all occupied properties have the opportunity to access high-speed internet services.	19 20 21 22	Engineering firm contracted to advance Phase 2 of the Connectivity Design Plan to create a broadband infrastructure plan for SGI. CRD Board supported two requests by Internet Service Providers for federal funding aimed at improving services.
4b Electoral Area Governance	Develop a comprehensive strategy and operational review to reflect the unique needs and governance of each electoral area (EA).	19 20 21 22	Service Planning and business case modelling underway to create new SGI Transportation service. Contract to develop plan awarded in Q1 2021. SSI Transportation Committee conducted a strategic planning session in Q4 2020 to set direction for annual capital priorities. SSI Water Optimization Study published in Q1 2021.
4c Regional Emergency Management Partnership (REMP)	Explore more comprehensive regional coordination of emergency services, including an assessment of regional hazards, risks and vulnerabilities.	19 20 21 22	SEOC continues to facilitate coordination of actions and resources in the Electoral Areas and regionally. The Corporate Emergency Management Plan has been updated. CRD advocated to CREST to urgently find an alternative method of providing emergency telecommunication in the Juan de Fuca electoral area. Public Alert Notification System contract awarded in Q1 2021. EA Volunteer Fire Service Regulatory Review completed in Q1 2021. Direction received to report back on strategies to meet and sustain regulatory compliance.
4d Triple Bottom Line	Achieve sustainable budgets through innovation and streamlining while recognizing the need for infrastructure revitalization and accountability to taxpayers.	19 20 21 22	Overhaul of service planning process implemented and operationalized. Review of capital reserve balances and funding practices completed Q4 2020, with comparison to other local governments. Work now underway developing guidelines targeted at setting reserve balances and levels of debt to set a standard approach to long-term funding strategies for capital obligations. Government Finance Officers Association US & Canada awarded CRD with this year's Distinguished Budget Presentation Award and the Canadian Award for Financial Reporting.

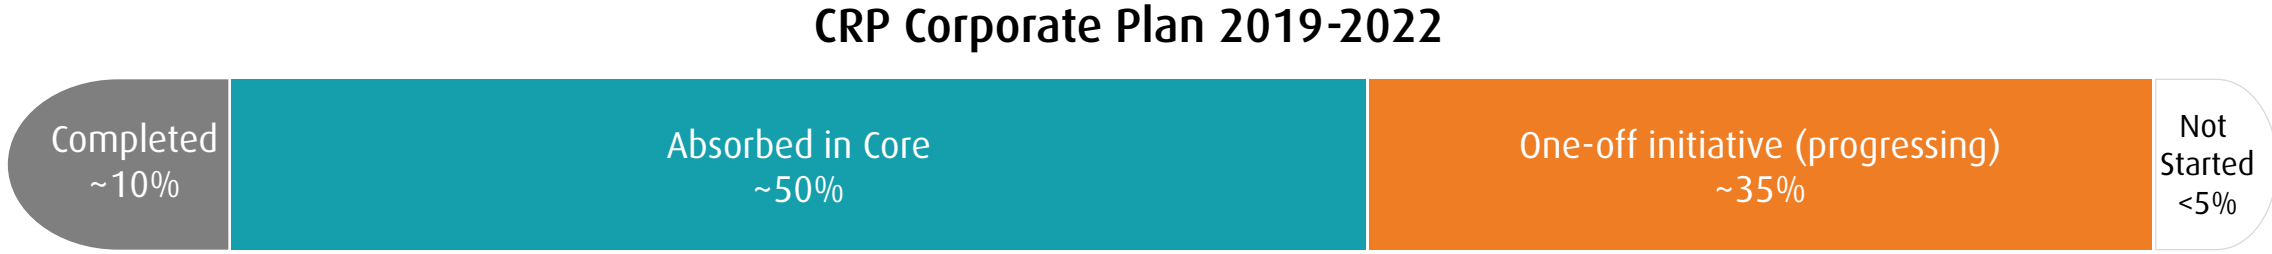
2. Delivering the CRD Corporate Plan 2019-2022

CRD Board Strategic Priorities Progress Report

Advocacy, Governance & Accountability (cont'd)	We envision effective advocacy, coordinated, collaborative and transparent governance of our committees and commissions, and fiscal/corporate accountability.

On track Delayed Operationalized Not started

Initiatives	Description	Status	Key Deliverables as of May 2021
4e Arts	Seek 100% participation in the CRD arts function and facilitate a discussion of the region's art facility needs.	19 20 21 22	CRD Arts & Culture Support Service Strategic plan update completed in Q2 2020. Public engagement regarding performing arts facilities work completed in Q4 2020. Implementation ongoing of report recommendations, including establishing a regional service for the purposes of planning, developing and funding of performing arts facilities that have regional impact.
4f Economic Development	Explore how the CRD can best contribute to regional economic development.	19 20 21 22	Contract for the Rural Dividend grant project to establish a shared business services model in SSI awarded to Rural Island Economic Partnership in Q1 2021. CRD allocated $1.4 million to the COVID-19 Safe Restart Grants for Local Government. SGI Community Economic Sustainability Commission coordinating with SSI Community Economic Development Commission for regional economic resiliency. Island Food Security report was presented to the SGI CESC. Island Coastal Economic Trust expanded to include Juan de Fuca, SSI and SGI who are not eligible to apply for funding and services.



CRD Corporate Plan Progress Report

Please see Progress Update CRD Corporate Plan 2019-2022 (Appendix C) for detailed overview of progress to date on each initiative.

The majority of initiatives highlighted in the Corporate Plan have started and are:

- Being progressed as a one-off initiative (orange)
- Been absorbed as part of a core service adjustment (teal)
- Completed (grey)

A handful of initiatives remain to be actioned/progressed (<5%); in a number of cases direction has been received but the work has not yet started.

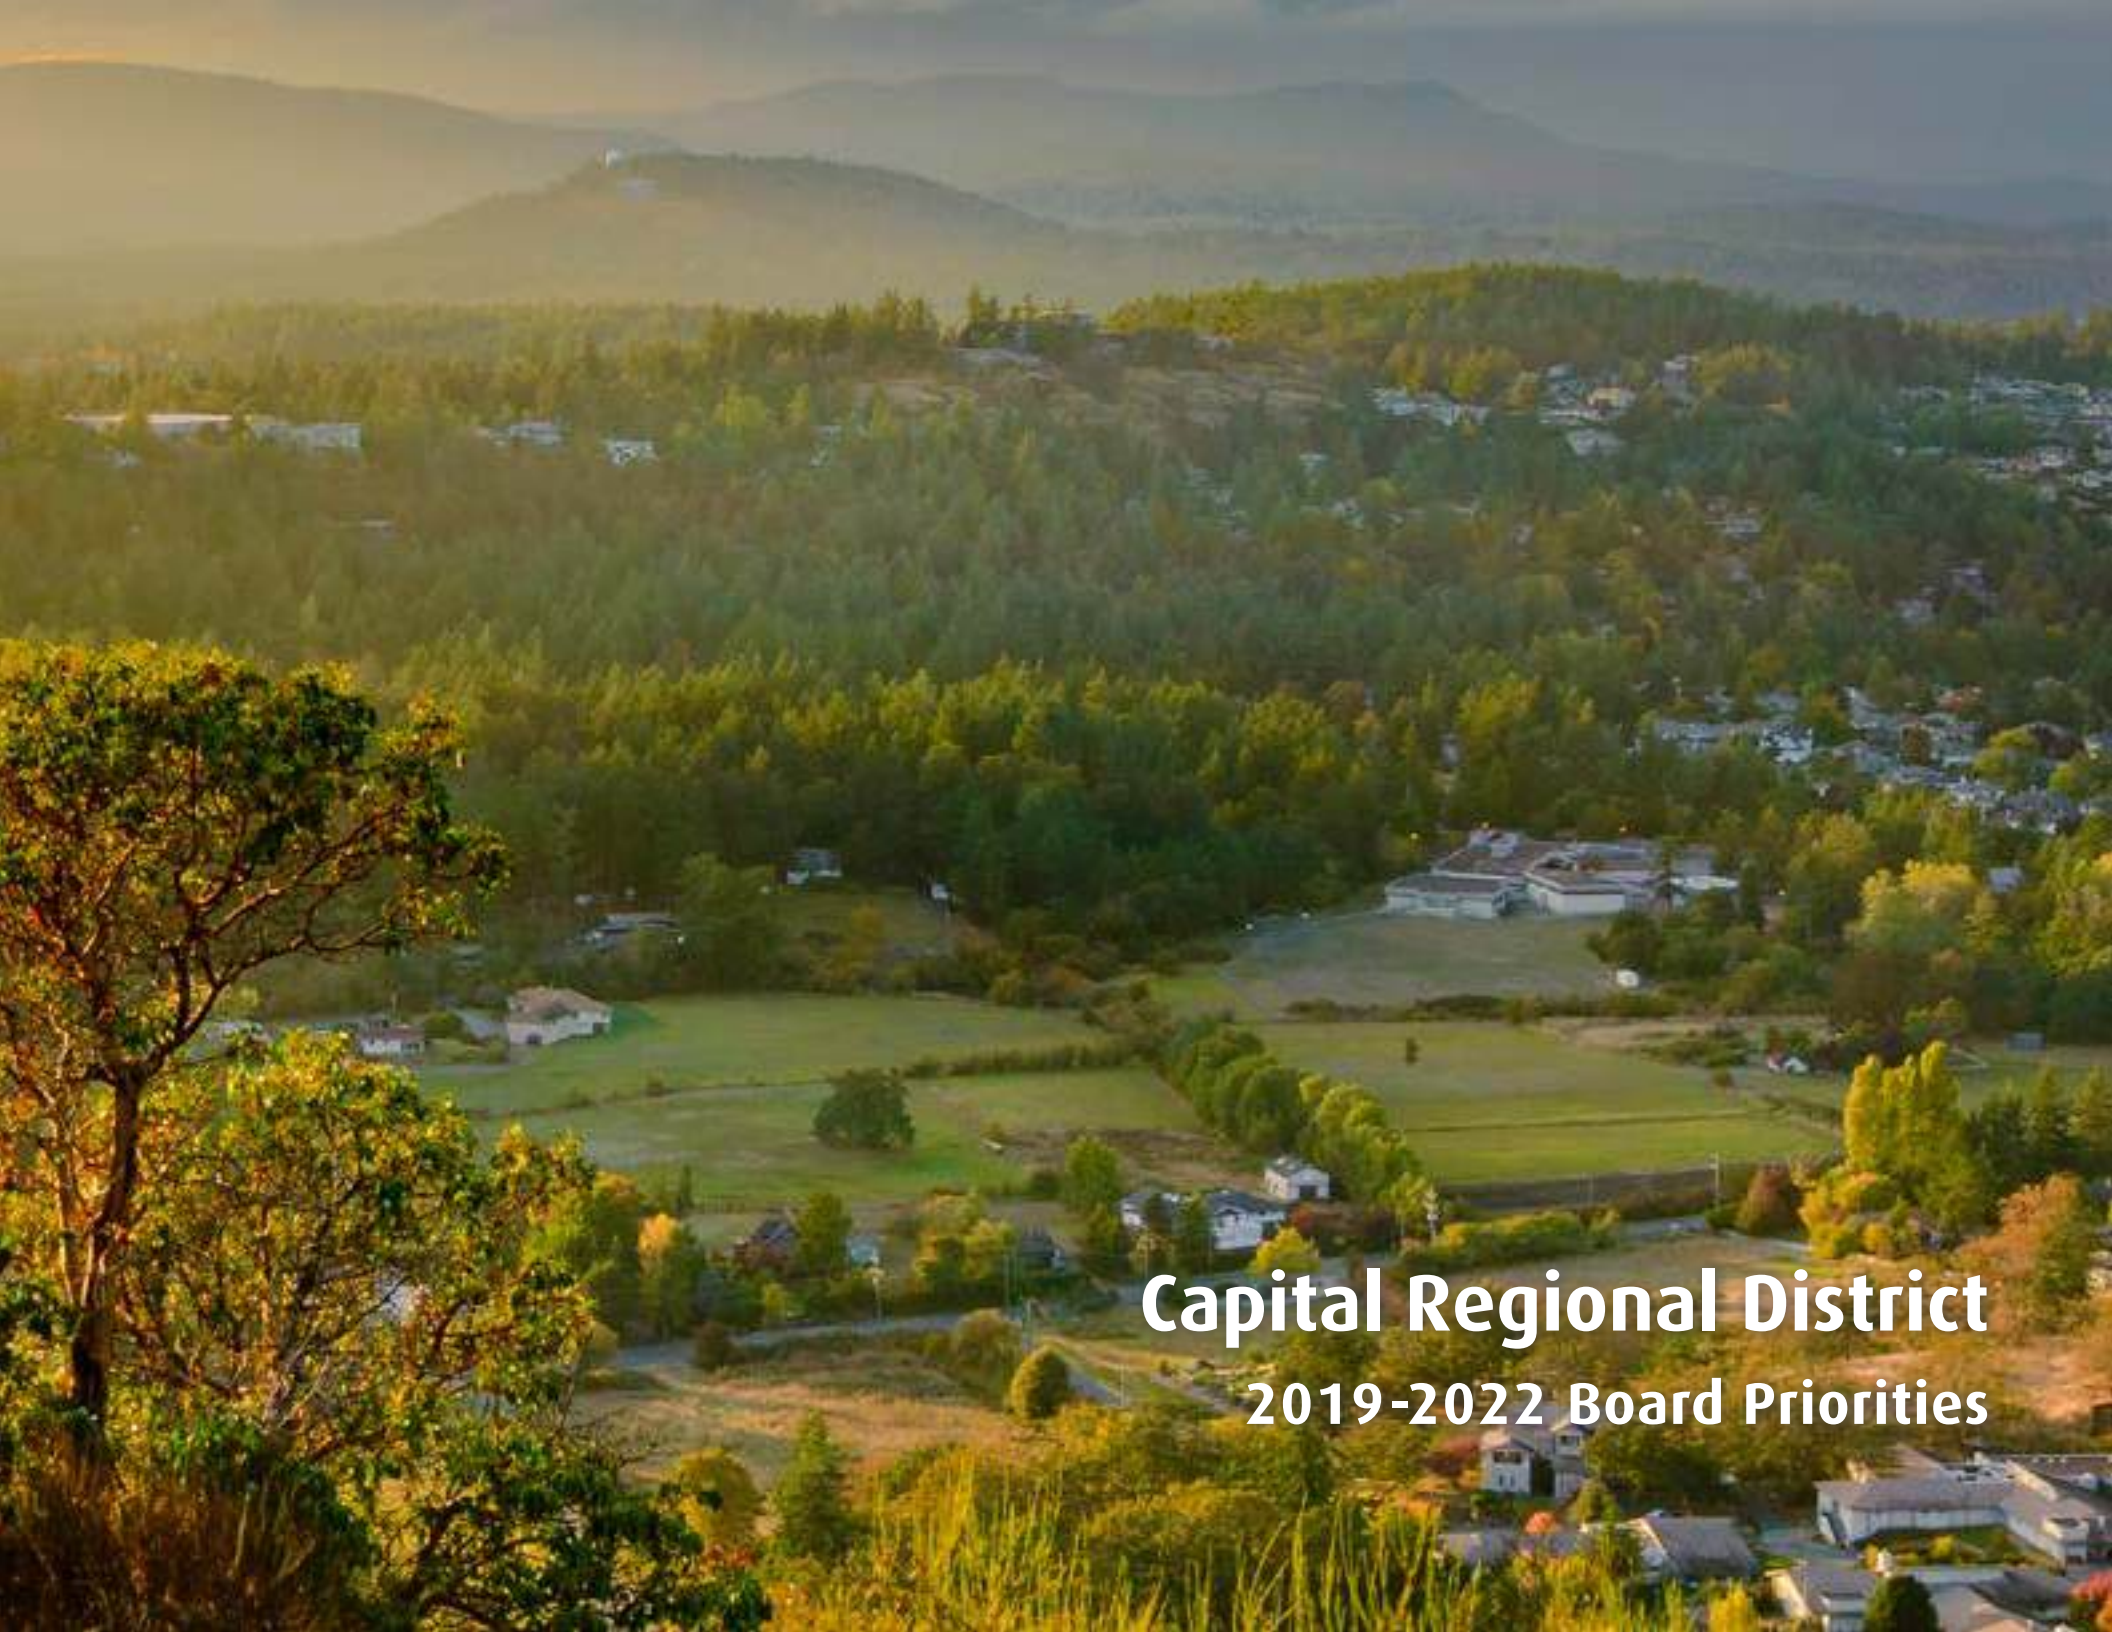
Maintaining our day-to-day operations

CRD staff continue to deliver 200+ core services at a regional, sub-regional and local level.

Support Services continue to support the corporation with day-to-day operations.

4. Facilitated discussion and Board direction

Making a difference...together



For discussion:

- ❑ Is progress on the Board Strategic Priorities meeting expectations?
- ❑ If not, where would the Board like to see additional effort to advance priorities?

APPENDIX A

CRD Board Priorities on a Page

Priorities	Community Wellbeing – Transportation & Housing	Climate Action & Environmental Stewardship	First Nations Reconciliation	Advocacy, Governance & Accountability
Initiatives	• Work with government/community partners to plan for and deliver an effective, long-term regional multi-modal transportation system and to increase use of public transit, walking and cycling. • Protect the E&N Corridor as a transportation corridor and participate in a Provincial working group to come to agreement on the future use of the E&N corridor. • Create and deliver more affordable housing across the region in a manner aligned with the Regional Growth Strategy in order to address the needs of a diverse & growing population, including vulnerable residents.	• Declare a Climate Emergency and take a leadership role to pursue regional carbon neutrality by 2030. • Work with local governments to further reduce emissions from buildings, transportation and solid waste. • Explore additional opportunities for resource recovery and identify best practices to further reduce waste, increase recycling and find beneficial uses for waste. • Ensure appropriate funding for parks and trails infrastructure, improvements and maintenance by updating the Regional Parks Strategy with consideration to ecological, recreation and reconciliation principles, land acquisition capacity, and expanded partnerships with First Nations and parks user groups. • Develop model bylaws and best practices for use by municipalities and electoral areas.	• Look to First Nations for leadership in understanding how to create new regional planning and decision-making systems together on their Traditional Territories. • Seek partnerships, share information and deliver fair and equitable services in working with First Nations on achieving their economic goals. • Work with First Nations on taking care of the land and water while providing space for cultural and ceremonial use, food and medicine harvesting, traditional management practices and reclaiming Indigenous place names. • Prepare an ecological asset management plan that includes natural infrastructure, First Nations guiding principles, First Nations language and place names, historical uses and invasive species management.	• Develop an advocacy strategy to ensure all occupied properties have the opportunity to access high-speed internet services. • Develop a comprehensive strategy and operational review to reflect the unique needs and governance of each electoral area. • Explore more comprehensive regional coordination of emergency services, including an assessment of regional hazards, risks and vulnerabilities. • Achieve triple bottom-line sustainable budgets through innovation and streamlining while recognizing the need for infrastructure revitalization and accountability to taxpayers. • Seek 100% participation in the CRD arts function and facilitate a discussion of the region's art facility needs. • Explore how the CRD can best contribute to regional economic development.
Desired Outcomes	• We envision that residents have access to affordable housing and convenient, green and affordable multi-modal transportation systems that enhance community wellbeing.	• We envision reduced GHG emissions, triple-bottom line solutions and progress on adaptation.	• We envision strong relationships with First Nations based on trust and mutual respect, partnerships and working together on shared goals.	• We envision effective advocacy, coordinated, collaborative and transparent governance of our committees and commissions, and fiscal/corporate accountability.

Message from the Board

As the 2019 – 2022 Capital Regional District (CRD) Board of Directors, we are the mayors and councillors in each municipality and representatives of the electoral areas. In our roles, we hear the concerns of our constituents, we identify risks and opportunities, and we work together as the CRD Board for the benefit of the region as a whole.

The continued growth of the region brings new opportunities and deepens existing issues for our communities, requiring decisive and collaborative action to set the strategic course for the CRD over the next four years.

We invite you to read this plan to see how we will work together to build a vibrant, livable and sustainable region.

Responding to Community Issues

As the CRD Board of Directors, we voice the needs of our constituents and direct the CRD's actions to respond.

In our Board planning sessions, we discussed a range of community issues, including but not limited to:

- Arts
- Climate Change
- Budgeting
- Environmental Protection
- Emergency Services
- Electoral Areas
- Farmland
- First Nations Reconciliation
- Governance & Service Delivery
- Health
- Housing
- Regional Parks
- Transportation
- Waste Management

Board Priorities & Initiatives

While all issues are important, limited resources require the Board to make strategic decisions. The Board carefully selected strategic priorities and associated initiatives that can be addressed within the CRD's legislative mandate, that are new, or that require more intense or urgent effort than has previously been applied.

We acknowledge the extensive work the CRD is already doing for the region and will continue to do. Accordingly, this document focuses on initiatives that we would like the CRD to address in addition to ongoing initiatives. Through the CRD's established service planning and budget processes, we will determine how best to fund our priorities/initiatives, with a focus on delivering value to taxpayers.

Board of Directors (2019–2022)

Our 24-member Board is composed of one or more elected officials from each of the local governments within the CRD boundaries. Each local government holds one director position on the Board for every 25,000 people (or portion thereof).

About the CRD

The Capital Regional District (CRD) is the regional government for 13 municipalities and three electoral areas (EA) on southern Vancouver Island and the Gulf Islands, serving more than 393,000 residents. The traditional territories of over 20 First Nations span portions of the region and 11 of those hold reserve lands throughout the capital region.

The Capital Regional District (CRD) was incorporated in 1966 to provide regional decision-making on issues that transcend municipal boundaries and to enable more effective service delivery to residents regionally, sub-regionally and locally.

As a local government, the CRD develops partnerships to facilitate and deliver projects and services to ensure a sustainable, livable and vibrant capital region.

The CRD plays a key role in providing services that can be delivered efficiently and effectively through region-wide or shared service delivery models.

The CRD has more than 200 services, infrastructure and financing agreements with municipalities and electoral areas. CRD services are organized into the following categories:

- **Regional**, where all municipalities and electoral areas are served;
- **Sub-regional**, where two or more jurisdictions are served;
- **Local**, in the electoral areas where the CRD is the local government.

The CRD works collaboratively with First Nations and other levels of governments and has direct relationships with individuals, businesses, organizations, institutions and communities that access regional utilities and services.

The CRD owns and operates the Capital Region Housing Corporation (CRHC), a non-profit provider of 1,418 affordable rental units throughout the region, and administers the Capital Regional Hospital District (CRHD). The CRHD invests in traditional health care services and provides capital funding for health care infrastructure, such as health facilities and hospital equipment.

Corporate Statements

Mission

We are diverse communities working together to serve the public good and build a vibrant, livable and sustainable region, through an effective, efficient and open organization.

Vision

Our communities strive to achieve exemplary environmental stewardship, a dynamic vibrant economy and an inclusive, caring society. Regional cooperation, mutually beneficial decision making and advancing shared interests shape the essence of the CRD.

Reconciliation

The CRD's boundaries span the Traditional Territories of over 20 First Nations, whose ancestors have been taking care of the land since time immemorial. The CRD believes that a positive working relationship with First Nations is good for the whole region. For the CRD to have a positive relationship with First Nations we need to acknowledge, respect and complement their Indigenous laws, customs and systems of governance.

The CRD is part of a national movement towards Reconciliation with Canada's Indigenous peoples, informed by:

- The Truth and Reconciliation Commission's Calls to Action
- The United Nations Declaration on the Rights of Indigenous Peoples
- Sec. 35 of the Canadian Charter of Rights and Freedoms
- The Douglas Treaties and the BC Modern Treaty process

For the full Statement of Reconciliation, please visit: **www.crd.bc.ca/firstnations.**

Priority Setting

Priority Setting

Priorities

For our 2019 - 2022 mandate, with an annual review, we agreed to focus on the following regional priorities:

- Community Wellbeing - Transportation & Housing
- Climate Change Adaptation & Mitigation
- First Nations Reconciliation
- Advocacy, Governance & Accountability (including EA-specific initiatives)

As part of the above regional priorities, we identified two electoral area initiatives that apply where the CRD serves as the local government, specifically Juan de Fuca, Salt Spring Island and the Southern Gulf Islands. The two initiatives call for an advocacy strategy to ensure all occupied properties have high-speed internet access and a comprehensive strategy and operational review to reflect the unique governance needs of each electoral area.

Strategic Planning Process

Through a series of facilitated Board meetings, beginning in November 2018 and ending in January 2019, we set the strategic priorities for our 2019 - 2022 mandate. Our priorities complement existing plans and budgets developed over many years.

The creation of this document involved consultation with Directors (surveys and discussions) and several Board planning sessions.

We, the Board, approved the 2019 - 2022 priorities on February 13, 2019.

Connecting Board Priorities to Action

Organizational efforts are aligned to ensure work is prioritized according to Board direction. Robust corporate planning processes consider existing CRD strategies, organizational mandates and resource availability to ensure the CRD delivers on Board expectations and administrative/operational obligations.

Internal Capacity

Board priorities cannot be fully implemented without sufficient internal capacity - be it systems (e.g. budgeting and information technology) or people (e.g. training, performance management, retention and recruitment). The CRD's Organizational Development Plan addresses organizational management.

Planning & Budgeting

Board priorities guide the strategic direction of the CRD. To deliver on Board priorities and corporate obligations, executive staff create a Corporate Plan that guides service delivery over the Board's four-year mandate. The Corporate Plan is implemented through annual Board approval of divisional service plans. Service plans detail service levels, actions, measurable targets and resources required to achieve Board and corporate priorities. Board approval of financial plans and budgets provides the resources for implementation.

Implementation

Once resourced, staff move to deliver on Board priorities and initiatives.

Accountability & Transparency

Staff report quarterly and annually on progress towards achieving Board priorities and on significant budget variances and emerging risks. Through the corporate planning process, key performance indicators will be developed to track progress.

Board Priorities

2019 - 2022 Board Priorities

Community Wellbeing – Transportation & Housing

The CRD Board will advocate, collaborate and form partnerships to address the affordable housing and transportation needs of the region's diverse and growing population.

Climate Action & Environmental Stewardship

The CRD Board will encourage and implement bold action on climate change by enhancing its natural and built assets to achieve environmental resilience, food security and continued wellbeing of our current and future residents.

First Nations Reconciliation

The CRD Board will take measurable steps toward strengthening government-to-government relationships with First Nations to foster shared prosperity for all.

Advocacy, Governance & Accountability

The CRD Board will advocate for infrastructure, regulatory, legislative, financial and operational support, focus its governance and Committees/Commissions on advancing regional, sub-regional and local priorities, and work to resolve issues that the CRD does not have the direct mandate to address.

Desired Outcomes

Community Wellbeing – Transportation & Housing

We envision residents have access to affordable housing and convenient, green and affordable multi-modal transportation systems that enhance community wellbeing.

Climate Action & Environmental Stewardship

We envision reduced GHG emissions, triple-bottom line solutions and progress on adaptation.

First Nations Reconciliation

We envision strong relationships with First Nations based on trust and mutual respect, partnerships and working together on shared goals.

Advocacy, Governance & Accountability

We envision effective advocacy, coordinated, collaborative and transparent governance of our committees and commissions, and fiscal/corporate accountability.

Community Wellbeing – Transportation & Housing

The CRD Board will advocate, collaborate and form partnerships to address the affordable housing and transportation needs of the region's diverse and growing population.

Why?

The region currently faces issues of unaffordable housing, as well as lengthy and costly commutes. These issues negatively impact community wellbeing and do not meet the long-term needs of our communities.

Initiatives

1a	Work with government/community partners to plan for and deliver an effective, long-term regional multi-modal transportation system and to increase use of public transit, walking and cycling.
1b	Protect the E&N Corridor as a transportation corridor and participate in a Provincial working group to come to agreement on the future use of the E&N corridor.
1c	Create and deliver more affordable housing across the region in a manner aligned with the Regional Growth Strategy in order to address the needs of a diverse and growing population, including vulnerable residents.

Desired Outcome

We envision residents have access to affordable housing and convenient, green and affordable multi-modal transportation systems that enhance community wellbeing.

Climate Action & Environmental Stewardship

The CRD Board will encourage and implement bold action on climate change by protecting and enhancing its natural and built assets to achieve environmental resilience, food security, managed growth and continued wellbeing of our current and future residents.

Why?

The impacts of climate change are already being felt globally and locally, and these impacts will continue to intensify and affect our communities and the natural environment for decades to come. It is urgent that we do our part to stabilize the climate and adapt.

Initiatives

2a	Declare a Climate Emergency and take a leadership role to pursue regional carbon neutrality by 2030.
2b	Work with local governments to further reduce emissions from buildings, transportation and solid waste.
2c	Explore additional opportunities for resource recovery and identify best practices to further reduce waste, increase recycling and find beneficial uses for waste.
2d	Ensure appropriate funding for parks and trails infrastructure, improvements and maintenance by updating the Regional Parks Strategy with consideration to ecological, recreation and reconciliation principles, land acquisition capacity, and expanded partnerships with First Nations and parks user groups.
2e	Develop model bylaws and best practices for use by municipalities and electoral areas.

Desired Outcome

We envision reduced GHG emissions, triple-bottom line solutions and progress on adaptation.

First Nations Reconciliation

The CRD Board will take measurable steps toward developing respectful government-to-government relationships and partnerships with First Nations to foster shared prosperity for all.

Why?

It is important to acknowledge historic harms, overcome current inequities and respect local indigenous laws and culture.

Initiatives

3a	Look to First Nations for leadership in understanding how to create new regional planning and decision-making systems together on their Traditional Territories.
3b	Seek partnerships, share information and deliver fair and equitable services in working with First Nations on achieving their economic goals.
3c	Work with First Nations on taking care of the land and water while providing space for cultural and ceremonial use, food and medicine harvesting, traditional management practices and reclaiming Indigenous place names.
3d	Prepare an ecological asset management plan that includes natural infrastructure, First Nations guiding principles, First Nations language and place names, historical uses and invasive species management.

Desired Outcome

We envision strong relationships with First Nations based on trust and mutual respect, partnerships and working together on shared goals.

Advocacy, Governance & Accountability

The CRD Board will advocate for infrastructure, regulatory, legislative, financial and operational support, focus its governance and Committees/Commissions on transparently and efficiently advancing regional, sub-regional and local priorities, and work collaboratively to address multi-jurisdictional issues that impact the wellbeing of the region's residents.

Why?

There are issues that require regional action outside the CRD's service mandate. Where the CRD does not have a direct mandate, the Board can advocate on behalf of the CRD. Through partnerships and effective governance, the CRD can leverage resources, extend its impact to more communities and achieve greater outcomes.

Initiatives

4a	Develop an advocacy strategy to ensure all occupied properties have the opportunity to access high-speed internet services.
4b	Develop a comprehensive strategy and operational review to reflect the unique needs and governance of each electoral area.
4c	Explore more comprehensive regional coordination of emergency services, including an assessment of regional hazards, risks and vulnerabilities.
4d	Achieve triple bottom-line sustainable budgets through innovation and streamlining while recognizing the need for infrastructure revitalization and accountability to taxpayers.
4e	Seek 100% participation in the CRD arts function and facilitate a discussion of the region's art facility needs.
4f	Explore how the CRD can best contribute to regional economic development.

Desired Outcome

We envision effective advocacy, coordinated, collaborative and transparent governance of our committees and commissions, and fiscal/corporate accountability.

Next Steps

To achieve our priorities, we commit to work collaboratively with each other and to direct the CRD with clarity and accountability. CRD staff will undertake specific actions that will be outlined in the 2019-2022 Corporate Plan and staff will report back on the progress of these actions at regular intervals. In turn, progress on our priorities and initiatives will be regularly updated to reflect our commitment to continually evolve and adapt.

We will focus on a handful of initiatives at one time, and, as they are completed or well underway, we will address remaining initiatives.

To ensure the Board priorities and initiatives continue to respond to the needs of our communities, we will review the 2019-2022 Board Priorities on an annual basis to confirm or revise the agreed-upon initiatives.

This document is available on **www.crd.bc.ca/plans**.

Key Documents

Making a difference...together

CRD Board Strategic Priorities Progress Report

Community Wellbeing – Transportation & Housing

We envision that residents have access to affordable housing and convenient, green and affordable multi-modal transportation systems that enhance community wellbeing.

On track Delayed Operationalized Not started

Initiatives	Description	Status	Key deliverables as of May 2021
1a Multi-Modal Transportation	Work with government / community partners to plan for and deliver an effective, long-term multi-modal transportation system and to increase use of public transit, walking and cycling.	19 20 21 22	MoTI's South Island Transportation Strategy (SITS) was published in Q3 2020. Staff brought a report on gaps in regional transportation functions and options for next steps to the Committee of the Whole. Based on the gaps, the Board directed that staff prepare a list of transportation priorities for Board prioritization, in close collaboration with regional partners and agencies, and the reinstatement of the Transportation Committee to provide oversight on this work going forward.
1b E&N Corridor	Protect the E&N Corridor as a transportation corridor and participate in a Provincial working group to come to agreement on the future use of the E&N Corridor.	19 20 21 22	Operationalized. SITS considered the E&N Corridor in its recommendations and will continue to protect it as a transportation corridor.
1c Affordable Housing	Create and deliver more affordable housing across the region in a manner aligned with the Regional Growth Strategy in order to address the needs of a diverse and growing population, including vulnerable residents.	19 20 21 22	Housing and Transportation Cost Estimate Study was released in Q3 2020, exploring the impact of transportation costs on household affordability in the region. CRD awarded three Regional Housing Trust Fund grants to support the construction of over 100 affordable rental units in Q4 2020. Through the Regional Housing First program: • 282 new affordable housing units opened for rental in the Westshore (Spencer Close and West Park) in Q4 2020 • 120 new affordable homes opened in Langford (Hockley House) in Q1 2021 Government of Canada announced $13.1M in federal funds for the Rapid Housing Initiative to create up to 91 new affordable homes. CRD received $1.9M in the fall in additional COVID-19 emergency response funding from Reaching Home to support the region's response capacity for those experiencing homelessness.

CRD Board Strategic Priorities Progress Report

Climate Action & Environmental Stewardship

We envision reduced greenhouse gas (GHG) emissions, triple-bottom line solutions and progress on adaptation.

On track | Delayed | Operationalized | Not started

Initiatives	Description	Status	Key Deliverables as of May 2021
2a Climate Emergency	Declare a Climate Emergency and take a leadership role to pursue regional carbon neutrality by 2030.	19 20 21 22	CRD Residential (Energy) Retrofit Acceleration Strategy was completed in Q2 2020, with more rebates offered. Completed the Climate Action Revenue Incentive Program reporting in Q2 2020 and the regional GHG inventory and associated municipal study in Q3 2020. Update of the CRD Climate Action Strategy is underway.
2b GHG from buildings, transportation and solid waste	Work with local governments to further reduce emissions from buildings, transportation and solid waste.	19 20 21 22	Implemented the neighborhood Transition 2050 'Bring It Home 4 Climate' Program to encourage residential energy retrofit in Q4 2020. The program has been extended. Working in partnership with Saanich and Victoria on a social media campaign to increase Electric Vehicle awareness and take-up in the region.
2c Environmental Resource Management	Explore additional opportunities for resource recovery and identify best practices to further reduce waste, increase recycling and find beneficial uses for waste.	19 20 21 22	Completed the community and local government consultation on the draft Solid Waste Management Plan, including targeted engagement with First Nations groups and residents in the Hartland Landfill area. The Board is considering the final draft in May. CRD announced biosolids trucking contract with K'ENES Transportation in Q4 2020. Process started to design and construct a new facility to upgrade the biogas generated at Hartland Landfill to renewable gas. Supply contract with FortisBC to purchase this gas for distribution submitted to BC Utilities Commissions in spring.
2d Regional Parks	Ensure appropriate funding for parks and trails infrastructure, improvements and maintenance by updating the Regional Parks Strategy.	19 20 21 22	Regional Parks 2020 to 2021 Land Acquisition Criteria was approved in Q2 2020. CRD has acquired further parkland in Saanich, Mount Parke and Mount Work Regional Parks. Mountain Biking Guidelines expected in spring 2021. Regional Trails Widening Study received by Board in Q1 2021 and staff directed to conduct public engagement. After a review of the appropriateness of property tax requisition as primary revenue source for Regional Parks operating costs, Board directed staff to consider additional parking revenue options as part of the Regional Parks strategic planning process.
2e Environmental Protection	Develop model bylaws and best practices for use by municipalities and electoral areas.	19 20 21 22	Completed the Region Coastal Flood Inundation Mapping Project in Q3 2020 and the Regional Electric Vehicle Charging Roadmap in Q1 2021. Engaged with the Province on opportunities related to the BC Recycling Regulations amendments.

CRD Board Strategic Priorities Progress Report

First Nations Reconciliation

We envision strong relationships with First Nations based on trust and mutual respect, partnerships and working together on shared goals.

On track Delayed Operationalized Not started

Initiatives	Description	Status	Key Deliverables as of May 2021
3a First Nations Leadership	Look to First Nations for leadership in understanding how to create new regional planning and decision-making systems together on their Traditional Territories.	19 20 21 22	CRD Board approved inclusion of First Nations in regional governance and decision making in Q1 2021. Amendments were approved and made to CRD Procedures Bylaw (to include First Nations Members on CRD Committees), Terms of Reference for various CRD Standing Committees (to allow for First Nation Member participation at their leisure in accordance with CRD Procedures Bylaw) and CRD Board Remuneration and Travel Expense Reimbursement Policy. CRD Board Chair and CRD CAO met with Nations' Chiefs and Council to present proposed changes and receive feedback ahead of amendments being made. Outreach to the Nations to determine their identified elected representatives is ongoing, with orientation to take place once they have been identified.
3b Service Delivery	Seek partnerships, share information and deliver fair and equitable services in working with First Nations on achieving their economic goals.	19 20 21 22	Completed First Nations Economic Development Partnership Model Feasibility Study in Q3 2020. Through the Economic Partnership Model from the Indigenomics Institute, staff are working to establish a First Nations Economic Opportunity Portal, advance procurement opportunities for First Nations, and support First Nations employment through an Indigenous Internship Program. Outreach in Q4 2020 to local First Nations informing them of additional Reaching Home COVID-19 Funding available. To date, three First Nations have projects underway.
3c First Nations Traditional Practices	Work with First Nations on taking care of the land and water while providing space for cultural and ceremonial use, food and medicine harvesting, traditional management practices and reclaiming Indigenous place names.	19 20 21 22	Corporate wide training to support the new Protection and Conservation of Heritage Sites underway. Training will be made available to staff bi-annually going forward. Board approved draft Land Altering Works MOU between WSÁNEC Leadership Council and CRD. Quarterly meetings began in Q4 2020 to review upcoming works taking place in WSÁNEC Territory and receive feedback from the Nations on the proposed works. Engagement and consultations ongoing with First Nations on parks management plans for Mount Work Park and East Sooke Park, water and wastewater service agreements.
3d First Nations Ecological Asset Management	Prepare an ecological asset management plan.	19 20 21 22	Ecological Asset Management Plan project scoping ongoing with multiple CRD divisions. Report expected in Q3 2021.

CRD Board Strategic Priorities Progress Report

Advocacy, Governance & Accountability

We envision effective advocacy, coordinated, collaborative and transparent governance of our committees and commissions, and fiscal/corporate accountability.

On track Delayed Operationalized Not started

Initiatives	Description	Status	Key Deliverables as of May 2021
4a Electoral Area Advocacy	Develop an advocacy strategy to ensure all occupied properties have the opportunity to access high-speed internet services.	19 20 21 22	Engineering firm contracted to advance Phase 2 of the Connectivity Design Plan to create a broadband infrastructure plan for SGI. CRD Board supported two requests by Internet Service Providers for federal funding aimed at improving services.
4b Electoral Area Governance	Develop a comprehensive strategy and operational review to reflect the unique needs and governance of each electoral area (EA).	19 20 21 22	Service Planning and business case modelling underway to create new SGI Transportation service. Contract to develop plan awarded in Q1 2021. SSI Transportation Committee conducted a strategic planning session in Q4 2020 to set direction for annual capital priorities. SSI Water Optimization Study published in Q1 2021.
4c Regional Emergency Management Partnership (REMP)	Explore more comprehensive regional coordination of emergency services, including an assessment of regional hazards, risks and vulnerabilities.	19 20 21 22	SEOC continues to facilitate coordination of actions and resources in the Electoral Areas and regionally. The Corporate Emergency Management Plan has been updated. CRD advocated to CREST to urgently find an alternative method of providing emergency telecommunication in the Juan de Fuca Electoral Area. Public Alert Notification System contract awarded in Q1 2021. EA Volunteer Fire Service Regulatory Review completed in Q1 2021. Direction received to report back on strategies to meet and sustain regulatory compliance.
4d Triple Bottom Line	Achieve triple bottom-line sustainable budgets through innovation and streamlining while recognizing the need for infrastructure revitalization and accountability to taxpayers.	19 20 21 22	Overhaul of service planning process implemented and operationalized. Review of capital reserve balances and funding practices completed Q4 2020, with comparison to other local governments. Work now underway developing guidelines targeted at setting reserve balances and levels of debt to set a standard approach to long-term funding strategies for capital obligations. Government Finance Officers Association US & Canada awarded CRD with this year's Distinguished Budget Presentation Award and the Canadian Award for Financial Reporting.

REPORT TO ELECTORAL AREAS COMMITTEE
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **Appointment of Officers**

ISSUE SUMMARY

This report is to update bylaw enforcement appointments to reflect staff changes and to provide auxiliary relief in the Capital Regional District Bylaw and Animal Care Services Division.

BACKGROUND

Pursuant to Section 233 of the *Local Government Act* and Section 28(3) of the *Offence Act* and in accordance with Capital Regional District Bylaw No. 2681, the Electoral Areas Committee must from time to time make resolutions for persons in new positions.

ALTERNATIVES

Alternative 1
The Electoral Areas Committee recommends to the Capital Regional District Board:
That for the purpose of Section 233 of the *Local Government Act* and Section 28(3) of the *Offence Act* and in accordance with Capital Regional District Bylaw No. 2681, Rick Sutherland, Spencer Navarrete, Morgan Shott, Kim Misick, Jeremy Restall and Barry Holland be appointed as Assistant Bylaw Officers.

Alternative 2
That the Appointment of Officers report be referred back to staff for further information based on Electoral Areas Committee direction.

IMPLICATIONS

Service Delivery Implications
These appointments ensure consistent bylaw enforcement in the CRD service areas.

CONCLUSION

The bylaw enforcement appointments reflect staff changes and provides auxiliary relief in the Capital Regional District Bylaw and Animal Care Services Division.

RECOMMENDATION

The Electoral Areas Committee recommends to the Capital Regional District Board:
That for the purpose of Section 233 of the *Local Government Act* and Section 28(3) of the *Offence Act* and in accordance with Capital Regional District Bylaw No. 2681, Rick Sutherland, Spencer Navarrete, Morgan Shott, Kim Misick, Jeremy Restall and Barry Holland be appointed as Assistant Bylaw Officers.

Submitted by:	Shawn Carby, CD, BHSc, MAL, Senior Manager Protective Services
Concurrence:	Kevin Lorette, P.Eng., MBA, General Manager Planning & Protective Services
Concurrence:	Bob Lapham, MCIP, RPP, Chief Administrative Officer

Making a difference...together

REPORT TO ELECTORAL AREAS COMMITTEE
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **Community Emergency Preparedness Fund: Emergency Operations Centres and Training Grant - Motion of Support**

ISSUE SUMMARY

The Capital Regional District (CRD) is responsible for emergency preparedness in the Electoral Areas (EAs). The CRD is applying to the Union of British Columbia Municipalities (UBCM) for funding to exercise and improve emergency response plans and train EA volunteers. UBCM requires that all grant applications be accompanied by a motion of support from the local government.

BACKGROUND

UBCM provides funding for many community based projects, including projects that support community resiliency and emergency preparedness. A 2021 grant opportunity is available to provide training opportunities for emergency program volunteers in all three EAs. Emergency planning and training exercises will be held with the goal of improving and validating emergency response plans.

In December 2018, the Auditor General for Local Government reviewed CRD's Emergency Program and offered the following recommendation:

> *"The Capital Regional District should consider conducting full-scale and/or larger-scale joint exercises that test the collaboration of all relevant parties involved in responding to a major emergency in the region. Staff should continue completing progressive, smaller, in-house exercises to further increase familiarity with their roles and responsibilities and to validate emergency plans in preparation for the larger scale joint exercise".*

This grant opportunity facilitates meeting this recommendation.

Emergency Operation Centre and Training grant funding would benefit all CRD EA Emergency Programs: Juan de Fuca, Southern Gulf Islands, and Salt Spring Island. The maximum grant amount is $25,000, which permits the CRD to facilitate two full-scale functional emergency exercises in the EAs, including participation from relevant first responder agencies, such as fire departments, police, ambulance, coast guard, search-and-rescue, and BC Ferries. Locations will be finalized upon grant approval.

As part of the application process, UBCM requires a motion of support from the local government to receive and manage grant funding.

ALTERNATIVES

Alternative 1
The Electoral Areas Committee recommends to the Capital Regional District Board:
That the Board support an application to Union of British Columbia Municipalities Community Emergency Preparedness Fund for the Emergency Operations Centres and Training Grant and direct staff to provide overall grant management.

Alternative 2
That staff be directed to rescind the application to UBCM Community Emergency Preparedness Fund for the Emergency Operations Centres and Training Grant.

IMPLICATIONS

Financial Implications
The grant will have no impact on annual Emergency Program budgets, but provides an opportunity for one-time projects that increase community resilience to emergencies.

Operational Implications
Under the *Emergency Program Act*, the CRD is obligated to provide Emergency Management Services to residents. Grants provide opportunity for one-time projects that increase emergency program capacity to support residents impacted by a disaster. Due to the expense and complexity of facilitating successful functional emergency exercises, this grant offers the CRD an important opportunity to provide staff and volunteers with experience.

CONCLUSION

The CRD is responsible for supporting emergency management programs in the EAs. The UBCM Emergency Operation Centres and Training Grant is a key opportunity to improve emergency plans and offer training and development in the EAs.

RECOMMENDATION

The Electoral Areas Committee recommends to the Capital Regional District Board:
That the Board support an application to Union of British Columbia Municipalities Community Emergency Preparedness Fund for the Emergency Operations Centres and Training Grant and direct staff to provide overall grant management.

Submitted by:	Shawn Carby, CD, BHSc, MAL, Senior Manager, Protective Services
Concurrence:	Kevin Lorette, P. Eng., MBA, General Manager, Planning & Protective Services
Concurrence:	Robert Lapham, MCIP, RPP, Chief Administrative Officer

Making a difference...together

REPORT TO ELECTORAL AREAS COMMITTEE
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **Community Resiliency Initiative Grant: FireSmart Economic Recovery Fund**

ISSUE SUMMARY

The Capital Regional District (CRD) provides emergency coordination to member municipalities and electoral areas (EAs). This includes helping communities prepare for wildfire through public education, vegetation management, emergency planning, and cross-agency training. The CRD is applying to the Union of British Columbia Municipalities (UBCM) for funding to increase wildfire resilience in the EAs and to support collaborative FireSmart committee work across the capital region. UBCM requires that all grant applications be accompanied by a motion of support from the local government.

BACKGROUND

UBCM provides funding for a range of community based projects, including wildfire preparedness. A 2021 grant opportunity is available to build local capacity in EAs and support regional coordination amongst municipalities and EAs. The intent of the FireSmart Economic Recovery Fund is to support immediate employment and build local wildfire resiliency. Wildfire preparedness includes all seven FireSmart disciplines: education, vegetation management, legislation and planning, development considerations, interagency cooperation, cross-training, and emergency planning.

This grant opportunity was announced in February 2021. Protective Services staff launched a series of engagements with EA fire departments and the Regional FireSmart Resliency Committee which informed this grant application. The resulting grant application was submitted to UBCM by the March 19 deadline. As part of the application process, UBCM requires a motion of support to receive and manage grant funding.

Fire departments operated by improvement districts and independent societies were eligible to apply for this grant opportunity independently. Protective Services notified all eligible EA departments of the opportunity, encouraged them to apply, and provided guidance during the application process.

The CRD has applied for this grant to improve wildfire resiliency in rural EA communities. Community resiliency will be built through increasing local capacity and collaboration, facilitated by a FireSmart Program Coordinator contract postion. The position would be funded for one year and responsible for coordinating home assessments, establishing FireSmart educational outreach programs, coordinating FireSmart projects, overseeing reporting and information sharing, supporting activities required for FireSmart Canada Neighbourhood Recognition, and related tasks. While the propsed position would report to Protective Services, the work is conducted in and on behalf of EA communities. The ideal candidate would be an experienced resident of the EAs. Further EA employment would be created through FireSmart home assessments and community woody debris disposal events.

The CRD facilitated a Regional FireSmart Resiliency Committee in 2020, as a result of motion 19-146 passed by the Parks and Enviornment committee in February 2019. This group enables regional efficiencies and provides a forum for sharing best practices. The grant project would provide some funding support for future committee meetings and the furthering of action items.

The grant fund requested in the application totals $127,907. Of this, $108,100 is directed to the three EAs: Juan de Fuca, Southern Gulf Islands, and Salt Spring Island. These grant funds would facilitate homeowner risk assessments, public education, first responder collaboration, and increased options for rural woody debris disposal, such as community chipping events. The remaining $19,807 is to provide support for Regional FireSmart Resiliency Committee Coordination.

ALTERNATIVES

Alternative 1
The Electoral Areas Committee recommends to the Capital Regional District Board:
That the Board support an application to the Union of British Columbia Municipalities Community Resiliency Initiative Fund for the FireSmart Economic Recovery Fund and direct staff to provide overall grant management.

Alternative 2
That staff be directed to rescind the grant application to the Union of British Columbia Municipalities Community Resiliency Initiative Fund for the FireSmart Economic Recovery Fund.

IMPLICATIONS

Financial Implications
The grant will have no impact on annual Fire Department or Emergency Program budgets, but provides an opportunity for one-time projects that increase community resilience to wildfire, such as homeowner education and chipping events in addition to an employment opportunity to support the community during COVID.

CONCLUSION

The CRD is responsible for community wildfire preparedness in its EAs and coordinates with member municipalities. The UBCM FireSmart Economic Recovery funding stream is an important opportunity to increase wildfire resilience and provide employment opportunity in the Capital Region. If supported by the Board, UBCM will consider the CRD's grant application.

RECOMMENDATION

The Electoral Areas Committee recommends to the Capital Regional District Board:
That the Board support an application to the Union of British Columbia Municipalities Community Resiliency Initiative Fund for the FireSmart Economic Recovery Fund and direct staff to provide overall grant management.

ATTACHMENT

Appendix A: UBCM FireSmart Economic Recovery Fund Application

Community Resiliency Investment Program

2021 FireSmart Economic Recovery Fund

Application Form

Please complete and return the application form and all required attachments by March 19, 2021.

All questions are required to be answered by typing directly in this form. If you have any questions, contact cri-swpi@ubcm.ca or (250) 356-2947.

SECTION 1: Applicant Information	**CRI-** *(administrative use only)*
Name of Eligible Applicant: Capital Regional District	Complete Mailing Address: PO Box 1000 Victoria, BC V8W 2S6
Contact Person*: Jonathan Reimer	Position: Manager, EA Fire and Emergency Programs
Phone: 250-360-3137	E-mail: jreimer@crd.bc.ca

** Contact person must be an authorized representative of the applicant (i.e. staff member or elected official).*

SECTION 2: Type of Application – Please identify the type of application you are submitting and provide the required information. Refer to Section 4 in the Program & Application Guide for eligibility.

1. **Type of Application** (select one only)**:**
   - ☒ Single applicant
   - ☐ Regional Project. Please list all of the partnering eligible applicants included in this application:

2. **Rationale for Regional Projects** (only)**.** Please provide a rationale for submitting a regional project application and describe how this approach will support cost-efficiencies in the total funding request.

SECTION 3: Project Summary

3. **Name of the Project:**

   Capital Regional FireSmart Economic Recovery

4. Project Summary. Please provide a summary of your project in 150 words or less.

Capital Regional District (CRD) is seeking to provide greater regional FireSmart coordination and improved resources to Electoral Area Residents. The CRD has 13 municipalities with a range of wildfire urban interface and intermix hazards. To increase regional effectiveness, the CRD launched a Regional FireSmart Resliency Committee in late 2020. This project would enable coordination and facilitation of 12 committee meetings and the furthering of action items.

The CRD is developing sustained local resiliency in our rural Electoral Area communities, home to over 20,000 residents who where disporportunately impacted by the COVID-19 Pandemic. Community Resliency will be facilitated through the creation of local capacity and new employment, namely a FireSmart Program Coordinator. The position will be responsible for coordinating home assessments, establishing FireSmart educational outreach programs, coordinating FireSmart projects, overseeing reporting and information sharing, supporting activities required for FireSmart Canada Neighbourhood Recognition, and related tasks.

5. Fire Centre (use check boxes). Indicate which Fire Centre the proposed activities are located in (check all that apply).

☐ Cariboo Fire Centre	☐ Northwest Fire Centre
☒ Coastal Fire Centre	☐ Prince George Fire Centre
☐ Kamloops Fire Centre	☐ Southeast Fire Centre

6. Project Cost & Funding Request:

Total project cost: $127,907

Total project funding request: $127,907

Have you applied for or received funding for this project from other sources? If yes, please provide details below.

No.

7. Engagement Prior to Submitting an Application. If you engaged with a BCWS Wildfire Prevention Officer or FNESS Fuel Management Specialist before submitting this application, please indicate the name(s) and title(s) of the person(s) you engaged with and describe the extent of that engagement.

Yes, this application is the result of engagement with BCWS through multiple phone calls with CFC Wildfire Prevention Officers Tony Botica and Jessica Duncan

SECTION 4: Detailed Project Information

8. Proposed Activities for Job Creation for FireSmart Projects & Fuel Management Demonstration Projects

Please refer to Table 1 in the Program & Application Guide for eligible activities and complete each section only if you are applying for funding in that category. For each, please describe how the proposed activities will support local recovery from the economic impacts of the COVID-19 pandemic.

Note that the purchase of FireSmart supplies and equipment required for FireSmart projects or fuel management demonstration projects is limited to no more than $3,000 of the total grant request.

a) Fire Smart Projects for Residential Areas. Refer to Appendix 2 in the Program & Application Guide for additional information.

Detailed proposed activities and expenditures, limited to labour costs: $27,500

Estimated per person days for this activity, including calculation: Est. 1100 assessments * 0.5 hours = 550 hrs x 7 hrs/day = 78 person days

Other proposed outcomes and performance measures: Proposed measurable: Baseline assessment for communities and neighbours. Future outcome: quantifiable improvement in FireSmart ratings.

b) FireSmart Projects for Farms & Ranches. Refer to Appendix 2 in the Program & Application Guide for addition information.

Detailed proposed activities and expenditures, limited to labour costs:

Estimated per person days for this activity, including calculation:

Other proposed outcomes and performance measures:

FireSmart Projects for Community Assets. The maximum funding request for building materials and labour is $50,000 per eligible structure. Refer to Appendix 3 in the Program & Application Guide for additional information.

Detailed proposed activities and expenditures, including labour and building material costs:

Estimated per person days for this activity, including calculation:

Other proposed outcomes and performance measures:

c) FireSmart Projects for Critical Infrastructure. The maximum funding request for building materials and labour is $50,000 per eligible structure. Refer to Appendix 3 in the Program & Application Guide for additional information.

Detailed proposed activities and expenditures, including labour and building material costs:

Estimated per person days for this activity, including calculation:

Other proposed outcomes and performance measures:

d) Fuel Management Demonstration Projects. All fuel management demonstration projects are required to have a completed prescription and to include educational signage. Refer to Appendix 4 in the Program & Application Guide for more information.

Description of project location, fuel reduction objectvies, treatment type (mechanical vs manual) including proposed hectares, visibility and accessibility, and estimated number of visitors per year:

Detailed proposed activities and expenditures:

- Prescription development:
- Operational treatment:
- Education and media (e.g. signage etc.):

Estimated per person days for this activity, including calculation:

Other proposed outcomes and performance measures:

9. Proposed Activities for Job Creation for Sustained Wildfire Resiliency

Please refer to Table 1 in the Program & Application Guide for eligible activities and complete this section only if you are applying for funding in this category. *Please describe how the proposed activities will support local recovery from the economic impacts of the COVID-19 pandemic.*

Detailed proposed activities and expenditures: FireSmart Program Coordinator position will be responsible for coordinating home assessments, establishing FireSmart educational outreach programs, coordinating FireSmart projects like providing community wood waste disposal events, forming Community Resiliency Committee, overseeing reporting and information sharing, supporting activities required for FireSmart Canada Neighbourhood Recognition, and related tasks.

Community FireSmart Resiliency Committee Coordination will administer CFRC meetings, minutes and agendas, determine topics, set meetings and further action items for the Committee, share information with the BC FireSmart Committee, and related activities.

Estimated per person days for this activity, including calculation: FireSmart Program Coordinator: 52 weeks x 5 days a week = 260 person days. Community FireSmart Resiliency Committee Coordination: 174 hours x 7hrs/day = 25 person days

Other proposed outcomes and performance measures: There are currently little to no FireSmart program in the most of the 12 communities in the Capital Regional Electoral Areas, and volunteer fire departments have limited capacity to launch these initiatives. This funding would enable the Regional District to establish an sustainable Electoral Area FireSmart program, including formation of new community resliency committees and the delivery of public educational campaigns and stakeholder coordination events. Outcome will be increased public awareness and sense of control over their exposure to wildfire emergencies.

10. Proposed Activities for Skills Development that Leads to Employment

Please refer to Table 1 in the Program & Application Guide for eligible activities and complete this section only if you are applying for funding in this category. *Please describe how the proposed activities will support local recovery from the economic impacts of the COVID-19 pandemic.*

Detailed proposed activities and expenditures:

Estimated per person days for this activity, including calculation:

Other proposed outcomes and performance measures:

11. Total per person days per project. Please include the proposed per person days for the overall project.

260 + 25 + 78 = 363 person days

12. Capacity Building. Please describe how the proposed activities will lead to increased capacity in your community. This may include information on increased employability of local populations, improved capacity for future wildfire risk reduction activities, etc.

FireSmart Program Coordinator is new employement oppertunity that will build project management and stakeholder collaboration skills. This position will collaborate closely with the existing Community Wildfire Resiliency Plan update project to identify local populations disporportionately impacted by COVID-19, such as First Nations, who could benefit socially and

economically from an engagement with community FireSmart Programs. These conversations are taking place at community- and regional-level FireSmart Resiliency Committees.

13. Rationale. What rationale or evidence is there for undertaking the proposed project? This may include information on local wildfire risk, economic impact of the COVID-19 pandemic, etc.

Best practices from North American jurisdictions have demonstrated the critical importance of unified messaging and homeowners preparedness and mitigation. The balkanization of the Capital Region has lead to difficulty coordinating wildfire prevention, mitigtation, and response operations. Coordination is critical to the success of these programs.

Remote CRD rural communities are often accessible by ferry only, are closely integrated with neighnouring First Nations, and frequently represent poorer and older demographics than the general population. This means the communities were disproportiately impacted by COVID-19 pandemic and also have limited resources to build robust and sustainable FireSmart programs. Particular struggles including training qualified personnel and capacity to manage coarse woody debris on private lands. Much of the rural Electoral Areas are in areas of extreme fire hazard, such as Jordan River and SaltSpring Island.

14. Increasing Wildfire Resiliency. Please indicate how the proposed project will increase community wildfire resiliency.

This project addresses the two major risks that the Capital Region faces in regards to wildfire. First: the capital region includes 13 municipalities and 3 electoral areas, which has created public confusion, a diversity of regulatory approaches, and a lack of coordination in emergency messaging and response agencies. These issues will be addressed through the Regional FireSmart Resiliency Committee. Secondly, our 12 rural communities are geographically isolated and have limited resources to build community resliency, understand wildfire risk, and manage coarse woody debris. These issues will be addressed through the creation of a FireSmart Program Coordinator role to administrate rural programs.

15. Partnerships & Collaboration. Please identify any other authorities you will collaborate with on the proposed project (e.g. community or resident organizations, First Nation or Indigenous organizations, or other local governments) and outline how you intend to work together.

The Regional FireSmart Resiliency Committee includes representatives from North Saanich, Sidney, Central Saanich, Saanich, Victoria, Oak Bay, Esquimalt, Langford, Colwood, Metchosin, Saanich, and has invited representatives from Beecher Bay FN, T-souke FN, and Pacheedaht FN. The FireSmart Program Coordinator will be meet frequently with land manager representatives such as Parks Canada, Provincial Parks, private timber companies, BC Wildfire, Beecher Bay FN, T-souke FN, and Pacheedaht FN.

16. Additional Information. Please share any other information you think may help support your submission**.**

SECTION 5: Application Check List. Refer to Section 7 of the Program & Application Guide for more information.

☒ Application Form.

☒ Detailed budget for each component identified in the application. This must clearly identify the funding request, applicant contribution, and/or other grant funding.
☒ Resolution or motion indicating support for the current proposed activities and willingness to provide overall grant management.
☐ For FireSmart projects for community assets only: evidence that the building is owned by a legally incorporated society-run fire department, local non-profit group, or community association.
☐ For fuel management demonstration projects only: PDF map and Google Earth compatible KML file, at appropriate scale, outlining the location, proposed treatments units, and if not phased, the signed and sealed prescription.
☐ For regional projects only: Resolutin or motion from each partnering community that clearly states approval for the applicant to apply for, receive and manage the grant funding on their behalf
☐ Legally incorporated society-run fire department applicants only: Current Certificate of Good Standing
Submit the completed Application Form and all required related attachments as e-mail attachments to cri-swpi@ubcm.ca and note "**2021 CRI FERF**" in the subject line. Submit your application as either a Word or PDF file(s). If you submit by e-mail, hardcopies and/or additional copies of the application are not required.

SECTION 6: Signature – Applications are required to be signed by an authorized representative of the applicant. Please note all application materials will be shared with the Province of BC and the BC FireSmart Committee.	
I certify that: (1) to the best of my knowledge, all information is accurate and (2) the area covered by the approved project is within the applicant's jurisdiction (or appropriate approvals are in place).	
Name: Jonathan Reimer	Title: Manager, EA Fire and Emergency Programs
Signature*: *An electronic or original signature is required.*	Date: March 18, 2021

** Signatory must be an authorized representative of the applicant (i.e. staff member or elected official).*

Making a difference...together

REPORT TO THE ELECTORAL AREAS COMMITTEE
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **2020 Electoral Areas Grants-in-Aid Annual Report**

ISSUE SUMMARY

This report provides a summary of the Electoral Areas (EA) Grants-in-Aid (GIA) activity for the period of January 1, 2020, to December 31, 2020.

BACKGROUND

Under authority of the Supplementary Letters Patent, the Capital Regional District (CRD) provides one-time grants through tax requisition to community non-profit organizations that deliver projects in the Electoral Areas (EA): Juan de Fuca (JDF), Salt Spring Island (SSI), and Southern Gulf Islands (SGI). Applications are accepted on a rolling basis and are reviewed continually throughout the year. Appendix A details GIA applications that were awarded in 2020.

EA Directors support eligible applications. Projects are selected based upon their demonstrated benefit to the community and alignment with GIA guidelines. The purpose of GIA is to fund special projects and activities that go beyond the scope of CRD services, and are not already funded by requisition.

IMPLICATIONS

Financial Implications
Since GIA is available to fund one-time requests, community organizations were able to access GIA funds to address one-time impacts driven by COVID-19. This provided much needed support to organizations who were impacted by COVID-19. Also in the year, two approved projects (events) were cancelled and funds returned as a result of COVID-19 health guidelines. Out of the 30 projects awarded, 6 projects were COVID-19 related.

GIA Activity Overview

The following table provides a summary of grants awarded to EAs in 2020, with a comparison to projects funded in 2019.

Table 1: GIA Awarded for 2020

EA	2020			2019		
	Budget	# of Applications	Amount Awarded	Budget	# of Applications	Amount Awarded
JDF	$40,000	2	$3,500	$40,000	8	$9,000
SSI	$43,000	10	$36,350	$45,000	13	$45,000
SGI	$60,000	16	$59,905	$85,000	23	$84,895
Total	**$143,000**	**28[1]**	**$99,755**	**$170,000**	**44**	**$138,895**

[1]This number does not include the two projects that were cancelled and GIA funds returned in 2020.

CONCLUSION

Grants-in-Aid are available to non-profit agencies and societies who put forth projects in the Electoral Areas. Throughout the year, community organizations submit requests for funding for one-time projects and special events. EA Directors review support GIA requests and staff assess applications using GIA guidelines to ensure they meet eligibility criteria.

RECOMMENDATION

The Electoral Areas Committee recommends to the Capital Regional District Board:
That the 2020 Electoral Areas Grants-in-Aid Annual Report be received for information.

Submitted by:	Lia Xu, MSc., CPA, CGA, Finance Manager, Local Services
Concurrence:	Nelson Chan, MBA, FCPA, FCMA, Chief Financial Officer
Concurrence:	Robert Lapham, MCIP, RPP, Chief Administrative Officer

Making a difference...together

REPORT TO ELECTORAL AREAS COMMITTEE
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **2020 Community Works Fund Annual Report**

ISSUE SUMMARY

This report provides a summary of the Community Works Fund (CWF) activity for the period of January 1, 2020 to December 31, 2020.

BACKGROUND

Community Works Funds are provided under the Administrative Agreement of the Federal Gas Tax Fund in BC (Gas Tax Agreement) with funding distributed to local governments based on population. The Union of BC Municipalities (UBCM) is the program administrator. The CRD has been recipients of CWF under two agreements from 2006–2013 and 2014–2024. Appendix A provides a current summary of funds and balances.

CWF received by the District is re-allocated to the three Electoral Areas (EA): Juan de Fuca (JDF), Salt Spring Island (SSI), and Southern Gulf Islands (SGI) on a per capita basis. To distribute CWF funding, the CRD reviews applications from third parties and CRD services in their respective EA throughout the year. Applications are subject to meeting the program's eligibility criteria, availability of funds, and must receive EA Director support. CWF funds are not required to be spent in the year they are received.

IMPLICATIONS

Financial Implications

To help communities recover from COVID-19, in 2020 the federal government accelerated payment and provided funds in a single payment rather than the customary two payments.

Grants Activity Overview
Tables 1 and 2 provide an overview of CWF allocations and activity to EAs in 2020 comparative to 2019. Appendix B details CWF applications that were awarded in 2020. Appendix C provides a further breakdown of CWF awarded by eligible project category and recipient type.

Table 1: Distribution of CWF Funds to EAs

EA	Population	%	2020 Allocation	2019 Allocation
JDF	4,860	24%	$271,227	$548,026
SSI	10,557	52%	$589,165	$1,190,436
SGI	4,732	24%	$244,083	$533,593
Total	**20,149[1]**	**100%**	**$1,104,475**	**$2,272,055[2]**

[1] These numbers are derived using 2016 population statistics.
[2] 2019 CWF funding included two installments and a bonus payment.

Table 2: CWF Funding Awarded to Projects

EA	2020		2019	
	# of Applications	Amount Awarded	# of Applications	Amount Awarded
JDF	11	$722,555	6	$156,500
SSI	8	$436,400	11	$559,734
SGI	8	$244,449	15	$420,889
Total	**27**	**$1,403,404**	**32**	**$1,137,123**

CONCLUSION

The 2020 Community Works Fund Annual Report provides a summary of funding activity in 2020. CRD services and eligible third parties can access CWF funding through an application process. Funds are used within the framework that sets out project categories, eligibility, and requirements.

RECOMMENDATION

The Electoral Areas Committee recommends to the Capital Regional District Board:
That the 2020 Community Works Fund Annual Report be received for information.

REPORT TO ELECTORAL AREAS COMMITTEE
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **AAP for Bylaw 4408 – SGI Harbours Service Loan Authorization**

ISSUE SUMMARY

To conduct an Alternate Approval Process for Bylaw No. 4408 by confirming the deadline to receive elector responses, establish the total number of electors, and approve the Notice of Alternative Approval Process and the Electoral Response Form.

BACKGROUND

At its meeting held March 24, 2021, the CRD Board gave three readings to the following bylaw attached as Appendix A:

- Bylaw No. 4408, "Southern Gulf Islands Harbours Service Loan Authorization Bylaw No. 1, 2021" to authorize the borrowing of one million one hundred eighty thousand dollars ($1,180,000) for Southern Gulf Islands harbours improvements.

The bylaw obtained Inspector of Municipalities approval on April 15, 2021. The next step prior to adopting the bylaw is to obtain elector assent. The CRD Board directed elector assent be obtained via alternate approval process (AAP) for the electors of Southern Gulf Islands Electoral Area.

In order to conduct the AAP, the attached Notice (Appendix B) and Elector Response Form (Appendix C) have been prepared in accordance with the applicable sections of the *Local Government Act* and the *Community Charter*. With an AAP, the Board may proceed with adopting the bylaw unless more than 10% of electors indicate that the Board must obtain the assent of the electors by way of assent voting (referendum). The proposed deadline to receive elector responses is July 5, 2021.

The total number of registered resident electors and registered non-resident property electors is determined to be 5224, of which 10% is 523 electors.

ALTERNATIVES

Alternative 1

1) That in accordance with section 86(3) of the *Community Charter*, the date of July 5, 2021 be confirmed as the deadline by which electoral response, under the Alternate Approval process for CRD Bylaw No. 4408, must be submitted to the Capital Regional District by the qualified electors of Southern Gulf Islands Electoral Area;
2) That the attached Notice of Alternative Approval Process (Appendix B) and the Elector Response Form (Appendix C) be approved; and
3) That the total number of registered electors within the service area is 5224 and that 10% of that number is 523 electors.

Alternative 2
That this report be referred back to staff for additional information.

CONCLUSION

The CRD Board has previously approved obtaining elector approval for an Alternative Approval Process for Bylaw No. 4408 to borrow one million one hundred eighty thousand dollars ($1,180,000) for Southern Gulf Islands harbours improvements. To conduct the Alternative Approval Process, the Board has to confirm the deadline to receive elector responses, establish the number of electors, and approve the Notice of Alternative Approval Process and the Elector Response Form.

RECOMMENDATION

1) That in accordance with section 86(3) of the Community Charter, the date of July 5, 2021 be confirmed as the deadline by which electoral response, under the Alternate Approval process for CRD Bylaw No. 4408, must be submitted to the Capital Regional District by the qualified electors of Southern Gulf Islands Electoral Area;
2) That the attached Notice of Alternative Approval Process (Appendix B) and the Elector Response Form (Appendix C) be approved; and
3) That the total number of registered electors within the service area is 5224 and that 10% of that number is 523 electors.

Appendix C: Elector Response Form

CAPITAL REGIONAL DISTRICT

BYLAW NO. 4408

****

A BYLAW TO AUTHORIZE THE BORROWING OF ONE MILLION ONE HUNDRED EIGHTY THOUSAND DOLLARS ($1,180,000) FOR SOUTHERN GULF ISLANDS HARBOURS IMPROVEMENTS

****

WHEREAS:

A. Under Bylaw No. 2614, "Small Craft Harbour Facilities Local Service Establishment Bylaw No. 1, 1998", the Capital Regional District established a local service for the acquisition and operation of small craft harbor facilities to serve the Southern Gulf Islands Electoral Area;

B. It is deemed desirable to fund works relating to the designing and constructing of harbour improvements, and the work shall include capital renewal and upgrade of the Retreat Cove, Horton Bay, Miners Bay Upgrades, Port Washington, Swartz Bay dock facilities, as well as supply and construction of an additional float for the Piers Island dock facility, and construction of the Anson Road dock facility as well as other related works, facilities and equipment purchases;

C. The estimated cost of the Projects, including expenses incidental thereto to be funded from debt servicing, is the sum of One Million One Hundred Eighty Thousand Dollars ($1,180,000);

D. Pursuant to section 407 of the *Local Government Act,* participating area approval is required and shall be obtained by alternative approval process under section 345 of the *Local Government Act*;

E. The approval of the Inspector of Municipalities is required under section 403 of the *Local Government Act*; and

F. The financing is to be undertaken by the Municipal Finance Authority of British Columbia

NOW THEREFORE the Board of the Capital Regional District in open meeting assembled enacts as follows:

1. The Board is hereby empowered and authorized to undertake and carry out or cause to be carried out the planning, study, design, equipment purchase and construction of works related to the provision of small craft harbor facilities, including, among other related works, capital renewal and upgrade of the Retreat Cove, Horton Bay, Miners Bay Upgrades, Port Washington, and Swartz Bay dock facilities, as well as supply and construction of an additional float for the Piers Island dock facility, and construction of the Anson Road dock facility and to do all things necessary in connection therewith and without limiting the generality of the foregoing:

   (a) to borrow upon the credit of the Capital Regional District a sum not exceeding One Million One Hundred Eighty Thousand Dollars ($1,180,000); and

   (b) to acquire and dispose of all such real property, easements, rights-of-way, leases,

licenses, rights or authorities as may be requisite or desirable for or in connection with the planning, study, design and construction of harbour systems and all related ancillary works, studies and equipment deemed necessary in connection with the Southern Gulf Islands Harbours Improvements.

2. The maximum term for which debentures may be issued to secure the debt intended to be created by this bylaw is twenty years.

3. This Bylaw may be cited as the "Southern Gulf Islands Harbours Loan Authorization Bylaw No. 1, 2021".

NOTICE TO ELECTORS
WITHIN THE SOUTHERN GULF ISLANDS ELECTORAL AREA

Alternative Approval Process for Bylaw No. 4408
Borrowing for Improvements to Southern Gulf Islands Small Craft Harbour Facilities

Notice is hereby given that the Board of Directors of the Capital Regional District ("CRD") proposes to adopt:

- Bylaw No. 4408, “Southern Gulf Islands Harbours Service Loan Authorization Bylaw No. 1, 2021” to authorize the borrowing of one million one hundred eighty thousand dollars ($1,180,000) for improvements to the Southern Gulf Islands small craft harbour facilities.

The intent of Bylaw No. 4408 is to authorize the borrowing of $1,180,000 over 20 years to fund improvements within the Small Craft Harbour Facilities Local Service Area in the Southern Gulf Islands Electoral Area in the Capital Regional District.

Take further notice that the CRD may proceed with Bylaw No. 4408 unless at least 523 electors within the Southern Gulf Islands Electoral Area indicate, by signing the elector response form, that the Board must obtain the assent of the electors by way of an assent vote (referendum) before proceeding to adopt Bylaw No. 4408.

The elector response must be in the form as established by the CRD and is available from the CRD on request or from the CRD website. The only persons entitled to sign elector response forms are electors of the area to which the alternative approval process opportunity applies. The Alternative Approval Process opportunity applies to electors within the Small Craft Harbour Facilities Local Service Area which is comprised of all the Southern Gulf Islands Electoral Area in the Capital Regional District.

The deadline for delivering the original signed elector response forms, in relation to Bylaw No. 4408, to the CRD is **4:00 pm on Monday, July 5, 2021**. Forms must be received by the deadline to be counted.

The CRD has determined that the total number of electors within the service area is 5224 and that 10% of that number or 523 electors must submit elector response forms to prevent the CRD from enacting Bylaw No. 4408 without the assent of the electors by referendum.

Questions regarding the proposed Southern Gulf Islands harbours improvement may be directed to Dale Puskas, Manager, Capital Projects, 479 Island Hwy, Victoria, BC, 250.474.9648, dpuskas@crd.bc.ca, from 8:30 am to 4:30 pm, Monday to Friday (excluding statutory holidays) from the date of this notice until July 5, 2021.

Qualifications for Resident and Non-Resident Property Electors

Resident Elector*:* You are entitled to submit an elector response form as a Resident Elector if you are 18 years or older on the date of submission of the elector response form, are a Canadian citizen, have resided in British Columbia for 6 months and in the Southern Gulf Islands Electoral Area for at least 30 days prior to signing the elector response form.

Non-Resident Property Elector*:* You may submit an elector response form as a Non-Resident Property Elector if you are 18 years or older on the date of submission of the elector response form, are

a Canadian citizen, have resided in British Columbia for 6 months, have owned and held registered title to property in the Southern Gulf Islands Electoral Area for 30 days and do NOT qualify as a Resident Elector. If there is more than one registered owner of the property (either as joint tenants or tenants in common) only one individual may, with the written consent of the majority, submit an elector response form.

To obtain an elector response form, or for questions about the alternative approval process, contact CRD Legislative Services, PO Box 1000, 625 Fisgard Street, 5th Floor, Victoria, BC V8W 2S6, email legserv@crd.bc.ca, telephone 250.360.3127 or toll free 1.800.663.4425 local 3127 from 8:30 am to 4:30 pm, Monday to Friday (excluding statutory holidays).

A copy of the elector response form may be downloaded from: www.crd.bc.ca/SGIHarboursAAP

Elector response forms, a copy of Bylaw No. 4408, and a copy of this Notice may be inspected during regular office hours, 8:30 am to 4:30 pm, Monday to Friday (excluding statutory holidays) from the date of this notice until July 5, 2021 at the following CRD locations:

- CRD headquarters, 625 Fisgard Street, Victoria
- on the CRD website: www.crd.bc.ca/SGIHarboursAAP

Given under my hand at Victoria, BC this th day of May, 2021

ELECTOR RESPONSE FORM

Appendix C

Alternative Approval Process for Bylaw No. 4408 – to authorize the borrowing of one million one hundred eighty thousand dollars ($1,180,000) to fund improvements to Southern Gulf Islands Small Craft Harbour Facilities.

By completing this elector response form I, the undersigned elector, residing or owning real property within the Southern Gulf Islands Electoral Area, as defined below, of the Capital Regional District ("CRD"), do hereby present my name on this elector response form for purposes of **OPPOSING** the CRD adopting Bylaw No. 4408, to authorize the borrowing of $1,180,000 over 20 years to fund harbour improvements in the Southern Gulf Islands Small Craft Harbour Facilities Service, unless a vote is held.

I acknowledge that I am a person who would otherwise be entitled to register and vote in respect of this matter, had the assent of the electors by voting been required. I hereby certify that:

1. I am 18 years of age or older;
2. I am a Canadian citizen;
3. I have lived in British Columbia for at least 6 months immediately before signing this elector response form;
4. I have lived in the Southern Gulf Islands Electoral Area of the CRD as defined below for at least 30 days before signing this elector response form;
5. In the case of a Non-Resident Property Elector:
   a) I am not entitled to vote as a Resident Elector in the CRD for purposes of this matter;
   b) I have been a registered owner of real property in the Southern Gulf Islands Electoral Area of the CRD as defined below for at least 30 days before signing this elector response form;
   c) I acknowledge that I may sign this elector response form on behalf of only one property that I own in the Regional District;
   d) If there is more than one individual who is the registered owner of the property, only one of those individuals may sign this elector response form in relation to the property, assuming the Non-Resident Property Elector has the written consent of the number of individuals who, together with the person signing this elector response form constitutes a majority of the registered owners.
   e) The only persons who are registered owners of the real property are individuals who do not hold the property in trust for a corporation or another trust.
6. I am not disqualified from voting under the *Local Government Act* or any other enactment or otherwise disqualified by law from voting.

The Southern Gulf Islands Small Craft Harbour Facilities Local Service area is comprised of all the **Southern Gulf Islands Electoral Area** in the Capital Regional District.

I understand and acknowledge that I may not sign an elector response form against Bylaw No. 4408 more than once and may not withdraw my name from an elector response form after **July 5, 2021.** I understand and acknowledge that this elector response form must be received by the CRD no later than **4:00 pm on July 5, 2021.** In an effort to obtain signatures with respect to this matter, I declare that I have not knowingly made any false or misleading statements to another person with respect to this elector response form, action or other matter to which this elector response form relates.

Signed original elector response forms must be returned to the CRD, from 8:30 am to 4:30 pm, Monday to Friday (excluding statutory holidays), on or before 4:00 pm on Monday, July 5, 2021 at the following CRD office location: Legislative Services, 625 Fisgard Street, 5th Floor, PO Box 1000, Victoria, BC, V8W 2S6.

FULL NAME OF ELECTOR (please print):	
FULL RESIDENTIAL ADDRESS OF ELECTOR Street Address including Town/City **(please print):**	
FOR NON-RESDIENT PROPERTY ELECTOR Address of Property in CRD service area **(please print):**	
SIGNATURE OF ELECTOR:	

Section 86(7) of the Community Charter requires the elector's full name and residential address or the address of the property in relation to which the person is entitled to register as a Non-Resident Property Elector in order for this response form to be counted.

REPORT TO ELECTORAL AREAS COMMITTEE
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT Southern Gulf Islands Community Economic Sustainability Commission Bylaw Amendment

ISSUE SUMMARY

To consider a request by the Southern Gulf Islands Community Economic Sustainability Commission (CESC) to amend Bylaw 3803 to add up to four (4) commissioners and increase the number of commissioners from five (5) to a maximum of nine (9).

BACKGROUND

At the April 20, 2021 meeting of the CESC, the following motion was carried:

> **MOVED** by Commissioner Hoebel, Commissioner Brent **SECONDED** that the CESC requests the Electoral Area Director request the CRD board amend the bylaw to allow for the appointment of four additional commissioners, who would be commissioners at large.

The SGI CESC was established in 2011 through Bylaw No. 3803 as an advisory committee of the CRD (Appendix A). The CESC is comprised of the Electoral Area Director or Alternate and a member representing Galiano Island, Mayne Island, Pender Islands and Saturna Island. Administration support is provided by the Assistant to Electoral Area Director, the CRD Manager for Service Delivery in the Southern Gulf Islands and the General Manager, Corporate Services.

According to the commission bylaw (Bylaw No. 3803), the CESC is an advisory commission that should work towards achieving a resilient and sustainable local economy that improves and maintains the SGI's economic prosperity, social equity, and environmental quality. The Commission is to assist in preserving and strengthening existing business, attracting new business, and coordinating local economic development initiatives that contribute to economic prosperity, social equity, and environmental quality.

The Commission has indicated an interest in broadening the diversity of its membership to bring a greater range of perspectives to its work. It was discussed that having more voices around the table would deepen the understanding of the region's economic sustainability and increase the accountability of the Commissions' deliberations.

The Commission has requested the membership be increased from five (5) to a maximum of nine (9) commissioners, with up to four (4) additional members to be considered "commissioners at large." The commissioners at large would represent a regional perspective in addition to the Regional Director and the existing four members that are appointed as representatives of each of Mayne, Galiano, Saturna, and Pender Islands.

The Commission has also indicated it would be beneficial to have flexibility in the term of the appointments, so these additional commissioners could be appointed for one or two year terms. This would enable those with specific expertise to be appointed to support a special project for a shorter term.

ALTERNATIVES

Alternative 1:

The Electoral Areas Committee recommends to the Capital Regional District Board:

1. That staff be directed to report back with amendments to Bylaw 3038, the "Southern Gulf Islands Community Economic Sustainability Commission Bylaw No. 1, 2012" to increase the number of commissioners from five (5) to nine (9), with the additional members considered commissioners at large to represent the Southern Gulf Islands Electoral Area as a whole, and to enable the commissioners at large to be appointed for one (1) or two (2) year terms.

Alternative 2:

That the Electoral Areas Committee request staff report back with additional information.

IMPLICATIONS

This request supports CRD Board priorities and the corporate plan priorities for Advocacy, Governance & Accountability.

The addition of commissioners at large will broaden the diversity of voices and allow different perspectives to inform the work of the CESC. Flexibility in the term of appointments will allow individuals with specific expertise to be appointment for shorter terms to serve special projects.

Administratively, this request will increase the number of appointments that require advertising and tracking, but does not represent a significant increase in work load.

CONCLUSION

The request by the Southern Gulf Islands Community Economic Sustainability Commission (CESC) to amend establishing Bylaw 3803 to increase the number of commissioners from five (5) to nine (9), will improve governance in the SGI EA. An increase in the number of commissioners to represent SGI's economic interests will bring a greater range of perspectives and broaden the diversity of deliberations of the CESC.

RECOMMENDATIONS

The Electoral Areas Committee recommends to the Capital Regional District Board:

That staff be directed to report back with amendments to Bylaw 3038, the "Southern Gulf Islands Community Economic Sustainability Commission Bylaw No. 1, 2012" to increase the number of commissioners from five (5) to nine (9), with the additional members considered commissioners at large to represent the Southern Gulf Islands Electoral Area as a whole, and to enable the commissioners at large to be appointed for one (1) or two (2) year terms.

CAPITAL REGIONAL DISTRICT

BYLAW NO. 3803

****

A BYLAW TO ESTABLISH A COMMUNITY ECONOMIC DEVELOPMENT COMMISSION FOR THE SOUTHERN GULF ISLANDS ELECTORAL AREA

****

CONSOLIDATED FOR PUBLIC CONVENIENCE

With Bylaw No. 4072

WHEREAS:

A. Supplementary Letters Patent dated the 7th day of June 1979 and Bylaw No. 1824 cited as the "Economic Development Commission Establishing Bylaw No. 1, 1990" provides that the Regional Board, may, by bylaw, establish an economic development commission;

B. The Southern Gulf Islands Electoral Area Director wishes to establish a Community Economic Development Commission for the Southern Gulf Islands;

C. The Commission may wish to work cooperatively with adjacent local governments on economic development projects;

D. Section 774.2 of the *Local Government Act* provides the Capital Regional District with the authority to continue to offer an economic development service.

NOW THEREFORE the Board of the Capital Regional District in open meeting assembled enacts as follows:

1. COMMISSION OBJECTIVES

(a) The Commission will work toward achieving a resilient and sustainable local economy that improves and maintains the Southern Gulf Islands' economic prosperity, social equity, and environmental quality;

(b) The Commission will assist in preserving and strengthening existing business, attracting new business, and coordinating local economic development initiatives that contribute to economic prosperity, social equity, and environmental quality.

(c) The name of the commission shall be "Southern Gulf Islands Community Economic Sustainability Commission.

Bylaw No. 4072

2. DUTIES

(a) The preparation of an economic development strategy to achieve a triple bottom line sustainable local economy; this includes tasks such as:

i. Analyzing the current economic base by profiling the commercial, industrial and other business activity on the Southern Gulf Islands;

ii. Assessing the Southern Gulf Islands' advantages and opportunities for current and prospective residents to establish viable businesses;

iii. Identifying resilient and year-round business opportunities that diversify the range of locally available products and services;

iv. Supporting training and technical assistance to existing and potential local businesses, including but not necessarily limited to: apprenticeship, mentoring and entrepreneurial programs;

v. Exploring and explaining the potential for Social Enterprise approaches for existing business and potential for establishment of new Social Enterprises that provide meaningful employment while meeting social and environmental needs of the islands.

(b) Coordinating economic development activities within the service area including consideration of an active marketing program to encourage support for local businesses and attract new businesses to the islands;

(c) Collaborating with the CRD on liaison with other levels of government, community leaders, and other stakeholders in respect of economic development within the service area.

3. COMPOSITION

(a) The Commission shall consist of five (5) members, including:

i. The Director representing the Southern Gulf Islands Electoral Area;

ii. Four (4) other individuals: one each representing Galiano Island, Mayne Island, Saturna Island, and the Pender Islands.

(b) Advisory groups may be established for each of Galiano Island, Mayne Island, Saturna Island, and the Pender Islands. These groups will work in collaboration with their respective Commission member to help deliver the Commission's mandate.

4. ELIGIBILITY FOR APPOINTMENT

(a) All persons appointed to the Commission must represent the interests of the Southern Gulf Islands.

5. TERM OF OFFICE

Bylaw No. 4072

(a) The terms of office of Commission members other than the Southern Gulf Islands Electoral Area Director shall be for a two-year period as follows:

(b) Appointments shall expire on the 31st day of December of the second year of appointment;

(c) No appointee may serve more than three (3) consecutive terms.

6. NEW APPOINTMENTS

(a) Commission vacancies will be advertised by the 1st day of October. Applications must be submitted to the CRD Corporate Officer by the 1st day of November. Applications will be reviewed by the Southern Gulf Islands Electoral Area Director.

(b) On the recommendation of the Southern Gulf Islands Electoral Area Director, the Capital Regional Board may appoint individuals to fill

Commission vacancies, and shall re-appoint members, on or before the 31st day of December, whose term is to expire.

7. DEATH, RESIGNATION, DISQUALIFICATION AND TERMINATION

(a) In the event of the death, resignation, termination or disqualification of a member of the Commission, the Capital Regional Board will appoint a successor for the remainder of the term as outlined in Section 5 of this bylaw;

(b) The Capital Regional Board may, upon the recommendation of the Southern Gulf Islands Electoral Area Director, terminate the appointment of any member of the Commission;

(c) Without limiting the intent of Section 7 of this bylaw, except for the Electoral area Director, if any member of the Commission is absent from three (3) consecutive meetings of the Commission without the Commission's approval, the Capital Regional Board may, upon the recommendation of the Southern Gulf Islands Electoral Area Director, terminate the appointment of such member thereby creating a vacancy on the Commission.

Bylaw No. 4072

8. QUORUM

(a) A majority of members of the Commission constitutes a quorum.

9. MEETINGS SCHEDULE AND PROCEDURES

(a) The Commission must hold at least four meetings per year to conduct their business, which must be open to the public;

(b) The Commission Chair, or in their absence the Vice Chair, must follow the CRD Procedural Bylaw when conducting a Commission meeting;

(c) For the conduct of business each member of a Commission shall have one vote.

(d) All meetings of the Commission must be held in a public facility and must be open to all members of the public. No in-camera meetings are allowed.

Bylaw No. 4072

10. BUDGET

(a) The Commission budget must be submitted to the Southern Gulf Islands Electoral Area Director and to the Capital Regional District's Financial Officer by September 1st of each year;

(b) This budget may be amended, modified or adopted as the Capital Regional Board requires, based upon input received from the Southern Gulf Islands Electoral Area Director.

11. ELECTION OF CHAIR OR VICE CHAIR

(a) The Chair and Vice Chair must be elected for a one-year term. The election for these positions must take place during the first meeting of the year.

12. CITATION

(a) This Bylaw may be cited for all purposes as the "Southern Gulf Islands Community Economic Sustainability Commission Bylaw No. 1, 2012".

Bylaw No. 4072

READ A FIRST TIME THIS	11th	day of	April	2012

ERM 21-14

REPORT TO ENVIRONMENTAL SERVICES COMMITTEE
MEETING OF WEDNESDAY, APRIL 21, 2021

SUBJECT Organics Processing Next Steps

ISSUE SUMMARY

To provide a recommendation on next steps regarding an in-region organics processing facility.

BACKGROUND

At its meeting of March 13, 2019, the Capital Regional District (CRD) Board directed staff to proceed with the next steps in establishing an organics processing facility (either composting or anaerobic digestion (AD)) at Hartland Landfill. In response to this direction, staff have undertaken stakeholder consultation with municipalities and private haulers to better understand feedstock availability, have conducted a market sounding with respondents to the 2018 Request for Expressions of Interest (RFEOI) on in-region organics processing alternatives and completed a financial and environmental screening on RFEOI results.

ALTERNATIVES

Alternative 1

The Environmental Services Committee recommends to the Capital Regional District Board:

That the Capital Regional District continue with the status quo of hauling and processing organics to private sector facilities on lower/mid-island, and signal to the market, through this resolution, that should the private sector establish an in-region facility, the Capital Regional District would consider working with municipalities to commit feedstock, pending pricing, greenhouse gas reductions, odour, location, and other environmental considerations.

Alternative 2

That staff continue working towards developing a Capital Regional District led small scale organics processing facility located at Hartland Landfill, and return to the Environmental Services Committee for a decision on technology selection (composting vs anaerobic digestion) and municipal funding before initiating next steps on procurement.

IMPLICATIONS

Intergovernmental Implications

Consultation was undertaken with staff in the six municipalities that currently provide curbside collection services, along with private haulers currently using the Hartland transfer station, to determine feedstock availability and interest in participating in a CRD-led in-region organics processing facility. Key findings of this consultation include:

- Esquimalt, Oak Bay, Sidney, View Royal, Saanich and Victoria have organics collection programs. The majority of municipal controlled feedstock (approximately 88%) comes from the District of Saanich and City of Victoria.
- Of the municipal feedstock available for an in-region organics facility, the majority (approximately 65%) is yard and garden waste. The remaining is kitchen scraps.
- The District of Saanich currently co-collects kitchen scraps with yard and garden waste, and the City of Victoria is actively exploring the co-collection option. It would be challenging and costly to shift operations to separated streams, and doing so could result in potentially higher greenhouse gas (GHG) emissions and decreased service levels for residents. Therefore, it would be advantageous for any CRD-led processing option to be able to process mixed feedstock.
- Private haulers currently haul approximately 13,000 tonnes of organic material to the Hartland transfer station annually. Private haulers confirmed that they are not in a position to make long-term feedstock commitments to a Hartland project, and will haul feedstock to whatever transfer station provides the most cost effective option. The current tipping fee at Hartland is $120/tonne. The Board has approved raising this to $140/tonne beginning January 2022, which staff anticipate will reduce the volume of private sector material being received at Hartland.

Table 1: Approximate Feedstock Collection in 2019

Feedstock Source	Tonnes per year
Municipal Kitchen Scraps	4,000
Municipal Yard and Garden Waste	10,800
Municipal Mixed Organic Waste (50/50 Kitchen scraps and Yard Waste)	9,000

Through the consultation, municipal staff indicated they would be interested in learning the results of a non-binding procurement, including understanding the cost per tonne of processing organics material, before municipalities make commitments on tonnages of kitchen scraps, yard and garden waste, or both substrates. Municipal staff also indicated that potential reduction in GHG emissions should be considered when evaluating technology alternatives and procurement outcomes.

Financial Implications

The CRD retained Deloitte to conduct a market sounding with RFEOI respondents to better understand market conditions for constructing a facility at the Hartland Landfill and clarify results of the RFEOI submissions. Results of the market sounding, coupled with RFEOI results, were then used by Reshape Strategies to evaluate potential costs and environmental benefits of an organics processing facility located at Hartland (either composting or AD), against the status quo alternative of operating a transfer station at Hartland and processing materials out of region. Results of Reshape's analysis are included in this report as Appendix A.

The Reshape analysis considered two feedstock scenarios intended to 'bookend' the range of feedstock availability, both assumed feedstock ratio of 70% kitchen scraps, 30% yard and garden waste:

- Scenario 1: A Small Plant with capacity for a flat volume of 10,000 tonnes per year (i.e. no change over time).
- Scenario 2: A Large Plant with starting capacity volume of 24,700 tonnes per year in 2024, increasing at 1% per year.

The CRD's 2018 RFEOI provided Scenario 1 as a guaranteed, baseline volume, and Scenario 2 as a potential volume. The CRD's consultation identified that municipalities currently collect much higher volumes of yard waste to kitchen scraps and currently control approximately 8,500 tonnes of kitchen scraps, making the Small Plant scenario most closely aligned with currently available feedstock blend. Both composting and AD facilities can conceivably take different blends of feedstock, and further analysis would be required to understand how feedstock blends would impact the overall business case.

The Reshape analysis then evaluated the RFEOI results to identify a levelized net processing cost ($/tonne) for three processing alternatives:

- **Status Quo:** organic material received at Hartland is trucked to third party composting facilities out of region under a contract to the CRD. The analysis assumes that current per tonne processing costs (including transportation) continue into the future, with an annual escalation.
- **Composting:** organic material received at Hartland is processed in a new dedicated in-vessel composting facility located at Hartland. Expected revenues from compost sales are included in the calculation of net processing cost to the CRD.
- **Anaerobic Digestion:** organic material is processed in a new AD facility located at Hartland. The AD facility does not include a biogas upgrader. Instead, biogas from the AD facility is sent to the landfill gas upgrader and renewable natural gas (RNG) is sold to FortisBC under the same terms and prices as RNG from landfill gas.

All alternatives consider a 20-year project life. Results of Reshape's Analysis are summarized in the table below.

Table 2: Levelized Net Processing Costs ($/tonne)

Annual Volume	**Small Plant** (10,000 tonnes fixed)	**Large Plant** (24,000 tonnes increasing 1%/year)
Processing Capacity	10,000 tonnes	30,000 tonnes
Levelized Net Processing Costs ($/tonne)		
Status Quo (composting out of region)	$168	$168
Composting (at Hartland)	$240	$150
Anaerobic Digestion (at Hartland)	$276	$148

This analysis found that a smaller-sized composting facility located at Hartland, utilizing only the feedstock currently available from municipalities, would not be cost competitive against the status quo option of hauling kitchen scraps to a large out of region facility for composting ($240/tonne vs $168/tonne). However, a small Hartland AD plant with a $108/tonne cost premium ($276/tonne vs $168/tonne or $1.08million/year) could be economic if enough value was placed on the GHG benefits associated with an AD facility.

At larger scales, either composting or AD at Hartland could be cost competitive, or even result in cost savings when compared to the status quo option. As there isn't sufficient municipal tonnage to fully supply a larger facility (assuming a 70% kitchen scraps, 30% yard and garden waste ratio), a CRD/Hartland facility would require feedstock from other sources.

Environmental & Climate Implications

The Reshape analysis also considered the GHG implications of each of the three processing scenarios. Results of this evaluation are included in Table 2, below.

Table 3: Operating GHG Emissions (kg/Co2-e/tonne feedstock/year)

	Status Quo	**Composting** (at Hartland)	**Anaerobic Digestion** (at Hartland)
Transport emissions	10.7	-	-
Composting	90.0	90.0	9.0
Shipping Compost	9.7	9.7	1.0
Other Operations	45.8	45.8	48.0
RNG- pipeline fugitive	-	-	0.2
Net Avoided Natural Gas	-	-	(49.5)
Total	156.1	145.5	8.7

This analysis found that building a new dedicated composting facility at Hartland would result in a very small decrease in cumulative emissions compared to status quo, however building a new dedicated AD facility at Hartland would result in significantly higher GHG emission reductions. This is because biogas produced by the AD facility would result in net avoidance of natural gas. As organics are already kept out of the landfill, the Reshape analysis excludes emissions reductions from avoiding landfilling in all scenarios. There are substantial differences in GHG (CO2-e) emissions among the alternatives. In particular, AD alternatives result in net reductions of 40,000 – 100,000 tonnes of GHG (CO2-e) over 20 years compared to composting.

Based on the Reshape analysis, reducing GHG emissions by building a small scale AD facility at Hartland results in a cost premium of $1,080,000/year or a $515 per tonne of CO2-e value of carbon. For comparison, the current BC carbon tax is $45/tonne and Metro Vancouver recently adopted an internal price of carbon policy of $150/tonne.

Social Implications

Staff also evaluated the current and future planned processing capacity for organic materials on Southern/Mid Vancouver Island. There is currently excess private sector compost processing capacity on Southern/Mid Vancouver Island with three on-island facilities that have the ability to receive and process CRD combined kitchen scraps and yard waste, with an approved annual capacity of 71,500 tonnes, and an additional 44,000 tonnes of capacity currently under construction at the Circular Waste BC facility in Nanaimo, bringing the total annual capacity up to 115,500 when complete. Additionally, there are well-established alternatives for processing yard and garden waste within the capital region. There are no AD facilities on Vancouver Island with

capacity for the CRD organic material. If the CRD were to construct a Hartland facility, this facility would compete for feedstock with out of region composting facilities, and in-region yard waste processing facilities.

Solid Waste Management Plan Implications

The Solid Waste Management Plan Phase two consultation identified both support and opposition for siting an organics processing facility at Hartland Landfill. In their formal response, District of Saanich requested that the draft Solid Waste Management Plan reference the additional benefits a regional organics processing facility would have associated with the GHG emissions savings from the reduced transportation of organics outside of the region. City of Victoria identified organics diversion as a priority strategy to support the City's Zero Waste strategy.

The final draft Solid Waste Management Plan indicates that the CRD intends to continue to provide the community with receiving and transport services for kitchen scraps through the transfer facility at Hartland while monitoring in-region and on island organics processing capacity. In response to a need to secure additional processing capacity for the community, the plan also indicates that a facility at Hartland may also be pursued in an effort to reduce the GHG emissions associated with the current transportation and processing model.

CONCLUSION

Staff have undertaken stakeholder consultation with municipalities and private haulers to better understand feedstock availability, have conducted a market sounding with respondents to the 2018 RFEOI on in-region organics processing alternatives and completed a financial and environmental screening on RFEOI results. This evaluation found that there are economies of scale when considering organics processing alternatives against the status quo, that municipalities control limited feedstock, and that an organics processing facility would need to compete for feedstock with the Private Sector, however that building an AD facility at Hartland would result in GHG emissions reductions.

RECOMMENDATION

The Environmental Services Committee recommends to the Capital Regional District Board:

That the Capital Regional District continue with the status quo of hauling and processing organics to private sector facilities on lower/mid-island, and signal to the market, through this resolution, that should the private sector establish an in-region facility, the Capital Regional District would consider working with municipalities to commit feedstock, pending pricing, greenhouse gas reductions, odour, location, and other environmental considerations.

RESHAPE STRATEGIES

EXECUTIVE SUMMARY

This report presents a screening-level analysis of a dedicated composting or anaerobic digestion (AD) facility for CRD organics located at Hartland Landfill. Alternatives are compared to the CRD's status quo costs for organics disposal.

Alternatives and scenarios are compared based on levelized net processing cost. This is calculated as the present value of expected project costs less any revenues from byproducts of the process (e.g., biogas and/or compost) divided by the present value of processed volumes.

The net processing cost reflects expected capital and operating costs. These are derived from information provided to CRD by technology providers in response to CRD's 2018 RFEOI. We note the indicative capital costs from the 2018 RFEOI are higher than others we have seen in recent literature and other processes, particularly for AD. The results of this study are very sensitive to capital cost assumptions.

Capital costs are amortized based on an indicative private sector model. There is very little information on hurdle rates for private proponents, which can vary with technology, market conditions, and specific contract terms. Actual capital and financing costs can have a large impact on net processing costs and also the ranking among different options. These will need to be confirmed through a competitive bidding process and detailed negotiations.

There is some evidence that AD projects tend to require higher hurdle rates, reflecting the higher capital intensity and technical complexity of AD, as well as the added risks and uncertainties surrounding the value of raw biogas or upgraded renewable natural gas (RNG). However, these risks can also be mitigated by contract terms and conditions. For example, B.C. is one of the few jurisdictions that currently offers long-term fixed price contracts for biogas / RNG sales.

The report includes sensitivity and scenario analyses on these and other key assumptions.

This study also includes a comparison of GHG (CO2-e) emissions for various options. These are derived from a recent lifecycle GHG (CO2-e) analysis prepared by Stantec (adjusted for alternate volumes and sizing scenarios in this study).

This screening study is to support strategic decisions and procurement design for organics processing, including technology specification and sizing targets. Some important findings of this screening analysis include the following:

- There are economies of scale for both composting and AD.
- The estimated net processing cost for a dedicated composting or AD facility is higher than status quo at small facility scales. However, at larger scales both composting and AD at Hartland could result in cost savings relative to the status quo, even if the facility is initially oversized to accommodate further growth of organics volumes. Filling spare capacity in early years with volumes from third parties could provide additional cost savings for both options.
- Composting appears to be much cheaper than a stand-alone AD plant at small scales. However, the cost difference is reduced at larger scales (and any differences at larger scales are within the range of uncertainty around inputs to the analysis).
- The proposed LFG upgrader and FortisBC Energy Inc. (FEI) interconnection have sufficient capacity to handle extra biogas volumes from organics, even under high LFG volume scenarios. Co-processing biogas from AD would not affect the expected returns on the LFG upgrader (which are based on LFG volumes only), but could reduce the risks posed by low LFG volumes as well as lower costs for processing organics.

- There may be additional savings from AD if spare digester capacity in the Residuals Treatment Facility can also be used on an interim basis for processing organics to defer some of the capital for new food waste digesters. This would not necessarily require any co-digestion of food waste and biosolids.
- Results are not very sensitive to the value of compost. However, the results are very sensitive to the price of RNG.
- There are substantial differences in GHG (CO2-e) emissions among the alternatives. In particular, AD results in net reductions of 40,000 – 100,000 tonnes of GHG (CO2-e) over 20 years compared to composting.
- The Small Plant AD scenario has a levelized net processing cost that is $108 per tonne higher than the Status Quo. However, The Small Plant AD scenario also results in significant additional GHG emissions reductions. A shadow value of carbon set at $515 per tonne GHG (CO2-e) would make the AD project equivalent in cost to the Status Quo operation. For the Large Plant scenario, because the AD project is already lower cost than the Status Quo, it has a negative shadow value of carbon, meaning a Large Plant AD project achieves GHG reductions and cost savings.

STATEMENT OF LIMITATIONS

This report has been prepared by Reshape Infrastructure Strategies ("Reshape") for the exclusive use and benefit of the Capital Regional District ("Client"). This report represents the best professional judgment of Reshape, based on the information available at the time of its completion and as appropriate for the scope of work. Services were performed according to normal professional standards in a similar context and for a similar scope of work.

ABBREVIATIONS

AD	Anaerobic Digestion
CRD	Capital Regional District
DR	Discount Rate
FEI	FortisBC Energy Inc (gas utility)
GHG (CO2-e)	Greenhouse Gas (CO2 Equivalent)
GJ	Gigajoules
IRR	Internal Rate of Return (Unlevered)
kWh/MWh	Kilowatt-hour/Megawatt-hour
LFG	Landfill Gas
MFA	Municipal Finance Authority
PV	Present Value
RFEOI	Request for Expressions of Interest
RNG	Renewable Natural Gas

1. INTRODUCTION

Capital Regional District (CRD) receives organics from member municipalities at Hartland Landfill ("Hartland"). These organics are currently transported to 3rd-party composting facilities for processing. CRD is exploring the development of a dedicated facility to process organics at Hartland.

In 2018, CRD issued a request for expressions of interest (RFEOI) to suppliers of organic processing technologies, asking them to provide information on possible technical solutions. The RFEOI process included suppliers of both composting and anaerobic digestion (AD) facilities.

This study estimates the potential costs and environmental benefits of a dedicated composting or AD facility located at Hartland. These are compared to status quo disposal. The analysis relies largely on information obtained from the RFEOI, with some adjustments to the AD option to reflect the opportunity to use spare capacity in the proposed landfill gas (LFG) to renewable natural gas (RNG) upgrader.

The intent of this study is to inform strategic decisions on organics processing and the design of any procurement of a dedicated facility. The analysis is based on indicative costs and financing assumptions, which will need to be confirmed through procurement and negotiation. The analysis is based on volumes not controlled by CRD so the project is also contingent on volume commitments from member municipalities or the private sector.

2. METHODOLOGY

This is a screening-level study to compare status quo disposal costs for CRD organics with a dedicated composting or AD facility. The key metric used for all comparisons is the net processing cost, which takes into account expected capital costs, operating costs, financing costs, and any revenues from the sale of compost, biogas, and/or RNG. Financing costs are based on a private sector financing model, with different financing benchmarks applied to composting and AD. The analysis is intended to approximate the expected outcome of a competitive procurement process and contract negotiation. Actual costs will depend on the final procurement model and detailed contract design.

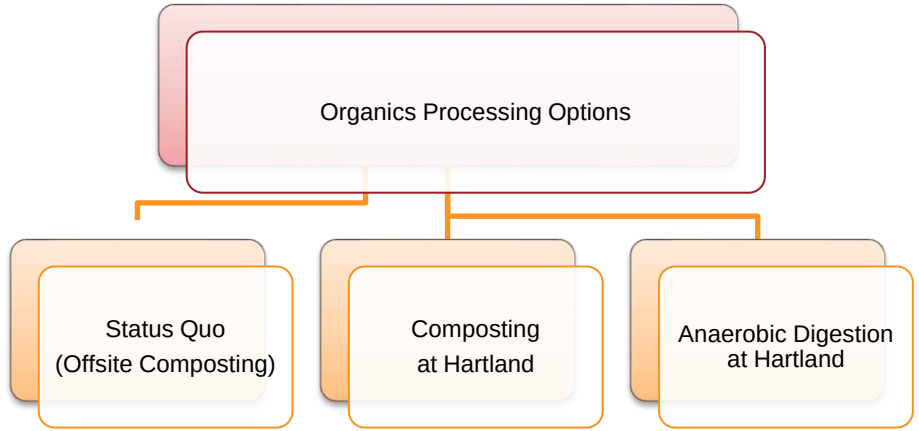
A levelized net processing cost is calculated for each option. This is calculated as the present value of annual costs less revenues divided by the present value of processed volumes over 20 years (beginning in 2024). The cashflows reflect a private sector financing model. Present values are calculated using the CRD discount rate (assumed to be equivalent to CRD's long-term borrowing rate).

For capital and operating costs we have relied on information from the RFEOI process, as summarized by Morrison Hershfield.[1] We have made some adjustments to capital and operating costs to reflect alternate sizing and project configurations as discussed later in this report. We note the costs derived from the RFEOI appear relatively high, particularly for AD.

[1] "Kitchen Scraps, Yard and Garden Waste Processing – RFP Scoping Document". Morrison Hershfield, June 1, 2018.

The greenhouse gas (GHG) emissions for different options are derived from a lifecycle GHG (CO2-e) analysis prepared for CRD by Stantec.[2] Stantec's estimates have been adjusted to reflect different volumes scenarios in this study.

This report also includes additional sensitivity and scenario analyses for net processing costs under alternate input assumptions.



3. PROCESSING OPTIONS

We consider three options for organics processing (Figure 1):

1. **Status Quo (Offsite Composting)**. Organic material received at Hartland is trucked to 3rd-party composting facilities under a contract to CRD. We assume current per-tonne processing costs (including transportation) continue into the future, with annual escalation.
2. **Composting at Hartland**. Organic material received at Hartland is processed in a new dedicated in-vessel composting facility located at Hartland. Expected revenues from compost sales are included in the calculation of net processing cost to the CRD.
3. **Anaerobic Digestion (AD) at Hartland**. Organic material is processed in a new AD facility located at Hartland. The AD facility does not include an upgrader. Instead, biogas from the AD facility is sent to the LFG upgrader at Hartland. RNG is then sold to FortisBC Energy Inc. (FEI) under the same terms and prices as RNG from LFG. Revenues from the sale of compost and RNG are included in the calculation of net processing costs to the CRD.

There is also the potential to integrate an AD facility with the spare digester capacity associated with the new Residuals Treatment Facility at Hartland. We have not assessed the technical or economic viability of this option but the costs and benefits of this approach may be considered as part of the procurement process.

Figure 1: Organics Processing Options

[2] "Life Cycle Greenhouse Gas Analysis of Organic Waste Processing Scenarios at the Hartland Landfill". Stantec Consulting Ltd, August 12, 2020.

4. KEY ASSUMPTIONS

4.1 Organic Volumes and Processing Capacity

Our analysis uses two bookends for organics volumes:

1. A flat volume of 10,000 tonnes per year (i.e. no change over time).
2. A starting volume of 24,700 tonnes per year in 2024, increasing at 1% per year.

The CRD's 2018 RFEOI provided Scenario 1 as a guaranteed, baseline volume, and Scenario 2 as a potential volume. The CRD does not control significant volumes directly, but available volumes from member municipalities are likely closer to Scenario 2.

Based on discussions with CRD, we assume an average composition of 30% yard and garden waste, and 70% kitchen scraps. The share of yard and garden waste vs kitchen scraps affects the expected biogas production from AD, as kitchen scraps have a greater potential for energy production. A greater share of yard and garden waste and correspondingly lower share of kitchen scraps will result in less biogas production from AD. In sensitivity analysis we test the impact of reduced biogas production.

Because of the wide range in volumes, each volume scenario is paired with a different processing capacity as shown in Table 1. Under the Large Plant scenario, the facility has sufficient capacity to process all organics throughout the analysis period. By year 20, annual volumes will have grown to 29,840 tonnes, or just below the facility's capacity.

While there is a wide range of uncertainty around organics volumes, CRD could potentially play a strong role in securing organics volumes for this project.

Table 1: Volume and Processing Capacity Scenarios

	Small Plant at Hartland	Large Plant at Hartland
Annual Volume	10,000 tonnes, fixed	24,700 tonnes, Increasing 1%/year.
Processing Capacity	10,000 tonnes	30,000 tonnes

4.2 Capital Costs

Table 2 summarizes capital cost assumptions for composting and AD. The assumptions are based on the RFEOI responses (escalated to 2024). Respondents to the RFEOI did not provide disaggregated cost information. For AD, we made an assumption of the cost savings from not constructing a separate upgrader, based on estimates of upgrader costs from previous studies for CRD's LFG upgrader project with conservative adjustments for losses in economies of scale for a much smaller upgrader.

We note that the capital costs received by CRD through the RFEOI are higher than we have seen from other projects. For example, from a 2017 RFI on AD, the City of London Ontario reported costs of $680 to $990 per tonne for a 25,000 tonne per year AD facility, including a biogas upgrader and land acquisition. It is possible that pricing declined significantly after the CRD's RFEOI.

It should be noted that capital costs sourced from RFEOI responses apply to commercial scale operations that must comply with strict operational specifications,

including stringent odor control, leachate management, and other regulatory requirements.

This analysis has not considered the availability of grant funding to offset capital costs. There may be grant funding available - particularly for the AD facility which would reduce GHG (CO2-e) emissions relative to the Status Quo option – however we have not incorporated this into our capital cost estimates.

Table 2: Capital Cost (Unit Capital Costs), 2024$

	Small Plant at Hartland	Large Plant at Hartland
Processing Capacity	10,000 tonnes	30,000 tonnes
Composting	$11.3 M ($1,130 / tonne of capacity)	$20.3 M ($680 / tonne of capacity)
Anaerobic Digestion	$26.0 M ($2,600 / tonne of capacity)	$34.8 M ($1,160 / tonne of capacity)

4.3 Financing Costs

The financial analysis assumes that all capital costs are amortized over the expected life of the asset. A new composting facility is assumed to have a 15-year asset life. A new AD facility is assumed to have a 20-year asset life. Because we have used a 20-year analysis period, the composting option includes annualized costs for a replacement facility in years 16-20 to allow an apples-to-apples comparison of net processing costs. In reality, a contract for composting would likely be shorter than for AD, or alternatively include some buy-out for unamortized capital at the end of 20 years (assuming the proponent is required to reinvest in the project).

Capital costs are amortized using an indicative private sector financing model. It is different to obtain credible information on hurdle rates for private sector proponents. Hurdle rates require assumptions about leverage (portion of debt financing), private borrowing costs (prevailing interest rates and credit spreads), corporate taxes, and levered return on equity. These variables can vary with technology, market conditions, and the specific contract terms (length, risk transfer, etc.).

A brief review of the literature suggests higher hurdle rates for AD than composting. This likely reflects higher complexity and also higher perceived risk. The difference in perceived risk is likely a function of the capital intensity and pricing model for each technology. The bulk of revenues for a composting facility are derived from tipping fees, which tend to be fixed for a specified term. AD facilities are more capital intensive, and a larger portion of their revenues would be derived from the sale of biogas or RNG. We note in many markets these revenues are riskier because of term-limited contracts and/or pricing that is tied to natural gas or other volatile benchmarks such as renewable energy credits. The risk profile of AD is probably lower in B.C. given the availability of longer, fixed-price contracts for RNG from FEI. To be conservative we have assumed a higher hurdle rate for AD options.

Our base case assumes a hurdle rate for AD of 7.5%. This is roughly equivalent to a financing model with 70% leverage, a long-term debt rate of 4.6%, a pre-tax levered return on equity of 18% and a corporate tax rate of 26%. We assume a lower hurdle rate for composting of 6%. For comparison, FEI's regulated after-tax weighted average cost of capital (WACC) is currently ~5.6% after tax, equivalent to ~6.5% on a before tax basis.

These are indicative rates to estimate possible prices under a competitive procurement. The level and differences in hurdle rates are uncertain, and would also be affected by specific contract terms.

Table 3: Indicative Asset Life and Financing Cost

	Asset Life	Financing Cost
Composting	15 years	6.00%
Anaerobic Digestion	20 years	7.50%

4.4 Operating Costs

Key operating cost assumptions are as follows:

- **Status Quo disposal costs** were provided by CRD staff. Pricing of $138/tonne was received in 2020. We assume continued escalation at 1.5%/year, which results in a cost of $194/tonne by 2043. We note that this pricing is for a short-term contract and may not be indicative of long-term pricing. It is unclear if this reflects existing spare capacity or if it includes costs for incremental expansion.

- **Land rent** assumes a facility sited at Hartland. Rent is based on the relative space requirements of different options from the RFEOI responses. Leases rates are derived from land value obtained from a recent 3rd party project at Hartland.

- CRD has fixed costs to operate the transfer station at Hartland where organics materials are received. Because these costs are the same for all options, including the Status Quo, they have been excluded from our analysis.

- **Processing costs** were derived from the RFEOI responses, with additional adjustments as described below, and are shown in Table 4.

The RFEOI responses provided AD processing costs for a complete facility, including an upgrader. The upgrader share of these costs can be deducted. However, there would be incremental operating expenses incurred at the LFG upgrader. In this analysis, we assigned incremental LFG upgrading costs to the AD project. We have not included any contribution to the fixed costs of the LFG upgrader. The LFG upgrader is already oversized so this capacity is available regardless. This methodology means that the IRRs for the LFG project (presented in a previous business case to the Board) will not be affected by the addition of biogas from AD.

The AD processing costs identified as part of the RFEOI (and which include the cost of an upgrader) are $59 per tonne, which is in line with the results received by London ON from their 2017 RFI.

Our analysis assumes that this AD project would incur processing costs of $39 per tonne in 2024, plus pay a fee to the LFG upgrader of $6.50 per GJ of biogas processed.

Under these assumptions, total operating expenses for the AD option (including direct processing costs as well as the upgrading fee paid to the LFG upgrader) are equivalent to the processing cost information received through the RFEOI process, for a new AD facility with its own upgrader. This analysis is likely conservative (i.e. it

has likely under-estimated the cost advantage of AD Integrated with LFG due to economies of scale in upgrading costs).

We assume these costs escalate at 2%/year.

Table 4: Operating Costs per Tonne Feedstock, 2024$

	Small Plant at Hartland	Large Plant at Hartland
Composting	$91 / tonne	$51 / tonne
Anaerobic Digestion	$39 per tonne plus $6.50 per GJ of biogas	$39 per tonne plus $6.50 per GJ of biogas

Figure 2: Available Capacity in LFG Upgrader

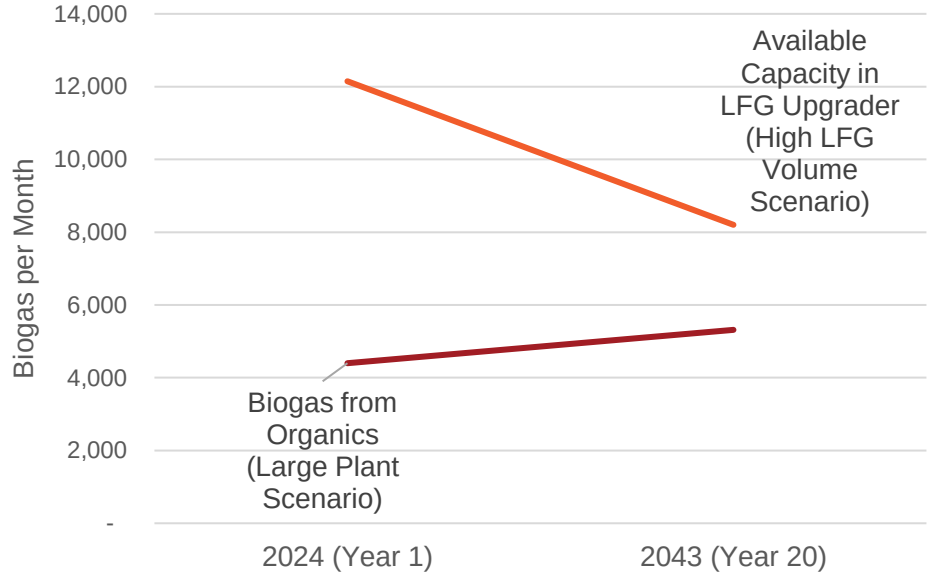


Figure 2 shows the available capacity in the LFG upgrader. Even under high LFG volumes, there is still significant available capacity in 2043 relative to the expected biogas from a large AD facility.

4.5 Revenues

There are two potential revenue streams to reduce the net cost of processing organics: the sale of compost and the sale of RNG.

Both composting and AD produce compost. However, composting produces higher volumes of compost than AD. For this analysis, we assume compost volumes equivalent to 60% and 28% of processed organics volumes for composting and AD, respectively. Our base case assumption for the value of compost is $3 / tonne (net of costs to bag, market and distribute compost). We test this assumption in sensitivity analysis.

An AD facility will also produce biogas which can be upgraded to RNG for sale to FEI. RNG production is dependent on the mix of feedstocks to the facility (yard and garden vs kitchen scraps) and recovery rates in production and upgrading. Table 5 shows the biogas production potential per tonne of feedstock under the base case assumption of 30% yard and garden waste, and 70% kitchen scraps[3].

Table 6 shows net RNG production after losses in the upgrade process, which occur during the upgrading process to produce RNG. Losses reflect expected upgrader downtime, internal energy use, and methane slip. Losses are predominantly in the form of methane converted to CO2 through combustion. We assume losses in upgrading of 10%, in line with the assumption used in the LFG upgrader analysis.

Under all AD options, RNG is assumed to have a value of [redacted] per GJ of RNG with no escalation, in line with CRD's contract for RNG from LFG. We test the effect of different biogas production factors and RNG prices in sensitivity analysis.

Table 5: Gross Biogas Production Factors

	Yard / Garden (30%)	Kitchen (70%)	Blended Average
Biogas Potential	1.5 GJ / tonne	2.75 GJ / tonne	2.38 GJ / tonne

Table 6: Net RNG Production, 2025

	Small Plant	Large Plant
Annual Volume	10,000 tonnes	24,700 tonnes, 1% growth p.a.
2025 Net RNG Production (AD only)	21,400 GJ	53,300 GJ

[3] Biogas factors were taken from Environment Canada, "Technical Document on Municipal Solid Waste Organics Processing", PWGSC 2013.

4.6 GHG Emissions

GHG emissions have been calculated for each scenario based on a lifecycle GHG (CO2-e) analysis conducted by Stantec. Sources of emissions include:

- Construction: one-time emissions related to the construction of the organics processing facility.
- Operations: emissions from the operation of the facility, including emissions from composting, from on-site fuel consumption, and from shipping compost off-site.
- Avoided Natural Gas: avoided emissions due to the production of RNG and injection into the natural gas grid.

GHG emissions factors (CO_2-equivalents) for construction are shown in Table 7. Emissions factors from ongoing operations (including direct operations and avoided natural gas) are shown in Table 8.

The Stantec analysis also included the impact of avoided landfilling. Organics are already kept out of the landfill and our analysis compares dedicated processing options to the status quo option. We have therefore excluded emissions from landfilling in all scenarios.

Table 7: Construction GHG Emissions (kg GHG CO2-e / tonne capacity)

	Status Quo	Composting	AD Standalone	AD Integrated w LFG
Construction	-	70.6	68.9	48.2

Table 8: Operating GHG Emissions (kg GHG CO2-e / tonne feedstock / year)

	Status Quo	Composting	AD Integrated w LFG
Feedstock Transport	10.7	-	-
Composting	90.0	90.0	9.0
Shipping Compost	9.7	9.7	1.0
Other Operations	45.8	45.8	48.0
RNG – Pipeline Fugitive	-	-	0.2
Net Avoided Natural Gas	-	-	(49.5)
Total	156.1	145.5	8.7

5. RESULTS

5.1 Net Processing Costs

Table 9 summarizes results for large and small project scales. Present values and levelized net processing costs are calculated using a discount rate of 2.6%, which is intended to represent the CRD's approximate cost of borrowing. Recently, indicative long-term borrowing rates published by the Municipal Financing Authority of B.C. have dropped much lower than usual, with 20-year rates at roughly 2.25% as of the date of this report. To be conservative, we have assumed that this decline in borrowing rates is temporary and 20-year rates will increase before the project

proceeds. The sensitivity analysis section of this report includes the impact of different discount rates.

At small scales, a dedicated facility is more costly than Status Quo disposal costs under our base assumptions. This also assumes current disposal costs continue to escalate at only 1.5% per year. At larger scales, a dedicated facility appears to be cheaper than Status Quo disposal costs, and AD becomes the lowest-cost option (though the cost difference between AD and composting is relatively small and within the margin of error for this analysis).

Table 9: Key Results

	Small Plant at Hartland	Large Plant at Hartland
Annual Volume	10,000 tonnes, fixed	24,700 tonnes Increasing 1%/year
Processing Capacity	10,000 tonnes	30,000 tonnes
Levelized Net Processing Costs ($ / tonne)		
Status Quo	$168	$168
Composting at Hartland	$240	$150
Anaerobic Digestion at Hartland	$276	$148
Present Value Costs ($ millions)		
Status Quo	$24.5 M	$66.5 M
Composting at Hartland	$35.1 M	$59.5 M
Anaerobic Digestion at Hartland	$40.4 M	$58.5 M

5.2 GHG Emissions

Table 10 shows the increase or decrease in cumulative GHG (CO2-e) emissions from a change from the status quo (offsite composting) to composting or AD at the Hartland Landfill Facility. Building a new dedicated composting facility at Hartland would result in a very small decrease in cumulative emissions. There would be additional emissions from constructing the facility, but these would be mitigated by a reductoin in transportation emissions. There are substantial differences in cumulative GHG (CO2-e) emissions between composting and AD.

Table 10: Cumulative Change in GHG (CO2-e) Emissions Relative to Status Quo (20 Year Analysis)

	Small Plant	Large Plant
Composting at Hartland	(1,400 tonnes)	(3,700 tonnes)
Anaerobic Digestion at Hartland	(40,100 tonnes)	(109,000 tonnes)

There are some minor GHG (CO2-e) savings compared to status quo for a dedicated compositing facility at Hartland. However, a dedicated AD facility would deliver significant GHG (CO2-e) benefits relative to status quo or a dedicated composting facility. For the AD option, we have also calculated a shadow value per tonne of GHG (CO2-e) reductions that would need to be assigned to the project to make AD cost-competitive with composting (Table 11).

Table 11: Required Shadow Value of GHG (CO2-e) Reductions from AD ($ per tonne) compared against Status Quo

	Anaerobic Digestion
Small Plant at Hartland	$515 per tonne GHG (CO2-e)
Large Plant at Hartland	($100) per tonne GHG (CO2-e)

For the Small Plant scenario, the AD at Hartland project would result in a cost premium of roughly $15.9 M relative to the Status Quo, as shown in Table 9. However, the Small Plant AD project would deliver significant GHG reductions relative to the Status Quo. Based on the cost premium and GHG reductions, the Small Plant AD project would require a shadow value of GHG reductions of $515 per tonne GHG (CO2-e). Stated differently, the Small Plant AD scenario can achieve GHG reductions at an abatement cost of $515 per tonne of GHG (CO2-e).

For the Large Plant AD scenario, because the AD project is already lower cost than the Status Quo, it has a negative shadow value of carbon, meaning that the project achieves GHG (CO2-e) reductions at negative cost (i.e. savings).

For comparison, Metro Vancouver (MV) recently adopted an internal carbon price policy of $150 / tonne GHG (CO2-e). This means that for potential projects with GHG (CO2-e) implications, MV will include a total price of $150 / tonne on all emissions. The City of Vancouver adopted a similar policy with a comparable total carbon price in late 2018.

5.3 Sensitivity & Scenario Analyses

We conducted sensitivity and scenario analyses on key inputs. Some of these are summarized in Table 13. We selected the Large Plant scenario for all sensitivity and scenario analyses because of the narrow range around net processing costs of different options at this scale. For reference, the levelized cost of Status Quo disposal is $168 per tonne.

We note the following:

- We conducted two sensitivity analyses on organics volumes. The first assumes a 20% reduction in volumes in all years, with no change in the facility size. The second scenario assumes full utilization of the facility from Year 1. This would require supplemental volumes to fill the facility as municipal volumes grow.
- Higher Compost Revenue illustrates the impact of assuming that net revenue from compost sales is $10 per tonne of compost, as opposed to the base case assumption of $3 per tonne of compost.
- There is uncertainty regarding both the mix of organics feedstocks (kitchen vs yard and garden), and the actual biogas production rates from each type of feedstock. The biogas production sensitivity analyses are intended to capture the overall uncertainty around biogas production volumes. This sensitivity does not impact the Composting option.

Table 12: Sensitivity Analysis, Large Plant Scenario (Levelized Net Processing Cost per Tonne)

	Composting	Anaerobic Digestion
Base (Large Plant at Hartland)	$150	$148
Organics Volume -20%	$171	$180
Flat 30k Volume	$141	$134
Higher Compost Revenue	$145	$145
Biogas Production +10%	$150	$144
Biogas Production -10%	$150	$151
Biogas Production -20%	$150	$155

The “Biogas Production -10%” scenario shown above corresponds to the expected biogas production rates from a feedstock mix of 50% kitchen scraps, and 50% yard and garden waste, based on the assumptions detailed in Table 5. The “Biogas Production -20%” scenario corresponds to the expected biogas production rates from a feedstock mix of 35% kitchen scraps, and 65% yard and garden waste.

In addition to the sensitivity analyses above, we conducted more detailed analysis on several other inputs. These results are summarized below.

Status Quo Costs

Status Quo disposal costs are built up from the 2020 per-tonne cost, and a future escalation rate. As of 2020, processing costs for the Status Quo option are $138 per tonne. Assuming escalation at 1.5% per year, this would increase to $194 per tonne by 2043. Under these assumptions – which are used for the base case Status Quo costs - the levelized processing cost is $168 per tonne over the 2024-2043 analysis period.

Table 13 shows status quo levelized net processing costs per tonne based on a range of starting per-tonne costs and escalation rates. The escalation rate would have to be as low as 0.5% for the duration of the analysis period for status quo costs to be lower than the cost of both composting and AD.

Table 13: Status Quo Cost Sensitivity (Levelized Net Processing Cost per Tonne)

	Status Quo
Base ($138/tonne, 1.5% p.a.)	$168
$138/tonne, 1% p.a.	$157
$138/tonne, 0.5% p.a.	$147
$138/tonne, 2% p.a.	$180
$148/tonne, 1.5% p.a.	$180

Discount Rates

The discount rate is used to calculate levelized net processing costs and the PV of net processing costs of each alternative from the perspective of the CRD. The effect of alternate discount rates on the PV of net processing costs of each alternative is shown in Table 14. The selection of discount rate affects absolute results but does not fundamentally alter the relative ranking of different alternatives.

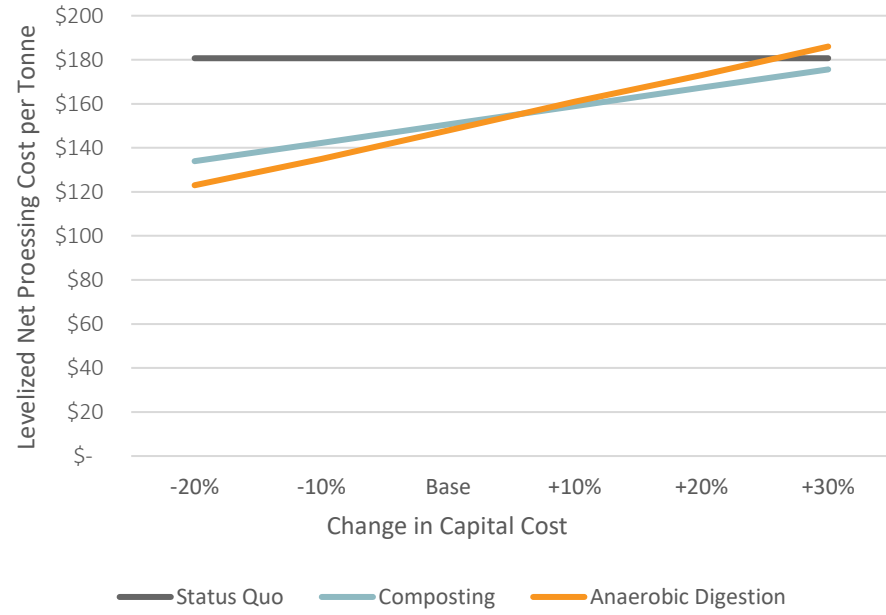

Table 14: Discount Rate Sensitivity ($ millions, PV of net processing costs), Large Plant at Hartland

	Status Quo	Composting	Anaerobic Digestion
Base (2.6%)	$66.5	$59.5	$58.5
1%	$81.2	$72.6	$71.0
4%	$56.3	$50.4	$49.9
6%	$45.0	$40.4	$40.2

Capital Costs

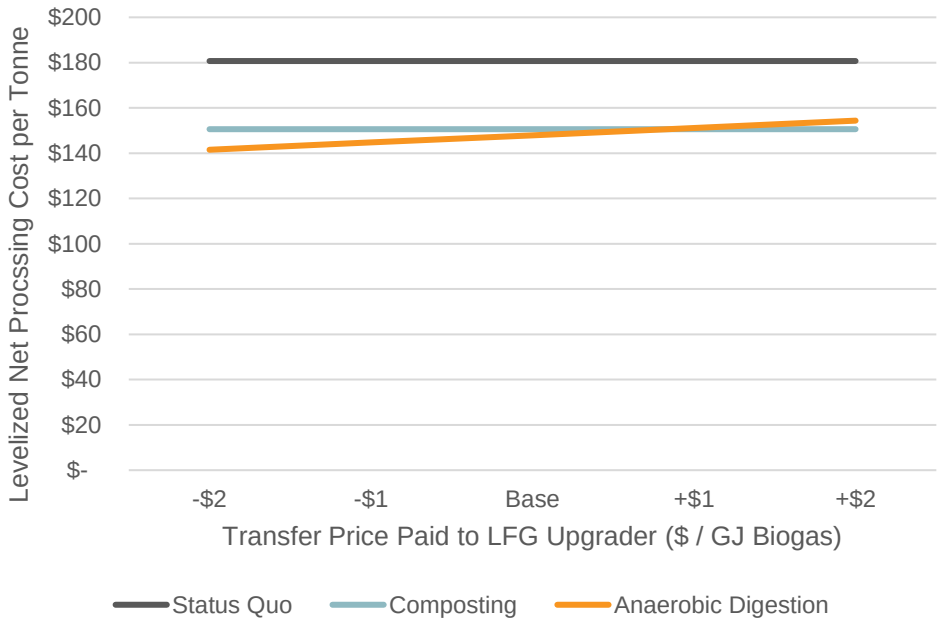
As noted, there is considerable uncertainty in the capital costs of alternatives. These will need to be confirmed through the procurement process. See Figure 3.

Figure 3: Capital Cost Sensitivity, Large Plant at Hartland

Upgrader transfer price

There is uncertainty in the incremental operating costs for the LFG upgrader. These will be confirmed in the procurement and detailed design phase. The base case assumption is $6.50 per GJ of biogas processed. Figure 4 shows the effect of a +/- 30% difference in incremental upgrading costs.

Figure 4: Sensitivity to Varying Upgrader Transfer Price, Large Plant at Hartland



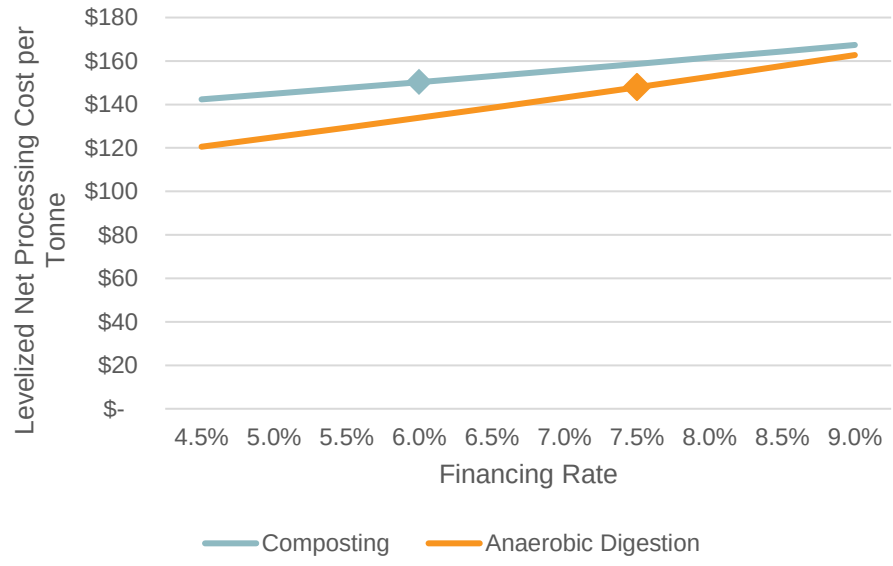


Figure 5: Sensitivity to Financing Rate, Large Plant at Hartland

The net processing cost of both options declines with lower hurdle rates. However, AD is more capital intensive and therefore more sensitive to assumptions about hurdle rates.

Financing Rates

Hurdle rates for private sector proponents are unknown. Our base case also assumes a higher hurdle rate for AD. Figure 5 shows the sensitivity of each technical solution to varying financing rates, under the Large Plant configuration. For each option, the base case assumption is marked with a diamond.

RNG Price

The base case results assume all RNG from AD is sold at the same price obtained by CRD in recent negotiations with FEI for upgraded LFG. CRD would be able to sell incremental RNG under its existing contract. However, CRD is not obligated to sell incremental RNG from other sources of biogas (beyond LFG) under the same terms and conditions as the existing purchase contract. There are no incremental costs to FEI from additional volumes of RNG (the proposed interconnection appears to have sufficient capacity). As a result, FEI may be able to pay a higher price for incremental volumes, if that is required to incent AD. Results are shown below.

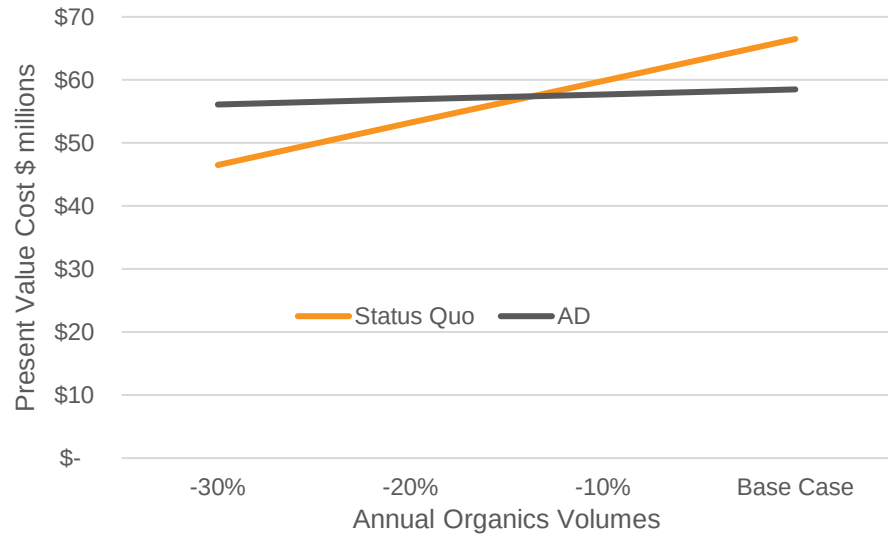
Table 15: Sensitivity to RNG Prices, Large Plant at Hartland

	Anaerobic Digestion
Base (Large Plant at Hartland) RNG @ [redacted] / GJ	$148
RNG @ [redacted] / GJ	$143
RNG @ [redacted] / GJ	$137

Volumes of Organics Received at Hartland

Depending on how CRD is able to contract for organics volumes, there may be volume-related risks associated with building the Large Plant AD option. Figure 6 and Figure 7 show the impacts on present value costs and on levelized net processing costs, respectively, for this option as compared against the Status Quo. With an AD project, reductions in organics volumes only lead to modest reductions in total costs, so unit processing costs will increase if volumes decline.

Figure 6: Anaerobic Digestion, Large Plant at Hartland, Sensitivity to Reduced Organics Volumes (Present Value Cost)



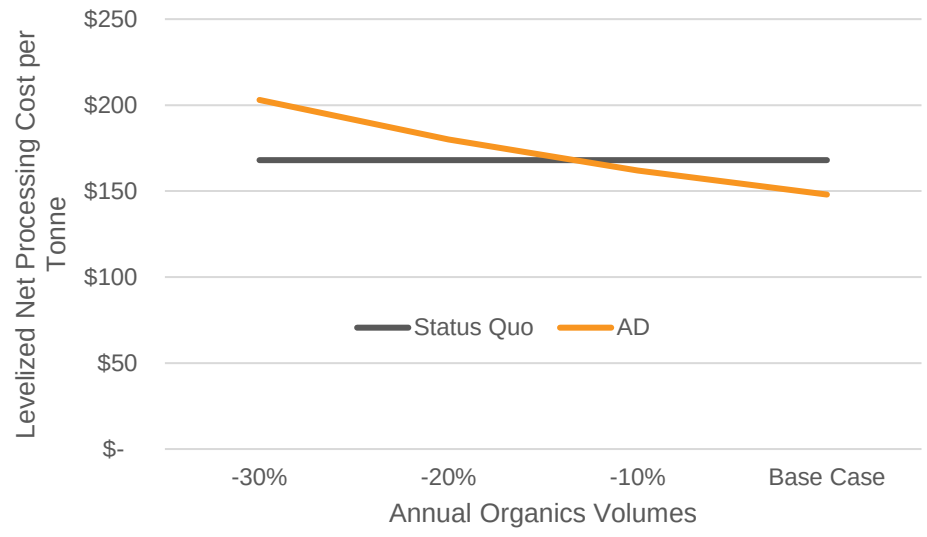


Figure 7: Anaerobic Digestion, Large Plant at Hartland, Sensitivity to Reduced Organics Volumes (Processing Cost per Tonne)

6. NEXT STEPS

Based on our analysis, the large scale AD at Hartland option has the potential to offer both financial and GHG benefits. CRD could lead its own further due diligence of the technical and economic viability of AD at Hartland, or could pursue an alternate approach where CRD focuses on securing feedstock commitments, and seeks private sector partners to conduct further due diligence and potentially develop a project at Hartland.

REPORT TO ENVIRONMENTAL SERVICES COMMITTEE
MEETING OF WEDNESDAY, APRIL 21, 2021

SUBJECT **Landfill Gas Emissions Quantification at Hartland Landfill**

ISSUE SUMMARY

To provide the results of a recent study on landfill gas generation, collection and emissions at Hartland Landfill (Hartland) and how the results will support additional landfill gas mitigation projects across the site.

BACKGROUND

In a solid waste landfill, the decomposition of refuse produces landfill gas, consisting primarily of methane and carbon dioxide. Even with an extensive landfill gas collection network, a portion of emissions will escape to the atmosphere. These fugitive emissions contribute to climate change, as methane is a powerful greenhouse gas (GHG).

In 2020, to better understand and mitigate fugitive emissions at Hartland, staff commissioned a study to: quantify fugitive landfill gas emissions across the landfill, assess the current landfill gas collection efficiency against modelled landfill gas generation and identify mitigation strategies.

Under the BC Landfill Gas Management Regulation, the Ministry of Environment and Climate Change Strategy (ENV) requires all BC landfills to use the same theoretical model and ENV Annual Reporting Tool (ENV AR tool) to predict gas generation and collection efficiency on an annual basis. Under the regulation, landfills are expected to meet a performance objective of 75% collection efficiency (i.e. of the total gas generation estimated by the model, 75% must be collected for destruction/beneficial reuse).

In order to better understand model accuracy and actual collection efficiency, fugitive emissions at Hartland were empirically measured during two field events in 2020 (Appendix A). The data was used to complete a comprehensive landfill gas mass balance for the site using three different landfill gas generation models. Report findings confirm that the ENV AR tool overestimates landfill gas generation and fugitive emissions at Hartland, while the more advanced landfill gas generation model (UBCiModel©) more accurately estimates these parameters due to its capacity for tailor model parameters to reflect Hartland's site specific conditions. Consequently, Hartland is collecting a higher proportion of total landfill gas than previously reported; approximately 76%-81% over the last three years compared to 64%-67% for the same period using the required ENV AR tool. According to the report, the Hartland gas collection efficiency may be the highest the consultant has observed in BC, and it exceeds the target of 75% under the Landfill Gas Management Regulation.

The analysis also found that current landfill cover systems are estimated to biologically oxidize 29% of the total fugitive emissions. Biological oxidation converts methane into carbon dioxide (CO_2) making the gas much more inert from a climate change perspective (methane is 25 times more potent as a GHG than CO_2).

Between landfill gas collection and biological oxidation of methane, it is estimated that approximately 86% of the total methane from Hartland is being beneficially utilized or destroyed. The report also identified additional strategies to increase methane collection efficiency and biological oxidization, including enhancements to the existing landfill gas collection system and targeted application of an engineered biocover system on both closed portions and operational phases of the landfill. The report concludes that implementing the recommendations could result in Hartland fugitive methane emissions approaching zero.

IMPLICATIONS

Regulatory Implications

Results of the study indicate that measured fugitive emissions for Hartland are significantly lower than those calculated using the ENV AR tool, and that Hartland currently meets the 75% collection efficiency target. These findings will provide a basis for the CRD to discuss using the UBCiModel© in annual reporting with the regulator.

Environmental & Climate Implications

Implementing recommendations from the study has environmental and climate benefits across multiple programs/initiatives:

- Areas identified as having high fugitive emissions can be targeted for additional landfill gas mitigation, either through additional infrastructure installation, or application of biocover.
    - Design/installation of a specialized gas collector is already underway to address an area contributing approximately 15% of the overall fugitive emissions.
    - In areas where gas collection is not feasible, the data will provide a baseline to support short-term biosolids planning and biocover application. Effective engineered biocover systems typically include a combination of biosolids, wood chips and sand. Emissions can be quantified before and after biocover application to quantify the GHG emissions reductions benefits as a result of biocover placement.
    - Beginning in 2023, landfill gas will be upgraded to Renewable Natural Gas (RNG) and used to displace conventional natural gas, replacing an estimated 264,000 tonnes CO_2e (Carbon dioxide equivalent) over a 25-year period. Optimizing landfill gas management through enhancing collection systems could increase landfill gas collection efficiency, which would increase the benefit of the RNG initiative.
- Any emission reductions beyond the 75% collection efficiency may be used to offset corporate GHG emissions, or could be sold as offset units to the Province (contingent on ENV approval). Follow-up emissions quantification studies are planned to support this effort.

CONCLUSION

In 2020, to better understand the performance of the landfill gas collection system and fugitive GHG emissions at Hartland, staff commissioned a field-level study to quantify fugitive landfill gas emissions across the site. The results of this study confirm a higher landfill gas capture rate (76%-81%), and lower fugitive GHG emissions than previously modelled. Including biological oxidation in cover soils, it is estimated that approximately 86% of the total methane from Hartland is beneficially being utilized or destroyed. The information will enable staff to implement focused landfill gas infrastructure improvements/mitigations to further increase landfill gas collection and reduce GHG emissions.

RECOMMENDATION

The Environmental Services Committee recommends to the Capital Regional District Board:

That this report be received for information.

RE: Hartland Landfill Greenhouse Gas Emissions Quantification – Final Report

Dear Mrs. Tradewell,

Sperling Hansen Associates (SHA) is pleased to provide you with the final report of the Hartland Landfill Greenhouse Gas (GHG) Emissions Quantification. advanced Landfill Gas (LFG) Generation assessment for the.

SHA conducted comprehensive field investigations and data analysis to quantify fugitive methane emissions from the landfill. Our field investigations and data analyses showed that Hartland Landfill is currently emitting 925 tonnes of CH_4 per year, equivalent to 184 scfm of LFG at 50% CH_4 content. Therefore, the maximum rate of GHG emissions from Hartland Landfill is estimated to be approximately 23,000 tonnes of CO2-e per year, which accounts for 14% of the generated gas from the landfill in 2020.

Results of this GHG emission quantification study showed that CH_4 emission rates at this facility are lower than what is known as industry best engineering practices, indicating a high collection efficiency of the active gas collection system at this site. To our knowledge, this is the highest gas collection efficiency currently achieved in BC. Furthermore, completing a methane mass balance during the two field measurement events showed that UBCiModel©, as a site-specific model, better represents CH_4 generation at Hartland Landfill.

If you have any questions about our submission or require any further information, please do not hesitate to contact me.

Yours truly,
SPERLING HANSEN ASSOCIATES

1 INTRODUCTION

1.1 Background

Hartland Landfill (Landfill) is owned and operated by the Capital Regional District (CRD), located 14 km northwest of Victoria, British Columbia (BC) in the District of Saanich at 1 Hartland Avenue. The landfill occupies a footprint of 33 ha on a property that encompasses 293 Ha. To date, approximately 7,300,000 tonnes of municipal solid waste (MSW) have been landfilled. Hartland Landfill has been developed in two distinct phases. Phase 1 was developed between 1950 and 1996, with a final capping system completed in 1997. Phase 2 has been operational since 1997, with development planned out in six distinct cells. Cells 1 and 2 have been completed to-date and landfilling is currently occurring in Cell 3.

Photo 1.1 - Hartland Landfill Aerial Photo

Hartland Landfill is one of the largest landfills in BC and is required to collect and thermally combust generated methane as per the BC Ministry of Environment (ENV) landfill gas regulation (LFG Regulation). This provincial regulation stipulates that landfills generating more than 1,000 tonnes of methane per year are to install and operate an active LFG management system with a minimum gas collection efficiency of 75%. Since 2012, the CRD has been continuously improving and expanding the Hartland Landfill's LFG collection system. As of 2015, the active LFG system has maintained excellent performance with an increasing capture efficiency of the gas throughout the past 5 years.

1.2 Landfill Gas Generation and Collection Efficiency at Hartland Landfill

In a recent study, Sperling Hansen Associates (SHA), 2019 conducted a comprehensive LFG generation assessment study for the landfill using three different models: (i) an advanced LFG generation model (UBCiModel©), (ii) ENV's LFG Generation Model (ENV Model), and (iii) ENV Annual Reporting Tool (ENV Annual Tool). This study determined an annual gas capture efficiency of 66% to 80% at this site between 2014 and 2019 based on the UBCiModel©. However, the ENV model and ENV AR Tool showed lower collection efficiencies ranging as low as 59% in 2014 and up to 71% in 2017 (SHA, 2019). More details from results of this study are provided in Section 4.4.

1.3 Scope of the Current Study

The CRD retained SHA to complete a full-scale measurement of methane emissions at the Hartland Landfill and to further assess effectiveness of the existing gas collection system. The purpose of the study was to execute the following key tasks.

- Conduct field measurement and quantify fugitive methane emissions from different areas of the landfill.
- Assess LFG management system collection efficiency.
- Identify major emission hot spots and assess potential additional greenhouse gas (GHG) emission reduction that can be achieved through other alternative methodologies such as application of a Biocover system.

2 LANDFILL METHANE MASS BALANCE INVESTIGATION

In order to complete a full methane mass balance for a landfill, not only the fugitive methane emissions to the atmosphere need to be quantified, but also methane oxidation by methanotrophic bacteria (naturally existing in landfill cover soil) and methane capture and combustion via active LFG collection and treatment systems must be taken into account. On this basis, Abedini (2014) developed the "METRO equation" which provides a comprehensive mass balance of landfill methane. Detailes of the equation are provided below:

$$G = M + E + T + R + O \qquad \textbf{Equation 1}$$

Where:

G = Generated Methane (theoretical model)
M = Migrated Methane (i.e. offsite lateral migration)
E = Emitted Methane (i.e. atmospheric emissions)
T = Trapped Methane (insignificant in well compacted and active landfills)
R = Recovered Methane (active gas collection system)

O = Oxidized Methane (soil cover or biocover)

The METRO equation considers all possible pathways for the methane generated within a landfill. When offsite lateral migration of methane is not reported and for landfills actively generating methane at high rates, M and T can be removed and the simplified METRO equation can be used as follows (Abedini, 2014):

$$G = E + R + O \qquad \textbf{Equation 2}$$

As mentioned in Section 1.3, the main scope of the current project is to quantify fugitive methane emissions (E) from Hartland Landfill. Section 3 discusses our approach and methodology to fulfill this scope while results of our study are presented and discussed in Section 4. Section 3 also includes information regarding methane recovery data and methane oxidation estimations for the landfill.

3 METHANE EMISSIONS MEASUREMENT

There are several methods that can be used to measure fugitive CH_4 or LFG emission rate from a variety of landfill covers. The most widely attempted method, and seemingly the more favorable for the purpose of regulatory compliance assessment, is the use of a flux chamber which directly measures CH_4 emission flux from the surface of landfills.

In addition to the flux chamber method, other methods such as eddy covariance and co-advected proxy tracer plume measurements and methods relying on remote sensing and plume mapping have been used (Gardiner et al., 2017; Delre et al., 2018; Kormi et al., 2017; Goldsmith et al., 2012; Gollapalli et al., 2018; Monster et al., 2014; Innocenti et al., 2017; Delkash et al., 2016; Allen et al., 2018; Abedini et al., 2019). Many of these methods suffer considerable drawbacks in terms of associated costs, reliability, logistics and compatibility with the typically heterogeneity of landfills and fugitive CH_4 emissions.

3.1 Technique for Quantification of Fugitive Methane Emissions at Hartland

The technique adopted to quantify the fugitive CH_4 emissions in this study is a patented methodology developed through the PhD research of Dr. Ali Abedini at the University of British Columbia (UBC) (Abedini, 2014; Abedini et al., 2019). Abedini's methodology was developed based on comprehensive field investigations completed at the Vancouver Landfill and involves measurement of near-ground surface methane concentrations (SMC) from the area of interest using a flame ionization detector (FID) device.

This method overcomes the major drawbacks of the conventionally acceptable stand alone flux chamber method in terms of detection limit, cost and extensive time required to characterize

fugitive emission at a given landfill. Measurement of CH_4 concentration at the surface of a landfill is less demanding compared to the flux chamber method and is presumed to lead to more reliable results when the concentration of CH_4 at the surface of a landfill is low, as usually happens in cases where there is an active landfill gas collection system or biocover system in place. A reliable correlation between surface concentration of CH_4, which can easily be measured, and CH_4 emission measured using flux chamber provides a practical method to facilitate CH_4 emission rate characterization at a lower cost.
The techniques and procedures used for measuring SMC using a hand-held FID is an approved methodology used across the US, where it is required by the U.S. Environmental Protection Agency's (EPA) new source performance standard (NSPS) regulation. The NSPS requires that all regulated landfills in the US must measure and report CH_4 concentrations at the landfill's surface on a quarterly basis. Values registered above the NSPS threshold during the FID scan imply a malfunctioning LFG control system and the landfill owner is then required to implement control measures within a given period of time.

Abedini (2014) developed a correlation between qualitative SMC data and quantitative surface CH_4 emission rates (MER). This technique is especially useful when MER levels are very low (e.g. where a geomembrane cap and an active gas collection system are in place) and other measurement techniques such as flux chamber cannot be applied. In June 2020 an SMC scan was completed over the entire landfill footprint where historically waste has been placed. In October of the same year, a second round of SMC measurements were completed over selected areas including areas without permanent closure system in place and where relatively higher emission rates were identified in June. The two rounds of field measurements were intentionally scheduled to be completed in two different climatic conditions (cold and warm seasons) to account for the impact of cold temperature on biological methane oxidation within the landfill's soil cover.

A *Thermo Scientific TVA 2020* FID instrument was used to measure and log CH_4 concentrations at the landfill surface. Hartland landfill was divided into 32 scan areas (zones) as shown in Figure 3.1. The areas located on side slopes are tagged as S.x and flat (crest) areas are tagged as C.x. The scanned area also included the exposed top surface of a coarse leachate collection blanket (approximately 2 m x 250 m) located on the west side of C1 area known as Rock Wall, labeled R.W. The surface scan areas had an approximate total footprint of 30 ha. Some minor changes in zones took place between the two rounds of the field work primarily due to the landfill's ongoing waste disposal operations and scheduled development.

Each zone was scanned on approximately 10 m spaced pathways while logging CH_4 concentration every 3 seconds. The FID instrument was calibrated using calibration gas tanks before conducting each set of measurements and tested using the same tanks after completion of each survey to detect any calibration drift during the field work.

Figure 3.1 - Surface Scan Areas at Hartland Landfill (June 2020)

Photos 3.1a & 3.1b show a TVA 2020 and calibration gases (left) and Dr. Abedini conducting FID measurements on a similar project (right).

Photo 3.1a & 3.1b - Surface Methane Concentration Scan Using a Portable FID Instrument

Results of both rounds of field investigations at Hartland Landfill are presented in Section 4.

3.1.1 Effect of Barometric Pressure on LFG Emission

A very important aspect of measurement of fugitive methane emissions from landfills is the effect of barometric pressure (BP) on the gas flux intensity. Fluctuation in BP is known to greatly impact LFG atmospheric emissions (Abedini, 2014; Abedini et al., 2019). When the BP is increasing, the increased atmospheric pressure is applied on the ground, restricting natural LFG venting through the landfill surface, or migrating through the soil. Dropping BP reduces the pressure exerted on the ground, enabling LFG to move more freely from the landfill and increasing the potential for gas to escape through the landfill cover or via offsite lateral migration. Abedini's surface scan technique for quantification of methane emissions includes adjustments of methane emission rates (MERs) based on the magnitude and sign of the rate of change in atmospheric pressure (i.e. ΔP/t) at the time of field measurements according to Equation 3 below (Abedini, 2014):

$$MER_a = MER \times (1 + 1.9731 \times |\Delta P/t|)^{\wedge (\Delta P/t \,/|\Delta P/t|)} \qquad \textbf{Equation 3}$$

where; MER_a = adjusted methane emission rate (g CH_4 m^2 d^{-1})
MER = measured methane emission rate (g CH_4 m^2 d^{-1})
$\Delta P/t$ = rate of change in barometric pressure at the time of field measurement (mbar/hr)

In this equation, ($\Delta P/t$ /$|\Delta P/t|$) would be equal to (-1) or (+1), represent the sign of the $\Delta P/t$.

Using Equation 3 and based on the BP variations that were recorded during the scans at Hartland Landfill, the field emission measurement results were adjusted for the rate of change in BP values. The BP data for the three field investigation days were acquired from the closest weather station to the landfill. Additionally, ambient pressure changes were monitored using a portable weather monitor instrument.

The data presented in Figures 3.2 through 3.6 were acquired from the Saanich Airport Weather Station during the days of field investigation on June 17th to 19th, 2020 and October 20th and 21st, 2020. Figures 3.3, 3.5 & 3.6 illustrate BP data from Saanich Airport weather station as well as onsite data measured by a portable weather station during the course of the field work. Comparing the two sets of data showed that even though the BP values measured onsite and at Saanich weather station were slightly different, the rate of change measured at two locations followed the same trend. This comparison confirmed applicability of the BP data that have been historically recorded at Saanich weather station to the emission rate calculations for Hartland Landfill (with a note that Sannich weather station has hourly records for BP).

3.2 Gas Collection Rates during June and October 2020 Field Investigations

In order to conduct a system performance review and compare the level of gas emissions with gas capture at Hartland Landfill, SHA collected updated information from the landfill's active gas collection system during the days of field monitoring. Table 3.1 present data regarding the landfill's collected gas quantity and quality during the course of the field investigations for GHG emissions quantification.

Table 3.1 - Hartland Landfill Active Gas Collection System Data (June & October , 2020)

	Daily LFG Flow (scf/day)	LFG Flow Rate (scfm)	CH_4 Content (%)	Normalized Flow Rate at 50% [CH_4] (scfm)

Oct. Average	**1,548,024**	**1,063.4**	**51.9**	**1,104.7**

scf = standard cubic feet, scfm = standard cubic feet per minute, [CH_4] = Methane Concentration

4 RESULTS

Results of the surface scan field investigations are presented below in four different sections. One big advantage of the surface scan technique for quantification of methane emissions is identification of methane emission hotspots at the same time. This information allows the landfill owner/ operator to more effectively develop and implement geo-targeted mitigation strategies for reduction of fugitive CH_4 emissions (GHG emissions) from the landfill. This information is presented in Section 4.1 below. Section 4.2 presents results of Flux Chamber investigations for development of a site-specific correlation factor between surface methane concentration (SMC) and methane emission rates (MER) and Section 4.3 presents the achieved results for quantification of MER values. Lastly, Section 4.4 reports GHG and LFG emissions rates for the Hartland Landfill in 2020.

4.1 Methane Emission Hotspots

There are several types of closure/cover systems that have been applied on various surfaces of Hartland Landfill throughout its lifespan to date. These cover systems include: (i) interim soil cover, (ii) temporary geomembrane cover, (iii) permanent geomembrane cover, and (iv) multi-layer full final closure system including geomembrane liner, drainage layer, sub soil and topsoil cover etc.

Photo 4.1 - Interim Soil Cover (Area S14)

Photo 4.2 - Temporary Woven Liner (Area S10, S11)

Photo 4.3 - Textured Geomembrane (Area S1)

Photo 4.4 - Final Multilayer Cover (Area S9)

In general, lower methane emission rates are expected to occur where an impermeable liner is in place and negative pressure is applied to the area through an active gas collection system. However, closure system faults may result in localized (point source) CH_4 leaks, known as emission "hotspots". Typical CH_4 emission hotspot locations at landfills include leaking gas pipes, manholes and underground infrastructure connected to the leachate collection system, exposed leachate drainage layer, exposed geomembrane punctures, settlement cracks in compacted clay liner systems and edges of geomembrane closure system if not tied into the bottom liner or no impermeable (clay) plug is used around the edges. Hotspots on the landfill surface are normally predominant on landfill side slopes; however, high emission rates can be observed in crest areas in the case of liner punctures/cracks and in active areas of the landfill where no impermeable liner is in place. Several emission hotspots were identified during the surface scan field works. Major emission hotspots identified during the field works (Rounds 1&2) are shown on Figure 4.1.

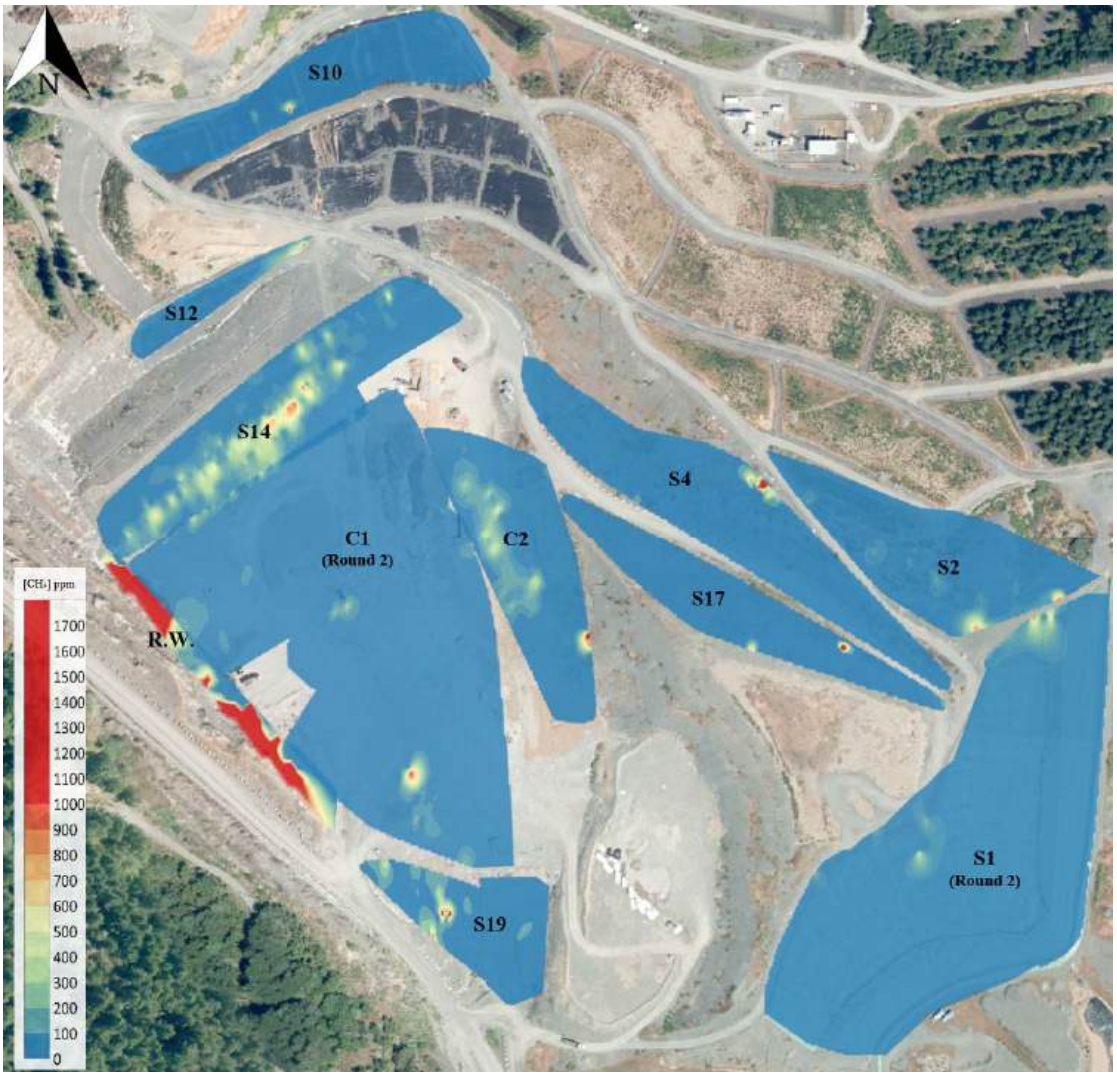

Figure 4.1 - Major Methane Emission Hotspots at Hartland Landfill (June & October 2020)

Phase 2, Cell 3 a major emission hotspot was exposed drainage blanket on the west side of the crest (C1) area. This area, known as the "Rock Wall", is the interface between the western filling extent of Cell 3 and refuse and creates challenges with respect to gas collection. Soon after round 1 of the surface scan was completed, the Hartland Landfill operations team applied a clay plug over this area and the next lift of waste continued to be placed over top of the clay plug. The second round of the surface scan showed a significant reduction in fugitive methane emissions from the Rock Wall area, however, not having a gas collection system in place at this location, the generated gas started migrating through the drainage blanket towards the north, resulting in a significant increase in CH_4 emission from west side of the north slope (marked as S14).

The second round of surface scanning identified this location as a major emission hotspot as illustrated in Figure 4.2. SHA is currently working with CRD to develop a gas collection system for the Rock Wall area. Photos 4.5 and 4.6 below show the clay plug and waste disposal operation at the Rock Wall area during the second round of field works (October 2020).

Photo 4.5 - Rock Wall Drainage Blanket Clay Plug, October 2020

Photo 4.6 - Waste Disposal at West of C1 area Over the Rock Wall Area, October 2020

North and south slopes (S14 and S19) of this cell (Phase 2, Cell 3) showed relatively high methane emission rates during both sampling rounds. Notably, the horizontal gas collectors that had been installed in the new lifts within this cell were not yet online at the time of the field works (See Photo 4.7).

In addition to S14, the second round of sampling showed higher emission rates from the crest area (C1). Two primary factors causing higher level of emissions from these areas in the second round are (i) blocking the easy pathway for gas emission from the rock wall drainage blanket, and (ii) decomposition of readily degradable organics that had been disposed in this area for the past couple years.

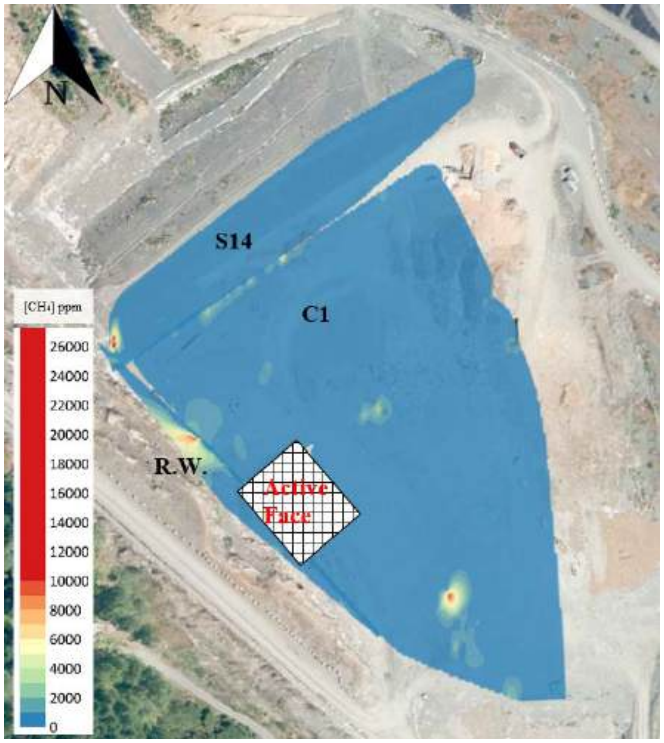

Figure 4.2 – Cell 3 Methane Emission Hotspots for Round 2 of the Surface Scan (October 2020)

Photo 4.7 - New Horizontal Collectors (Area S14)

Phase 2, Cell 2 major emission hotspots were detected at the edges of the geomembrane liner. These hotspots were identified during both rounds of field measurements with higher emission rates observed in the second round. Additional hotspots were identified in locations where the geomembrane was damaged. Photos 4.8a to 4.8d show some examples of S1 area emission hotspots.

Photos 4.8a & 4.8d - Emission Hotspots, Edge of Geomembrane Liner and Damaged Liner (Area S1)

Phase 2, Cell 1 temporary liner punctures (Photos 4.9a & 4.9b below) showed relatively high methane leaks during both sampling rounds.

Photos 4.9a & 4.9b - Temporary Liner Puncture (Area S10)

4.2 Site-Specific Correlation Factor for Hartland Landfill

During the course of the field investigations at Hartland Landfill, thirty five (35) flux chamber measurements were conducted in three (3) zones (Areas S4, S13, and S14) in order to generate a site-specific correlation factor similar to what Dr. Abedini developed for the Vancouver Landfill which were later used as default values in his methodology. Application of flux chambers at landfills to measure fugitive methane emissions from the soil surface through isolating and monitoring the emitting gas from soil is a well-established method. The flux chamber technique includes placing a closed chamber (box) on the landfill's surface and monitoring the change of methane concentration in the box over time. Based on the rate of change in methane concentration in the chamber over time, chamber volume, and area beneath the chamber, the methane flux emitted from landfill's surface can be calculated. The US-EPA guideline, "measurement of gaseous emission rates from land surfaces using an emission isolation flux chamber" (EPA/600/8-86/008), was used to determine the required number of flux chamber tests based on the footprint area of selected zones.

During these tests at the landfill, methane concentrations inside the chamber were continuously monitored using a Landtec GEM 2000+ gas analyzer. With a maximum flux chamber test duration of approximately 5 to 10 minutes, and the chamber volume of V = 0.007 m^3, as well as the gas analyzer sensitivity of ± 0.1% CH_4, the method overall detection limit was determined to be in the order of 10 to 20 g CH_4 m^{-2} d^{-1}. In five (5) locations out of fifteen (15) tested in Area S4, values higher than the instrument detection limit were recorded. However, due to the low methane emission rates in Areas S13 and S14, flux chamber measurements in these two areas did not produce meaningful results. Photos 4.10a and 4.10b below show the flux chamber test setup at Hartland Landfill.

Photo 4.10a & 4.8b - Flux Chamber Measurement at Hartland Landfill

The flux chamber test results were graphed and translated to methane emission rates (MER) based on the chamber volume and footprint area. Figures 4.3a and 4.3b show two examples of the graphical illustration of the flux chamber test results.

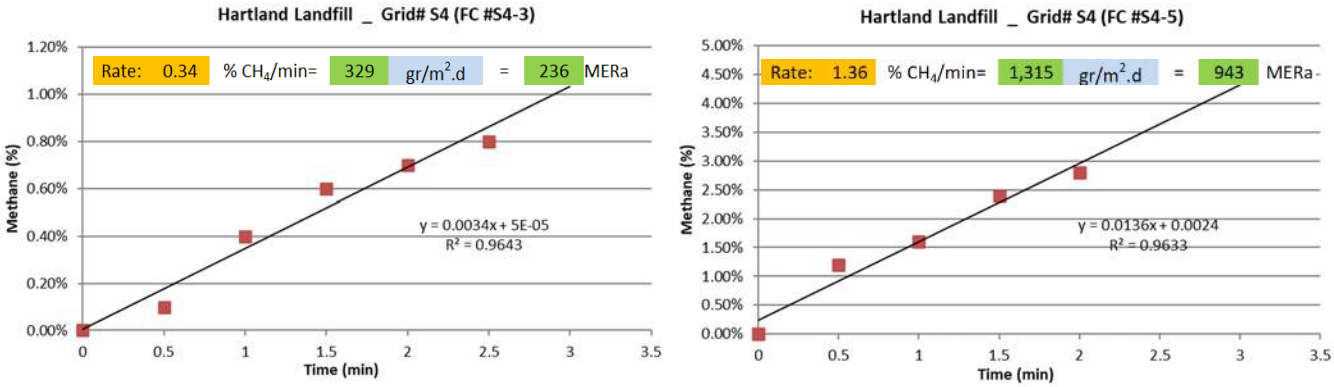

Figure 4.3a & 4.3b - Flux Chamber Results Graphical illustration (FC# S4-3/15 & FC# S4-5/15)

The resulting MER from flux chamber tests in Area S4 ranged between zero (non-detectable) to 1,315 g/m^2/day (before adjustment for barometric pressure was applied). The averaged result for this area was 14.46 g CH_4/m^2/day based on the flux chamber measurements.

4.3 Methane Emission Rates

The recorded SMC data derived from the first round of surface scan at Hartland Landfill ranged between 0 and 2,167 volumetric parts per million (ppmv) with the majority of high hits (methane emissions hotspots) in areas previously shown on Figure 4.1. The rock wall area showed significantly higher emission rates than all other areas scanned, with SMC values as high as approximately 167,000 ppmv. Further analysis of the results showed significant variation in the level of emission rates from different areas of the Landfill, with the rock wall area being responsible for approximately 18% of the overall GHG emissions from the site during the first round of sampling. Application of a clay plug in this area reduced the maximum SMC value to less than 10,000 ppmv during the follow up measurements in October, however, significant increase in SMC values were observed in western sections of S14 area in this round.

Other areas with relatively high total emissions (i.e. emission rate multiplied by area) identified during the first sampling round were S2, S4, S7, C2, and S19. After completing this round of measurements, the scanned areas were grouped into five (5) categories based on the MER associated with each area. Group 1 (coloured green) with MER less than 2.5 g/m^2/day, Group 2 (blue) with MER between 2.5 and 5.0 g/m^2/day, Group 3 (yellow) with MER between 5.0 and 10

g/m^2/day, Group 4 (orang), with MER between 10 and 15 g/m^2/day, and Group 5 (red) with MER higher than 15 g/m^2/day.

Detailed assessment of the results indicated that majority the overall emissions were sourced from small portions of the scanned areas, mainly located at the unclosed (active) cell of the landfill (Cell 3). While higher gas emissions from active phases of the landfill are inevitable, identification of major emission hotspots and application of geo-targeted mitigation measures can have a significant impact on further reduction of the overall GHG emissions from the landfill. Figure 4.4 illustrates average CH_4 emission rates from each zone. Figure 4.5 shows different scanned areas colour coded based on the associated average MER from each area in first round of surface scan.

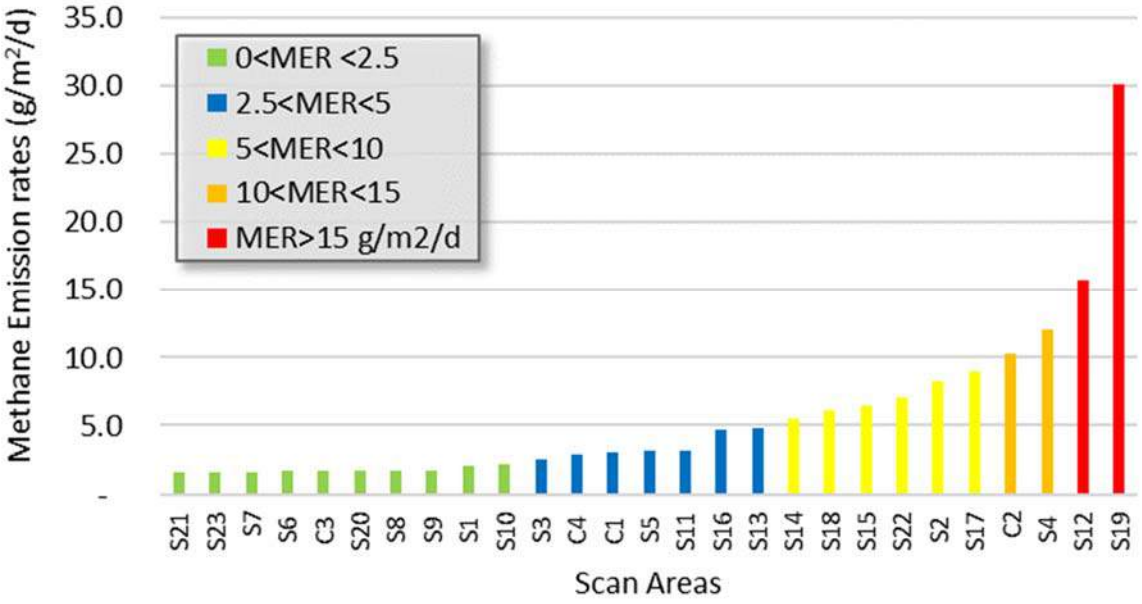

Figure 4.4 - Average Methane Emission Rates (MER), Hartland Landfill June 2020

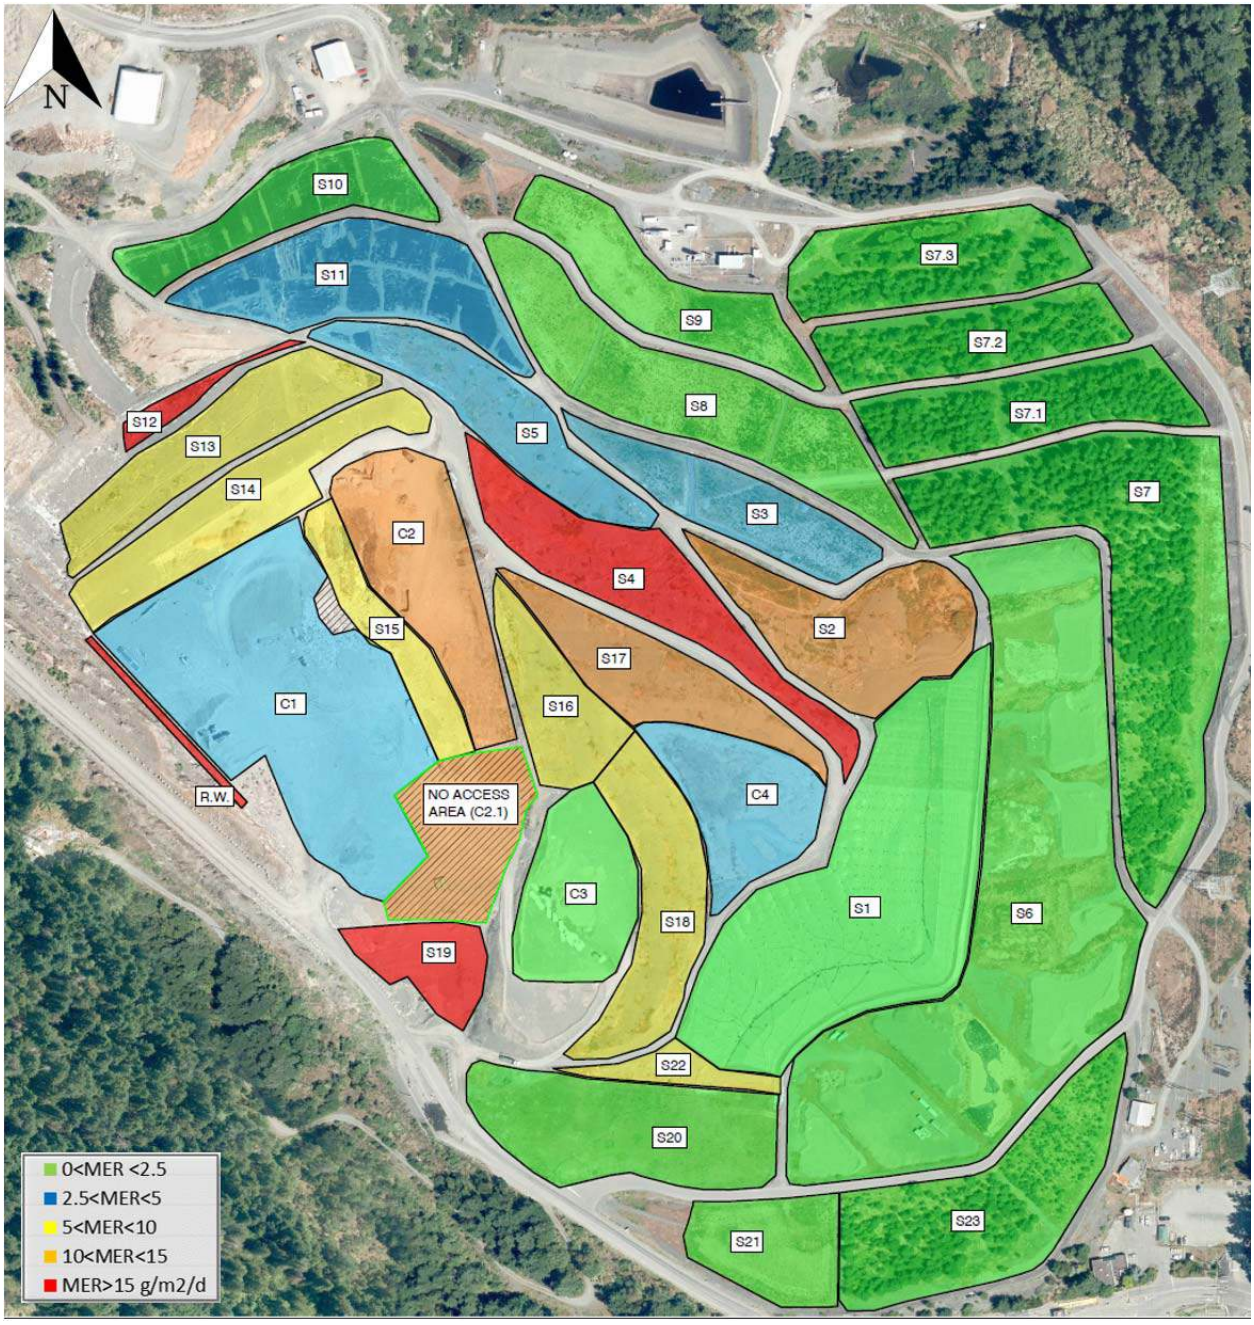

Figure 4.5 - Grouping the Scan Areas Based on Average Methane Emission Rates

Based on the default correlation factor, the SMC data was translated to average MER values ranging between 1.6 g $CH_4/m^2/d$ (Area S.21) and 30.1 g $CH_4/m^2/d$ (Area S.19) in the first round. These values in the second round ranged between 1.6 g $CH_4/m^2/d$ (Area S.8) and 34.6 g $CH_4/m^2/d$ (Area S.14). Average MER from the Rock Wall area for Rounds 1 and 2 were 480.6 g $CH_4/m^2/d$ and 190.7 g $CH_4/m^2/d$, respectively. The overall MER for the Hartland landfill for 2020 was calculated to be 17.6 g $CH_4/m^2/d$.

Table 4.1 below presents the results for SMC and MER values for both rounds as well as the site's overall average MER for 2020.

Table 4.1 - Results of Surface Scan and Methane Emission Quantification for Hartland Landfill

x.x Data acquired from 1st round of the field work

Excluding the fugitive CH_4 emissions from the rock wall area, Hartland Landfill's average methane emission rate is as low as 6.6 g $CH_4/m^2/d$.

The methane emission rate from the rock wall area was significantly reduced during the second round of field measurement. This reduction was primarily caused by blocking of the methane escape pathway using clay plug and a lift of waste placed over the area between August and October 2020. However, the second round of surface scanning showed higher methane emission rates from slopes just north of the rock wall area (S14). SHA in close collaboration with the CRD engineering team designed a gas emission mitigation system (horizontal gas collector) that will be constructed in the near future.

Round 1 of field measurements, completed in June 2020, showed a total annual CH_4 emission rate of 757 ± 179 tonnes of CH_4 per year with approximately 50% of the emissions occurring in the unclosed portion of the landfill (Cell #3). The second round that was completed in October of the same year showed an annual CH_4 emission rate of 1,069 ± 212 tonnes of CH_4 per year with Cell #3 being responsible for 59% of the site's overall emissions. As shown in Table 4.2, these values are equivalent to an average LFG emission rates of 150 scfm and 212 scfm for the first and second round of sampling, respectively.

The site's overall average annual methane emission rate was determined to be 925 tonnes of CH_4 per year, equivalent to an LFG emission rate of 183 scfm at 50% methane content. The overall methane emission rate quantified in October was higher than the first round measured in June. Possible reasons for this increase may include (i) seasonal variation in methane emission, (ii) lower oxidation rate of the fugitive methane through the cover soil during colder seasonal temperatures, and (iii) increased gas generation from the active fill area (Cell #3) while no new horizontal gas collectors were brought online between June and October 2020.

Table 4.2 summarizes the annual methane and LFG emission rates for different areas of the landfill and the site's overall average based on the two rounds of GHG measurements completed in June and October of 2020.

Table 4.2 - Methane and LFG Emission Rates from Different Areas of Hartland Landfill

4.4 Methane Mass Balance

4.4.1 Modelled Landfill Gas Generation

In 2019, the CRD retained SHA to conduct a comprehensive LFG generation assessment study for the landfill using three different models: (i) an advanced LFG generation model (UBCiModel©), (ii) ENV's LFG Generation Assessment Model (ENV Model), and (iii) ENV Annual Reporting Tool (ENV AR Tool).

The BC LFG Regulation requires that the LFG generation assessment reports be prepared in accordance with the LFG generation assessment procedure guidance (ENV Guidelines) using the ENV Model. ENV AR Tool, is another LFG generation estimation Tool which must be used for annual reporting to assess performance of existing active LFG systems and their methane capture efficiency. The only difference between the ENV Model and the ENV AR Tool is the historical waste disposal tonnages that are considered for gas generation modeling purposes. For the ENV model, historical waste tonnages should cover the period from the first year of landfill operations or thirty years before the year in which the gas generation assessment takes place, whichever is more recent. While for the ENV AR Tool, all waste tonnage data from 1980 to the calendar year prior to the year of assessment are taken into account, resulting in methane generation estimates being usually higher than with the ENV Model. UBCiModel© is a powerful gas generation model that utilizes numerous site-specific input parameters to estimate methane generation rates from the landfill more accurately. Based on a recent comprehensive review on existing gas generation models by Environment and Climate Change Canada (ECCC), the UBCiModel© was ranked among the most accurate models for LFG generation estimation (Jacobs 2020).

A summary of results from SHA, 2019 is provided in Table 4.3 below (SHA, 2019).

Table 4.3 - LFG Generation Assessment Summary using 3 Models (SHA, 2019)

Model	Modelled Methane Generation 2019[1] tonnes CH_4/year (scfm LFG)	Modelled Methane Generation 2020[1] tonnes CH_4/year (scfm LFG)
UBCiModel	6,872 (1,363)	6,865 (1,362)
ENV Model	6,889 (1,365)	6,947 (1,376)
ENV AR Tool	7,846 (1,554)	7,866 (1,558)

[1] - flows normalized to 50% v/v CH_4

Figure 4.6 illustrates a 25-year snapshot of LFG generation comparison between the three models as well as the landfill's LFG recovery data between 2000 and 2020.

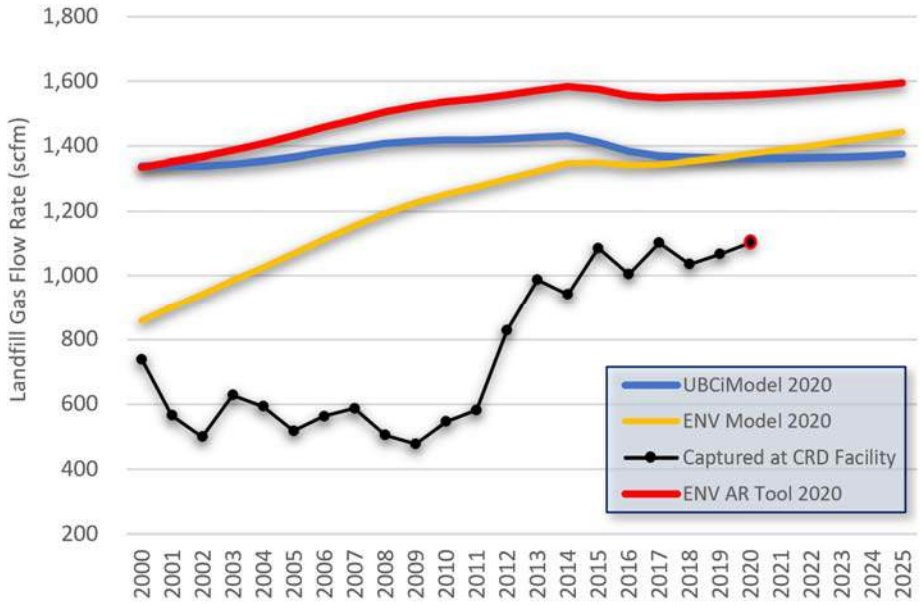

Figure 4.6 - LFG Generation Estimates for Based on Different Models (2000-2025)

Given the complexity of the UBCiModel and incorporation of site-specific information as well as the historical and planned organic diversion initiatives, SHA is of the opinion that the UBCiModel predictions provide a better representation of CH_4 generation at Hartland Landfill.

Figure 4.7 presents UBCiModel results for LFG generation compared to historical gas collection quantities that was reported by CRD, as well as SHA's estimates for LFG collection rates for landfill's anticipated lifespan including 25 years post closure.

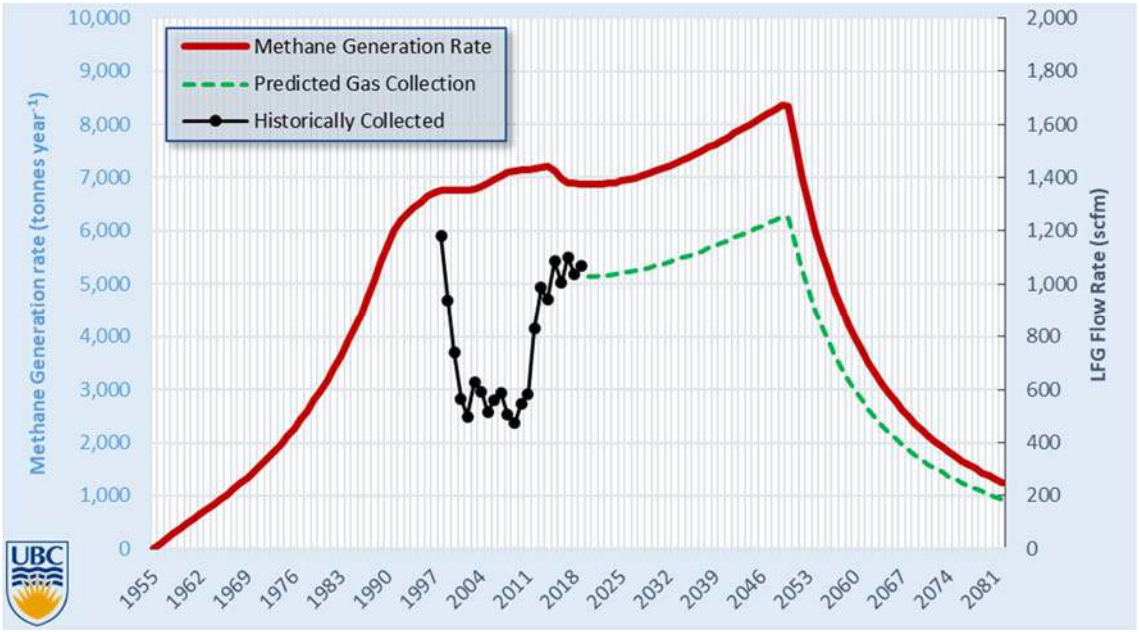

Figure 4.7 - Predicted LFG Generation and Collection Rates at the Hartland Landfill

4.4.2 Methane Collection Efficiency at Hartland Landfill

Based on the theoretical gas generation modeling and the historical landfill gas flow rate and methane content reported at the gas extraction facility, Table 4.4 below summarizes Hartland Landfill active LFG collection system's efficiency between 2014 and 2019 reported by the three models: UBCiModel©, ENV Model, and the ENV AR Tool.

Table 4.4 - Hartland Landfill LFG System Capture Efficiency Based on three models

Year	Methane Capture Efficiency		
	UBCiModel	ENV Model*	ENV AR Tool
2014	66%	64%	59%
2015	77%	75%	69%
2016	73%	71%	64%
2017	80%	79%	71%
2018	76%	75%	67%
2019	78%	78%	69%

* Based on generation estimates made in the year following year of assessment

Based on the results achieved from the UBCiModel©, the current methane generation at Hartland Landfill was estimated to be 1,362 scfm, equivalent to 6,865 tonnes of CH_4 per year. Based on the average collected gas flow rate and the average CH_4 content previously presented in Table 3.1, the average collected LFG flow rate in June and October of 2020 at the landfill were 1,102 scfm and 1,105 scfm for June and October when normalized to 50% CH_4 content. Therefore, the landfill's active gas collection system's average collection efficiency based on the UBCiModel was estimated to be 81% during the field works.

The site investigation showed an average annual methane emission rate of 184 scfm. Therefore, based on results of the field investigations, SHA concluded that approximately 14% of the generated methane from Hartland Landfill is emitted to the atmosphere.

Figure 4.8 illustrates UBCiModel© gas generation estimates, historical gas collection data and gas emission results from the 2020 field investigations.

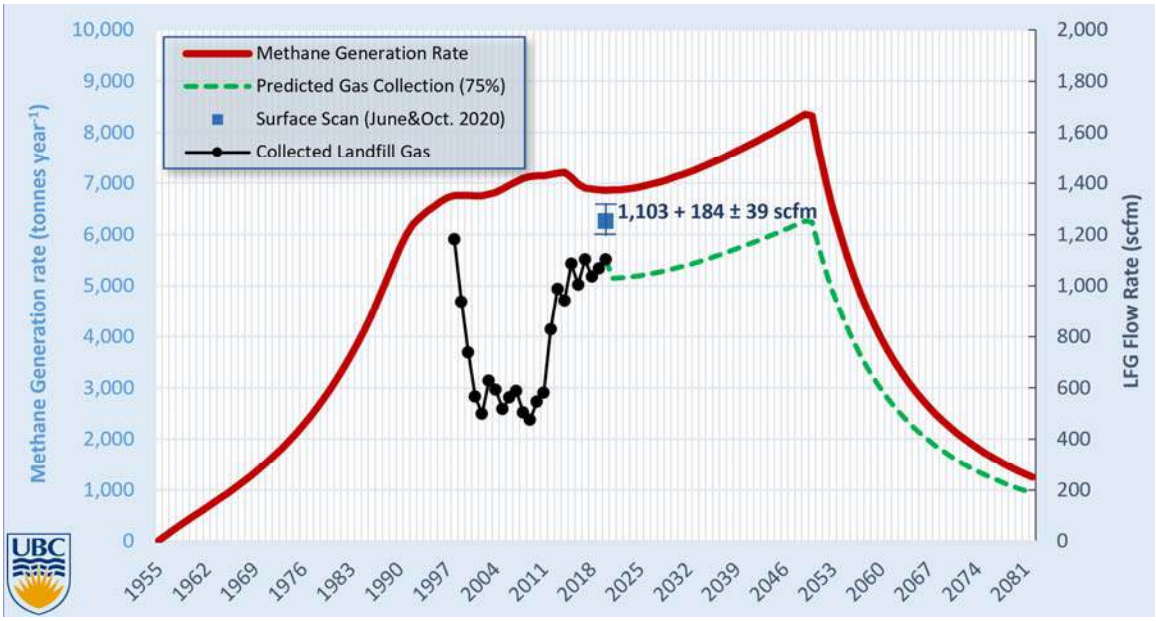

Figure 4.8 - Landfill Gas Generation, Collection and Emission Rates at Hartland Landfill

Comparing the CH_4 generation estimates for 2020 with the quantity of CH_4 collected and emitted this year, shows a difference in results. This value for UBCiModel, ENV Tool and ENV AR Tool was 6%, 7%, and 17% of modelled generated gas, respectively. This difference could be a result of model overestimation and/or the marginal error associated with Abedini's technique linear regression. Moreover, as suggested by the CH_4 mass balance METRO equation (described in Section 2), this quantity of "missing" CH_4 could be result of methane biological oxidation rates that can vary seasonally.

Table 4.5 shows the CH_4 mas balance for Hartland Landfill in 2020 based on the three gas generation models estimations and the two rounds of the fugitive methane emission measurements completed at this site.

Table 4.5 - Methane Mass Balance at Hartland Landfill in 2020

	Modelled LFG Generation Rate	Average LFG Collection Rate		Average LFG Emission Rate		Measured LFG (Collected + Emitted)	Difference Between Modelled and Measured Data	
	(scfm)	(scfm)	%	(scfm)	%	(scfm)	(scfm)	%
UBCiModel	1,362	1,103	81%	183	13%	1,287	75	6%
ENV Tool	1,376	1,103	80%	183	13%	1,287	90	7%
ENV AR Tool	1,558	1,103	71%	183	12%	1,287	272	17%

4.5 Biological Oxidation of Methane

Methane is a potent GHG with a global warming potential (GWP) of 28 to 36 times higher than CO_2 in a 100-year timeframe. Therefore, management of LFG and reducing methane emissions from MSW landfills through collection and thermal combustion of methane has become a requirement in many jurisdictions. Another effective method to control CH_4 emissions from landfills is biological oxidation. Biological oxidation of methane in landfill cover soil is historically acknowledged by a number of regulatory agencies such as ENV, U.S. Environmental Protection Agency (US EPA), and the International Panel on Climate Change (IPCC).

While landfill cover can be designed to maximize oxidation of CH_4 by promoting the growth of methanotrophic bacteria, most regulatory agencies adopted a default value of 10% oxidation rate for any type of soil cover. USEPA (2004) reported an average CH_4 oxidation rate (removal efficiency) of 10% to 25% with lower rates for clay cover soil and higher rates for topsoil. However, there are a number of published and peer reviewed scientific research papers that have reported CH_4 oxidation rates of 22% to 55% through operational soil cover (Whalen et al., 1990; Chanton et al., 2009; Chanton et al., 2011, Abedini et al. 2016). Abedini et al. (2016) conducted comprehensive investigations and analyses at Vancouver Landfill using stable isotope technique and showed approximately 30% baseline oxidation occurring within cover soils at this site.

Given the site conditions we are of the opinion that the majority of the remaining CH_4 mass is biologically oxidized in the landfill soil cover by naturally existing methanotrophic bacteria. The second round of CH_4 emissions quantification in October 2020 showed slightly higher emission rates when compared with the rates quantified in June. This could be a result of lower ambient temperature in October slowing down the shallow seated methanotrophic bacteria. Therefore, based on the UBCiModel's CH_4 generation estimates, we calculated the total quantity of oxidized CH_4 is approximately 29% of the uncollected CH_4 travelling through the soil cover in certain areas of the landfill.

Table 4.6 and Figure 4.9 summarize the CH_4 mass balance for Hartland Landfill as per the 2020 two rounds of field investigations.

Table 4.6 - Methane Mass Balance Summary

	LFG (scfm)	Methane (tonnes/year)	% of Total LFG Generated	% of LFG Not Collected
Gas Generation (Model, 2020)	1,362	6,865	100%	--
Average Collection rate	1,103	5,554	81%	--
Uncollected Gas	259	1,311	19%	--
Average Emission Rate	184	935	14%	71%
Balance (Oxidized)	75	376	5%	29%

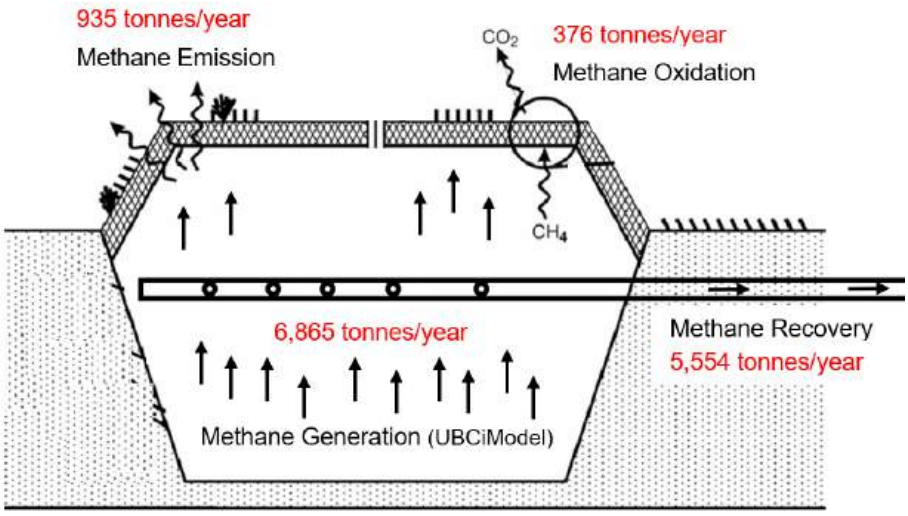

Figure 4.9 - Hartland Landfill Methane Mass Balance Schematic (2020 Average)

Figure 4.10 illustrates methane generation and collection data between 2010 and 2030, as well as estimated CH_4 emissions and oxidation based on the 2020 field investigations.

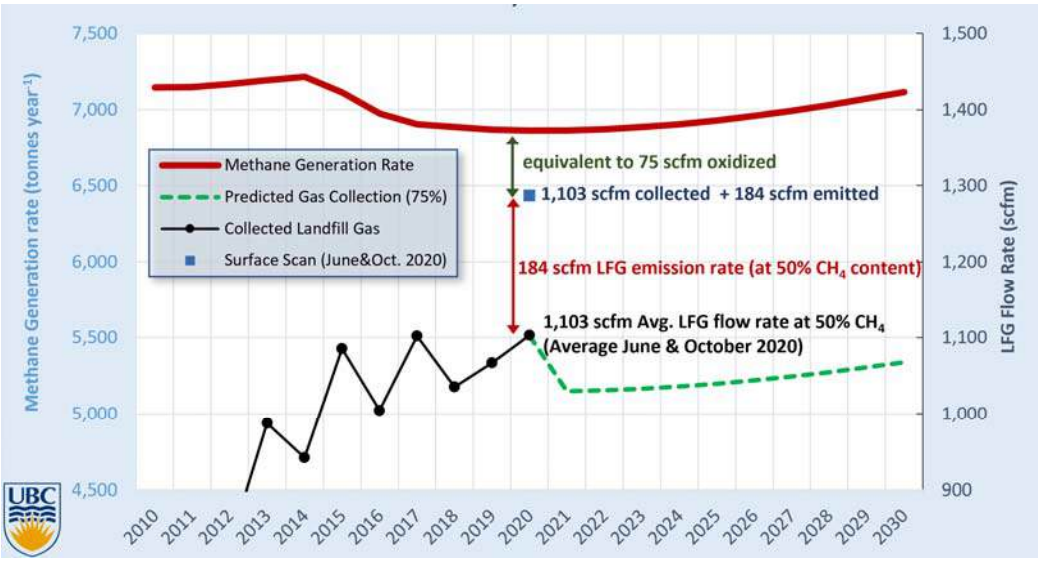

Figure 4.10 - Illustration of Methane Mass Balance for Hartland Landfill based on 2020 field works

We anticipate that there is a relatively high seasonal variation in methane oxidation levels in the landfill's soil cover as the media (soil cover) is not engineered to optimize methanotrophic activities. Landfill cover can be designed to maximize CH_4 oxidation by promoting the growth of methanotrophic bacteria. Type I and Type II methanotrophs are the primary bacterial populations that utilize CH_4 as their source of energy and carbon and convert it to CO_2, water and heat. Techniques such as bacterial DNA extraction and stable isotope technique can be used to study methanotrophic abundance and their effectiveness in methane oxidation.

Currently, there are no approved methodologies for assessment of these system's efficiencies in Canada. As a practical approach, SHA has utilized the surface scan technique to measure baseline and post-installation methane emission rates and has successfully quantified several biocover system methane removal efficiencies across BC.

Taking into account the extremely low level of CH_4 emission rates at Hartland Landfill (i.e. 6.6 g CH_4/m^2/day excluding the rock wall area), SHA believes that application of a fabricated biocover system on closed surfaces and operational phases of the landfill, in addition to an LFG collection system for the rock wall area, would result in the landfill becoming a near-zero emission facility. General recommendations for fabrication of an optimized biocover system are provided in enclosed Appendix A.

5 CONCLUSIONS AND RECOMMENDATIONS

The CRD retained SHA to conduct a full-scale GHG emissions quantification for Hartland Landfill. Site investigations were completed in two rounds of surface emission monitoring in June and October of 2020. Surface emission monitoring includes measurement of near surface methane concentrations which is a standardized methodology in the United States (US) required to assess effectiveness of active gas collection systems in regulated landfills (Reference: California Code of Regulations [CCR] Title 17 Article 4, Sub-article 6, or similarly in the US EPA regulations; 40 Code of Federal Regulations [CFR] Part 60 Subpart XXX).

Quantification of GHG emissions from Hartland Landfill was completed using the surface scan results and a patented technique developed by Dr. Abedini. In this technique, CH_4 emission rates are quantified based on landfill's surface methane concentrations and the rate of change in barometric pressure at the time of surface scanning.

Field investigations and data analyses showed that Hartland Landfill is currently emitting 925 tonnes of CH_4 per year, equivalent to 184 scfm of LFG at 50% CH_4 content. Therefore, the maximum rate of GHG emissions from Hartland Landfill is estimated to be approximately 23,000 tonnes of CO_2-e per year, which accounts for 14% of the generated gas from the landfill. SHA estimated that about 29% of the uncollected CH_4 is biologically oxidized by naturally existing methanotrophic bacteria within the soil covers of the landfill. The current methane biological oxidation rate has a significant seasonal variation due to climatic conditions, however; application of an engineered biocover system can maximize the removal efficacy of the fugitive CH_4 through biological oxidation.

Hartland Landfill has an active gas collection system that currently collects more than 1,100 scfm of the generated LFG, equivalent to 5,500 tonnes of CH_4 per year. Our previous assessments have

shown that the site's active LFG system is effectively collecting the generated gas with an approximate capture efficiency of 76% to 80% over the past 3 years. Results of the current GHG emission quantification study confirmed that CH_4 emission rates at this facility are lower than what is known as industry best engineering practices, indicating a high collection efficiency of the active gas collection system at this site. To our knowledge, this is the highest gas collection efficiency currently achieved in BC. Furthermore, completing a methane mass balance during the two field measurement events showed that UBCiModel©, as a site-specific model, better represents CH_4 generation at Hartland Landfill. We highly recommend that any future feasibility studies and engineering designs for gas collection and/or gas to energy initiatives to be based on more sophisticated models such as UBCiModel©.

Based on our detailed analyses of the field data, we concluded that the majority of the overall CH_4 emissions from Hartland Landfill are sourced from the Cell 3 area which is the only area with no permanent or temporary impermeable cap in place. We identified CH_4 emission hotspots such as exposed geomembrane liner punctures and tears, edges of geomembrane liner, side slopes of the current filling area and the exposed leachate drainage layer on west of Cell 3 area (rock wall). The level of emissions from north and south slopes of Cell 3 area will be significantly reduced as soon as the recently-installed horizontal gas collectors (lift 167m) in this area are brought online. The rock wall area (located at west of the Cell 3) was identified to be responsible for more than 18% of the site's overall GHG emissions in June 2020. This area was capped later in the summer with an impermeable clay layer and a lift of compacted waste. SHA designed a methane emission mitigation system for this area that will be constructed soon at lift 171m.

Even though the level of GHG emissions from the landfill is well below industry standards and regulatory requirements, additional GHG emission reductions can be achieved at the landfill through application of an engineered biocover system on the closed portions of the landfill, areas such as edges of the geomembrane closure system and areas with no impermeable cap that will not receive new lifts of waste within one year.

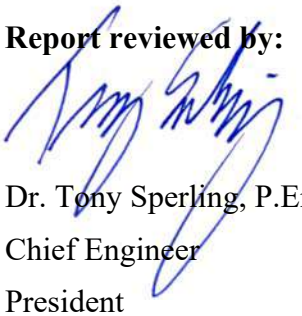
Currently, there are no regulations in place in Canada that would encourage application of biological methods to reduce the provincial and/or federal GHG emissions footprint from landfills, nor are there approved methodologies for assessment of these system's efficiencies. Nevertheless, SHA has been using best engineering practices in application of the biocover technology to reduce GHG emissions at a number of smaller landfill sites in BC. We have successfully quantified these biocover methane removal efficiencies through utilization of the surface scan technique.

6 STATEMENT OF LIMITATIONS

This report has been prepared by Sperling Hansen Associates (SHA) on behalf of the Capital Regional District in accordance with generally accepted engineering practices to a level of care and skill normally exercised by other members of the engineering and science professions currently practicing under similar conditions in British Columbia, subject to the time limits and financial and physical constraints applicable to the services. The report, which specifically includes all tables and figures, is based on engineering analysis by SHA staff of data compiled during the course of the project. Except where specifically stated to the contrary, the information on which this study is based has been obtained from external sources. This external information has not been independently verified or otherwise examined by Sperling Hansen Associates to determine its accuracy and completeness. Sperling Hansen Associates has relied in good faith on this information and does not accept responsibility of any deficiency, misstatements or inaccuracies contained in the reports as a result of omissions, misinterpretation and/or fraudulent acts of the persons interviewed or contacted, or errors or omissions in the reviewed documentation.

The report is intended solely for the use of the Capital Regional District. Any use which a third party makes of this report, or any reliance on, or decisions to be made based on it, are the responsibilities of such third parties. Sperling Hansen Associates does not accept any responsibility for other uses of the material contained herein nor for damages, if any, suffered by any third party because of decisions made or actions based on this report. Copying of this intellectual property for other purposes is not permitted.

The findings and conclusions of this report are valid only as of the date of this report. The interpretations presented in this report and the conclusions and recommendations that are drawn are based on information that was made available to Sperling Hansen Associates during the course of this project. Should additional new data become available in the future, Sperling Hansen Associates should be requested to re-evaluate the findings of this report and modify the conclusions and recommendations drawn, as required.



Yours truly,
SPERLING HANSEN ASSOCIATES

Appendix A

Biocover Design Recommendations

Biocover Design

Biocover feedstocks may consist of compost, compost and sand or a combination of biosolids, wood chips and sand. The high initial ammonium nitrogen content of fresh biosolids has the potential to negatively impact methanotrophy; however, the effect is short lived and the biocover is designed to assimilate this form of nitrogen to facilitate optimum CH_4 consumption. Alternatively, an older source of biosolids or compost can be used. Another alternative is to apply the biocover and allow it to stabilize over time. Under this scenario the biocover will not function optimally until stabilization has occurred. Based on recent research this delay can range from two weeks to a month under laboratory conditions.

Favorable Conditions for Biocover Performance

Recently, several approaches have been investigated in industry to exploit the powerful oxidizing ability of methanotrophic bacteria (methanotrophs) and potential uses in industrial processes. Methane reduction in biocover is also accomplished by methanotrophs that utilize methane monooxygenase (MMO) enzyme to oxidize CH_4 as a source of energy and carbon. Products of CH_4 oxidation are water, carbon dioxide, biomass and heat. Physical and chemical characteristics of the biocover influence the growth and performance of methanotrophs. These include temperature, moisture, organic matter content, carbon to nitrogen ratio (C:N), porosity, structure, and pH.

Temperature – The optimal temperature range for CH_4 oxidation by methanotrophic bacteria is 15 – 35 °C. Oxidation slows at cooler temperatures, although cold tolerant oxidizers show activity at temperatures as low as 2 – 5 °C (Abedini *et al.*, 2016) and above 40 °C. Oxidation stops at 50 °C (Chris A. Zeiss, 2006).

To optimize the methanotrophic activity in relation to temperature, a key factor to be considered is the depth of the biocover. Biocovers with design depths of 300mm to 600mm are proven to be more effective in methane removal than shallower biocovers. While deep sections of the biocover profile may lack methanotrophic activity due to a lack of oxygen, the mid-sections of the biocover do not experience the severe drop in ambient temperature experienced at surface and are, therefore, capable of hosting and nourishing different types of methanotrophs, and particularly Type 1 methanotrophs. In other words, from a temperature control or cold weather impact perspective, optimization of the biocover performance is achievable through adjusting the depth of a biocover.

Moisture content – Moisture in the soil facilitates the transfer of gases allowing CH_4 and O_2 to reach the methanotrophic bacteria and CO_2 to diffuse away. The optimum soil moisture concentration varies for different soils but is in the range of 10 – 30 % although CH_4 oxidation can occur in a wider moisture range of 8 – 50 % (Chris A. Zeiss, 2006). Another work suggests that the moisture content should be at least 5 % (Hettiaratchi *et al*., 2007).

Organic matter – In general an increase in CH_4 oxidation is directly related to an increase in soil organic matter content. Moderate oxidation rates have been demonstrated in soils with an organic matter content of 1 – 10%; soils with an organic matter content of up to 35% show an increased oxidation rate of 10 to 100 times more effective (Chris A. Zeiss, 2006).

It is also important to note that the optimum levels of organic matter and moisture content at which the maximum CH_4 oxidation rate (V_{max}) is expected are directly related. Figure A.1 below illustrates relation of optimum moisture content to optimum organic matter (Pokhrel et al., 2016).

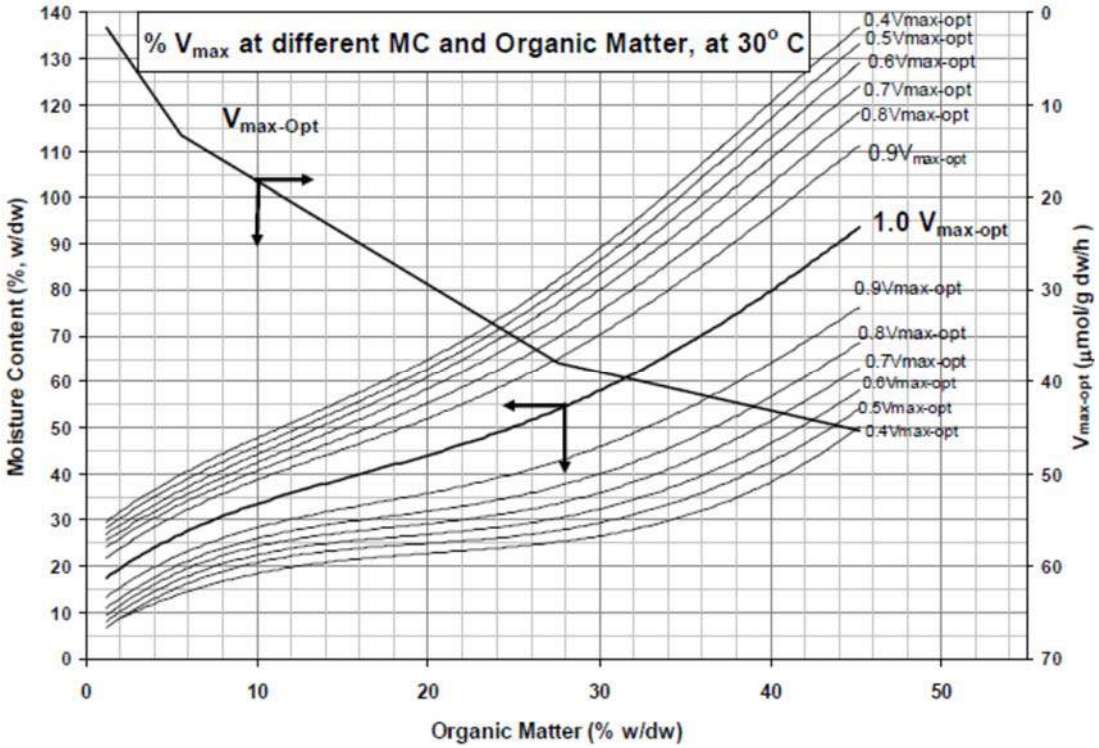

Figure A.1 - Maximum methane oxidation (Vmax) at different Moisture and Organic Content

Carbon to nitrogen ratio (C:N) – The C:N of the biocover is important as nitrogen, specifically ammonia, can inhibit performance. If the C:N ratio of the soil is lower than 12 the concentration of ammonia can inhibit CH_4 oxidation. At C:N ratios of 25 – 97 forms of nitrogen as ammonia are low (Chris A. Zeiss, 2006).

Porosity and structure – The ability of oxygen (O_2) to enter and move through the soil is vital for CH_4 oxidation thus a high porosity (the ratio of the volume of voids to the total volume of the media) is required in the biocover. Increases in bulk density of the medium lead to decreases in porosity and consequently might affect the gas permeability of the biocover. Additionally, the biocover should be structurally stable with minimal settling (Abichou *et a*l, 2004). On the other hand, too porous media allows free movement of gas, not allowing enough retention time for methane within the biocover media. Based on SHA's experience, optimum porosity for biocovers also depends on precipitation levels in the area. Porosities close to coarse sand is usually recommended as minimum value for biocover.

pH – Methanotrophs are neutrophilic with an optimal pH range of 6.5 to 8.0. Methane oxidation can occur to a maximum pH range of 8.5 – 9.0. Specific methanotroph species are tolerant of lower pH values down to a pH of 3.0 (Chris A. Zeiss, 2006).

In summary, SHA recommends the following properties to be taken into account for fabrication of a biocover system for the Hartland Landfill.

- moisture: 10 – 30 %, not less than 5%
- organic matter: increasing concentrations up to 35%
- C:N: 25 – 97, not less than 12
- porosity: high (not less than coarse sand porosity)
- pH: 6.5 – 8.0
- thickness of 400mm to 600mm

Once the available feedstock for fabrication of the media is known, lab test on each material shall be conducted and an optimized blend designed.

Making a difference...together

ERM 21-15

REPORT TO ENVIRONMENTAL SERVICES COMMITTEE
MEETING OF WEDNESDAY, APRIL 21, 2021

SUBJECT **Environmental Resource Management - 2020 Progress Report**

ISSUE SUMMARY

To present a summary of 2020 activities, results and accomplishments of the Capital Regional District's (CRD) solid waste function.

BACKGROUND

Based on the 5R hierarchy of Reduce, Reuse, Recycle, Resource Recovery and Residual Management, the CRD's solid waste services strive to minimize waste generation and disposal needs, and maximize diversion and recovery opportunities. Work in the first three areas focuses on conserving airspace in an effort to ensure enough landfill capacity to meet the residuals disposal needs of the community in the future.

Highlights from the 2020 report include:

Developing a New Solid Waste Management Plan
- Building on the strategies and actions for the new Solid Waste Management Plan endorsed by the Board in 2019, a draft Solid Waste Management Plan was developed.
- Engagement on the draft plan took place between November 2020 and February 2021. The engagement results and the final version of the plan is the subject of a separate staff report at this meeting.

Reduce, Reuse, Recycle (Diversion Services)
- Expanded and focused web content related to reducing consumption and accessing reuse and repair opportunities available in the community.
- Residents have recycled over 500,000 tonnes of recyclables since the curbside program's inception in 1989.

Recovery (Energy Recovery Services)
- A field-level landfill gas quantification study was completed, the results of which indicate that fugitive (uncaptured) emissions from the landfill are significantly lower than what had been calculated using previous modeling.
- Work continued on a plan to upgrade landfill gas to renewable natural gas for sale to FortisBC for beneficial use which will displace conventional natural gas and reduce the region's greenhouse gas emissions.

Residual Management (Disposal Services)
- The region's per capita disposal rate climbed from 382 kg/capita to 395 kg/capita in 2020.
- The beneficial use of materials received at Hartland increased in 2020 with 5,476 tonnes of ground yard and wood waste material used for controlled waste cover and site restoration.
- Over 25,400 trees and bushes have been planted on closed areas of the landfill.

British Columbia has set provincial waste disposal targets with a goal of lowering the municipal solid waste disposal rate to 350 kg per person by 2020/21. The provincial average in 2019 was 500 kg per person. Provincial initiatives which are expected to decrease waste disposal rates include the Plastics Action Plan, organics diversion, food waste prevention, and extended producer responsibility programs. The CRD continues to maintain one of the lowest disposal rates in the province.

IMPLICATIONS

Environmental & Climate Implications

The environmental monitoring program for Hartland confirms that regulatory requirements were met. Monitoring results confirm that effective measures are in place to ensure environmental impacts are mitigated and that leachate is effectively being controlled and contained on site. A detailed report and monitoring data is posted annually to the CRD website in the fall.

Social Implications

With in-person gatherings paused for the majority of the year, efforts were placed on creating and updating online activities, resources and lesson plans for teachers and parents. As well, a live streamed tour of Hartland Landfill was piloted in 2020.

The number of inquiries to the CRD Infoline increased by 26% in 2020. This is a reflection of residents spending time cleaning out their homes and conducting renovation activities.

While the volume of material received at the Hartland public drop off depot was not dramatically affected in 2020, the number of transactions (customers) increased substantially. The average number of customers to the site per day rose 15% from 355 (2019) to 407 (2020). The previous one day transaction record of 680 (2007) was broken three times in 2020 – first in May (712), then in August (750) and again in December with 794 transactions.

Financial Implications

Solid waste services continued to be self-funded in 2020 with surplus funds held in reserve for future capital works, operating shortfalls and closure/post-closure work. Year end balances are as follows:

Fund	Balance
Sustainability Reserve	$38,784,614
Landfill Closure	$11,281,092
Capital Reserve	$2,428,503
Equipment Replacement	$3,240,062
Airspace Reserve	$1,000,000

CONCLUSION

The roles and responsibilities for managing solid waste include a combination of government, private and non-profit sectors and the consumers themselves. The CRD continues to safely operate and maintain Hartland Landfill and meet its regulatory commitments to protect human health and the environment from potential impacts associated with solid waste disposal services. Staff have prepared an annual progress report with updates on solid waste programs, operations, capital projects, environmental monitoring and other activities. Based on the 5R hierarchy, the CRD's solid waste services continue striving to minimize waste generation and disposal needs, and maximize diversion and recovery opportunities.

RECOMMENDATION

The Environmental Services Committee recommends to the Capital Regional District Board:

That the Environmental Resource Management 2020 Progress Report be received for information.

Submitted by:	Russ Smith, Senior Manager, Environmental Resource Management
Concurrence:	Larisa Hutcheson, P. Eng., General Manager, Parks & Environmental Services
Concurrence:	Robert Lapham, MCIP, RPP, Chief Administrative Officer

ATTACHMENT

Appendix A: Environmental Resource Management – 2020 Progress Report

APPENDIX A

Making a difference...together

Environmental Resource Management

2020 Progress Report

ORGANIZATIONAL OVERVIEW

The Capital Regional District (CRD) delivers regional, sub-regional and local services to 13 municipalities and three electoral areas on southern Vancouver Island and the Gulf Islands.

Governed by a 24-member Board of Directors, the CRD works collaboratively with First Nations and all levels of government to enable sustainable growth, foster community well-being, and develop cost-effective infrastructure while continuing to provide core services to residents throughout the region.

COVID-19 IMPACT

2020 activities were greatly impacted by the COVID-19 global pandemic. As a local government, the CRD takes direction from the Provincial Health Officer and Minister of Public Safety and Solicitor General. We activated a corporate emergency operations centre in March 2020 to respond to the various Ministerial orders, policies, recommendations and guidelines. The CRD continues to maintain critical services and infrastructure, as well as provide reliable and essential services that play a significant role in economic recovery for the region.

Note: some images in this report were taken before COVID-19 health orders came into effect, therefore social distancing and safety measures may not be pictured.

TERMS & ABBREVIATIONS

3Rs – reduce, reuse, recycle
5Rs – reduce, reuse, recycle, recovery, residual management
CEC – Compost Education Centre
CRD – Capital Regional District
EPR – extended producer responsibility
ERM - Environmental Resource Management
ENV – Ministry of Environment or Ministry of Environment and Climate Change Strategy
GHG – greenhouse gas
PPP – packaging and printed paper
SWMP – Solid Waste Management Plan

WASTE DISPOSAL DATA
— PAGE 23

Overview and Governance

SOLID WASTE DISPOSAL

The CRD became responsible for solid waste disposal for the region in 1973 when, at the request of the CRD Board, the Province of British Columbia established solid waste disposal as a regional function of the CRD.

In 1975, the CRD acquired Hartland Landfill, which had been operating as a private facility since the 1950s. The facility continued to be managed by a private contractor until 1985, when the CRD assumed direct operation of the site.

In 2008, the privately owned and operated Highwest Landfill was added to the CRD's SWMP. The facility is located in the District of Highlands and primarily manages construction and demolition material.

SOLID WASTE MANAGEMENT PLAN

All regional districts must have a SWMP approved by the ENV. The original plan for the CRD was approved by the Minister of Environment in 1989. There have been two subsequent revisions to the original plan plus eight amendments.

Building on the strategies and actions for a new SWMP endorsed by the Board in 2019, a draft SWMP was developed and engagement on the plan took place in the late fall 2020 and winter of 2021. It is expected that plan approval by the Board and submission to the Province will take place in the spring of 2021.

SOLID WASTE COLLECTION

Collection of residential and commercial garbage and kitchen scraps is conducted by the private sector, with the exception of single family dwelling service offered by six of the region's municipalities.

The private sector also collects recycling from multi-family buildings and commercial buildings.

The CRD provides region-wide residential recycling service through a combination of single family home curbside collection and depot collection programs under contract to Recycle BC.

ENVIRONMENTAL RESOURCE MANAGEMENT

With a mission to efficiently and effectively manage the region's solid waste resources in an environmentally, socially and economically responsible manner, the ERM division is responsible for municipal solid waste management in the capital region, including waste reduction, recycling programs and operation of Hartland Landfill.

As part of the Parks & Environmental Services Department, the division reports to the Environmental Services Committee, which also acts as the steering committee for the development of the new SWMP.

Communications, Outreach and Education Programs

A number of communications, education and outreach programs are used to support the 5R hierarchy and promote resident awareness and participation in waste reduction and disposal services, including:

- Information phone line and email, as well as robust website resources.
- Curriculum-linked educational workshops and tours for students from Kindergarten to Grade 12.
- Seasonal, research-based public education campaigns and instructive materials.
- Active media relations to support public awareness of solid waste programs and opportunities.
- Timely and educational social media content.

INFOLINE

The Infoline is an essential part of education and outreach programs. This service responds to waste reduction, waste management, recycling and general Hartland Landfill inquiries.

An automated voice messaging service (250.360.3030) is available 24 hours a day and inquiries are responded to within 24 hours on weekdays. Waste and recycling information can also be found at www.crd.bc.ca/waste or by emailing infoline@crd.bc.ca. **In 2020, the Infoline received 25,165 calls and 3,500 emails.**

MYRECYCLOPEDIA.CA

Myrecyclopedia.ca contains a comprehensive online listing of items — from aerosol containers to zinc — and includes the environmental story behind each item, local recycling listings and tips on how to reduce and reuse in our daily lives. This tool was developed to encourage sustainable practices and to reinforce the 3Rs. **In 2020, Myrecyclopedia.ca listings received 246,440 visits.**

READY, SET, SORT!

Ready, Set, Sort! is an online waste sorting game where residents can test their knowledge about local recycling opportunities. The game includes 72 items, six bins and five levels of play and can be accessed through Myrecyclopedia.ca.

In 2020, there were 6,636 game plays, with the most common misunderstood depot items being plastic shopping bags and foam packaging.

EDUCATIONAL WORKSHOPS AND TOURS

Environmental education is of paramount importance to the CRD's waste reduction strategies.

Programs taking place at Hartland Landfill and the Hartland Learning Centre allow for place-based learning, providing participants with an interactive experience to create awareness, impart knowledge and inspire behavioural change in our region. An outreach and community presence, as well as the Infoline, increase educational and informational opportunities and allow for interactions with a wider variety of audiences. Education and outreach occurs through many programs and initiatives.

3Rs School Programs

The 3Rs school programs are free interpretive programs and tours offered to Kindergarten to Grade 12 students in the region.

Program topics such as That's Not Garbage!, 3Rs Unwrapped and Digging Deeper challenge students to explore our habits and behaviours surrounding waste and discuss ways to generate less waste by practicing the first of the 5Rs (reduce, reuse and recycle). Classes that visit the Hartland Learning Centre for their programs are also offered the opportunity for a behind-the-scenes tour of the landfill to see where their garbage goes and what is involved in operating a landfill.

In 2020, we delivered 26 school programs to 643 participants:

- **21 programs at Hartland (519 participants)**
- **5 in-school programs (124 participants)**

As in-person programming was paused in March 2020, efforts were placed on creating and updating online activities, resources and lesson plans for teachers and parents. The webpage where resources are retrieved was redesigned for easy access and more visibility. Activities and resources such as; Make Your Own Recycled Paper, Make Your Own Beeswax Wraps and a Home Garbage Habits Survey were created and made accessible on the website.

3Rs Community Programs

In-person programming was paused for the majority of the year, however in the first quarter of the year a few community programs were delivered. In 2020, community programming involved tours and presentations at Hartland as well as piloting a live streamed tour of the landfill. These programs are an opportunity for community groups and organizations to learn more about waste management in the region. Groups come to the Hartland Learning Centre for interactive presentations and a landfill tour, or request a CRD speaker to come to them. **In 2020, we delivered 4 community programs to 83 participants and a live-streamed tour of the landfill was piloted.**

Technical Tours

Technical tours of Hartland Landfill are offered to groups from industry associations, colleges, universities and government staff.

In 2020, we delivered 3 technical tours of Hartland to 104 participants.

Public 3Rs Programs

Public 3Rs programs were not offered in 2020 as in-person programming was paused due to COVID-19. Typically public 3Rs programs are offered for residents not associated with a school or organized group, opening up the opportunities for individuals to tour Hartland Landfill.

In previous years, programs have been designed and offered for both adults and families in the spring, summer and fall. Adult programs included a presentation at the Hartland Learning Centre and a behind-the-scenes tour of the landfill to give residents the opportunity to learn how Hartland operates, how waste is managed in the region and what diversion opportunities are available. The family orientated version included a presentation and discussion surrounding food waste, a workshop where participants made their own beeswax food wraps and a behind the scenes tour of the landfill.

PUBLIC EDUCATION CAMPAIGNS

In 2020, the CRD developed and implemented a number of seasonal public education campaigns to promote and provide information in the following areas:

END MARKETS FOR RECYCLABLE MATERIALS

ILLEGAL DUMPING PREVENTION

HOUSEHOLD HAZARDOUS WASTE DISPOSAL

HOLIDAY SEASON WASTE REDUCTION

COMPOST EDUCATION CENTRE

The CEC encourages environmental stewardship and provides residents with climate resiliency tools and skills needed to compost, reduce waste, grow their own food and conserve soil, local ecosystems and water.

The CEC supports the CRD yard and garden material and kitchen scraps landfill bans through programming that emphasizes accessible education around organics diversion, both on and off-site. Through a contract with the CRD, the centre offers presentations, workshops, and educational demonstrations at on-site gardens and throughout the community.

Due to community concerns regarding pandemic effects upon supply chains in 2020, the CEC received an increased demand in food security related information on soil contamination, home scale solar, native ecology conservation, composting, to numerous local food security workshops such as Grow Your Own Food 101, Planning Your Year Round Veggie Garden, Canning the Abundance and Food Preservation Basics. The CEC was also an instrumental partner in Growing Together; a coalition of organizations responding to the surge in interest in topics of composting and gardening that resulted from the pandemic.

In addition, the CEC began to develop tools and resources for further addressing soil degradation in the CRD via the Healing City Soils program, and initiated the Neighborhood Composting Pilot Program, which aims to divert food scraps from landfills and reduce usage of resource intensive collection programs.

In 2020, the CEC communicated with 536,276 residents, ran 67 community workshops/learning events with 8,672 residents participating.

The CEC also delivered 63 school programs to 1,125 preschool to Grade 12 students and their guardians or teachers.

In 2020, the Infoline received 25,165 calls and 3.500 emails

You can contact us at:

automated voice messaging (250.360.3030)

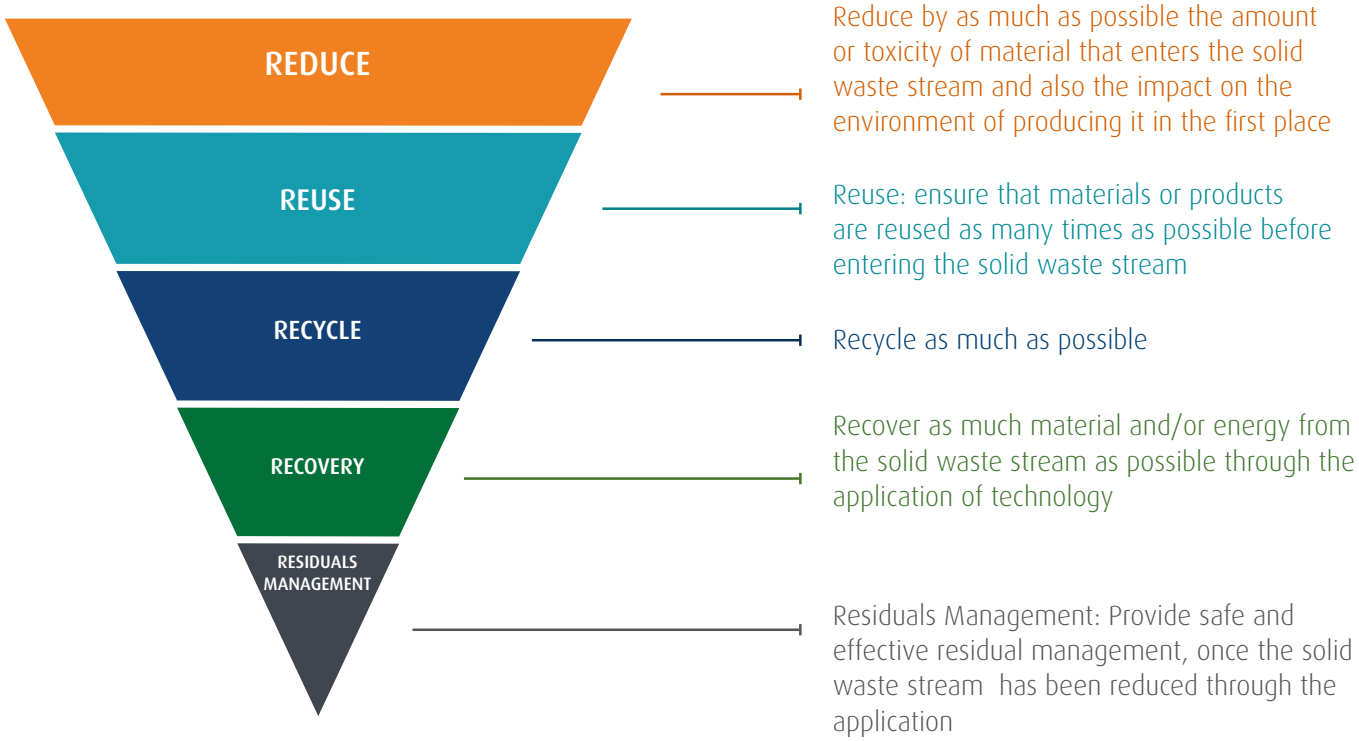
In 2020, the Compost Education Centre ran 67 learning events for 8,672 residents



1,125 students participated in Compost Education Centre school programs in 2020

The 5R Hierarchy

The CRD views waste as a commodity and seeks the highest and best use for these resources by applying the 5R hierarchy of reduce, reuse, recycle, resource recovery and residual management.

Services range from planning and policy development, bylaw and contract administration to landfill operations. The goal is to extend the life of Hartland Landfill by minimizing waste disposal and maximizing diversion opportunities.

5R Pollution Prevention Hierarchy

Reduce and Reuse

WASTE REDUCTION

In 2020, the CRD website was expanded to provide focused content on how residents could reduce their consumption of products and maximize reuse opportunities in the community. Information available at crd.bc.ca/reduce includes tips for avoiding single use items, resources for finding repair services and suggestions on how to donate items responsibly.

DIVERSION FUNDING FOR NON PROFIT ORGANIZATIONS

Since 1992, the CRD has provided funding to non-profit organizations involved in the reuse of clothing, household goods, building supplies and food recovery. The funding assists with costs related to recycling and waste disposal, in recognition that some of the donations received are not suitable for reuse. Ten organizations participated in the program in 2020.

HARTLAND REUSABLE MATERIALS PROGRAM

The CRD partners with five organizations for the management of donated items received at Hartland depot. Goods such as textiles, bicycles and appliances are redistributed through a variety of networks operated by these non-profit associations.

Recycle

CURBSIDE RECYCLING

Under agreement with Recycle BC, the CRD provided 128,830 single family dwellings with curbside recycling service for PPP in 2020. The CRD curbside program is a successful three-stream recycling model, which ensures the highest quality and value for marketing of the material.

Residents are able to download the RecycleCRD app or sign up for collection reminders and service alerts via email, voicemail or Twitter. To date, 77,098 reminders have been created.

Since the program's inception in 1989, over 505,967 tonnes of recyclables have been collected.

HARTLAND DEPOT

The public drop-off depot at Hartland receives garbage, recyclables and household hazardous waste. Over 80 items from 28 product categories are accepted for recycling. This area is intended for residential quantities and limits vehicle size to 5,500 kg gross vehicle weight.

2020 depot fees:

- Extended Producer Responsibility products: no charge
- Household hazardous waste: no charge
- Rimmed tires: $6 per drop-off, maximum five tires
- Business recycling: $26/visit
- Yard and garden material: $59/tonne
- Mattresses and box springs: $110/tonne plus a $10 bin fee
- Garbage: $110/tonne plus a $10 bin fee

GULF ISLANDS DEPOTS

Residents on Salt Spring Island and the Southern Gulf Islands are provided recycling services through drop-off programs set up at depots in their communities.

The CRD, under agreement with Recycle BC, partners with local on-island non-profit associations for recycling services for PPP at these depots.

In addition to receiving PPP, most depots offer additional services such as scrap metal and electronics recycling.

PORT RENFREW TRANSFER STATION

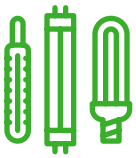
Under a local service funded by the community of Port Renfrew, residents and businesses have access to a transfer station for drop off of general refuse, kitchen scraps and recyclables.

128,830 single family dwellings with curbside recycling service

77,098 curbside collection reminders have been created

Over 500,000 tonnes of recyclables have been collected since 1989

80 items from 28 product categories are accepted for recycling



EXTENDED PRODUCER RESPONSIBILITY

British Columbia's industry-led product stewardship programs require producers of designated products to take extended producer responsibility for the life-cycle management of their products, including collection and recycling. The BC Recycling Regulation, under authority of the *Environmental Management Act*, sets out the requirements for product stewardship in BC. The CRD supports industry-led product stewardship with participation in the following provincial programs:

Beverage Containers (Refundable)

Refundable glass, plastic, aluminum, metal and polycoated beverage containers are accepted at the Hartland depot and electoral area recycling depots. Beverage bags and pouches are not included in CRD programs. Refundable beverage containers are also accepted at participating retail stores and private depots.

Electronics, Electrical Products, Batteries and Lighting Products

Since 2014, the CRD has partnered with seven stewardship agencies for the collection of a wide range of electrical items at the Hartland depot:

- Encorp Pacific (computers, monitors, printers, TVs, audio visual equipment, CDs, VHS tapes)
- ElectroRecycle (small appliances, power tools, sewing machines, exercise equipment)
- Call2Recycle (batteries and mobile phones)
- LightRecycle (residential fluorescent lamps, compact fluorescent bulbs and lighting fixtures)
- Switch the 'Stat (thermostats)
- AlarmRecycle (smoke detectors)
- Outdoor Power Equipment (mowers, blowers, clippers, chainsaws)

Lead-Acid Batteries

Lead-acid batteries have been accepted for recycling at the Hartland depot since 1992, shortly after the BC Lead Acid Battery Collection program was introduced. This first generation program transitioned in 2012 to being managed under the BC Recycling Regulation. Batteries are broken down at smelters into lead, plastic and acid.

Paints, Solvents, Flammable Liquids, Gasoline and Pesticides

In 1994, the CRD began working with the Product Care Association to provide the region with waste paint collection at the Hartland depot. Since then, the program has expanded to include solvents, flammable liquids, gasoline and pesticides (paint plus) and a paint exchange.

Product Care Association depots in the region:

- 1 paint plus with paint exchange (Hartland depot)
- 3 paint plus
- 2 paint only with paint exchange
- 5 paint only

See myrecyclopedia.ca for a full list of locations.

Pharmaceuticals

The Medications Return Program, is promoted regionally through the CRD Infoline, website and regional source control program. The CRD works in partnership with the Medications Return Program and Island Health to raise awareness about safe and proper disposal of medications. Through 2020, the CRD continues to have one of the highest medication return rates per capita amongst regional districts in the province.

Packaging and Paper Products

In 2011, the BC Recycling Regulation was amended to add PPP from residential generators. The amendment shifted the financial responsibility for managing these materials to producers starting in 2014. PPP are managed through a combination of residential curbside collection and depot drop off, which are provided locally by both the CRD and the private sector.

In 2020, 19,459 tonnes of PPP were collected through these CRD programs:

- Curbside Blue Box Program
- Gulf Island Recycling Depots
- Hartland Depot
- Port Renfrew Transfer Station

Tires

Tires have been accepted at the Hartland depot since it opened in 1992, in conjunction with the province's Financial Incentives to Recycle Scrap Tires program. In 2007, this provincial initiative was replaced with a product stewardship program under the BC Recycling Regulation managed by Tire Stewardship BC (TSBC). TSBC, in partnership with the Bicycle Trade Association of Canada and the local biking community, also offer a voluntary program for the recycling of tires and tubes through bike retailers. Collection of bicycle tires and tubes at the Hartland depot began in 2011.

Used Lubricating Oil, Filters and Containers

The BC Used Oil Management Association manages the product stewardship program that provides for the collection and recycling of used oil, oil filters, antifreeze and containers. The program strives to ensure every drop of used oil and antifreeze, as well as all filters and containers, are brought to a collection facility to be properly recycled.

ORGANICS MANAGEMENT

Regional Kitchen Scraps Strategy

In January 2015, a landfill ban on kitchen scraps was implemented, saving a valuable resource, conserving landfill space and reducing GHG emissions.

Kitchen scraps are typically managed in one of two ways: onsite digestion or collection for transportation to composting facilities in the Cowichan Valley Regional District and on the lower mainland. Establishment of in-region kitchen scraps processing capacity is being explored.

Compost Facilities Bylaw

The CRD Board adopted the regional composting bylaw in December 2005. The bylaw regulates the operation of composting facilities to protect public health and the environment. In 2020, there were no licensed facilities under the bylaw.

Yard and Garden Material Landfill Restriction

In 2006, a yard and garden material landfill ban came into effect. A number of private facilities in the area accept the region's yard and garden material.

In 2020, a total of 907 tonnes of source-separated yard and garden material was received at Hartland where it was ground and beneficially used on-site. The landfill ban excludes invasive, infectious and noxious plants which are managed at Hartland as garbage through a rate of $59/tonne in an effort to reduce their proliferation.

HOUSEHOLD HAZARDOUS WASTE

The Hartland depot offers residents a one-stop drop-off service for virtually all types of household hazardous waste and is a leading program of its kind in British Columbia. The material is accepted in residential quantities only at no charge for recycling (where feasible) or disposal at a hazardous waste management facility.

Hartland Public Drop-off Depot

Materials collected at Hartland Landfill's recycling depot.

MATERIAL TYPE (TONNES)	
Antifreeze	9.150
Appliances	329.170
Batteries	51.580
Books	0
Containers (metal, plastic, paper)	50.400

Refundable containers	17.060
Reusable goods	20.850
Tires	100.890
Yard and garden waste	906.710
TOTAL FOR 2020	**17,880.480**

Recovery

HARTLAND LANDFILL GAS CAPTURE AND UTILIZATION

Landfill gas is produced from decomposing garbage. This gas is mainly made up of carbon dioxide and methane. Methane is an energy source, but is also a GHG. It is flammable and explosive in certain concentrations, which is why it needs to be controlled.

Landfill gas is collected at Hartland using a network of wells and pipes installed in the early 1990s. Between 1991 and 2003, the gas collected was burned using a flare to reduce GHGs. In 2003, a landfill gas-to-electricity plant was built next to the flare station to utilize the methane in the landfill gas to produce electricity. The electricity produced is fed into the existing BC Hydro distribution system on site. The facility produces close to 1.6 megawatts of green power — enough electricity to supply about 1,600 homes.

In 2012, a site-specific Landfill Gas Management Plan was approved, which detailed a strategy for capturing landfill gas and meeting collection targets set by the ENV and regulated under the Landfill Gas Management Regulation. The plan includes installation, operation and maintenance of collection infrastructure and routine reporting. Collection infrastructure continues to be installed in accordance with the plan and GHGs have been reduced by approximately 50% since 2011.

In 2020, to better assess overall performance of the landfill gas collection system, a field-level landfill gas quantification study was completed. Results of the study indicate that fugitive (uncaptured) emissions from the landfill are significantly lower than what is calculated through modelling. As a result, the existing landfill gas collection system is capturing a higher proportion of total landfill gas: approximately 76% - 81% over the last three years, compared to the 64% - 67% for the same period using the model required by ENV.

The report also identified additional strategies that can be taken by the CRD to further increase collection efficiency and biological oxidization, including enhancements to the existing landfill gas collection system and application of an engineered biocover system. These recommendations will be studied and implemented throughout 2021 and 2022.

FUTURE OF GAS UTILIZATION

The volume of landfill gas collected at Hartland has exceeded the capacity of the current landfill gas utilization plant, which produces clean electricity. The equipment is also reaching its end of life. As a result, the CRD has evaluated two enhanced alternatives: upgrading landfill gas to renewable natural gas (a carbon neutral form of biogas) for sale to FortisBC or expanding the capacity of the current plant to produce more electricity. Maximizing landfill gas management can have both environmental and financial benefit for the community. It can also foster a greater circular economy, using waste to generate energy.

In April 2020, the CRD announced approval in principle of an agreement to sell renewable natural gas (RNG) to FortisBC for beneficial use. Blending seamlessly with conventional natural gas, RNG is a carbon-neutral energy made from capturing and upgrading the biogas released from decomposing organic waste in the landfill. Converting the biogas generated at Hartland Landfill to RNG will reduce our region's emissions by approximately 264,000 tonnes of carbon dioxide over the life of the project—the equivalent to removing 2,240 cars from the road. A lifecycle GHG assessment found that decommissioning the electricity plant, a facility nearing the end of its life, and building a new RNG facility at Hartland Landfill is a more effective beneficial use of this resource from a climate change perspective.

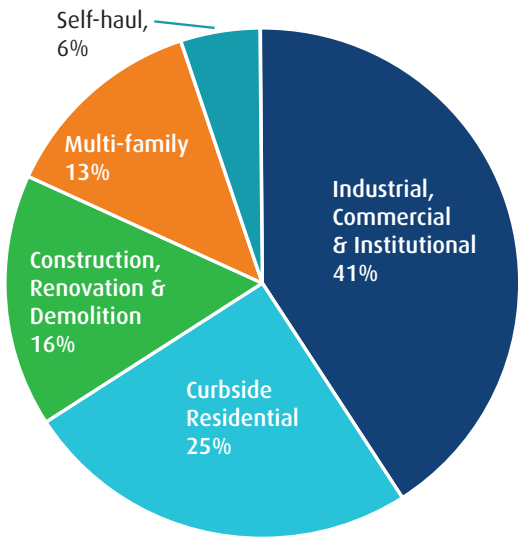
The CRD and FortisBC have executed a supply contract that will be submitted to the British Columbia Utilities Commission for approval in spring, 2021. If approved by the commission, the CRD will continue to be responsible for the ownership and operation of Hartland Landfill, the landfill gas collection system and the upgrade facility. FortisBC will pay a fixed price per gigajoule for the renewable natural gas and will be responsible for the costs associated with injecting it in to the natural gas distribution system. The CRD expects the RNG facility to be operational in 2023.

Residuals Management

Hartland is a multi-purpose site which, in addition to landfill services for general refuse and controlled waste, provides drop off for recycling, stewardship items, compostables and household hazardous waste.

Hartland has received the Silver Landfill Management Excellence Award from the Solid Waste Association of North America, as well as awards for leadership and innovation in gas utilization and best practices for household hazardous waste collection.

The CRD has also received awards for safety initiatives, including the prestigious National Award for Best Safety Week Program in Canada, in which Hartland Landfill played a major role.



LANDFILLING

The site operates under a Design, Operations and Closure Plan, in accordance with an Operational Certificate issued by ENV, as well as the BC Landfill Criteria for Municipal Solid Waste, and the CRD's SWMP. There is also a provincial authorization in place for asbestos management. Municipal solid waste is typically landfilled using the advanced terracing method. This technique enables the management of surface runoff and leachate flow, as well as control of long-term settlement. It consists of advancing the filling area with vehicular access provided atop the preceding day's refuse.

A landfill compactor is used to grade and compress refuse while maintaining a desired slope at a constant width. Hartland's compaction rate exceeds 950 kg/m^3 and all refuse is covered daily with synthetic tarps and aggregate quarried on-site to cover the side slopes and vehicle access areas.

Controlled waste, such as sewage sludge, condemned food and animal carcasses is landfilled in trenches dug in completed waste lifts and covered daily with chipped wood waste, aggregate or clay to reduce odours. Asbestos is landfilled in segregated areas of the site and is covered daily with aggregate or soil.

SECTORS CONTRIBUTING TO WASTE DISPOSAL

TOTAL REFUSE BY TYPE (tonnes)

TYPE OF WASTE	2019	2020	% CHANGE
General refuse	145,402	149,538	3%
Controlled waste	11,512	13,207	15%
Asbestos containing material	3,813	3,093	-19%
TOTAL	160,727	165,838	3%

LANDFILL DISPOSAL RATES

Landfill tipping fees provide a financial incentive to reduce the quantity of solid waste being brought to the landfill for disposal. The tipping fee structure for 2020 included:

- $110/tonne for general refuse
- $157 to $500/tonne for controlled waste
- $254/tonne for bulky waste

LANDFILL MATERIAL RESTRICTIONS

Landfill restrictions have been part of the CRD waste diversion strategy since 1991 and are only implemented when viable and sustainable recycling alternatives exist.

Recyclable materials banned from disposal include:

1991: drywall
1993: corrugated cardboard, white goods, tires, directories
1995: scrap metal, aggregate, concrete, asphalt, rubble, clean soil
1998: paper fibres
2006: yard and garden material
2011: EPR products
2015: kitchen scraps

INTERNATIONAL WASTE

In Canada, solid waste from foreign sources is managed according to the International Waste Directive under the authority of the Canada Border Service Agency and the Canadian Food Inspection Agency.

At Hartland Landfill, international waste is managed as a controlled waste at a fee of $157 per tonne.

Hartland Landfill typically receives approximately 2,000 tonnes of international waste each year. In 2020, this amount was reduced to 18 tonnes primarily due to the reduction in foreign air and ferry travel and elimination of the cruise ship season.

CONTROLLED AND DEMOLITION WASTES

Landfilling of certain types of wastes creates a potential nuisance, health and safety concerns for staff, or environmental concerns beyond those expected from regular household refuse. Wastes such as asbestos, demolition wastes, animal fecal wastes, or deceased animals require special handling to protect the health and safety of employees and to minimize nuisance, odours, and scavenging by birds.

There are four regulated waste types at Hartland:

ASBESTOS WASTE

CONTROLLED WASTE

CLEAN DEMOLITION WASTE (commercial)

RENOVATION WASTE (residential)

The risks associated with these regulated wastes vary and each type is managed differently. These wastes require permits and usually an appointment for disposal. The number of permits issued annually has been increasing since 2013. This is attributed to population growth, a strong economy, and recent permitting requirements for demolition wastes.

BYLAW ENFORCEMENT

CRD Bylaw 3881 (Hartland Landfill Tipping Fee and Regulation Bylaw) regulates activities at the Hartland site. CRD bylaw enforcement officers and landfill staff ensure Hartland customers adhere to site regulations.

In 2020, 40 written warnings and 307 enforcement tickets were issued. The majority of enforcement tickets were in relation to the deposit of recyclable material (52%), EPR products (16%), kitchen scraps (13%), prohibited waste (13%) and management of construction material (6%).

SAFETY AND LANDFILL FIRES

Landfill fires happen periodically at Hartland. Typically this occurs as a result of improper disposal of household hazardous waste, such as chemicals and product stewardship items like electronics with lithium-ion batteries. Staff and local emergency services personnel respond to fire incidents at the active face following an established fire safety plan.

LANDFILL CAPITAL WORKS

Each year, the CRD invests approximately $3 million in capital works that cover rock excavation and crushing, leachate and gas management infrastructure, environmental controls, roads and site improvements. . In 1997, Phase 1 of the landfill site was closed and the filling of Phase 2 (Heal Basin) was initiated. It is expected that Phase 2 will continue to receive landfill materials until about 2047, at which time it will have reached its current design capacity.

In 2019 a new landfill master filling plan was finalized that optimizes site capacity; maximizes gas and leachate collection and other environmental management systems.

2020 achievements include:

- continued project management for the landfill's heavy equipment services.
- annual installation of new combined gas/leachate collection infrastructure
- paving for dust control and better storm water management
- completion of the design and tender for a new scale building at Hartland North
- preparation of a new landfilling cell to receive garbage in the future
- Construction of a new water main and reservoir on the landfill property

SITE RECLAMATION

Since the Phase 1 closure, significant efforts have been made towards site rehabilitation at the landfill.

A long-standing vision for Hartland Landfill is to restore the land to a condition that will blend in naturally with the surrounding forest. Planting of native species began in 2004 and includes Douglas Fir, Big Leaf Maple and Red Alder, as well as ocean spray, Indian plum and mock orange.

Cell 1 final closure design was completed in 2010 and included a final cover, complete with a new wetland sedimentation pond, in addition to gas, leachate and road upgrades.

Over 25,400 trees and bushes have now been planted in Phase 1 and 2 on closed areas at Hartland Landfill. These areas are maintained with annual invasive species removal to encourage growth of new plant species and protect those already established. In 2020, 3,400 new poplar and fir trees were planted on two hectares of closed landfilling areas on the North and South side slopes. New plants were protected with deer fencing and areas equipped with temporary irrigation after invasive species removal.

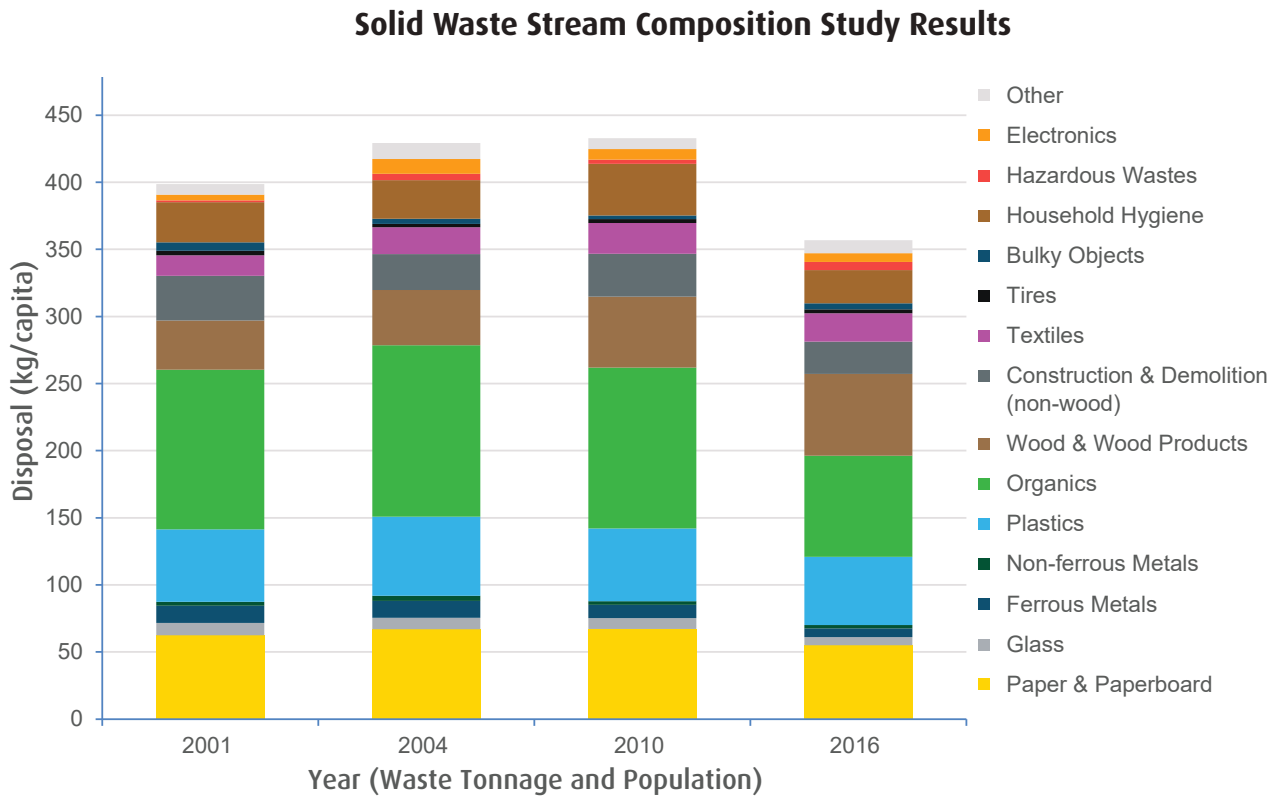
LEACHATE MANAGEMENT

Leachate is a liquid that is produced when precipitation comes into contact with decomposing refuse. To minimize the amount of leachate generated on site, impermeable covers are installed over completed landfill areas to divert clean surface water away from becoming leachate.

In the fall of 2018, the primary landfill leachate underdrain (micro tunnel), located in the bottom of Heal Basin, was inspected and cleaned to ensure its continued safe operation. While doing this work, it was found that changes to the pipe system would also be necessary in order to make emergency use and pumping possible, in the event that a major seismic event damaged the micro tunnel and made repairs necessary. This pipe system work was completed in the fall of 2020.

ENVIRONMENTAL MONITORING

Environmental Science Officers at Hartland Landfill employ a number of control measures to prevent or reduce potential effects on groundwater, surface water and air. Through over 40 years of engineered controls, groundwater and surface water quality at Hartland Landfill has continually improved. An environmental monitoring, assessment and management program is conducted in accordance with ENV requirements. The monitoring program measures water quality at and near the landfill and assesses the effectiveness of control measures.



Groundwater quality monitoring data obtained in 2020 was similar to previous years and indicated that landfill leachate continues to be effectively contained and controlled on site. Leachate quality monitoring confirmed that leachate discharged from the site was in compliance with CRD Bylaw 2922 (Sewer Use Bylaw), which regulates discharges to the sanitary sewer. Surface water monitoring in 2020 indicated that nearby surface water bodies, Tod Creek, Durrance Creek, Durrance Lake, and Killarney Lake are not impacted by leachate.

Landfill gas monitoring confirmed that the landfill gas collection system worked effectively to control emissions. Landfill gas infrastructure continues to be installed as part of a long-term gas management plan.

WASTE STREAM ANALYSIS

Since 1990, the CRD has commissioned six studies to assess the composition of waste being landfilled at Hartland. These studies provide valuable benchmark data and analysis for evaluating the success of existing solid waste programs and planning future initiatives. The most recent analysis took place in 2016. The results indicate a broad regional trend towards decreased per capita waste generation.

Per capita organic waste generation dropped by 37.5%, confirming the successful launch of the 2015 kitchen scraps ban. Per capita paper disposal decreased by 18% and plastics by 5%, while wood and wood products increased by 15%, likely due to more construction activities in the region. All other materials remained relatively consistent compared to the previous study in 2010.

Community Support Programs

COMMUNITY CLEAN-UP FUNDING

Since 1997, the CRD's Community Clean-up Program has been supporting non-profit groups that make visible environmental improvements to their community through organized clean-ups

Funding provided supports:

- Collection, processing and marketing of recyclables recovered during clean-up.
- Container rental for transportation and disposal of non-recyclable material.
- Supplies, such as rubber gloves and collection bags.

In 2020, the CRD provided funding to five community groups.

ABANDONED BOAT PROGRAM

In 2017, staff were directed to submit funding applications for the assessment and removal of derelict boats through Transport Canada's Abandoned Boat Program. In 2018, the CRD established a Letter of Agreement with the Dead Boats Disposal Society (DBDS) and the Salish Sea Industrial Services (SSIS)—a subsidiary of Ralmax that employs local First Nations in the marine industry—to identify, assess and remove abandoned boats in the capital region. Under the agreement, the CRD provided the 25% grant funding required for the DBDS and SSIS to apply for removal funding through Transport Canada's Abandoned Boat Program grants (up to 75% of expenditures).

Many municipalities participated in the program by identifying boats in their region, assisting with placing notices on boats and informing their communities about this work. All abandoned boats reported to the Infoline through the "See Something, Say Something" awareness campaign were provided to the DBDS who worked with SSIS to submit the required paperwork and funding applications, coordinate equipment and trained the crews in removal of these vessels. As a result, more than 70 abandoned vessels were removed from the bays and harbours in the region and 10 local First Nations received training and experience on vessel removal techniques through SSIS.

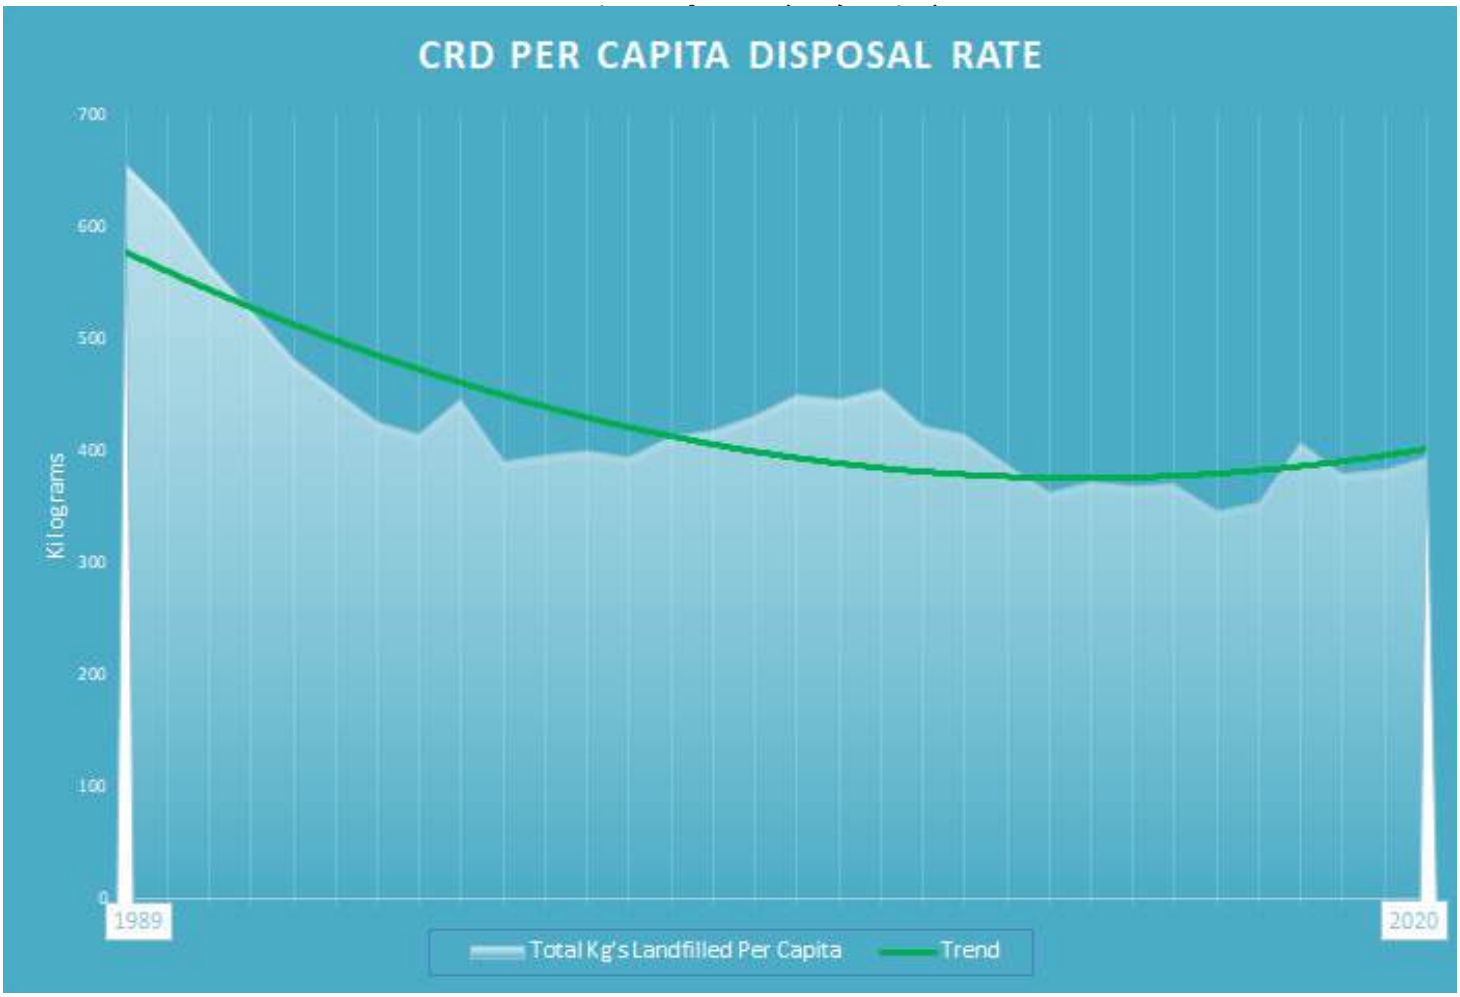
There is currently a joint application to the provincial Clean Coast Clean Water Initiative Fund to remove marine debris and derelict vessels from our region wherein Songhees Nation will lead a consortium of local First Nations to work with the DBDS and SSIS to coordinate and conduct the removal of derelict vessels and marine debris from the Salish Sea, including the capital region. This fund covers 100% of the costs to coordinate and conduct vessel removals and shoreline clean-ups. To date DBDS has identified 178 floating and submerged derelict vessels in bays and harbours of the capital region.

Financial Management

All costs associated with solid waste disposal and diversion programs in the capital region are funded through tipping and user fee revenues at Hartland Landfill, collection contract revenues, sale of electricity and sale of recyclables.

A sustainable financial business model is essential for the provision of solid waste services.

This form of financing has practical limits as diversion increases and landfill volumes decline.



Long-term financial sustainability of the CRD solid waste function will form a critical part of the new solid waste management plan.

REVENUES	
Tipping fees	$19,874,916
Extended producer responsibility programs	$6,239,142
Recycling program revenues	$1,785,045
Power plant	$536,519
Permits, fines and miscellaneous	$91,772
TOTAL REVENUE FOR 2020	**$28,527,393**
EXPENSES	
Landfill operations	$6,552,639
Curbside recycling	$6,121,854
Hartland diversion programs	$4,341,853
Power plant costs	$863,642
Electoral Area recycling programs	$676,596
Planning	$889,918
Leachate	$522,320
Debt charges	$1,383,043
Community support programs	$432,197
TOTAL EXPENSES FOR 2020	**$21,784,062**

NET REVENUE (EXPENSES)	**$6,743,331**
TRANSFER TO OWN FUNDS	
Capital Reserve Fund	$1,668,074
Millstream Capital Fund	$320,000
Equipment and Vehicle Fund	$283,000
Sustainability Reserve Fund	$4,407,430
TOTAL TRANSFER TO OWN FUNDS	**$6,678,504**

ANNUAL SURPLUS (DEFICIT)	**$64,827**
Accumulated surplus, beginning of year	$943,419
Accumulated surplus, end of year	$1,008,246

Waste Disposal Data

Year	Population	Hartland Landfill			Highwest Landfill	Disposal Rate (kg/ person)
		Received	Beneficial Use	Landfilled		
2012	368,935	129,279	n/a	129,279	7,880	372
2013	371,265	123,210	n/a	123,210	13,025	367
2014	372,463	120,942	-1,636	119,306	18,000	369
2015	377,810	114,476	-2,034	112,442	18,000	345
2016	382,645	134,167	-971	133,196	2,056	353
2017	392,046	145,285	-917	144,368	15,000	407
2018	413,406	148,551	-2,120	146,431	10,500	380
2019	418,511	146,544	-1,142	145,402	14,625	382
2020	425,503	155,014	-5,476	149,538	18,506	395

PER CAPITA DISPOSAL

In 2012, the Province of British Columbia began using per capita disposal rates as the standard solid waste metric and is targeting 350 kg/capita by 2020.

Based on the provincial government's calculation method, the disposal rate for the capital region was 395 kg/capita in 2020.

EEP 21-17

REPORT TO ENVIRONMENTAL SERVICES COMMITTEE
MEETING OF WEDNESDAY, APRIL 21, 2021

SUBJECT **Capital Regional District Climate Action – 2020 Annual Report**

ISSUE SUMMARY

To present the Capital Regional District's (CRD) 2020 Climate Action Annual Report, which identifies progress toward the CRD's Corporate Climate Action Strategy, the CRD's Regional Climate Action Strategy and BC Climate Action Charter commitments.

BACKGROUND

The CRD signed the BC Climate Action Charter in 2007 and committed to achieving carbon neutrality within corporate operations by 2012. Subsequently, the CRD adopted a target in 2008 to reduce greenhouse (GHG) emissions 33% by 2020 from a base year of 2007. The Regional Growth Strategy includes a target to reduce regional GHG emissions by 61% by 2038, from a base year of 2007.

In 2016, the CRD approved the Corporate Climate Action Strategy and the Regional Climate Action Strategy in 2017. In February 2019, the CRD declared a climate emergency. The Board has embedded the declaration and leadership intentions to greatly accelerate greenhouse gas emissions reductions in the 2019-2022 CRD Board priorities. Staff are currently updating the CRD's climate action strategies with a 'climate emergency' lens.

Under Bylaw 3510, the CRD established a climate action service in 2009 to act as a resource and facilitator for local governments, citizens and organizations in the capital region on energy and climate issues. The service administers two inter-municipal climate action committees and directly assists CRD services, local governments and other regional stakeholders on policy, planning, data and capacity building efforts and leading regional programs.

Since 2012, the CRD has been reporting annual corporate GHG emissions and a summary of corporate and community focused activities through the Climate Action Revenue Incentive Program, a provincially-funded conditional grant program that provides funding to BC Climate Action Charter signatories equivalent to 100% of the carbon taxes they pay directly. To be eligible for the program, Charter signatories must report publicly on their progress toward meeting their climate action goals.

Despite challenges related to COVID-19 throughout 2020, multiple CRD services contributed to corporate and regional climate goals. Some of the key highlights include:

- Advanced the development of a new Solid Waste Management Plan and Hartland Landfill renewable natural gas utilization project.
- Developed strategies and piloted a program to support regional energy retrofits in buildings, and provided fuel switching top-ups.
- Completed a regional greenhouse gas inventory for the region and its local governments.

- Completed the coastal flood inundation mapping project to assist planners and emergency managers to better understand future coastal flooding impacts due to rising sea levels and tsunamis.
- Advanced various efforts to transition CRD's fleet to low emission vehicles, including e-bikes.

A consolidation of the corporate and community-related actions is provided in the CRD Climate Action 2020 Annual Report (Appendix A). The report satisfies the annual reporting requirements related to the CRD's Corporate Climate Action Strategy, the CRD's Regional Climate Action Strategy and the provincial Climate Action Revenue Incentive Program associated with the CRD's BC Climate Action Charter commitment.

In 2020, the CRD completed a community energy and GHG emissions inventory to provide a more complete picture of the region's energy and GHG emissions consumption. The study, conducted for the 2018 year, shows that the capital region emits approximately 1.7 million tonnes of CO_2 emissions annually. Results were presented to the CRD Board on August 12, 2020.

In 2020, CRD operations produced 2,512 tonnes of CO_2e. This represents an 11% decrease compared to 2007 levels. As such, the CRD did not meet its 2020 corporate GHG emissions reductions target. This was due, in part, to lack of renewable gas supply for use of corporate buildings, delays in electric vehicle technologies for the corporate fleet, the inability to source funding for key retrofit projects and the expansion in CRD services over this time (resulting in an approximate 24% increase in fleet size and 19% in staffing). With the Mcloughlin Point Wastewater Treatment Plant coming on line, overall corporate emissions are expected to increase in 2021.

Since 2012, the CRD has been carbon neutral in its operations (as defined by the provincial reporting framework). For 2020, carbon neutrality will again be achieved by applying historical carbon credits (pre-2015) that were generated through methane destruction from the Hartland Landfill gas capture system.

The CRD is developing a renewed climate action strategy which will be brought to the Board for approval in fall 2021. The new strategy will build upon and ultimately replace the existing CRD climate action strategies, and reflect existing Board priorities (including their climate emergency declaration) to provide a clear path forward for how the CRD, under its service mandates, will show leadership on climate action, both for the CRD's corporate operations and for its community focused services. The plan will address both climate mitigation and adaptation efforts.

Staff reviewed all of the annual progress reporting associated with the 2016 corporate strategy and 2017 regional strategy. The corporate strategy identified a total of 47 actions across seven broad goal areas. The regional strategy identified a total of 48 actions across eight broad goal areas. Twenty-two CRD services, representing all five CRD departments, were identified as having a lead or support role for the actions. Across both strategies, 82% of planned actions are either complete, in progress, or ongoing and 18% are on hold or delayed with no planned timing. Successes related to various community-GHG reduction programs, regional research and data acquisitions, implementation of corporate planning procedures, various corporate retrofit and fleet transitions, and a number of CRD and local government capacity building and policy development initiatives.

ALTERNATIVES

Alternative 1

The Environmental Services Committee recommends to the Capital Regional District Board:

1. That the 2020 Climate Action Annual Report be received for information; and
2. That staff complete all Climate Action Revenue Incentive Program reporting requirements and submit to the Province by the reporting deadline (currently June 1, 2021) and post on the CRD website.

Alternative 2

That this report be referred back to staff for additional information.

IMPLICATIONS

Social Implications

In 2020, CRD advanced many projects and programs that were delivered in the community across the region and adjusted as required as per COVID-19 protocols. Some included, but are not limited to:

- leading the Walk and Roll to School Week, implementing the Ready, Step, Roll – Active School Travel Planning initiative;
- launching the Bring it Home 4 Climate Program and providing top-up fuel switching incentives as part of the provincial Better Homes Program;
- supporting the Cool It! Climate Leadership Training in local schools; and
- executing the regional-scale sea-level rise modelling and mapping project.

A full list is provided in Appendix A.

Financial Implications

In 2020, the Climate Action service operated on an annual budget of approximately $577,000, which included three full-time employees and one two-year, full-time term position (co-funded by BC Hydro Sustainable Communities) which will likely be renewed in late-2021. In addition, the corporation provides an annual stipend of $100,000 towards a fund to support key corporate focused climate action planning activities. The program's core budget is provided through an annual requisition from all of the municipalities and electoral areas, and supplemental funding from corporate services. The program also relies on external grants and partnerships to undertake community climate action programming.

In 2020, external sources accounted for approximately $485,000 in additional funding to support staffing and completion of key projects.

Intergovernmental Implications

Climate action is explicitly acknowledged through the Board's current strategic priorities and climate emergency declaration, the numerous targets, policies and actions found in official

community plans across the region, the Regional Growth Strategy and consecutive CRD corporate strategic plans. Climate change is a critical issue facing our region.

The CRD Climate Action service has a regional collaboration mandate and directly supports local governments and the CRD in reaching mitigation and adaptation policies and goals. The service will continue to work with internal and other regional stakeholders to identify other climate action opportunities and advance initiatives in collaboration.

Alignment with Board & Corporate Priorities

The CRD embedded the climate emergency declaration and leadership intentions to greatly accelerate GHG emissions reductions in the 2019-2022 CRD Board priorities. In addition to the three Board priorities related to climate change, the 2019-2022 CRD Corporate Plan includes 11 additional initiatives related to climate action.

Environmental & Climate Implications

In 2020, CRD operations produced 2,512 tonnes of CO_2e. Approximately half of the CRD's corporate GHG emissions are sourced from fleet and the other half from the CRD's buildings, with natural gas use at the five main facilities accounting for the majority (Panorama Recreation Centre, SEAPARC Recreation Centre, Integrated Water Services, CRD Headquarters and the Saanich Peninsula Wastewater Treatment Plant). GHG emissions associated with Hartland Landfill and Capital Region Housing Corporation are not included in this total, as they are excluded from the provincial reporting framework.

In 2020, the CRD completed a community energy and emissions inventory to provide a more complete picture of the region's energy and GHG emissions consumption. This followed the GPC BASIC+ Framework, and included GHG emissions from:

- Stationary energy (e.g., buildings, construction, energy industry)
- Transportation (including airport and marine emissions)
- Waste
- Industrial process and product use
- Agriculture, forestry and other land use

The study, conducted for the 2018 year, shows that the capital region emitted approximately 1.7 million tonnes of CO_2 emissions annually. Although this does not represent a significant reduction from the 2007 baseline, the total per capita GHG emissions (tCO_2e / Capita) has decreased by 14.4%. Transportation and buildings account for the vast majority of regional emissions - almost 80%.

Regardless of GHG emission reductions today, the capital region will continue to experience the impacts of climate change now and into the future, including:

- An increase in rainfall in fall, winter and spring; and a decrease in rainfall in summer
- More intense, longer in duration, and more frequent rainfall events
- Frequent heavy snowfalls and rain-on-snow events in the short-term, less snow in the future
- Hotter summers and less days with freezing in winter
- More extreme climate events (such as long hot and dry summers)

- Increased likelihood of variability of climate within and between years
- Sea level rise

Climate adaptation planning and implementation will be a key aspect of future service delivery.

Regional Growth Strategy Implications

The Regional Growth Strategy (RGS) includes a target to reduce GHG emissions by 61% by 2038, from a base year of 2007. The CRD climate action activities completed in 2020 align with the principles of the RGS.

Alignment with Existing Plans & Strategies

Climate actions completed in 2020 align with the CRD Corporate Climate Action Strategy, the CRD Regional Climate Action Strategy, Regional Growth Strategy, Board Priorities and the CRD Corporate Plan.

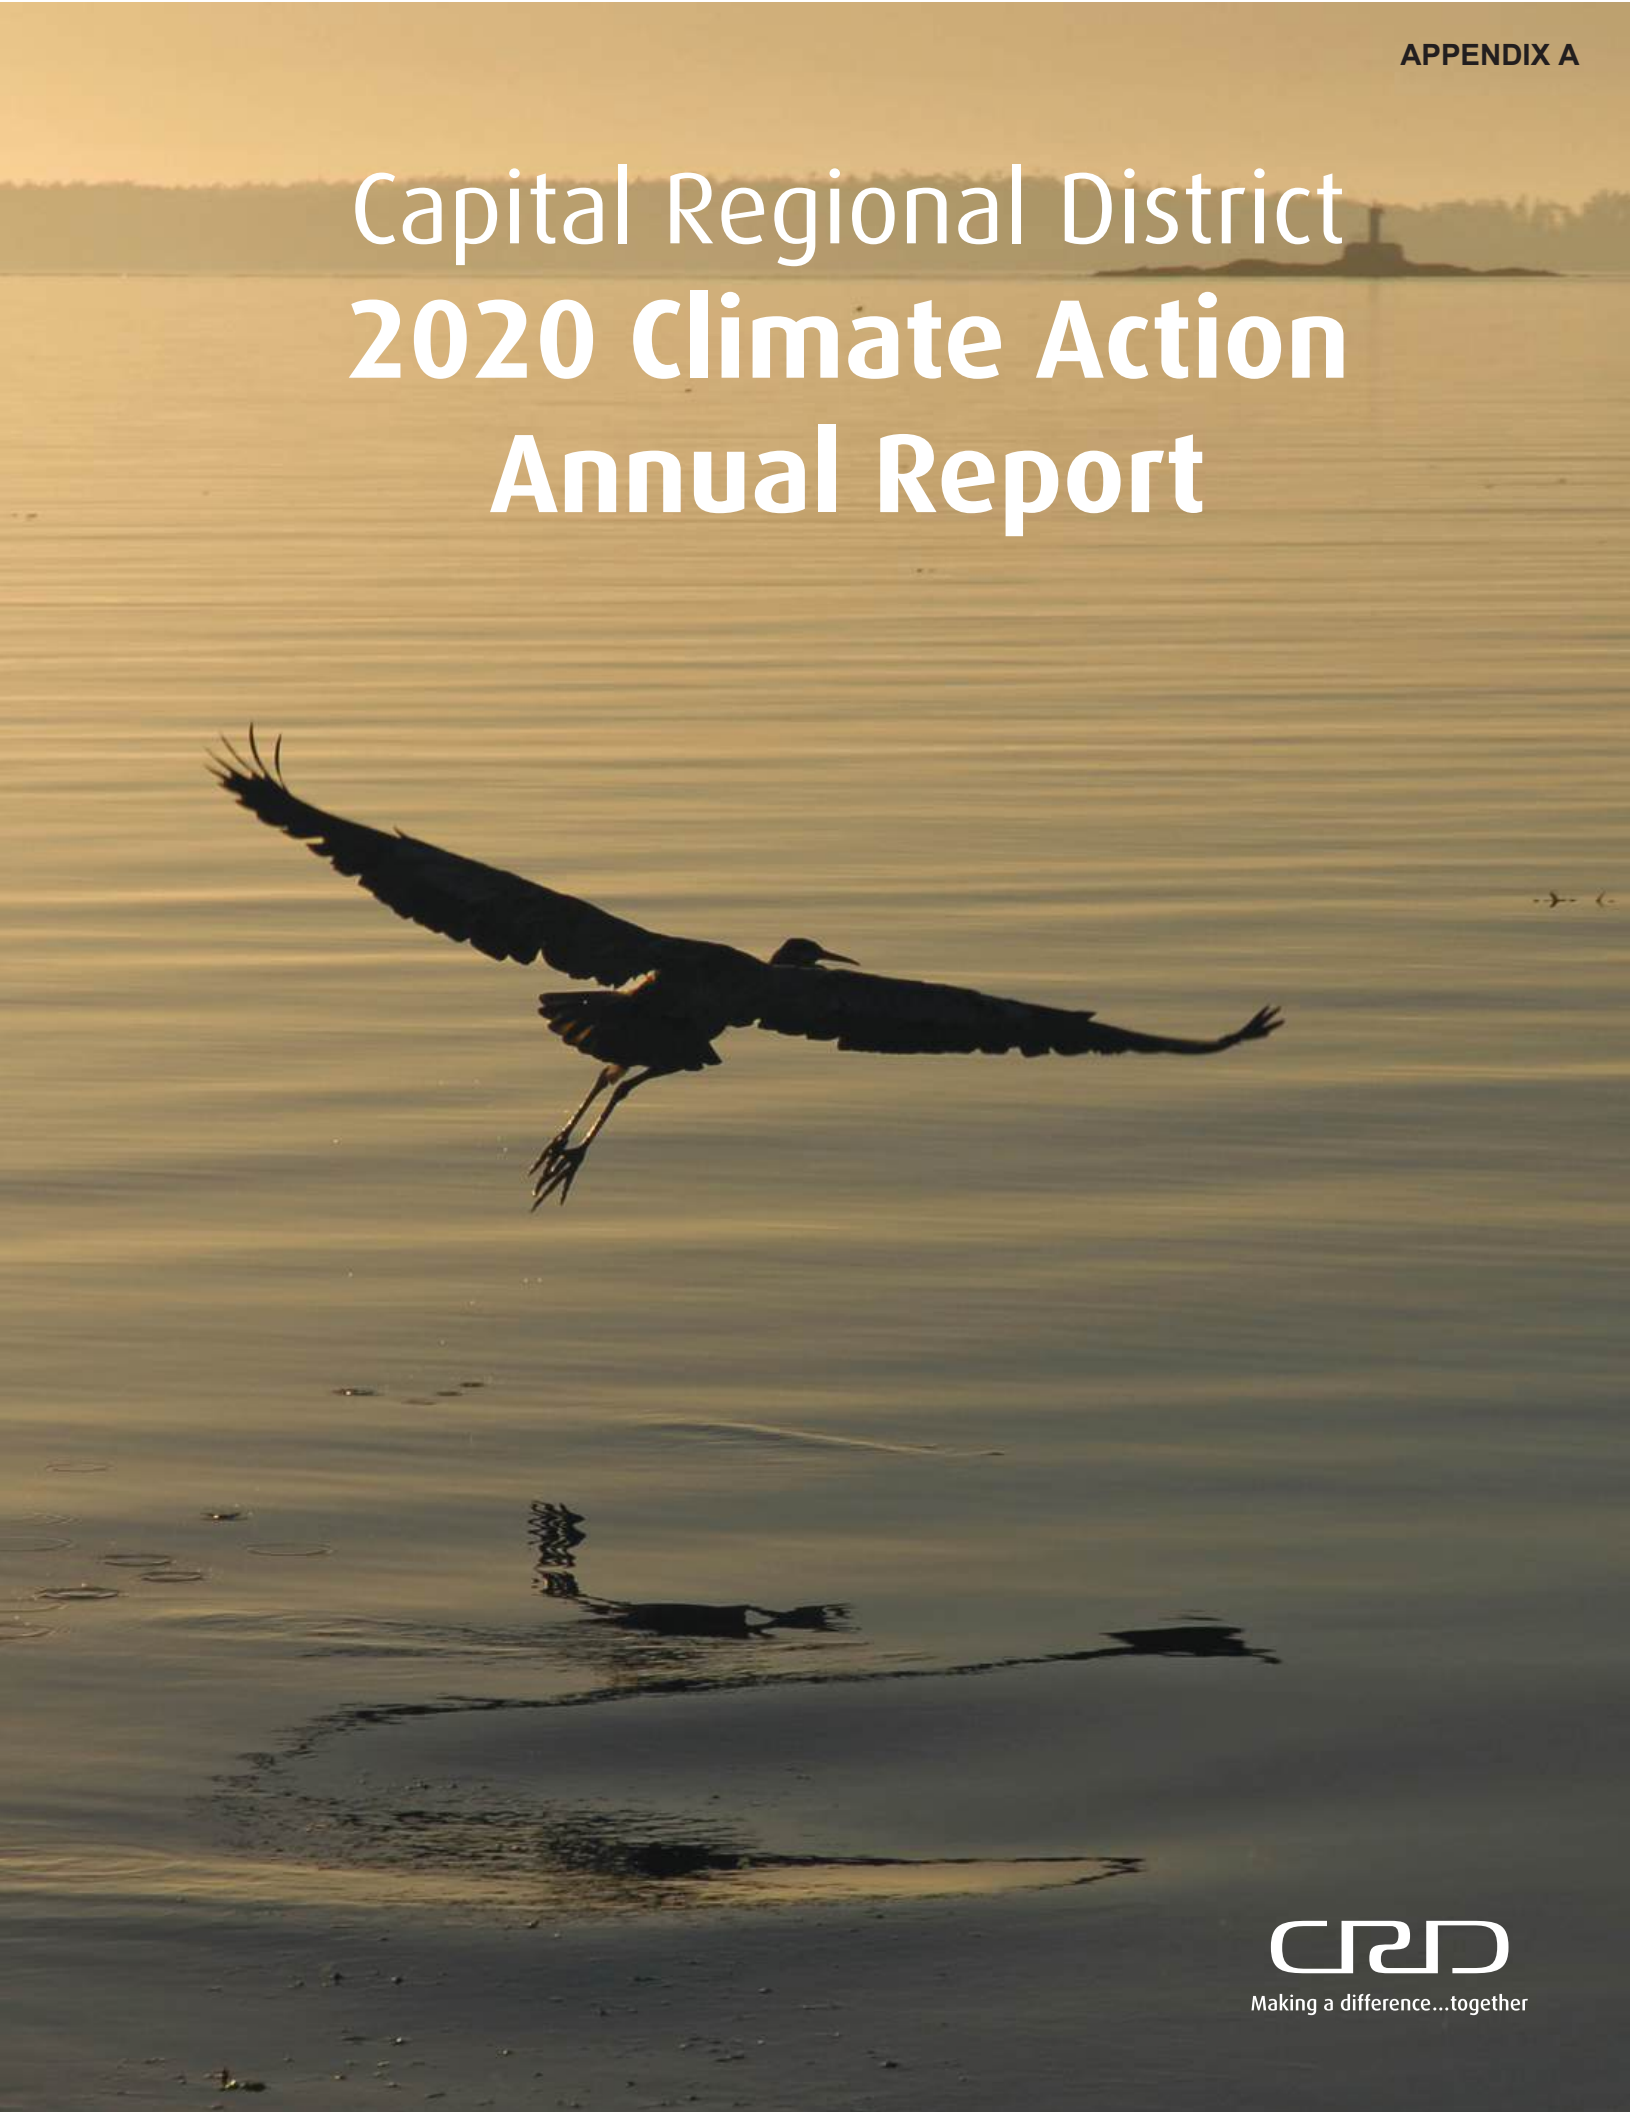
CONCLUSION

Throughout 2020, multiple CRD services contributed to corporate and regional climate goals. The 2020 Climate Action Annual Report outlines actions the CRD has undertaken to advance the corporate and regional climate strategies, Board priorities, and commitments as a signatory to the BC Climate Action Charter over the past year. After it is received by the Board, the Climate Action Revenue Incentive Program report will be submitted to the Province as required under the Climate Action Revenue Incentive Reporting Program. The CRD is developing a renewed climate action strategy which will be brought to the Board for approval in fall 2021.

RECOMMENDATION

The Environmental Services Committee recommends to the Capital Regional District Board:

1. That the 2020 Climate Action Annual Report be received for information; and
2. That staff complete all Climate Action Revenue Incentive Program reporting requirements and submit to the Province by the reporting deadline (currently June 1, 2021) and post on the CRD website.



Submitted by:	Glenn Harris, Ph.D., R.P.Bio., Senior Manager, Environmental Protection
Concurrence:	Larisa Hutcheson, P.Eng., General Manager, Parks & Environmental Services
Concurrence:	Robert Lapham, MCIP, RPP, Chief Administrative Officer

Making a difference...together

Organizational Overview

The Capital Regional District (CRD) delivers regional, sub-regional and local services to 13 municipalities and three electoral areas on southern Vancouver Island and the Gulf Islands.

Governed by a 24-member Board of Directors, the CRD works collaboratively with First Nations and all levels of government to enable sustainable growth, foster community well-being, and develop cost-effective infrastructure, while continuing to provide core services to residents throughout the region.

Regional Climate Action Strategy Actions

Appendix B:
Corporate Climate Action Strategy Actions

Overview

This report summarizes all of the climate action related activities undertaken by the Capital Regional District (CRD) in 2020 and satisfies the annual reporting requirements associated with the CRD's Regional Climate Action Strategy, the CRD's Corporate Climate Action Strategy and the provincial Climate Action Revenue Incentive Program, as per the CRD's BC Climate Action Charter commitment.

The CRD has an obligation to support climate action, whether that be through the planning and management of its assets, or through the delivery of its services.

Regulations & Commitments

The CRD is required to take action to reduce corporate and community-related greenhouse gas (GHG) emissions and prepare for the impacts of climate change under the following provincial regulations and commitments:

- ***Local Government (Green Communities) Statutes Amendment Act*** (Bill 27) requires regional districts and local governments to include targets, policies and actions for the reduction of GHG emissions in Regional Growth Strategies and Official Community Plans. The Act also provides powers to local governments to support mitigation and adaptation through development permit areas, development cost charges and parking and building code requirements.
- **Landfill Gas Management Regulation** establishes province-wide criteria for landfill gas capture from municipal solid waste landfills. The regulation focuses on GHG emissions reductions from landfills, with the objective of maximizing reductions of landfill gas emissions and identifying potential opportunities to increase landfill gas recovery. As a manager of the Hartland Landfill, the CRD is responsible for adhering to this regulation.
- All local governments in the region, including the CRD, are signatories of the ***BC Climate Action Charter***. This includes a commitment to:
  - become carbon neutral in corporate operations starting in 2012
  - measure and report on the community's GHG emissions profile
  - work to create compact, complete and more energy-efficient rural and urban communities
- United with more than 350 Canadian local governments, the CRD is a member of the **Partners for Climate Protection Program**, from the Federation of Canadian Municipalities and ICLEI - Local Governments for Sustainability, affirming its ambitious GHG reductions and participating in a five-milestone planning, implementation and reporting framework.

In February 2019, the CRD Board voted unanimously to declare a climate change emergency and assume a leadership role to work towards achieving carbon neutrality in the region by 2030. The CRD Board has embedded the declaration and leadership intentions to greatly accelerate greenhouse gas emissions reductions in the 2019-2022 CRD Board priorities.

Climate Action Strategies

The CRD has two strategies dedicated to climate action: one related to community-based activities, the other to CRD corporate operations, assets and decision-making. These strategies, among others, support the overarching Regional Growth Strategy.

Regional Growth Strategy

The **Regional Growth Strategy (RGS)** is a vision for the future of the capital region, guiding decisions on regional issues such as transportation, population growth and settlement patterns until 2038. The RGS promotes the long-term livability of the region, with policy intended to enhance social, economic and environmental performance. It is developed in partnership with local governments and includes policies, actions and targets for the reduction of greenhouse gas emissions. The current RGS was adopted in 2018. The full strategy can be found at *www.crd.bc.ca/rgs.*

Regional Climate Action Strategy

In 2017, the CRD Board approved the **Regional Climate Action Strategy (RCAS)**, which guided the CRD's services to support community-focused climate mitigation and adaptation action over the following five years. The RCAS built upon work that is already being done by residents, businesses, non-profits, local governments and First Nations, by federal and provincial governments, and the direction provided in the RGS.

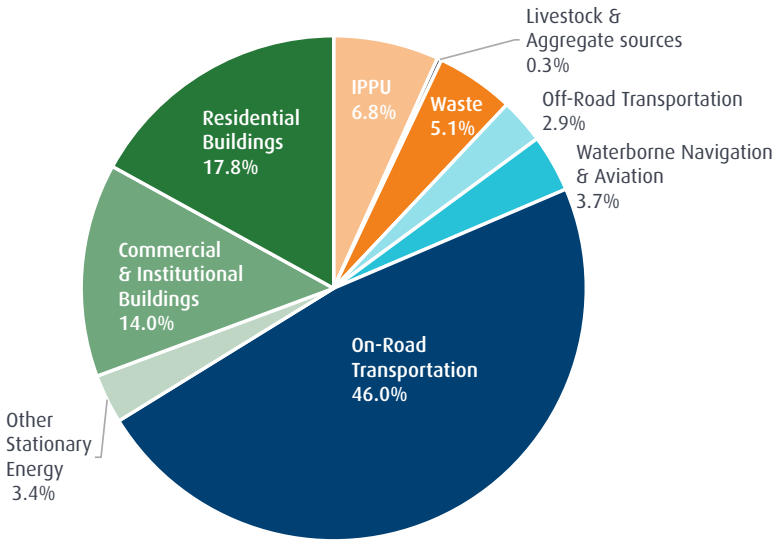
Corporate Climate Action Strategy

In 2016, the CRD Board endorsed the **Corporate Climate Action Strategy (CCAS)** to guide the CRD's operational approach and decision-making through a policy framework and corresponding climate action activities and actions related to the CRD's buildings, fleet and lands until the end of 2020. The CCAS reflects on what the CRD has accomplished to date and renews corporate climate action efforts through seven long-term goals.

Multiple CRD service areas are responsible for the implementation of the actions *(see Appendix A - Regional Climate Action Strategy Actions)*. This report satisfies the annual reporting commitments associated with the RCAS. The full strategy can be found at: *www.crd.bc.ca/climate*.

Updating our Climate Action Strategy

The CRD is developing a renewed climate action strategy which will be confirmed in late 2021. The new strategy will build upon and ultimately replace the existing CRD climate action strategies, and reflect existing Board priorities (including the climate emergency declaration) to provide a clear path forward for how the CRD, under its service mandates, will show leadership on climate action, both for the CRD's corporate operations and for its community focused services. The plan will address both climate adaptation and mitigation efforts.



CLIMATE MITIGATION
Reduce Greenhouse Gas Emissions

Capital Region Community Greenhouse Gas Emissions

In 2020, the CRD completed a community energy and emissions inventory to provide a more complete picture of the region's energy and greenhouse gas (GHG) emissions consumption. This followed the Global Protocol Community-Scale Greenhouse Gas Emission Inventories BASIC+ Framework, and included GHG emissions from: stationary energy (e.g., buildings), transportation (e.g., commuter vehicles), waste (e.g., landfills), industrial processes and product use (IPPU) (e.g., chemical industry), and agriculture, forestry and other land use (e.g., fertilizer application).

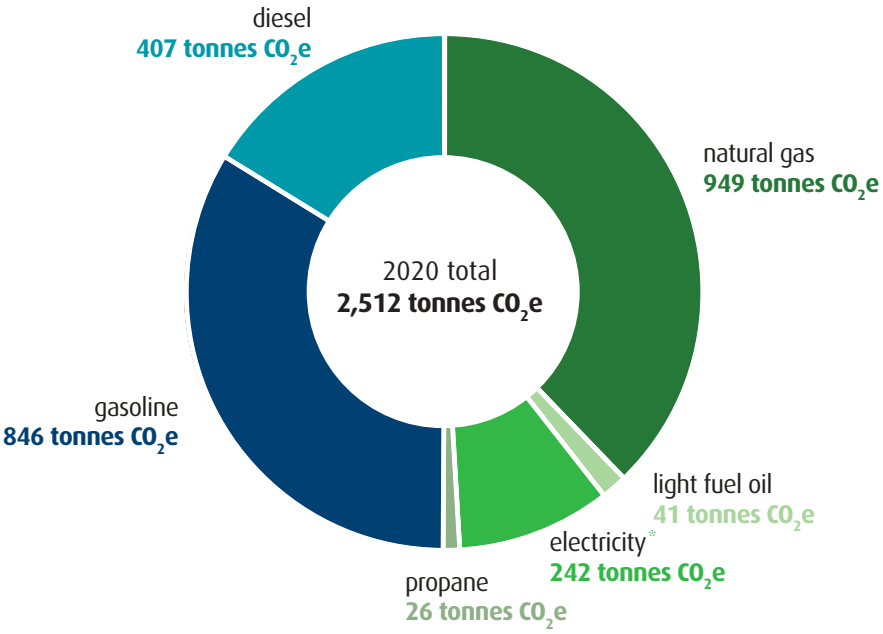
The study conducted for the 2018 year shows that the capital region emits approximately 1.7 million tonnes of CO_2 emissions annually. Although this does not represent a significant reduction from the 2007 baseline, the total per capita GHG emissions (tCO_2e / Capita) has decreased by 14.4%. Transportation and buildings account for the vast majority of regional emissions - almost 80%.

2018 Capital Region Community Energy Emissions

The Regional Growth Strategy identifies a target for the capital region to reduce greenhouse gas emissions by 61% by 2038. This ambitious target will require a decrease of almost one million tonnes of CO_2e. This means reducing emissions from approximately 4.2 tCO_2e per person to 2.6 tCO_2e per person.*

*from 2007 levels

Corporate Greenhouse Gas Emissions and Targets



In 2008, the CRD Board set a target to reduce operational GHG emissions 33% below 2007 levels by 2020. Since 2012, the CRD has completed an annual GHG inventory and reported GHG emissions through the provincial Climate Action Revenue Incentive Program, following the guidance provided by the provincial Green Communities Committee.

In 2020, CRD operations produced 2,512 tonnes CO_2e. This represents a 10% reduction compared to 2007 levels. As such, the CRD did not meet its 2020 corporate GHG emissions reductions target. This was due, in part, to delays in electric vehicle technologies for the corporate fleet, lack of renewable gas supply for use of corporate buildings, inability to source funding for key retrofit projects and an expansion in CRD services over this time (which resulted in an approximate 24% increase in fleet size and 19% in staffing). With the Mcloughlin Point Wastewater Treatment Plant coming on line, this trend will continue.

In 2021, the creation of the new climate action strategy will reflect on achievements and barriers to date, create new targets and design pathways for achieving greenhouse gas emissions reductions within the corporate operations of the CRD.

The CRD has been carbon neutral, under the provincial reporting framework, in its operation since 2012. In 2020, carbon neutrality was achieved by applying historical carbon credits that were generated through methane destruction from the Hartland Landfill gas capture system. Activities undertaken to reduce annual carbon emissions are outlined in the Corporate Climate Action Strategy (*see Appendix B* for 2020 actions).

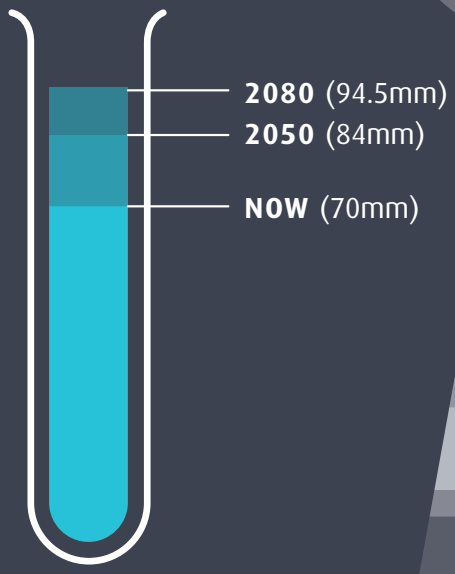
2019 Operational Greenhouse Gas Emissions by Source

Total fleet
1,254 tonnes CO_2e

Total buildings, facilities & infrastructure
1,258 tonnes CO_2e

*Currently, electric vehicle charging is included in building electricity use

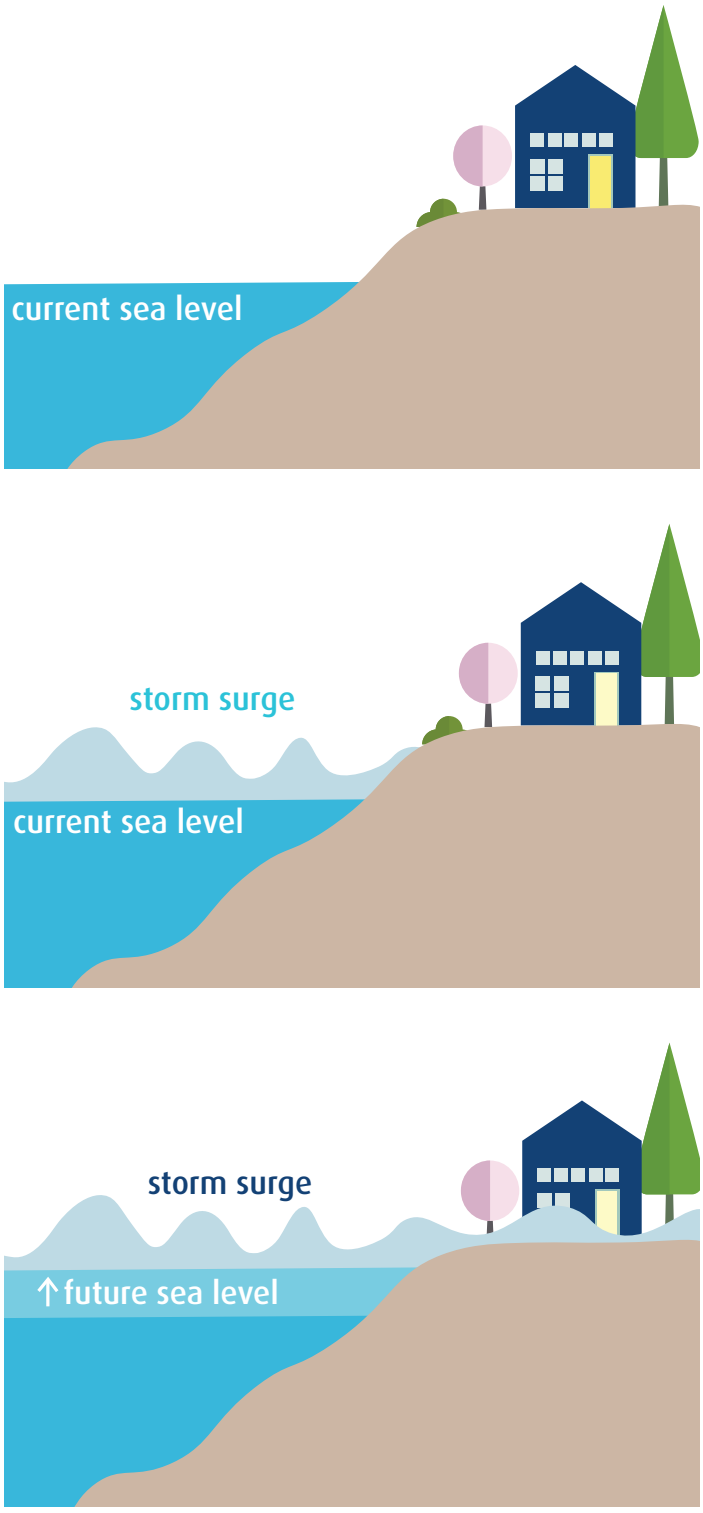
CLIMATE ADAPTION
Build Resilience



In 2017, the CRD worked with the Pacific Climate Impacts Consortium to undertake a comprehensive assessment of the projections of global climate models for the capital region.

This assessment shows, as a result of global warming, the capital region will experience:

- **More extreme climate events** (such as long hot and dry summers)
- **An increase in rainfall** in fall, winter and spring; and a decrease in rainfall in summer
- **More intense, longer-lasting, and more frequent rainfall** events
- **Frequent heavy snowfalls** and rain on snow events in the short-term, less snow in the future
- **Hotter summers** and less days with freezing in winter
- Increased likelihood of **variability** of climate within and between years



Rainstorms will grow more intense.

Maximum one-day rainfall

The capital region will need to adapt to a changing climate. A warming climate will impact our ecosystems, watersheds, agriculture and communities.

Capital Region Coastal Flood Inundation Mapping

In 2019/2020, working with local governments, the CRD commissioned the **Capital Region Coastal Flood Inundation Mapping Project** to provide the region and local governments with a comprehensive picture of projected coastal flooding due to rising sea levels and tsunamis.

Results found that low-lying areas in the region are susceptible to coastal storm flooding – which are set to increase significantly over time, due to sea level rise.

To access further information on climate projections related to precipitation, temperature and future sea level rise visit: **www.crd.bc.ca/about/data/climate-change**.

As new science and global climate projections advance, the CRD will continue to build on its local climate projection studies to understand climate changes and their impacts and adjust responses accordingly.

Effects of sea level rise over time combined with storm surges.

Climate Action Service

Under Bylaw 3510, the CRD established a climate action service in 2009 to act as a resource and facilitator for local governments, citizens and organizations in the capital region on energy and climate issues. The service has five major focus areas:

- **Provide support to local governments in developing and implementing climate action plans** and programs (emissions reductions and climate adaptation), as part of legislative requirements under Bill 27 and voluntary commitments under the BC Climate Action Charter.
- **Catalyze action through partnerships with public and private sectors, non-governmental organizations and community organizations** and increase public awareness of climate change issues.
- **Liaise with senior levels of government on climate change related programs**, policies and legislation that impact the capital region.
- **Provide scientific information, data and indicators** related to local and regional greenhouse gas emissions and projected climate impacts.
- **Support the CRD in fulfilling its corporate climate objectives** by developing and facilitating implementation of corporate climate action plans, policies and programs and support execution of climate-related Board strategic priorities.

The service administers two inter-municipal committees, one with elected officials and one with staff, which represent the 13 municipalities and three electoral areas in the region. These committees meet quarterly and work in an advisory capacity to the CRD to develop priority objectives and support project delivery with the aim of supporting regional coordination on climate action.

In 2020, the program operated on an annual budget of approximately $577,000, which included three full-time employees and one two-year, full-time term position (co-funded by BC Hydro Sustainable Communities) which will likely be renewed in 2021.

In addition, the corporation provides an annual stipend of $100,000 towards a fund to support key corporate focused climate action planning activities. The program's core budget is provided through an annual requisition from all of the municipalities and electoral areas, and supplemental funding from corporate services. The program also relies on external grants and partnerships to undertake community climate action programming. In 2020, external sources accounted for approximately $485,000 in additional funding to support staffing and completion of key projects.

The CRD climate action service is a part of the Parks & Environmental Department, Environmental Protection Division. The service reports through the CRD's Environmental Services Committee to the CRD Board.

See *Appendices A and B* for accomplishments.

40

2020 Climate Action Highlights

The CRD completed and supported a number of climate actions throughout 2020 listed in *Appendix A – CRD Regional Climate Action Strategy Actions* and *Appendix B – Corporate Climate Action Strategy Actions.* Some highlights are:

Solid Waste Management Plan

The CRD is developing a new Solid Waste Management Plan to reduce how much material is sent to Hartland Landfill and guide how the region's waste is managed in a safe, secure and sustainable way now and in the future. The plan aims to extend the life of Hartland Landfill by prioritizing reduce, reuse and recycling-focused actions and incorporating climate action and sustainability considerations wherever possible. The draft plan was released in 2020 for a second round of public engagement and input, including feedback from local First Nations, municipalities, industry and residents. The final plan will be presented to the CRD Board for approval in spring 2021.

Hartland Landfill Renewable Natural Gas Utilization

In April 2020, the CRD announced approval in principle of an agreement to sell renewable natural gas (RNG) to FortisBC for beneficial use. Blending seamlessly with conventional natural gas, RNG is a carbon-neutral energy made from capturing and upgrading the biogas released from decomposing organic waste in the landfill. Converting the biogas generated at Hartland Landfill to RNG will reduce our region's emissions by approximately 264,000 tonnes of carbon dioxide over the life of the project—the equivalent to removing 2,240 cars from the road. A lifecycle greenhouse gas assessment found that decommissioning the electricity plant, a facility nearing the end of its life, and building a new RNG facility at Hartland Landfill is a more effective beneficial use of this resource from a climate change perspective.

2020 Canada's Greenest Employers

For the third year in a row, the CRD was recognized as one of *Canada's Greenest Employers* by the *Canada's Top 100 Employers* project. This special designation recognizes employers that lead the nation in creating a culture of environmental awareness in their organizations. The CRD's Corporate Climate Action Strategy aims to integrate climate action into everyday business across the CRD's departments, divisions and services.

Transitioning CRD's Fleet to Low Emission

In 2020, the CRD began piloting a new procedure to better facilitate procurement of low emissions vehicles across its various services. Learnings informed the development of a new green fleet policy which is planned for finalization in 2021. Also in late 2020, the CRD received two hydrogen fuel cell vehicles to pilot in the fleet over a six month period as part of commitments under the CRD's **Zero Emission Fleet Initiative**, co-funded by a *Federation of Canadian Municipalities (FCM) Green Municipal Fund* grant.

The CRD now has nine e-bikes for staff use at CRD Headquarters and Regional Parks. In addition, staff bike parking was greatly expanded at CRD Headquarters to accommodate staff commuters with e-bikes and cargo bikes.

Regional Data and Indicators

In 2020, the CRD completed a number of regional research initiatives to support the CRD, local governments, First Nations and other key stakeholders in their climate action planning efforts. This includes:

- **Regional and Local Greenhouse Gas Inventory:** To better understand the sources and trends of greenhouse gas (GHG) emissions within the capital region, the CRD produced a GHG Inventory Study which will serve as a resource for the CRD and municipalities to plan for effective climate action.
- **Coastal Flood Inundation Mapping Project:** This report provides planners and emergency managers a comprehensive picture of the risks of coastal flooding due to rising sea levels and tsunamis.
- **Forest Sequestration Project:** This first phase project utilized a carbon budget model to quantify the forest carbon sequestration potential of the region's forest lands and offer recommendations on forest management.
- **Regional Energy Benchmarking Roadmap:** The CRD worked with a University of British Columbia Sustainability Scholar to undertake research to develop recommendations for enabling a regional benchmarking program for complex buildings in the capital region.

Regional Residential Energy Retrofits

In 2020, working a number of local government partners, the CRD completed the *FCM Transition 2050* funded **Residential Retrofit Project**. This work developed a regional energy retrofit strategy, led industry engagement and capacity building events, completed key local research and supported the Bring It Home 4 the Climate pilot program. In the first five months, this pilot program engaged 300 homeowners, completed 54 subsidized Virtual Home Check-ups, and 78 subsidized *EnerGuide Assessments* and hosted two public webinars on understanding heat pumps. The feedback on the program has been universally positive to date and staff have worked with our partner organization to extend the pilot into 2021. Learnings from this work will directly inform future work in 2021.

To encourage residents to switch to electric heat pumps from fossil fuel heating systems, between September 2018 and December 2020, 415 CRD $350 top-up incentives (80% from oil, 17% from natural gas and 3% from propane heating) have been processed. The CRD is supporting continued promotions, and have seeded a Group Purchase Rebate Code which offers an additional rebate opportunity to qualifying regional homeowners.

McLoughlin Point Wastewater Treatment Plant

In late 2020, the new McLoughlin Point Wastewater Treatment Plant became operational. Although the operation of this plant is expected to increase the CRD's corporate emissions, the facility has been built with climate considerations in mind, including features that promote sustainability and energy efficiency. The operations and management building has been built to *LEED Gold* design standards and features a green roof which will help mitigate storm water runoff and provide wildlife habitat. The plant itself features a heat recovery mechanism that will provide heating for the building.

Looking Ahead - 2021

The CRD will continue to show a leadership role, support collaborative efforts, pursue strategic partnerships, external funding sources, and respond to opportunities as local and senior levels of governments advance their efforts.

Some activities planned for 2021 include:

- **Update the Climate Action Strategy:** In 2021, the CRD will be undertaking a planning exercise to review and update its existing climate action strategies. The planning process will endeavor to identify opportunities to accelerate actions as a response to the CRD's climate emergency declaration and targets. The renewed CRD Climate Action Strategy will be presented to the Board in fall 2021.
- **Regional Energy Retrofit Programming:** Through the development of a business case, the CRD will investigate the feasibility and benefits of a regional energy retrofit program to help residents implement retrofits and access rebates. If successful, further work will be completed with regional partners through the Federation of Canadian Municipalities Community Efficiency Financing grant.
- **Electric Vehicle Infrastructure Road Map:** To support CRD and local government planning efforts, this project aims to better understand future charging station user needs and designs, and to find the opportunities for collaboration between regional fleet owners and other key stakeholders.
- **Cool It! Climate Leadership Program:** The CRD will continue its support of the BC Sustainable Energy Association Cool it! Program, offering interactive workshops throughout the region where grade 4-5 students learn about climate change and participate in the Cool It! Challenge to learn climate-friendly behaviours.
- **Solid Waste Management Planning:** Pending Board approval in spring 2021, staff will begin strategy development in a number of key areas of the new Solid Waste Management Plan — including multi-family housing, construction, renovation and demolition waste and diversion opportunities for the industrial, commercial and institutional (ICI) sector. After the CRD and FortisBC submit a supply contract to the British Columbia Utilities Commission, staff will issue a Request for Qualifications seeking submissions for the design and construction of the new CRD facility that will upgrade the biogas generated at Hartland Landfill to renewable natural gas.
- **Regional Transportation Committee:** In late 2020, the CRD board directed staff to work with municipalities, the Province and BC Transit to create list of regional transportation priorities for coordinated advocacy, with a climate emergency lens. This work will continue in 2021.
- **Corporate Green Fleet Policy and Electric Vehicle Charging Planning:** This new policy will help prioritize low emission vehicles in CRD procurement, and will be finalized in 2021. Further technical work related to electric vehicle charging will be completed to support the ongoing transition of CRD's fleet to low carbon.

Making a difference...together

Capital Regional District
625 Fisgard Street
Victoria, BC V8W 2S6

Appendix A:
Goal 1 | Developed urban areas are compact and complete

RCAS Action	Status	2020 Action / Projects	External Partners
1-1. **IDENTIFY OPPORTUNITIES TO SUPPORT LOCAL GOVERNMENTS** and interested First Nations governments with transit-oriented development	Complete	• Considered in context of Regional Growth Strategy (RGS) and policies to support urban containment.	• Municipalities, Juan de Fuca Electoral Area
1-2. **DEVELOP TOOLS AND UNDERTAKE RESEARCH** to support local governments and interested First Nations governments in creating compact and complete urban areas		• No actions reported.	
1-3. **MANAGE COMPLIANCE WITH REGIONAL GROWTH STRATEGY (RGS)**	Ongoing	• RGS was adopted in March 2018. All new CRD bylaws and services must be consistent with RGS.	
	Complete	• Liaised with CRD Development and Planning Advisory Committee to manage compliance with RGS.	• Municipalities, Juan de Fuca Electoral Area
1-3-1. **Review Regional Context Statements** for alignment with the RGS	Complete	• Board has accepted all Regional Context Statements.	• Municipalities
1-3-2. **Continue to adopt Official Community Plans (OCP)** for the Juan de Fuca Electoral Area that are consistent with the RGS.		• See Action 1-3 (Juan de Fuca Official Community Plans).	
1-3-3. **Monitor and report on RGS** commitments	Planned	• Completed annual RGS indicator report.	
1-4. **CONTINUE TO DEVELOP GHG-RELATED TARGETS,** policies and actions for the Juan de Fuca electoral area OCP	Planned	• Likely to initiate update for Port Renfrew Official Community Plan.	
PERFORMANCE INDICATORS			
• **Percentage of new dwelling units within the Growth Policy Area**		• 96.5% = percentage of new dwelling units within the Urban Containment Policy Area (target is 95%). 20% (2016-2019) = percentage of growth in new dwelling units in areas with greater than 45% active transportation.	

Goal 2 | Multi-modal transportation systems are low carbon

RCAS Action	Status	2020 Action / Projects	External Partners
2-1. **ESTABLISH A CRD TRANSPORTATION SERVICE TO FULFILL THE MULTI-MODAL VISION OF THE REGIONAL TRANSPORTATION PLAN.**	In progress	• In late 2020, the CRD board directed staff to work with municipalities, the Province, and BC Transit to create list of regional transportation priorities for coordinated advocacy.	
2-1-1. **Consolidate CRD transportation** functions			
2-1-2. **Apply for external funding**			
2-1-3. **Requisition for future infrastructure** projects			
2-2. **IMPLEMENT THE REGIONAL TRANSPORTATION PLAN AND THE PEDESTRIAN AND CYCLING MASTER PLAN.**	Ongoing	• CRD provided data and technical expertise to a number of project-based working groups to ensure that multi-modal infrastructure is integrated into transportation projects.	• Ministry of Transportation and Infrastructure, BC Transit, partner municipalities and electoral areas, BC Ferries
	Ongoing	• Continued offering Ready Step Roll program to provide active school travel planning for up to five schools per year.	• School boards, schools, municipalities and electoral areas, public health, local law enforcement agencies, parents, students and school administration, ICBC Road Safety, Greater Victoria Bike to Work Society, CRD Traffic Safety Commission, Island Health, Ministry of Transportation and Infrastructure
2-3. **IMPLEMENT PRIORITY PROJECTS IDENTIFIED IN THE REGIONAL TRAILS MANAGEMENT PLAN TO SUPPORT ACTIVE TRANSPORTATION.**	Ongoing	• Continued to monitor external project implementation funding opportunities to implement the Gulf Islands Regional Trails Plan.	
	In progress	• E&N Rail Trail Phase 3 is in progress with plans to be completed in summer 2021.	
	In progress	• Public engagement ongoing of design lighting options put forth in the regional trail widening or separation feasibility study.	
	Planned	• Planning new regional trails on the Gulf Islands: Main Island Regional Trail (2.3 km of trail). Planned to be complete in 2023.	

Goal 2 | Multi-modal transportation systems are low carbon (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
2-4. **IDENTIFY OPPORTUNITIES TO WORK WITH BC TRANSIT** as they develop policies and plans for rapid transit, frequent transit and increased accessibility.	Ongoing	• Provided ongoing modelling, data and planning support.	
2-5. **FACILITATE DELIVERY OF THE SALT SPRING ISLAND (SSI) COMMUNITY TRANSIT SERVICE AND IMPLEMENT MULTI-MODAL TRANSPORTATION PROJECTS,** including recommendations from the Pedestrian and Cycling Master Plan: SSI Edition	In progress	• Salt Spring Island Parks and Recreation Commission is working with residents and trail enthusiasts to develop a plan for a connector trail for acquired lands off Starks Road on Salt Spring Island. An environmental assessment has been completed to inform trail design. In 2020, brush clearing was initiated with construction to take place in the spring of 2021.	
2-6. **SUPPORT ELECTRIC VEHICLE (EV) AND ELECTRIC BICYCLE (E-BIKE) ADOPTION AND INFRASTRUCTURE DEPLOYMENT (INCLUDING BATTERY PLUG-IN AND FUEL CELL EV INFRASTRUCTURE)** in coordination with the Province, local governments and private sector.	Complete	• Undertook a study to understand electric vehicle (EV) charging performance standards for local government bylaws. Developed a technical brief and provided to staff.	
	In progress	• Began project to create and EV Charging Roadmap to identify coordination opportunities for EV charging infrastructure in the region. Engaged with various regional stakeholders. Work will continue into 2021.	• BC Hydro, local and regional governments
	In progress	• Install EV chargers at Portlock Park and Rainbow Pool.	
	Planned	• EV awareness campaign planned for spring 2021.	• Emotive BC, municipal partners
2-7. **DEVELOP, DELIVER AND SUPPORT EDUCATION PROGRAMS AND INITIATIVES** that achieve reductions in transportation related GHGe.	Ongoing	• Supported delivery of Cool It! Climate Leadership workshops in 39 grade 4-5 classrooms throughout the capital region and provided tools for behaviour change. Worked with BC Sustainable Energy Association (BCSEA) and municipal partners to update workshop content to incorporate more regional context. In 2021, support delivery of workshops in 45 grade 4-5 classrooms throughout the capital region.	• BC Sustainable Energy Association, municipal partners • Funders: District of Saanich, City of Victoria, District of North Saanich

Goal 2 | Multi-modal transportation systems are low carbon (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
2-7. **DEVELOP, DELIVER AND SUPPORT EDUCATION PROGRAMS AND INITIATIVES** that achieve reductions in transportation related GHGe.	Complete	• Supported BCSEA in the development and pilot of a high school climate action program.	
	Ongoing	• 4th annual Walk and Wheel to School Week. Adjusted offering due to COVID-19. Participating schools were not required to report on activities to reduce stress on teachers during COVID-19 restrictions. Thirteen schools requested and received program packages.	• Island Health, CRD Traffic Safety Commission, schools
2-8. **DEMONSTRATE LEADERSHIP** by implementing the CCAS corporate fleet actions and policy.	Ongoing	• See Appendix B.	
PERFORMANCE INDICATORS			
• **Reductions in GHGe from personal vehicle transportation**		• Regional Greenhouse Gas Inventory Study (2018): In-boundary on-road transportation - 871,571 tCO_2 (4% decrease compared to 2007 baseline).	
• **Increase in active transportation infrastructure kilometres**		• Not currently available.	
• **Percentage of all trips made by walking, biking or transit**		• Not currently available.	
• **Total kilometers of the Regional trail network completed**		• 96 km (55km Galloping Goose; 29km Lochside; 12 km E&N).	

Goal 3 | Buildings are high performing and low carbon

RCAS Action	Status	2020 ACTION / PROJECTS	External Partners
3-1. **SUPPORT THE TRANSITION FROM OIL HEATING TO HIGH EFFICIENCY, LOW EMISSIONS HEATING SYSTEMS**	Ongoing	• Continue to coordinate and develop promotional and display materials.	
	Ongoing	• Coordinate CRD and local government top-up incentives to the provincial CleanBC program offering homeowners incentives to switch from fossil fuel heating systems to electric heat pumps. Between September 2018 and December 2020, 415 CRD $350 top-up incentives (80% from oil, 17% from natural gas and 3% from propane heating) have been processed. The CRD continues to support continued promotions, and seed Group Purchase Rebate Codes on a rolling basis which offers an additional rebate opportunity to qualifying regional homeowners.	• Government of Canada, Province of British Columbia, local governments, BC Hydro and Fortis BC, City Green Solutions • Funders: District of Central Saanich, Township of Esquimalt, District of North Saanich, District of Saanich, City of Victoria
	✓ Complete	• Between 2018-2020, supported development and implementation of Federation of Canadian Municipalities (FCM) grant-funded Transition 2050: Residential Retrofit Acceleration Project; included strategies, marketing, industry engagement and pilot projects.	• City Green Solutions. Home Performance Stakeholder Council, City of Victoria, District of Saanich, District of Central Saanich, Township of Esquimalt • Funders: Federation of Canadian Municipalities
	Ongoing	• In 2020, support pilot project Bring it Home 4 the Climate aimed at supporting energy audits and expert coaching, the pilot will be designed to overcome various barriers. Due to popularity, the pilot has been extended into 2021.	• City Green Solutions. Home Performance Stakeholder Council, City of Victoria, District of Saanich, District of Central Saanich, Township of Esquimalt • Funders: Federation of Canadian Municipalities
	✓ Complete/ Planned	• In 2020, applied for FCM community efficiency financing grant to create a design study for a regional energy retrofit program. In 2021, complete a business case to investigate the feasibility and benefits of a regional energy retrofit service to help residents support home retrofits. Expand on this work with local governments if successful with FCM grant.	
3-2. **EDUCATE AND PROVIDE REGIONAL COORDINATION FOR NATIONAL AND PROVINCIAL INITIATIVES.**	Ongoing	• Supporting regional local governments in information sharing and coordination around BC Energy Step Code, electric vehicle charging policy and incentive programs.	
3-2-1. **Opt-in regulations** (e.g. the Energy Step Code, a tiered energy performance standard beyond Building Code)	✓ Complete	• Hosted a local government staff workshop on energy step code to further understand regional needs and opportunities.	• Local governments

Goal 3 | Buildings are high performing and low carbon (cont.)

RCAS Action	Status	2020 ACTION / PROJECTS	External Partners
3-2-2. **Energy literacy initiatives** such as energy benchmarking and, voluntary and mandatory energy labeling programs for buildings	Complete	• Obtained a grant funded a University of British Columbia intern to complete research to develop a regional energy benchmarking roadmap for Part 3 buildings.	• BC Hydro, University of British Columbia
	In progress	• Continue to circulate the building energy literacy materials and Climate Action To Go Kits. Co-supported the development of heat pump display for recreation centers. In 2020, in person outreach was limited due to COVID-19, so increased social media engagement.	• Libraries in the region, local governments
	In progress	• See Action 3-1 (CleanBC, Bring it Home 4 the Climate).	
3-3. **DEVELOP, DELIVER AND SUPPORT EDUCATIONAL PROGRAMS AND INITIATIVES** That achieve reductions in building-related GHGe and, water and energy use.	Planned	• Developed new drinking water school education programming.	
	Planned	• A similar project to the Hotel Water, Energy, and Greenhouse Gas Savings program is planned to help eight groceries stores reduce energy and water consumption.	
	Complete	• Drinking water cart events postponed due to COVID-19.	
	Complete	• Fix a Leak Week disrupted due to COVID-19. Some kits distributed to community associations. In 2021, planning for modified Fix a Leak Week using community associations and recreation centers if open.	
	Planned	• Create an introduction video for water conservation and watershed protection education workshops.	• Swan Lake Nature Sanctuary
	On hold	• Residential native plant gardening workshops planned for 2020 and 2021 have been delayed due COVID-19.	

Goal 3 | Buildings are high performing and low carbon (cont.)

RCAS Action	Status	2020 ACTION / PROJECTS	External Partners
3-3. **DEVELOP, DELIVER AND SUPPORT EDUCATIONAL PROGRAMS AND INITIATIVES** that achieve reductions in building-related GHGe and, water and energy use.	Complete	• To increase online engagement and replace in person opportunities disrupted by COVID-19, a series of six water conservation videos were created that incorporate climate impacts (part of Summer Yard Maintenance Stewardship series).	
	Ongoing	• Launched Aerator Replacement Program for businesses offering free replacements to reduce water consumption. Water and energy savings expected.	
	Planned	• Investigate the possibility of thermal imaging camera kits to distribute through regions libraries.	• District of Saanich
	In progress	• See Action 2-7 (Cool It! program).	
3-4. **PROVIDE RESEARCH, DATA AND ANALYSIS TO LOCAL GOVERNMENTS AND INTERESTED FIRST NATION GOVERNMENTS** on high performing, resilient and low carbon buildings.	Ongoing	• Participated in the provincial local government step code peer network and share learnings with capital region local governments.	
	In progress	• See Action 3-2.	
3-5. **SUPPORT AND DEVELOP PROGRAMS THAT INCREASE THE USE OF RENEWABLE ENERGY, GREEN INNOVATION AND SMART TECHNOLOGY IN BUILDINGS.**	Planned	• Oak Bay Lodge redevelopment, initial planning of long-term care facility with climate mitigation considered. Considering energy efficiency in all new buildings. • See Action 3-1 (Clean BC Better Homes, Bring it Home 4 the Climate, Residential Energy Retrofit Business Case).	

Goal 3 | Buildings are high performing and low carbon (cont.)

RCAS Action	Status	2020 ACTION / PROJECTS	External Partners
3-6. **BUILD CAPACITY AMONG BUILDING OFFICIALS AND INDUSTRY IN THE REGION BY:**			
3-6-1. **Sharing and promoting resources at monthly South Vancouver Island Building Officials meetings.**	Ongoing	• See Action 3-2 (Energy Step Code Program).	
3-6-2. **Supporting ongoing education of building officials and industry**	 In progress	• See Action 3-1 (CleanBC Better Buildings & Homes).	
3-7. **DEMONSTRATE LEADERSHIP BY IMPLEMENTING THE CCAS POLICY AND ACTIONS** related to existing and new corporate buildings.	Ongoing	• See Appendix B.	
PERFORMANCE INDICATORS			
• **Reductions in residential and commercial building GHGe and energy use**		• Regional Greenhouse Gas Inventory Study (2018): Residential buildings - 338,796 tCO2e (16% decrease compared to 2007 baseline). • Commercial & institutional buildings - 265,424 tCO2e (7% increase compared to 2007 baseline).	
• **Volume of water used in the Greater Victoria Water Supply Area**		• 48.384 M m^3 of drinking water was delivered through the regional water supply system.	

Goal 4 | Natural assets are valued for reducing our contributions to climate change

RCAS Action	Status	2020 Action / Projects	External Partners
4-1. **WORKING WITH PARTNERS, UPDATE THE REGIONAL INVENTORY OF LAND COVER.**	In progress	• Updating regional inventory of land cover. This will include change in canopy and impervious surfaces based on jurisdictional boundaries and watershed. To be completed in 2021.	• Local municipalities, core area, Saanich Peninsula, electoral areas
	In progress	• The 2020–2021 Land Acquisition Strategy was approved in May 2020. The proposed priority acquisitions are primarily additions to existing regional parks and will enhance the environmental values of a park, expand the regional park system, and will help protect existing natural areas within the parks. Climate change mitigation and adaptation values are factored into land acquisition criteria. The information from the landscape evaluation analysis will be used in the update of the 2012-2021 Regional Parks Strategic Plan.	
4-2. **COLLABORATE WITH LOCAL GOVERNMENTS AND INTERESTED FIRST NATIONS GOVERNMENTS** to develop and implement a strategy to improve, increase area of, and protect rural, suburban and urban tree canopy and root space.	Complete	• Land Acquisition Strategy renewed.	
	In progress	• Land cover classification project will report on changes in canopy cover since 1985. Deliverables will include suitable tree planting areas on private and public land to help municipalities with planning projects.	• Local municipalities, core area, Saanich Peninsula, electoral areas
4-3. **CONSIDER CARBON SEQUESTRATION AND STORAGE IN ALL CRD LAND, MARINE MANAGEMENT, ASSET MANAGEMENT AND ACQUISITION DECISIONS** to reduce community GHGe in collaboration with stakeholders and First Nations governments.	Ongoing	• Consider carbon sequestration in all park land acquisition decisions.	
	Planned	• Current two-year Land Acquisition Strategy concluded in 2019. Developing a new two-year strategy going forward.	
	In progress	• A collaborative research project, Balancing Forest, Wildfire and Carbon Management Strategies in a Changing Climate Project, seeks to model changes in forest composition and structure in the Greater Victoria Water Supply Area (GVWSA); associated changes to wildfire fuel types, crown fire initiation and burn probability; the effects of these potential changes on the carbon budget of the forests; and how forest fuel management activities could reduce potential threats to the forest.	• University of Victoria, Natural Resources Canada, Canadian Forest Service, ESSA Consultants • Funding: Alliance Grant from the National Science and Engineering Research Council
	Complete	• GVWSA Land Acquisition Priorities developed and approved by the Regional Water Supply Commission.	

Goal 4 | Natural assets are valued for reducing our contributions to climate change (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
4-3. **CONSIDER CARBON SEQUESTRATION AND STORAGE IN ALL CRD LAND, MARINE MANAGEMENT, ASSET MANAGEMENT AND ACQUISITION DECISIONS** to reduce community GHGe in collaboration with stakeholders and First Nations governments.	Complete	• Utilizing a Pacific Institute for Climate Solutions grant funded student intern and support from staff at the Natural Resources Canada (NRCan) Pacific Forestry Centre, CRD completed a project that assessed the forest carbon sequestration potential of the region's forest lands. This first phase project utilized NRCan's carbon budget model to quantify potential and offer recommendations on forest management, considering carbon sequestration only. Staff hosted a webinar for interested local government and CRD staff to share key insights. Staff will continue to look for opportunities to further investigate this topic.	• Pacific Institute for Climate Solutions
	Ongoing	• Continue to implement Official Community Plan permit system for areas with sensitive ecosystems.	
	Planned	• Acquisition of 145 acres of private forest land for protection of the Sooke Lake Reservoir watershed.	
4-4. **DEVELOP A SILVICULTURE WORKING GROUP FOR THE JUAN DE FUCA ELECTORAL AREA** in collaboration with landowners.	On hold	• Not a priority at this time.	
PERFORMANCE INDICATORS			
• **Completion of the regional inventory of land cover**		• Planned completion in 2021.	
• **Number of hectares of protected areas, forest land and tree cover**		• 53.1 = hectares of protected areas acquired.	

Goal 5 | Waste generation is minimized and remaining waste is transformed into a resource

RCAS Action	Status	2020 Action / Projects	External Partners
5-1. **MINIMIZE COMMUNITY GHGE** by completing the CRD Solid Waste Management Plan.	In progress	• Draft Solid Waste Management Plan completed. Public engagement process was conducted and input is being incorporated.	
5-2. **WORK WITH LOCAL GOVERNMENTS TO PLAN WASTE REDUCTION STRATEGIES** based on waste composition study results.	In progress	• See Action 5-1.	
5-3. **DEVELOP AND DELIVER PROGRAMS TO PROMOTE THE 3RS** (reduce, reuse, recycle) and zero waste approaches to reduce the amount of community solid waste (e.g. food preservation).	Ongoing	• Maintaining and promoting use of MyRecyclopedia online diversion directory.	
	Ongoing	• Support curbside recycling education (e.g. subscription for service reminders and updates, seasonal diversion, "extra material", warm weather tips education).	
	On hold	• No water cart events were held in 2020 because of COVID-19 restrictions.	
	In progress	• In an effort to reduce household food waste in the capital region, the CRD joined Love Food Hate Waste Canada as a campaign partner in 2018. In 2020, the CRD shared promotional videos and food-saving tips through its social media platforms, YouTube channel and website, participated in Waste Reduction Week — promoting Food Waste Friday — and provided relevant content for two advertorial news articles and nine community association newsletters. The CRD also participates in quarterly campaign partner meetings. For more information visit: www.crd.bc.ca/lovefood.	
	Ongoing	• The InfoLine is an essential part of education and outreach programs. This service responds to waste reduction, waste management and general Hartland Landfill inquiries.	
	Ongoing	• Under contract with the CRD, the Compost Education Centre (CEC) offers presentations, workshops and educational demonstrations, both at our demonstration gardens and out in the community. CEC also engages with volunteers, publishes a monthly e-newsletter and fact sheets on a range of related topics, and maintains the CEC Hotline and website. For more information see the CRD's Environmental Resource Managements 2020 Progress Report.	

Goal 5 | Waste generation is minimized and remaining waste is transformed into a resource (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
5-3. **DEVELOP AND DELIVER PROGRAMS TO PROMOTE THE 3RS** (reduce, reuse, recycle) and zero waste approaches to reduce the amount of community solid waste (e.g. food preservation).	Ongoing	• MyRecyclopedia.ca tool was developed to encourage sustainable practices and to reinforce the 3Rs of reduce, reuse and recycle. Items listed received 246,440 web visits in 2020.	
	Ongoing	• 10 organizations participated in the diversion funding program.	
	Ongoing	• Partners with five non-profit organizations for the management of donated items received at the Hartland depot.	
	Ongoing	• Hartland Public Drop Off Depot - Over 80 items from 28 product categories are accepted for recycling.	
	Ongoing	• Under agreement with Recycle BC, the CRD provided 128,830 single family dwellings with curbside recycling service for packaging and paper products. Since the program's inception in 1989 over 505,967 tonnes of recyclables have been collected.	
	Ongoing	• Residents on Salt Spring Island and the Southern Gulf Islands are provided recycling services through drop off programs set up at depots in their communities. The CRD, under agreement with Recycle BC, partners with local non-profit associations for recycling services for packaging and paper products at these depots.	
	Ongoing	• Under a local service funded by the community of Port Renfrew, residents and businesses access a transfer station for drop off of general refuse, kitchen scraps and recycling.	
	Ongoing	• Supported industry-led product stewardship. Continued to have one of the highest medication return rates per capita amongst regional districts in the province and total of 19,459 tonnes of packaging and paper products was collected through CRD programs.	
	Ongoing	• In 2020, 5,476 tonnes of source-separated yard and garden material and wood waste was received, ground and utilized for Hartland operations and capital improvements.	
	Complete	• Delivered waste education programming (three community programs, 26 school program and tours). Workshops disrupted by COVID-19.	
	Complete	• Improved and developed new online resources, lesson plans and activities for virtual engagement on waste diversion. Piloted virtual live tour of landfill.	

Goal 5 | Waste generation is minimized and remaining waste is transformed into a resource (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
5-3. **DEVELOP AND DELIVER PROGRAMS TO PROMOTE THE 3RS** (reduce, reuse, recycle) and zero waste approaches to reduce the amount of community solid waste (e.g. food preservation).	Planned	• Virtual live tour of landfill planned for various schools for Earth Day.	
	In progress	• See Action 2-7 (Cool It! program).	
5-4. **PROMOTE ORGANIC MATERIAL DIVERSION** (kitchen scraps, yard and garden waste) and facilitate the responsible recovery of resources locally.	Planned	• Implementation of mobile incineration unit for disposal for select invasives is planned for 2021.	
	In progress	• See Action 5-3 (Love Food Hate Waste).	
5-5. **IDENTIFY AND EVALUATE ADDITIONAL OPPORTUNITIES TO OPTIMIZE LANDFILL GAS RECOVERY AND ENERGY PRODUCTION FROM ORGANIC WASTE.**	In progress	• Monthly speciation will support landfill gas utilization and operations.	
	In progress	• Updated landfill gas quantification of fugitive emissions (wet and dry season).	
PERFORMANCE INDICATORS			
• **Completion of the CRD Integrated Solid Waste and Resource Management Plan**		• In-progress.	
• **Percentage of methane gas captured at Hartland Landfill**		• 67% percentage of methane gas captured at Hartland Landfill.	
• **Per capita waste disposal rate**		• 395 kg/per capita waste disposal rate. In 2018, BC's average was 505 kg per capita.	

Goal 6 | Regional vulnerabilities to the impacts of climate change are understood

RCAS Action	Status	2020 Action / Projects	External Partners
6-1. **CONTINUE AND EXPAND DATA COLLECTION AND MAPPING EFFORTS TO IDENTIFY VULNERABILITIES TO THE IMPACTS OF CLIMATE CHANGE AND ACQUIRE RESOURCES** to help prepare for a changing climate (e.g. Light Detection and Ranging data).	Complete	• Installed additional hydrology monitoring stations in the Leech Water Supply Area.	
	In progress	• Harbours Inventory update for core area planned to be completed in 2021.	
	Ongoing	• Update planned for this year for orthophoto project. Port Renfrew taking part in ground cover mapping project.	
	In progress	• Greater Victoria Water Supply Area Forest Fuel Management - 5S Rithet North Fuel Break.	
	Complete	• Purchased Post Wildfire Debris Flow Mitigation Supplies.	
	Ongoing	• Working with regional partners to identify tsunami inundation safe zones and educate the public.	
	Planned	• Additional hydrology monitoring in the Sooke and Goldstream Water Supply Areas.	• Forest Technology Solutions
	Planned	• An intertidal olympia oyster survey is ongoing and will be included in the Harbours Inventory. To be completed 2021.	• World Fisheries Trust
	Complete	• Completed Capital Region Coastal Flood Inundation Mapping Project to model and map various scenarios related to sea level rise and tsunamis. Shared results with local governments, First Nations and other partners.	• Inter-Municipal Climate Action Working Group, Local Government Emergency Managers Advisory Committee • Funders: Province of BC, Government of Canada (National Disaster Mitigation Fund)

Goal 6 | Regional vulnerabilities to the impacts of climate change are understood (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
6-2. **CONDUCT REGION-WIDE CLIMATE RISK AND VULNERABILITY ASSESSMENTS FOR NATURAL AND SOCIAL IMPACTS** (e.g. ecosystem shifts, invasive species, drought, disease) every five years, or sooner as new information (e.g. climate projects) becomes available in partnership with local governments and interested First Nations governments.	Complete	• Bowker Creek Daylighting Feasibility Study is complete and report is being shared with municipalities for endorsement. Bowker Creek Blueprint Implementation Framework has been completed to operationalize improved hydrological function and greenways. Next steps include an inter-municipal committee to create watershed-wide standards.	• City of Victoria, District of Saanich, District of Oak Bay
	Ongoing	• Greenshore Training Level 1 course offered in 2020 and another course is planned for 2021.	• Core local governments
	In progress	• Using mapping of ecosystems, forest characteristics, and invasive species to identify potential vulnerabilities and identify risk to the projected effects of climate change on the Greater Victoria Water Supply Area (GVWSA) and associated functions. • Expanding the monitoring network for weather and stream flow in the GVWSA to better understand watershed hydrology in the GVWSA and the potential effects of projected changes to climate. Conducting a review of how the latest climate change projections for the CRD relate to the records of climate for the water supply area over the past 100 years. Identifying needs for additional information to better understand the effects of climate change on the GVWSA.	
	Ongoing	• Updating the Regional Outcomes Monitoring Group as needed or as information becomes available. Collect and share data and indicators around the social determinants of health.	• Island Health, Greater Victoria Public Library, Inter-Cultural Association, Community Social Planning Council, Capital Region Food and Agriculture Initiatives Roundtable, United Way of Greater Victoria, University of Greater Victoria, Children's Health Foundation of Vancouver Island
	Complete	• Helped external group environmental group connect Craigflower Creek to online hydrological data tracking system.	
	Planned	• In 2021, contract consultant to implement better calibration on the seven creek data collecting systems to acquire improved flow data.	
	Planned	• As part of the Bowker Creek Daylighting Feasibility Study, looking at greenways for connectivity opportunities to rest of trail system. Updating the blueprint to incorporate updated greenways routing proposals.	• District of Saanich, District of Oak Bay, City of Victoria

Goal 6 | Regional vulnerabilities to the impacts of climate change are understood (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
6-3. **CONVENE APPROPRIATE PARTNERS TO IDENTIFY AND FILL GAPS IN MARINE MONITORING PROGRAMS,** to determine whether changes in the marine environment are related to climate impacts and advocate for the coordination of marine science data collection and research in region by the federal government.	Ongoing	• Ongoing seafloor monitoring. Added new stations to cover the footprint of the new McLoughlin Point Wastewater Treatment Plant outfall. All stations should provide enhanced spatial coverage to detect any climate or broader environmental changes relative to our outfall impacts.	
	Ongoing	• Continue to standardize monitoring methods to those used by other agencies such as PollutionTracker, Washington State Department of Ecology, etc. This standardization allows cross-jurisdictional comparison of results, thereby also ensuring a broader spatial coverage to detect environmental change.	
	Ongoing	• Monitoring program staff maintain connections with local academics and federal researchers to keep abreast of others' research into this topic. In 2020, staff attended the virtual Salish Sea Ecosystem Conference. In 2021, increase involvement in the Canadian Water and Wastewater Association.	
	In progress	• Establish a Peninsula Harbour service to identify marine issues and determine solutions.	• District of Central Saanich, District of Saanich, Town of Sidney
6-4. **AS THE LATEST CLIMATE DATA BECOMES AVAILABLE, SHARE WITH STAKEHOLDERS AND FIRST NATIONS GOVERNMENTS,** and facilitate the updating of regional climate projections.	Complete	• Hosted and coordinated invasive species best practices and management workshops. • See Goal 6-1 (Coastal Flood Mapping Project).	
6-5. **COMPILE RESEARCH ON ECOSYSTEM SHIFTS FOR STAKEHOLDERS, AND INTERESTED FIRST NATIONS, TO INCLUDE IN NATURAL AREA AND WATERSHED MANAGEMENT PLANNING** (e.g. watershed report cards).	Ongoing	• Continue partnership in the Climate Related Monitoring Program with BC Hydro, RioTinto, MetroVan and others.	
	Complete	• Received hydrological survey, and watershed management plan and it is now complete.	
	Planned	• Implementation of residential based nutrient reduction identified in the watershed management plan.	

Goal 6 | Regional vulnerabilities to the impacts of climate change are understood (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
6-5. **COMPILE RESEARCH ON ECOSYSTEM SHIFTS FOR STAKEHOLDERS, AND INTERESTED FIRST NATIONS, TO INCLUDE IN NATURAL AREA AND WATERSHED MANAGEMENT PLANNING** (e.g. watershed report cards).	Planned	• Design of oxygenation system planned to reduce nutrient leaching from sediment and reduce algae blooms. Planned to be in operation by spring 2022.	
	Planned	• Develop watershed assessment tool for Bowker Creek, Colquitz Creek, and Elk/Beaver Lake.	
6-6. **COLLABORATE WITH LOCAL GOVERNMENTS, AND INTERESTED FIRST NATIONS GOVERNMENTS, TO INCLUDE REGIONAL CLIMATE CHANGE PROJECTIONS IN INFRASTRUCTURE PLANNING STANDARDS** (e.g. revise design storms, Intensity Duration Frequency curves).		• No actions reported.	
6-7. **INCLUDE REGIONAL CLIMATE PROJECTIONS IN HAZARD, RISK AND VULNERABILITY ASSESSMENTS FOR THE THREE ELECTORAL AREAS'** Emergency Operations Work Plans and share regional climate change projections with local authorities' emergency programs.	Complete	• Utilized grant funds to support equipment procurement and training to assist electoral areas in wildfire response planning.	• Electoral areas' volunteer fire departments, North Galiano, Otter Point, Shirley and Port Renfrew • Funding: $117,000
	Planned	• Renew Electoral Area Community Wildfire Resiliency Plans.	
	In progress	• Search for new location for an Emergency Operation Center on Salt Spring Island still ongoing.	
6-8. **DEMONSTRATE LEADERSHIP BY DEVELOPING A CORPORATE CLIMATE ADAPTATION PLAN.**	In progress	• See Appendix B.	

Goal 6 | Regional vulnerabilities to the impacts of climate change are understood (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
PERFORMANCE INDICATORS			
• **Number of stakeholders and residents engaged through educational programming and outreach.**		• Data not available for 2020.	
• **Completion of the Climate Projections for the Capital Region report and integration of the results into CRD plans, strategies and processes**		• Study complete in 2017. Ongoing integration.	
• **Completion of an updated list of Species at Risk and critical habitats in regional parks**		• Regional Parks applying for a grant to support species at risk inventory and management which will help inform an updated list.	
• **Updated habitat survey for core area harbours**		• Harbours Inventory update for core area planned to be complete in 2021.	
• **Number of streams with water quality and flow monitoring stations**		• 10 (including hydrometric). In addition, helped external group environmental group connect Craigflower Creek to online hydrological data tracking system.	

Goal 7 | Communities are prepared for and resilient to the impacts of climate change

RCAS Action	Status	2020 Action / Projects	External Partners
7-1. **COLLABORATE AND COORDINATE WITH STAKEHOLDERS AND INTERESTED FIRST NATIONS GOVERNMENTS** to include climate change projections and risks in strategies, plans and policies.	In progress	• Participated with seven other local and regional governments on Vancouver Island in the ICLEI Canada Together for Climate Initiative.	• ICLEI Canada • Funders: Real Estate Foundation of BC (via ICLEI)
	In progress	• Supported development of the Vancouver Island Agricultural Climate Adaptation Strategy.	• BC Agriculture & Food Climate Action Initiative, Province of BC, other Vancouver Island Regional Districts
	Complete	• Supported the TETACES / Gulf Islands Climate Action and Education Project. The project developed and delivered three, five-day intensive educational programs that combined current climate science with tr aditional knowledge of the W̱SÁNEĆ people to inform and support decision-making on land use and climate action at both the local and regional levels. The final report was completed in July 2020.	
7-2. **WORK WITH STAKEHOLDERS, AND INTERESTED FIRST NATIONS GOVERNMENTS,** on an Integrated Watershed Management approach to changes in flows, groundwater storage and other stressors due to climate change.	Planned	• Will incorporate information from upcoming climate adaptation plan into new Official Community Plans.	
	Complete	• Culvert replacements considering climate change peak flow for Sooke Water Supply Area complete.	
	Planned	• Update Bowker Creek Blueprint using Greenways, Watershed implementation study and daylighting feasibility inputs.	

Goal 7 | Communities are prepared for and resilient to the impacts of climate change (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
7-3. **WORK WITH STAKEHOLDERS AND INTERESTED FIRST NATIONS GOVERNMENTS** to address the capacity of wastewater transmission and treatment systems to manage and minimize elevated flows as a result of increased inflow and infiltration due to climate change-induced storms.	Ongoing	• Supporting customized inflow and infiltration pilot projects in Oak Bay and Esquimalt to educate on basement flooding prevention and identifying root causes. To be completed in 2021.	• District of Oak Bay, Township of Esquimalt
7-4. **INCORPORATE CLIMATE-RELATED DISASTER PLANNING AND COMMUNICATIONS INTO PUBLIC OUTREACH ACTIVITIES.**	In progress	• Utilizing grant funds to promote FireSmart activities in electoral areas to minimize potential for wildfires.	• Federation of Canadian Municipalities • Funding: $50,000
	Planned	• Protective Services is leading a series of community forums for each major island and CRD electoral area to increase awareness of climate-related emergencies such as wildfire and tsunami inundation. These forums will be held online in 2022 and will include local first responders, subject matter experts, emergency program, and stakeholders. Participation will be open to all residents and permit open discussion and questions with the goal of increasing preparedness and resiliency to future climate-related disasters.	
	In progress	• New public alert system being evaluated.	
	Ongoing	• Maintain and promote PrepareYourself.ca.	
7-5. **WORK WITH THE PROVINCE AND THE REGIONAL EMERGENCY MANAGEMENT PARTNERSHIP TO REDUCE THE RISK OF INTERFACE FOREST FIRES.**	In progress	• Construction of the South Galiano Fire Hall is in progress.	• Government of Canada, Southern Gulf Islands Electoral Area • Funding: $84,000
	In progress	• A regional FireSmart Committee has been established with representatives from local governments, fire departments, and stakeholders form across the capital region.	• Government of Canada, Salt Spring Island, Pender Island, Juan de Fuca emergency program, Saturna FireSmart • Funding: $100,000

Goal 7 | Communities are prepared for and resilient to the impacts of climate change (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
7-6. **INTEGRATE AVAILABLE INFORMATION ON CLIMATE CHANGE RISKS AND VULNERABILITIES INTO JUAN DE FUCA ELECTORAL AREA OCP DEVELOPMENT** and educate residents on how to avoid or reduce damage and personal injury from storms and flooding (e.g. preparing buildings).	Planned	• No actions reported.	
7-7. **DEVELOP, DELIVER AND SUPPORT EDUCATIONAL PROGRAMS AND INITIATIVES THAT PROMOTE LOCAL FOOD SYSTEMS.**	On hold	• The seaweed harvest sites project is on hold due to COVID-19.	• Washington, Mainland BC and Vancouver Island
	In progress	• Support planning for Indigenous Foods Conference. Due to disruption by COVID-19, the conference will be adapted to a video presentation.	
PERFORMANCE INDICATORS			
• Incorporation of climate adaptation into emergency preparedness	Ongoing		
• Completion of Green Infrastructure Common Design Guidelines	Complete		
• Number of partnerships focused on local food education		• None reported.	
• Number of high priority stormwater discharges		• 46 wet weather related sewer volume permit exceedances.	
• Number of shoreline closure days and locations		• 108 closure days (combined from four locations).	
• Length of staged water restrictions		• May 1-Sept 30 (CRD Stage 1).	

Goal 8 | Natural assets are resilient to the impacts of climate change

RCAS Action	Status	2020 Action / Projects	External Partners
8-1. **DEVELOP A REGIONAL BIODIVERSITY STRATEGY WITH STAKEHOLDERS AND INTERESTED FIRST NATIONS THAT INCLUDES A SPECIES INVENTORY, PLANTING GUIDELINES AND PLANNING FOR NATURAL AREAS.** The Strategy should reflect regional climate change projections and adaptation priorities (e.g. sea level rise, flood inundation) and advocate to senior levels of government to protect biodiversity.	Planned	• Planned biodiversity inventory in development as a precursor to the strategy.	
8-2. **FOSTER THE REGION'S NATURAL AREAS RESILIENCY TO CLIMATE-INDUCED CHANGE** (e.g. sea level rise, flood inundation) in collaboration with stakeholders and interested First Nations.	In progress	• See Action 6-1 (Coastal Flood Mapping Project).	
	In progress	• Support SṈIDƟEŁ resiliency project at Tod Inlet, removing invasive species and building local connections. Planned completion in 2021.	
	Planned	• Planning an online symposium on invasive species with municipal partners, land managers and other stakeholders.	
8-3. **INCLUDE THE VALUE OF NATURAL AREAS IN REGIONAL CLIMATE ADAPTATION IN ALL CRD LAND AND MARINE MANAGEMENT, ASSET MANAGEMENT AND ACQUISITION DECISIONS,** and work collaboratively with stakeholders and interested First Nations.	Ongoing	• Prepared the space for a community-based association to operate and develop gardens.	
8-4. **ADVOCATE FOR INCREASED GROUNDWATER PROTECTION.**		• No actions reported.	
8-5. **CONTINUE TO USE ENVIRONMENTAL DEVELOPMENT PERMIT AREAS, COVENANTS AND OTHER MECHANISMS TO IMPROVE THE RESILIENCY OF SHORELINE AND MARINE HABITATS IN THE JUAN DE FUCA ELECTORAL AREA.**		• No actions reported.	

Goal 8 | Natural assets are resilient to the impacts of climate change (cont.)

RCAS Action	Status	2020 Action / Projects	External Partners
PERFORMANCE INDICATORS			
• Completion of a regional biodiversity strategy		• Not complete.	
• Percentage change in the amount of tree canopy cover		• Data unavailable.	
• Watershed evaluations that incorporate environmental and hydrological monitoring		• Evaluated water quality extensively in three watersheds. Took water quality measurements (dissolved xygen, pH, conductivity, temperature, orthophosphorus, nitrate, turbidity, E.coli) at the mouth of 25 other creeks. Measured just E.coli in approximately 10 others.	
• Number of volunteer hours leveraged in restoration or stewardship activities		• CRD Parks - 2176 hours by 344 volunteers.	

Additional | Regional climate action

RCAS Action	Status	2020 Action / Projects	External Partners
A-1. **FACILITATE REGIONAL CLIMATE ACTION EFFORTS AND SHARE INFORMATION ON THE BROAD RANGE OF CLIMATE ACTION TOPICS.**	Ongoing	• Continue to administer the CRD Climate Action Inter-Municipal Working Group and Task Force.	
	Ongoing	• Continue to develop and distribute a monthly climate action e-newsletter to local governments.	
	Ongoing	• Maintain collaboration websites to support ongoing coordination and communication for members of the inter-municipal committees.	
		• Discontinued the Resilient Region Exchange Series model in light of COVID-19.	
	 In progress	• Completed first year of two year BC Hydro co-funded community energy specialist position.	
	 In progress	• Provided quarterly updates on climate action activities through corporate dashboard and Chief Administrative Officer Progress report.	
	 Complete	• Various CRD staff provided input and data into the Transition Salt Spring Climate Action Plan 2.0.	• Transition Salt Spring

Appendix B

Goal 1 | Climate lens

Use a Climate Lens for Board decision-making that demonstrates how decisions align with the CRD's greenhouse gas reduction target, climate action objectives and strategic priorities

	Action	Timing	Status	Action / Project Description
1-1.	**IMPLEMENT THE CLIMATE LENS TEMPLATE TO PROVIDE A CLIMATE LENS REVIEW ON CAPITAL PROJECTS**	*2017*	Complete	• The CRD implemented a climate lens on all capital projects greater than $100,000 in value, and all capital projects 'in scope' for greenhouse gas reporting. The climate lens review is conducted during the capital budgeting and planning cycle. Staff will be reviewing this procedure as part of the renewal of the climate action strategy, which will inform future implementation phases of the climate lens policy. • Elected officials are provided ongoing updates on CRD's climate policy and Corporate Climate Action Strategy during the annual Climate Action Revenue Incentive Program reporting. Where appropriate, climate lens implications are incorporated into staff reports to the CRD Board and Committees. For example, this was included in the Hartland Landfill Gas Utilization reporting to inform Board decision making.
1-2.	**PROVIDE MEMBERSHIP OF ALL COMMITTEES AND COMMISSIONS WITH AN ORIENTATION TO THE CRD'S CORPORATE CLIMATE POLICY AT THE START OF EACH NEW SESSION**	*Each new session*	Ongoing	
1-3.	**INCLUDE CLIMATE LENS CONSIDERATIONS WITHIN STAFF REPORTS TO THE CRD BOARD AND COMMITTEES**	*Ongoing*	Ongoing	

Goal 2 | Management & operational decision-making

Integrate climate change considerations into CRD management and operational decision-making

	Action	Timing	Status
2-1.	**INCORPORATE CLIMATE CHANGE CONSIDERATIONS INTO BUDGET PLANNING CYCLE**	*Annually with service planning*	Ongoing
2-2.	**PREPARE AN ANNUAL SUMMARY ACROSS DIVISIONS** to present to senior management prior to service plan reviews	*Annually with service planning*	Ongoing
2-3.	**UPDATE THE PROJECT MANAGEMENT PROCESS TO INCORPORATE CLIMATE ACTION POLICY** into project requirements documents and project level decision-making	*TBD*	On hold
2-4.	**UPDATE THE ASSET MANAGEMENT PROCESS** to incorporate evaluation of most energy-efficient and/or low-carbon technologies at time of renewal	*2019*	In progress
2-5.	**INCLUDE CLIMATE CHANGE POLICY AND TARGET CONSIDERATIONS DURING CAPITAL PROJECT INITIATION PROCESS**	*Ongoing*	Complete
2-6.	**DEVELOP A MECHANISM TO PROVIDE FINANCING (SEED FUNDING) FOR STUDIES** or components of capital projects that support the CRD's corporate climate action policy	*2018*	Complete
2-7.	**INTEGRATE A REQUIREMENT TO DOCUMENT ALIGNMENT WITH THE CRD'S CORPORATE CLIMATE ACTION POLICY INTO STRATEGIC ASSET MANAGEMENT PLANS** for new and retrofit facilities and infrastructure	*2020*	In progress
2-8.	**ESTABLISH A STAFF CLIMATE ACTION ENGAGEMENT PROGRAM** including a climate action recognition program that acknowledges climate leadership among CRD employees	*2018*	In progress
2-9.	**ESTABLISH AN ONGOING STAFF CLIMATE ACTION WORKING GROUP TO SHARE KNOWLEDGE ACROSS THE ORGANIZATION** and continually evaluate best opportunities for accelerating climate action	*Ongoing*	In progress
2-10.	**UPDATE THE PROCUREMENT POLICY TO ALIGN PROCUREMENT AND VENDOR SELECTION WITH THE CRD'S CORPORATE CLIMATE POLICY** and develop supporting decision criteria and matrix	*TBD*	On hold

Action / Project Description

- The CRD continues to integrate climate change considerations into CRD management and operational decision-making.
- The CRD Corporate Asset Management Policy and Strategy, endorsed by the CRD Board in spring 2019, incorporates a climate change lens to ensure the CRD's climate policies are considered throughout the asset's lifecycle (ongoing operations and maintenance, and at the time of asset renewal and replacement).
- Since 2018, the Climate Action Reserve Fund has supported corporate climate action feasibility, energy studies, and related planning activities to corporate operations. The Sustainable Service-Delivery Plan Template (Strategic Asset Management Plans) incorporates the climate mitigation and adaptation risk assessments as a standard component in the template and will be carried out to all services when they are developed. The risk assessment framework for climate adaptation is currently underway and scheduled to complete in mid-2021.
- The CRD incorporated climate change considerations into regional and corporate strategic planning and included the climate lens into the capital planning template.
- A corporate climate action fleet and facilities working group meets quarterly to identify and coordinate key policy procedures and projects across the organization.
- All of these actions resulted in recognition for the CRD. In 2020, the CRD was recognized as one of Canada's greenest employers.

Goal 3 | Metrics & reporting

Monitor, report and communicate metrics to enhance continuous improvement across the organization

	Action	Timing	Status	Action / Project Description
3-1.	**ESTABLISH A CORPORATE ENERGY MANAGEMENT PROCESS FOR BUILDINGS, FACILITIES AND INFRASTRUCTURE** that includes: monitoring and reporting of facility energy consumption and energy management in existing buildings using the real-time utility data metrics that communicate progress towards the CRD's GHG target contextual information on changes in level of service, e.g., total corporate GHG emissions; GHG emissions/square foot of buildings operated by CRD	*2019*	In progress	• Accurate greenhouse gas (GHG) emissions measurement is required to achieve significant reductions in emissions. Since 2016, the CRD has been using an energy management system to track and consolidate utility billing information (natural gas, hydro and water) at the facility level. • In light of COVID-19, the Province waived Climate Action Revenue Incentive Program reporting requirements for 2019 but the CRD was still able to complete the report and a 2019 Climate Action Annual Report. • In 2020, the CRD started using a different GHG reporting tool as the province discontinued the SMARTTool and have been onboarding historical data into a new GHG accounting tool. CRD is participating in a BC Hydro corporate energy management program and is accessing support for planning activities and energy audits. Various sites have been approved to complete American Society of Heating, Refrigerating and Air-Conditioning Engineers Energy Audits. • The CRD also continued the Zero Emissions fleet Initiative and will implement recommendations overtime.
3-2.	**ESTABLISH A PROCESS TO COLLECT THE GHG EMISSIONS FOR ALL CONTRACTED SERVICES CONSIDERED "IN SCOPE" FOR GHG REPORTING**	*Ongoing*	On hold	
3-3.	**ESTABLISH A FLEET MANAGEMENT SYSTEM** that includes: GHG footprint calculations installing/engaging a monitoring system to improve fleet performance; evaluating and expanding a telematics system to the whole fleet, as appropriate; issuing an annual report of total vehicles, utilization, volume of fuel consumed, GHGs emitted and costs of ownership and maintenance; reviewing data collected to inform fleet policy and asset management and procurement processes	*2017 - 2019*	On hold	
3-4.	**INCORPORATE OUTCOMES OF ENERGY MANAGEMENT MONITORING INTO AN ADAPTIVE MANAGEMENT PROCESS** to ensure continuous improvement	*2018*	Ongoing	
3-5.	**DEVELOP A COMMUNICATIONS PLAN TO SHARE CORPORATE PROGRESS ON CLIMATE ACTION** with staff and public	*2017*	Complete	
3-6.	**COORDINATE THE ANNUAL CARIP REPORTING REQUIREMENTS**, on behalf of the organization	*Annually*	Ongoing	

Goal 4 | Adaptation

Accelerate corporate climate adaptation activities to enhance resilience and prepare for future climate change impacts

	Action	Timing	Status	Action / Project Description
4-1.	**COMPLETE DOWNSCALED CLIMATE PROJECTIONS REPORT AND IDENTIFY POTENTIAL IMPACTS OF CLIMATE CHANGE FOR THE REGION**	*2017*	Complete	• The Climate Projections for the Capital Region Report, completed in 2017, identified that temperatures in the capital region are warming, and the region would experience more frequent and wetter storms and be susceptible to sea level rise. To prepare for these changes, the CRD has included climate adaptation policy and considerations into the climate lens review that is conducted on capital projects. In 2020, the CRD completed a coastal flood hazard mapping and modelling project, which investigated coastal flood hazards due to sea level rise and tsunamis. Deliverables will support future asset climate risk assessments of CRD assets. • Also in 2020, the CRD initiated a corporate climate adaptation planning process which will be complete in 2021. It will address the assets (natural and engineered) and infrastructure that support service delivery and integrate with existing business practices, including asset management, risk management, business continuity and emergency management. The Zero Emissions Fleet Initiative has an emergency resilience component and the CRD has engaged with a masters student from the University of Victoria Institute for Integrated Energy Systems to complete a research project on the role of electric vehicles in a local disaster scenario.
4-2.	**IDENTIFY POTENTIAL IMPACTS OF SEA LEVEL RISE ON CRD ASSETS**	*2018*	In progress	
4-3.	**DEVELOP A CORPORATE CLIMATE ADAPTATION PLAN FOR THE CRD**	*2019*	In progress	
4-4.	**CONSIDER IDENTIFIED CLIMATE IMPACTS WITHIN RISK REGISTERS** in the enterprise risk management process and potential impacts of climate change for the region	*2019*	Ongoing	
4-5.	**CONSIDER CLIMATE ADAPTATION IN ALL NEW CAPITAL PROJECTS THROUGH THE CLIMATE LENS** review template	*Ongoing*	Ongoing	
4-6.	**IDENTIFY OPPORTUNITIES FOR GREATER REGIONAL RESILIENCE** in the CRD fleet (emergency preparedness) by: researching possibilities to use electric vehicles as a power source during outages; incorporating strategies to enhance emergency preparedness and resiliency through the use of electric vehicles into corporate plans, where appropriate	*2018-2020*	In progress	

Goal 5 | Fleet management

Achieve continuous, significant reductions in greenhouse gas emissions from the fleet and strive towards zero emissions for new fleet vehicles

	Action	Timing	Status	Action / Project Description
5-1.	**CONTINUE TO REPLACE END-OF-LIFE GAS AND DIESEL VEHICLES WITH ZERO EMISSIONS VEHICLES** when possible, including adding more battery electric vehicles to the fleet	*Ongoing*	Ongoing	• The CRD's goal of achieving continuous, significant reductions in greenhouse gas emissions from the fleet is being implemented through the Zero Emissions Fleet Initiative (ZEFI). • The CRD's goal of achieving continuous reductions in fleet related GHG emissions is being implemented through ZEFI. The CRD continues to acquire plug-in hybrid electric vehicles (PHEVs), electric vehicles (EVs) and hybrid vehicles to reduce fleet emissions. In late 2020, we received two hydrogen vehicles to pilot in the fleet over a six month period as per ZEFI commitments. In 2019, 8% of new light vehicles procured were EVs. In 2020, of all new light vehicles procured: 10% were EVs, 10% were PHEVs, and 20% were hybrids. The whole light duty fleet is: 3% EVs, 1.4% PHEVs, 4.7% hybrids. • The Corporate Green Fleet Policy is due to be completed in 2021 and will help prioritize low emission vehicles in CRD procurement. Staff will also be pursuing technical studies to support additional EV charging of fleet vehicles. • In 2020, the CRD completed a corporate electric bike procedure and expanded e-bike fleet within corporate CRD Headquarters and CRD Parks to a total of nine e-bikes, and trained an additional 36 staff members in their use. Expanded bike and e-bike parking was added at CRD Headquarters for staff commuters.
5-2.	**IDENTIFY, DEVELOP OR PROCURE A TOOL TO SUPPORT SELECTION OF NEW VEHICLES** based on utilization, operational needs, potential for electric vehicles and right-sizing	*Ongoing*	Ongoing	
5-3.	**REVIEW AND IDENTIFY PATH TO MEETING HIGHEST LEVEL OF THE WEST COAST ELECTRIC FLEET PLEDGE** (striving towards purchasing at least 10% zero emissions vehicles for all new light-duty fleet purchases)	*2017*	Complete	
5-4.	**BETTER UTILIZE SAP ASSET MANAGEMENT SYSTEM** to support preventative maintenance program and track all costs (including purchase-card purchases) associated with each fleet unit	*TBD*	On hold	
5-5.	**CONDUCT AN IN-DEPTH ANALYSIS OF THE ENTIRE CRD FLEET** to identify ways to optimize fleet utilization and efficiency and to reduce emissions and cut costs	*2017-2020*	In progress	
5-6.	**IDENTIFY, DEVELOP OR PROCURE A TOOL TO SUPPORT PREPARATION OF HIGH-LEVEL BUSINESS CASES** that demonstrate lifecycle costs and payback (fuel and maintenance) for investing in efficient vehicles	*2017-2020*	In progress	
5-7.	**INSTITUTE FLEET MANAGEMENT BEST PRACTICES** by: engaging all fleet vehicle operators in energy-efficient driver training program, recognizing staff who demonstrate efficient driving practices as part of the climate action recognition program	*2017-2020*	In progress	
5-8.	**RENEW THE DRAFT CORPORATE FLEET POLICY (2007) AND DEVELOP OR IDENTIFY TOOLS TO SUPPORT IMPLEMENTATION OF THE POLICY**, including: guidelines and/or a tool to evaluate operational needs in advance of vehicle purchase based on industry best practices, a tool to incorporate lifecycle costs and GHG emissions impacts as priorities during fleet purchasing process	*2017-2020*	In progress	

Goal 5 | Fleet management (cont.)

	Action	Timing	Status	Action / Project Description
5-9.	**ADD TWO ADDITIONAL BATTERY ELECTRIC VEHICLES TO THE CRD FLEET** to be available for staff to test and determine the locations and uses where a battery electric vehicle is a good fit to replace gas or diesel vehicles.	*2018*	Complete	
5-10.	**TEST THE USE OF ELECTRIC BIKES FOR THE SOURCE CONTROL PROGRAM INSPECTIONS** to replace existing gas-powered vehicle use, and evaluate opportunities for other downtown or short trip applications	*2017-2020*	Complete	
5-11.	**TEST HYDROGEN FUEL CELL ELECTRIC VEHICLES** to replace existing gas-/diesel-powered vehicles that are used for longer trips and heavier-duty applications	*2017-2020*	In progress	
5-12.	**MOVE TOWARDS CENTRALIZED RESPONSIBILITIES FOR FLEET VEHICLE ACQUISITION, USE AND MAINTENANCE** while maintaining a distributed approach to day-to-day operational activities (scheduling, fuelling, determining local needs and performing maintenance and repairs), based on a renewed corporate fleet policy	*TBD*	On hold	

Goal 6 | Existing buildings, facilities & infrastructure

Accelerate a reduction in energy use and greenhouse gas emissions in existing buildings, facilities and infrastructure

	Action	Timing	Status	Action / Project Description
6-1.	**INCORPORATE ENERGY EFFICIENCY INTO ALL REGIONAL WATER SUPPLY INFRASTRUCTURE RENEWAL PROJECTS** through strategic asset management plans		Ongoing	• In 2020, the CRD approved, in principle, an agreement where FortisBC will purchase Renewable Natural Gas (RNG) generated from Hartland Landfill for beneficial use in its natural gas distribution system. The project is expected to reduce the region's greenhouse gas (GHG) emissions by approximately 264,000 tonnes of carbon dioxide equivalent over the 25-year project life. The CRD hopes to be able to access some of the RNG for their corporate use in the future as well. • The energy consumption of CRD buildings and facilities will be reviewed as part of the BC Hydro supported strategic energy management plan and associated American Society of Heating, Refrigerating and Air-Conditioning Engineers Audits. • In 2020, CRD submitted a provincial grant application for up to $1.9 million to support a heat recovery project at Panorama Recreation Centre. This is would significantly reduce the facility's GHG emissions. A grant decision is expected in spring 2021.
6-2.	**COMPLETE RECOMMENDATIONS FROM THE PANORAMA AND SEAPARC ENERGY ASSESSMENTS** that minimize GHG emissions and energy use, including upgrading to high-efficiency natural gas boilers, implementing ice plant heat recovery at SEAPARC and investigating the waste heat recovery opportunity at Panorama	*2018-2020*	In progress	
6-3.	**REDUCE GHG EMISSIONS THROUGH FUEL SWITCHING TO RENEWABLE NATURAL GAS (RNG), AND CONDUCT A BUSINESS CASE ANALYSIS TO PRODUCE RNG**	*2018-2020*	In progress	
6-4.	**DEVELOP CONSERVATION DEMAND MANAGEMENT PROGRAM FOR STAFF TO RAISE AWARENESS ABOUT ENERGY-SAVING HABITS AND BEHAVIOURS**	*TBD*	On hold	
6-5.	**COMPLETE A REVIEW OF THE 15 LARGEST ENERGY CONSUMING BUILDINGS AND FACILITIES** every four years to develop a list of priority opportunities for energy and GHG emissions reductions and incorporate opportunities into service plans	*2018*	In progress	

Goal 7 | New buildings, facilities & infrastructure

Achieve high-performance standards and strive towards net-zero energy for all new construction

	Action	Timing	Status	Action / Project Description
7-1.	**ESTABLISH TECHNICAL STANDARDS FOR NEW CONSTRUCTION TO ENSURE HIGH ENERGY PERFORMANCE AND LOW-CARBON CRITERIA ARE INCORPORATED INTO DESIGN OF NEW FACILITIES,** including: aligning standards with new provincial Energy Step Code (e.g., Passive House Standard); ensuring standards are incorporated in requests for proposals as baseline	*TBD*	On hold	• The best time to address energy consumption and greenhouse gas (GHG) emissions is at the very beginning of new capital projects. Through the climate lens, the CRD is working to ensure that every new capital project meets the policy, targets and objectives identified within the corporate climate action strategy. Asset management has applied for a grant to develop a template for a corporate business case analysis to include lifecycle considerations. In 2021, staff also intend to develop a new corporate green buildings policy which will include GHG emissions considerations.
7-2.	**DESIGN HEATING, VENTILATION AND AIR CONDITIONING SYSTEMS THAT MINIMIZE THE USE OF FOSSIL FUELS** (heating oil and natural gas) and consider renewable energy sources		Ongoing	
7-3.	**INCORPORATE LIFE CYCLE COSTING TO CALCULATE THE BUSINESS CASE FOR ALL CAPITAL PROJECTS OVER $100,000 IN VALUE**	*TBD*	On hold	
7-4.	**UPDATE THE PROJECT MANAGEMENT PROCESS TO REQUIRE COMMISSIONING OF ALL NEW BUILDINGS** to ensure they are operating at maximum efficiency	*TBD*	On hold	
7-5.	**INCLUDE CLIMATE ACTION CONSIDERATIONS IN THE CAPITAL PROJECT INITIATION PROCESS** (see page 46 of the Corporate Climate Action Strategy)	*TBD*	On hold	

Making a difference...together

REPORT TO THE FINANCE COMMITTEE
MEETING OF WEDNESDAY, MAY 05, 2021

SUBJECT **CRD 2020 Audit Findings Report and Statement of Financial Information**

ISSUE SUMMARY

To approve the Capital Regional District (CRD) 2020 Statement of Financial Information (SoFI) and receive the 2020 Audit Findings Report for information.

BACKGROUND

The *Local Government Act* and the *Community Charter* require local governments to prepare financial statements each calendar year. The financial statements must be prepared in accordance with Generally Accepted Accounting Principles for Local Government (Canadian Public Sector Accounting Board (PSAB) Standards) and independently audited by a qualified auditor.

These statements, along with the annual filing of the Local Government Data Entry (LGDE) form, must be submitted to the Inspector of Municipalities by May 15 each year and must be available for public viewing at this time. The Statement of Financial Information and the annual municipal report must be completed by June 30 each year.

The audit has now been completed. The 2020 Audited Financial Statements have been prepared by management in accordance with Canadian Public Sector Accounting Board (PSAB) Standards. Under PSAB regulations, governments are required to present five statements with explanatory notes:

1. Statement of Financial Position
2. Statement of Operations
3. Statement of Change in Net Debt
4. Statement of Remeasurement Gains and Losses
5. Statement of Cash Flows

In addition to the required statements listed above, the 2020 Consolidated Statements of Financial Information (Appendix A) include:

1. Schedule of Remuneration and Expenses – Employees
2. Schedule of Remuneration and Expenses – Directors & Alternate Directors
3. Schedule of Remuneration and Expenses – Committee & Commission Members
4. Schedule of Remuneration and Expenses – Project Board Members
5. Statement of Severance Agreements
6. Schedule of Payments to Suppliers for Goods and Services
7. Schedule of Guarantee and Indemnity Agreements

Also included in the package are unaudited statements (Appendix B) that present long term debt, reserve and financial statements for each service, a whitepaper on rating Canadian Municipal Governments (Appendix D) which describes DBRS's credit rating methodology, additional

financial analysis (Appendix E) that provides financial indicators on 2020 financial results, and the 2020 Audit Findings Report (Appendix F).

The Audit Findings Report summarizes responsibilities of the auditor, scope of work, and audit results. The report also confirms there were no significant changes in the audit approach from the Audit Planning Report presented to the Board on January 13, 2021. In summary, the auditor did not identify any significant uncorrected differences or significant control deficiencies.

ALTERNATIVES

Alternative 1
The Finance Committee recommends to the Capital Regional District Board:
That the Capital Regional District 2020 Audit Findings Report be received and the Capital Regional District 2020 Statement of Financial Information be approved.

Alternative 2
That the Capital Regional District 2020 Audit Findings Report be received and the Capital Regional District 2020 Statement of Financial Information be referred back to staff for additional information.

IMPLICATIONS

Financial Implications

Audit Findings Report

The Auditor's opinion is included as part of the Independent Auditors' Report within the financial statements (Appendix A). In KPMG's opinion, the financial statements present fairly, in all material respects, the financial position of the Capital Regional District as at December 31, 2020, in accordance with Canadian public sector accounting standards.

The Audit Findings report (Appendix F) provides the results of their audit, and further discusses areas of focus identified in the Audit Planning Report presented to Board on January 13, 2021. Also included in the report is a summary of corrected and uncorrected adjustments on pages 28 and 29. Adjustments made during the course of audit field work are a result of both those detected by management and by KPMG through various reconciliation and testing activities.

Generally, adjustments may remain uncorrected when an element of uncertainty exists and/or the adjustment has a material impact on accounting activities in a closed period but not considered to have a material impact on decision making. All uncorrected adjustments are below the materiality threshold determined by the auditor. KPMG concurs with managements' assessment of year-end adjustments.

Financial Statements

The Consolidated Statement of Financial Position and the Consolidated Statement of Operations form the basis of the audited financial statements and are similar to the Balance Sheet and Income Statement in private organizations.

The Capital Region Housing Corporation (CRHC) financials are consolidated in the CRD financial statements, as required by PSAB.

HIGHLIGHTS

1. Consolidated Statement of Financial Position

The Statement of Financial Position highlights the following four key elements that together, describe the financial status of the organization:

a. Financial Assets and Liabilities (cash resources and obligations),
b. Net Debt position (calculated as the difference between assets and liabilities)
c. Non-financial assets that are held for service provision (such as tangible capital assets), and,
d. The accumulated surplus (referred to as equity in private organizations).

Financial Assets

Financial assets are non-physical assets whose value is derived from a contractual claim. The financial assets as of year-end consist of cash, short and long term investments, accounts receivable and debt recoverable from member municipalities. As an example, these assets can be used to pay vendors, employees, and make debt payments.

Total financial assets are $548.5 million as of year-end, an increase of $61.3 million or 13%. Table 1 details balances within the financial assets as of December 31 and provides the change year over year:

Table 1 – Change in Financial Assets Year over Year ($ millions)

Description	2020	2019	$ Change	% Change
Cash and cash equivalents	176.9	184.5	(7.6)	(4%)
Investments	185.7	114.2	71.5	63%
Accounts Receivable	35.0	23.2	11.8	51%
Member Debt & MFA Debt Reserve Fund	150.9	157.0	(6.1)	(4%)
Land held for resale	-	8.3	(8.3)	100%
Total Assets	**$548.5**	**$487.2**	**$61.3**	**13%**

Cash and cash equivalents includes cash on hand, bank deposits and cashable investments. The balance decreased in 2020 by $7.6 million ($184.5 million to $176.9 million). Further detail on changes in cash are discussed below in section 5, Consolidated Statement of Cash Flows.

Investments include short term deposits of $141.7 million and long term holdings in the MFA bond fund of $44.0 million. Investments increased compared to 2019 by $71.6 million. The year-end investment balance will vary depending on timing of operational cash needs and whether higher investment yields can be obtained with term deposits (classified as investments on the financial statements) or HISA accounts (classified as cash on the financial statements).

Accounts receivable are due through the normal course of business. The balance at year-end will vary as a result of the timing of invoicing and payments. The increase of $11.8 million, or 51%

from prior year, was due to $11.1 million in federal grants for the Wastewater Treatment Project (WTP).

Regional districts and municipalities are required to finance debt through the MFA. In the financial statements, debt recoverable from member municipalities is a receivable for their respective financing obligations, as such, there is no direct impact on CRD net debt. In 2020, member municipalities had a net decrease of $6.1 million in debt, decreasing the outstanding amount receivable, caused by $6.3 million in additional borrowing offset by $12.4 million of repayments leaving a year-end balance of $146.9 million.

The debt reserve fund is the amount held by the MFA as security for debt obligations issued to the District. These amounts are refundable, with interest upon debenture maturity. Cash deposits of $3.9 million (excluding member municipalities) are presented as a receivable on the financial statements. This balance fluctuates with debt issues and maturities.

Liabilities

Liabilities are obligations or debt that will be settled through financial assets. These obligations represent the costs for goods and services consumed and owed by the CRD. Liabilities are used to finance operations and large capital construction or acquisitions. As of December 31, 2020, liabilities totaled $628.8 million, an increase of $41.2 million or 7% from prior year. Table 2 provides balances and year over year changes:

Table 2 – Change in Liabilities Year over Year ($ millions)

Description	2020	2019	$ Change	% Change
Accounts Payable and Other Liabilities	117.1	111.3	5.8	5%
Deferred revenue	32.7	16.0	16.7	105%
Short term debt	61.3	-	61.3	-
Long term debt	405.0	447.3	(42.3)	(9%)
Landfill closure and post-closure liability	11.3	10.7	0.6	6%
Other liabilities	1.4	2.3	(0.9)	(38%)
Total Liabilities	**$628.8**	**$587.6**	**$41.2**	**7%**

Compared to 2019, accounts payable increased by $5.8 million or 5% due to WTP construction invoices outstanding at year-end. The increase in deferred revenue of $16.7 million or 105% is due to $15.4 million received through the Reaching Home and Rapid Housing grant programs for affordable housing projects in 2021.

Short-term debt, as detailed in note 3 of the financial statements, was held by CRHC directly related to $61.3 million from the BC Housing Mortgage Corporation. The short-term debt was used to finance the purchase of Spencer and West Park properties and converted to long-term mortgages in January 2021.

Long-term debt includes balances for CRD, CRHC, and member municipalities as detailed in note 4 of the financial statements. CRD and CRHC Long term debt decreased by $36.2 million to $258.2 million, while member municipality debt decreased by $6.1 million to $146.9 million. Long term debt is decreasing as repayments have outpaced new financing.

Landfill closure and post-closure liability increased by $0.6 million, representing an additional year of capacity usage. The total liability represents an estimate of the present value of future cost obligations due to required closure and post-closure activities. Changes in estimated costs, useful life of the landfill, discount rate and capacity estimates can have significant impacts on recorded liability.

The decrease of $0.9 million in other liabilities relates to $0.7 million of remediation work completed, $0.5 million relating to WTP and $0.2 million at the Weeks Lake gravel pit. The remaining $0.2 million decrease was due to new information provided in 2020 relating to the Millstream Septage Lagoon liability which reduced the known scope of contamination.

Non-Financial Assets

Non-financial assets are resources held for service delivery over one or more future periods. Examples include tangible capital assets, inventories of supplies, and prepaid portions of land leases. Table 3 lists balances of non-financial assets and changes from 2019:

Table 3 – Change in Non-Financial Assets Year over Year ($ millions)

Description	2020	2019	$ Change	% Change
Tangible capital assets	1,760.5	1,529.6	230.9	15%
Other Non-Financial Assets	2.6	1.7	0.9	53%
Total Non-Financial Assets	**$1,763.1**	**$1,531.3**	**$231.8**	**15%**

Non-financial assets increased by $231.8 million to $1.76 billion in 2020, mainly driven by an increase in tangible capital assets of $230.9 million. The change consists of $268.4 million of tangible capital assets acquired or contributed and an offset of $33.8 million amortization and a loss on disposal of $3.6 million for WTP. The loss is on disposal of sewer infrastructure at Macaulay Point and Clover Point that was replaced with new WTP assets that were put into use at the end of 2020.

Significant asset additions for 2020 include:
- $133.2 million for the Wastewater Treatment Project; and
- $75.5 million for the West Park and Spencer housing property acquisitions.

Accumulated Surplus

The accumulated surplus or net book value of equity for the CRD is $1.68 billion, showing the organization has assets (Financial and Non-Financial) of greater value than what it owes (Liabilities). Table 4 summarizes accumulated surplus by significant category.

Table 4 – Accumulated Surplus Categories ($ millions)

Description	2020	2019
Equity Invested in Tangible Capital Assets	1,441.1	1,243.5
Capital and Operating Reserves	141.4	137.5
Net Operating Funds	99.7	50.5
2020 Accumulated Surplus	**$1,682.2**	**$1,431.8**

2020 CRD net operating funds of $99.7 million represents 5.9% of accumulated surplus. The balance is primarily in tangible capital assets, operating and capital reserves representing 94.1% of accumulated surplus.

Operating Reserve Funds enable each service area to set aside funds to mitigate fluctuations in revenue driven by cyclical expenditures, unforeseen operating expenses and special one-time operating projects. Capital Reserve Funds accumulate resources for future capital expenditures. Periodically, services transfer either budgeted or operating surplus funds to their respective capital reserve fund. The practice of building capital reserves for funding ongoing infrastructure renewal is essential to ensure long-term sustainability of infrastructure-dependent CRD services.

2. Consolidated Statement of Operations

The Statement of Operations identifies results of financial activities for the fiscal year by presenting revenues less expenses on an accrual basis. Under accrual accounting and the matching principle, the CRD records economic events regardless of when cash is actually received or used, with the objective of matching period revenues with incurred costs.

As required by PSAB reporting standards, the budget authorized by bylaw is included on the Statement of Operations and has been adjusted to exclude reserve transfers and principal repayment, and any other items not classified as expenses under the accounting standards. Other differences from budget exist due to adjustments to actuals for elimination and classification purposes. These differences include labour allocations, inter-service recoveries, grant revenue, deferred revenue, donations and amortization expense.

Revenue

2020 Revenue was $433.2 million, an increase of $1.8 million or 0.4%. Revenue totals by type and changes from 2019 are summarized in Table 5:

Table 5 – Change in Revenue Year over Year ($ millions)

Description	2020	2019	$ Change	% Change
Government transfers	302.1	305.1	(3.0)	(1%)
Sale of services	77.7	77.1	0.6	1%
Other revenue	16.3	15.7	0.6	4%
Interest earnings	5.6	6.3	(0.7)	(11%)
Developer contributions	5.7	3.3	2.4	73%
Affordable housing - rental income	17.0	15.7	1.3	8%
Other revenues	8.8	8.2	0.6	7%
Total Revenue	**$433.2**	**$431.4**	**$1.8**	**0%**

Primary drivers for changes in revenue are:

- $3.0 million decrease in government transfers primarily due to a $64.1 million decrease in federal grants offset by a $59.0 million increase in provincial grants.

- $0.6 million increase in sale of services due to $2.6 million increase in water revenue, $0.3 million increase in Hartland landfill refuse revenue, offset by $2.3 million decrease in recreation services revenue.
- $0.6 million increase in other revenues driven by $0.5 million in proceeds from an insurance claim and $0.1 million relating to COVID bylaw enforcement recoveries.
- $0.7 million decrease in interest earnings due to declining interest rates.
- $2.4 million increase in developer contributions relating to water infrastructure assets and household water connections in the Juan de Fuca Water Distribution service. Lead drivers include $0.7 million relating to the Belmont Market development and $1.3 million due to Kemp Lake Waterworks.
- $1.3 million increase in affordable housing revenue driven by rental units increasing from 1,418 in 2019 to 1,773 in 2020.

Expenses

Expenses in 2020 increased by $5.6 million or 3.2% to $182.8 million. As shown through segmented reporting, note 19 in the financial statements, the change by expense type over 2019 is summarized in table 6:

Table 6 – Change in Expenses Year over Year ($ millions)

Description	2020	2019	$ Change	% Change
Salaries, Wages and Benefits	68.9	65.2	3.7	6%
Contract for services and consultants	22.1	19.9	2.2	11%
Other expenses	91.8	92.1	(0.3)	0%
Total Expenses	**$182.8**	**$177.2**	**$5.6**	**3%**

Expense changes were driven by:

- $3.7 million increase in salaries, wages and benefits related to contractual agreements and benefit load costs.
- $2.2 million increase in contract for services and consultants due to $0.4 million increase in CRHC, $1.0 million increase in WTP, $0.4 million increase in curbside recycling, $0.3 million increase in solid waste landfilling operations and $0.1 million increase in lab services relating to marine assessment in environmental health services.

2020 Annual Surplus

The net difference between revenues and expenses for 2020 is an annual surplus of $250.3 million, which is summarized in table 7 below:

Table 7 – Surplus Reconciliation ($ millions)

Description	2020	2019
Operating surplus (final budget)	1.3	2.3
Add: Increase in Capital Equity	185.1	215.7
Add: Increase in Capital and Operating Reserves	3.6	3.8
Add: Increase in Operating Funds	61.7	34.3
All Other Eliminating/PSAB Entries	(1.4)	(1.9)
2020 Annual Surplus	**$250.3**	**$254.2**

The Operating surplus of $1.3 million is 0.5% of annual budgeted revenues and driven by surpluses in Environmental Health Services, Landfill operations, Water Services, Sewer Services and Recreational and Cultural Services.

The increase in equity, reserves and operating funds account for the difference from operating surplus for final budget and the surplus for financial statement purposes. The amounts represent use of surplus to fund capital, reserves and annual operating costs in the future.

3. Other Financial Statements Analysis

Summaries and analysis of the remaining 3 statements can be found in Appendix C;

3. Statement of Change in Net Debt,
4. Statement of Remeasurement Gains and Losses; and
5. Statement of Cash Flows

Financial Indicators

As in prior years, the consolidated financial health of the organization is monitored and reported through financial indicators (Appendix D). These measures demonstrate a consistent, healthy financial position based on operational needs, market conditions and debt servicing costs.

COVID-19 Impacts

An assessment was made by management and the auditor regarding organizational impacts due to COVID-19. Overall, there was no significant financial impact in the 2020 fiscal year. Notable service impacts occurred in the recreation and cultural services, specifically, as a result of Provincial health orders requiring the temporary closure of the Panorama Recreation Center, SEAPARC Leisure Complex and the Rainbow Road Aquatic Centre on Salt Spring Island. As the pandemic is still impacting service levels at recreation centers budgets have been adjusted to balance against available revenue.

In September 2020, the Province announced joint Provincial and Federal funding to support local government operations as part of BC's Economic Recovery Plan. The CRD received $1.4 million in grants from this initiative in November 2020 and an additional $0.6 million was received in March 2021.

The economic conditions and the CRD's response to the pandemic did not have a material impact on the District's operating results and financial position in 2020.

Emerging Accounting Issues

As identified in appendix 3 of the Audit Findings report (Appendix F), the upcoming asset retirement obligation change is a significant accounting standard that will be effective for the year ending December 31, 2021. The new standard addresses the recognition, measurement, presentation and disclosure of legal obligations associated with the retirement of tangible capital assets. It will require the CRD to record a liability in the financial statements related to future costs of any legal obligations to be incurred upon retirement of any controlled tangible capital asset.

It is expected the introduction of the new accounting standards for asset retirement obligations will result in a significant revaluation of the landfill liability and recognition of all closure and post-closure costs. The standard will require the entire post-closure liability to be recorded upfront rather than overtime as is currently done. The change in standard does not address or direct how the liability will be funded.

As staff begin preparing to implement the standard across all services, scope, timing and financial implications will be reported to the Board through Committee. The standard change will require a significant level of effort and be addressed in the annual service planning process.

CONCLUSION

Board approval of the CRD 2020 Statement of Financial Information is required under the *Local Government Act*, *Community Charter*, and *Financial Information Act*. As noted in the Audit Findings Report, it is the auditors' opinion that these financial statements present fairly the consolidated financial position of the CRD as of December 31, 2020, and the results of financial activities for the year then ended in accordance with Canadian Public Sector Accounting Standards.

RECOMMENDATION

The Finance Committee recommends to the Capital Regional District Board:
That the Capital Regional District 2020 Audit Findings Report be received and the Capital Regional District 2020 Statement of Financial Information be approved.

Submitted by:	Rianna Lachance, BCom, CPA, CA, Senior Manager, Financial Services
Concurrence:	Nelson Chan, MBA, FCPA, FCMA, Chief Financial Officer
Concurrence:	Robert Lapham, MCIP, RPP, Chief Administrative Officer

Capital Regional District
2020 Statement of Financial Information

Presentation to Finance Committee

Wednesday May 5, 2020

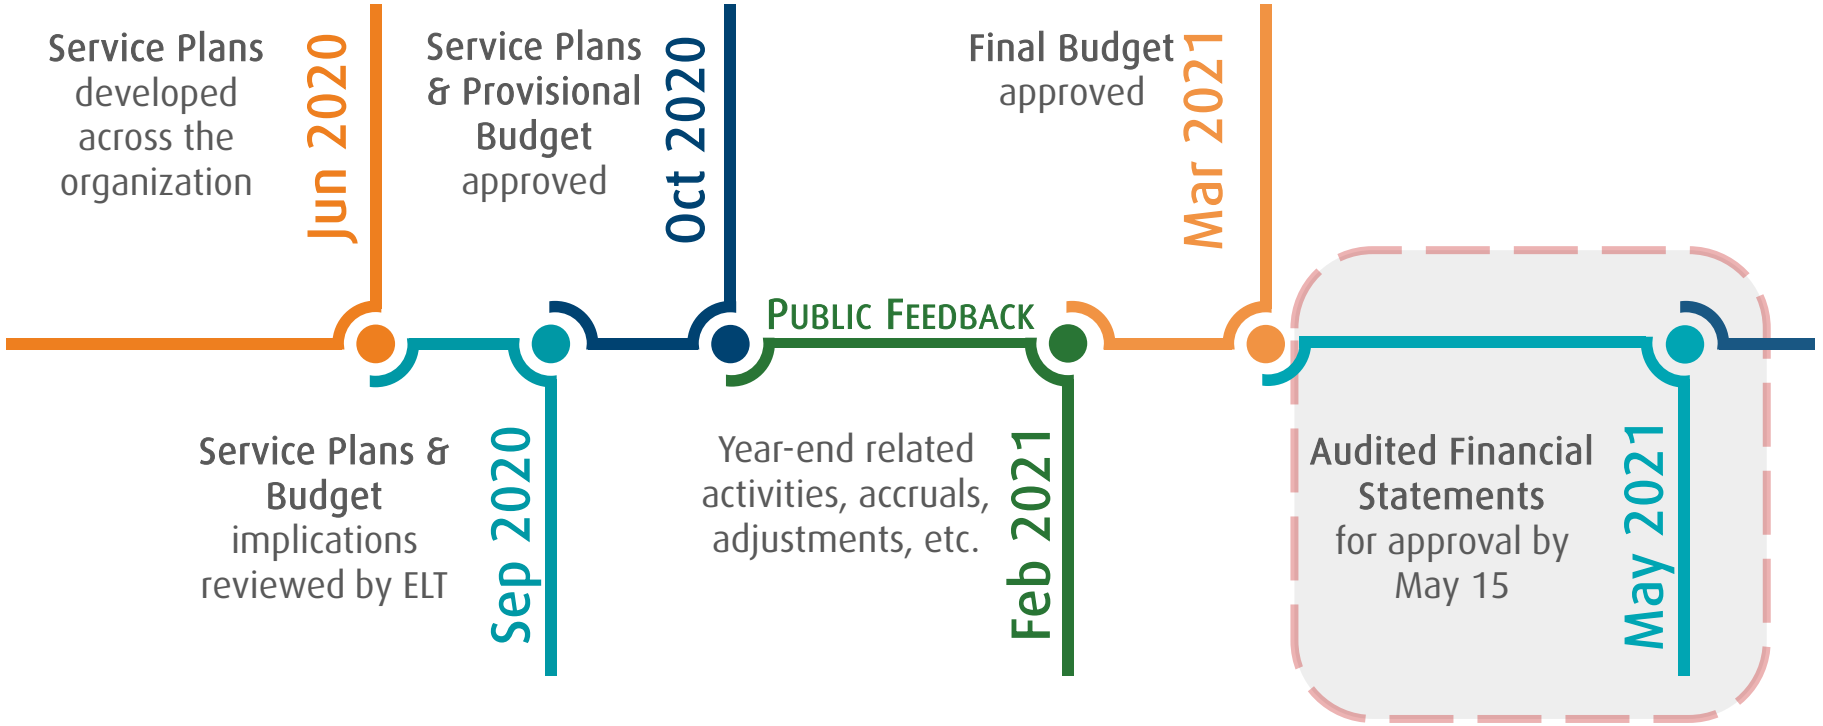
2020 Executive Summary

1. Financial Reporting Timeline
2. What are the Financial Statements
3. How do the Statements Relate
4. Highlights from Statements
5. Additional Information
6. Financial Metrics and Indicators

In 2020, the CRD continued supporting Regional Priorities identified in the Corporate and Strategic Plan through extraordinary economic conditions, a challenging labour market, and unprecedented growth in asset utilization

Investments made for the Future

capital investment was 7.9x depreciation while 8% of revenue was committed to debt repayments



Managing the Cost of Debt

7.6% of total revenue was committed to long-term debt repayment

Diversifying Revenue Streams

39% of total revenue came from government grants while 29% came from sale of services

Budget Planning Timeline

CRD Audited Financial Statements

- Legislation requires statements be approved and submitted to the Ministry of Municipal Affairs and Housing by May 15
- Financial Statements are prepared on an accrual basis (as required by PSAB)
- Consolidated statements include all CRD services and CRHC

What are the Financial Statements?

Financial Position

The overarching statement that summarizes CRD's financial position at a point in time.

Changes in the financial position are summarized in the following four statements.

Operations

Explains the change in the overall financial position during the accounting period except those reported in the Statement of Remeasurement Gains and Losses.

Change in Net Debt

Reconciles the change in net debt for the current and prior year.

Net debt is a financial performance measure unique to public sector financial reporting.

Remeasurement Gains and Losses

Explains the change in the overall financial position due to remeasurements related to unrealized gains and losses on specific financial assets and liabilities recorded at fair value.

Cash Flows

Explains the change in cash and cash equivalents from the prior year and provides information about the ability to generate cash to meet cash requirements.

How do the statements relate?

1. Statement of Financial Position

Summary of Consolidated Statement
December 31, 2020 with comparative information for 2019 ($M)

	2020	2019	B/(W) $	B/(W) %
Financial Assets	549	487	61	13%
Financial Liabilities	(629)	(588)	(41)	7%
Net Debt	**(80)**	**(100)**	**20**	**20%**
Non-Financial Assets	1,763	1,531	232	15%
Accumulated Surplus	**$1,683**	**$1,431**	**$252**	**18%**

Change in Financial Assets

- Increase in cash, cash equivalents and investments +64M, receivables +12M due CAWTP grants offset by a decrease in land held for sale (8M)

Change in Financial Liabilities

- Increase in debt +19M due to CRHC housing acquisitions for RHFP
- Increase in accounts payable +6M due to CAWTP expenses
- Increase in deferred revenue +17M related to federal grants for RHFP

Change in Non-Financial Assets

- Due to increase in tangible capital assets +230M driven by additions to engineering structures +106M, buildings +80M and work in progress +42M

2. Statement of Operations

Summary of Consolidated Statement
December 31, 2020 with comparative information for 2019 ($M)

	2020	2019	B/(W) $	B/(W) %
Revenue	433	431	2	0%
Expenses	(183)	(177)	(6)	3%
Annual Surplus	**250**	**254**	**(4)**	**(2)%**
Accumulated Surplus Beginning of Year	1,432	1,178	254	22%
Accumulated Surplus End of Year	**$1,682**	**$1,432**	**$250**	**17%**

Change in Revenue

- Increase in developer contributions +2.4M, rental income +1.3M, and sale of services +1.2M, offset by a decrease in government grants (3M)

Change in Accumulated Surplus

- Operating Surplus +62M, and +188M increase in capital and reserve equity

3. Statement of Net Debt

Summary of Consolidated Statement
December 31, 2020 with comparative information for 2019 ($M)

	2020	2019	B/(W) $	B/(W) %
Annual Surplus	250	254	(4)	(2)%
Acquisition of Tangible Capital Assets	(260)	(313)	53	(17)%
Contributed tangible capital assets	(8)	(3)	(5)	137%
Amortization of Tangible Capital Assets	34	32	2	7%
Accrued Liabilities and Other	(4)	(2)	(2)	111%
Change in Net Debt	**19**	**(29)**	**61**	**167%**
Net Debt Beginning of Year	(100)	(72)	(28)	40%
Net Debt End of Year	**$(68)**	**$(100)**	**$(32)**	**32%**

Change in Net Debt

- Primarily due to an increase in acquired tangible capital assets (260M)
- Offset by the annual surplus +250M and amortization +34M

4 & 5. Statements of Remeasurement & Cash Flow

Remeasurement of Gains & Losses ($M)

	2020	2019	B/(W) $	B/(W) %
Accumulated remeasurement gains and losses, beginning of year	**(0.9)**	**(1.7)**	**(0.8)**	**(48)%**
Unrealized gain (loss) on foreign exchange	0.01	0.02	(0.01)	(35)%
Unrealized gain (loss) on investment	1.5	0.1	1.4	1142%
Portfolio investments reclassified to the statement of operations	-	0.7	(0.7)	(100)%
Accumulated remeasurement gains and losses, end of year	**0.6**	**(0.9)**	**1.5**	**(166)%**

- PS3450 Financial Instruments, investments carried at fair value, results in remeasurement gain in 2020

Statement of Cash Flow ($M)

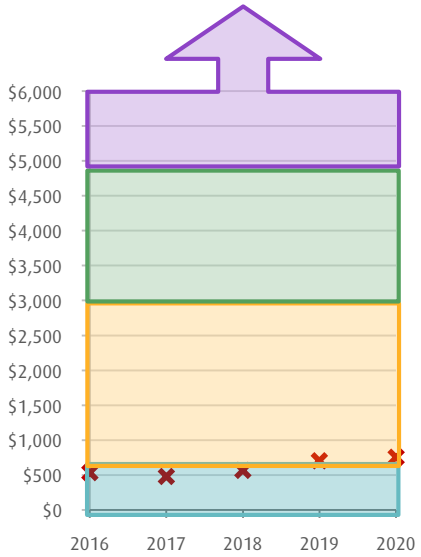
	2020
Operating Activities	281
Capital Activities	(249)
Investing Activities	(70)
Financing Activities	30
Net Cash and Cash Equivalents	**(8)**
Cash and Equivalents Beginning of Year	184
Cash and Equivalents End of Year	**$177**

- Positive cash flow from operating activities means that core operations is generating enough cash to buy new assets and to cover future loan obligations
- The cash is generated from annual surplus of +$250M which contributed to a +$281M change in cash from operating activities, combined with inflow from financing activities of +$30M, totaling +$312M
- $319M was invested into capital ($249M), and investments ($70M) resulting in decrease in cash at year end of ($8M)

The Consolidated Statement of Cash Flow inherently explains the change in cash from the end of the prior year to the end of the current year, additional information is available in the financial statements (Appendix A).

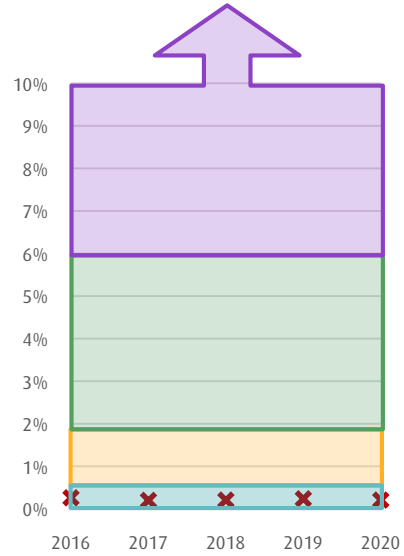
Additional Information

Additional Statements & Schedules (Appendix A)



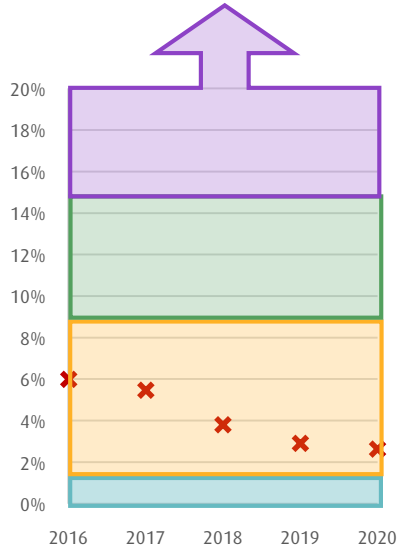
- Schedule of Remuneration & Expenses: Employees
- Schedule of Remuneration & Expenses: Directors
- Severance Agreements (none in 2020)
- Schedule of Payments for Goods & Services
- Schedule of Guarantee & Indemnity Agreements

Unaudited Financial Statements (Appendix B)



- Consolidated Debt Charges
- Summary of Long-Term Debt
- Long-Term Debt General, Water and Sewer Funds
- Supplementary Statements – General, Water and Sewer Funds

Financial Metrics and Benchmarking



DBRS is the largest rating agency in Canada and fourth largest in the world. Using the rating methodology for municipal government, CRD results are shown below.

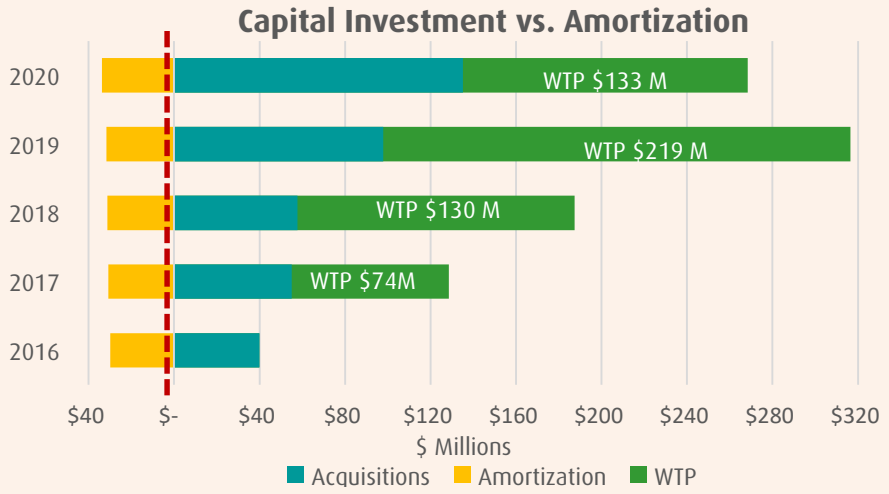
net tax-supported debt per capita

net tax-supported debt as % of assessment

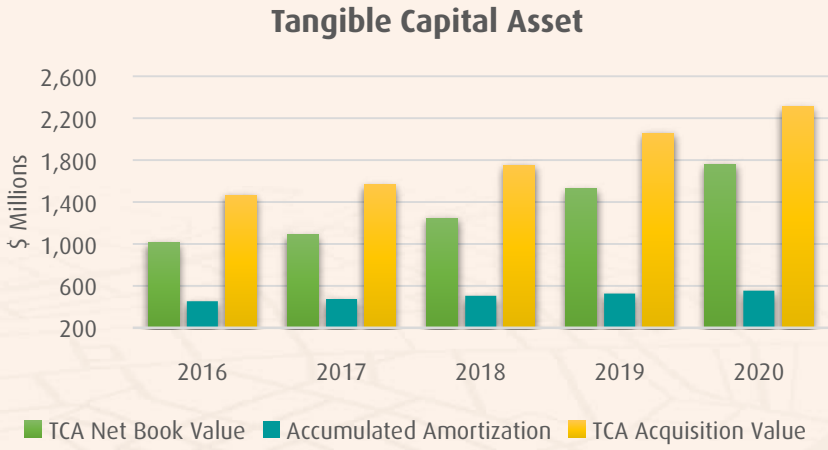
interest costs as a percentage of revenue

AAA	AA	A	BBB
The capacity for the payment of financial obligations is exceptionally high and unlikely to be adversely affected by future events.	The capacity for the payment of financial obligations is considered high. Differs from AAA only to a small degree. Unlikely to be significantly vulnerable to future events.	The capacity for the payment of financial obligations is substantial. May be vulnerable to future events, but considered manageable.	Adequate credit quality. The capacity for the payment of financial obligations is considered acceptable. May be vulnerable to future events.

Rating Canadian Municipal Governments: Canadian Municipal Government Financial Risk Metrics, by DBRS (Dominion Bond Rating Service) 360939.pdf (dbrsmorningstar.com), May 2020



Additional Financial Analysis

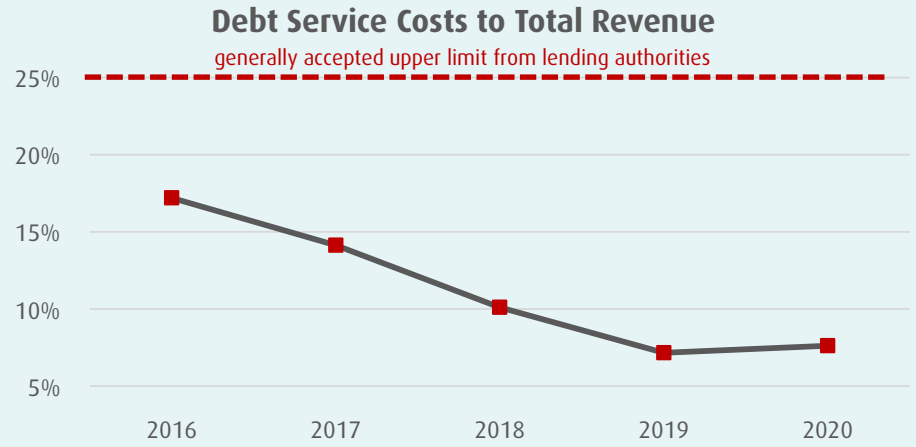


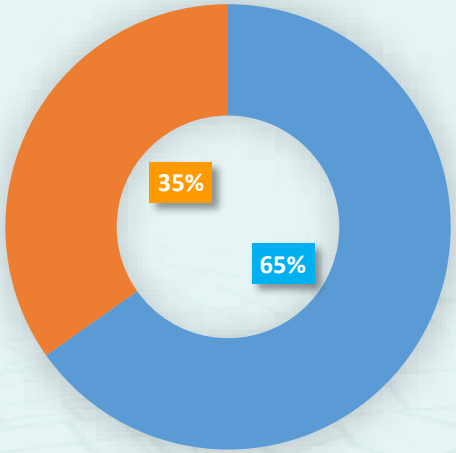
Investments made for the Future

2020 capital investment was 7.9x the rate of depreciation

2020 net book value of tangible capital assets is $1.8 billion

The 2021-2025 5 year financial plan includes TCA additions of $0.8 billion





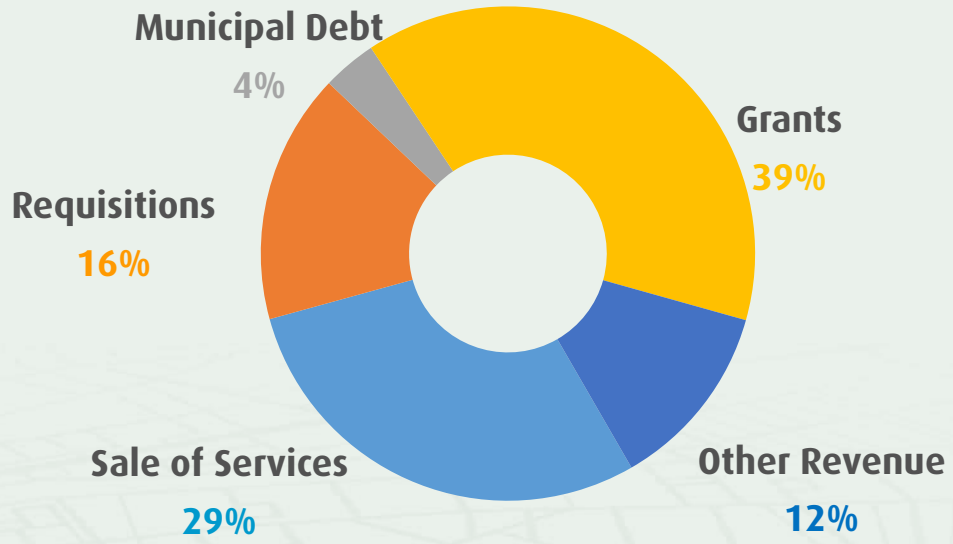
Additional Financial Analysis

Managing the Cost of Debt

7.6% of total revenue was spent on long-term debt payments

In 2020, CRD debt on average has matured to where principal payments are 65% of debt servicing costs, while interest payments are 35%

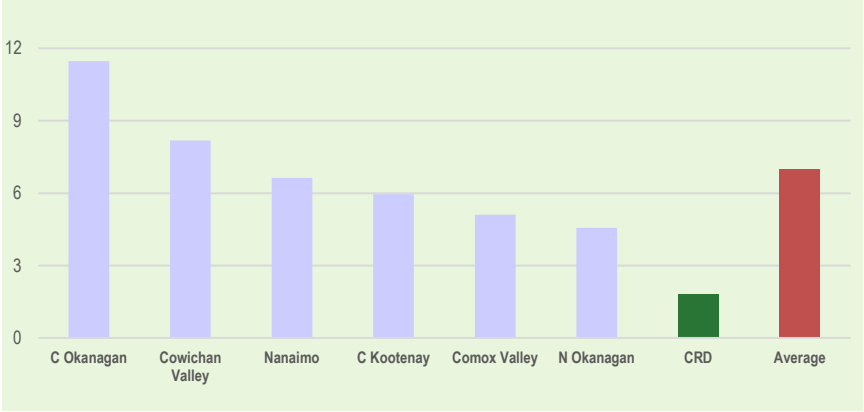
Debt Servicing Costs



Principal Portion of Payment
Interest Portion of Payment

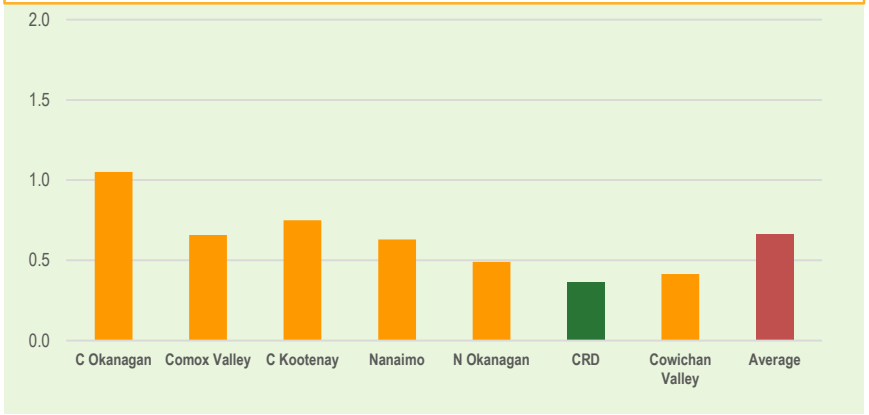
Additional Financial Analysis

Diversifying Revenue Streams

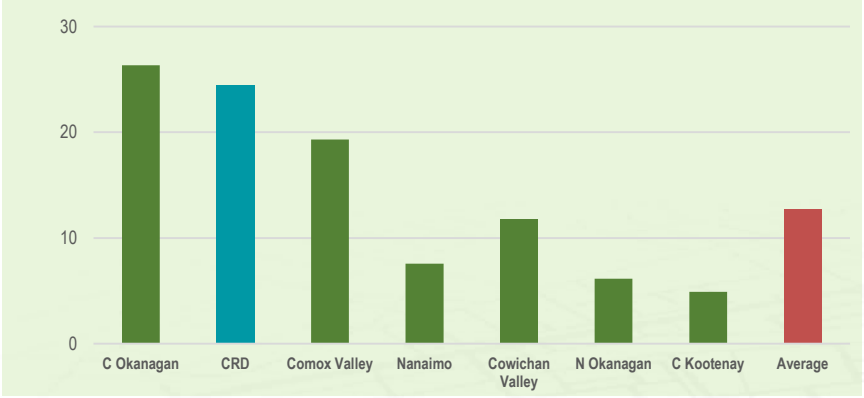


Almost $^1/_2$ of revenue came from government grants while almost $^1/_3$ came from sale of services.

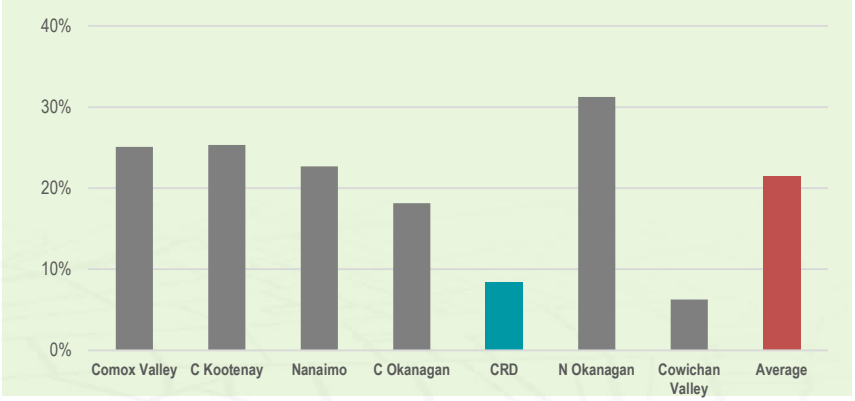
Sale of Services	126.0
Requisitions	71.0
Municipal Debt	15.3
Grants	167.6
Other Revenue	53.4
Total	$433.2M



Additional Financial Analysis

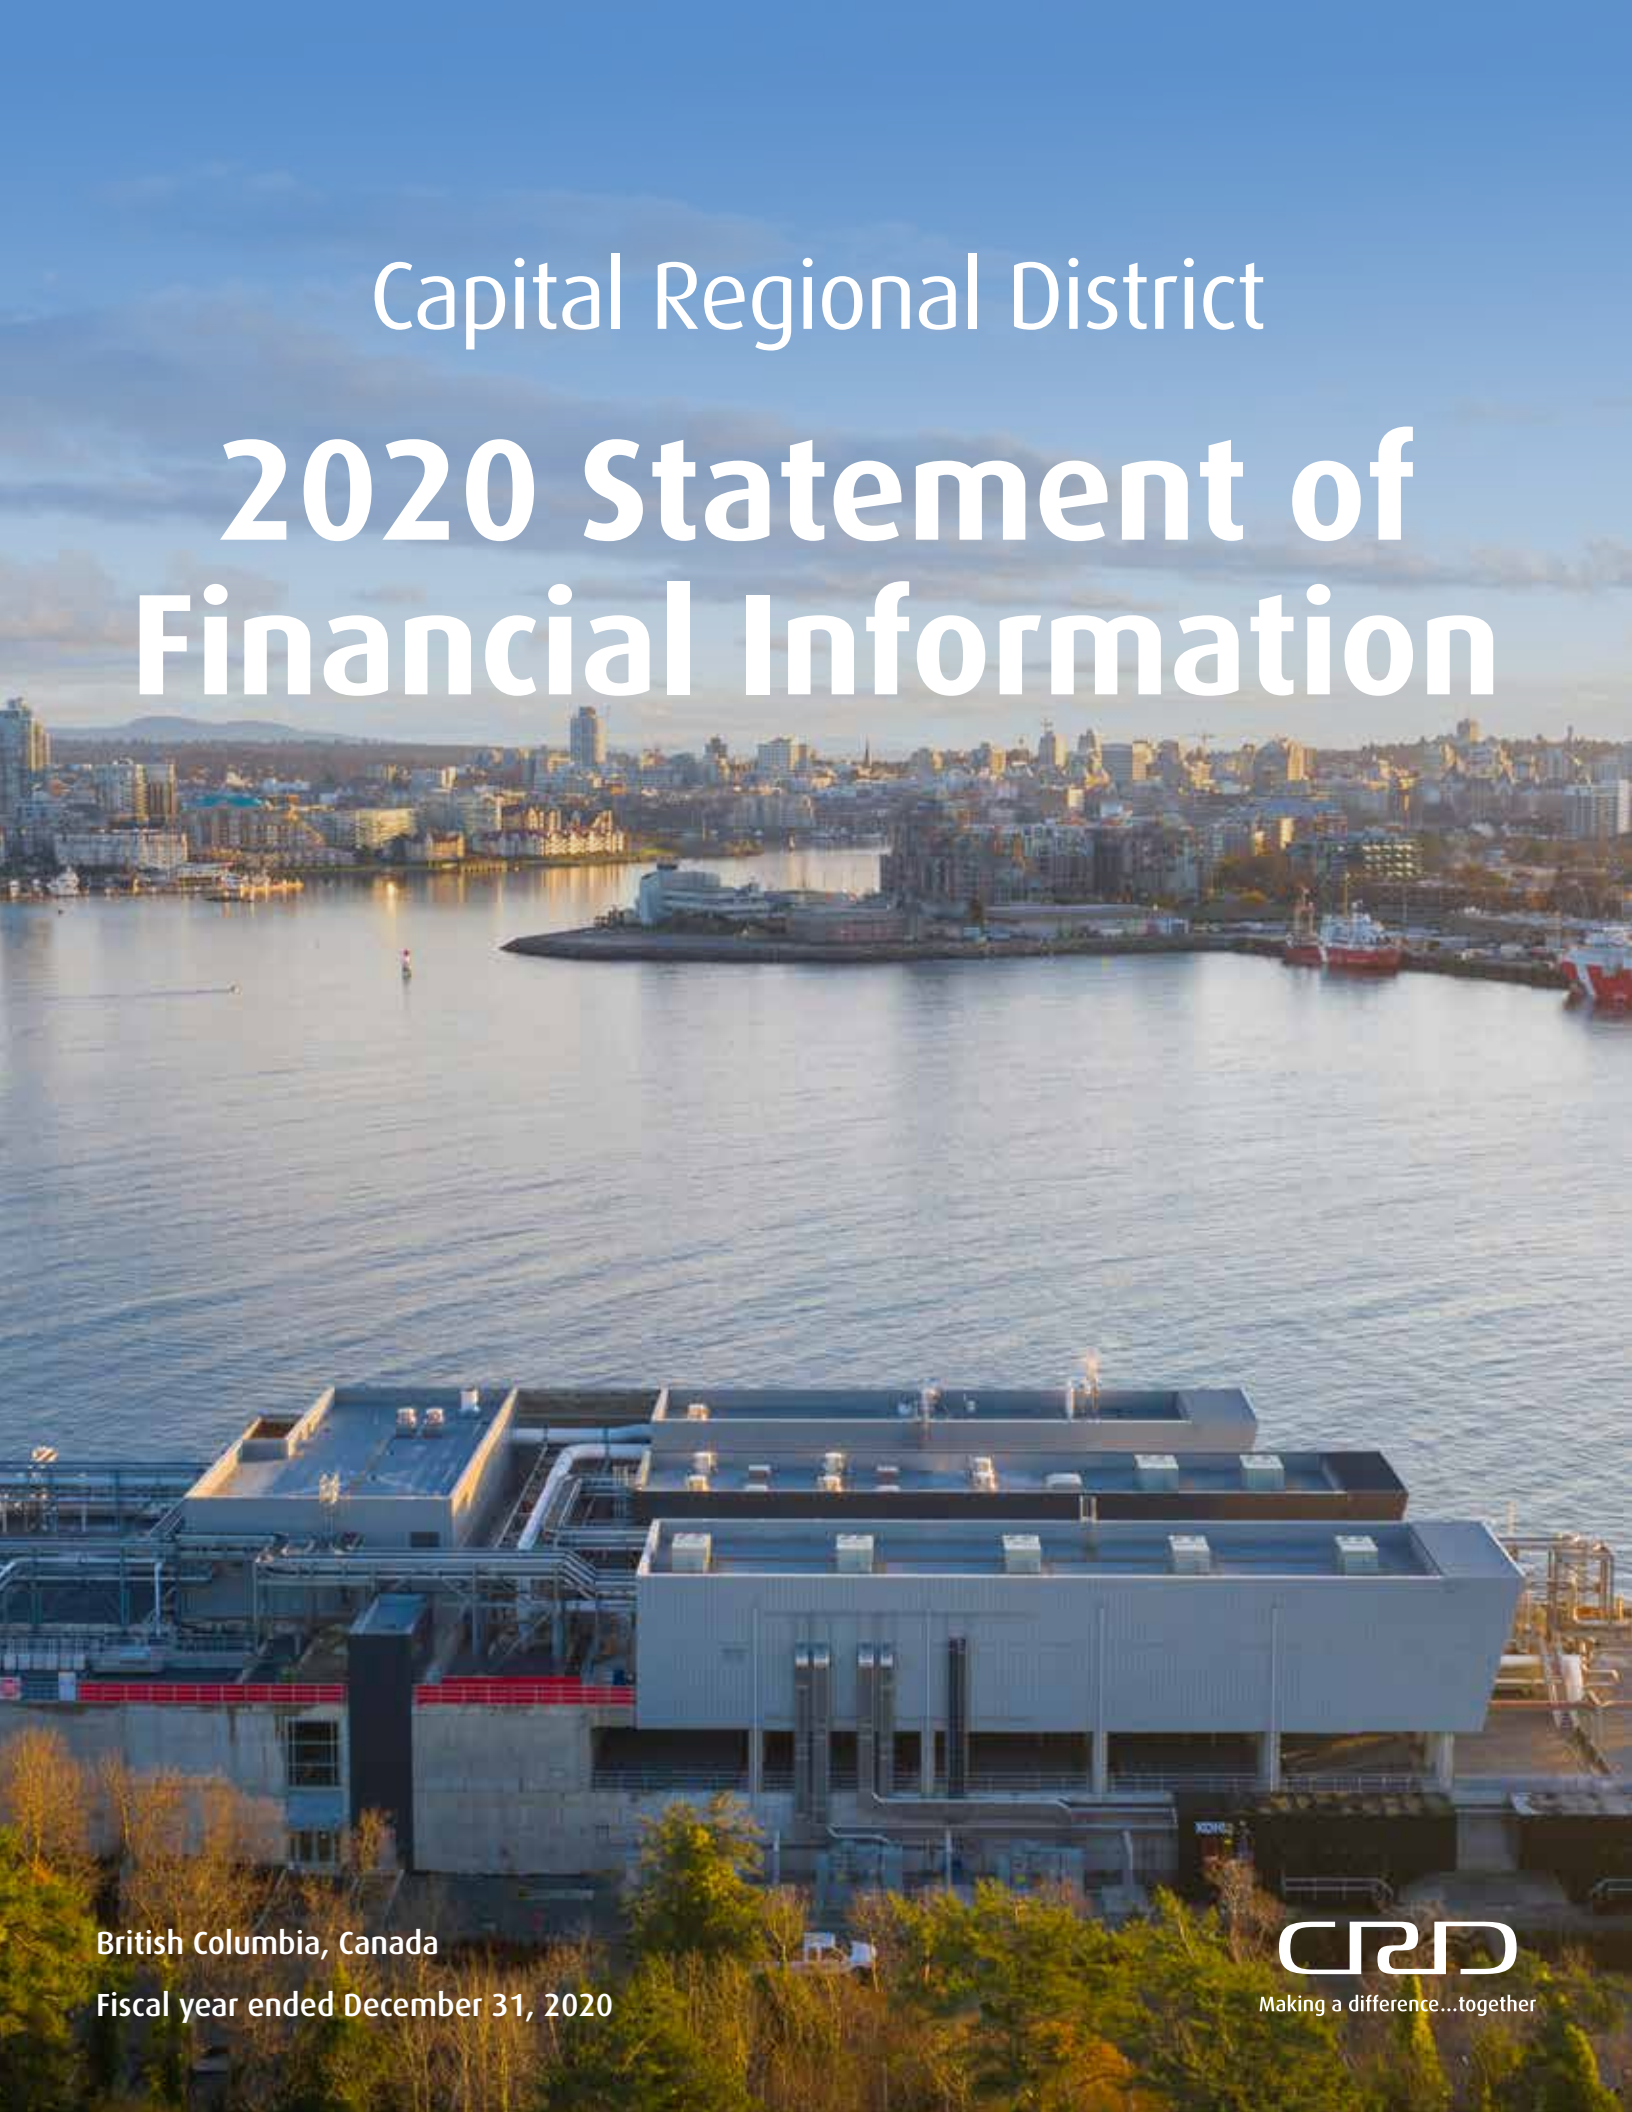


Quick Ratio: Measure of short-term liquidity or the ability to pay immediate financial obligations (greater than 1 is ideal)



Debt-to-Equity Ratio: Measure of financial leverage, or using debt to increase value (essential public service utilities average 1.2)

Interest Coverage Ratio: Measures how easily a company can pay interest on outstanding debt (greater than 2 is ideal)



Capital Reserve Health: Measure of ability to finance long-term investment projects, also acts as buffer during financial hardship

CRD from 2020 Audited Financial Statement, Source for Rest: Local Government Statistics 2019, by Ministry of Municipal Affairs and Housing, https://www2.gov.bc.ca/gov/content/governments/local-governments/facts-framework/statistics/regional-district-general-financial-statistics, May 2021.
Excluded from comparison due to size of region (less than $10M or greater than $300M in costs); Central Coast, Metro Vancouver, Mount Waddington, North Coast, Peace River.

INDEPENDENT AUDITORS' REPORT

To the Chair and Directors of the Capital Regional District

Opinion

We have audited the consolidated financial statements of the Capital Regional District (the District), which comprise:

- the consolidated statement of financial position as at December 31, 2020
- the consolidated statement of operations for the year then ended
- the consolidated statement of change in net debt for the year then ended
- the consolidated statement of remeasurement gains and losses for the year then ended
- the consolidated statement of cash flows for the year then ended
- and notes to the consolidated financial statements, including a summary of significant accounting policies

(Hereinafter referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the consolidated financial position of the District as at December 31, 2020, and its consolidated results of operations, its consolidated change in net debt, its consolidated remeasurement gains and losses, and its consolidated cash flows for the year then ended in accordance with Canadian public sector accounting standards.

Basis for Opinion

We conducted our audit in accordance with Canadian generally accepted auditing standards. Our responsibilities under those standards are further described in the "Auditors' Responsibilities for the Audit of the Financial Statements" section of our auditors' report.

We are independent of the District in accordance with the ethical requirements that are relevant to our audit of the financial statements in Canada and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

DRAFT

KPMG LLP is a Canadian limited liability partnership and a member firm of the KPMG network of independent member firms affiliated with KPMG International Cooperative ("KPMG International"), a Swiss entity. KPMG Canada provides services to KPMG LLP.

Other Information

Management is responsible for the other information. Other information comprises:

- the information, other than the financial statements and the auditors' report thereon, included in the Annual Report.

Our opinion on the financial statements does not cover the other information and we do not and will not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit and remain alert for indications that the other information appears to be materially misstated.

We obtained the information, other than the financial statements and the auditors' report thereon, included in the Annual Report as at the date of this auditors' report.

If, based on the work we have performed on this other information, we conclude that there is a material misstatement of this other information, we are required to report that fact in the auditors' report.

We have nothing to report in this regard.

Responsibilities of Management and Those Charged with Governance for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with Canadian public sector accounting standards, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the District's ability to continue as a going concern, disclosing as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the District or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the District's financial reporting process.

Auditors' Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Canadian generally accepted auditing standards will always detect a material misstatement when it exists.

Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the financial statements.

KPMG LLP is a Canadian limited liability partnership and a member firm of the KPMG network of independent member firms affiliated with KPMG International Cooperative ("KPMG International"), a Swiss entity. KPMG Canada provides services to KPMG LLP.

As part of an audit in accordance with Canadian generally accepted auditing standards, we exercise professional judgment and maintain professional skepticism throughout the audit.

We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion.

  The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the District's internal control.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.

- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the District's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditors' report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditors' report. However, future events or conditions may cause the District to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

- Communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

- Obtain sufficient appropriate audit evidence regarding the financial information of the entities or business activities within the group entity to express an opinion on the financial statements. We are responsible for the direction, supervision and performance of the group audit. We remain solely responsible for our audit opinion.

MANAGEMENT REPORT

The Financial Statements contained in this Statement of Financial Information under the Financial Information Act have been prepared by management in accordance with Canadian public sector accounting standards. The integrity and objectivity of these statements are management's responsibility. Management is also responsible for all the statements and schedules, and for ensuring that this information is consistent, where appropriate, with the information contained in the financial statements.

Management is also responsible for implementing and maintaining a system of internal controls to provide reasonable assurance that reliable financial information is produced.

The Board of Directors are responsible for approving the financial statements and for ensuring that management fulfills its responsibilities for financial reporting and internal control.

The external auditors, KPMG LLP, conduct an independent examination, in accordance with Canadian public sector accounting standards, and express their opinion on the financial statements. Their examination does not relate to the other schedules and statements required by the *Financial Information Act*. Their examination includes a review and evaluation of the District's system of internal control and appropriate tests and procedures to provide reasonable assurance that the financial statements are presented fairly. The external auditors have full and free access to staff and management. The Independent Auditors' Report outlines the scope of the audit for the year ended December 31, 2020.

On behalf of Capital Regional District and Capital Region Housing Corporation,

DRAFT

The Capital Regional District was incorporated by Letters Patent under the provisions of the British Columbia Local Government Act.

1. SIGNIFICANT ACCOUNTING POLICIES

a) BRITISH COLUMBIA REGIONAL DISTRICTS

The consolidated financial statements of the Capital Regional District (the District) are prepared by management in accordance with Canadian public sector accounting standards for local governments and regional districts as recommended by the Public Sector Accounting Board of the Chartered Professional Accountants of Canada. The resources and operation of the District are segregated into various funds for accounting and financial reporting purposes, each being treated as a separate entity with responsibility for the stewardship of the assets allocated to it. Transactions between funds are eliminated on consolidation.

b) BASIS OF CONSOLIDATION

The consolidated financial statements reflect the assets, liabilities, revenues, and expenses of the District and Capital Region Housing Corporation (CRHC). The CRHC is controlled by the District. All transactions and balances between these entities have been eliminated on consolidation.

c) BASIS OF ACCOUNTING

The District follows the accrual method of accounting for revenues and expenses. Revenues are normally recognized in the year in which they are earned and measurable. Expenses are recognized as they are incurred and measurable as a result of receipt of goods or services and/or the creation of a legal obligation to pay.

d) TAXATION

Each Municipality and Electoral Area within the District is requisitioned for their portion of each service in which they participate. These funds are then levied by the Municipalities and the Province (for Electoral Areas) to individual taxpayers and turned over to the District by August 1 of each year.

e) INTEREST

The District follows the practice of investing individually significant unspent funds within individual funds. Interest earned is allocated on the basis of actual earnings from the specific instruments. Investment income is reported as revenue in the period earned. When required by the funding government or related Act, investment income earned on deferred revenue is added to the investment and forms part of the deferred revenue balance.

Excess funds or temporary borrowings of all functions are pooled and interest income or expense is allocated to the individual functions on a monthly basis.

DRAFT

1. SIGNIFICANT ACCOUNTING POLICIES continued

f) GOVERNMENT TRANSFERS

Government transfers without stipulations restricting their use are recognized in the financial statements as revenues in the period in which the transfers are authorized, any eligibility criteria are met, and reasonable estimates of the amounts can be made. Government transfers with stipulations restricting their use are recognized in the financial statements as revenues in the period in which the eligible expenditures are incurred, providing they are authorized and eligibility criteria are met.

g) DEFERRED REVENUE

Deferred revenue includes amounts received from third parties which may only be used in certain programs, in the completion of specific work, or for the purchase of tangible capital assets. Revenue is recognized in the period when the related expenses are incurred, services performed, or the tangible capital assets are acquired, thereby extinguishing the related liability.

h) LAND HELD FOR RESALE

Land held for resale is recorded at the lower of cost and net realizable value. Cost includes amounts for improvements to prepare the land for sale or servicing.

i) CASH AND CASH EQUIVALENTS

Cash and cash equivalents include short-term highly liquid investments with a term to maturity of less than 90 days at acquisition.

j) FINANCIAL INSTRUMENTS

Financial instruments are classified into two categories fair value or cost.

i. Fair value category: portfolio investments quoted in an active market are reflected at fair value as at the reporting date. Sales and purchases of investments are recorded on the trade date.

   Transaction costs related to the acquisition of investments are recorded as an expense. Unrealized gains and losses on financial assets are recognized in the Statement of Remeasurement Gains and Losses until such time that the financial asset is derecognized due to disposal or impairment. At the time of derecognition, the related realized gains and losses are recognized in the Statement of Operations and related balances reversed from the Statement of Remeasurement Gains and Losses.

DRAFT

1. SIGNIFICANT ACCOUNTING POLICIES continued

j) FINANCIAL INSTRUMENTS continued

ii. Cost category: portfolio investment not quoted in an active market, financial assets and liabilities are recorded at cost or amortized cost. Gains and losses are recognized in the Statement of Operations when the financial asset is derecognized due to disposal or impairment. Sales and purchases of investments are recorded on the trade date.

Transaction costs related to the acquisition of financial assets are included in the cost of the related instrument.

Financial assets are assessed for impairment on an annual basis. If there is an indicator of impairment, the District determines if there is a significant adverse change in the expected amount or timing of future cash flows from the financial asset. If there is a significant adverse change in the expected cash flows, the carrying value of the financial asset is reduced to the highest of the present value of the expected cash flows, the amount that could be realized from selling the financial asset or the amount the District expects to realize by exercising its right to any collateral. If events and circumstances reverse in a future period, an impairment loss will be reversed to the extent of the improvement, not exceeding the initial carrying value.

k) LONG-TERM DEBT

Long-term debt is recorded net of repayments and actuarial adjustments.

l) EMPLOYEE FUTURE BENEFITS

i. The District and its employees make contributions to the Municipal Pension Plan. These contributions are expensed as incurred.

ii. Sick leave and other benefits are also available to the District's employees. The costs of these benefits are actuarially determined based on service and best estimates of retirement ages and expected future salary and wage increases. The obligations under these benefit plans are accrued based on projected benefits as the employees render services necessary to earn the future benefits.

m) LANDFILL LIABILITY

The liability for closure costs of operational sites and post-closure care has been recognized based on the present value of estimated future expenses, estimated inflation and the cumulative usage of the site’s capacity. The change in this liability during the year is recorded as a charge to operations. These estimates are reviewed and adjusted annually.

DRAFT

1. SIGNIFICANT ACCOUNTING POLICIES continued

n) NON-FINANCIAL ASSETS

Non-financial assets are not available to discharge existing liabilities and are held for use in the provision of services. They have useful lives extending beyond the current year and are not intended for sale in the ordinary course of operations.

i. Tangible Capital Assets

Tangible capital assets are recorded at cost which includes amounts that are directly attributable to acquisition, construction, development or betterment of the asset. The cost, less residual value, of the tangible capital assets, excluding land and the landfill site, are amortized on a straight line basis over their estimated useful lives as follows:

Asset	Useful Life - Years
Engineering Structures	10 to 100 Years
Buildings	20 to 50 Years
Machinery and equipment	5 to 20 Years
Vehicles	8 to 15 Years
Other Assets	5 to 25 Years

The capacity of the landfill site is evaluated using the units of production method based upon capacity used during the year.

Amortization is charged annually, including in the year of acquisition and in the year of disposal. Assets under construction are not amortized until the asset is available for productive use.

Tangible capital assets are written down when conditions indicate that they no longer contribute to the District's ability to provide goods and services or when the value of the future economic benefits associated with the asset is less than the book value of the asset.

The District is fortunate to have many natural assets that reduce the need for engineered infrastructure that would otherwise be required. This includes watersheds, creeks, ditches and wetlands (rain water management). Canadian public sector accounting standards do not allow for the valuation and recording of such assets into the financial statements of the District. As such, these natural assets are not reported in these consolidated financial statements.

Assets acquired by right, such as forests, water and mineral resources, are not recorded in the consolidated financial statements.

ii. Contributions of Tangible Capital Assets

Tangible capital assets received as contributions are recorded at their fair value at the date of receipt and also are recorded as revenue.

DRAFT

1. SIGNIFICANT ACCOUNTING POLICIES continued

n) NON-FINANCIAL ASSETS continued

iii. Works of Art and Cultural and Historic Assets

Works of art and cultural and historic assets are not recorded as assets in these financial statements.

iv. Interest Capitalization

The District does not capitalize interest costs associated with the acquisition or construction of a tangible capital asset.

v. Leased Tangible Capital Assets

Leases which transfer substantially all of the benefits and risks incidental to the District are accounted for as leased tangible capital assets. All other leases are accounted for as operating leases and the related payments are charged to expenses as incurred.

vi. Inventories of Supplies

Inventories of supplies held for consumption are recorded at the lower of cost and replacement cost.

o) CONTAMINATED SITES

Contaminated sites are defined as the result of contamination being introduced in air, soil, water or sediment of a chemical, organic, or radioactive material or live organism that exceeds an environmental standard. A liability for remediation of contaminated sites is recognized, net of any expected recoveries, when all of the following criteria are met:

i. an environmental standard exists

ii. contamination exceeds the environmental standard

iii. the District is directly responsible or accepts responsibility for the liability

iv. future economic benefits will be given up, and

v. a reasonable estimate of the liability can be made.

DRAFT

1. SIGNIFICANT ACCOUNTING POLICIES continued

p) USE OF ESTIMATES

The preparation of financial statements in conforming with Canadian public sector accounting standards requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities, and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the period. Significant estimates include assumptions used in estimating provisions for accrued liabilities, landfill liability, useful lives of tangible capital assets and in performing actuarial valuations of employee future benefits. Actual results could differ from these estimates.

q) SEGMENTED INFORMATION

A segment is defined as a distinguishable activity or group of activities of a government for which it is appropriate to separately report financial information to achieve the objectives of the standard. The District has provided definitions of the District's segments as well as presented consolidated financial information in segmented format in Note 19.

DRAFT

2. CASH AND CASH EQUIVALENTS AND INVESTMENTS

a) CASH AND CASH EQUIVALENTS

		2020		2019
CRD	**$**	**164,029,736**	$	172,111,798

	$	**185,743,761**	$	114,190,859

MFA Bond Fund investments are quoted in an active market and therefore recorded at fair market value. The carrying cost of MFA bond funds is $43,392,987 (2019 - $42,460,332). Included in Other investments - short term is $141,432,957 of term deposits recorded at cost.

3. SHORT-TERM DEBT

In November 2020, CRHC secured short-term capital financing from BCHMC in the amount of $61,277,457. The financing was used to fund prepaid leases on the West Park and Spencer Close properties which were purchased by the CRD as part of the Regional Housing First Program (RHFP). The short-term financing was coverted to a 35-year mortgage subsequent to year end.

DRAFT

4. LONG-TERM DEBT

a) DEBT

The District's debt is borrowed through the Municipal Finance Authority of British Columbia (MFA). The principal portion of long-term debenture repayment is added to the MFA sinking fund, which is secured against the debt and invested over the term of the loan. The balance of this fund is used to retire the debt at or before maturity of the loan depending on the actual return on investments in the sinking fund. The MFA provides the CRD with an estimated actuarial valuation, which is the estimated return on the invested balance of the sinking fund. Debt principal is reported net of repayments and actuarial adjustments. Interest expense is calculated and paid net of actuarial adjustments.

In addition to debt incurred directly by the District, the District has also incurred long-term debt on behalf of its member municipalities through agreements with the MFA. All monies borrowed are upon the District's credit at large and, in the event of any default, would constitute an indebtedness for which its members are jointly and severally liable.

The District reports the total principal and interest payments collected from member municipalities as expenses in Debt payments for member municipalities and revenue in Government transfers. Total principal payments received from member municipalities in the year was $9,210,128 (2019 - $8,686,508) Total interest expense reported on the consolidated statement of operations is as follows:

	2020	**2019**
Interest expense on all debt	**$17,073,209**	$18,321,445
Interest received from member municipalities for debt issued on their behalf	**6,129,375**	6,219,409
Net interest expense reported on the consolidated statement of operations	**$10,943,834**	$12,102,036

In addition, $64,366 (2019 - $70,353) collected from member municipalities relating to payments into the Debt Reserve Fund (see Note 5) are included as expenses in debt payments for member municipalities. Debt incurred on behalf of member municipalities is also presented as a receivable from member municipalities on the statement of financial position in the amount of $146,869,657 (2019 - $152,970,007).

DRAFT

4. LONG-TERM DEBT continued

a) DEBT continued

Debt is comprised of the following and includes varying maturities, with interest rates ranging from 0.91% to 4.20% and an average rate of 2.52%. The District's debt consists of debenture debt and non-debenture debt of $1,683,324 (2019 - $21,910,000) both held with the MFA. The Capital Region Housing Corporation (CRHC) debt consists of mortgages with BC Housing and commercial banks.

DRAFT

5. MFA DEBT RESERVE FUND

The MFA provides capital financing for regional districts and their member municipalities. The MFA is required to establish a Debt Reserve Fund into which each regional district and member municipality, who shares in the proceeds of a debt issue through the District, is required to pay certain amounts set out in the debt agreements. Interest earned on these funds (less administrative expenses) becomes an obligation of the MFA to the regional district. If at any time insufficient funds are provided by the regional district or their member municipalities or any other MFA borrower, the MFA may then use these funds to meet payments on its obligations. Should this occur, the regional district and member municipalities may be called upon to restore the fund. The MFA has not required the debt reserve fund to meet obligations in its history. The cash deposits of the member municipalities $3,174,151 (2019 - $3,138,303) are not recorded in these financial statements. The District's restricted cash on its direct debt is $3,934,313 (2019 - $4,037,743).

		2020		2019
Cash Deposits				
Restricted cash - MFA Debt Reserve Fund	**$**	**3,934,313**	$	4,037,743

Developer advances for construction		**536,769**		488,095
Deferred revenue - CRHC		**704,008**		670,815
Balance, end of year	**$**	**32,729,481**	$	15,984,958

DRAFT

7. LANDFILL CLOSURE AND POST-CLOSURE LIABILITY

A post closure liability of $11,281,091 (2019 - $10,658,111) is recorded for the estimated capacity of the landfill used and estimated total landfill closure and post-closure costs of $33,788,000. The estimated liability for these costs is recognized as the landfill site's capacity is used. The liability represents the portion of total costs recognized as at December 31, 2020, based on used versus remaining capacity. Total cost represents the sum of discounted future cash flows for closure and post-closure care activities using a long-term borrowing rate of 2.26%.

Estimates are based on assumptions that may change. Significant assumptions include remaining useful life, total expense, total or used capacity and liability. Changes would be recognized prospectively as a change in estimate when applicable. Underlying assumptions, related to the reported liability, are assessed periodically.

The estimate incorporates assumptions contained in the current draft Solid Waste Management Plan which was in public consultation as of year-end.

Based on the approved Solid Waste Management Plan, the estimated remaining capacity of the landfill site is 40% with a remaining life of 28 years. The plan also includes an additional 30 years of post-closure activities.

As at December 31, 2020, the District has $11,281,091 in reserve funding for the post-closure liabilities. Management monitors the estimate annually and budgets appropriate transfers to meet the future liability.

DRAFT

8. OTHER LIABILITIES

	2020	2019
Sick leave benefits	**$ 532,200**	$ 495,400
Contaminated sites	**856,882**	1,799,335
Other benefits payable	**53,365**	34,444
	$ 1,442,447	$ 2,329,179

a) SICK LEAVE BENEFITS

The District provides sick leave benefits to its employees. The accrued benefit obligation is included in other liabilities on the consolidated statement of financial position and has been estimated by an actuarial valuation completed at December 31, 2020. The District's accrued benefit obligation is $532,200 (2019 - $495,400).

The significant actuarial assumptions adopted in measuring the District's accrued benefit obligation are as follows:

	2020	2019
Discount rates	**2.10%**	2.70%
Expected future inflation rates	**2.50%**	2.50%
Expected wage and salary increases	**2.50%**	2.50%

b) CONTAMINATED SITES

The District estimated a liability of $856,882 as at December 31, 2020 (2019 - $1,799,335) for remediation of a total of six known contaminated sites, including the Millstream Meadows site identified in previous years. This estimate has been discounted to present value using current Municipal Finance Authority lending rates. The nature of the contamination includes heavy metals, chlorinated solvents, hydrocarbons, and other organic and inorganic compounds. The source of the contamination includes unregulated shooting activities, disposal of excess soil from utility projects, underground storage tanks, fuel bulk storage facilities, and disposal of septage and other trucked liquid and solid waste.

11. CONTRACTUAL OBLIGATIONS

a) CAPITAL PROJECTS AND OPERATING CONTRACTS

At December 31, 2020, the District has outstanding commitments to capital projects and operating contracts totaling $69,132,520 (2019 - $144,162,453). The Core Area Wastewater Treatment Project accounts for $18,250,210 (2019 - $98,955,517) of the outstanding commitments.

The District entered into an agreement with a third party to design, build, finance, operate and maintain a Residuals Treatment Plant (RTP) for the District. Under the agreement, the District is obligated to make a lump sum payment of 50% of total capital costs once the RTP has achieved service commencement and the asset is accepted by the District. The remaining 50% of capital costs will be paid out monthly over a 20 year term. The estimated capital costs of this agreement is $126,782,789. The operating portion of this agreement is also for a 20 year period to be paid out monthly. The estimated operating costs of this agreement is $116,707,942. The first lump sum payment and start of the capital financing arrangement and monthly operating payments is expected to begin in 2021.

b) LONG TERM LEASES

The District rents facilities and leases machinery and equipment under long-term operating leases. Future minimum lease payments are as follows:

		2020		**2019**
2021	**$**	**2,810,964**	$	2,338,674
2022		**325,406**		143,980
2023		**318,308**		137,350
2024		**264,638**		101,950
2025		**261,441**		100,478
Total future minimum lease payments	**$**	**3,980,757**	$	2,822,432

The above noted future minimum lease payments include $308,503 (2019 - $1,687,807) for leases relating to the Core Area Wastewater Treatment Project.

DRAFT

12. CONTRACTUAL RIGHTS

a) THIRD PARTIES AGREEMENTS

At December 31, 2020, the District has entered into a number of multi-year contracts with third parties totaling $23,619,027 (2019 - $29,887,372)

b) LONG TERM LEASES

The District has entered into various contracts for rental revenue. The estimated contractual rights under these contracts are as follows:

		2020		2019
2021	**$**	**1,616,097**	$	1,865,755
2022		**1,436,455**		1,752,142
2023		**1,395,412**		1,483,044
2024		**365,950**		453,926
2025		**26,596**		114,572
	$	**4,840,510**	$	5,669,439

13. CONTINGENCIES

a) LAWSUITS

In the normal course of operations, the District is faced with lawsuits for damages of a diverse nature. At year-end, the District's estimated exposure to each such liability is either not determinable or is not considered to be significant. Claims paid by the District as a result of litigation are reported as expenses. Liabilities are recorded upon a determination that a loss is likely and a determination can be made of the estimated amounts.

b) BUILDING ENVELOPE REMEDIATION (BER) - (CRHC)

A number of low income housing buildings are operated by the Capital Region Housing Corporation (CRHC) under agreements with BC Housing Management Commission (BCHMC). Prior to the signing of the new Umbrella Agreement in 2012, BCHMC provided funding for building envelope failure remediation for BCMHC and Homes BC buildings. In the event CRHC is unable to comply with agreement terms, BCHMC may require repayment of certain BER subsidies. Repayment would be funded by second mortgages.

Funding for future BER for all buildings except for buildings with no operating agreements is subject to future negotiations with BCHMC.

DRAFT

14. BUDGET DATA

The budget data presented in these consolidated financial statements is based on the 2020-2024 Financial Plan Bylaw 4349 as approved by the Board on March 18, 2020. Interfund transfers and debt principal payments are removed from the budget, and the CRHC budget is added for presentation in the financial statements. Amortization is not contemplated in development of the budget and, as such, is not included. The chart below reconciles the budget surplus reported in the statement of operations to the budget surplus approved by the Board. The approved budget includes operating expenditures of $282.6 million for CRD, and $19.8 million for CRHC. The budget surplus approved by the Board is nil for CRD and $349,869 for CRHC.

	Total
Budget annual surplus (deficit)	**$ 71,064,153**
Deduct outflows for:	
Transfers to reserve funds	**(20,668,360)**
Transfers to capital funds	**(32,768,308)**
Transfers to equipment replacement fund	**(3,797,668)**
Debt principal payments	**(16,901,995)**
CRHC transfers to reserve funds	**(2,367,168)**
CRHC debt principal payments	**(5,092,006)**
Add inflows for:	
Transfers from reserve funds	**3,360,173**
Prior year net surplus	**7,385,966**
CRHC transfers from reserve funds	**135,082**
Annual surplus approved by the Board	**$ 349,869**

DRAFT

15. GOVERNMENT TRANSFERS

The following government transfers have been included in revenues:

	2020	2019
Federal	**$ 42,855,140**	$ 106,952,746
Provincial	**142,109,163**	82,159,182
Local	**117,133,370**	115,975,852
	$ 302,097,673	$ 305,087,780

Federal Government transfers include $36,174,635 (2019 - $75,860,342) relating to the Core Area Wastewater Treatment Project and $4,200,000 (2019 - $30,000,000) relating to the Regional Housing First Program (RHFP). Provincial Government transfers include $124,000,000 (2019 - $62,000,000) relating to the Core Area Wastewater Treatment Project. Local Government transfers include tax levies collected by the Province and municipalities on behalf of the District.

16. PENSION PLAN

The District and its employees contribute to the Municipal Pension Plan (a jointly trusteed pension plan). The board of trustees, representing plan members and employers, is responsible for administering the plan, including investment of assets and administration of benefits. The plan is a multi-employer defined benefit pension plan. Basic pension benefits are based on a formula. As at December 31, 2019, the plan has about 213,000 active members and approximately 106,000 retired members. Active members include approximately 41,000 contributors from the District.

Every three years, an actuarial valuation is performed to assess the financial position of the plan and adequacy of plan funding. The actuary determines an appropriate combined employer and member contribution rate to fund the plan. The actuary's calculated contribution rate is based on the entry-age normal cost method, which produces the long-term rate of member and employer contributions sufficient to provide benefits for average future entrants to the plan. This rate may be adjusted for the amortization of any actuarial funding surplus and will be adjusted for the amortization of any unfunded actuarial liability.

The most recent valuation for the Municipal Pension Plan as at December 31, 2018, indicated a $2,866 million funding surplus for basic pension benefits on a going concern basis.

The District paid $5,168,746 (2019 - $4,623,299) for employer contributions to the plan in fiscal 2020, while employees contributed $4,607,461 (2019 - $4,090,624) to the plan in fiscal 2020.

The next valuation will be as at December 31, 2021, with results available later in 2022.

Employers participating in the plan record their pension expense as the amount of employer contributions made during the fiscal year (defined contribution pension plan accounting). This is because the plan records accrued liabilities and accrued assets for the plan in aggregate, resulting in no consistent and reliable basis for allocating the obligation, assets and cost to individual employers participating in the plan.

17. RELATED PARTY TRANSACTIONS

The Capital Regional Hospital District (CRHD) is a related party to the CRD. The Board of Directors for each entity is comprised of the same individuals. As legislated by the Hospital District Act, the officers and employees of the CRD are the corresponding officers and employees of the CRHD. The CRD and CRHD are separate legal entities as defined by separate Letters Patent and authorized by separate legislation. During the year the CRHD purchased, at cost, $727,404 (2019 - $795,300) of administrative support and project management services from the CRD, of which $16,622 (2019 - $141,985) of project management services was capitalized.

The Regional Housing First Program (RHFP) is a partnership between the CRD, and the Provincial and Federal governments to provide capital funding to affordable housing projects in the region. The CRD, CRHC and CRHD will invest a combined $40 million towards projects. In 2018, a RHFP project management office was created to support the delivery of the program. During the year, the CRHD contributed $141,154 (2019 - $138,387) and the CRHC contributed $63,520 (2019 - $62,275) to the CRD, to cost share in administrative support and project management services.

On January 25, 2019, as part of the RHFP, the CRD purchased Millstream Ridge and entered into a 60-year prepaid lease in the amount of $33,250,194 and a 35-year operator agreement with the CRHC. The CRHC secured 35-year mortgage financing to fund the prepaid lease.

On November 2, 2020, as part of the RHFP, the CRD purchased West Park and entered into a 60-year prepaid lease in the amount of $29,430,822 and a 35-year operator agreement with the CRHC. The CRHC secured short-term capital financing from BCHMC to fund the prepaid lease. This short-term financing was converted to a 35-year mortgage subsequent to year end.

On November 20, 2020, as part of the RHFP, the CRD purchased Spencer Close and entered into a 60-year prepaid lease in the amount of $28,419,513 and a 35-year operator agreement with the CRHC. The CRHC secured short-term capital financing from BCHMC to fund the prepaid lease. The short-term financing was converted to a 35-year mortgage subsequent to year end.

18. GVLRA - CUPE LONG-TERM DISABILITY TRUST

The Trust was established January 1, 1987 as a result of negotiations between the Greater Victoria Labour Relations Association (GVLRA) representing a number of employers and the Canadian Union of Public Employees (CUPE) representing a number of CUPE locals. The Trust's sole purpose is to provide a long-term disability income benefit plan. The employers and employees each contribute equal amounts into the Trust. The District paid $379,157 (2019 - $351,329) for employer contributions and District employees paid $379,157 (2019 - $351,329) for employee contributions to the plan in fiscal 2020. Based upon most recent information, at December 31, 2019, the total plan provision for approved and unreported claims was $19,081,300 with a net surplus of $4,244,806.

DRAFT

19. SEGMENTED REPORTING

The District is a diversified regional government that provides a wide range of services to its stakeholders. For management reporting purposes, the District's operations and activities are organized and reported by Fund. Funds were created for the purpose of recording specific activities to attain certain objectives in accordance with special regulations, restrictions or limitations.

District services are provided by departments and their activities are reported within these funds. Certain functions have been separately disclosed as segmented information, along with accounting for the services they provide as follows:

Water Services:

Water Services operations include responsibility for the supply of wholesale water to the core municipalities, distribution to the Saanich Peninsula, the Westshore Communities, and Sooke. This segment also includes accountability for a number of local water service areas in Port Renfrew, Saltspring Island, and the Southern Gulf Islands.

Sewer Services:

Sewer Services operations include responsibility for the design, build, and operation of sewage collection, treatment, and disposal systems in the District. This includes the accountability for liquid waste in the core area and a number of local sewer service areas in Port Renfrew, Saltspring Island, and the Southern Gulf Islands.

Environmental Health Services:

Environmental Health Services operations are responsible for solid waste management and related environmental assessment and regulatory programs. The department provides municipal solid waste disposal and recycling services.

Recreation and Cultural Services:

Recreation and Cultural Services operations provide a wide variety of facilities and programs to residents of the capital region. Regional Parks is responsible for establishing and protecting a network of regional parks. Three recreation centers are operated in Sooke, Sidney, and Ganges. There are a number of parks and recreation programs located throughout the Southern Gulf Islands.

DRAFT

19. SEGMENTED REPORTING continued

General Government Services:

General Government Services operations are responsible for providing the functions of Corporate Services (Financial Services, GIS & Information Technology, Business Development, Risk Management, Payroll, Arts Development, and Facilities Management), Administration (Human Resources and Corporate Communications), and Planning and Protective Services.

Capital Region Housing Corporation:

The CRHC is a wholly-owned subsidiary of the Capital Regional District. It was incorporated under the laws of British Columbia Company in 1982 and its principal activity is the provision of rental accommodation for citizens of the District. The CRHC operates properties with 1,773 housing units.

The following page provides additional Segmented Information. The accountings policies used in these segments are consistent with those followed in preparation of the financial statements as disclosed in Note 1.

DRAFT

20. FINANCIAL RISKS AND CONCENTRATION OF RISK

The District is potentially exposed to credit risk, market and interest rate risk, liquidity risk, and foreign exchange risk from the District's financial instruments. Qualitative and quantitative analysis of the significant risks from the District's financial instruments is provided below by type of risk.

a) CREDIT RISK

Credit risk primarily arises from the District's cash and cash equivalents, accounts receivable and portfolio investments. The risk exposure is limited to their carrying amounts at the date of the statement of financial position.

Accounts receivable primarily consist of amounts receivable from government organizations, residents and financial institutions. To reduce the risk, the District regularly reviews the collectability of its accounts receivable and if needed, will establish an allowance based on its best estimate of potentially uncollectible amounts. As at December 31, 2020, the amount of allowance for doubtful debts was nil (2019 - nil). The District historically has not had difficulty collecting receivables, nor have counterparties defaulted on any payments.

b) MARKET AND INTEREST RATE RISK

Market risk is the risk that changes in market prices and inputs, such as interest rates, will affect the District's income. The objective of market risk management is to control market risk exposures within acceptable parameters while optimizing the return on risk.

The District manages market risk by holding cash balances with top rated Canadian Schedule I financial institutions. The portfolio investments are managed following the investment policy which is approved by the District's Board of Directors. The District periodically reviews its investments and is satisfied that the portfolio investments are being managed in accordance with the investment policy.

Interest rate risk is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in the market interest rates. The District's investments are disclosed in Note 2 and changes in the fair value of investments have parallel changes in unrealized gains or losses until realized on disposal. The District's mortgage interest rates are fixed rate mortgages and are subject to interest rate risk upon renewal. The interest rate risk is mitigated by the subsidy assistance received from BCHMC and CMHC which is based on mortgage principal and interest payments.

There has been no change to the interest rate risk exposure from 2019.

c) LIQUIDITY RISK

Liquidity risk is the risk that the District will not be able to meet its financial obligations as they become due. The District manages liquidity risk by continually monitoring actual and forecasted cash flows from operations, anticipated investing, and financial activities to ensure that its financial obligations are met.

d) FOREIGN EXCHANGE RISK

The District has not entered into any agreements or purchased any foreign currency hedging arrangements to hedge possible currency risks, as management believes that the foreign exchange risk derived from currency conversions is not significant. The foreign currency financial instruments are short-term in nature and do not give rise to significant foreign currency risk.

DRAFT

21. SUBSEQUENT EVENT

a) CORE AREA WASTEWATER TREATMENT PROJECT

In 2021, the Certificate of Service Commencement for the Residuals Treatment Facility is expected to be complete which will trigger a one-time capital payment of $63.4 million and the start of subsequent monthly capital and operating payments which will continue to December 2040. The monthly capital payments have an imbedded financing rate of approximately 6% and will be approximately $5.5 million annually.

The transaction will result in an increase in tangible capital assets of approximately $126.8 million derived from the initial $63.4 million capital payment plus the principal portion for long-term debt of approximately $63.4 million. Monthly, the interest portion of the long-term debt combined with operating and maintenance payments will be expensed on the Statement of Operations. The monthly operating and maintenance payments are determined based on actual volumes of residuals processed at the facility.

b) CAPITAL REGION HOUSING CORPORATION

On March 22, 2021, the District purchased the residential property, Hockley House, for $31.0 million and then entered into a 60 year, $23.8 million prepaid lease agreement and 35 year operating agreement of the property with the CRHC. The CRHC obtained short-term financing from BCHMC to fund the prepaid lease of Hockley House from the CRD. The financing will be converted to a 35-year mortgage after being placed with a lender by BCHMC.

On April 14, 2021, the CRHC's Board authorized the Corporation's staff to enter into a prepaid lease agreement with the CRD in the amount of $10.1 million for an affordable housing project in the region. The estimated total housing project costs for the CRD is $17 million.

22. COMPARATIVE INFORMATION

Certain 2019 comparative information has been reclassified to conform with the financial statement presentation adopted for the current year.

23. COVID-19

On March 11, 2020, the COVID-19 outbreak was declared a pandemic by the World Health Organization. This resulted in governments worldwide, including the Canadian federal and provincial governments enacting emergency measures to combat the spread of the virus. The economic conditions and the District's response to the pandemic did not have a material impact on the District's operating results and financial position in 2020. The situation is dynamic and the ultimate duration and magnitude of the impact on the economy and the financial effect on the District is not known at this time.

Other Financial Statement Analysis

British Columbia, Canada

Fiscal year ended December 31, 2020

Making a difference...together

Appendix C: Other Financial Statement Analysis

The audit has now been completed. The 2020 Audited Financial Statements have been prepared by management in accordance with Canadian Public Sector Accounting Board (PSAB) Standards. Under PSAB regulations, governments are required to present five statements with explanatory notes. The first two statements are summarized in the staff report. This appendix provides a summary of the remaining statements.

3. Consolidated Statement of Change in Net Debt

The Statement of Change in Net Debt reconciles current to prior year and informs the reader of change drivers. Included in this statement are expenditures that could be incurred in year but not consumed during the period. Table 8 summarizes the primary drivers of changes in net debt for 2020:

Table 8 – Change in Net Debt Year over Year ($ millions)

Description	2020	2019
Annual Surplus	250.3	254.2
Acquisition of Tangible Capital Assets	(260.5)	(313.1)
Amortization	33.8	31.6
Contributed Tangible Capital Assets	(7.9)	(3.3)
Loss/Proceeds on assets	3.7	1.6
Inventory and Prepaid	(0.8)	(0.4)
Net Remeasurement Gain/(Loss)	1.5	0.8
Total change in net debt	**20.1**	**(28.6)**
Net debt, beginning of year	(100.4)	(71.9)
Net debt, end of year	**($80.3)**	**($100.5)**

Overall, the net debt position decreased by $20.0 million, primarily due to an annual surplus of $250.3 million, the net impact of a $260.5 million increase in tangible capital assets, $7.9 million increase in contributed assets, less $33.8 million in amortization, and other minor expenses or gains incurred during the period not yet realized.

4. Consolidated Statement of Remeasurement Gains and Losses

As required by PSAB standards, investments are carried at fair value and result in remeasurement gains or losses annually. Gains or losses remain unrealized until they are disposed, at which point they are recognized through the Statement of Operations.

Table 9 – Change in Remeasurement Gains and Losses Year over Year ($ millions)

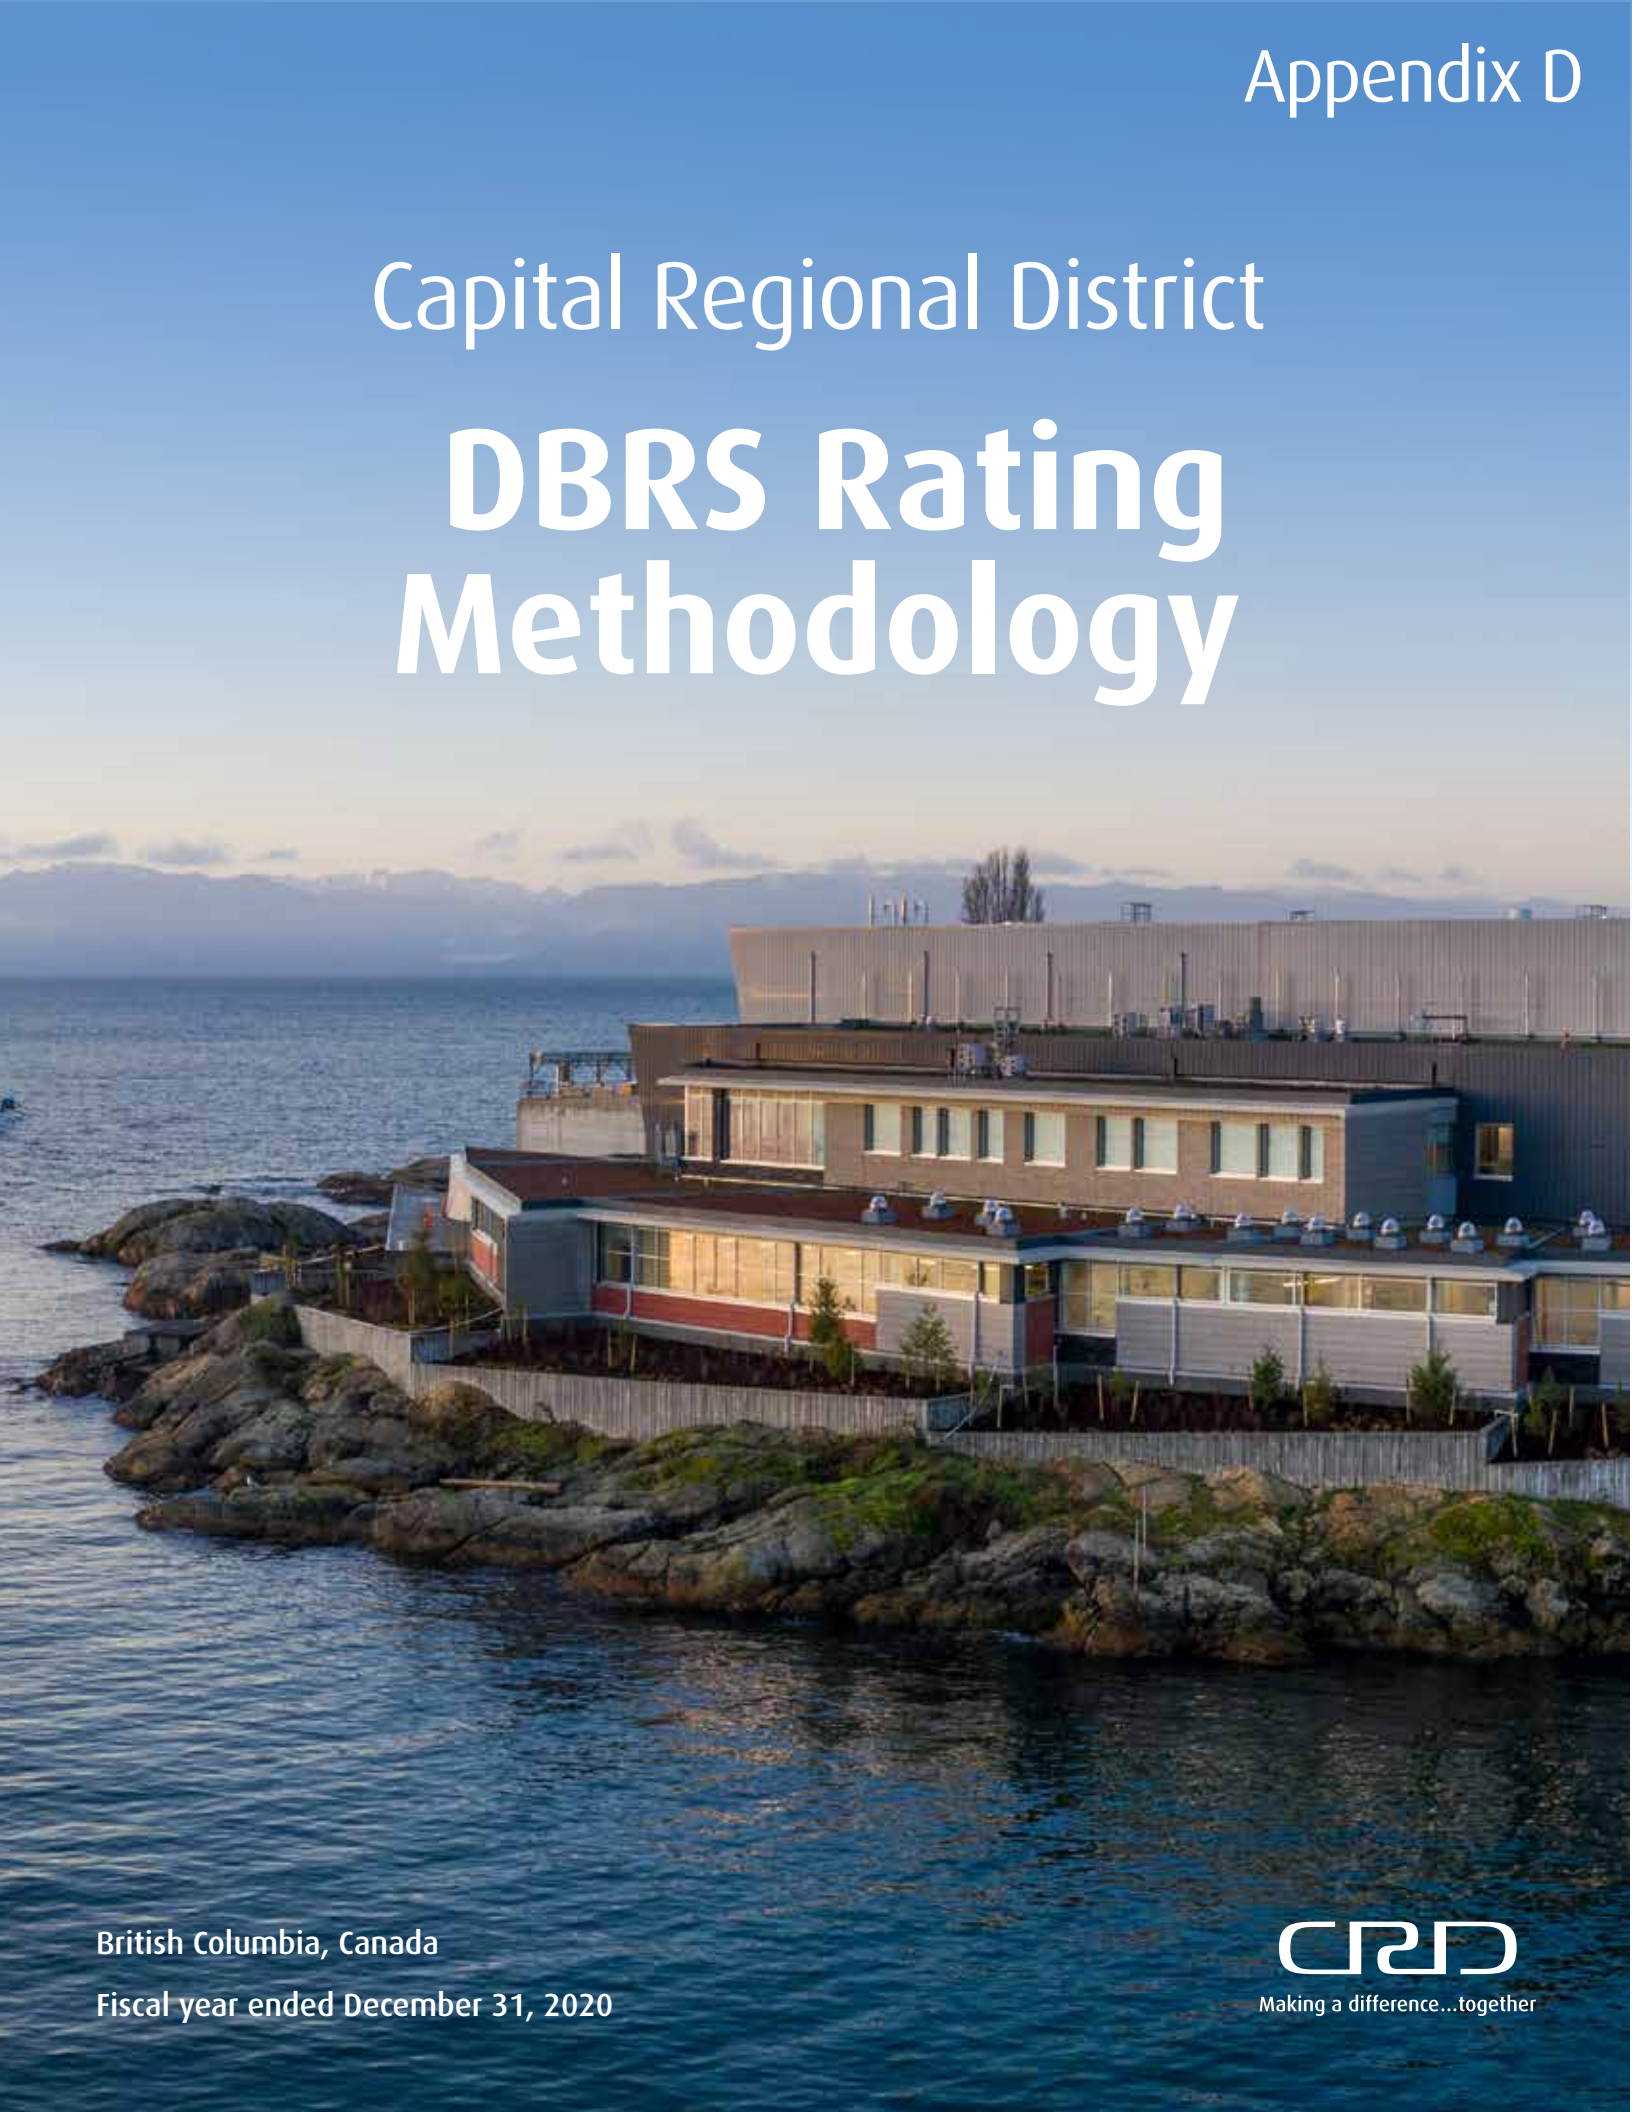
Description	2020	2019
Accumulated Remeasurement Opening	(0.9)	(1.7)
Net Remeasurement Gains (Losses)	1.5	0.8
Accumulated Remeasurements End of Year	**$0.6**	**$(0.9)**

The $1.5 million net unrealized remeasurement gain for the year was a result of an increase in market value of investments held in the MFA bond fund and various term deposits. Although the gains are unrealized, they illustrate that the CRD's investment portfolio has performed positively over the year. The accumulated remeasurement gain at the end of 2020 is $0.6 million, up from the ($0.9) million remeasurement loss at the end of 2019.

5. Consolidated Statement of Cash Flows

The Statement of Cash Flows reports the sources and uses of cash during the period, and provides information about capital, investing, and financing activities.

Table 10 – Change in Cash and Cash Equivalents Year over Year ($ millions)



Description	2020	2019
Operating activities	281.4	296.4
Capital activities	(249.3)	(301.5)
Investing activities	(70.0)	54.9
Financing activities	30.3	64.6
Net change in cash & cash equivalents	**(7.6)**	**114.4**
Cash & cash equivalents, beginning of year	184.5	70.1
Cash and cash equivalents, end of year	**$176.9**	**$184.5**

Overall, the CRD's cash position decreased in 2020 by $7.6 million, driven by investing activities of $70.0 million and capital activities of $249.3 million. This was offset by the annual surplus of $250.3 million, which contributed to a $281.4 million change in cash from operating activities. In addition, financing activities (debt) increased cash by $30.4 million.

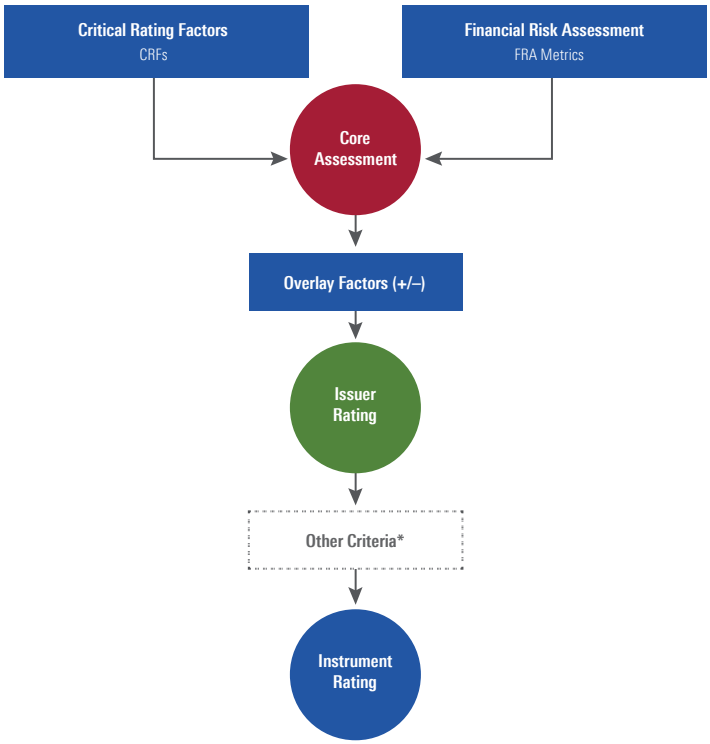
Scope and Limitations

This methodology represents the current DBRS Morningstar approach for rating Canadian municipal governments. It includes consideration of historical and expected business and financial risk factors as well as sector-specific issues, regional nuances, and other subjective factors and intangible considerations. DBRS Morningstar's approach incorporates a combination of both quantitative and qualitative factors. This methodology provides guidance regarding the DBRS Morningstar methods used in the sector and should not be interpreted with formulaic inflexibility, but rather should be understood in the context of the dynamic environment in which it is intended to be applied. The methods described herein may not be applicable in all cases; the considerations outlined in DBRS Morningstar methodologies are not exhaustive and the relative importance of any specific consideration can vary by issuer. In certain cases, a major strength can compensate for a weakness and, conversely, a single weakness can override major strengths of the issuer in other areas.

Introduction to DBRS Morningstar Methodologies

DBRS Morningstar publishes rating methodologies to give issuers and investors insight into the rationale behind DBRS Morningstar's rating opinions. In general terms, DBRS Morningstar ratings are opinions that reflect the creditworthiness of an issuer, a security, or an obligation. DBRS Morningstar ratings assess an issuer's ability to make timely payments on outstanding obligations (whether principal or interest), consistent with the terms of those obligations.



DBRS Morningstar operates with a stable rating philosophy; in other words, DBRS Morningstar strives to factor the impact of a cyclical economic environment into its ratings wherever possible, which minimizes rating changes caused by economic cycles. Rating revisions do occur, however, when more structural changes, either positive or negative, have occurred or appear likely to occur in the foreseeable future. DBRS Morningstar also publishes criteria, which are an important part of the rating process. Criteria typically cover areas that apply to more than one sector. Both methodologies and criteria are publicly available on DBRS Morningstar's website.

"DBRS Morningstar Criteria: Approach to Environmental, Social, and Governance Risk Factors in Credit Ratings" is incorporated by reference into this methodology.

Overview of the DBRS Morningstar Rating Process

- As illustrated below, there are generally four key components to the DBRS Morningstar corporate rating process: (1) Critical Rating Factors (CRFs), (2) the Financial Risk Assessment (FRA), (3) overlay considerations, and (4) specific instrument considerations.
- The CRFs capture the major business risk aspects of the issuer and is determined by assessing each of the CRFs outlined in the industry-specific grid. The FRA pertains to financial soundness and is determined by assessing each of the FRA metrics. Throughout the FRA and CRF determination process, DBRS Morningstar performs a consistency check of these factors relative to the issuer's rated industry peers.
- The CRFs and FRA are then combined to derive the issuer's core assessment. For investment-grade credits, the CRFs will have greater weight than the FRA in determining the core assessment.
- The core assessment may then be adjusted up or down, as applicable, if any of the overlay factors is deemed applicable and material to the credit profile in order to arrive at the issuer rating, which represents DBRS Morningstar's assessment of the issuer's likelihood of default.
- The issuer rating is then used as the basis for specific instrument ratings, which may differ from the issuer rating due to seniority or, in the case of non-investment-grade issuers, expected recovery considerations. (See the "Rating the Specific Instrument and Other Criteria" section below.)

DBRS Morningstar Rating Analysis Process

* Depending on the instrument, "other criteria" may include *DBRS Criteria: Recovery Ratings for Non-Investment Grade Corporate Issuers* or *DBRS Morningstar Criteria: Preferred Share and Hybrid Security Criteria for Corporate Issuers*, for example. Please refer to the Rating the Specific Instrument and Other Criteria section below for a list of these criteria, as well as other criteria that may be applicable at any stage of the rating process.

Rating Canadian Municipalities—Overview

- This methodology applies to Canadian municipalities rated by DBRS Morningstar. Large local governments generally have a stable revenue base owing to well-defined though limited taxing powers, a basket of responsibilities for the provision of customary public services, developed and diverse economic and taxable assessment bases, and relatively supportive senior governments, which lend support to their credit ratings.
- Nonetheless, economic disparities, varying approaches to fiscal and financial management, capital investment requirements, and debt levels are only a few of the considerations that lead to differing credit quality among major Canadian cities. Overall, large Canadian municipalities currently rank solidly in the investment-grade category.
- While municipalities benefit from their relationship with senior governments, municipal governments are primarily rated based on their own merits, and DBRS Morningstar does not assume any implicit senior government support.

Critical Rating Factors

The table below presents the primary factors (and various subfactors) used by DBRS Morningstar in determining the overall critical rating assessment. Although they are important considerations in the determination of a municipality's rating, these factors only represent a portion of considerations factored into the assessment process, as explained throughout this methodology. While these CRFs are shown in general order of importance, depending upon a specific issuer's situation, this ranking can vary by issuer. The table is followed by a brief discussion of the characteristics of each factor.

Exhibit 1 Critical Rating Factors

	AAA	AA	A	BBB
Economic Structure				
The economic structure of a municipality constitutes a key consideration in the credit assessment of its government, as it is the primary determinant of the capacity of a government to raise the revenue necessary to deliver services and support its debt. This factor evaluates the municipality's economic diversification, volatility, growth potential, and propensity to create jobs and generate wealth.				
Economic Diversification and Volatility	• The economy is viewed as highly dynamic and comprises a broad mix of industries, with no undue reliance on any single sector, which helps reduce volatility and cyclicality in GDP growth.	• The economy is viewed as dynamic and boasts a relatively diversified mix of industries but may be influenced by a few large industries, resulting in average volatility overall.	• The economy may be relatively small or reliant on seasonal industries, with a limited number of key industries accounting for a substantial portion of economic activity, resulting in above-average volatility.	• The economy is relatively small or located far from a major urban centre, with one seasonal or challenged industry accounting for a substantial portion of economic activity.
Population and Taxable Assessment Growth	• Population and taxable assessment growth have been consistently above the provincial average over the last five to ten years.	• Population and taxable assessment growth are sound and fairly consistent with the provincial average year over year.	• Population and/or taxable assessment growth has been steadily below the provincial average or inconsistent in recent years.	• Population is small and/or has been steadily declining in recent years. Assessment growth has been limited.
Income and Wealth of Local Economy	• Income and taxable assessment per capita are above average relative to comparable issuers.	• Income and taxable assessment per capita are consistent with other comparable issuers.	• Income and taxable assessment per capita may be below the average of comparable issuers.	• Income and taxable assessment per capita are markedly below the average of comparable issuers, indicative of lower wealth levels and income potential.
Labour Market	• The labour force is highly skilled, and unemployment is below average. • The labour force is growing above the rate of population growth.	• The labour force is skilled, and unemployment is low and stable. • The labour force is growing in line with average population growth.	• The job market is somewhat dynamic, although the unemployment rate may be somewhat above average. • The labour force is growing below average population growth.	• The job market is less dynamic and is characterized by an unemployment rate that may be notably above the provincial average. • The labour force is growing notably below average population growth or contracting.
Fiscal Management				
The review of a municipality's fiscal management framework assesses the government's commitment to fiscal sustainability, volatility of fiscal performance, budget management and prudence, relative tax competitiveness, and the transparency, timeliness and quality of reporting. DBRS Morningstar evaluates municipal service responsibilities, revenue potential, expenditure management capacity, and the broader coherence of the strategies, policies, and political processes governing the allocation of public funds.				
	AAA	**AA**	**A**	**BBB**
Fiscal Sustainability and Performance	• Fiscal sustainability is a core political and administrative priority, with minimal reliance on one-time measures or sizable tax and fee increases to balance the budget. • Volatile or uncertain revenue sources account for a negligible share of the operating budget (<2%). • Consistent record of fiscal surpluses as measured by DBRS Morningstar.	• Fiscal sustainability is emphasized by the government, but reliance on one-time measures or sizable tax and fee increases may be exhibited periodically to balance the budget. • Volatile or uncertain revenue sources account for a low share of the operating budget (<5%) but may be rising gradually.	• Fiscal sustainability is an objective of the government, but reliance on one-time measures or sizable tax and fee increases to balance the budget is more frequent. • Volatile or uncertain revenue sources are moderate as a share of the operating budget (<10%) or are rising rapidly.	• Fiscal sustainability is not emphasized by the government, and reliance on one-time measures to achieve budget balance is high. • Volatile or uncertain revenue sources account for a material share of the operating budget (>10%) or are rising rapidly, and this poses greater risks to the budget framework.

		• Fiscal results, as measured by DBRS Morningstar, generally maintain a balanced position year over year.	• Fiscal results, as measured by DBRS Morningstar, may exhibit greater volatility because of a lower ability to manage in-year budgetary pressures.	• Fiscal results exhibit greater volatility and weakness because of a lower ability to manage in-year budgetary pressures. • Fiscal results, as measured by DBRS Morningstar, have generally been weaker and deficits more frequent.
Budget Management and Prudence	• Budgets are consistently balanced using very conservative assumptions and incorporating meaningful contingencies to help manage unforeseen events. • Demonstrated ability to address unexpected adverse budget deviations to protect fiscal balance. • Budget pressures are managed responsively through very tight expenditure controls or revenue-raising initiatives.	• Budget contingencies vary year to year, although assumptions are generally conservative. • Demonstrated ability to address most unexpected adverse budget deviations to protect fiscal balance. • Budget pressures are managed over time through generally prudent expenditure management or revenue-raising initiatives.	• Budget pressures tend to linger but are viewed as sustainable, although reliance on one-time funding and/or sizable tax increases to balance the budget is high. • Budget assumptions are considered to be adequately prudent, although the use of contingencies may be limited. • Reduced ability and/or willingness to manage budget pressures through meaningful expenditure restraint or revenue-raising initiatives.	• Budget pressures tend to linger and are viewed as potentially unsustainable, resulting in steady reliance on one-time funding and/or sizable tax increases to balance the budget. • Budget assumptions are considered to be less prudent, resulting in more significant variances and use of contingencies. • Limited ability and/or willingness to manage budget pressures through meaningful expenditure restraint or revenue-raising initiatives.
Tax Competitiveness	• Property taxes and user fees are low, providing ample room to raise taxes if necessary. • Political willingness to raise taxes and fees to cover inflationary operating pressures and future capital investment needs.	• Property taxes and user fees are in line with peers, providing moderate flexibility to raise taxes. • Political willingness to raise taxes and fees to cover inflationary operating pressures, but future capital investment needs may remain unfunded.	• Property tax and user-fee burdens may already be somewhat high, limiting the ability to further raise taxes and fees if needed. • Limited political willingness to raise taxes and fees to cover either inflationary operating pressures or capital investment.	• Tax and user-fee burdens are high, and delinquencies are building up. • Political resistance to raising taxes and fees to cover either inflationary operating pressures or capital investment.
Transparency and Reporting	• Fiscal management framework is very well developed and responsive, with detailed planning documents and clear presentation. • Budget documents are clearly comparable to reported financial results. • Transparency and timeliness in financial reporting are exemplary.	• Fiscal management framework is well developed, with detailed planning documents. • Budget documents are somewhat comparable to reported financial results. • Transparency is good, and financial reporting is timely.	• The fiscal management framework is well developed, but some key planning documents or reports may lack details. • Budget documents are somewhat comparable to reported financial results. • Transparency and timeliness of financial reporting are considered adequate.	• The fiscal management framework lacks structure. • Budget documents are not comparable with reported financial results. • Transparency and timeliness of financial reporting are weaker, with only limited planning documents.

Debt and Liquidity Management

The financial management strategy and practices of a municipal government, including the requirements and financing strategy for capital investment, sophistication of debt and liquidity practices, debt structure and maturity profile, and other unfunded liabilities are central considerations in the determination of a municipal government rating.

	AAA	AA	A	BBB
Capital Investment Outlook	• Capital investment requirements for the foreseeable future are manageable and are not expected to pressure debt materially.	• Capital investment requirements may be sizable, but they are not expected to put excessive pressure on debt.	• Significant capital investment requirements have the potential to lead to significant increases in debt going forward, although management may have been successful at containing upward pressure in recent years.	• Large current and future capital needs are expected to lead to rising debt.
Debt and Liquidity Management Practices	• Debt and liquidity management practices are highly sophisticated and very conservative.	• Debt and liquidity management practices are sophisticated and conservative.	• Debt and liquidity management practices are conservative but may lack formality or sophistication relative to those of frequent borrowers.	• Debt and liquidity management practices are lacking structure and sophistication relative to those of frequent borrowers.
Debt Structure and Maturity Profile	• The debt structure is very prudent, with low refinancing risk, a smooth maturity profile, and minimal unhedged exposure to interest rate reset risk and foreign currency fluctuations.	• The debt structure is prudent but may at times entail sizable refinancing needs, an uneven maturity profile, or modest exposure to interest rate reset risk.	• The debt structure is prudent but may at times entail sizable refinancing due to an uneven maturity profile or moderate exposure to interest rate reset risk.	• The debt structure is less prudent and at times entails sizable refinancing due to an uneven maturity profile or more material exposure to interest rate reset risk.
Pension and Benefits Liabilities	• Unfunded pension and postemployment benefit liabilities, if any, are low and being addressed.	• Unfunded pension and postemployment benefit liabilities may be sizable but are being addressed.	• Unfunded pension and postemployment benefit liabilities may be considerable and steadily growing.	• Unfunded pension and postemployment benefit liabilities may be considerable and steadily growing, leading to pressure on operating results.

Relations with Senior Governments

Relations with senior governments influence the rating of municipal governments, as municipalities receive substantial senior government funding for capital projects and the delivery of certain programs from provincial and federal sources, share their tax base with their provincial and federal counterparts, and are bound by the broader legislative and regulatory frameworks set by provincial and federal governments in areas such as revenue-generating powers and service responsibilities.

	AAA	AA	A	BBB
Municipal Legislative Framework	• The legislative framework defining municipal responsibilities and revenue-generating powers is supportive and fosters financial sustainability. • Adequate provincial monitoring is provided.	• The legislative framework defining municipal responsibilities and revenue-generating powers is supportive and fosters financial sustainability. • Adequate provincial monitoring is provided.	• The legislative framework defining municipal responsibilities and revenue-generating powers is rigid and may lack the guidelines necessary to foster financial sustainability. • Provincial monitoring is more limited.	• The legislative framework defining municipal responsibilities and revenue-generating powers is weak and lacks the guidelines necessary to foster financial sustainability. • Provincial monitoring is potentially insufficient.

Senior Government Funding	• Sizable and reliable funding support is provided by senior governments, particularly for major capital investments and social services.	• Senior government funding support is meaningful and relatively reliable but may display volatility depending on the economic and fiscal environment.	• Senior government funding support is somewhat less meaningful as a share of revenues and is less reliable and predictable. • Funding displays greater volatility depending on the economic and fiscal environment.	• Senior government funding support is viewed as unreliable or inadequate, with a higher level of volatility depending on the economic and fiscal environment.
Relations with Senior Governments	• Cooperative relationship with senior governments and record of supportive tax and program policy objectives. • Limited interference by senior governments in traditional areas of municipal responsibility.	• Reasonable level of cooperation with senior governments, although policy objectives may diverge in some areas. • Some interference by senior governments in traditional areas of municipal responsibility.	• Less cooperative relationships with senior governments. • Direct but infrequent interference by senior governments in traditional areas of municipal responsibility. • History of downloading of service responsibilities with little accompanying fiscal support from senior governments.	• Contentious relationships with senior governments. • Direct interference by senior governments in traditional areas of municipal responsibility. • History of downloading of service responsibilities with no accompanying fiscal support from senior governments.

Discussion of Critical Rating Factors

Economic Structure

- The economic structure of a municipality constitutes an important consideration in the credit assessment of its government, as it is the primary determinant of the capacity of a government to raise the revenue necessary to fulfill its service responsibilities and support its debt.
- A large and diversified economy that is well integrated into the provincial transportation network will generally tend to experience more consistent growth in GDP, a steady population, and taxable assessment growth over the longer term, and it will display better labour market outcomes than smaller, more isolated commodity-based or seasonal municipal economies.
- In the analysis of a suburban commuter municipality highly reliant on a neighbouring urban municipality for employment, DBRS Morningstar may consider some of the larger city's economic fundamentals, provided the municipality being rated is strongly integrated into its larger neighbour and is likely to retain this relationship over time because of its proximity, competitive taxes, and/or considerable availability of land for development, among other factors.

Fiscal Management

- DBRS Morningstar considers the political and administrative commitment to fiscal sustainability, as evidenced by public statements, strategy documents, political/administrative policies, processes, or commitments. Strategies employed to maintain fiscal balance are considered, with one-time measures, deferrals, reserve draws, or reliance on volatile or uncertain revenue sources (e.g., real estate/land transfer taxes) generally viewed as weaknesses in the municipal fiscal management framework. DBRS Morningstar analyzes the volatility of fiscal results, which provides an indication of the government's commitment to maintaining a sound fiscal position.

- DBRS Morningstar evaluates budget management practices and prudence, including the conservatism of assumptions contained within operating/capital budgets, the presence of budget contingencies, and other forms of flexibility to respond to in-year pressures. DBRS Morningstar compares recent years' fiscal results with original budget estimates, examining the frequency and extent of major budget deviations.
- The municipality's fiscal capacity and relative tax and user fee burden is considered in relation to peers locally and nationally, as well as the willingness of political and administrative leaders to respond to both operating and capital pressures considering available revenue tools and provincially mandated service responsibilities.
- DBRS Morningstar considers the timeliness, breadth, and transparency of municipal budgeting and financial reporting as an indicator of the quality of the municipal fiscal framework.

Debt and Liquidity Management

- The financial management strategy and practices of a municipal government, including the requirements and financing strategy for capital investment, sophistication of its debt and liquidity management practices, debt structure and maturity profile, and other unfunded liabilities are central considerations in the determination of a municipal government rating.
- DBRS Morningstar examines current and projected levels of capital investments, as investment in physical infrastructure is the primary driver of borrowing needs based on provincial government prohibitions on debt for operating purposes.
- The government's financial management strategy, including the level of sophistication of its borrowing practices and overall debt structure, helps assess the potential volatility of debt-servicing requirements.
- DBRS Morningstar assesses the composition and maturity structure of the debt stock and its sensitivity to changes in interest and exchange rates (if applicable) and considers the full range of factors that could affect the debt burden and related servicing requirements to assess overall affordability. (See Appendix 1 for DBRS Morningstar's definition of tax-supported and self-supported debt).
- Although pension and employee future benefit liabilities are not included in the calculation of tax-supported debt for municipal governments, they are considered in the analysis of debt affordability to the extent that they will drive future cash funding requirements.

Relations with Senior Governments

- While the creditworthiness of a Canadian municipality is primarily driven by the fundamentals of that municipality, relations with the provincial and federal government may also have an influence on the rating.
- Municipalities receive substantial senior government funding for capital projects and the delivery of certain programs, share their tax base with their provincial and federal counterparts, and are bound by the broader legislative and regulatory frameworks set by the provincial government for revenue-generating powers and service responsibilities. Given these linkages, a stronger provincial and federal government credit profile implies a higher level and consistency of funding support to municipal governments.
- Service responsibilities, revenue-generating powers, and all other determining features of the operating framework of municipalities are defined by provincial governments. As a result, the responsiveness of a provincial government to the realities faced by municipal governments, as well as the various constraints

or flexibilities provided through the legislated framework, may also have significant implications for the credit profile of municipalities, highlighting the importance of considering the dynamic between municipalities and their respective provincial governments.

- DBRS Morningstar considers the current state and history of intergovernmental relations between municipalities and senior governments. The degree of intergovernmental cooperation and policy alignment, including potential interference by senior governments in areas of traditional municipal responsibility or the downloading of services with or without accompanying fiscal support, can have implications for the municipal government's financial outlook.

Financial Risk Assessment Factors

Primary FRA Factors

- Recognizing that any analysis of financial metrics may be prone to misplaced precision, DBRS Morningstar has limited its matrix of the key metrics below to a small sample of critical ratios. For each of these ratios, DBRS Morningstar provides a range within which the issuer's financial risk would be considered as supportive for the rating category. However, the wide range of municipalities in existence throughout Canada, especially in terms of size, location, economic diversification, and wealth, makes any attempt at generalization challenging and potentially misleading. As such, the values provided below are for Canada's larger cities with populations exceeding 300,000, as their credit profiles are generally supported by diversified economies and sophisticated management frameworks.
- This rating methodology can be used for smaller municipalities, although unique strengths or weaknesses such as overreliance on a single industry or location in a shrinking, economically challenged region may distort the analysis and reduce the relevance of the guidelines significantly, requiring financial metrics considerably stronger than noted below for a rating category.
- Furthermore, the ratings in the matrix below should not be understood as the final rating for a large city with matching metrics. The final rating is a blend of both the operating risk and financial risk considerations in their entirety.
- DBRS Morningstar ratings are based heavily on future performance expectations, so while past metrics are important, any final rating will incorporate DBRS Morningstar's opinion on future metrics based on the best available projections and assumptions of a government's future debt burden.
- It is also not uncommon for a government's key ratios to move in and out of the ranges noted in the ratio matrix above. In the application of this matrix, DBRS Morningstar looks beyond the point-in-time ratio.

Exhibit 2 Canadian Municipal Government Financial Risk Assessment Metrics

Key Ratio	AAA	AA	A	BBB
Net tax-supported debt per capita ($)[1]	< 600	600 to 3,000	3,000 to 5,000	> 5,000
Net tax-supported debt as a percentage of taxable assessment (%)	< 0.5	0.5 to 2.0	2.0 to 6.0	> 6.0
Interest costs as a percentage of total revenues (%)	< 1.5	1.5 to 9.0	9.0 to 15.0	> 15.0
Net post–capital expenditure surplus (deficit) as a share of total revenues (five-year average; %)	> 5.0	5.0 to 0.0	0.0 to (5.0)	> (5.0)

1 Refer to Appendix 1 for an explanation of DBRS Morningstar adjustments to reported financial figures. DBRS Morningstar notes that this metric is adjusted periodically.

General Considerations in Evaluating a Canadian Municipal Government's Credit Profile

Fiscal Balance

- Fiscal results are viewed by DBRS Morningstar as an indicator of management proficiency and commitment to fiscal sustainability. A municipal government's operating balance (operating revenues excluding capital revenues minus program expenditures excluding amortization expense) is an indicator of fiscal flexibility, while the net post–capital expenditures (capex) surplus (deficit) (operating balance minus net capex) better reflects overall fiscal sustainability and the potential financing requirements in each year.
- DBRS Morningstar notes that Canadian municipalities are required under legislation to balance their operating budgets, although capital investment and accounting consolidation may at times translate into sizable post-capex deficits and upward pressure on debt and tax rates.
- DBRS Morningstar views operating deficits negatively but will generally discount them if they are the result of nonrecurring events rather than a structural imbalance that the government shows little initiative in addressing. DBRS Morningstar refers to this practice as rating through the cycle.

Revenues

- The primary source of revenue for municipal governments is residential, commercial, and industrial property taxation. Other sources include user fees for services such as water and waste management, senior government grants, and earnings from government enterprises.
- While property tax revenues are subject to seasonal fluctuations based on tax collection dates, these dynamics are well understood and accounted for by municipal governments. Because Canadian municipalities do not tax income or consumption, they generally benefit from a more stable revenue base than provincial governments, as property taxation is also generally insulated from economic and home price cyclicality.
- Emphasis is placed on the resilience of major revenue sources, reliance on provincial government transfers, and competitiveness of the city's tax rates relative to neighbouring jurisdictions. DBRS Morningstar considers overreliance on uncertain or volatile revenue sources (e.g., real estate transfer taxes) to be a weakness in the fiscal management framework.
- Constraints in revenue-generating powers such as legislated caps on certain property tax rates, political willingness to raise taxes, and structural weaknesses in the government's tax system are also considered, including the ability of municipal revenue tools to adequately address inflationary pressures such as salary and benefit escalation and long-term capital investment requirements.
- DBRS Morningstar may make certain adjustments to reported revenue figures to exclude nonrecurring items and ultimately better reflect the underlying fiscal situation of a municipality.

Expenditures

- Municipal government expenditures are also generally predictable and considerably less exposed to demand pressures relative to provincial governments. They also follow patterns that do not vary significantly year to year.
- DBRS Morningstar distinguishes between three major types of expenditures: service and program expenses; capital investments and debt servicing, with an emphasis placed on identifying major trends; and actual and potential areas of pressures and sources of rigidities.

- In its analysis of program expenditures, DBRS Morningstar focuses on the government's primary service responsibilities and the relationship between key expenditure items and factors such as demographics and economic conditions to identify potential sources of fiscal volatility and pressure. Analysts review major program responsibilities established by the provincial government, focusing on the coherence and sustainability of programs and expected cost implications in relation to external revenue sources, if any, such as senior government grants.
- Capital investment accounts for a considerable portion of municipal spending. Municipal governments have some flexibility to manage and partially defer capital spending in the near term in response to both internal budget pressures and external factors, including variability in senior government capital funding. This has contributed to the buildup of significant deferred maintenance deficits in most large Canadian municipalities. However, over the long term, capital investment requirements represent the key driver of debt growth for municipal governments, which are only permitted to borrow for capital purposes.
- DBRS Morningstar considers the capital investment requirements faced by the municipality, including for the state of good repair of public infrastructure and for growth-related investments. This typically includes major public transit infrastructure, roadways and bridges, and municipal water and sewer systems. Financing methods and accounting rules for capital spending are also reviewed to understand the debt implications of projected capital needs.
- Debt servicing is the most rigid expenditure category and can constitute a meaningful portion of a government's budget. Thus the stability and trend of a municipality's debt servicing requirements are important considerations

Balance Sheet and Financial Flexibility Considerations

- The sustainability of a municipality's debt burden and balance sheet flexibility are central considerations in the determination of a credit rating. DBRS Morningstar examines current and projected levels of indebtedness and considers the full range of factors that could affect the debt burden and related servicing requirements.
- The primary focus is on tax-supported debt, which includes financial obligations for which taxpayers are directly accountable. This concept captures tax-supported debt directly issued by the municipality as well as the financial obligations of any other related tax-supported organization that is within municipal jurisdiction (e.g., transit authorities).
- Debt is measured by DBRS Morningstar net of sinking funds and other quality assets set aside explicitly for debt-retirement purposes. The tax-supported debt figure is compared with the municipality's taxable assessment base and on a per-capita basis to assess debt affordability. (See Appendix 1 for DBRS Morningstar's definition of tax-supported debt.)
- Self-supporting debt, which is issued by or for commercial or potentially commercial municipal government enterprises or assets and serviced by a distinct revenue stream (e.g., electric utilities or water services), is analyzed separately by DBRS Morningstar for its affordability and is generally allocated a lesser weighting in the credit review. (See Appendix 1 for DBRS Morningstar's definition of self-supporting debt.)
- Because of the general stability and predictability of revenue and expenditures, liquidity is typically not a material source of concern for Canada's major municipalities, but DBRS Morningstar conducts an

assessment to identify potential liquidity vulnerabilities (see the Overlay Factors: Liquidity section for more information).

Blending the CRFs and FRA into an Issuer Rating

- The core assessment is a blend of the CRFs and FRA. In most cases, the CRFs will have greater weight than the FRA in determining the issuer rating.
- At the low end of the rating scale, however, particularly in the B range and below, the FRA and liquidity factors play a much larger role. The CRFs would, therefore, receive a lower weighting than it would at higher rating levels.
- In addition, DBRS Morningstar also takes into consideration the volatility of an issuer's FRA in arriving at the final rating. An issuer with more volatile credit metrics than its industry peers may be rated lower than it would otherwise be based on a blend of the CRFs and FRA. The lower rating reflects the higher risk, especially in a downturn, associated with the increased volatility.

Overlay Factors

Liquidity

- Given the stability and predictability of municipal government revenues and expenditures, combined with legislative requirements to balance operating budgets, liquidity is typically not a material source of concern for Canada's major municipalities.
- External financing requirements for capital investment and refinancing needs have the potential to create liquidity pressures, although DBRS Morningstar notes that Canadian municipalities generally benefit from (1) access to the lending programs of provincially created municipal finance agencies (Municipal Finance Authority of B.C., Infrastructure Ontario, Alberta Capital Finance Authority, etc.); (2) widespread of sinking funds to retire maturing bullet debentures, largely eliminating refinancing risk for many municipalities and resulting in significant pools of available liquidity; and (3) the ability to partially defer or curtail capital investment in the near term to preserve cash and reserves, which combine to further mitigate concerns with respect to liquidity.
- Nonetheless, similar to other rated sectors, DBRS Morningstar conducts a qualitative liquidity assessment based on four key liquidity determinants (i.e., liquid reserves, capex financing, refinancing needs (if any), and access to external financing) in order to identify potential vulnerabilities in an issuer's liquidity profile.
- Material deficiencies identified in the liquidity assessment may exert downward pressure on the rating.

Ownership of Valuable Municipal Corporations

- DBRS Morningstar considers material benefits generated by the municipal ownership of self-supporting corporations as fulfilling commercial mandates. Electricity-generating utilities are the most common type of valuable corporations owned by major Canadian municipalities. These entities often generate steady dividend streams that contribute positively to fiscal results and could be monetized, if needed, to significantly reduce debt. However, ownership of poorly performing corporations can represent a drain on municipal resources and potentially add to tax-supported debt obligations.

ESG Considerations

- Environmental, Social, and Governance (ESG) factors may affect a credit rating and/or the related credit analysis. The impact of ESG factors may vary across industries, sectors, or asset classes and is described in the *DBRS Morningstar Criteria: Approach to Environmental, Social, and Governance Risk Factors in Credit Ratings*. Where an ESG factor is material to a corporate rating, but is not otherwise addressed in a BRA/FRA factor or other overlay, DBRS Morningstar will reflect the impact of the ESG factor on the rating through this general ESG overlay.

Rating the Specific Instrument and Other Criteria

- The issuer rating (which is an indicator of the probability of default of an issuer's debt) is the basis for rating specific instruments of an issuer, where applicable. DBRS Morningstar uses a hierarchy in rating long-term debt that affects issuers that have classes of debt that do not rank equally. In most cases, lower-ranking classes would receive a lower DBRS Morningstar rating. For more detail on this subject, please refer to the general rating information contained in DBRS Morningstar's "Credit Ratings Global Policy."
- In addition to this methodology, the following criteria may be used from time to time in determining a rating.
- For a discussion of the relationship between short- and long-term ratings and more detail on liquidity factors, please refer to the DBRS Morningstar policy "Short-Term and Long-Term Rating Relationships" and *DBRS Morningstar Criteria: Commercial Paper Liquidity Support for Nonbank Issuers*.
- Guarantees and other types of support are discussed in *DBRS Morningstar Criteria: Guarantees and Other Forms of Support*.

Appendix 1: DBRS Morningstar Adjustments to Reported Financial Figures

In certain circumstances, DBRS Morningstar may adjust the financial results reported by a municipal government in order to (1) allow for a better comparison among peers, (2) capture all material tax-supported debt, (3) exclude debt deemed to be self-supporting within the reporting entity, and/or (4) present fiscal results that are more reflective of the impact of government activities on indebtedness. The most frequent adjustments relate to the following areas:

1. **Net Tax-Supported Debt:** In an effort to capture the full extent of debt obligations to the account of taxpayers, DBRS Morningstar sums the debt of all activities and entities supported in a significant fashion by tax proceeds, such as public transit, road investments, and general municipal services and operations. Tax-supported debt is measured by DBRS Morningstar net of sinking funds and other quality assets set aside explicitly for debt-retirement purposes.

   Tax-supported debt includes direct debt and other long-term capital obligations such as capital leases or liabilities arising from public-private partnership (also known as Alternative Financing and Procurement) contracts if these obligations are materially supported by tax proceeds.

2. **Self-Supporting Debt:** DBRS Morningstar considers certain debt or long-term capital obligations as self-supporting and separate from the tax-supported debt burden. Debt or long-term capital obligations are considered self-supporting provided that the services or assets have commercial value and are operated on a commercially sustainable basis, are highly unlikely to require government support, and are mostly (if not entirely) supported by user fees, a rate base, a levy, or an otherwise distinct revenue stream (e.g., toll revenue) dedicated to servicing and repaying the associated debt or long-term capital obligation. DBRS Morningstar believes that these services or assets could potentially be monetized to repay the related debt obligations if the municipality faced serious financial stress. These activities may include municipal electricity generation and distribution, water treatment/distribution, and tolled transportation and transit infrastructure. Based on the proportion of the direct debt or long-term capital obligation that is serviced and repaid through a user fee, rate base, levy, or otherwise distinct revenue stream, DBRS Morningstar may, on a case-by-case basis, treat that proportion of the obligation as self-supporting.

   In addition, DBRS Morningstar may consider debt leveraged against long-term senior government grants (e.g., federal fuel tax grants) to be self-supported and may therefore exclude such debt from tax-supported debt calculations provided (A) the grants fully cover debt servicing requirements of the related debt, (B) the term of the debt does not exceed the useful life of the assets being funded, (C) the municipality discloses the value of such debt in its financial statements, and (D) the

commitment from the senior government is secured in legislation or by established government policies.

3. **Capex Treatment:** DBRS Morningstar converts capex from an amortization basis to a pay-as-you-go basis to get fiscal results that are more reflective of the full extent of municipal government spending and of external financing needs for a given year.

4. **Nonrecurring Items:** Fiscal results sometimes include extraordinary items that introduce distortions in results and hinder year-over-year comparisons of results. These may include asset sales performed to boost revenues and balance budgets in challenging fiscal times, restructuring costs, or write-offs of tax receivables. DBRS Morningstar attempts to remove all material nonrecurring items from reported results in order to better understand the underlying fiscal position of a municipality.

Appendix 2: Key Financial Ratios

Exhibit 3 Key Financial Ratios

Net Tax-Supported Debt Per Capita	Net tax-supported debt ÷ Total population of the municipality (as reported in most recent census or population estimate) Where, net tax-supported debt is gross market debt outstanding, less • Self-supporting debt (see Appendix 1) • Dedicated debt retirement/sinking funds and debt reserves • Amounts recoverable from senior governments • Municipal government holdings of its own debt obligations (outside of sinking funds)
Net Tax-Supported Debt as a Percentage of Taxable Assessment	Net tax-supported debt (see definition above) ÷ Total residential, commercial, industrial, and farm assessment value (as reported by the municipality or provincial government)
Interest Costs as a Percentage of Total Revenues	Interest charges on market debt outstanding (net of interest earned on sinking funds) ÷ Total revenues (net of interest earned on sinking funds)
Net Post-Capex Surplus (Deficit) as a Share of Total Revenues (Five-Year Average)	Operating surplus (deficit), net of amortization expenses – Net capex (gross capex, minus capital revenues (senior government grants and developer contributions)) ÷ Total revenues

About DBRS Morningstar

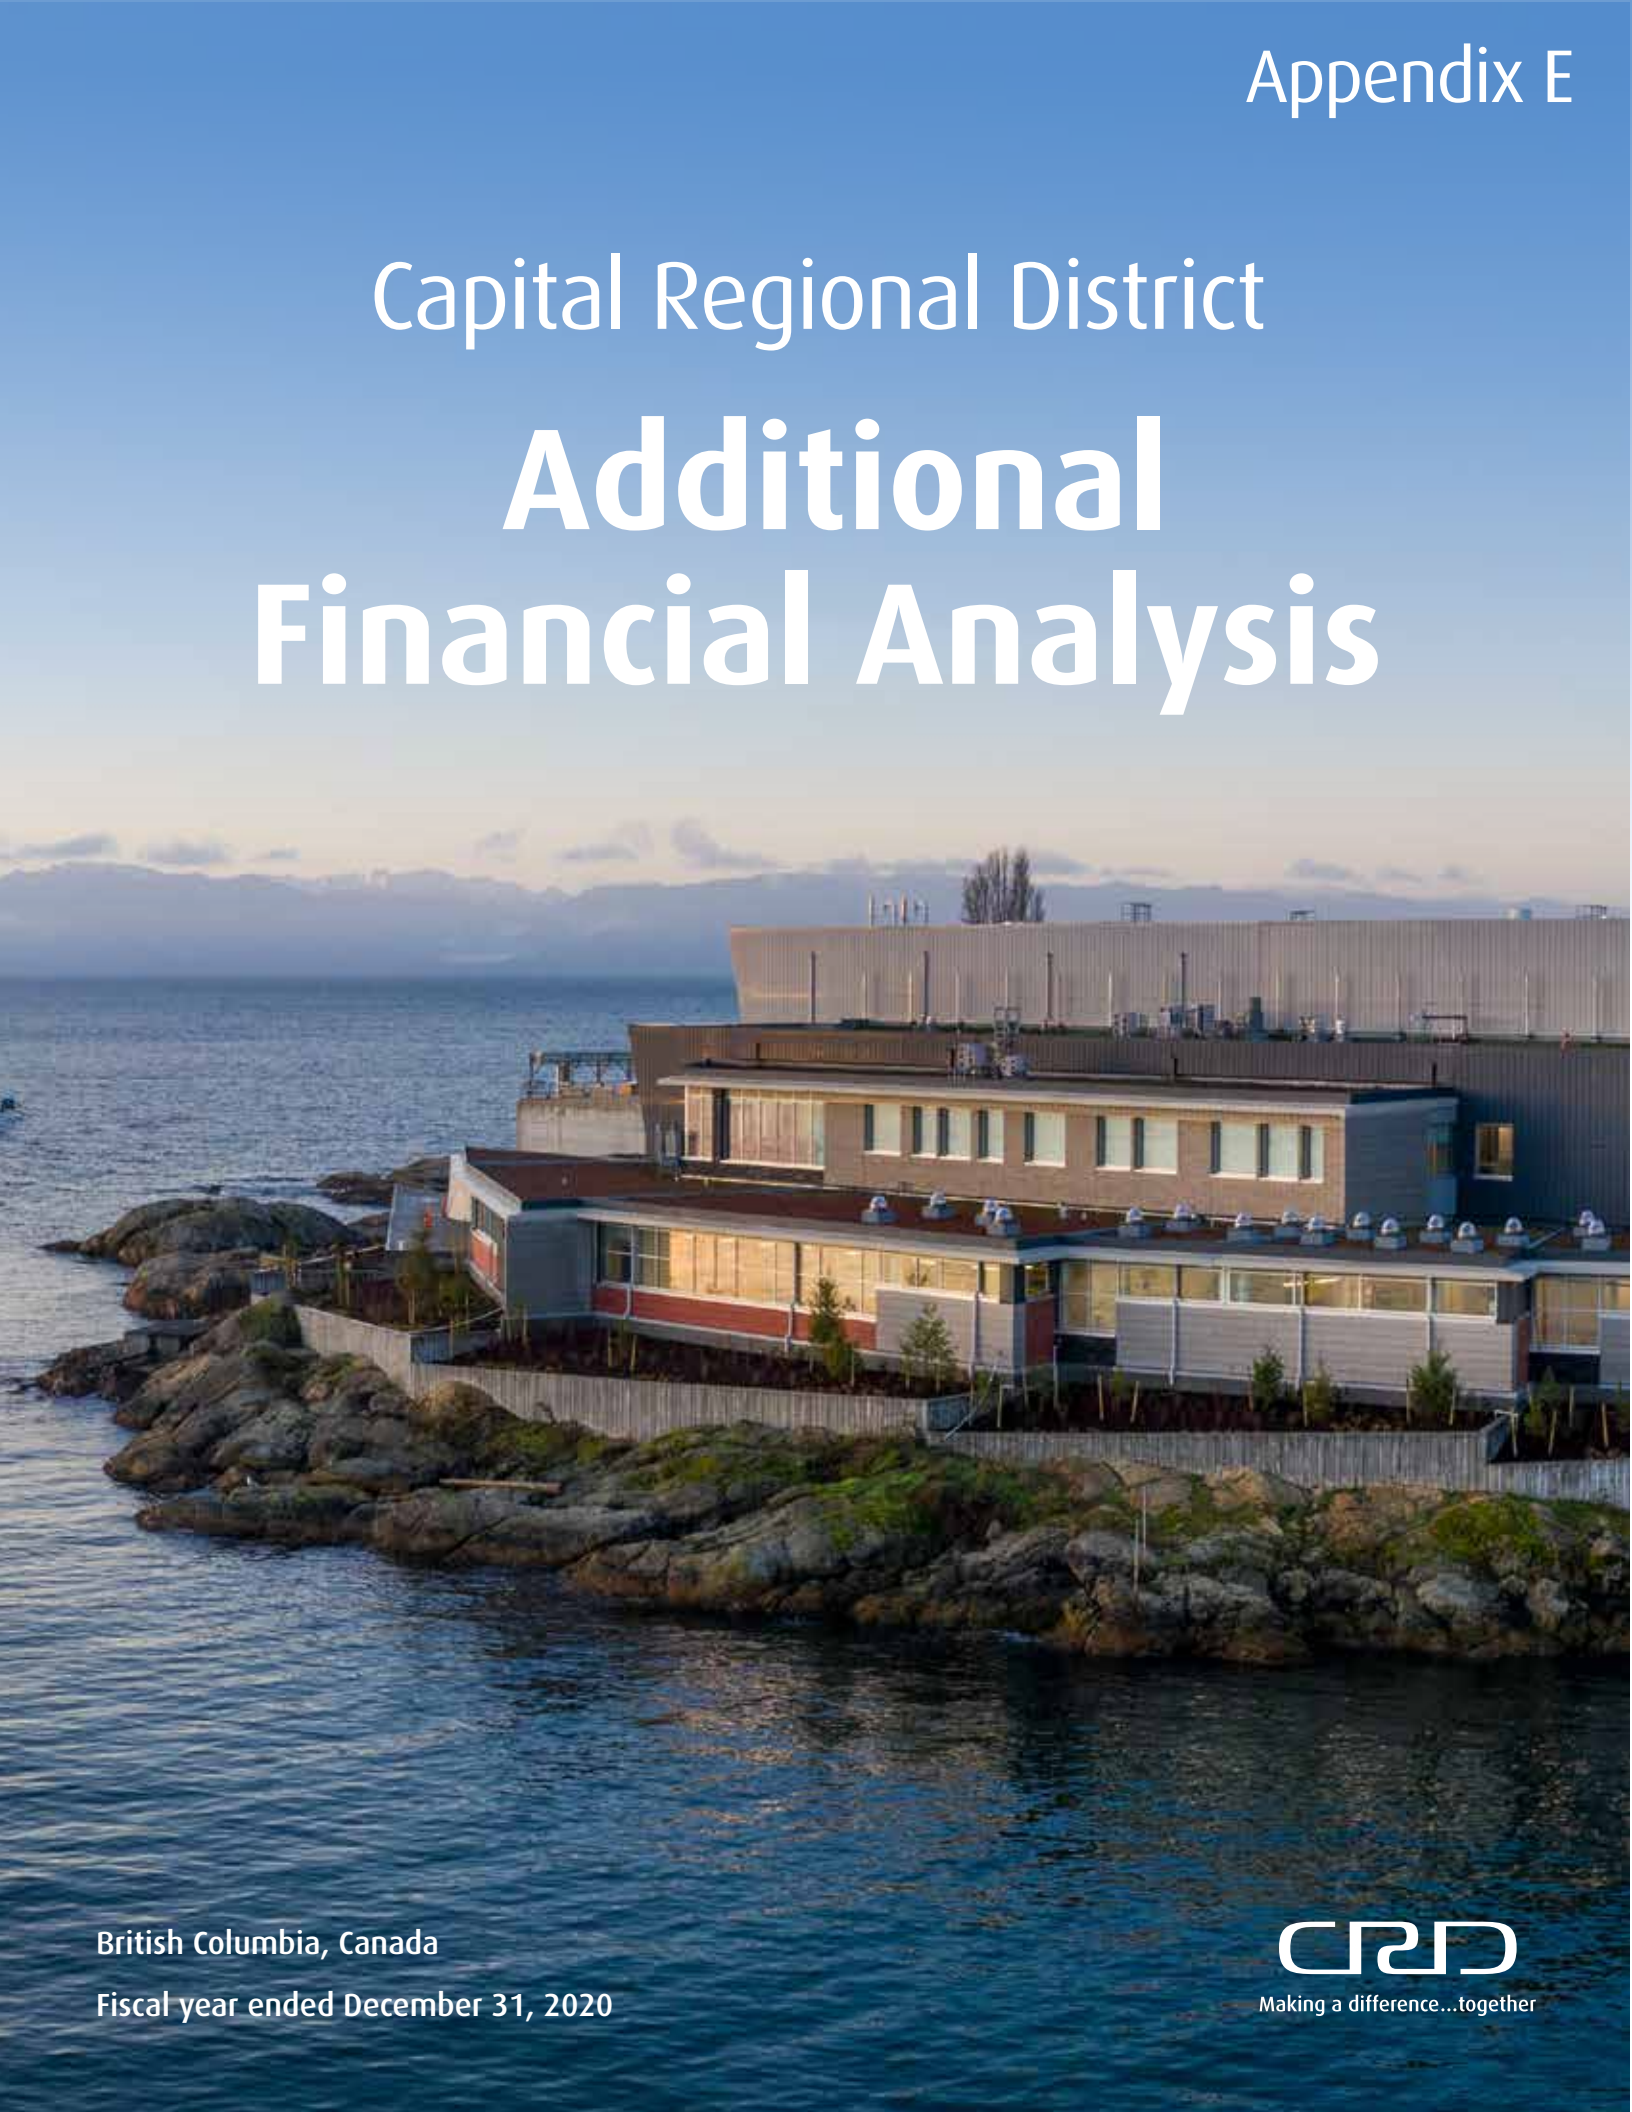
DBRS Morningstar is a global credit ratings business with approximately 700 employees in eight offices globally.

On July 2, 2019, Morningstar, Inc. completed its acquisition of DBRS. Combining DBRS' strong market presence in Canada, the U.S., and Europe with Morningstar Credit Ratings' U.S. footprint has expanded global asset class coverage and provided investors with an enhanced platform featuring thought leadership, analysis, and research. DBRS and Morningstar Credit Ratings are committed to empowering investor success, serving the market through leading-edge technology and raising the bar for the industry.

Together as DBRS Morningstar, we are the world's fourth-largest credit ratings agency and a market leader in Canada, the U.S., and Europe in multiple asset classes. We rate more than 2,600 issuers and 54,000 securities worldwide and are driven to bring more clarity, diversity, and responsiveness to the ratings process. Our approach and size provide the agility to respond to customers' needs, while being large enough to provide the necessary expertise and resources.

The DBRS group of companies consists of DBRS, Inc. (Delaware, U.S.)(NRSRO, DRO affiliate); DBRS Limited (Ontario, Canada)(DRO, NRSRO affiliate); DBRS Ratings GmbH (Frankfurt, Germany)(CRA, NRSRO affiliate, DRO affiliate); and DBRS Ratings Limited (England and Wales)(CRA, NRSRO affiliate, DRO affiliate). Morningstar Credit Ratings, LLC is a NRSRO affiliate of DBRS, Inc.

For more information on regulatory registrations, recognitions and approvals of the DBRS group of companies and Morningstar Credit Ratings, LLC, please see: http://www.dbrsmorningstar.com/research/highlights.pdf.



The DBRS group and Morningstar Credit Ratings, LLC are wholly-owned subsidiaries of Morningstar, Inc.

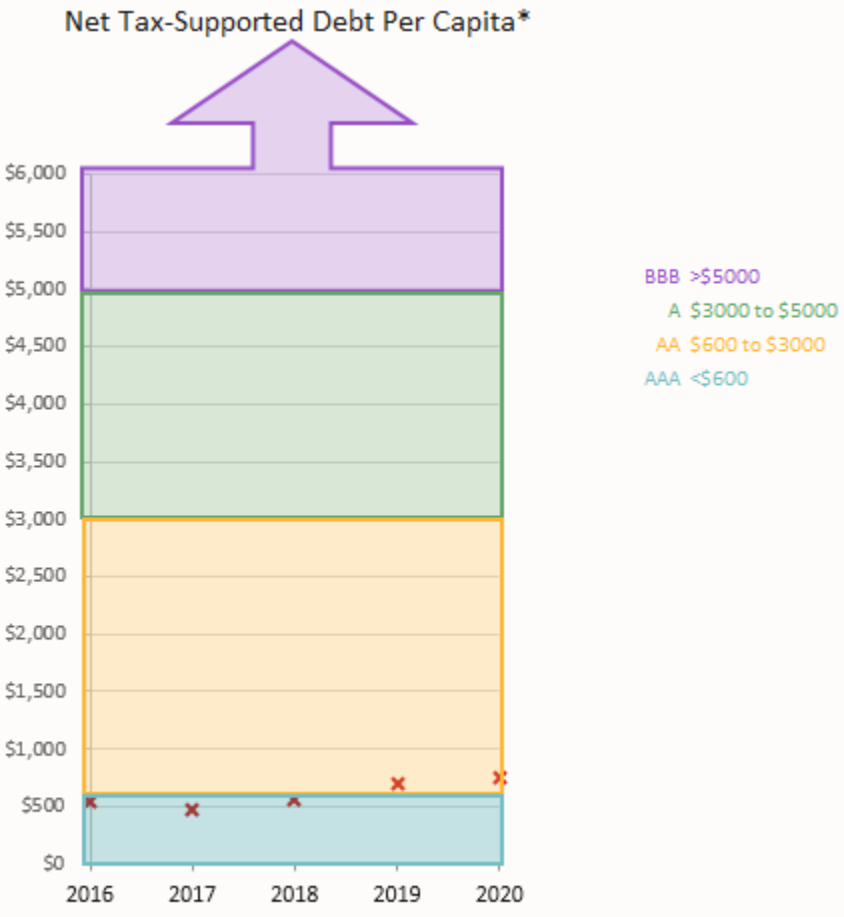
11. Capital investment versus amortization.....14

Introduction

The financial performance of the organization is illustrated in the financial indicators contained in this appendix. These indicators should be read in conjunction with the 2020 Audited Financial Statements and accompanying notes. These measures demonstrate a consistent, healthy financial position based on current operational needs, existing market conditions and debt servicing costs. Net debt decreased by $20.0 million and the debt ratios using the DBRS rating methodology demonstrate the CRD is able to meet its obligations and is unlikely to be adversely affected by future events.

DBRS is Canada's largest and the world's fourth largest credit rating agency, respected for its independent, third-party evaluation of credit quality. They publish research whitepapers describing their methodology of rating Canadian municipal governments (Appendix C). Their methodology includes analyzing the economic environment within which the government operates, and assessing fiscal management by looking at revenue generation, program responsibilities and fiscal discipline, as well as at the coherence and appropriateness of the strategies, policies and processes governing the planning and allocation of public funds. Other critical rating factors include financial management in terms of debt and liquidity, and relations with senior governments.

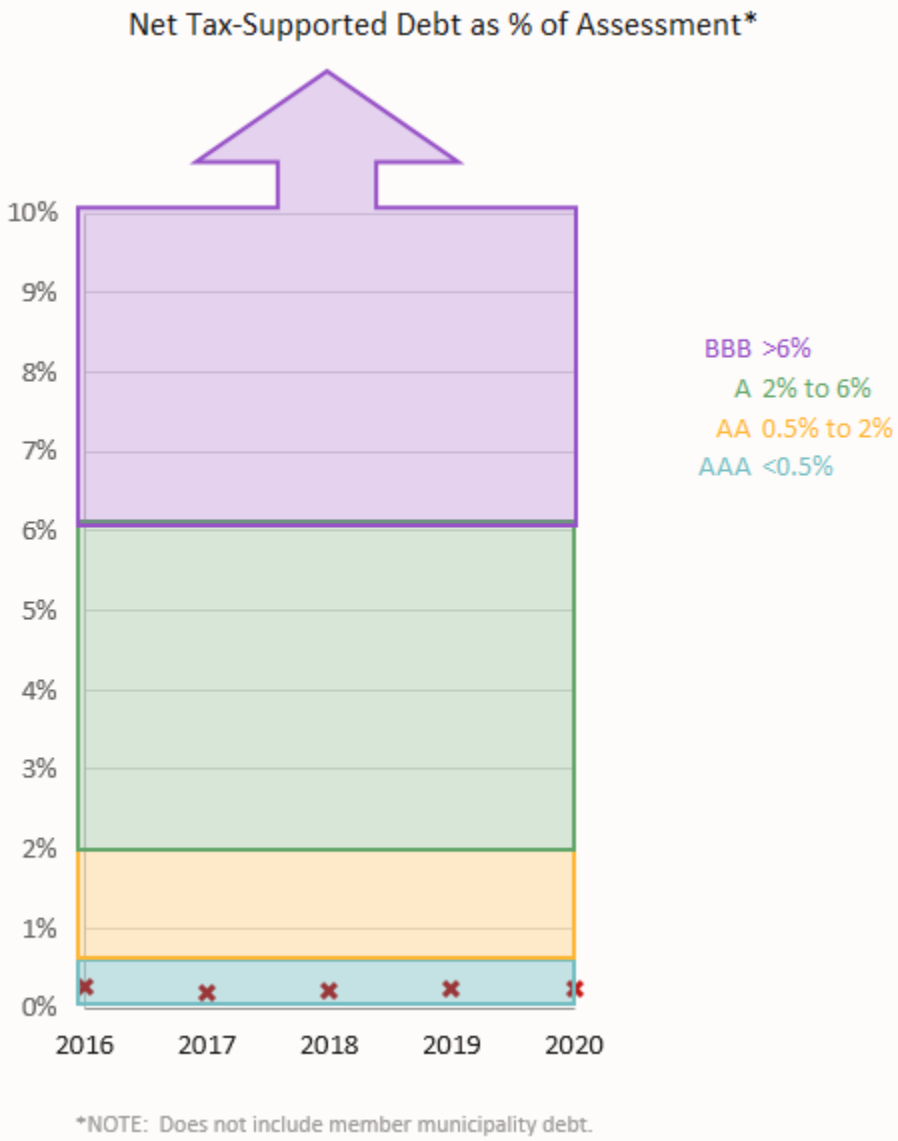


Although the final rating considers a blend of both operating risk and financial risk in their entirety, key ratios can provide a quick measure in assessing the government's financial strength— its ability to make timely payments on outstanding obligations (whether principal, interest, or other expenditures) with respect to the terms of the obligation. The following pages outline CRD key ratios.

The four ratings, from exceptional to adequate credit quality, are:

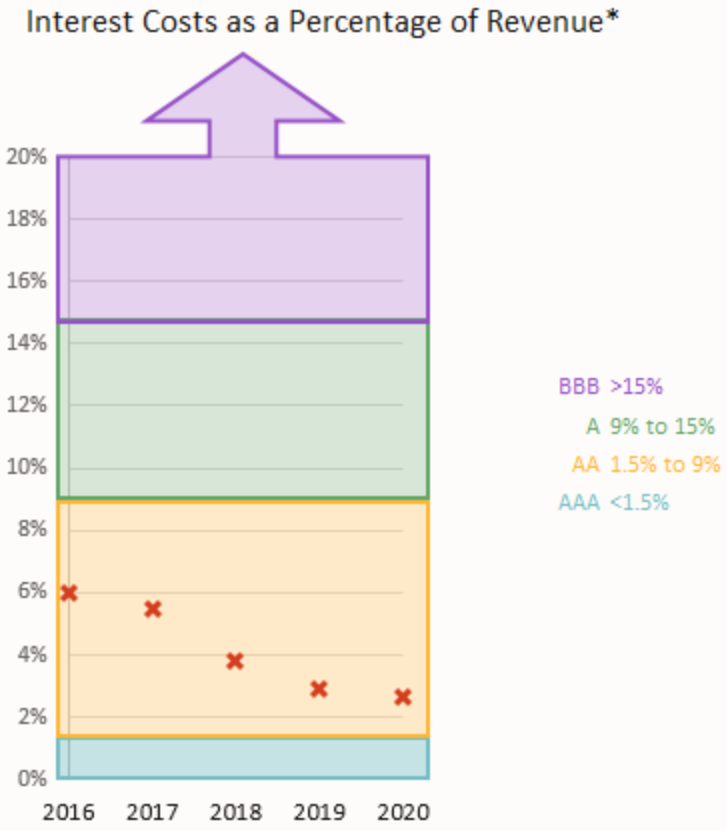
1. 'AAA' – The capacity for the payment of financial obligations is exceptionally high and unlikely to be adversely affected by future events.
2. 'AA' – The capacity for the payment of financial obligations is considered high. Differs from AAA only to a small degree. Unlikely to be significantly vulnerable to future events.
3. 'A' – The capacity for the payment of financial obligations is substantial. May be vulnerable to future events, but considered manageable.
4. 'BBB' – Adequate credit quality. The capacity for the payment of financial obligations is considered acceptable. May be vulnerable to future events.

1) Net Tax- Supported Debt Per Capita



Tax-Supported Debt includes financial obligations for which taxpayers are directly accountable. Net Tax-Supported Debt per Capita is a measure of CRD's debt, excluding member municipality debt, expressed in terms of the amount attributable to each citizen under CRD's jurisdiction. This indicator is an important factor when analyzing CRD's ability to continue paying its debt service costs through current levels of tax revenue. This indicator had been trending downwards as CRD reduced its net debt obligations through to 2017. However, in 2019 and 2020 the metric trended upwards. In 2020, there was a $25 million net increase in borrowing mainly due to $61 million increase related to the Regional Housing First Program and a pay down of $30 million related to Core Area Wastewater Program as construction nears completion. The net tax-supported debt per capita is $751 as at fiscal end 2020 ($703 – 2019), within the AA rating threshold of $600 to $3000.

*NOTE: Does not include member municipality debt.
Ratings assessed using DBRS methodology issued in May 2020



2) Net Tax-Supported Debt as a Percentage of Assessment

A second measure to assess debt affordability, this ratio takes the same net tax-supported debt as above and expresses it in terms of taxable assessment. This indicator is 0.25% in 2020 (0.24% - 2019), well within the AAA rating threshold of 0.5%.

3) Interest Costs/ Total Revenue

This is the percentage of revenue committed to payment of interest on temporary and long-term debt (excluding municipal debt) for CRD services. A high percentage indicates greater use of revenues for servicing interest on outstanding debt, and less ability to adjust to unplanned events and changing circumstances. Interest as a percentage of total revenue was 2.62% in 2020 (2.90% - 2019), resulting in an AA rating.

*NOTE: does not include member municipality debt

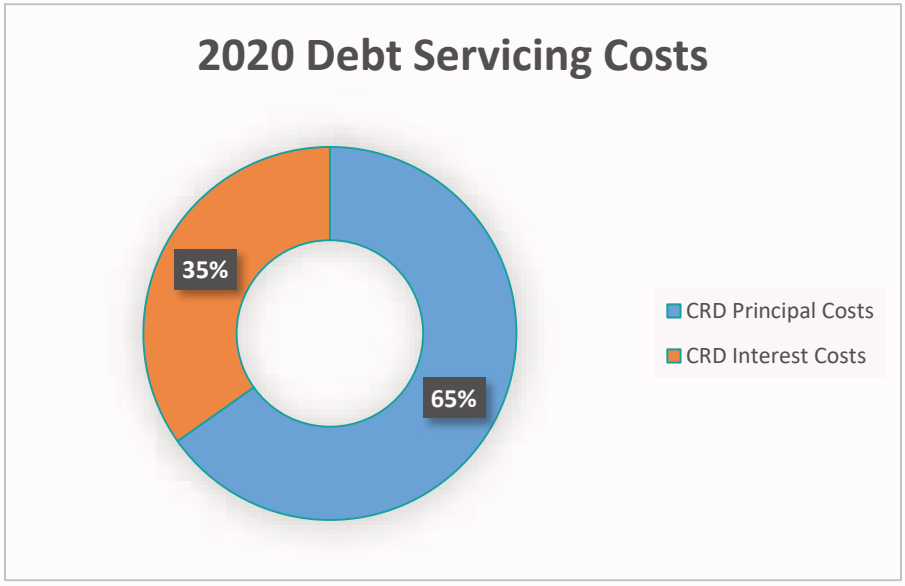
4) Net Post-capex surplus (deficit) as a share of total revenues (5 year average)

The net post-capex surplus (deficit) (operating balance minus net capital expenditures) reflects overall fiscal sustainability in each year. Net Post-capex surplus as a share of total revenue, 5 year average, for 2016-2020 is 1.4%, resulting in an AA rating. The decline in this ratio from 2019 (1.5%) is due to the continued increase in capital expenditures relating to CAWTP in 2020. The expenditure levels for CAWTP were expected to peak in 2019 and will decline through 2021.

	2015-2019 Average		2016-2020 Average	
Surplus post-capex	4,033,360	**1.5%**	4,317,225	**1.4%**
Total Revenue	262,945,692		307,647,812	
		AA		**AA**

*NOTE: does not include member municipality debt

BBB	> -5.0%
A	0.0% to -5.0%
AA	5.0% to 0.0%
AAA	>5.0%

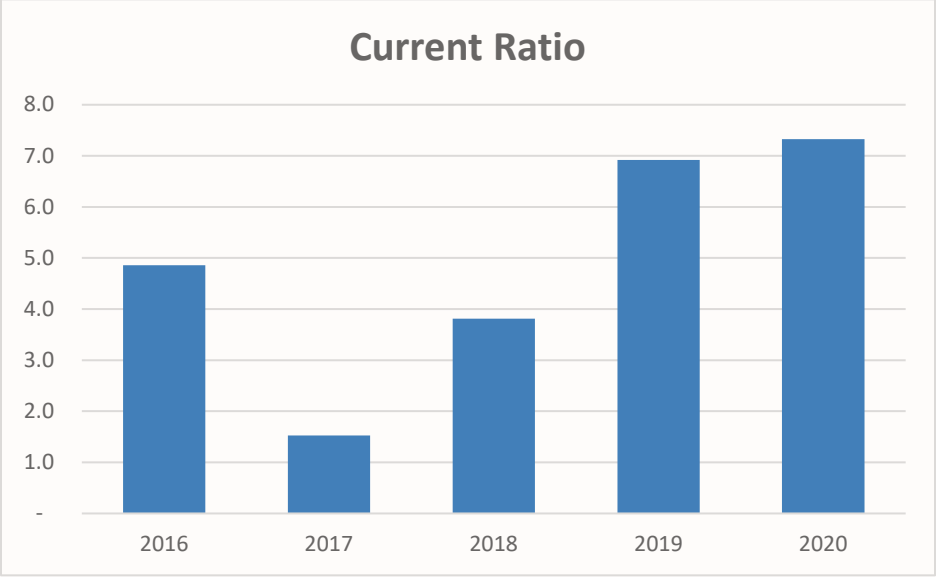


5) Debt Service Costs / Total Revenue

Related to indicator 3, this is the percentage of revenue committed to the payment of interest and principal on temporary and long-term debt. A high percentage indicates greater use of revenue for the repayment of debt, and less ability to adjust to unplanned events and changing circumstances. The CRD's average debt service cost (excluding municipal debt) over revenue for the last four years averages 12.1%, while the 2020 result is down to 7.6%. This decline from 2017 onwards is the result of increased total revenues from government grants received for CAWTP combined with a 6.9% increase in debt service costs. Interest rates on long-term debt have also been decreasing which attributes to a lower percentage.

6) Principal and Interest as Proportion of Debt Service Costs

This measure indicates how much of the debt service payments are repaying principal amounts borrowed versus paying interest costs. The split between interest and principal will change when interest rates change and when longer or shorter terms to maturity are selected. In 2020, CRD debt service payments repaid principal of 65% (2019: 59%) and interest of 35% (2019: 41%). The decrease in interest costs is consistent with the declining Bank of Canada overnight rate in response to the economic impacts of COVID-19.



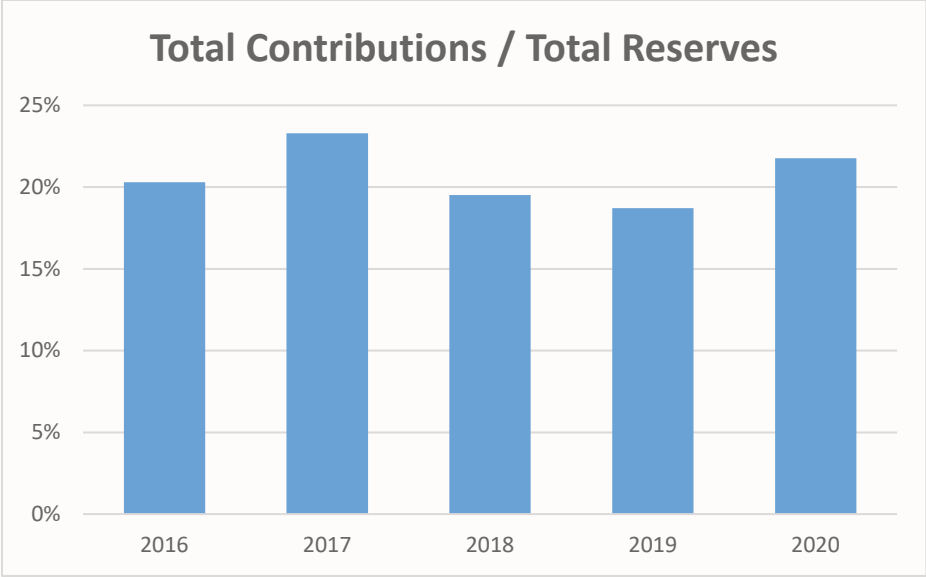
7) Current Ratio

The current ratio is a measure of the liquidity of an organization, meaning CRD's ability to meet current obligations (accounts payable) through current assets (cash and accounts receivable) of the organization. A high ratio indicates a greater ability to meet budgeted and unexpected expenditures. The current ratio has increased to 7.3 for 2020 (adjusted to exclude balances for CAWTP) which was primarily driven by funding held on deposit at year end. Generally a current ratio greater than one is considered healthy for a government entity.

(in 000s)

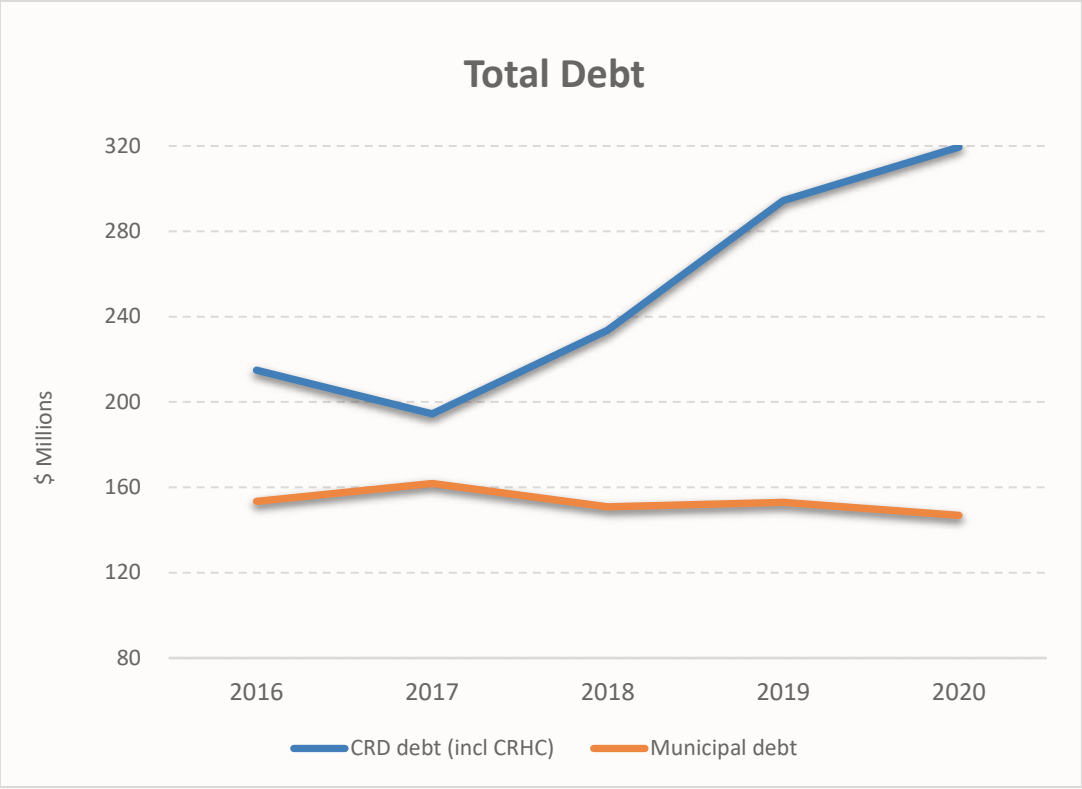
	2016 Actual	2017 Actual	2018 Actual	2019 Actual	2020 Actual
Current Assets	102,667 **4.9 : 1**	45,350 **1.5 : 1**	88,199 **3.8 : 1**	201,762 **6.9 : 1**	194,953 **7.3 : 1**
Current Liabilities	21,129	29,744	23,126	29,150	26,614

*Actual excludes CAWTP



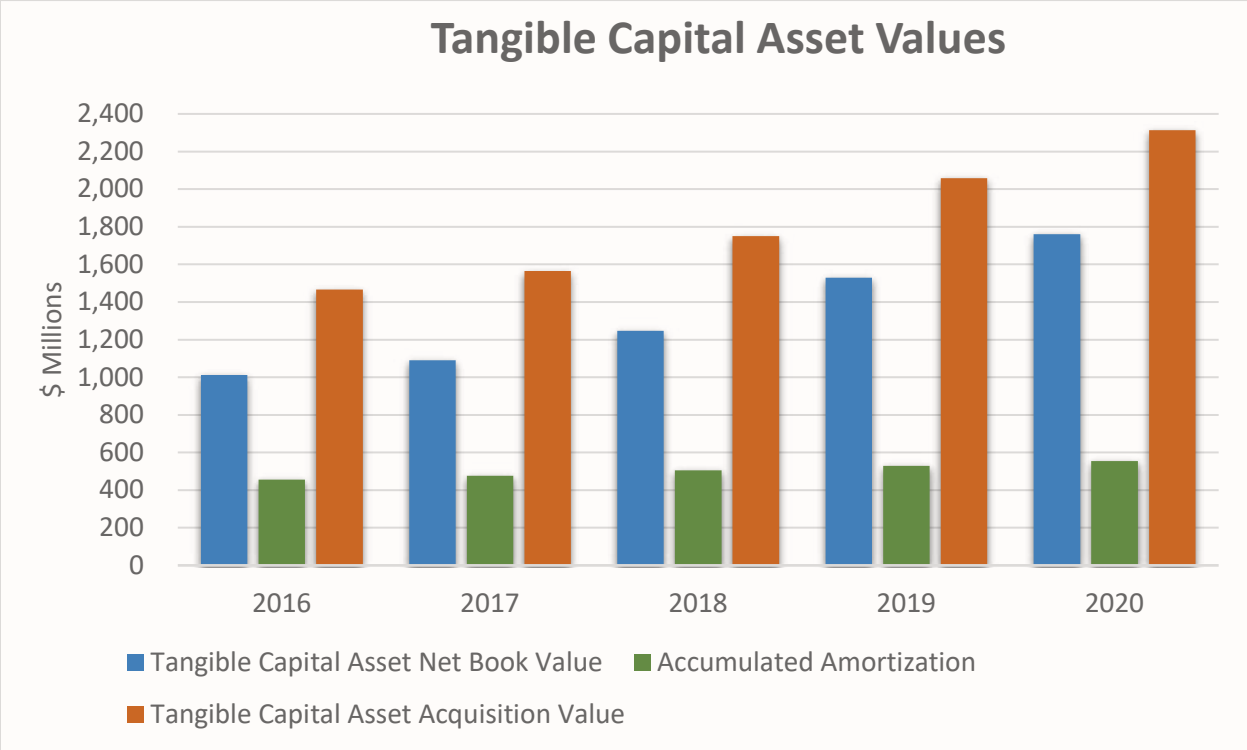
8) Contributions to Reserves / Total Reserves

The following graph shows the percentage of total reserve contributions to total reserve balances. For the last four years, the CRD has been contributing an average of 20.8% per year to reserves. The CRD continues to contribute to reserves in order to sustain the existing infrastructure, maintain consistent debt servicing levels, and leverage grant funding.



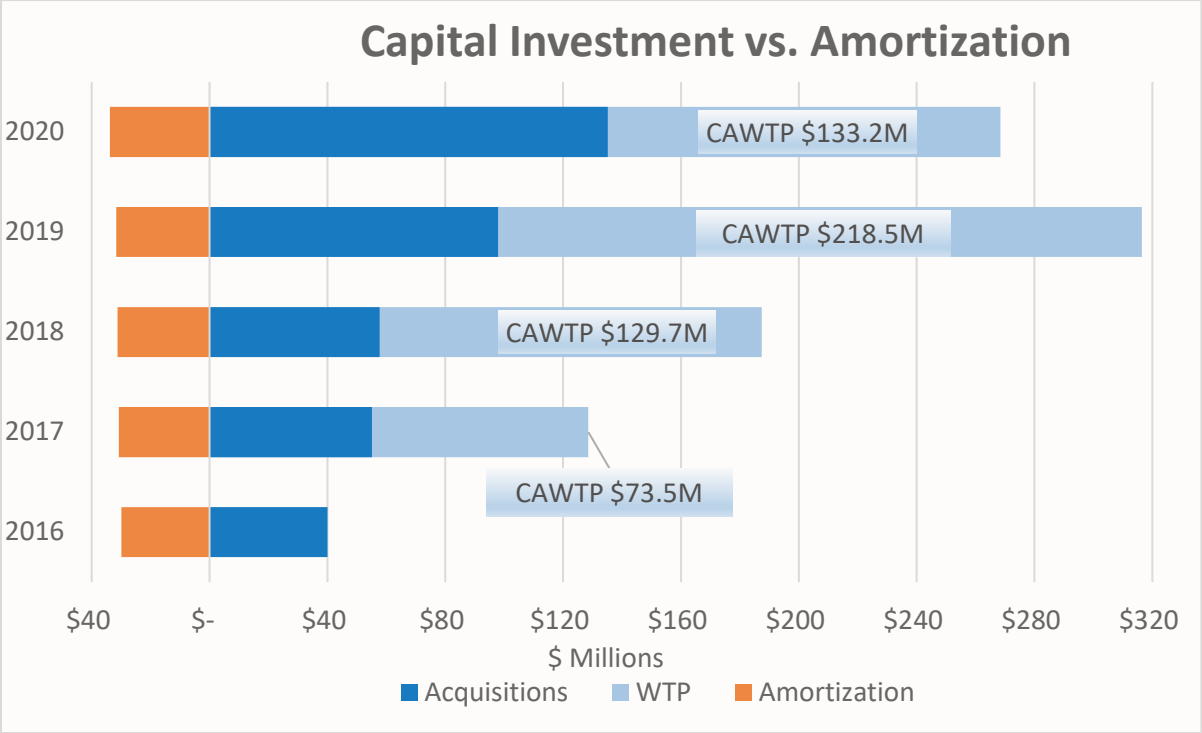
(in 000s)

	2016 Actual		2017 Actual		2018 Actual		2019 Actual		2020 Actual	
Reserve Contributions	21,890	**20.3%**	27,995	**23.3%**	26,145	**19.5%**	25,789	**18.7%**	30,785	**21.8%**
Total Reserves	107,817		120,179		134,029		137,814		141,413	



9) Total Debt

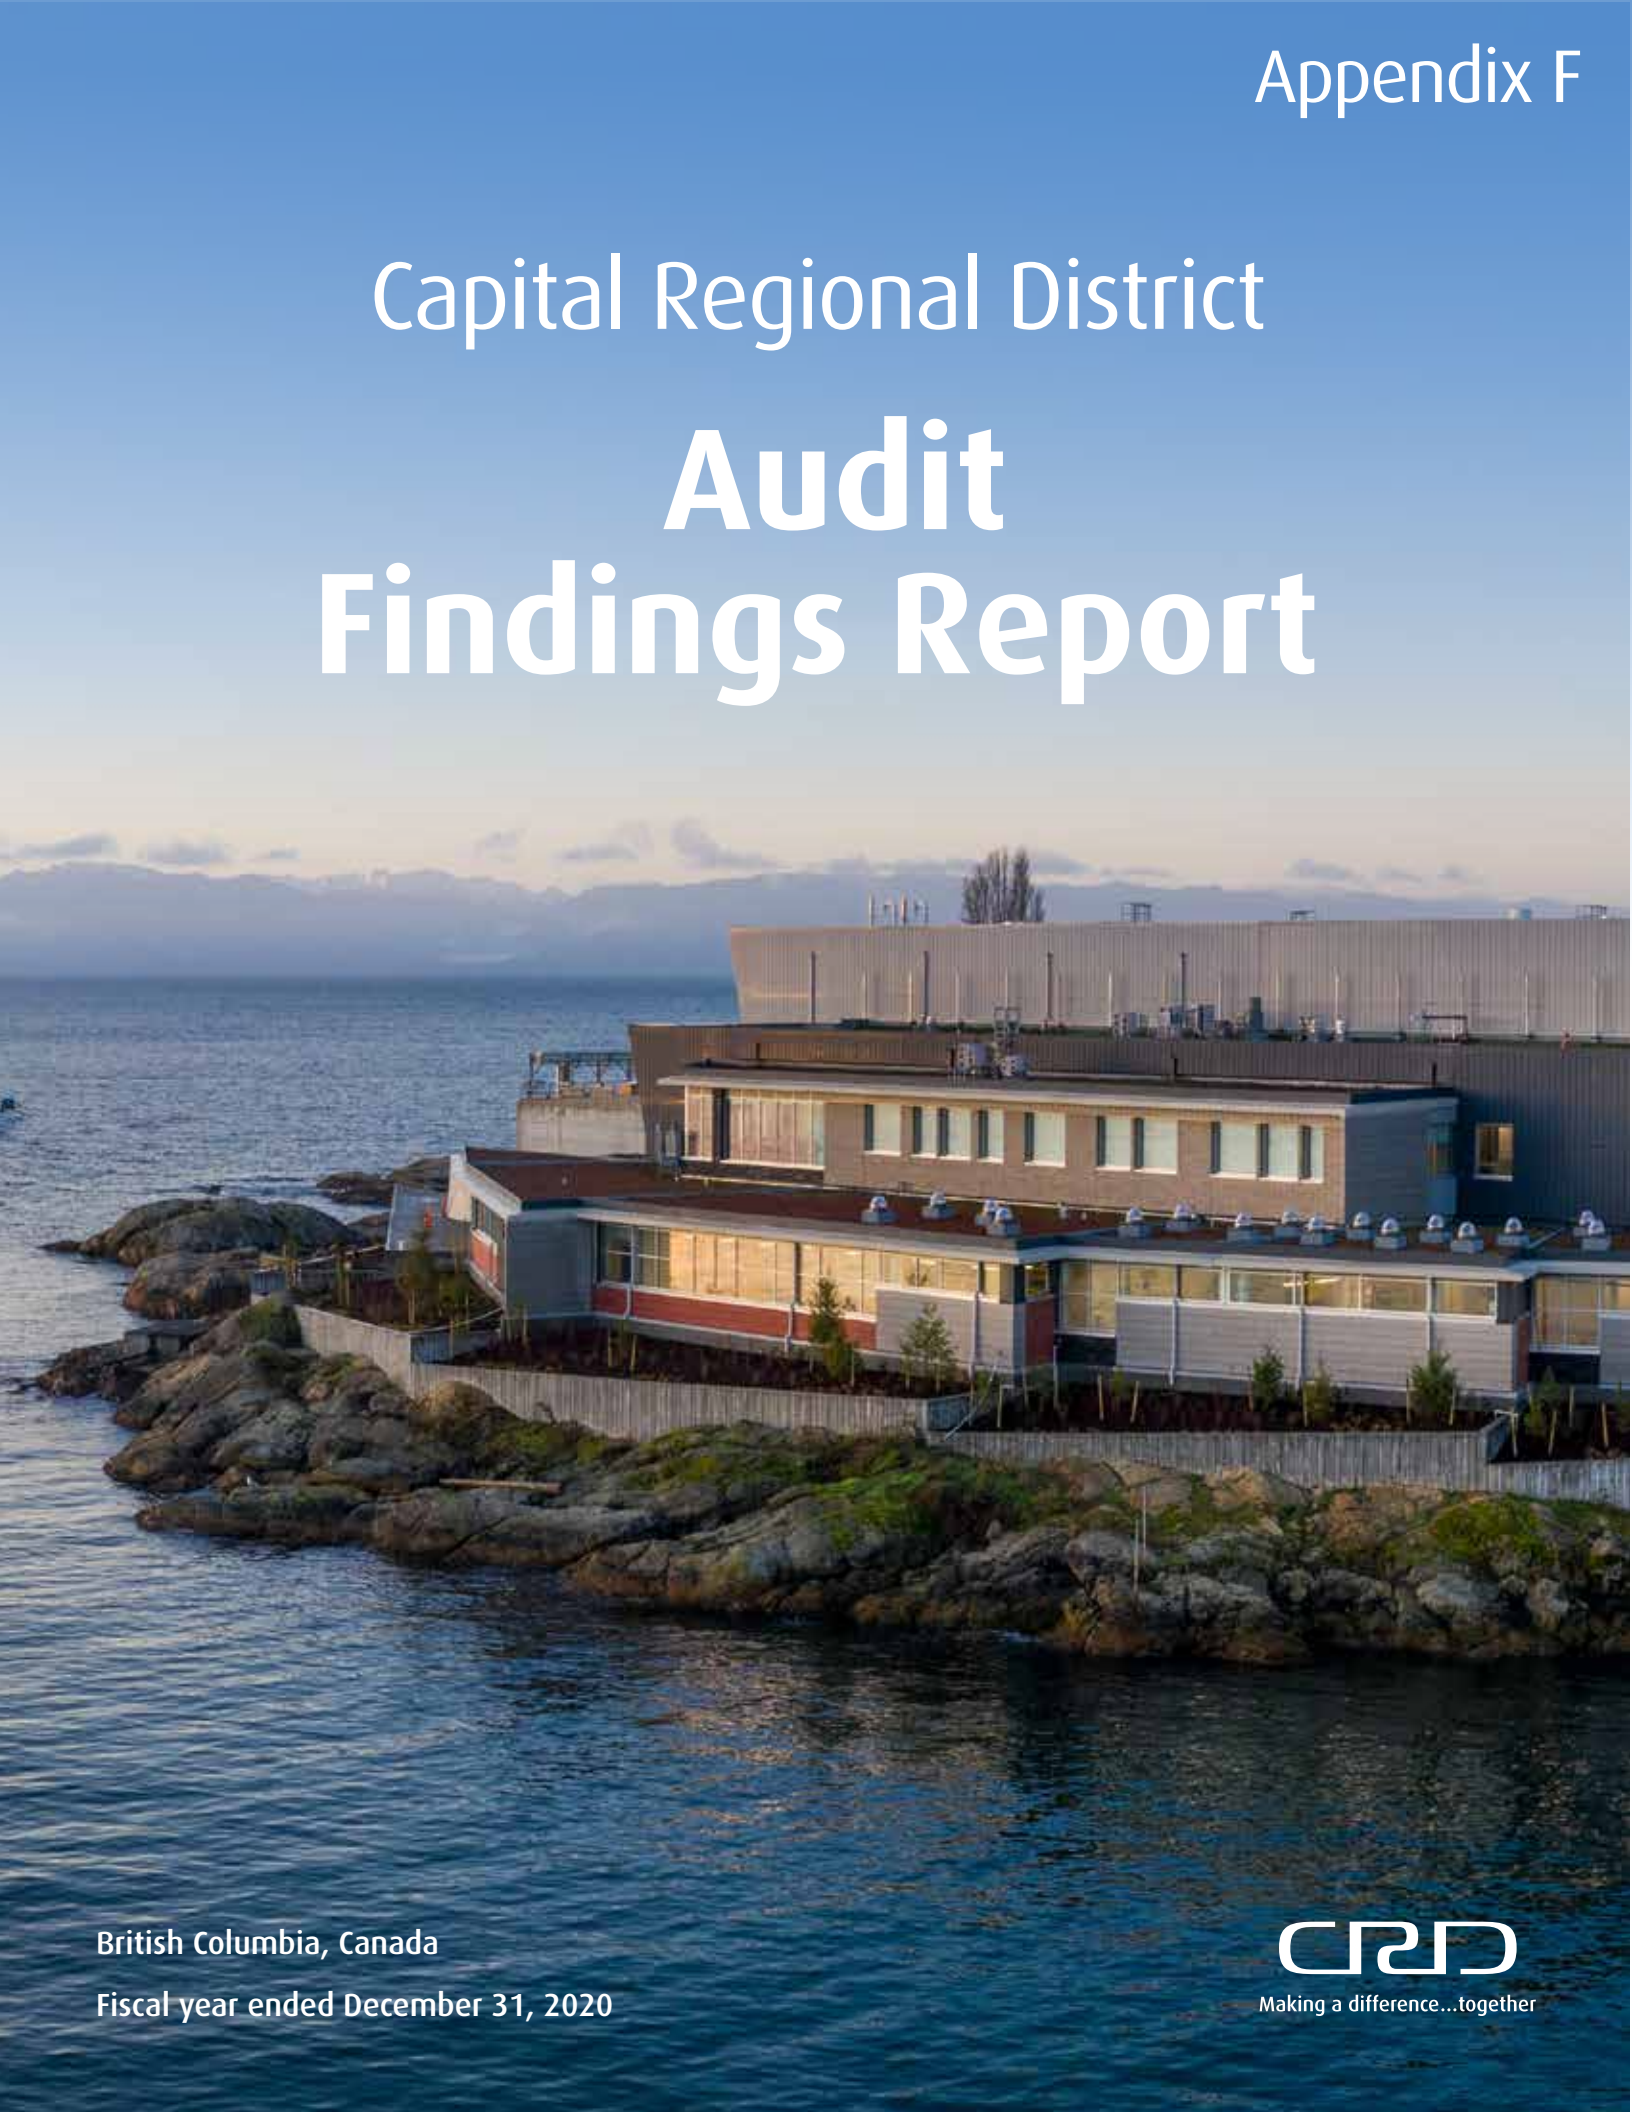
The CRD borrows long and short-term debt through the Municipal Finance Authority (MFA), who pools the borrowing and investment needs of BC communities to offer better rates of borrowing. In addition to debt incurred directly, the CRD also incurs long-term debt on behalf of its member municipalities. The additional debt servicing costs are offset by corresponding receivables from municipalities. In 2020, CRD's direct debt increased by 8.5% to $319 million (2019 – 294 million), while municipal debt decreased 4.0% to $147 million (2019 – 153 million). The increase for CRD is attributable to: (1) $62 million in short-term borrowing related to CRHC Regional Housing First program, offset by a $30 million paydown of short-term debt and long-term debt related to CAWTP.



11) Tangible Capital Assets

CRD's tangible capital assets include land, engineering structures, buildings, equipment, and vehicles. Where assets have an anticipated useful life of more than one year, the practice is to amortize or allocate part of the asset's expense each year through its useful life, instead of expensing the entire cost in the year the asset was purchased. Net book value is an approximation of the remaining value of the assets that CRD uses in the provision of services. At the end of 2020, CRD is responsible for a total asset base of $2.30 billion. After accumulated amortization, the net book value of assets totals $1.76 billion.

12) Capital Investment vs. Amortization



The amount spent on tangible capital assets or capital investment, less amortization, is called net investment. If capital investment is consistently higher than amortization, net investment will be positive, indicating that productive capacity is increasing. Conversely, if capital investment is consistently lower than amortization, net investment will be negative, indicating that productive capacity is decreasing. On an annual basis, CRD is acquiring assets at a faster rate than assets are amortizing. In 2020, CRD was acquiring assets 7.95 times faster than amortization (increased from 10.01 times faster in 2019), indicating that productive capacity is increasing.

KPMG shall have no responsibility or liability for loss or damages or claims, if any, to or by any third party as this Audit Findings Report has not been prepared for, and is not intended for, and should not be used by, any third party or for any other purpose.

Executive summary

Purpose of this report

The purpose of this Audit Findings Report is to assist you, as a member of the Board of Directors, in your review of the results of our audit of the consolidated financial statements (hereinafter referred to as the "financial statements") of Capital Regional District (the District) as at and for the year ended December 31, 2020. This Audit Findings Report builds on the Audit Plan we presented to the Board of Directors on January 6, 2021.

What's new in fiscal 2020

There have been changes in fiscal 2020 which impacted financial reporting and our audit:

- COVID-19 pandemic – See pages 5-6
- New auditing standard for estimates – See page 6

Changes from the audit plan

There have been no significant changes regarding our audit from the Audit Planning Report previously presented to you.

Finalizing the audit

As of the date of this report, we have completed the audit of the financial statements, with the exception of certain remaining procedures, which include:

- Completing our discussions with the Board of Directors;
- Obtaining the signed management representation letter;
- Obtaining evidence of the Board of Directors' approval of the financial statements; and,
- Completing subsequent event review procedures up to the date of the Board of Directors' approval of the financial statements.

We will update the Board of Directors on significant matters, if any, arising from the completion of the audit, including the completion of the above procedures. Our auditors' report, a draft of which is attached to the enclosed draft financial statements, will be dated upon the completion of any remaining procedures.

Areas of audit focus

At the planning stage of the audit we discussed with you areas of audit focus. We are satisfied that our work has appropriately dealt with the focus areas identified.

See pages 8 to 10 for the audit findings related to these areas of audit focus.

Adjustments and differences

Adjustments and differences identified during the audit have been categorized as "Corrected adjustments" or "Uncorrected differences". These include disclosure adjustments and differences.

We identified four adjustments that were communicated to management and subsequently corrected in the financial statements.

We identified two misstatements that remain uncorrected. Management have decided not to correct these differences and in their judgment they are not material to the financial statements. We concur with management's representation that the differences are not material to the financial statements. Accordingly, the differences have no effect on our auditors' report.

Executive summary (continued)

Significant accounting policies and practices

There have been no initial selections of, or changes to, significant accounting policies and practices to bring to your attention.

The presentation and disclosure of the financial statements are, in all material respects, in accordance with Canadian public sector accounting standards. Misstatements, including omissions, if any, related to disclosure or presentation items are in the management representation letter.

Control and other observations

We did not identify any control deficiencies that we determined to be significant deficiencies in internal control over financial reporting.

We have issued a separate management letter with control recommendations in areas not considered to be significant deficiencies in internal controls over financial reporting.

Independence

We confirm that we are independent with respect to the District within the meaning of the relevant rules and related interpretations prescribed by the relevant professional bodies in Canada and any applicable legislation or regulation from January 1, 2020 up to the date of this report.

Current developments

Please refer to Appendix 3 for the current developments updates, including COVID-19 resources.

What's new in 2020

COVID-19 pandemic

Areas of impact	Key observations
CRD's financial reporting impacts	- We considered impacts to financial reporting due to the COVID-19 pandemic and the increased disclosures needed in the financial statements as a result of the significant judgements applied. Suggestions were provided to management to enhance disclosures which have been reflected in the financial statements.
CRD's internal control over financial reporting	- There were minimal changes to internal controls over financial reporting due to the COVID-19 pandemic as the District did not move to a fully remote working environment and was able to maintain its existing internal controls and processes.
Risk assessment	- We performed a more thorough risk assessment specifically targeted at the impacts of the COVID-19 pandemic, including an assessment of fraud risk factors (i.e. conditions or events that may be indicative of an incentive/pressure to commit fraud, opportunities to commit fraud, rationalizations of committing fraud).
Working remotely	- We worked both remotely and onsite. We used virtual work rooms, video conferencing, and internally shared team sites to collaborate in real-time, both amongst the audit team as well as with management. - We used secure technologies to conduct walkthroughs, perform tests of controls and substantive tests. - We increased our professional skepticism when evaluating electronic evidence received and performed additional procedures to validate the authenticity and reliability of electronic information used as audit evidence.
Direction and supervision of the audit	- The Senior Manager and Engagement Partner were actively involved in determining the impact that the COVID-19 pandemic had on the audit (as discussed above), including the impact on the District's financial reporting and the District's internal control over financial reporting. - The Senior Manager and Engagement Partner implemented new supervision processes to deal with working in a remote environment, and our audit approach allowed us to manage the audit using meaningful milestones and frequent touch points.
Substantive testing – Response	- For those areas of the financial statements which were impacted by COVID-19 during the year (payroll costs and sale of services), we changed our substantive analytical procedures to incorporate the impacts of the pandemic on these balances.

What's new in 2020 (continued)

New auditing standard

Standard	Key observations
CAS 540, Auditing Accounting Estimates and Related Disclosures	- The new standard was applied on all estimates within the financial statements that had a risk of material misstatement due to estimation uncertainty. - We assessed the risk of material misstatement due to estimation uncertainty for all estimates within the financial statements and not just "key estimates", "critical accounting estimates", or "estimates with significant risk". In assessing this risk, we considered the degree of complexity, uncertainty and subjectivity involved in making each accounting estimate to determine the level of audit response. - We considered the potential for management bias. - The granularity and complexity of the new standard along with our interpretation of the application of that standard necessitated more planning and discussion and increased involvement of more senior members of the engagement team. - We determined that one estimate (landfill closure and post-closure liability) had a risk of material misstatement due to estimation uncertainty that was greater than remote. - See page 10 under Areas of Audit Focus for a summary of our audit approach and findings.

Audit risks

Professional requirements	Why is this significant?
Fraud risk from management override of controls	This is a presumed fraud risk. We have not identified any specific additional risks of management override relating to this audit.

Our response

Our audit methodology incorporates the required procedures in professional standards to address this risk. These procedures include:

- Testing of journal entries and other adjustments throughout the period and during the post-closing period for financial statement preparation.
- Evaluating the business rationale of significant unusual transactions.

Significant findings

There were no issues noted in our testing.

Areas of audit focus

Other area of focus	Why are we focusing here?
Wastewater treatment project (WTP)	This is a significant project for CRD, involves a significant value of expenditure, met substantial completion in 2020 and is currently being commissioned, and significant management judgment may be required over recognition of impairment.

Our response

- The CRD's Wastewater Treatment Project ("WTP") includes construction of the wastewater treatment plant, residuals treatment facility, and the conveyance system and is budgeted at a total cost of $775M.
- In December 2020, the District began providing tertiary treatment for wastewater and reached substantial completion of the McLoughlin Point Wastewater Treatment Plant. This milestone triggered a transfer of work in progress to in use and final claims for funding from third parties.
- Costs capitalized for the WTP in 2020 were $121M; upon substantial completion of the plant in 2020, $421M in costs were transferred from work in progress to other capital asset classes (including engineering structures, buildings, and other assets).
- We performed substantive audit procedures over a sample of capital additions, agreeing samples to source documentation.
- We verified the capital costs transferred from work in progress to in use by comparing the total costs included in work in progress since the beginning of the project in 2017 to 2020 to the transfer to amounts capitalized as in use.
- We reviewed the WTP Board minutes and verified the completeness of liabilities and contingent liabilities related to the WTP.
- We performed a walkthrough of the procurement processes related to the WTP and related controls over expenditures and did not note any significant deficiencies.
- We reviewed management's analysis over impairment and concur with management's assessment that no costs were required to be written off in 2020.
- In 2020, $19M of federal grants and $124M in provincial grants were received and recognized as revenue related to WTP. We inspected the grant claims, agreed them to cash receipt and noted appropriate eligible expenses related to grant terms.
- We noted $17M of grant holdbacks are outstanding from the Federal Government which was claimed in 2020 and received in 2021 upon completion of final requirements under the funding agreement.

Significant findings

- There were no issues noted in our testing of capital additions and the transfer of work in progress to in use.
- We recommended the grant holdback be recognized as revenue and receivable in 2020 to align with when the revenue was earned and final claim submitted. This adjustment has been recognized in the financial statements.

Areas of audit focus (continued)

Area of audit focus	Why are we focusing here?
Regional Housing First Program	On November 2, 2020 and November 20, 2020, the District entered into 60-year prepaid leases and 35-year operator agreements with Capital Regional Housing Corporation regarding West Park and Spencer Close respectively. These prepaid leases were initially funded through short-term financing obtained by CRHC which was converted into mortgages subsequent to year-end.

Our response

- RHFP is a partnership between three levels of government that have committed to fund affordable or supportive housing projects in the CRD. BC Housing, CMHC and CRD (through CRD, CRHC and CRHD) have committed to invest $40M each to develop and acquire approximately 300 (at $300,000 each) new housing units that will have a rental rate equal to the Province's income assistance shelter rate ($375) for residents of the region experiencing chronic homelessness.
- Either BC Housing or CRD/CRD entities will purchase the approximately 20% provincial assistance rate units as an equity contribution. The operator (non-profit organization or CRHC) operates 100% of the units and maintains ownership of the remaining approximately 80% of units (or lease agreement with BC Housing or CRD/CRD entity). CMHC's $30M contribution is in the form of a grant to the CRD, where the CRD holds ownership of those units.
- In November 2020, the CRD purchased West Park and Spencer Close under the RHFP. The properties were purchased for $29.4M and $28.4M respectively, including closing costs. CRD owns 100% of the units and has entered into a 60-year prepaid lease agreement with the CRHC, and a 35-year operator agreement for the RHFP units.
- The purchase of the properties is funded by contributions from CMHC and a 60-year prepaid lease with CRHC. CRHC received short-term financing from BC Housing to fund the lease and closing costs. The short-term financing was converted into mortgages subsequent to year-end.
- We reviewed the related Board minutes and inquired with management on any changes or updates to this program.
- We performed substantive audit procedures by obtaining and reviewing contracts and agreements between CRD, CRHC, BC Housing, and CMHC.
- We agreed the purchase price allocated to the land and building to the costs capitalized with no issues.
- We concur with management's accounting treatment of the transaction in the financial statements, including the removal of inter-entity transactions between CRD and CRHC in the consolidated financial statements.

Significant findings

- There were no issues noted in our testing regarding the purchase of properties, financing and recognition of costs and debt by the District.
- We recommended the District consider a more precise estimate of amortization expense for material asset additions to align with when assets are placed in use during the year. The impact on amortization was not significant in 2020 and will be considered for future material asset additions.

Areas of audit focus (continued)

Area of audit focus	Why are we focusing here?
Hartland Landfill closure and post-closure costs	Landfill closure and post-closure costs (2020 - $11.3M, 2019 - $10.7M) are recognized in the financial statements including disclosure in the notes. Estimated costs are recognized annually as the capacity of the site is utilized.

Our response

- Closure and post-closure costs are a significant estimate recognized in the District's financial statements. Measurement involves multiple assumptions and data inputs including capacity available and used, future costs, discount rates, inflation rates, among others.
- The last detailed assessment of closure and post-closure costs by an external expert was performed in 2019. Management performed an analysis and updated significant assumptions in 2020 to estimate the liabilities and costs to be recognized in 2020.
- We performed more granular risk assessments of the elements of the estimate such as the method, the assumptions used, the data used and the application of the method.
- We assessed the degree of uncertainty, complexity, and subjectivity in the closure and post-closure cost estimate to determine the level of audit response. The higher the level of response, the more persuasive the audit evidence was needed.
- We evaluated the projections and discount rates used by management to determine the closure and post-closure liabilities for the landfill and verified the accuracy of management's calculations.

Significant findings

- Management's modelling used to calculate the liability was enhanced in 2020 and incorporated results of the external expert's work performed in 2019.
- Management's estimate of the liability and expense in 2020 included the impact of certain activities and programs to extend the life of the landfill that have not yet been approved or implemented. This assumption resulted in a longer useful life of the landfill and lower liability and expense compared to an estimate based on current practices in use.
- We recommended the liability and expense be estimated based on current practices in use, and the impact of future life extensions be incorporated at the time new programs are approved. An estimated understatement of liability and expense of $1,479,449 is noted as an unadjusted audit difference. Recognition of the adjustment may result in an expense in 2020 and recovery of expense in future years. Management has chosen not to adjust this difference in order to reduce volatility in the liability and expense as new programs are expected to be approved in the near future.
- Effective for the 2023 fiscal year, new accounting standards for asset retirement obligations will require a significant revaluation of the landfill liability and recognition of all closure and post-closure costs upfront rather than as capacity of the landfill is used. We recommend early planning for this transition as it will result in recognition of a liability sooner than current practice and a significant increase in net debt for financial reporting purposes. The change in accounting standard will not affect how the District decides to fund the liability through reserve funding.

Significant accounting policies and practices

Significant accounting policies

- There were no initial selections of or changes to the significant accounting polices and practices.
- There were no significant accounting policies in controversial or emerging areas.
- There were no material issues noted with the timing of the District's transactions in relation to the period in which they were recorded other than described in this report.
- There were no issues noted with the extent to which the financial statements are affected by a significant unusual transaction and extent of disclosure of such transactions.
- There were no issues noted with the extent to which the financial statements are affected by non-recurring amounts recognized during the period and extent of disclosure of such transactions.

Significant accounting estimates

- There were no issues noted with management's identification of accounting estimates.
- There were no issues noted with management's process for making accounting estimates other than described in this report.
- There were no indicators of possible management bias.
- There were no significant factors affecting the District's asset and liability carrying values.

Financial statement presentation and disclosure

- There were no issues noted with the judgments made, in formulating particularly sensitive financial statement disclosures.
- There were no issues noted with the overall neutrality, consistency, and clarity of the disclosures in the financial statements.
- There were no significant potential effects on the financial statements of significant risks, exposures and uncertainties.

Uncorrected differences and corrected adjustments

Differences and adjustments include disclosure differences and adjustments.

Professional standards require that we request of management and the Board of Directors that all identified differences be corrected. We have already made this request of management. Misstatements, including omissions, if any, related to financial statement presentation and disclosure items are in the management representation letter.

Uncorrected differences

We identified two adjustments that remain uncorrected:

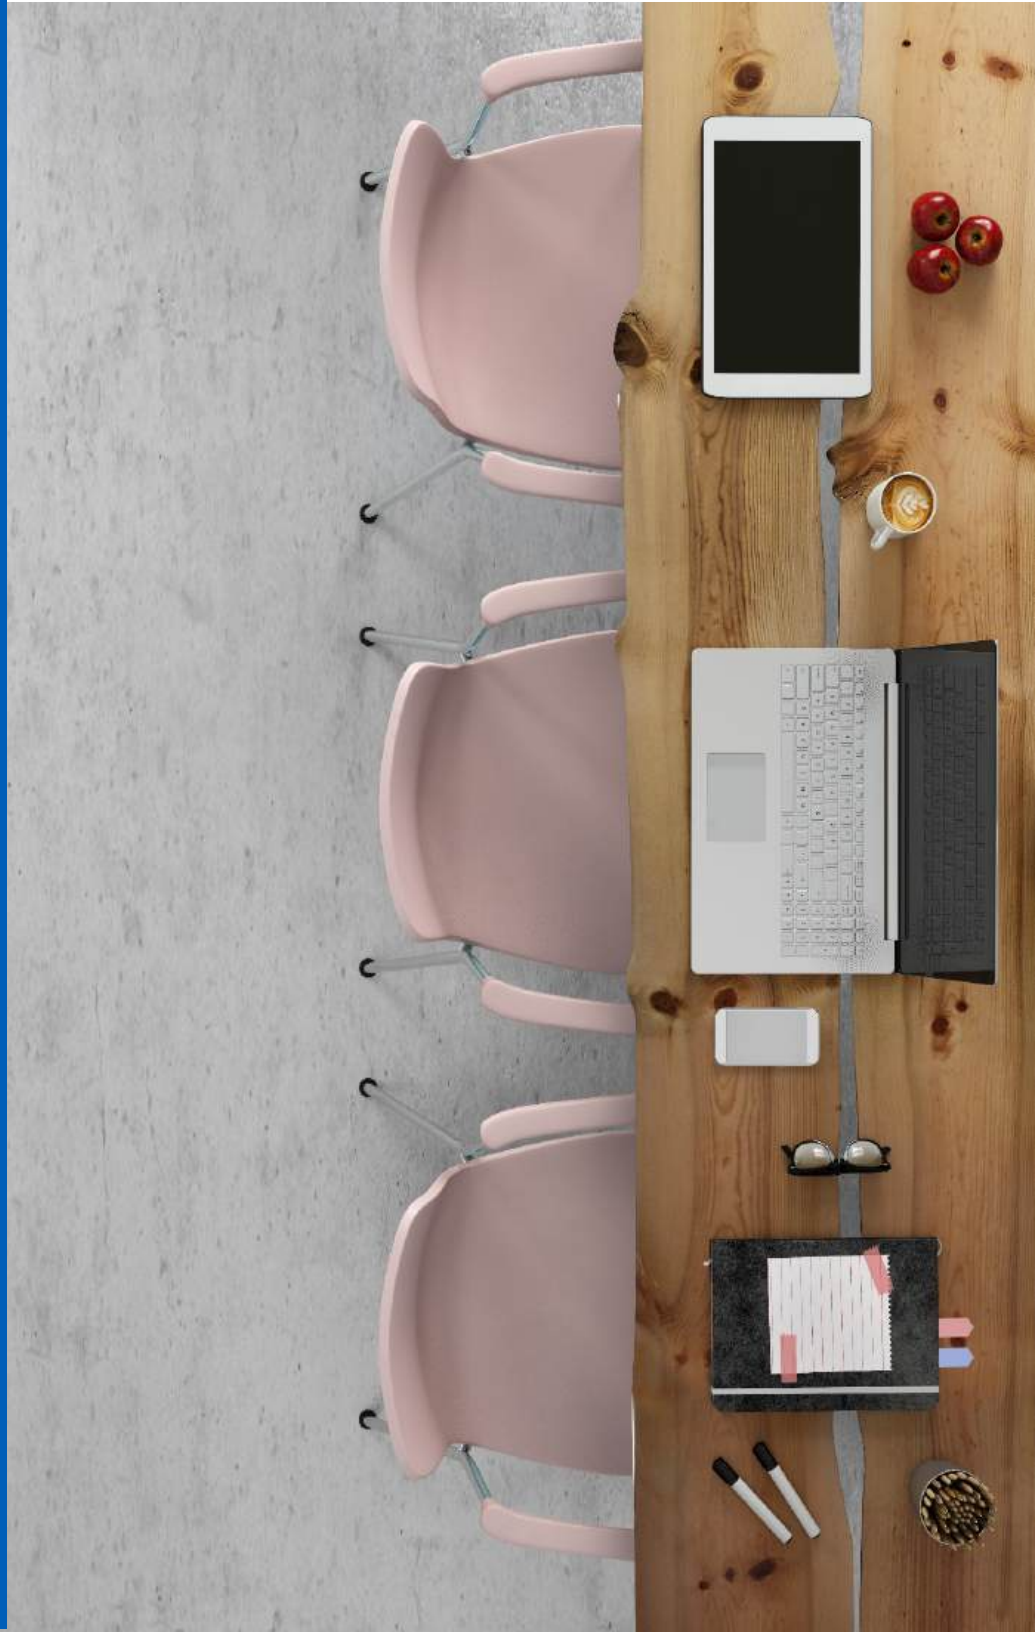
- A net $360,649 estimated overstatement of annual surplus and understatement of liabilities due to the deferral of grants and methodology used to estimate the landfill liability.
- An overstatement of 2020 revenue and understatement of 2019 revenue of $563,047 due to timing of recognition of system developer charges earned and $248,134 for assets acquired in a prior year.

We concur with management's representation that the differences are not material to the financial statements. Accordingly, the differences have no effect on our auditors' report.

Corrected adjustments

We identified four adjustments that were communicated to management and subsequently corrected in the financial statements. Two adjustments did not have an impact on the annual surplus of the District. They relate primarily to presentation and classification of figures which are prepared only once a year for financial reporting purposes in accordance with Public Sector Accounting Standards. Management does not use these figures for financial decision making during the year.

- A decrease in cash and accounts payable of $262,562 to reflect payments made before year end.
- A decrease in sales of services revenue and other expenses by $729,615 for internal charges that are removed when preparing financial statements.
- A decrease in revenue and increase of development cost charges of $293,000 for amounts related to revenue earned in 2021.
- An increase in revenue from the Federal government of $17M for recognition of grant holdbacks on substantial completion of CAWTP.



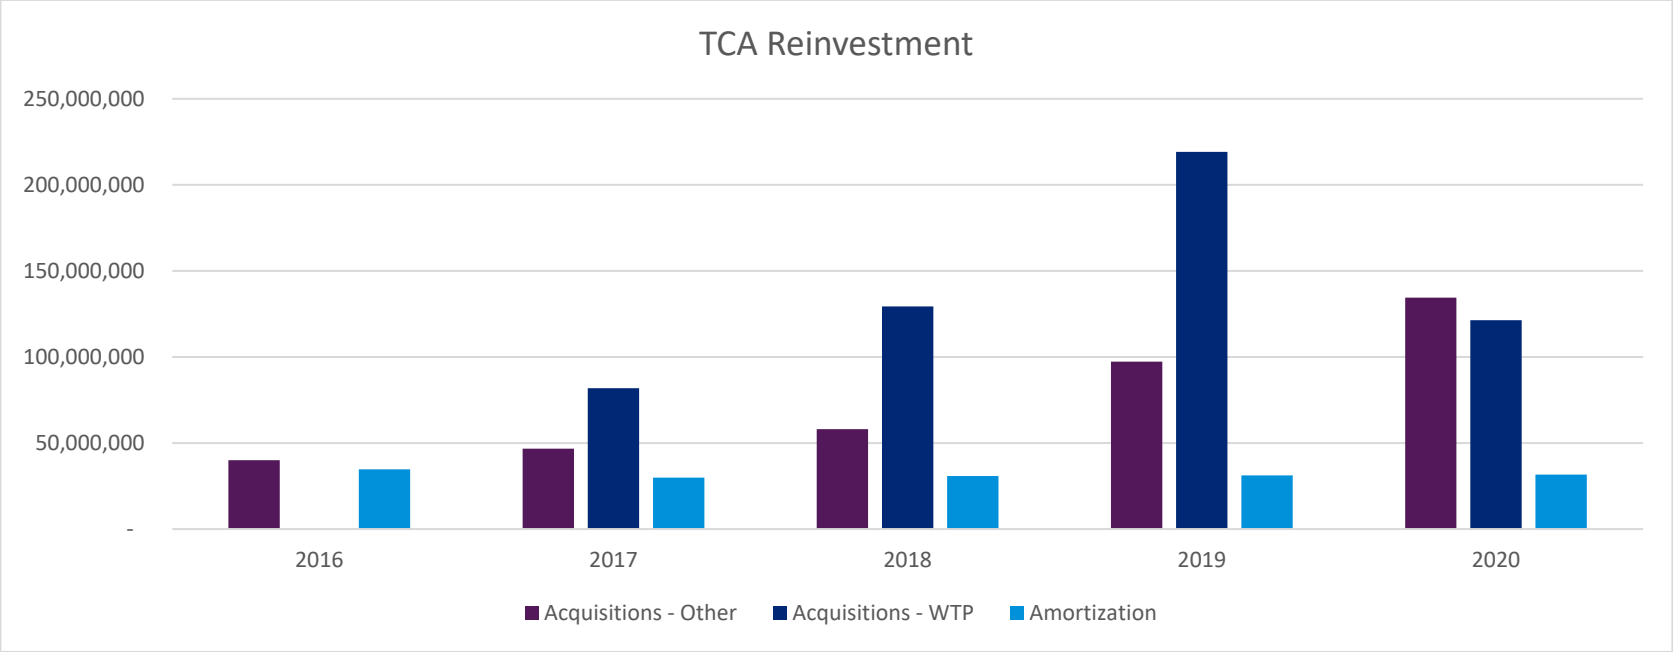
Appendices

Appendix 1: Selected financial information

Appendix 2: Required communications

Appendix 3: Current developments and audit trends

Appendix 4: Management representation letter



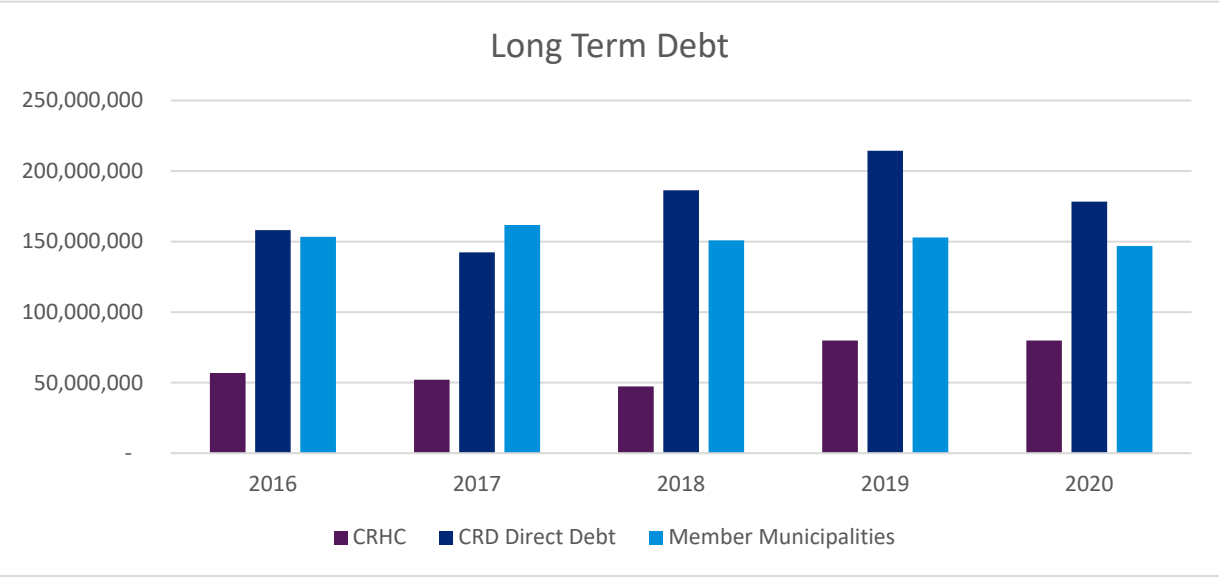
Appendix 1: Selected financial information

As part of the audit, there are certain key ratios and trends that we review. We share these ratios with the Board and Management and welcome any questions related to our interpretation of trends. The following financial information is taken from the annual audited financial statements prepared in accordance with Public Sector Accounting Standards. The accounting framework used in these financial statements differs from the framework used in the financial plan in that the rate-setting formula is based on a cash-basis and includes transfers from reserves and other unspent funds and planned capital acquisitions rather than amortization of capital assets.

Appendix 1: Selected financial information (continued)

Tangible Capital Asset (TCA) Reinvestment

TCA is the District's most significant asset and is funded by a combination of internal reserves and external financing. The following illustration depicts TCA acquisitions and amortization amounts for the past five years:



TCA acquisitions were relatively consistent in 2016 through 2018. From 2017 more significant capital additions were acquired under the Wastewater Treatment Project (WTP), which are shown separately in the chart above. TCA additions in 2019 and 2020 are higher than previous years due to the construction of and acquisition of properties under the Regional Housing First Program. TCA additions relating to the WTP grew in 2018 and 2019 and declined in 2020 due to the project nearing completion.

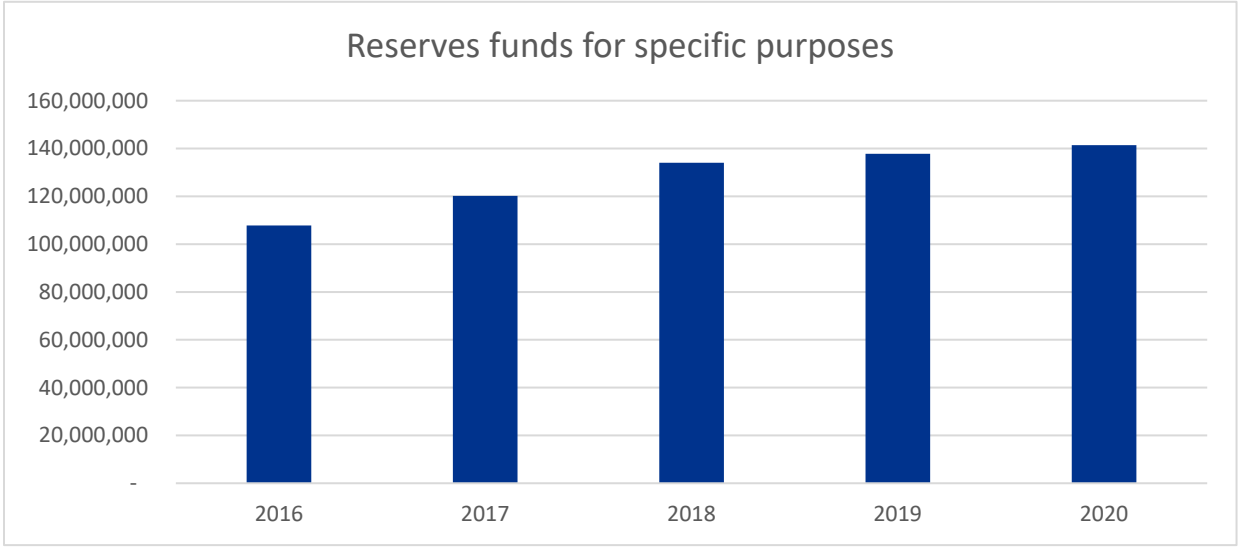
The value of amortization has remained relatively consistent over the past 5 years. From 2016 – 2020 the District has been replenishing capital assets at a faster pace than they are being used, mainly due to the additions resulting from the Wastewater Treatment Project. Total acquisitions are 7.5 times the value of annual amortization in 2020. In future years, amortization expense will increase due to the WTP being in use.

Appendix 1: Selected financial information (continued)

Long-term Debt

The District incurs debt directly, and on behalf of its member municipalities through agreements with the MFA. Repayments of interest and principal on long-term debt are included in the annual operating expenditure for each function. The Community Charter and Municipal Liabilities regulation provides that a municipality's (district's) annual cost of servicing its aggregate liabilities for the year cannot exceed 25% of its annual revenue for the previous year. Interest expense in 2020 represents approximately 13% of the District's revenue excluding government transfers and interest expense related to municipal borrowing equates to approximately 4.7% of revenue excluding government transfers. Debt represents approximately 10% of the net book value of capital assets.

CRD direct debt increased mostly in 2018 and 2019 in order to finance the Wastewater Treatment Project. In 2020, debt has started to decrease due to debt repayments exceeding new debt, including repayment of short-term facilities using proceeds of debt obtained in 2019. Between 2016 and 2020, CRD direct debt has increased by 13%.



In addition, member municipalities' debt has increased steadily from 2016 to 2017. In 2018, there was a slight decrease in member debt consistent with the trend that in a low interest rate environment, more debt is held through short term facilities until project completion when a more precise amount of borrowing is determined and locked into long term financing. Short term borrowing by member municipalities is not included in the District's financial statements. There was a small decrease in member municipalities' debt in 2020.

The increase in CRHC debt in 2019 represents new debt obtained to fund the purchase of the RHFP Millstream Ridge/Treanor housing project. There was no significant change in 2020 as additional debt was offset by debt retirement. CRHC held $61.3M of short term financing in relation to the purchase of Spencer Close and West Park which is not included in the above chart; this was transferred to a long term mortgage subsequent to year end.

Appendix 1: Selected financial information (continued)

Reserves

The accumulated surplus for the District is made up of amounts invested in tangible capital assets, operating reserves, for both the District and Capital Region Housing Corporation, and reserves set aside for regional, sub-regional and local purposes. The amounts shown in the graph relate to reserve funds set aside for specific purposes as detailed in note 9 in the financial statements:

These reserves are tracked on a per service basis. Each year, the amount presented is the accumulated amount. Since 2016, the reserves have continued to grow at a consistent rate. In 2020, reserves increased by 2.6% over prior year and this was due primarily to increases in the Equipment Replacement Reserve, the Regional Parks Capital Reserve, the Solid Waste Operating Reserve, and the Capital Regional Housing Corporation Reserve. The increase was partially offset by decreases in the Solid Waste Capital Reserve, the S.P.W.W.W.S. Sewer Debt Reserve, the Trunk Sewers and Sewage Disposal Facilities Capital Reserve, the LWMP Core and WS Operating Reserve Fund and the Salt Spring Island Transport Capital Reserve. Compared to a significant increase in capital assets, reserves have stayed relatively constant.

Appendix 2: Required communications

Draft auditors' report

The conclusion of our audit is set out in our draft auditors' report attached to the draft financial statements.

Independence

In accordance with professional standards, we have confirmed our independence.

Management representation letter

In accordance with professional standards, a copy of the management representation letter is included in Appendix 4.

Appendix 3: Current developments and audit trends

Current Developments, created by the KPMG Public Sector and Not-for-Profit Practice, summarizes regulatory and governance matters impacting public sector entities today, or expected to impact them over the next few years. We provide this information to help public sector entities understand upcoming changes and challenges they may face in their industry. Some of these developments may not impact the District directly, but we believe it is important for the Board of Directors to understand what is happening in the sector.

Public Sector Accounting Standards

Standard	Summary and implications
Impact of COVID-19	– In response to the impact of COVID-19 on public sector entities, PSAB has approved deferral of all upcoming accounting standards by one year and will issue non-authoritative guidance on the effects of COVID-19.
Asset Retirement Obligations	– The new standard is effective for fiscal years beginning on or after April 1, 2022. The effective date was deferred by one year due to COVID-19. – The new standard addresses the recognition, measurement, presentation and disclosure of legal obligations associated with retirement of tangible capital assets in productive use. Retirement costs will be recognized as an integral cost of owning and operating tangible capital assets. PSAB currently contains no specific guidance in this area. – The ARO standard will require the public sector District to record a liability related to future costs of any legal obligations to be incurred upon retirement of any controlled tangible capital assets (“TCA”). The amount of the initial liability will be added to the historical cost of the asset and amortized over its useful life. – As a result of the new standard, the public sector District will have to: • Consider how the additional liability will impact net debt, as a new liability will be recognized with no corresponding increase in a financial asset; • Carefully review legal agreements, senior government directives and legislation in relation to all controlled TCA to determine if any legal obligations exist with respect to asset retirements; • Begin considering the potential effects on the organization as soon as possible to coordinate with resources outside the finance department to identify AROs and obtain information to estimate the value of potential AROs to avoid unexpected issues.

Appendix 3: Current developments and audit trends (continued)

Standard	Summary and implications
Revenue	– The new standard is effective for fiscal years beginning on or after April 1, 2023. The effective date was deferred by one year due to COVID-19. – The new standard establishes a single framework to categorize revenues to enhance the consistency of revenue recognition and its measurement. – The standard notes that in the case of revenues arising from an exchange transaction, a public sector entity must ensure the recognition of revenue aligns with the satisfaction of related performance obligations. – The standard notes that unilateral revenues arise when no performance obligations are present, and recognition occurs when there is authority to record the revenue and an event has happened that gives the public sector district the right to the revenue.
Purchased Intangibles	– In October 2019, PSAB approved a proposal to allow public sector entities to recognize intangibles purchased through an exchange transaction. Practitioners are expected to use the definition of an asset, the general recognition criteria and the GAAP hierarchy to account for purchased intangibles. – PSAB has approved Public Sector Guideline 8 which allows recognition of intangibles purchased through an exchange transaction. Narrow-scope amendments were made to Section PS 1000 Financial statement concepts to remove prohibition on recognition of intangibles purchased through exchange transactions and PS 1201 Financial statement presentation to remove the requirement to disclose that purchased intangibles are not recognized. – The effective date is April 1, 2023 with early adoption permitted. Application may be retroactive or prospective.

Appendix 3: Current developments and audit trends (continued)

Standard	Summary and implications
Public Private Partnerships ("P3")	– PSAB has proposed new requirements for the recognition, measurement and classification of infrastructure procured through a public private partnership. PSAB in the process of reviewing feedback provided by stakeholders on the exposure draft. – The exposure draft proposes that recognition of infrastructure by the public sector district would occur when it controls the purpose and use of the infrastructure, when it controls access and the price, if any, charged for use, and it controls any significant interest accumulated in the infrastructure when the P3 ends. – The exposure draft proposes that the public sector district recognize a liability when it needs to pay cash or non-cash consideration to the private sector partner for the infrastructure. – The infrastructure would be valued at cost, which represents fair value at the date of recognition with a liability of the same amount if one exists. Cost would be measured in reference to the public private partnership process and agreement, or by discounting the expected cash flows by a discount rate that reflects the time value of money and risks specific to the project. – The final standard was approved in December 2020 with an issuance date of April 1, 2021 and an effective date of April 1, 2023.
Concepts Underlying Financial Performance	– PSAB is in the process of reviewing the conceptual framework that provides the core concepts and objectives underlying Canadian public sector accounting standards. – PSAB has released four exposure drafts for the proposed conceptual framework and proposed revised reporting model, and their related consequential amendments. Comments on the exposure drafts are due in May 2021. – PSAB is proposing a revised, ten chapter conceptual framework intended to replace PS 1000 *Financial Statement Concepts* and PS 1100 *Financial Statement Objectives*. The revised conceptual framework would be defined and elaborate on the characteristics of public sector entities and their financial reporting objectives. Additional information would be provided about financial statement objectives, qualitative characteristics and elements. General recognition and measurement criteria, and presentation concepts would be introduced. – In addition, PSAB is proposing: • Relocation of the net debt indicator to its own statement and the statement of net financial assets/liabilities, with the calculation of net debt refined to ensure its original meaning is retained. • Separating liabilities into financial liabilities and non-financial liabilities. • Restructuring the statement of financial position to present non-financial assets before liabilities. • Changes to common terminology used in the financial statements, including re-naming accumulated surplus (deficit) to net assets (liabilities). • Removal of the statement of remeasurement gains (losses) with the information instead included on a new statement called the statement of changes in net assets (liabilities). This new statement would present the changes in each component of net assets (liabilities), including a new component called "accumulated other". • A new provision whereby an entity can use an amended budget in certain circumstances. • Inclusion of disclosures related to risks and uncertainties that could affect the district's financial position.

Appendix 3: Current developments and audit trends (continued)

Our discussions with you, our audit opinion and what KPMG is seeing in the marketplace - both from an audit and industry perspective - indicate the following is specific information that will be of particular interest to you. We would, of course, be happy to further discuss this information with you at your convenience.

Appendix 4: Management representations letter

Ladies and Gentlemen:

We are writing at your request to confirm our understanding that your audit was for the purpose of expressing an opinion on the consolidated financial statements (hereinafter referred to as "financial statements") of Capital Regional District ("the Entity") as at and for the period ended December 31, 2020.

General:

We confirm that the representations we make in this letter are in accordance with the definitions as set out in Attachment I to this letter.
We also confirm that, to the best of our knowledge and belief, having made such inquiries as we considered necessary for the purpose of appropriately informing ourselves:

Responsibilities:

1) We have fulfilled our responsibilities, as set out in the terms of the engagement letter dated April 8, 2021, including for:

   a) the preparation and fair presentation of the financial statements and believe that these financial statements have been prepared and present fairly in accordance with the relevant financial reporting framework.
   b) providing you with all information of which we are aware that is relevant to the preparation of the financial statements, such as all financial records and documentation and other matters, including:
      (i) the names of all related parties and information regarding all relationships and transactions with related parties; and
      (ii) the complete minutes of meetings, or summaries of actions of recent meetings for which minutes have not yet been prepared, of the board of directors and committees of the board of directors that may affect the financial statements. All significant actions are included in such summaries.
   c) providing you with unrestricted access to such relevant information.
   d) providing you with complete responses to all enquiries made by you during the engagement.
   e) providing you with additional information that you may request from us for the purpose of the engagement.
   f) providing you with unrestricted access to persons within the Entity from whom you determined it necessary to obtain audit evidence.
   g) such internal control as we determined is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error. We also acknowledge and understand that we are responsible for the design, implementation and maintenance of internal control to prevent and detect fraud.
   h) ensuring that all transactions have been recorded in the accounting records and are reflected in the financial statements.

Internal control over financial reporting:

2) We have communicated to you all deficiencies in the design and implementation or maintenance of internal control over financial reporting of which we are aware.

Appendix 4: Management Representation Letter (continued)

Fraud & non-compliance with laws and regulations

3) We have disclosed to you:

a) the results of our assessment of the risk that the financial statements may be materially misstated as a result of fraud.
b) all information in relation to fraud or suspected fraud that we are aware of that involves:
   - management;
   - employees who have significant roles in internal control over financial reporting; or
   - others

   where such fraud or suspected fraud could have a material effect on the financial statements.
c) all information in relation to allegations of fraud, or suspected fraud, affecting the financial statements, communicated by employees, former employees, analysts, regulators, or others.
d) all known instances of non-compliance or suspected non-compliance with laws and regulations, including all aspects of contractual agreements, whose effects should be considered when preparing financial statements.
e) all known actual or possible litigation and claims whose effects should be considered when preparing the financial statements.

Subsequent events:

4) All events subsequent to the date of the financial statements and for which the relevant financial reporting framework requires adjustment or disclosure in the financial statements have been adjusted or disclosed.

Related parties:

5) We have disclosed to you the identity of the Entity's related parties.
6) We have disclosed to you all the related party relationships and transactions/balances of which we are aware.
7) All related party relationships and transactions/balances have been appropriately accounted for and disclosed in accordance with the relevant financial reporting framework.

Estimates:

8) The methods, the data and the significant assumptions used in making accounting estimates, and their related disclosures are appropriate to achieve recognition, measurement or disclosure that is reasonable in the context of the applicable financial reporting framework.

Going concern:

9) We have provided you with all information relevant to the use of the going concern assumption in the financial statements.
10) We confirm that we are not aware of material uncertainties related to events or conditions that may cast significant doubt upon the Entity's ability to continue as a going concern.

Appendix 4: Management Representation Letter (continued)

Misstatements:

11) The effects of the uncorrected misstatements described in Attachment II are immaterial, both individually and in the aggregate, to the financial statements as a whole.

12) We approve the corrected misstatements identified by you during the audit described in Attachment II.

Non-SEC registrants or non-reporting issuers:

13) We confirm that the Entity is not a Canadian reporting issuer (as defined under any applicable Canadian securities act) and is not a United States Securities and Exchange Commission ("SEC") Issuer (as defined by the Sarbanes-Oxley Act of 2002). We also confirm that the financial statements of the Entity will not be included in the consolidated financial statements of a Canadian reporting issuer audited by KPMG or an SEC Issuer audited by any member of the KPMG organization.

Yours very truly,

_____
Mr. Robert Lapham, Chief Administrative Office

_____
Mr. Nelson Chan, Chief Financial Officer

Attachment I – Definitions

Materiality

Certain representations in this letter are described as being limited to matters that are material. Information is material if omitting, misstating or obscuring it could reasonably be expected to influence the economic decisions of users taken on the basis of the financial statements.

Judgments about materiality are made in light of surrounding circumstances, and are affected by perception of the needs of, or the characteristics of, the users of the financial statements and, the size or nature of a misstatement, or a combination of both while also considering the entity's own circumstances.

Fraud & Error

Fraudulent financial reporting involves intentional misstatements including omissions of amounts or disclosures in financial statements to deceive financial statement users.

Misappropriation of assets involves the theft of an entity's assets. It is often accompanied by false or misleading records or documents in order to conceal the fact that the assets are missing or have been pledged without proper authorization.

An error is an unintentional misstatement in financial statements, including the omission of an amount or a disclosure.

Attachment II – Summary of Audit Misstatement Schedule

Year ended December 31, 2020

Corrected misstatements

- A decrease in cash and accounts payable of $262,562 to reflect payments made before year end.
- A decrease in sales of services revenue and other expenses by $729,615 for elimination of internal charges.
- A decrease in revenue and increase of development cost charges of $293,000 for amounts related to revenue earned in 2021.
- An increase in revenue from the Federal government of $17M for recognition of grant holdbacks on substantial completion of CAWTP.
- Within Note 14 to the financial statements, an increase in federal government grants and decrease in provincial government grants of $1,906,394 to align with the source of funds received.

Uncorrected misstatements

	Statement of operations effect	Statement of financial position effect		
Description	**(Decrease) Increase**	**Assets (Decrease) Increase**	**Liabilities (Decrease) Increase**	**Accumulated Surplus (Decrease) Increase**

May 5, 2021

Dear Mr. Chan:

Re: Reporting on internal control matters

In planning and performing our audit of the consolidated financial statements of Capital Regional District ("the District") for the period ended December 31, 2020, we obtained an understanding of internal control over financial reporting (ICFR) relevant to the District's preparation of the financial statements in order to design audit procedures that are appropriate in the circumstances for the purpose of expressing an opinion on the financial statements, but not for the purpose of expressing an opinion on ICFR. Accordingly, we do not express an opinion on the effectiveness of the District's ICFR.

Our consideration of ICFR was for the limited purpose described above and was not designed to identify all control deficiencies that might be significant deficiencies and therefore, there can be no assurance that all significant deficiencies and other control deficiencies have been identified. As a result, any matters reported below are limited to those deficiencies in ICFR that we identified during the audit.

Our awareness of control deficiencies varies with each audit and is influenced by the nature, timing, and extent of audit procedures performed, as well as other factors.

IDENTIFICATION

We did not identify any significant deficiencies in internal control.

Refer to the Appendix D for the definitions of various control deficiencies.

OTHER CONTROL MATTERS

We identified certain control matters that have not been communicated to management by other parties and that, in our professional judgment, are of sufficient importance to merit management's attention. Refer to Appendices A, B and C.

MANAGEMENT'S RESPONSES

Management's responses have not been subjected to the audit procedures applied in the audit, and accordingly, we express no opinion on them.

USE OF LETTER

This letter is for the use of management and those charged with governance in carrying out and discharging their responsibilities and should not be used for any other purpose or anyone other than management and those charged with governance. KPMG shall have no responsibility or liability for loss or damages or claims, if any, to or by any third party as this letter has not been prepared for, and is not intended for, and should not be used by, any third party or for any other purpose.

Yours very truly,

KPMG LLP

Chartered Professional Accountants

Appendix A — Current Year Other Control Matters

1. Amortization Policy

Observation and implication:
During our procedures over amortization expense, it was noted that management has an accounting practice, whereby newly constructed or purchased assets are not amortized until the year after they are placed in use due to the District's annual capitalization process occurring at year-end. Capital Region Housing Corporation also has an accounting practice for amortization. However, the Corporation's practice is to recognize a full year of amortization in the year the asset is placed in use. Current amortization practices could result in material differences when comparing amortization recognized and amortization calculated from an in-use date.

Recommendation:
We recommend management assesses the consistency of practice between the District and Corporation. With higher value property purchases and large-scale capital projects, the policy should also include guidance on how to calculate amortization on material new assets.

Management Response:
As part of the Corporate Asset Management Strategy, a revision to the tangible capital asset policy is underway. The revision includes enhanced accounting practices for asset componentization, useful life, depreciation, criticality and condition of assets. The recommendation to align across entities and to introduce a more precise calculation in the first year of an asset does align with internal findings and will be incorporated into the revised version. Implementation of the revised policy is currently anticipated for the 2022 calendar year. For 2021, a review will be performed on all significant assets being placed into use in the year and amortization will be calculated based on when they are placed into use.

Appendix B – Update on Previous Year's Continuing Other Control Matters

1. Recurring financial reporting adjusting entries

Observation and implication:
During our audit, we noted that many manual adjusting entries required for financial reporting are not recorded in SAP but are recorded each year end as "PSAB" entries. These entries are tracked in excel and are the trail to reconciling balances in SAP to the final audited financial statements. Tracking these entries in excel rather than directly in SAP increases the risk entries are incorrect, incomplete or knowledge of their source is lost during unexpected employee turnover or extended leave.

Update from 2020 Audit:
During our audit, we noted the number of manual entries was consistent with previous years. The documentation trail remains complex; however, the finance team's understanding and explanation of amounts had improved. The District is in the process of reviewing its internal controls over financial reporting to assess whether there are alternate methods of recognizing the above entries.

Recommendation:
We recommend that management continue to prioritize the review and integration of year end adjusting journal entries into the system trial balance rather than through manual excel adjustments. Further, we recommend as the District moves to recording entries in SAP where possible, that a continued focus remain on developing clear documentation to facilitate transfer of knowledge between individuals should unexpected employee turnover or extended leave occur.

Management Response:
During 2020, the system was developed to allow corporate level closing entries to be posted in the system. For the 2020 year-end a number of entries were migrated to SAP and are no longer adjusted manually. In addition, analysis was performed on the remaining manual entries and migration of more entries is planned for the 2021 year-end.

2. Reporting of Serious Misconduct Policy

Observation and implication:
The District has a policy entitled 'Reporting of Serious Misconduct' that describes the principles and procedures for reporting and investigating serious misconduct. A definition of serious misconduct is included in the policy, and a reporting matrix exists for communication of such matters through General Managers, the Chief Administrative Officer and Board, depending on nature and severity.

The definition of serious misconduct includes allegations such as misappropriation of funds, theft, embezzlement, kickbacks, bribes and exposure to significant financial loss, however, the Chief Financial Officer is not included in the communication matrix of those that shall be immediately informed of allegations. This information gap can result in a lack of information related to financial risks, inaccurate financial reporting, non-compliance and misinformed decision making.

In addition, we noted the hierarchy matrix remains within the chain of command of the complainant, for example, concerns are escalated through their direct supervisor, manager and General Manager. This could result in management bias and/or conflict of interest in evaluating the validity of the allegations. There is no description of when an independent, third party reviewer would be engaged to conduct the assessment rather than management.

Recommendation:
We recommend the District's policy be reviewed with the following considerations:

- Include the Chief Financial Officer in the communication matrix for any financial allegations;
- Modify the reporting hierarchy to ensure independence in the review process so an individual who is not a direct supervisor is assessing the claim, if internal resources are evaluating the claim;
- Identify when a third party reviewer would be used to assess claims, for example, when related to Board or senior leadership members.

We also recommend communication on a routine basis with management teams of the District's policy towards reporting serious misconduct, risk tolerance towards allegations, and clarification of examples of misconduct. Establishing a strong tone at the top regarding expectations of communication of any allegations is important as a preventative and detective measure, and enables matters to be investigated promptly.

Enhance tracking of allegations in a manner similar to the District's legal claims (a complete and ongoing listing of any matters the District is aware of). This assist with providing the District with a more comprehensive view of such activity, risk mitigation measures and other responses, as needed. We recommend regular reporting to the senior leadership team similar to legal matters take place to encourage awareness, discussion and visibility over how such matters are expected to be assessed.

Management Response:
Recommendations on reporting and design of the policy is taken under advisement. As this is a Board adopted policy, management will integrate various improvements in the next revision for consideration. Management has planned revisions to the Reporting of Serious Misconduct Policy to address recommendations from KPMG. The policy will now have to go through the review process and final board approval.

3. Purchase and Payment Process - Cutoff

Observation and implication:
During our sampling of transactions related to contract for service and consultants expense, we identified an invoice for an environmental survey that was conducted in 2018, with the final deliverable received in 2019; financial services had not been informed of the potential accrual. The amount of the invoice exceeds the $100,000 internal threshold set for the application of accruals, and therefore required an expense and accrued liability to be recorded in 2018. Instead, the amount was recorded as an expense in 2019. Contracts are subject to extended terms of service and if not recorded in the correct period, could result in expenses being recorded in the incorrect fiscal year.

We noted management has made efforts in 2019 and 2020 to review significant accruals and outstanding balance sheet items during the year-end closing process which will continue to promote more accurate accruals and minimize the impact of such cut-off discrepancies. This is a significant undertaking by the Finance team because invoices are received by departments for initial review before being approved and sent to Finance for recording and payment. The existing process can result in payments being made 1-3 months past their due date. Such cut-off discrepancies have been identified by management in previous years.

Recommendation:
We recommend that management evaluate the existing process for processing invoices and consider opportunities to enhance awareness and communication of commitments by departments to the Finance team. Many organizations direct invoices to the Finance team upon receipt for recognition of an expense, then send them to the approving department for review and authorization to pay. This may be a more efficient process for both informing Finance of invoices received and obtaining department approval because Finance can follow up if documents are misplaced. Enhanced line of sight into the existence of invoices upon receipt will provide more complete information to Finance for accurate financial reporting.

Management Response:
The current process is for invoices to be received by vendor contacts across the organization, reviewed for goods and services receipt, coded, approved, and then submitted to Financial Services for payment processing. This process results in varied end-to-end process timing of up to 6 months, limiting the ability to accurately record expenses within a reporting period. Management will evaluate an organization wide change in business process for potential implementation in future years. Management will also continue to perform outreach and education to ensure timely and accurate reporting within a reporting period.

Management implemented an additional control procedure requiring the Manager of Financial Reporting, to review all invoices exceeding $100,000 for potential cut-off issues to determine if the invoice requires accrual into the reporting period if not already accrued for.

4. Expense Report Process – Approval of Board of Directors Expense Reimbursement

Observation and implication:
During our review of Board of Directors' expense reports, we noted that one expense report inspected was approved by an employee not part of the Executive Team. The District's policy is that expense reports related to Board of Directors be approved by the Chief Financial Officer (or alternate member of the Executive Team if not available). KPMG noted that this expense related to an event where the Director was not acting in their capacity as a Board Member, but acting in their capacity as a Chair of a Commission. The budget for meetings of this Commission is assigned to a manager at CRD.

Recommendation:
We recommend that the District's policy be updated to clarify the approval process for expenses related to other related entities, Commissions or Boards.

Management Response:
Recommendations on improvements to the existing policy is taken under advisement. As this is linked to a Board adopted policy, management will integrate various improvements in the next revision for consideration.

Management will also continue to perform outreach and education to ensure timely and accurate reporting.

Management has drafted revisions to the Board Remuneration and Travel Expense Reimbursement policy to address recommendations noted by KPMG. The revised policy will also go through the review and approval process to obtain board approval.

5. Expense Report Process - Approval of Chief Administrative Officer Expense Reimbursement

Observation and implication:
During our review of expense reports, we noted that the CAO's expense reports are reviewed and authorized for reimbursement by the CFO, not the Board of Directors. As best practice, expense reports should be approved by an employee's supervisor.

As a preventative control, a guideline was implemented in 2017 requiring the CAO to complete a Training and Development Request form and obtain pre-approval by the Board Chair before the CAO is able to travel or attend an event. As per the guidelines of the pre-approval form, the signed document is kept in the employee's file in the custody and control of the Human Resources department.

Update from 2020 Audit:
During our review of expense reports, we noted that the CAO's expense report for the item selected in April 2020 was reviewed by the CFO, not the Board of Directors.

Recommendation:
Pre-approval for travel and events is an effective control designed to capture the largest costs being incurred. As a good practice, we recommend that the CAO's expense reports be reviewed and approved by the Board Chair and a policy for the CAO's expense reports be created to reflect this requirement. In addition to a review of the amount of expenses incurred, the focus of this approval is an evaluation of the nature and reasonability of expenses incurred in compliance with District policy. We recognize the current process may achieve more timely reimbursement, and that a practical control may involve addition of Board review after review by the CFO and payment takes place. A preventative control before payment is a stronger control than after payment.

Management Response:
Recommendations on improvements to the existing process is taken under advisement. Management will review and present a recommendation to the Board Chair.

As discussed in prior years, in addition to the requirements of the local government act, the Chief Financial Officer is a designated Chartered Professional Accountant and bound by the professional code of conduct and ethics governed by CPA Canada.

Additionally, as a preventative control, a guideline was implemented in 2017 requiring the CAO to complete a Training and Development Request form and obtain pre-approval by the Board Chair before the CAO is able to travel or attend an event. As per the guidelines of the pre-approval form, the signed document is kept in the employee's file in the custody and control of the Human Resources department.

A review of delegated authority, budget authority and disbursement signing authority matrix was completed in 2020. Staff recommend sign off on CAO expenses consistent with KPMG recommendations which require all expense reimbursements to be signed by Board chair. This extends the existing procedure to not only cover travel expenses, but all expense claims.

Appendix C – Update on Previous Year's Closed Other Control Matters

1. Related Party Transactions with Board of Directors

Observation and implication:
In 2018, the adoption of a new accounting standard resulted in the District requesting Declarations of Related Party Transactions from the Board of Directors covering both pre- and post-election Directors. There were five Directors where the Declaration form was not received. Further, in 2019 there were two Directors where the Declaration form was not received.

In the absence of a Declaration form, management placed reliance on the Oaths taken by Directors. While the Oaths address Directors not allowing private interest to influence their conduct in public matters, they do not cover any potential transactions with related parties.

Update from 2020 Audit:
During our review of the declarations submitted by the Board Directors, it was noted that all Directors submitted the signed declaration forms.

2. Expense Report Process - Cutoff Policy

Observation and implication:
During our review of Board Member expense reports, we noted an instance where vehicle mileage recorded as an expense and reimbursed in 2017 actually occurred in 2016. Staff Travel Expenses Procedures point G. Claims Procedure states the following: Claims for travel expenses are to be submitted on the CRD Travel Expense Report claim form within 30 days of the period in which the expenses were incurred. Submission of expenditures for reimbursement after the 30-day period particularly at year end increases the risk of cut-off errors and inaccurate expense balances.

Update from 2020 Audit:
During our review of Board Member expense reports, we noted no instances where a cutoff error existed.

3. Bank Reconciliation Process – Capital Regional Housing Corporation (CRHC)

Observation and implication:
During our review of the year-end bank reconciliation for CRHC, we observed outstanding cheques aged past 60 days were included as reconciling items, indicating that they were stale-dated. Neither CRD nor CRHC has a policy on stale-dated cheques nothing when to investigate, reissue or write off such items. Continuing to include stale-dated cheques on bank reconciliations can decrease the efficiency of the reconciliation process and results in recipients not relieving CRD's liability to them.

Update from 2020 audit:
During our audit, we performed substantive procedures over the bank reconciliation for the Corporation and noted no issues with cheques aged over 60 days. We noted a standard operating policy has been drafted for stale-dated cheque.

4. Expense Report Process – certification of attendance and accuracy

Observation and implication:
During our review of Board of Directors' expense reports, we noted there are activities and events Directors attend and are compensated for that do not have readily available supporting documentation to verify both the occurrence and type of business expense such as attendance at external meetings, training or conferences that take place outside the District's premises. Where possible, external documentation to verify attendance is preferred to support the dates, duration and accuracy of these costs. It provides a clear documentation trail that the amounts and nature of expenses are in compliance with Board policy. In the absence of such documentation being available, a certification by Directors can serve as alternate support for the accuracy of amounts claimed.

Update from 2020 audit:
During our audit, we did not note any instances where activities and events that Directors attended did not have support available.

Appendix D – Definitions

Terminology	Definition
DEFICIENCY IN INTERNAL CONTROL	A deficiency in internal control exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent or detect misstatements on a timely basis. A deficiency in design exists when (a) a control necessary to meet the control objective is missing; or (b) an existing control is not properly designed so that, even if the control operates as designed, the control objective would not be met. A deficiency in operation exists when a properly designed control does not operate as designed or the person performing the control does not possess the necessary authority or competence to perform the control effectively.
SIGNIFICANT DEFICIENCY IN INTERNAL CONTROL	A significant deficiency in internal control is a deficiency or combination of deficiencies in internal control that, in the auditor's professional judgment, is of sufficient importance to merit the attention of those charged with governance.

Making a difference...together

REPORT TO FINANCE COMMITTEE
MEETING OF WEDNESDAY, MAY 05, 2021

SUBJECT **Capital Regional District External Grants Update**

ISSUE SUMMARY

A bi-monthly update on external grants activity for the period of February 8 through April 12, 2021.

BACKGROUND

This report summarizes activities and outcomes since the CRD External Grants Update was last presented at the March 2021 Board meeting. Additionally, the CRD External Grants Dashboard (Appendix A) details grant applications, awards, and status of projects in progress.

IMPLICATIONS

Financial Implications

Grants / Contributions Awarded

1. An additional $575,000 through the Provincial Government's COVID-19 Safe Restart Grant for Local Governments for impacts related to service delivery through the pandemic. Total grants received through this program are $1.9M.

2. $337,256 through the Federal Government's Reaching Home grant to support vulnerable Indigenous populations facing homelessness. Total grants received through the Reaching Home program-Indigenous populations total $1.0M since 2019.

3. $224,354 through BC Transit's Annual Operating Agreement and Safe Restart Contribution for the Salt Spring Island Transportation Service to deliver on island conveyancing.

4. $76,000 through the Community Economic Recovery Infrastructure Program – Unique Heritage Infrastructure Stream for the Goldstream Powerhouse Roof Replacement project.

5. $3,256 through the 2020 Canada Summer Jobs Program for Parks Summer Grant. Total grants received through this program for 2020 are $78,140.

Five grants are under news embargo.

Applications Submitted

Seven applications were submitted:

1. $127,907 through the 2021 FireSmart Economic Recovery Fund-Community Resiliency Investment Program-UBCM for the Capital Regional FireSmart Economic Recovery project.

2. $100,000 through the Canada Healthy Communities Initiative for the Salt Spring Island Parks and Recreation Centennial Park Plaza project.

3. $49,806 through the Habitat Stewardship Program for Species at Risk for the State of Species at Risk project for Regional Parks.

4. Up to $40,000 through the Natural Resources Canada – Zero Emission Vehicle Infrastructure Program, MURBS, Workplaces and LDV Fleets for Eight Level Two Electric Vehicle Chargers for corporate fleet chargers.

5. $25,000 through the 2021 Emergency Operations Centres & Training-Community Emergency Prepardeness Fund for the CRD Electoral Area EOC Functional Exercises.

6. $9,000 through the Salt Spring Island Foundation for the Centennial Park Gazebo project.

7. $1,000 through the ParticipACTION Community Better Challenge for the Swim the Southern Gulf Islands.

Core Area Wastewater Treatment Plant Project Update

The Core Area Wastewater Treatment Plant project is partially funded by the Federal Government, the Province of BC, and the Federation of Canadian Municipalities. Since the last update to committee and Board, the CRD received the final holdback payment from the Building Infrastructure Grant of $12M. Cumulatively, the CRD has received $351M of the estimated $462M in grants. The remaining $111M is expected to be received in 2021 based on timing of eligible expenditures and achievement of target milestones.

Service Delivery Implications

New Grant Opportunities

Twenty-seven new grant calls were issued during the reporting period. Grant Calls in Progress for which the CRD is eligible to apply are featured in Appendix A (see pages 7–9), and in the table below:

Grant	Deadline	Information
ParticipACTION Community Better Challenge	26-Feb-21	Funds physical activity events and/or programs in person/virtually from June 1-30, 2021 (Challenge period).
Immunization Partnership Fund: Public Health Agency of Canada	05-Mar-21	Provides funding for projects on COVID-19 vaccines that may include capacity, outreach, promotion, and education.
Canada Healthy Communities Initiative	09-Mar-21 25-Jun-21	Provides funding to create public spaces, improve mobility options, and provide digital solutions.

Grant	Deadline	Information
Canada Learning Bond Grants and Contributions Pilot Projects: Phase II-Employment and Social Development Canada	17-Mar-21	Provides funding to organizations that are testing enrolment models for Canada Learning Bond eligible children.
Emergency Operations Centres and Training-Community Emergency Prepardness Fund-UBCM	26-Mar-21	Provides funding for supplies, equipment, and capacity for Emergency Operations Centres.
Economic Recovery Intake-Connecting British Columbia Program	31-Mar-21	Short-term opening funding opportunity to improve and expand immediate connectivity projects.
AgriSpirit Fund-Farm Credit Canada	31-Mar-21	Provides funding to capital and sustainability projects where the city or town's population is less than 150,000.
Community to Community Forum	01-Apr-21	Provides funding to host a Regional Community to Community Forum
Canada Arts Presentation Fund	1. 01-Apr-21 2. Continuous	Two streams to support art festivals/series/ presenters/presenter organizations: 1. Presenter Support Organizations 2. Development
Clean Transportation System – Research and Development	15-Apr-21	Provides funding for research projects on aviation, marine and rail sectors with the goal to reduce GHG emissions and support climate change.
Strengthening Communities' Services-UBCM	15-Apr-21	Part of Safe Restart funding to provide support to unsheltered homeless populations and address community impacts.
Asset Management Planning Program-UBCM	30-Apr-21	Provides funding to support asset management development (planning/training/resources, etc.).
Community Anniversaries-Building Communities through Arts and Heritage	30-Apr-21	Provides funding for one-time events/capital projects that celebrate the 100th (or 125th/150th/175th, etc.) anniversary of a significant historical event/personality.
CleanBC Industry Fund	1. 30-Apr-21 2. 24-May-21 3. TBC	Three streams to reduce GHG emissions in industries: 1. Emissions performance 2. Innovation accelerator 3. Project feasibility studies
Jumpstart – Sports Relief Fund	02-May-21	Provides funding for operational and delivering program support for sport/recreational programming.
Local Government Development Approvals Program-UBCM	07-May-21	Part of Safe Restart funding to provide support for local governments to improve the development approvals processes.
2021 Active Transportation Planning	22-May-21	Provides funding to incorporate or enhance active transportation of formal planning documents.

Grant	Deadline	Information
PlanH 2021 Healthy Communities	01-Jun-21	Supports projects that promote equitable and inclusive and healthier communities. Two streams: 1. Community Connectedness 2. Healthy Public Policy
Housing Needs Report Planning-UBCM	04-Jun-21	Provides funding to produce, publish or update housing needs report.
Zero Emission Vehicle Infrastructure program	22-Jun-21	Funding for ZEV infrastructure projects in public places, on-street, multi-unit residential buildings, workplaces and light-duty vehicle fleets
Infrastructure Planning Grant Program	16-Jul-21	Funding for local governments to develop/improve long-term plans.
Green Municipal Fund: Local Home-Energy Upgrade Financing Program	Continuous	Loan/grant program for home energy upgrades.
Economic Development Readiness Program	Continuous	Supports capacity building and investment readiness projects within the Island Coastal Economic Trust regions

Forthcoming Funding Initiatives

1. Island Health Community Wellness Granting Program 2021/22 intake, forthcoming spring 2021.

CONCLUSION

The CRD recognizes grants are a supplementary funding source to address the needs of services provided to the region. The External Grants Update outlines how the CRD continues to integrate and consider these grant opportunities relative to service needs, as well as informing local partners of these opportunities through the grants dashboard. The CRD will continue to provide a summary of activities and outcomes in the External Grants Update on a bi-monthly basis.

RECOMMENDATION

The Finance Committee recommends to the Capital Regional District Board:
That the Capital Regional District External Grants Update be received for information.

Submitted by:	Lia Xu, MSc., CPA, CGA, Finance Manager, Local Services
Concurrence:	Nelson Chan, MBA, FCPA, FCMA, Chief Financial Officer
Concurrence:	Robert Lapham, MCIP, RPP, Chief Administrative Officer

REPORT TO THE FINANCE COMMITTEE
MEETING OF WEDNESDAY, MAY 05, 2021

SUBJECT **Capital Regional District External Grants 2020 Annual Report**

ISSUE SUMMARY

This report provides a summary of the Capital Regional District (CRD) external grants activity for the period of January 1, 2020, to December 31, 2020.

BACKGROUND

In 2015, the CRD introduced a grants dashboard to provide the Board with regular updates on the organization's activities related to external grant programs. In addition to this annual report, staff report on grant applications, awards, and forecast upcoming programs bi-monthly through committee to Board. There are additional reports detailing Community Works Funds and Grants-in-Aid that report through the Electoral Areas Committee.

Through various financial processes, including budgeting, staff actively manage revenue streams to fund operating and capital expenditures. As a critical component of revenue management and cost effective service delivery, staff continually monitor and partner with funders to align and occasionally adjust work plans with granting opportunities.

IMPLICATIONS

Financial Implications

As a result of COVID-19, grant activity during the 2020 calendar year was unique. Many previously announced programs were either cancelled or postponed and replaced with COVID-19 streams to support impacted organizations. A number of provincially funded COVID-19 grants including the Safe Restart for Local Governments were allocation-based versus traditional application programs. As a result, the rate of return key performance indicator, which is a function of staff time, is heavily skewed when comparing year to year. The following is a summary of grant activity during 2020 excluding those still under communication embargo. Appendix A provides additional detail on grant application activity.

Grants Activity Overview (as of December 31, 2020)

1. Grant alerts: 69 alerts circulated
    - 50 weekly grant alerts
    - 19 individual grant summaries
2. Grant application activity
    - 44 submitted applications in 2020
    - 27 applications approved

- 20 pending results
- 11 declined/cancelled/deferred

3. Grant coordination and reporting
   - 9 External Grants Staff Reports were provided monthly to the Governance & Finance committee.
   - 4 Annual Reports, including reports detailing activity for external grants, Community Works Fund, and Grants-in-Aid.
   - 5 Other Grant Reports, including reports related to the Investing in Canada Infrastructure Program, grant adjudication, and Safe Restart funding.
4. Professional development
5. Grant research & performance
6. Financial administration
7. Relationship building with Grant Program Funders

The following table provides an overview of awards for the past 2 years.

Table 1: Grants Awarded for 2020

Grants Awarded	**2020**	**2019**
Core Area Wastewater Treatment Project (CAWTP)[1]	$149.1M	$138.9M
Regional Housing First Program (RHFP)[2] Canada Mortgage and Housing Corporation (CMHC) grant	$4.2M	$30M
External Grants Awarded	$31.2M	$6.8M
Total	**$187.5M**	**$175.7M**
Rate of Return (excludes CAWTP/RHFP)	35x	13x

Grant Program Trends

In tracking funding trends, staff review various program alerts, notifications, and announcements. For information purposes, appendix B summarizes the top five categories of granting programs in 2020 in addition to applications submitted aligned to CRD's identified community needs, showcasing the effort and activity across the organization in support of revenue diversification.

CONCLUSION

Staff provide regular reports through both the Finance and Electoral Area committees detailing internal and external grants activity. In 2020, COVID-19 impacted the portfolio with cancellations,

[1] At the end of 2020, CAWTP had collectively year to date received $339M in funding from provincial and federal programs.
[2] RHFP includes funding from the CRD, BC Housing (contribution), and CMHC (grant); in 2020, each partner had committed $40M towards affordable housing, for a total of $120M.

postponements, and new funding programs. Staff continue to monitor and track key performance indicators which, in 2020, are unique when compared with the prior year. Staff proactively manage the various processes for optimal financial management and adjust work plans when necessary.

RECOMMENDATION

The Finance Committee recommends to the Capital Regional District Board:
That the CRD External Grants 2020 Annual Report be received for information

Submitted by:	Lia Xu, MSc., CPA, CGA, Finance Manager, Local Services

REPORT TO THE FINANCE COMMITTEE
MEETING OF WEDNESDAY, MAY 05, 2021

SUBJECT **2022 Service and Financial Planning Guidelines**

ISSUE SUMMARY

This report outlines the service and financial planning process for 2022 including key budget drivers for consideration.

BACKGROUND

The Capital Regional District (CRD) 2022 service and financial planning processes have begun. Board Priorities, Corporate Initiatives, and Core Service Delivery form the foundation of the 2022–2026 five-year financial plan. Appendix A highlights the overall planning process while Appendix B is more prescriptive with a timeline.

The 2022 planning cycle marks the final year of both the CRD Board term and the 2019-2022 Corporate Plan. As in prior years, the Board has a scheduled Committee of the Whole meeting where staff will report on progress and check in for strategic priority feedback. The 2021 meeting is scheduled for May 12. Heading into 2022, the organization will continue to action initiatives advancing strategic and corporate priorities while balancing service delivery pressures brought on by continued population growth, increased utilization of services, COVID-19 and economic uncertainty.

2022 service plans will continue to take the form of Initiative Business Cases (IBCs) that will propose action on priorities and initiatives in the corporate plan. IBCs will convey the human resource, financial, organizational and strategic impacts associated with delivering each initiative over the plan period.

As staff prepare and evaluate IBCs through the summer, the Executive Leadership Team (ELT) will consider and make recommendations through committees and to the Board in the fall. Impacts, along with an overview of financial implications and budget recommendations, will be summarized and presented at the Committee of the Whole meeting scheduled for October 27, 2021.

As in prior years, to proactively influence service and financial planning, this report explores financial plan guidelines along with key trends, assumptions and drivers to be used in the planning process.

ALTERNATIVES

Alternative 1
The Finance Committee recommends to the Capital Regional District Board:
That the financial planning guidelines as presented be approved and that staff be directed to prepare the draft financial plan review based on the timeline presented.

Alternative 2
That this report be referred back to staff for additional information.

IMPLICATIONS

Financial Implications
Alignment of the financial plan with strategic priorities supports efficient and effective service delivery. Prudent financial management of surpluses, reserves, debt levels, and rigor over expenditures enables the organization to optimize revenue requirements and minimize requisition impacts.

Guidelines establish how management will respond on core service levels, new initiatives, adjustments for inflation and market cost escalations in preparation of the budget each year.

Financial Guidelines

The financial guidelines are the policies and assumptions by which CRD Board and staff determine the most appropriate allocation of resources by initiative.

The financial guidelines are based on the following:
1) Economic Conditions
2) Base Service Levels and Infrastructure Funding
3) Board Input
4) Financial Management Strategies

1) Economic Conditions

With COVID-19 declared as a pandemic by the World Health Organization in March 2020, there has been significant economic and social impacts locally, domestically, and internationally. Multiple waves, variants of concern, and vaccination rollout have driven uncertainty in resolution of the pandemic, and may impact future cash flow, service delivery and ultimately, short and long-term financial planning.

To support due diligence through the planning process, monitoring of economic and social conditions will continue with conservative drivers and assumptions forming the basis of the financial plan. The organization's foundation will be to maintain existing services and advance essential initiatives directly identified in the corporate plan in consideration of economic conditions.

2) Base Service Levels and Infrastructure Funding

The CRD Board's 2019–2022 strategic priorities formed the basis of the Corporate Plan. These priorities are foundational to each service's work plans. The rolling five-year financial plan will reflect updated assumptions in timing, scope and cost estimates. The budget will also include core inflation and cost escalation linked to market conditions, and related funding.

Key Drivers

The most significant costs to service delivery are salaries and benefits, debt servicing, materials and equipment. Changes in these expenditures can be influenced by uncontrollable economic conditions such as unemployment rates, supply and demand, tax changes, and contractual agreements.

Infrastructure

The corporate asset management policy and strategy for the organization have been endorsed by the Board. These documents are well aligned with other strategic documents; specifically, to the Corporate Plan, climate action strategy and the risk management policy. A priority action from the asset management strategy is to develop Sustainable Service Delivery Plans and, as they are compiled, to integrate risk assessments, as well as climate adaption, which will ultimately further inform financial implications in the future.

In response to the corporate plan priority to develop triple bottom line sustainable budget practices, a review of capital reserve balances and funding status was completed in Q4 2020. The review included assessment of internal practices, existing bylaws, reserve levels against industry benchmark and a comparison to other local governments. A report back to committee is planned for July. As a result of the review work, a guideline was established to introduce a standard approach in setting optimal levels of reserve, debt and grant funding to minimize lifecycle costs within a long term funding strategy. The guideline establishes a common practice and aligns funding strategies with asset lives, enabling a balancing of revenue needs through the life of the asset.

3) Board Input

The 2022 financial planning process is based on the corporate planning cycle and will reflect direction from Commissions, Committees and the Board inclusive of feedback received in the last planning cycle. In addition, the Board will be completing their annual check-in on Strategic Priorities and any new direction will be incorporated into the service planning process. As in prior years, the public will continue to be engaged throughout the process with the established communications and feedback strategy. There are also ongoing opportunities for public input through service activities at committee and commissions of the CRD.

Alignment of the financial plan with strategic priorities and financial management strategies supports efficient and effective service delivery. Prudent financial management of surpluses, reserves, debt levels, and rigor over spending levels enables the organization to optimize revenue requirements and minimize requisition increases. The guidelines to maintain core service levels and incorporate new initiatives from the Strategic and Corporate Plans adjustments for inflation and market cost escalations, as detailed in this report for the 2022 budget, aim to minimize financial implications for the 2022 budget year.

4) Financial Management Strategies

Financial management strategies ensure critical financial objectives are integrated into organizational decision making and operations. The following outlines the financial management strategies that will guide financial planning:

- Optimize fees for service revenues and stabilize tax rates to fund operations, maintenance, growth and asset utilization.
- Limit transfers to/from operating reserves, transferring only to fund one-time projects or to stabilize revenue requirements.
- Levels of transfers to/from capital reserves supported through development of life cycle funding requirements and optimal levels of debt and debt terms.
- One-time variances resulting in surplus transferred to reserve in order to fund future capital liabilities or reduce future revenue requirements, and only applied to reduce tax rates in rare circumstances where the offset is sustainable and stable.

CONCLUSION

Services will build work plans and five-year financial plans to plan for and carry out the identified priorities. Assumptions for inflation, market cost escalation, salary contract rates, benefit rates and utility rates will also be taken into account when developing the financial plans.

RECOMMENDATION

The Finance Committee recommends to the Capital Regional District Board:
That the financial planning guidelines as presented be approved and that staff be directed to prepare the draft financial plan review based on the timeline presented.

REPORT TO FINANCE COMMITTEE
MEETING OF WEDNESDAY, MAY 05, 2021

SUBJECT **2021 Provincial Budget Highlights**

ISSUE SUMMARY

To provide the Committee with a high level review of potential impacts on CRD services in the 2021 Provincial Budget.

BACKGROUND

On April 20, 2021, Finance Minister Selina Robinson introduced the 2021 Provincial Budget in the legislature. This information report is intended to provide highlights on items relating to the Capital Regional District, Capital Regional Hospital District, and Capital Region Housing Corporation. While these highlights have been focused on organizational impacts, there was an attempt to include potential implications for member municipalities and electoral areas.

This is not intended to be a comprehensive budget review.

IMPLICATIONS

Refer to Appendix A for a CRD, CRHD, and CRHC perspective on the Provincial Budget including potential impacts to member municipalities and electoral areas. Highlights also include potential services that may be impacted by provincial initiatives.

Refer to Appendix B: Provincial Budget and Fiscal Plan, the main budget document from the Ministry of Finance that lays out the Province's three-year fiscal plan, including economic outlook, revenues, spending, tax measures, and forecasting risks and assumptions.

RECOMMENDATION

The Finance Committee recommends to the Capital Regional District Board:
That the 2021 Provincial Budget Highlights report be received for information.

Submitted by:	Nelson Chan, MBA, FCPA, FCMA, Chief Financial Officer
Concurrence:	Robert Lapham, MCIP, RPP, Chief Administrative Officer

ATTACHMENT(S)

Appendix A: 2021 Provincial Budget Highlights
Appendix B: Ministry of Finance – Provincial Budget and Fiscal Plan

Highlights of 2021 BC Provincial Budget

At first glance it's an unbalanced budget (nearly $70B) with forecasted deficits of;

- 2021/22 $9.7B deficit (including $3.3B in contingencies)
- 2022/23 $5.5B deficit (including $1.0B in contingencies)
- 2023/24 $4.3B deficit (including $0.3B in contingencies)

The forecasted debt by the end of the 3 year budget in 2023/24 is $92.7B (nearly double pre-pandemic levels). The Government predicts that it will take at least 10 years to repay this debt.

2021/22 GDP forecast to grow at 4.4% with a provincial Unemployment rate of 7.5%

Provincial Budget Highlights Impacting CRD & Member Municipalities

1. COVID Response

- $3.2B in COVID-Related Impacts including;
  - $253 million over three years to provide faster access to doctors and nurse practitioners
  - Additional $900 million for 2021/22 Pandemic and Recovery for health-related needs including testing, contact tracing, and vaccine rollout
- $120 million in 2021/22 for tourism including $20 million for community destination development grants **[municipalities? Non-profits, EAs]**
- $6M over three years to support the recovery of arts and culture organizations **[Arts, Grants]**

2. Affordable Housing

- $2 billion additional funding for the HousingHub program which aims to build 9,000 rental homes over the next 3-5 years. Incremental to current funding to the build more than 10,000 low-middle-income units through grant funding non-profit housing providers. **[CRHC, non-profit housing providers]**
- $265 million in 2021/22 to supports and services related to homelessness. There is an additional $30 million ongoing support tied to hotel purchases providing 400 shelter units. **[CRHC, CRHD?]**
- Funding to maintain more than 3,000 temporary emergency shelter spaces secured during the COVID-19. Specific to Vancouver and Victoria, additional funding for the 650 urgent shelter spaces, rent supplements, and supportive housing sites used to support decampments, with on-site health and other supports. **[CRHC, non-profit housing providers, CRHD?]**
- Continued partnership with the federal government through the Rapid Housing Initiative to convert existing buildings into supportive housing, and develop modular housing. **[CRHC]**

3. Environment

- $506 million continued funding (over 3 years) to support CleanBC through;
    - $130 million incentives for zero emission vehicles, charging infrastructure, electrification of school buses, ferries, government fleets. Also included is $18 million for active transportation infrastructure **[Parks & Trails, Facilities, Transportation]**
    - $11 million to develop and fund a new program for local governments to plan for compact, energy efficient communities **[Community Planning?, Climate Action]**
    - $46 million for energy efficient buildings and communities **[Facilities?]**
    - PST exemption on electric bikes **[Transportation, Parks & Trails]**
- $60 million for Centre of Innovation & Clean Energy to support commercialization of clean tech
- $519 million for CleanBC's Program for Industry to transition to low carbon technology

4. First Nations Reconciliation

- $60 million annual funding to support engagement and capacity building on legislation, policy, and programs **[FNR]**
- $59 million for cultural safety and humility training across health and addiction services
- $20 million in rural economic recovery grants for Indigenous and local governments **[FNR, Grants, EAs]**
- $17M to implement the Declaration Act and reconciliation agreements, including land transfers **[FNR]**

5. Support Services

- $233 million increase over three years for childcare to create new spaces **[Recreation?]**
- Additional $111M to expand the low-to no-cost childcare program **[Recreation?]**
- Provincial funding of $41 million over 3 years to support local governments, not-for-profit entities and First Nations in accessing community infrastructure funding *further details coming in the fall of 2021.* **[FN Relations, Grants, EAs]**
- $100 million in 2021/22 for Community Infrastructure, BC 150 Grants, and CleanBC recovery **[Grants, EAs]**
- Ongoing base funding of $40 million over the plan for the Province's connectivity strategy **[Grants, EAs]**
- $83 million over 3 years for BC Parks, with $10 million in 2021/22 to improve parks, add campsites, upgrade trails, purchase new land, and improve the reservation system **[Parks?]**

6. Other Budget Items of Interest

- $150M for Increased Employment Incentive tax credit for those who increased hiring or wages in the fourth quarter of 2020 **[CRD, Munis?] Note the minimum wage will be raised to $15.20 per hour on June 1, 2021.**
- $1.9B for public transit services including free transit for youth 12 and under across the province **[Transportation]**
- Mental Health & Substance use
    - $3.1 billion over the plan to improve mental health care, including $500 million to expand mental health and substance services:
        - $97 million to build a network of mental health supports for youth (schools, wellness resources, integrated supports teams school districts) **[Health]**
        - $61 million incremental over the plan to improve access and quality of services, including eating disorder care, suicide prevention, psychosis intervention **[Health]**
        - $14 million for the First Nations Health Authority to deliver mental health and addictions services to Indigenous peoples. **[FN Relations, reconciliation]**
        - $330 million over the plan for full spectrum substance-use treatment and recovery services, including $152 million for opioids **[Health]**
        - 195 new substance use treatment and recovery beds **[Health]**
- $195 million in 2021/22 for the Small and Medium Sized Business Recovery Grant Program **[Economic Development?]**

Appendix 135

BRITISH COLUMBIA

April 20, 2021

As required by Section 7(1)(d) of the *Budget Transparency and Accountability Act*, I confirm that *Budget 2021* contains the following elements:

- Fiscal forecasts for 2021/22 to 2023/24 (provided in Part 1) and economic forecasts for 2021 to 2025 (provided in Part 3).
- A report on the advice received from the Economic Forecast Council (EFC) in February 2021 (updated in March 2021) on the economic growth outlook for British Columbia, including a range of forecasts for 2021 and 2022 (see Part 3, page 103).
- Material economic, demographic, fiscal, accounting policy, and other assumptions and risks underlying *Budget 2021* economic and fiscal forecasts. In particular:
  - The economic forecast reflects an improved outlook for British Columbia amidst ongoing uncertainty associated with the global COVID-19 pandemic. In recognition of downside risks, the economic projections assumed in *Budget 2021* are prudent relative to the average of the forecasts provided by the Economic Forecast Council.
  - Consistent with past practice, the economic forecast does not incorporate fiscal policy measures announced in the current budget (*Budget 2021*), since the timing of budget decisions generally coincides with the development of the economic forecast. These budget policy measures will be incorporated into the economic outlook in the updated forecast included in the *First Quarterly Report*.
  - The corporate income tax revenue forecast is based on projections for national corporate taxable income provided by the federal government.
  - Natural gas royalty forecasts continue to adopt a lower natural gas price forecast compared to the private sector average in order to maintain prudence against volatility.
  - The fiscal plan includes three-year financial projections for school districts, post-secondary institutions and health authorities, based on plans submitted by those entities to the Ministries of Education, Advanced Education, Skills and Training, and Health, respectively, and for the other service delivery agencies and the commercial Crown corporations.
  - The fiscal plan includes general program contingencies of $1.0 billion in 2021/22, $800 million in 2022/23 and $700 million 2023/24, and a forecast allowance of $1.0 billion in 2021/22, $750 million in 2022/23, and $400 million in 2023/24. In addition, *Budget 2021* provides a Pandemic and Recovery Contingencies allocation of $3.25 billion in 2021/22, $1.0 billion in 2022/23, and $300 million in 2023/24. Government's economic and fiscal prudence measures generally have resulted in government exceeding its budget targets.
  - *Budget 2021* contains an additional $1.5 billion in 2022/23 and 2.0 billion in 2023/24 in funding available for priority spending initiatives to be developed for future budgets, and for budgetary pressures such as caseload growth.

To the best of my knowledge, the three-year fiscal plan contained in *Budget 2021* conforms to the standards and guidelines of generally accepted accounting principles for senior governments as outlined in Note 1 of the 2019/20 *Public Accounts*.

I would like to recognize staff in government ministries and agencies for their contribution to this document. I would especially like to acknowledge staff in the Ministry of Finance, whose professionalism, commitment and expertise were essential to the completion of this budget and fiscal plan.

Heather Wood
Deputy Minister and Secretary to Treasury Board

A StrongerBC, for Everyone

The emergence and evolution of the COVID-19 pandemic has challenged the people of British Columbia and the world alike. While B.C. has demonstrated resilience and there are signs of optimism for the year ahead, the Province continues to respond to the ongoing health and economic impacts from the pandemic.

Budget 2021 builds on the Province's COVID-19 Action Plan by prioritizing $8.7 billion in new investments across the three-year fiscal plan to protect the health and safety of British Columbians, to support people and businesses in addressing the pandemic's immediate impacts, and to prepare the province for recovery once the pandemic is over.

The fiscal plan also reflects the ongoing uncertainty of the pandemic by maintaining Pandemic and Recovery Contingencies of $3.25 billion in 2021/22, $1 billion in 2022/23 and $300 million in 2023/24. This will ensure that the Province can continue to deliver COVID-19 response and recovery measures and builds additional prudence in the fiscal plan. Total new operating spending is $13.2 billion over fiscal plan, as shown in Table 1.2.1 on page 7.

Budget 2021 sets the path for working towards fiscal balance with declining deficits from $9.7 billion in 2021/22 to $4.3 billion in 2023/24. The topic box on page 30 provides additional information about the Province's approach to economic recovery and path to fiscal balance.

Health and Safety

The health and safety of British Columbians remains government's top priority. The pandemic highlighted the importance of a robust and responsive health care system. *Budget 2021* invests more than $3.1 billion over three years

to strengthen B.C.'s health care and mental health systems. This includes measures to support long-term care residents and patients, provide more options for seniors and others to receive care at home, accelerate surgeries and diagnostic imaging services, and expand the number of urgent and primary care centres in B.C. Historic investments of $500 million over three years are provided to address the opioid crisis and improve access to mental health and addictions services. Funding will provide targeted mental health supports for children, youth and Indigenous peoples, as well as prevention, treatment and emergency response services.

In addition to these investments, government has allocated $900 million from the Pandemic and Recovery Contingencies to support ongoing COVID-19 related health response needs, including vaccine roll-out, testing and screening, and the provision of personal protective equipment for frontline healthcare workers.

Supporting People and Businesses

Budget 2021 continues to deliver and enhance the services people rely on and helps make life more affordable. This includes nearly $1.6 billion more over the fiscal plan to provide supports for British Columbians receiving income and disability assistance, including low-income seniors, to improve financial security for some of B.C.'s most vulnerable people.

This budget also provides significant new investments to support essential public services including: the K-12 education sector ($1.2 billion), children, youth and family services ($85 million), supports for adults with developmental disabilities ($367 million), and justice and public safety services ($206 million).

The plan also invests new funding in key government priorities. *Budget 2021* provides over $375 million over the plan for homelessness response and affordable housing initiatives. It provides $233 million more over three years to advance the ChildcareBC strategy to provide more affordable, accessible and high quality child care to support families and help parents — particularly women — to participate in the workforce.

The budget contains a number of measures which support reconciliation, including $197 million for: engagement with Indigenous peoples on legislation, policy, and programs; negotiation capacity; initiatives that increase participation of Indigenous people in land and resource activities within their territories; and resources to continue the implementation of reconciliation agreements and the *Declaration on the Rights of Indigenous Peoples Act*.

Budget 2021 continues to support businesses through the ongoing COVID-19 response initiatives implemented during the fall 2020 *StrongerBC Economic Recovery Plan.* This includes funding for the Small and Medium Sized Business Recovery Grant program, and tax incentives for businesses that increased hiring or compensation in the last quarter of 2020 compared to the previous quarter. It also includes $45 million more to support farmers and the agriculture sector, and $120 million to support the tourism sector, including community infrastructure grants, supports for anchor attractions, and initiatives to promote domestic and international travel to B.C. when health restrictions are lifted.

Preparing for Recovery

While the Province continues to manage the ongoing pandemic, *Budget 2021* makes investments of over $1 billion over the fiscal plan to help position B.C. for a strong economic recovery. This includes new training investments to increase the overall capacity of the health care workforce. The budget also allocates an additional $200 million in 2021/22 from the Pandemic and Recovery Contingencies to help boost training and job creation initiatives. This includes more skills training opportunities for Indigenous people, an increase in youth work placement and job opportunities, and for micro-credentialing programs that will help people to quickly move into good-paying jobs.

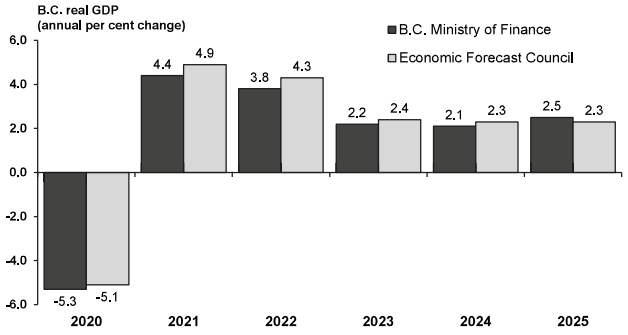
The Province also continues to invest in a greener and more sustainable future with $506 million in new investments for CleanBC. *Budget 2021* provides $500 million in financing to support the new InBC Strategic Investment Fund that will help to attract and anchor high-growth

businesses, talent and jobs in B.C. The plan also provides $147 million over three years for new investments in communities by improving broadband and cellular connectivity for rural and remote communities, enhancing campgrounds and recreational trails, and investing in community infrastructure and programs to mark the 150th anniversary of B.C.'s entry into the confederation.

Capital Investments

Budget 2021 makes significant new capital commitments in the health, transportation, and education sectors. Taxpayer-supported capital spending on hospitals, schools, post-secondary facilities, affordable housing, transit, roads and other infrastructure around the province is expected to be $26.4 billion over the fiscal plan period. This three-year total is $3.5 billion higher than *Budget 2020*. These important investments help build and improve infrastructure to deliver services people count on in communities around the province and are expected to create over 85,000 jobs during the next three years, providing economic stimulus to support B.C.'s economic recovery.

Capital spending of self-supported Crown corporations is expected to total $13.1 billion over three years, relating primarily to electrical generation, transmission and distribution projects.

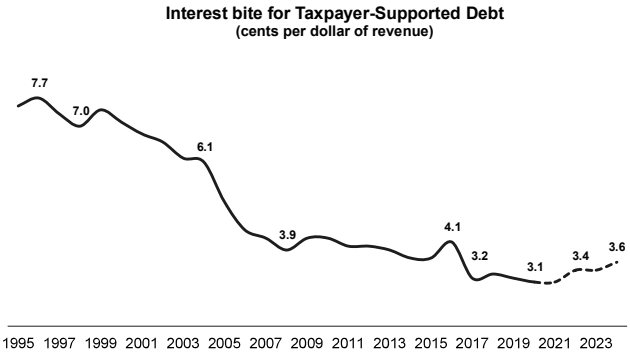


Economic Outlook

The COVID-19 pandemic pushed economies all over the world into deep recessions and B.C. was no exception. Widespread job losses strained households and unprecedented challenges weighed on businesses. While the reopening of the economy and government emergency response programs have gone a long way to support economic recovery, the pandemic continues and significant challenges remain. The swift development of effective vaccines together with stronger than expected economic activity in 2020 have improved the outlook.

It is estimated that the B.C. economy contracted by 5.3 per cent in 2020 and that it will expand by 4.4 per cent in 2021 and then 3.8 per cent in 2022. Over the medium-term (2023 to 2025), growth is expected to range between 2.1 per cent and 2.5 per cent annually.

The *Budget 2021* forecast over the three-year fiscal plan for B.C. real GDP growth is below the average outlook provided by the Economic Forecast Council (EFC). This is one of the levels of prudence built into the fiscal plan. The outlook for 2025 is slightly higher than the average EFC forecast as LNG production is anticipated to provide more support to the economy in that year.



Prudent Economic Forecast

Debt Affordability

Debt is expected to increase significantly to finance the operating and capital investment needs of the province. Taxpayer-supported debt at the end of the three-year fiscal plan in 2023/24 is forecast to be $92.7 billion, with the taxpayer debt-to-GDP ratio at 26.9 per cent. In spite of the debt level increase, debt servicing costs remain at a historically low level due to prevailing low interest rates. A common metric of affordability is the interest bite, or the taxpayer-supported interest

Debt Affordability

costs as a percentage of provincial government revenue, which continues to remain lower than it has been historically, forecast at 3.4 per cent in 2021/22 and 3.6 per cent by 2023/24.

Risks to the Fiscal Plan

The main risks to the government's fiscal plan include:

- Ongoing health-related uncertainty relating to the pandemic, including the extent of the spread or containment of the virus in B.C. and across the world;
- Uncertainty relating to the depth and duration of the pandemic and the pace and timing of recovery which contributes to the potential volatility in the economic and fiscal outlooks;
- Increased demands for government services, such as health care, income assistance, other social service programs, or COVID-19 response or recovery programs;
- Changes in the timing of capital projects and related spending which may be influenced by several factors, such as physical distancing on work sites, design development, procurement activity, market conditions, weather, geotechnical conditions and interest rates; and
- Actual operating results and capital spending which may affect borrowing requirements and overall provincial debt.

To mitigate the risks to the fiscal plan, government has incorporated increased levels of prudence in its projections which include:

- Annual forecast allowances of $1.0 billion in 2021/22, $750 million in 2022/23 and $400 million in 2023/24 to guard against volatility, including revenue changes;
- General Program Contingencies allocation of $1 billion in 2021/22, $800 million in 2022/23 and $700 million in 2023/24 to help manage unexpected pressures;
- Pandemic and Recovery Contingencies allocation of $3.25 billion in 2021/22, $1.0 billion in 2022/23 and $300 million in 2023/24 to continue to fund short-term initiatives to address health or economic recovery needs related to COVID-19;
- Notional allocations of $1.5 billion in 2022/23 and $2.0 billion 2023/24 for caseload pressures and priority initiatives that may require funding in future budgets; and
- A forecast for B.C.'s real GDP growth that is lower than the outlook provided by the Economic Forecast Council (0.5 percentage points lower in both 2021 and 2022, and 0.2 percentage points lower in both 2023 and 2024).

Conclusion

Budget 2021 continues to prioritize investments that help B.C. respond to the pandemic. This includes significant new investments in health and safety, supports to people and businesses, and preparing B.C. for recovery. These investments will help create jobs, support recovery, and build a more sustainable, inclusive and equitable economy. The past year has presented challenges, but also opportunities to think about how to do things better. In the coming months, the Province will engage with businesses, workers, industry and Indigenous and community leaders to help move the province forward to build a stronger B.C. for everyone.

Introduction

Budget 2021 provides for the needs of British Columbians as we turn the corner from the COVID-19 pandemic, and lays a foundation for an economic recovery with enhanced services and supports that people rely on. The fiscal plan reflects the increased level of spending and the unprecedented impacts of the pandemic on the Province's revenues. The path to balance is demonstrated with declining deficits from $9.7 billion in 2021/22 to $4.3 billion in 2023/24.

Budget 2021 investments focus on the response and recovery from the pandemic, providing supports for people and businesses, and improving the health and safety of British Columbians through a strengthened health care system. Government's consolidated operating expense totals $67.6 billion in 2021/22, $68.0 billion in 2022/23, and $69.0 billion in 2023/24, including ministry operating budget increases of $8.7 billion over the fiscal plan and $4.6 billion of time-limited Pandemic and Recovery Contingencies appropriation. Revenue is forecast to grow to $65.1 billion by 2023/24, substantially recovering from the pandemic-related decline.

Capital spending on schools, hospitals, affordable housing, roads, bridges, hydro-electric projects and other infrastructure is expected to total $39.5 billion over the three-year fiscal plan period. These investments will help ensure that the necessary infrastructure is in place to deliver the services that people count on in communities around the province and create jobs that support a strong and sustainable economy.

The new operating funding initiatives are discussed in the expense section starting on the next page. Details on the Province's revenue forecasts are provided in the revenue section,

starting on page 37. The capital investments section is on page 46, followed by the debt section on page 61, and a discussion on the risks to the fiscal plan on page 64.

Budget 2021 demonstrates government's ongoing commitment to incorporate Gender-Based Analysis Plus (GBA+) into its policy and budget process. Since 2018, the Province has used GBA+ to ensure that comprehensive, evidence-based policy advice is provided to decision makers to achieve better results for all British Columbians. *Budget 2021* uses GBA+ analysis to inform spending and tax decisions. This analytical tool helps assess, where appropriate, the effect of different spending or tax measures on different groups, including people of different genders, incomes, ethnicities, geographic areas, ages, abilities or sexual orientation. This lens helps to build a province where everyone has equal access to opportunities and services that are inclusive, respectful and representative of the diverse population in B.C.

Expense

Consolidated Revenue Fund Spending

Consolidated Revenue Fund (core government) spending in 2021/22 is $58.3 billion, with planned expenditures of $59.0 billion in 2022/23 and $59.9 billion in 2023/24 as shown in Table 1.3 on page 36. Government remains committed to investing in the health, social and economic needs of British Columbians as the province continues to manage through the effects of the unprecedented COVID-19 pandemic and into recovery. *Budget 2021* prioritizes investments towards health and safety, supports for people and businesses and preparing for recovery. Funding decisions are also underpinned by government's five foundational principles: to put people first; to engage in lasting and meaningful reconciliation with Indigenous peoples; to support equity and anti-racism in our province; to build a better future through fighting climate change; and to build a strong, sustainable economy that works for everyone.

COVID-19 Response & Recovery

Budget 2021 focuses on health and safety, supports for people and businesses and preparing for B.C.'s longer term economic recovery with $8.7 billion in budget increases over the fiscal plan. This includes permanent funding increases to address enhancements to and increasing demand for essential public services including health care, opioid and substance-use prevention and response services, education, and justice and public safety services. New permanent funding also includes further advancing key government priorities: child care, poverty reduction, mental health, housing, reconciliation with Indigenous peoples and CleanBC.

Government has also budgeted $4.6 billion over three years to maintain the Pandemic and Recovery Contingencies to support ongoing measures related to the pandemic, with $3.25 billion in 2021/22, $1 billion in 2022/23 and $300 million in 2023/24. The Pandemic and Recovery Contingencies will be used to continue short-term funding initiatives or newer programs where the demand and costs may fluctuate as the pandemic, vaccine roll-out and related health orders continue to evolve. This includes ongoing supports for people and businesses, such as the B.C. Recovery Benefit, the Small and Medium Sized Business Recovery Grant, supports to the tourism sector and a tax incentive for businesses that increased hiring or wages for employees in the fourth quarter of 2020. A summary of the *Budget 2021* operating spending is shown in Table 1.2.1.

Table 1.2.1 *Budget 2021* New Operating Spending Summary

Pandemic & Recovery Contingencies	3,250	1,000	300	4,550
Total	**5,744**	**3,658**	**3,825**	**13,226**

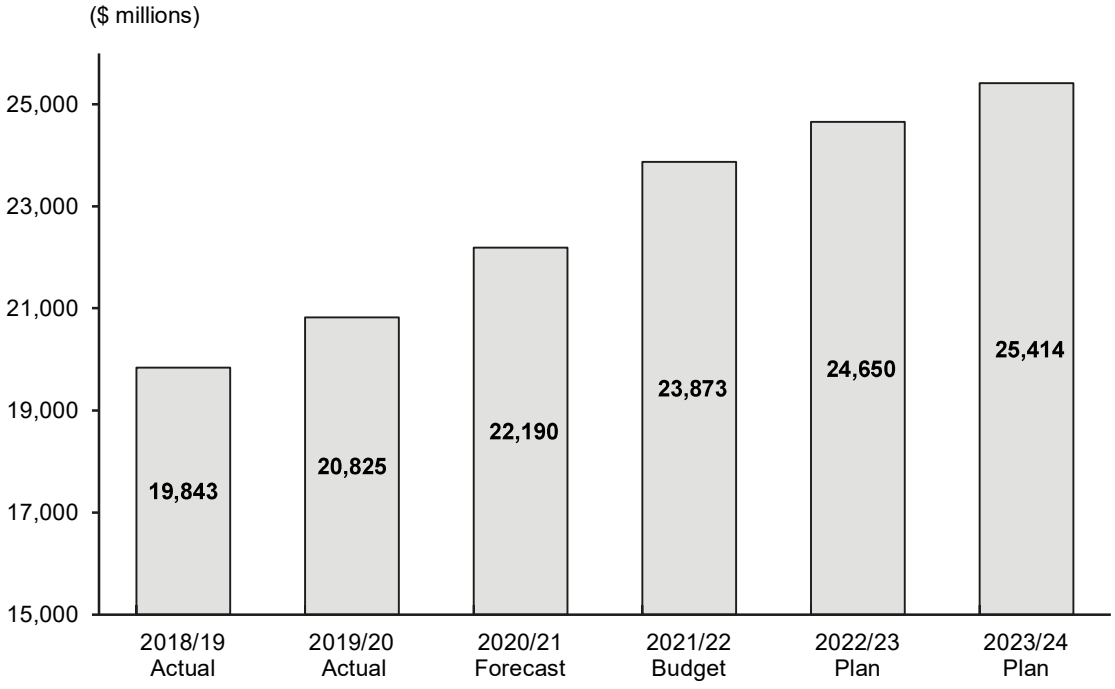
Note: Table may not sum due to rounding

In addition, the Pandemic and Recovery Contingencies will help ensure government is well positioned to support people and businesses through any unanticipated urgent health or targeted recovery measures, with unallocated funding being directed to reduce the operating deficit. Notional allocations for 2021/22 Pandemic and Recovery Contingencies are shown in Table 1.2.2.

Table 1.2.2 Pandemic and Recovery Contingencies Allocations for 2021/22

Category	Notional Allocation*	Measures
Health and Safety	$900 million	Health-related COVID-19 management
Supports for Businesses and People	$265 million	Temporary housing, meals and supports for vulnerable populations
	$225 million	Essential services including justice services, child care safety grants, agriculture/food security and potential increased demand for income assistance
	$195 million	Small and Medium Sized Business Recovery Grant Program
	$120 million	Tourism and art sector supports
	$150 million	Increased Employment Incentive tax credit
	$100 million	B.C. Recovery Benefit
Preparing for Recovery	$100 million	Skills training and youth employment initiatives
	$100 million	Community infrastructure programs, BC 150 Community Grants and CleanBC recovery investments
Unallocated	$1.1 billion	Reserve for unanticipated urgent health or recovery measures
Total	**$3.25 billion**	

**Notional allocations are based on current forecasts, with any changes communicated in Quarterly Reports.*



Protecting the Health and Safety of British Columbians

Government's top priority in responding to the pandemic is to protect the health and safety of British Columbians. *Budget 2021* continues to prioritize health and safety by providing significant new investments to build capacity in the health sector and continue measures that support the safety of health care workers, long-term care residents and patients, and other targeted supports to seniors. The Province is also making historic investments to address the opioid crisis and improve mental health and addictions services.

Strengthening the Health Care for People

Budget 2021 includes significant new investments in the health care system of $2.6 billion in base budget funding over the fiscal plan period, bringing total annual health spending to over $25.4 billion by 2023/24 as shown in Chart 1.1.1. This includes $253 million over three years to continue to expand team-based and urgent primary care that provides British Columbians with faster access to doctors and nurse practitioners. The three-year fiscal plan also provides $300 million more to address growing demand for cancer care, PharmaCare and services under the Medical Services Plan. It also provides $495 million over the fiscal plan to continue to fund the successful strategy to reduce diagnostic imaging and surgery backlogs exacerbated by the pandemic. This new permanent funding is expected to further reduce wait times for British Columbians to improve patient experiences and outcomes.

Chart 1.1.1 Investing in People's Health and Mental Health*

* Does not include time-limited funding initiatives related to pandemic response and economic recovery.

The Province has allocated an additional $900 million for 2021/22 from the Pandemic and Recovery Contingencies for health-related needs as the health sector continues to manage the effects of the pandemic. This will support the Province's vaccine deployment, increased personal protective equipment, and screening services across multiple health facilities.

Funding will also be used to maintain a number of newly implemented health strategies such as the Hospital-at-Home program which allows British Columbians to receive health services outside of a hospital, and the Rural and Remote Collaborative Framework to better connect remote Indigenous and non-Indigenous communities to critical health care services.

Budget 2021 also responds to the recommendations of the *In Plain Sight* report by providing $45 million over three years of new funding for First Nations cultural safety and humility training and Indigenous liaisons within each regional health authority. These investments will help to address systemic racism in the health care system through training and education and by prioritizing the hiring of a health care workforce that better represents the diverse communities it serves.

In addition to new operating investments, *Budget 2021* funds significant capital investments for major hospital projects including the New Surrey Hospital and Cancer Centre project. These are detailed in the capital section starting on page 50.

Improving Health Services for Seniors

As part of the health care priority investments, the Province is committed to providing seniors with better access and services. This includes funding to support seniors to access more health services from home that continues to improve safety and quality of services in long-term and assisted living facilities.

Helping seniors stay at home longer improves the patient experience and reduces demands on other acute forms of care. *Budget 2021* invests $12 million over the fiscal plan for the Home Health Monitoring Initiative which supports patients with moderate to highly complex chronic and episodic health conditions to self-manage their health from the comfort of their homes, using blue-tooth-enabled devices that communicate blood pressure and other health indicators to monitoring nurses in their local health authority. In addition, $68 million over three years will increase the number of care aides and other community care providers to deliver better home care and to help seniors with daily living.

As part of the Province's continued safety measures, B.C. will continue to maintain the single site health facility orders and enhanced screening at long-term and assisted living facilities. Government is also building on its recruitment campaign launched last year in response to the COVID-19 pandemic. In doing so, *Budget 2021* provides permanent funding to support the Province's commitment to grow the workforce that will support B.C.'s aging population. This includes an investment of $585 million over the fiscal plan period for the Health Career Access Program that will recruit, train, and employ up to 3,000 health care workers over the next three years. This will introduce more health care support workers into long-term care homes and assisted living facilities across the province.

Investing in Mental Health and Responding to the Overdose Crisis

The COVID-19 pandemic has highlighted the importance of mental health, including the challenges faced by youth, as well as the damaging impacts of the ongoing overdose crisis. *Budget 2021* provides the largest investment in mental health and addictions services in B.C. history with $500 million in new funding across the fiscal plan. This funding supports progress on B.C.'s mental health and addictions strategy, *A Pathway to Hope,* which provides a roadmap to enhancing and improving mental

health and addictions services. This includes targeted supports for children and youth, improved quality and access to mental health services, and prevention, treatment and emergency response to the overdose crisis.

Improved Wellness for Children, Youth and Young Adults

Government is investing $97 million to provide targeted mental health supports for children, youth and young adults in recognition of the critical importance of early diagnosis, intervention and supports. Funding will support the Mental Health in Schools program, as well as expand the number of integrated child and youth teams from five to 20 teams across B.C. by 2023/24 to support more school and community-based, multidisciplinary mental health and substance use services. The goal of these teams is to provide quicker, more direct support to students with coordinated responses so that youth do not have to retell their issues or stories to multiple people, which may cause more trauma.

Budget 2021 also provides funding to support and expand the number of Foundry Centres to 23 by 2023/24. Foundry currently has 11 locations and virtual service offerings that provide health and wellness resources and services for young people ages 12 to 24. Funding will support a full suite of treatment and recovery services for youth experiencing substance use issues as well as other more intensive supports for children and youth with severe mental health or substance-use conditions.

Improved Access & Better Quality Mental Health Services

To improve the access and quality of mental health services, *Budget 2021* will invest $75 million in new funding over three years. This includes $14 million for the First Nations Health Authority to deliver targeted mental health and addictions services to Indigenous peoples throughout B.C. There is also $8 million over three years in new funding to expand eating disorder care at each of the health authorities and to maintain suicide prevention services that were implemented in response to COVID-19. The budget also provides $53 million across the fiscal plan to expand the early psychosis intervention program to be accessible across the province. The program supports early identification, diagnosis and treatment of psychosis to maximize the likelihood that intervention will successfully reduce the burden of suffering and improve daily functioning.

Substance Use and Overdose Emergency Response

Budget 2021 provides $330 million over the fiscal plan to provide a full spectrum of treatment and recovery services for individuals experiencing issues with substance use. This includes $152 million for opioid treatment. Overdose prevention supports implemented in response to the pandemic will become permanent programs through *Budget 2021*. This means continued operation of new supervised consumption sites, Assertive Community Treatment teams, the Lifeguard App, consultative services for health care professionals providing substance use treatment, and additional nursing supports.

Other substance-use services include end-to-end services from initial sobering and assessment and withdrawal management services, through to supporting an individual transition back into daily life. Funding will support the creation of 195 new substance-use treatment and recovery beds throughout B.C. for all types of substance use. New beds will be supported by new outpatient, peer supports and community-based support services throughout the province.

Table 1.2.3 Investments for Mental Health and Addictions Services

($ millions)	2021/22	2022/23	2023/24	Total

First Nations Health Authority	5	5	5	14
Total	**146**	**165**	**189**	**500**

Note: Table may not sum due to rounding

Supports for People and Businesses

Government continues to focus on putting people first by delivering the services people rely on and working to make life more affordable for everyone. Through *Budget 2021*, the Province is making significant new investments to reduce poverty, advance child care, make life more affordable, advance meaningful reconciliation with Indigenous peoples, and invest in the services people count on. In addition, government continues to provide relief and recovery supports for B.C. businesses to support them through the pandemic and better prepare them for the post-pandemic recovery. This includes ongoing business relief and recovery measures implemented through the *StrongerBC Economic Recovery Plan*, such as business recovery grants, tax incentives to encourage business hiring and/or employee wage increases, and PST rebates on machinery and equipment. It also provides targeted supports for farmers and the agriculture sector to build resilience in local food security. The budget also allocates new funding to support the tourism sector during the pandemic and when it is safe to welcome visitors back to B.C.

Reducing Poverty and Helping Those Most in Need

In 2019, the Province introduced *TogetherBC*, B.C.'s first poverty reduction strategy. The strategy aims to lift people out of poverty and create a more diverse, equitable and prosperous province. Poverty reduction has been a key government priority, with significant investments to help lift British Columbians and, in particular, children out of poverty. Recent examples include:

- the Child Care Fee Reduction Initiative and Affordable Child Care Benefit that were introduced in 2018 to make child-care more affordable;
- the new B.C. Child Opportunity Benefit implemented on October 1, 2020, that provides a monthly, tax-free benefit of up to $1,600 per year for the first child for low and middle-income families with children under the age of 18; and
- three increases to the minimum wage since 2017, with another planned increase on June 1, 2021, to $15.20 per hour.

Income and Disability Assistance Enhancements

Budget 2021 continues to invest in poverty reduction initiatives by providing $1.6 billion over the fiscal plan to increase supports and address demand for income and disability assistance. Building on previous rate increases of $100 a month in September 2017 and

$50 a month in April 2019, *Budget 2021* provides a $175 per month increase for income and disability assistance rates — the largest ever permanent increase. Since April 2017, the monthly rate for a single person on income assistance has increased by 53 per cent and for a single person on disability assistance by 38 per cent. Over 240,000 people, including 49,000 children will directly benefit from this rate increase. This means B.C. has the highest income assistance rates in Canada, and the third highest disability assistance rates.

Budget 2021 will also increase the Senior's Supplement by $50 — the first increase since it was introduced in 1987. This increase will benefit up to 80,000 low-income seniors, including 20,000 more seniors who will become eligible for the supplement because of the increase. The Province is also increasing the comforts allowance for people on income assistance, a supplement that allows people on assistance living in a special care facility (such as community care centre or assisted living facility) to buy basic personal items such as hygiene products. The $20 per month increase is the first increase to the comforts allowance for income assistance clients since 2005.

Supports for Individuals Experiencing Homelessness

The COVID-19 pandemic has increased the prevalence, risks and visibility of homelessness around the province. Government responded quickly by committing $162 million in 2020/21 to lease spaces at hotels, motels and community centres to provide temporary shelters and meal supports, and to connect those experiencing homelessness with other services. Government is continuing to address homelessness by allocating $265 million in 2021/22 from the Pandemic and Recovery Contingencies to extend supports and services for people experiencing or at risk of homelessness. There is an additional $30 million over the fiscal plan for ongoing housing support costs associated with recent hotel purchases that are providing 400 units of temporary shelter.

The Pandemic and Recovery Contingencies allocation includes funding to help maintain more than 3,000 temporary emergency shelter and hotel spaces that have been secured during the pandemic to provide temporary shelter and accommodations. Funding also extends the additional 650 urgent shelter spaces, rent supplements, and supportive housing sites used to support recent decampments efforts in Vancouver and Victoria, with on-site health and other supports. Supports include meals, support staff, security as well as personal protective equipment to help service operators maintain safe and healthy shelters and housing.

The Province is also maintaining outreach services to connect homeless and vulnerable populations with resources and available programs. New *Budget 2021* funding will create 388 new permanent shelter spaces in communities throughout the province. Shelters provide a warm, dry place for individuals to sleep, but just as importantly offer meal services, showers, laundry, access to social workers, referrals to community services and harm reduction services.

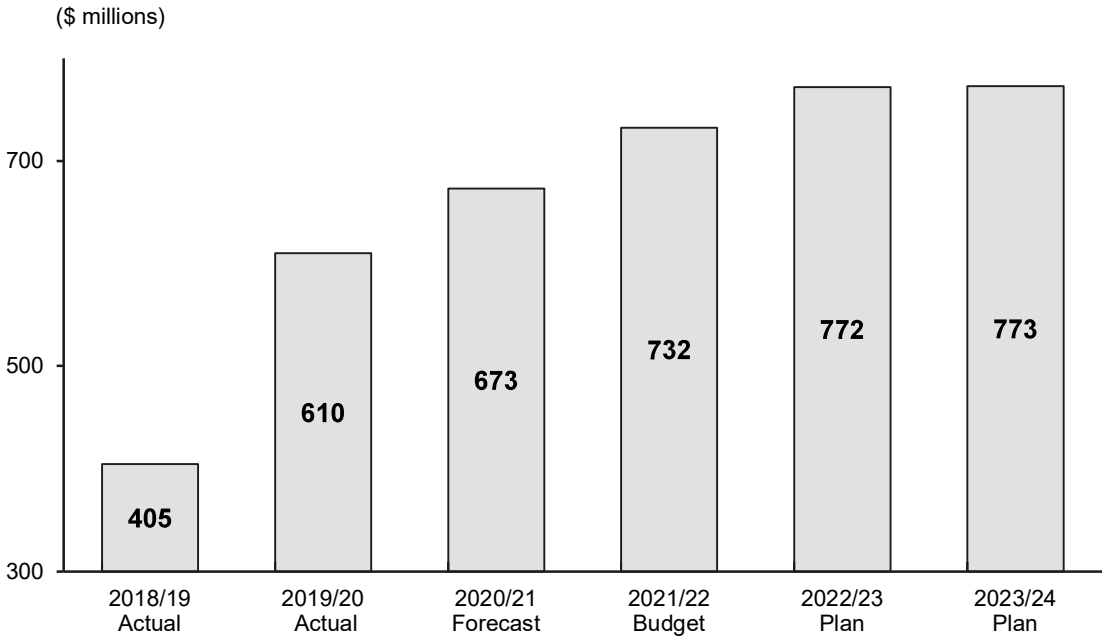
In addition to continued investments in the *Homes for B.C.* Supportive Housing Fund, the Province is partnering with the federal government through the Rapid Housing Initiative to convert existing buildings into supportive housing, and to support development of modular housing to expedite housing solutions for homeless or other vulnerable populations. These collaborative, long-term initiatives will support B.C. in increasing capacity to respond to and reduce homelessness and improve people's lives.

Affordable, Accessible and High-Quality Child Care

Since *Budget 2018*, government has been creating affordable, accessible, and high-quality child care throughout B.C. Investments over the past three years have funded over 26,000 new child care spaces, provided more than 35,000 families with low-cost child care, and provided $2 per hour wage increases for over 11,000 registered Early Childhood Educators. It has also reduced fees by up to $350 per month per child for over 69,000 child care spaces through the Child Care Fee Reduction Initiative, and supported an estimated 63,000 children from low- and middle-income families to receive up to $1,250/month per child through the Affordable Child Care Benefit.

The pandemic underscored the vital importance of child care to families — especially women — to participate in the workforce. As part of the Province's COVID-19 Action Plan, government provided over $300 million in 2020/21 for temporary emergency funding for child care providers to remain open for front-line workers, and to ensure those that closed temporarily were poised to reopen again to support parents in returning to the work place. Further investments of $99 million through the *StrongerBC Economic Recovery Plan* provided child care providers with health and safety grants and contributed to recovery efforts by accelerating the creation of over 3,200 more new spaces as part of the 26,000 spaces funded to date. This will help more child care businesses to open, help more parents get back to work, and help to build strong, local economies that benefit everyone in the community.

As part of the Pandemic and Recovery Contingencies, government has allocated a further $20 million in 2021/22 to provide more health and safety grants to child care providers for increased cleaning supplies, personal protective equipment, or space enhancements to ensure child care centres remain safe.



In addition to the approximate 2,500 - 3,000 new spaces that will be created per year under the New Spaces Fund, *Budget 2021* advances the ChildcareBC strategy by investing $233 million more over the fiscal plan to create more new spaces and continue to make child care more affordable. This brings the total child care budget to nearly $2.3 billion over the fiscal plan, as shown in Chart 1.1.2.

New investments include $20 million over three years to add 400 more spaces to the Aboriginal Head Start program that provides no-fee, culturally-based child care for Indigenous families. In addition, approximately 2,000 more families will be able to access Supported Child Development and Aboriginal Supported Child Development programs. Children who are already enrolled in these programs will receive additional hours of support.

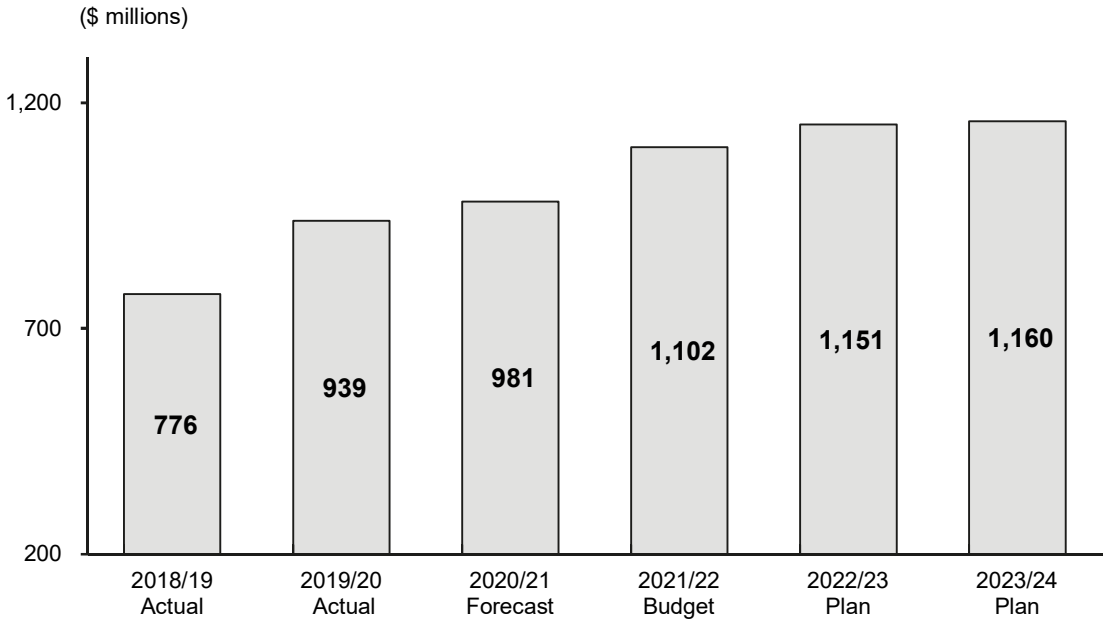
Budget 2021 also includes $111 million over the fiscal plan to expand the Province's low-to no-cost child care program, which provides child care for no more than $10 per day, regardless of a parent's income. This will give families access to 3,750 new low-cost child care spaces throughout the province through 75 additional ChildcareBC Universal Prototype Sites.

Early childhood educators (ECEs) are not only the heart of the child care system — they are the workforce behind the workforce. Government recognizes the importance of continuing to invest in ECEs throughout the province, both to recruit them into the child care sector and to support them to stay. *Budget 2021* improves access to ECE training by adding 110 more post-secondary seats in B.C. and provides $94 million over the plan to double the current ECE wage enhancement to a $4 an hour increase. This will benefit about 11,000 ECEs who are working in child care centres throughout

Chart 1.1.2 Child Care Programs*

* Does not include time-limited funding initiatives related to pandemic response and economic recovery.

the province to support recruitment and retention of a stable, qualified, and skilled workforce.



Bringing child care and education together is one step in government's long-term vision to create a universal, inclusive early care and learning system in B.C. that will better support families and inspire lifelong learning in children. *Budget 2021* will expand the Seamless Day Pilot under the Ministry of Education which will benefit families in accessing more child care on school grounds. The pilot will expand to 20 additional school districts — on top of the four that are currently participating — and will integrate school-age care programs into kindergarten and Grade 1 classrooms. These steps will support the work that is ahead for the Province as it continues to engage with partners from the child care and education sector, including Indigenous-led child care providers, to continue to build an inclusive early care and learning system to move British Columbia even further along the path to universal child care.

Making Life More Affordable

Building B.C. and Affordable Housing

Budget 2021 continues to fund the *Homes for B.C.* plan, a key government priority to deliver 114,000 affordable homes over 10 years to improve market supply and provide more housing options for growing families, seniors, women and children fleeing violence, students and Indigenous peoples. *Budget 2021* provides $80 million across the fiscal plan to continue to support B.C.'s housing strategy, which includes the improvement of rental and housing opportunities through continued partnerships with all levels of government, Indigenous peoples, non-profits and the private sector. This brings the total housing operating budget to over $1.1 billion annually over the fiscal plan as shown in Chart 1.1.3. As of February 28, 2021, over 26,000 new homes have been completed or are underway since the *Homes for B.C.* plan was launched in 2018.

Chart 1.1.3 Investments in Housing Affordability and Homelessness Supports*

* Does not include time-limited funding initiatives related to pandemic response and economic recovery.

Over the course of the fiscal plan, the Province intends to fund the building of more than 10,000 new low- and middle-income housing units through grant funding to non-profit housing providers and $1.6 billion in capital investments. Additionally, government will provide up to $2 billion in low-cost financing to expand the HousingHub program which will work with a variety of partners to facilitate the creation of approximately 9,000 units of affordable rental housing and homeownership options for middle-income British Columbians over the next three to five years. This builds on the approximately 1,000 completed homes through previous HousingHub projects. Through these varied strategies, B.C. continues to take action towards its goal of a province where everyone has opportunities to access a secure, safe and affordable home.

Free Transit for Youth

The Province is allocating $26 million to help families get around more affordably by making transit free for children aged 12 and under. This includes investments from the 2020/21 federal-provincial Safe Restart Agreement for transit and new *Budget 2021* funding. Free transit for children supports the Province's poverty reduction strategy, improves affordability and promotes greener transportation options through public transit for families. The first phase of the initiative will be launched in September 2021 with free transit for children aged 12 and under on all BC Transit and TransLink transportation including buses, SkyTrain, Canada Line, SeaBus, West Coast Express and HandyDART. This will improve affordability for families by reducing the cost of transit. For example, it is estimated that families with children and youth in the TransLink service area who access monthly passes will save up to $672 per year per child.

Overall, this program will enable approximately 340,000 children across the province to access transit for free effective September 2021. This will improve equitable access to transportation, especially for lower income and Indigenous families that tend to be more reliant on public transit. It will also help to rebuild transit ridership, and attract new family ridership and future public commuters which supports the Province's CleanBC emissions reduction goals.

B.C. Recovery Benefit

Budget 2021 allocates $100 million to continue to fund the B.C. Recovery Benefit, which launched in December 2020 and remains open for new applications until June 30, 2021. The B.C. Recovery Benefit provides a one-time, tax-free payment of up to $1,000 for eligible families and single parents and up to $500 for eligible individuals. The benefit is provided on a sliding scale and phases out at a net income of $175,000 for families and single parents; and at $87,500 for individuals. The benefit provides financial relief to middle and lower-income British Columbians while helping to stimulate the economy. The overall program is forecasted to cost $1.4 billion based on year-to-date uptake, with $1.3 billion forecasted for 2020/21 and $100 million anticipated for 2021/22 (with additional Pandemic and Recovery Contingencies available should uptake in 2021/22 exceed the forecasted allocation). As of February 28, 2021, nearly 1.7 million applications have been approved, benefiting over 2.3 million British Columbians.

Reconciliation with Indigenous Peoples

A strong and sustainable economy that works for everyone means moving forward together through true and lasting reconciliation with Indigenous peoples. The *Declaration on the Rights of Indigenous Peoples Act (Declaration Act)* recognizes and respects the human rights of Indigenous peoples and ensures they are involved in decisions that affect them and their territories. *Budget 2021* includes $60 million annually in base budget funding to support a range of activities, including engagement with Indigenous peoples on legislation, policy, and programs; negotiation capacity; and initiatives that increase participation in land and resource activities within their territories. The Province has also allocated $17 million over three years to support the implementation of the *Declaration Act* and government's commitments under existing reconciliation agreements, including land transfers.

Budget 2021 also supports reconciliation through a range of new investments that support the health and well-being of Indigenous peoples and communities. This includes new funding for culturally based child care through the Aboriginal Head Start program, skills training initiatives for Indigenous people, culturally safe access to health services and mental health and addictions treatment, and for other priority initiatives as discussed throughout this document.

Table 1.2.4 Investments to Support Reconciliation

Investing in the Services British Columbians Count On

K-12 Education

The Province will invest $1.2 billion over the fiscal plan to support the growing number of students accessing B.C.'s K-12 education system and to support wage increases for teachers and support staff under the *Sustainable Services Negotiating Mandate*. Funding will also support the growing number of special needs students, English/French language learners, and Indigenous learners in both public and independent schools. In addition, *Budget 2021* supports the K-12 education sector with new funding to improve access to mental health supports in schools, to expand early learning and onsite child care opportunities, and to develop a framework to address racism and reconciliation. This brings the total annual budget for the K-12 education sector to over $7.1 billion per year as shown in Chart 1.1.4. In addition, the fiscal plan includes approximately $3.5 billion for capital investments to expand, replace, maintain or renovate schools throughout B.C. as further discussed on page 47.

Chart 1.1.4 Investing in K-12 Education*

* Does not include time-limited funding initiatives related to pandemic response and economic recovery.

Improving the Lives of Families, Children and Youth

Budget 2021 provides $85 million over the fiscal plan to support family, children and youth services. This includes additional funding to support children in ministry care or with Delegated Aboriginal Agencies. The budget also supports programs for children living with a disability, and provides more funding for medical equipment and services for children that are deaf or hard of hearing. This also includes $41 million to support alternatives to care arrangements by reuniting families, promoting adoption, and other permanent transfer of custody options. These investments support government's overall strategy to reduce the number of children in care and, where appropriate, keep families

together to improve outcomes for children. In particular, this supports a government priority of improving Indigenous child welfare outcomes by keeping children and youth safely at home and connected to community and culture. This helps to ensure a diversity of Indigenous voices, history and practices are reflected in child services in collaboration with Delegated Aboriginal Agencies and Indigenous communities.

Social Services and Supports for Adults with Developmental Disabilities

Community Living BC provides supports and services to over 24,000 adults with developmental disabilities and their families. This includes contracted services to support community inclusion programs, respite for families, residential and employment supports, and other connections to community. The Province is providing $367 million in new funding to Community Living BC over three years. This will support approximately 1,300 more clients each year, while addressing staffing and operational costs for service providers, including wage enhancements under the *Sustainable Services Negotiating Mandate*, to ensure Community Living BC can continue to deliver the services people count on.

Timely and Equitable Access to Justice

The Province is providing $132 million more over three years to support a justice system that serves all British Columbians. This includes funding to support courts, family dispute resolution, legal clinics, parent legal centres and family maintenance enforcement services as well as sector wage enhancements under the *Sustainable Services Negotiating Mandate*. These services support timely and equitable access to justice, particularly for women, visible minorities, single parents, refugee claimants, Indigenous peoples, those with low incomes or who live in poverty, and members of the LGBTQ2S+ community who tend to have greater unmet legal needs.

Justice sector funding includes $16 million over three years to support the Province's court modernization strategy. An additional $24 million in one-time funding from the Pandemic and Recovery Contingencies is allocated in 2021/22 to augment these efforts. This funding will support the safe operations of courts during the pandemic, including increased cleaning and personal protective equipment, as well as virtualization, electronic filing solutions and other system enhancements. These measures have province-wide benefits, including fewer cases being directed to the courts. In addition, those living in rural or remote communities benefit by saving hours of travel time. Modernization also provides safe alternatives through virtual delivery of witness and victim statements.

Maintaining Public Safety

The Province is adding $73 million over the fiscal plan to support public safety services. This includes funding to support policing and security, initiatives under the Gang Suppression Action Plan, the BC Coroners Service, the Office of the Fire Commissioner, road safety programs, and sector wage enhancements under the *Sustainable Services Negotiating Mandate*. Funding will help to address added staffing needs for front-line RCMP officers in rural communities to address increased investigative complexity and co-ordinated responses for emergencies such as floods, wildfires, and the ongoing health emergencies of COVID-19 and the opioid crisis.

Table 1.2.5 Investments in Justice and Public Safety Services

($ millions)	2021/22	2022/23	2023/24	Total

Note: Table may not sum due to rounding

Support for B.C. Businesses

The fall 2020 *StrongerBC Economic Recovery Plan* is a key step in continuing to support business recovery over the coming year. Funding in 2020/21 included $44 million for digital marketing training and the Launch Online program which has supported thousands of B.C. businesses to create or improve their e-commerce presence through contracts with B.C. technology companies. It also included $7.5 million for B.C. agri-tech companies and $6 million in supply chain grants to strengthen B.C.'s supply chain, and a further $10 million to support small- and medium-sized manufacturing businesses commercialize new technologies and/or products and improve market access (see page 119 for complete listing of measures).

Budget 2021 provides ongoing funding for *StrongerBC* initiatives, including allocating $195 million in 2021/22 to continue the Small and Medium Sized Business Recovery Grant Program. The program has been updated with streamlined access and expanded eligibility to ensure more businesses can access up to $30,000 in provincial grant funding that can be used to support their recovery and adapt to COVID-19. This may include diversifying their business to include new services, modifying physical space, offsetting fixed costs such as rent, or growing the business by moving online. Tourism-related businesses (which may include transportation, accommodation, food and beverage and recreation organizations) can receive an additional top-up of $15,000. In total, the budget for the program remains $345 million, as committed by the Province in the fall.

Budget 2021 also allocates $150 million to support the Increased Employment Incentive tax credit for private sector employers as announced as part of the *StrongerBC Economic Recovery Plan.* This program provides a tax credit to businesses that increased their payroll through hiring or compensation increases in the last quarter of 2020 compared to the previous quarter. Other continuing *StrongerBC* business supports include a PST exemption on select equipment and machinery until the end of September 2021 to support businesses to pivot or upgrade operations. This is estimated to save businesses $470 million over the tax exemption period. Government has also permanently allowed restaurants, bars and tourism operators with liquor licenses to purchase beer, wine and spirits at the wholesale price, providing over $70 million per year in support for the industry. This measure helps alleviate financial pressures and provides more cost certainty for the hospitality sector to support recovery and to help the estimated 190,000 British Columbians who work in the sector.

Table 1.2.6 Ongoing Business Supports from the Fall *StrongerBC Economic Recovery Plan*

Support for Farmers and the Agriculture Sector

Budget 2021 invests $10 million over the fiscal plan to expand the Grow BC, Feed BC, Buy BC strategy launched in 2018 to strengthen B.C.'s agrifood and seafood sector and expand the domestic market for B.C. food and beverage products. Grow BC helps young farmers access land, and supports fruit and nut growers and processors to expand local food production; Feed BC increases the use of B.C.-grown and processed foods in hospitals, schools, and other government facilities; and Buy BC helps local producers and processors market their products by re-establishing a strong, recognizable Buy BC brand and supporting industry-led Buy BC marketing activities. This funding is in addition to the $7 million provided as part of the *StrongerBC Economic Recovery Plan* to expand the B.C. food hub network and support farm innovation and food processing.

The Province has also allocated $35 million in 2021/22 to continue to support B.C. farmers in safely accessing and accommodating temporary foreign workers to support crop harvesting. This includes providing hotel-based quarantine services for foreign workers to meet COVID-19 related-health orders to minimize risks of on-farm outbreaks and maintain B.C.'s critically important local food supply.

Tourism and Arts Sector Supports

Tourism is a valuable component of the B.C. economy as one of the largest employers and a generator of small businesses; however, it remains one of the hardest-hit sectors from the pandemic which has disproportionately affected women, youth, part-time workers, immigrants and Indigenous peoples who make up a greater proportion of the tourism workforce compared to the overall labour force. Through the fall 2020 *StrongerBC Economic Recovery Plan*, government dedicated $100 million of the Small and Medium Sized Business Recovery Grant program specifically to tourism operators, which continues into 2021. In addition, over $70 million was provided in other tourism relief and recovery measures which included grants for Indigenous-owned tourism businesses and investments to help small municipalities build, adapt, and diversify their tourism infrastructure such as trails construction, visitor centre improvements and safety upgrades to amenities. It also included funding to Destination BC to market B.C. domestically and secure its spot in the international tourism market for when it is safe to welcome visitors back to the province.

Budget 2021 builds on these investments by allocating $120 million in 2021/22 from the Pandemic and Recovery Contingencies for further tourism recovery and to support B.C. in remaining a globally competitive destination. This includes $20 million in recovery funding for more community destination development grants to enhance tourism infrastructure, such as rail trails, rest stops, and airport improvements. This funding doubles the StrongerBC investment to help create short-term jobs while also increasing the future capacity of tourism destinations.

Government will also continue to work with business and tourism stakeholders, as well as health officials, to ensure B.C.'s tourism sector is poised to welcome the world back in the near future. Government has reserved $100 million to support tourism recovery, including support for major anchor attractions. Anchor attractions are vital in drawing visitors into B.C. communities, stimulating local economies and creating experiences that connect visitors to people, place and culture. These initiatives will contribute to government's broader strategy to support destination development and anchor attractions in future years. Other supports will help promote domestic and international travel when restrictions are lifted to help revitalize businesses and the tourism workforce.

Budget 2021 is also doubling the budget for the Arts Infrastructure Program by providing $6 million over three years to support recovery to arts and culture organizations. This program will provide increased grants of up to $250,000 to arts and culture organizations to support capital improvement projects, such as the purchase or construction of new spaces and the expansion of existing spaces. It also provides funding for specialized equipment, such as accessibility improvements and sound systems. This new funding builds on the $35 million in Arts and Culture Resiliency funding provided in 2020/21 as part of the *StrongerBC Economic Recovery Plan* that provided financial relief and grants to artists and arts and culture organizations.

Preparing for Recovery

The pandemic has already begun to reshape the future economy, and the Province will continue to work with businesses, workers, economists and Indigenous and community leaders to ensure a strong and sustainable recovery. *Budget 2021* continues to prepare for recovery by investing over $1 billion over the fiscal plan, including $200 million allocated from the Pandemic and Recovery Contingencies to support training, job creation, CleanBC recovery investments and supports for communities.

Targeted Training & Job Creation

Post-Secondary Education and Skills Training

Investments in post-secondary education and training opportunities are a critical part of B.C.'s recovery strategy, which helps train or re-train people to secure good-paying jobs and strengthen B.C.'s labour force. *Budget 2021* provides $649 million over three years to support the post-secondary education sector, including sector wage increases under the *Sustainable Services Negotiating Mandate*. Funding also includes $96 million over three years to support the health sector's longer-term human resource needs while supporting people to find rewarding careers in health. This funding will help thousands of people transition to jobs in the health care system, while supporting job recovery and addressing the province's future workforce needs.

Budget 2021 also provides an additional $32 million in one-time funding to continue training initiated through the *StrongerBC Economic Recovery Plan*. This includes $17 million in 2021/22 to support skills training for Indigenous people, which builds on the $19 million provided in 2020/21. This will help support 1,250 Indigenous people to gain new skills, transfer their training knowledge to other jobs, and participate in the labour market while contributing to economic recovery and resiliency in their communities. Funding is allocated to 266 Indigenous communities and organizations (203 First Nations, 38 Métis Chartered Communities, and 25 Aboriginal Friendship Centres) around the province where Indigenous communities have the flexibility to determine priority training needs.

The Province is allocating $5 million in 2021/22, on top of the $4 million invested in 2020/21, to support micro-credential training in B.C., which provides options for those looking to retrain for new career opportunities. Micro-credentials are formally recognized learning experiences that offer learners the ability to gain skills and competencies through shorter, more flexible programs rather than a standard degree, diploma or certification program. Initial funding is being used to deliver 25 micro-credential courses for an estimated 2,000 students. The new funding will be used to develop an additional 30 courses. The flexibility of micro-credential programs will improve accessibility to post-secondary education, particularly for women, Indigenous peoples, people with disabilities and people with multiple barriers who struggle with the financial, time or physical ability requirements associated with taking a full program.

Budget 2021 allocates $6 million in 2021/22 to support work-integrated learning placements for 3,000 students, whose unemployment rate has been disproportionately affected by the pandemic. Funding will allow post-secondary institutions to work with employers to connect them with students and support with the recruitment process, such as job postings and managing interviews, as well as helping to improve employer awareness of federal and provincial wage subsidy programs.

There is also $4 million allocated in 2021/22 to continue short-term skills training programs to support unemployed or underemployed individuals to train in high demand sectors such as construction, technology, health care and child care to ensure graduating students are well positioned to secure employment. The Province will also continue partnering with the federal government on further skills training opportunities in the coming year.

Youth Employment Initiatives

Pandemic-related employment losses have been unequal, concentrated among lower-wage workers in high-contact services, where youth are over-represented. To provide targeted employment opportunities for youth, *Budget 2021* allocates $36 million in 2021/22 Pandemic and Recovery Contingencies. This includes $15 million to expand the Innovator Skills Initiative program that provides up to $10,000 in funding for businesses to hire a post-secondary student, or non-student youth who has completed industry-approved certification or training, into a technology or tech-enabled position. This creates 3,000 job placements for youth in a high-opportunity sector with higher-than-average wages.

The Province is also providing $9 million to expand co-op positions in the natural resources sector to create employment opportunities that improve knowledge and data about the land base, create field work experience, and advance public education and public safety objectives. *Budget 2021* also allocates $3 million for the Recreation Sites

and Trails B.C. youth program which provides safe, quality recreation opportunities for the public by developing, maintaining, and managing the provincial network of sites and trails. This will create 72 new jobs that will help those hardest hit by the pandemic — including youth, women and Indigenous peoples — by providing high quality employment and training opportunities in rural and remote communities while restoring public outdoor recreation spaces.

B.C. Parks, the Conservation Officer Services and the Aquatic Invasive Species programs will also receive $4 million to support over 80 short-term youth employment opportunities. The youth employment program provides meaningful work opportunities to young people while helping them gain valuable skills, experiences, and insights into conservation and natural resource law enforcement careers in the public sector. This includes opportunities and experiences in conservation, recreation, community engagement, Indigenous relations, public outreach, wildlife safety, and education on aquatic invasive species.

Finally, $5 million is allocated in 2021/22 to extend the Clean Coast, Clean Waters program initiated as part of the *StrongerBC Economic Recovery Plan* to create jobs removing marine debris in coastal communities.

CleanBC

B.C. continues to be a climate action leader with new investments totaling $506 million over the fiscal plan to support CleanBC. This includes $269 million in new operating and capital funding for clean transportation, energy efficient buildings and communities (as discussed in the Investing in Infrastructure to Support Recovery topic box on page 28), and other cleantech and climate change initiatives. It also includes $96 million more for the CleanBC Program for Industry in alignment with scheduled carbon tax increases, while adjusting for the delayed increase to the tax in April 2020 that provided relief to businesses and families from the pandemic. There is also an additional

$120 million to continue the Climate Action Tax Credit in 2023/24. *Budget 2021* also includes a new PST exemption on electric bikes, estimated to save British Columbians $7 million per year. These significant investments bring CleanBC allocations to nearly $2.2 billion since 2019/20.

These CleanBC investments are in addition to the Province's other climate-related spending, including public transit projects such as the expansion of Vancouver's Broadway Subway, energy-efficiency spending on public-sector buildings, the Innovative Clean Energy Fund, the First Nations Clean Energy Business Fund, and Forest Carbon Initiative, among others. Future Climate Change Accountability Reports will continue to report on actual expenditures.

Table 1.2.8 Investments for CleanBC (including Contingencies allocations)

Notes: Table may not sum due to rounding.

Cleaner Transportation

Budget 2021 provides $123 million in operating funding and $7 million in capital funding over three years to support cleaner transportation through financial incentives, greener infrastructure, technological advancements, and electrification of school buses, ferries, and government fleets. This includes $94 million over the fiscal plan to continue the Go Electric Program which provides financial rebates to customers who buy zero-emissions vehicles, charging stations, and funding to support commercialization of medium and heavy-duty vehicles. This funding is in addition to a new $40 million invested in 2020/21 to transition the existing incentives program to an income-tested model in 2021/22. This program directly supports B.C. in meeting its 2025 mandate to have at least 10 per cent of new light duty vehicles sold in B.C. be zero emissions vehicles. New funding of $18 million will provide grants to local governments to improve active transportation infrastructure, such as building connecting sidewalks, installing bike lanes, and building multi-use paths in parks. There is also $10 million over three years to develop policy on reducing the carbon intensity of fuel and develop the hydrogen economy.

CleanBC Program for Industry

The CleanBC Program for Industry reduces emissions at industrial operations and drives innovation by directing a portion of the carbon taxes paid by industry into two streams:

1. **The CleanBC Industrial Incentive Program**: provides incentives to large regulated industrial operations upon reducing emissions to world-leading benchmark levels; and
2. **The CleanBC Industry Fund**: finances emissions reduction projects identified by industry.

Budget 2021 maintains the Province's commitment to partner with industry by providing new program funding of $173 million in 2023/24, in alignment with planned increases to the carbon tax, bringing total funding to the Program to $519 million over the fiscal plan period. *Budget 2021* commits stable base funding which will enable some early investment decisions through the Industry Fund to better align with industry capital planning timelines. This supports government with a strong foundation for a sustainable future by working side by side with industry and other partners to continue to adopt new technologies and maintain B.C. industry's position as global leaders in reducing their carbon footprint.

Table 1.2.9 CleanBC Program for Industry - Total Funding

($ millions)	2021/22	2022/23	2023/24	Total

Contingencies allocations	22	28	38	88
Total	**120**	**171**	**229**	**519**

Note: Table may not sum due to rounding

Energy Efficient Buildings and Communities

Investments in CleanBC also support the adoption of energy efficiency measures in buildings and communities. *Budget 2021* provides $57 million in operating funding to support energy efficient buildings and communities. This includes $34 million to reduce diesel consumption for electric generation in remote communities, including Indigenous communities, and $11 million to develop and fund a new program for local governments to plan for building compact, energy efficient communities. The budget also provides $12 million in capital funding to support school districts under the Carbon Neutral Capital Program.

Clean Energy and Cleantech Innovation

Budget 2021 also provides $60 million in one-time funding for 2021/22 to support the Centre for Innovation and Clean Energy and for cleantech investments to support partnership opportunities with the federal government. Announced as part of the *StrongerBC Economic Recovery Plan*, the Centre for Innovation and Clean Energy will support the development and commercialization of clean technology in B.C. — creating good jobs and supporting technological advancements required to transition to a low-carbon future.

Climate Preparedness and Adaptation

The Province also continues to invest in research and forward-looking strategies to support climate preparedness and adaptation. *Budget 2021* provides $6 million to support planning and preventative action, and to better understand climate risk to reduce the impact of negative outcomes of climate change over time.

InBC Strategic Investment Fund

Initially announced as part of the *StrongerBC Economic Recovery Plan*, *Budget 2021* will provide InBC Investment Corp. with $500 million over three years, financed through a fiscal agency loan, to establish a new strategic investment fund. Investments through the fund will help to attract and anchor high-growth businesses, talent, and good jobs in B.C. InBC will make investment decisions independent of government but will be guided by criteria that seek to achieve financial returns while delivering on specified economic, social, and environmental policy priorities. These may include criteria that promote the decarbonization of the economy, good quality, family-supporting jobs in all parts of the province, and that advance reconciliation with Indigenous peoples. With the governance and mandate development of the fund well underway, it is anticipated that InBC will be ready to invest later in the 2021/22 fiscal year.

Table 1.2.10 InBC Strategic Investment Fund*

($ millions)	2021/22	2022/23	2023/24	Total

**Represents available financing to support investments. Draws against amounts provisioned depend on the actual investment schedule.*

Investing in Communities

Investing in community infrastructure remains a key strategy to supporting recovery across B.C. and building more resilient communities. These investments help to ensure the necessary infrastructure is in place to deliver the services people count on, while generating jobs and upgrading facilities to attract new residents and visitors.

Connectivity

The pandemic has highlighted the importance of technology and how it supports people, businesses and communities in their work, to access services and to stay connected. Historically, there has been no stable funding to improve or expand broadband and cellular access to all British Columbians. Building on the Province's recent one-time investments of $140 million, *Budget 2021* establishes stable base funding of $40 million over the plan to further invest in the Province's connectivity strategy. Providing reliable high-speed broadband to rural, remote and Indigenous communities supports a more inclusive society, improves access to health care and education and helps unlocks opportunities for businesses to better reach and access local, regional and global markets.

B.C. Parks Infrastructure Investments and Campsite Expansion

The pandemic limited access to indoor recreational facilities and highlighted the value of high-quality outdoor recreational opportunities. *Budget 2021* responds to the substantial increase in demand for outdoor activities during the pandemic by providing $36 million in operating funding and $47 million in capital funding for new B.C.

Parks investments over three years. Operating funding will be used to expand and enhance park management and recreation opportunities through new and upgraded campsites and trails. It will also support the maintenance and preservation of provincial parks infrastructure and facilities for both front-country and back-country sites and trails, as well as invest in B.C. Parks' reservation services to further improve the park user experience. Capital funding will be used to build and expand campgrounds, and to provide more campsite facilities and amenities. This will create hundreds of new campsites starting in 2022/23. Capital funding will also be used to enhance trails, including improving accessibility for those who use wheelchairs, strollers or who may have other accessibility challenges. New investments in park infrastructure are anticipated to create more than 50 direct and indirect jobs annually.

Investing in Canada Infrastructure Program

The Province continues to partner with the federal government to deliver local community projects across B.C. under the Investing in Canada Infrastructure Program. The Government of Canada has committed to $3.9 billion in B.C. infrastructure over a 10-year period starting in 2018/19 to support public transit; green infrastructure; community, culture and recreation; rural and northern communities; and the COVID-19 resilience stream. The Province has supported these initiatives with total allocations of $3.6 billion anticipated over the 10-year period. This includes new *Budget 2021* provincial funding commitments of $41 million over the fiscal plan, or $247 million over the next six years to maximize federal contributions and continue to support local governments, not-for-profit entities and First Nations in accessing community infrastructure funding. The Ministry of Municipal Affairs will be communicating further details on the application process for new intakes in the fall of 2021.

Marking BC 150+

2021 has been and continues to be a remarkable year, which also includes the 150th anniversary of British Columbia's entry into confederation. As part of this milestone, Budget 2021 provides $30 million in one-time funding in 2021/22 to support initiatives around B.C. communities that honour:

- reconciliation and learning;
- diversity and inclusion; and
- resiliency and the next 150 years.

Investments will raise cultural awareness, recognize the diversity that contributes to B.C.'s vibrant social and economic fabric, and support resiliency and recovery across the province to mark this milestone. More details will be shared on the program in the summer, closer to the anniversary date.

Investing in Infrastructure to Support Recovery

Community Infrastructure: Building Better Communities and a Sustainable Economy for Everyone

The *StrongerBC Economic Recovery Plan* announced in September 2020 provided over $400 million as a first step towards targeted investments in community infrastructure to support economic recovery by creating jobs and building better communities. This includes investments to revitalize community infrastructure, enhance connections between communities by road and air, improve broadband and cellular access and to help get people back to work.

Budget 2021 builds on community infrastructure investments by providing $147 million in new funding over the fiscal plan. This includes supports to further improve broadband and cellular access in rural, remote and Indigenous communities to better enable people to access essential services and work. There are also new investments to maintain and improve community and arts infrastructure, including upgrades to B.C. parks and campsites as British Columbians head to the outdoors and to prepare for the return of tourism throughout the province. B.C. will also provide $41 million over the fiscal plan to partner with the federal government in the Investing in Canada Infrastructure program for clean energy and community infrastructure projects.

The Province also continues to invest in key strategies that contribute to a more equitable and sustainable economy. As part of the *StrongerBC Economic Recovery Plan*, the Province invested $99 million in 2020/21 to ensure child care spaces were safe and available for parents and accelerated the creation of more child care spaces to support recovery efforts. Building even more child care spaces is instrumental in enabling parents, particularly women, to enter or rejoin the workforce. Through the New Spaces Fund, inclusion in the construction of new schools and other grant funding, the Province has funded over 26,000 new child care spaces since *Budget 2018*. *Budget 2021* provides more towards the creation of new spaces over the fiscal plan (see page 13) as government works to integrate child care into the broader learning environment.

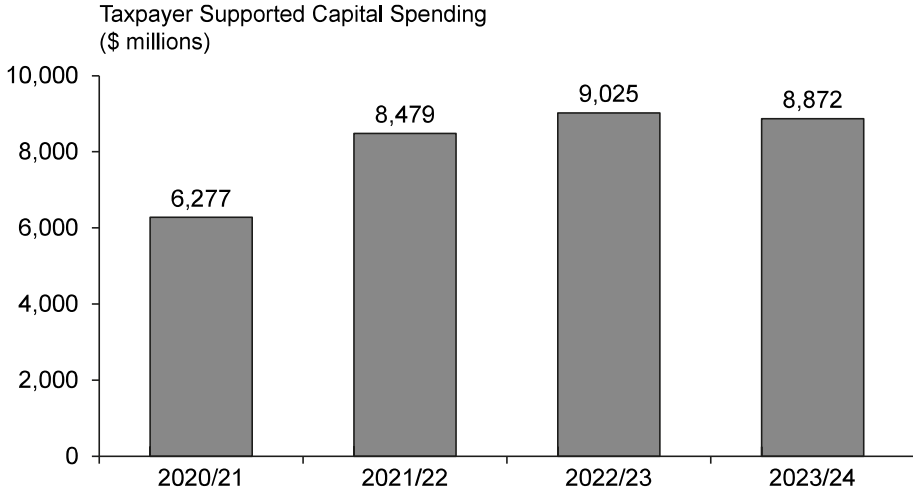
Budget 2018 committed to invest $7 billion over 10 years in the homes people need and B.C. continues to deliver on its commitment to build housing that is safe and more affordable. The Province is providing more than $1.6 billion over the next three years to support the construction of new low- and middle-income housing throughout B.C. *Budget 2021* also provides up to $2 billion in low-cost financing to expand the HousingHub program. This program will facilitate the creation of approximately 9,000 additional units of affordable rental housing and homeownership options for middle-income British Columbians over the next three to five years.

Budget 2021 includes $7.6 billion in transportation investments over the next three years, as shown in Table 1.7 (page 53). Along with highway rehabilitation and upgrades, transportation investments include the replacement of the George Massey Tunnel with a new crossing, which has advanced to the business case review stage, and completing the planning for the Surrey-Langley SkyTrain project. The infrastructure investments keep B.C. on the path to a sustainable future, through shorter commute times and greener transportation. *Budget 2021* also includes the Richmond Hospital redevelopment project, which has advanced to the business case review stage. Investing in renewal and expansion of health authority-owned long-term care facilities is a priority for *Budget 2021*. Over 20 projects across the Province are in planning. In total, the projects are expected to result in the replacement of approximately 2,850 beds, and the creation of over 1,500 net new beds.

New buildings incorporate modern energy-efficient design to reduce the carbon footprint of public-sector buildings. For example, Glenmerry Elementary, Mills Memorial Hospital and Dawson Creek and District Hospital will exceed the energy performance

typically achieved by a Leadership in Energy and Environmental Design (LEED) Gold design. The UVic Student Housing project is being built to the innovative Passive House standard. For existing buildings, *Budget 2021* provides an additional $12 million for schools to reduce emissions and lower energy costs through the Carbon Neutral Capital Program.

The Province also remains committed to promoting the use of mass timber where feasible, to support a more resilient and competitive forestry sector, by incorporating mass timber into projects like Bayview Elementary and Begbie Elementary. The British Columbia Institute of Technology Student Housing project uses mass timber, has a lower carbon footprint compared to traditional concrete construction, and has an energy-efficient design that supports the Province's commitment to meeting legislated greenhouse gas reduction targets.



Major Capital Infrastructure: Creating Jobs While Growing Our Province

With the record $26.4 billion capital plan, *Budget 2021* is making a historic investment in major infrastructure to deliver the critical services people count on as communities grow, keeping B.C. a desirable destination to work, study and live. This record capital spending over three years is $3.5 billion higher than *Budget 2020* with infrastructure recovery investments in the areas of health, education and transportation. Rising capital investments are needed to replace older infrastructure, protect existing assets and build new ones. By leveraging existing capital project planning and with interest rates forecast to remain low by historical standards, the capital plan is well-positioned to support the recovery with shovel-ready projects, spanning all sectors and regions across the Province.

Overall, capital investments are anticipated to create over 85,000 jobs in the fiscal plan period. This includes direct construction jobs as well as indirect jobs, such as offsite employment at suppliers (for example, material manufacturing and food services). These benefits ripple out into the broader economy with the additional income being spent in the community and further supports recovery.

The capital investments include more apprenticeship and training opportunities in local communities, in particular for Indigenous peoples, women, people with disabilities and other traditionally under-represented groups who want to build a career in the skilled trades. The Broadway subway project, which is beginning construction, will provide opportunities under the Province's Community Benefits Agreement. Altogether, these investments will allow the Province to build back better, create good-paying jobs, provide economic stimulus and form the foundation of B.C.'s long-term prosperity for decades to come.

The Capital Plan

Economic Recovery and the Path to Fiscal Balance

As required under the *Budget Transparency and Accountability Act*, government presented a balanced budget on February 18, 2020 for 2020/21 – 2022/23. This plan was suddenly impacted by the COVID-19 pandemic. The Province's strong fiscal and economic position, as highlighted by successive past balanced budgets, allowed government to respond to the pandemic with health, social and economic supports. Within weeks of the onset of the pandemic, B.C. took early leadership in its fiscal response and implemented its COVID-19 Action Plan to deliver critical services and provide financial relief and supports to people and businesses.

Responding to the pandemic meant that government needed to pause the requirement to table balanced budgets for 2021/22 to 2023/24. This approach is consistent with general economic policy that encourages governments to provide appropriate supports and stimulus as needed to address economic downturns and extraordinary events, even if those supports and stimulus result in time-limited deficits.

Given the unprecedented economic impacts, the increased level of supports and the commitment to transparency, government enhanced its financial reporting by providing timely updates of the Ministry of Finance's evolving forecast and economic scenarios as well as all of the pandemic response measures, including detailed reporting about allocations from the pandemic-related Contingencies votes. This reporting started with the *July 14, 2020 Economic and Fiscal Update*, which was not required under the *Budget Transparency and Accountability Act*. Government also maintained quarterly fiscal updates and continued to provide enhanced reporting about response measures and changes to allocations from the pandemic-related Contingencies votes in the *First Quarterly Report* in September and the *Fall 2020 Economic and Fiscal Update* in December.

Third Quarter Results for 2020/21 and the Updated Fiscal Plan

Government's 2020/21 deficit is projected to be $8.1 billion, an improvement from the projected $13.6 billion deficit forecast in the fall 2020 update (as detailed in the *Third Quarterly Report* starting on page 107). This is consistent with past practice whereby government aims to meet or exceed its fiscal forecasts. The improvement is mainly due to: higher tax revenue results; reducing the $1.0 billion forecast allowance; moderately lower spending than anticipated; and a number of other changes, including a one-time Canada Health Transfer top-up provided late in March 2021 from the federal government.

The deficit is forecast to increase moderately compared to the 2020/21 deficit to $9.7 billion (which includes a $1.0 billion forecast allowance). While there is lower forecasted pandemic-related spending and improved overall revenue forecasts in 2021/22, this year-over-year deficit increase is partly attributed to the $3.2 billion in one-time federal funding that was received last year (2020/21) to support pandemic measures, including funding under the Safe Restart Agreement. B.C. welcomes the time-limited federal funding in 2020/21 and support for vaccine roll out in 2021/22. Moving forward, B.C. will need to see sustained and long-term federal funding for health care and other important services. See the Topic Box titled "*A Collaborative Approach to Address COVID-19 Through Partnership with the Federal Government*" on page 45 for more information about B.C.'s priorities for enhanced federal transfers and other supports for British Columbians.

Beginning in 2021/22, the fiscal plan reflects ongoing and declining deficits in the medium term as B.C.'s economy continues to respond to and recover from the pandemic. It is important to note that the projected declining deficits incorporate higher than normal levels of

prudence across the three-year track as shown in the Budget Prudence Measures table on the next page.

Budget 2021 Fiscal Planning Framework

The pausing of the balanced budget requirement is not unprecedented as similar action occurred after the global financial crisis of 2008/09 (or the Great Recession), allowing for multiple deficit years. However, the duration, depth, and breadth of the pandemic recession is materially different from the Great Recession.

The Ministry of Finance estimates that B.C.'s real GDP fell by 5.3 per cent in 2020, much deeper than the 2.4 per cent decline in 2009. This is further discussed in the Economic Outlook chapter beginning on page 79.

During this year's consultation with the Economic Forecast Council, members noted that adaptive and targeted government supports are needed throughout the pandemic with careful consideration about when and how they are withdrawn in B.C. and Canada. From a longer-term perspective, it was agreed that the B.C. government should remain disciplined in its fiscal planning to maintain the solid fiscal position with which it entered the pandemic.

Budget 2021 builds on the Province's COVID-19 response and recovery measures implemented over the past year and focuses on taking care of people, businesses and supporting a just economic recovery. Government will return to balanced budgets after the pandemic has ended and the province is on a path to stable economic recovery.

As a first step, *Budget 2021* uses fiscal guardrails to help maintain fiscal discipline and guide government's decision-making while B.C. continues to manage its response to the pandemic and prepare for recovery.

Budget 2021 Fiscal Guardrails

Government has established a framework of fiscal guardrails to guide financial decisions for *Budget 2021*. These include:

- **Year-over-year declining deficits –** *Budget 2021* presents declining deficits starting in 2021/22, with deficit projections of $9.7 billion, $5.5 billion and $4.3 billion over the next three years. The significant yearly improvements include the tapering of supports, where possible, that address immediate needs caused by the pandemic and recovery over the short term.
- **Targeted spending criteria –** Permanent and time-limited spending on new initiatives are focused on health and safety, supports for people and businesses, and measures to help B.C. to prepare for recovery. This includes supports to address gaps that were exposed or exacerbated by the pandemic, including supports for vulnerable populations such as seniors, those receiving income and disability assistance and people experiencing homelessness.
- **Increased prudence levels: –** *Budget 2021* includes increased prudence compared to past budgets, such as more prudent forecasts compared to the Economic Forecast Council; a larger Contingencies Vote to account for any additional urgent government spending, including placeholders for future budget needs such as caseload growth and priority initiatives; and higher forecast allowance to cover fluctuations in revenues.
- **Pandemic and Recovery Contingencies –** The unprecedented nature of the COVID-19 pandemic required a unique response that will taper off when the pandemic passes. These initiatives are funded through a time-limited Pandemic and Recovery

Budget Prudence Measures

	Budget 2020	Budget 2021		
	2020/21	2021/22	2022/23	2023/24
Real GDP Growth Below EFC (percentage points, pp)*	0.4pp	0.5pp	0.5pp	0.2pp
Contingencies – General Programs	$600 million	$1.00 billion	$800 million	$700 million
Contingencies – Pandemic and Recovery	$8.00 billion (Supplementary Estimates)	$3.25 billion	$1.00 billion	$300 million
Contingencies – Caseload pressures and Priority Investments	-	-	$1.50 billion	$2.00 billion
Forecast Allowance	$300 million	$1.00 billion	$750 million	$400 million

** Calendar Year*

Contingencies, including a reserve that will be limited to the most urgent health and recovery needs. Access will be restricted to measures that are time-limited in nature and that do not create increased costs to government in the future. Reserve funding that is not needed will be held in order to reduce the government's forecasted operating deficit.

- **"Best in Class" Debt Metrics and Debt Affordability** – Debt-to-GDP and debt-to-revenue ratios are measures used to monitor the Province's overall level and sustainability of debt. Government has set overall envelopes for *Budget 2021* operating and capital funding investments so that the level of debt remains affordable while making progress on important new and existing infrastructure projects and related programs and services. (See the Topic Box titled "*Investing in Infrastructure to Support Recovery*" on page 28 for a description of government's capital investments and priorities). Even after continuing to make significant investments in schools, hospitals, housing, transportation and other priorities, the debt-to-GDP ratio is projected to remain below 30 per cent in all years of the fiscal plan at 22.8 per cent in 2021/22, 25.0 per cent in 2022/23 and 26.9 per cent by 2023/24. Debt-to-revenue is projected to be 125.9 per cent in 2021/22, 135.4 per cent in 2022/23, and 147.5 per cent in 2023/24. These metrics continue to compare favorably to debt metrics in other "peer" jurisdictions.
- **Transparent and Timely Reporting** – As demonstrated throughout 2020/21, government is committed to transparent and timely reporting and will continue to provide updated economic forecasts as well as detailed reporting of pandemic measures, including Pandemic and Recovery Contingencies allocations.

Government's Economic Framework

British Columbia has a strong economic foundation, which has helped to manage the impacts of the COVID-19 pandemic. As the pandemic evolved, government introduced new measures to keep people safe and to prepare for recovery. This included the September 2020 *StrongerBC Economic Recovery Plan* which delivered early economic recovery programs to create jobs and opportunities, help businesses to adapt, and spur economic stimulus to foster stronger, more resilient communities[1].

Budget 2021 continues to build on the *StrongerBC Economic Recovery Plan*, by adapting government's response with a focus on innovative, inclusive and sustainable growth. Increasingly, the Province's support for innovation will be channeled into projects that address social and environmental issues, along with economic ones. This includes the new $500 million InBC Strategic Investment Fund for B.C. businesses as described on page 26.

[1] Further detail is provided as part of the *2020/21 Third Quarterly Report* about the broad suite of measures implemented by the BC Government since the start of the pandemic (see page 111)

Announced in September, the fund will invest to achieve a financial return as well as specific social, economic and environmental policy objectives.

Budget 2021 makes continued investment to balance economic interests with sound environmental management and government's commitment to reconciliation. Government's commitment to engage with Indigenous peoples on land and resource activities is supported through the $180 million in stable, ongoing funding over the fiscal plan (see page 16) and signifies the importance of reconciliation to the economic prosperity of all British Columbians. B.C.'s mining sector is poised to play a critical role in supporting the transition to a low-carbon future both here and abroad, as metals and minerals found within B.C. are used to create green technology, such as electric vehicles and wind turbines, and B.C.'s mining operations stand out as having a lower greenhouse gas intensity than most global competitors. In addition, continued funding of $519 million over the fiscal plan period to the CleanBC Program for Industry will help large industry, including forestry and mining operations, transition to low-carbon technology, furthering B.C.'s environmental advantage (see page 25). *Budget 2021* also adds $11 million over the fiscal plan to support timely permitting for land-based decisions and ensure the Province is more appropriately resourced to promote sustainable economic development. This approach presents a competitive advantage, particularly as capital markets are increasingly focused on investing in jurisdictions that reflect a strong record of environmental, social and governance factors and will help ensure that the resource wealth in B.C. continues to be a key source of the province's economic strength.

The pandemic has reinforced the importance of a strong and sustainable economy that produces good paying jobs and raises the standard of living for British Columbians. In the coming months, the Province will engage with workers, businesses, industries, and Indigenous and community leaders to renew the economic framework. The framework will be released this fall and will continue to focus on ensuring our future economy is:

- innovative, generating new ideas, products, services and processes,
- inclusive, with everyone in British Columbia engaged in and benefiting from economic growth, and
- sustainable, meeting people's needs today without compromising our future.

B.C.'s renewed economic framework will include strategies to grow B.C.'s advanced manufacturing and technology sectors; advance sustainable natural resource development; attract high growth businesses and talent to anchor in B.C.; and build upon the province's legacy as a leader in global climate change and clean energy.

The Path to Balanced Budgets

Given the unprecedented level of uncertainty resulting from the ongoing impacts of the pandemic, it is too early to forecast a specific timeline to balance. However, preliminary analysis indicates a return to balanced budgets within a range of seven to nine years (the period of 2028/29 - 2030/31), consistent with projections tabled by other provinces in their 2021 budgets.

While the analysis incorporates economic growth scenarios and other assumptions, the Province will be working over the coming months to finalize a specific timeline to return to balance. Decisions required to achieve the timeline and the approach to balancing will be carefully guided by indicators that monitor the health of the economy, communities, and businesses. This will ensure a thoughtful approach that protects the momentum of the recovery and sustains important investments for British Columbians. The specific timeline, approach and plan will be presented in *Budget 2022* when there will be greater certainty about the path and pace of economic recovery.

BC Public Service

Full-time equivalent (FTE) staff utilization in core government ministries is projected to be 32,750 FTEs across the fiscal plan. This is an increase of 350 FTEs compared to the 2020/21 FTE forecast. The anticipated FTE growth is mainly due to increased staffing needs across the public service to respond to the COVID-19 pandemic, and for expansion of programs including CleanBC, mental health services, housing, and natural resource permitting. It also accounts for FTE growth related to bringing key services, such as revenue and tax administration services, back into core government.

BC Public Sector Compensation

There are nearly 490,000 people in British Columbia's public sector working in the core public service, at Crown corporations and agencies, in health and community social services, K-12 public education and post-secondary institutions. Of those people, approximately 385,000 are unionized employees.

Budget 2021 provides funding to support collective agreements settled over the past year under the three-year 2019 *Sustainable Services Negotiating Mandate*. Over the fiscal plan period, a total of $1.6 billion in funding is provided for agreements signed under the mandate. The mandate supports government's commitment to improve the services people count on, make life more affordable and invest in sustainable economic growth.

Spending Recovered from Third Parties

Government projects that, over the fiscal plan period, it will incur almost $10 billion in program spending which will be recovered from third parties.

A total of $3.5 billion of programs will be delivered with funding from the federal government, such as the Labour Market Development Agreement, the Canada Job Grant, public transit, health, and child and family support programs.

Recovered costs include an estimated $2.6 billion in interest payments from commercial Crown corporations through the fiscal agency loan program and from sinking fund investment returns.

$3.8 billion in government spending is supported by various recovery sources, primarily other jurisdictions, other levels of government, agencies, and fees and licenses. Expenses that relate to these recoveries include health care, PharmaCare, transportation projects, and grants to various organizations in the community, and employee health benefits costs collected from participating government agencies.

Program spending from recoveries have no net impact to the government's fiscal plan as the recoveries are reported as revenue and the spending is expensed as it is incurred.

Transfers to Service Delivery Agencies

Around 62 per cent of ministry spending takes the form of transfers (both operating and capital) to service delivery agencies for the provision of services on behalf of government. These transfers will total $103 billion over the three-year fiscal plan period and will support education, health care, social services, housing, and transportation programs delivered by the agencies. These service delivery agencies include the SUCH sector (schools, universities, colleges and health organizations), Community Living BC, BC Housing Management Commission, BC Transit, and the BC Transportation Financing Authority.

Service Delivery Agency Spending

Service delivery agency spending is projected to increase from $39.5 billion in 2021/22 to $40.9 billion by 2023/24, an increase of $900 million or 3.5 per cent. Additional funding may be allocated to agencies during the year out of pandemic and recovery contingencies, which may result in higher actual spending in 2021/22.

School district spending is projected to increase from $7.48 billion in 2021/22 to $7.53 billion in 2023/24, an increase of over $40 million reflecting higher salary and benefits and other operating costs.

Post-secondary institution spending is projected to rise from $7.0 billion in 2021/22 to $7.4 billion by 2023/24 — an increase of $400 million, or 5.7 per cent. The spending increase is primarily due to higher staffing and operating costs related to higher enrolment.

Health authority and hospital society spending is projected to increase from $18.3 billion in 2021/22 to $19.3 billion in 2023/24 an increase of $1 billion or 5.5 per cent; this reflects increased funding from the government, as discussed on page 8.

Projected spending by other service delivery agencies is forecast to remain stable around $6.7 billion over the fiscal plan. This spending relates mainly to services in the transportation, social services, and housing sectors.

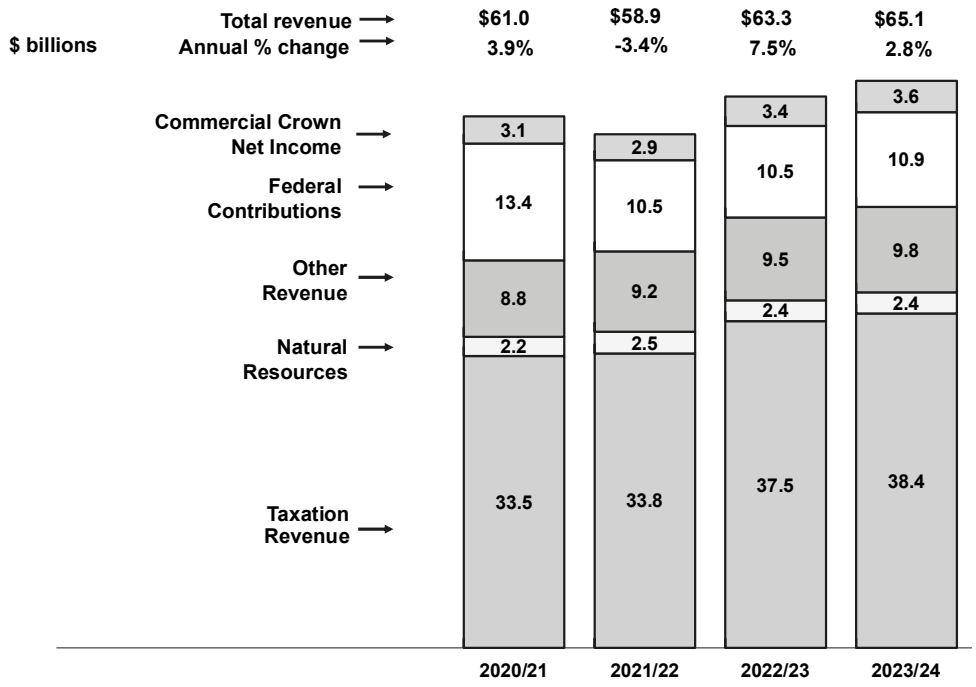
[1] Includes provincial sales tax, HST/PST housing transition tax and harmonized sales tax related to prior years.

[2] Columbia River Treaty, Crown land tenures, other energy and minerals, water rental, and other resources.

[3] Health-care-related, motor vehicle, and other fees.

[4] Includes reimbursements for health care and other services provided to external agencies, and other recoveries.

[5] Includes contributions for health, education, community development, housing and social service programs, and transportation projects.



[6] Net of payments to the federal government and beginning in 2021/22 also net of payments under the gaming revenue sharing agreement with First Nations.

[7] Includes Columbia Power Corporation, BC Railway Company, Columbia Basin power projects, and other agencies' self-supported subsidiaries.

Revenue

Total revenue growth is expected to average 2.2 per cent annually over the three-year period to 2023/24, with growth in taxation, natural resources, other sources, and net income of commercial Crown corporations and declining revenue from federal government contributions.

Chart 1.2 Revenue Forecast

Revenue growth in taxation sources averages 4.7 per cent over the three-year fiscal plan period. B.C. and the federal government continue to support business competitiveness in the face of ongoing global developments through the continuation of corporate income tax relief through the incentives for investment in capital assets, such as buildings, machinery and equipment. The effects of these changes, combined with the impacts of economic growth and LNG Canada's final investment decision to build an LNG facility in Kitimat, result in a 4.7 per cent average annual growth in the taxation revenue forecast.

Natural resource revenue is forecast to increase by 14.3 per cent in 2021/22, with higher revenues from natural gas royalties, forests, the mineral tax on coal mine operations, electricity sales under the Columbia River Treaty and water rentals, which are partly offset by declining revenue from bonus bids and rents on drilling licences and leases. The revenue is expected to decline in 2022/23 by 6.1 per cent mainly due to lower forest stumpage revenues reflecting lumber prices decreasing from historically high prices experienced in early 2021. Natural resource revenue is expected to be relatively flat in 2023/24, rising by 0.5 per cent.

Table 1.5.1 Comparison of Major Factors Underlying Revenue

Calendar Year	*April 20, 2021*				*February 18, 2020*			
Per cent growth unless otherwise indicated	2020	2021	2022	2023	2020	2021	2022	2023

SPF 2x4 price ($US/thousand board feet)	$570	$650	$475	$450	$380	$360	$350	$350
Exchange rate (US cents/Canadian dollar)	74.6	79.0	79.0	78.0	76.3	76.1	77.0	77.5
Fiscal Year	2020/21	2021/22	2022/23	2023/24	2020/21	2021/22	2022/23	2023/24
Natural gas price ($Cdn/GJ at plant inlet)	$1.23	$1.48	$1.48	$1.50	$0.62	$0.74	$0.88	$0.96
Bonus bid average bid price per hectare ($)	$0	$0	$200	$300	$350	$350	$350	$300
Electricity price ($US/mega-watt hour, Mid-C)	$27	$37	$34	$33	$34	$36	$34	$35
Metallurgical coal price ($US/tonne, fob Australia)	$135	$136	$145	$148	$155	$155	$152	$152
Copper price ($US/lb)	$3.05	$3.52	$3.35	$3.20	$2.81	$2.90	$2.97	$3.07
Average stumpage rates ($Cdn/cubic metre)	$23.32	$24.21	$19.05	$18.36	$16.83	$16.03	$15.67	$15.46
Crown harvest volumes (million cubic metres)	46.0	46.0	45.0	45.0	46.0	46.0	46.0	45.0

Other revenue consists of fees, licences, investment earnings and other miscellaneous sources, incorporating estimates provided by ministries and taxpayer-supported agencies. Over the next three years, these revenues are projected to average 3.3 per cent annual growth, slightly lower than the *Budget 2021* real GDP outlook.

Federal government contributions in 2020/21 include one-time COVID-19 related funding; as a result, the forecast for 2021/22 shows a 21.2 per cent decline year-over-year. The federal contributions are expected to increase by 1.8 per cent annually over the next two years mainly due to expected increases in the Canada Health Transfer (CHT) and the Canada Social Transfer (CST) disbursements. The combined CHT and CST contributions are forecast to average 3.9 per cent annual growth over next two years in the fiscal plan and represent about 77 per cent of total federal government contributions. Other federal government transfers are projected to decline at an average of 1.8 per cent annually over the three-year fiscal plan.

The net income of commercial Crown corporations is expected to average 5.9 per cent growth annually over the next three years reflecting a full recovery of BC Lottery Corporation's net income to pre-pandemic levels, and stable growth in the other agencies. More details on commercial Crown corporations net income are provided beginning on page 44.

Major Revenue Sources

Key assumptions and sensitivities relating to revenue are provided in Appendix Table A5. The assumptions and factors that are the major drivers for preparing projections of individual revenue sources include sensitivities which provide a sense of potential impacts to revenue projections if there are changes to these underlying assumptions and factors. The following text references the forecasts of these assumptions and factors in explaining individual revenue sources. An analysis of historical volatility of the economic variables related to revenue sources can be found in the *2020 British Columbia Financial and Economic Review* (pages 16-17). The major revenue components are detailed below.

Taxation revenue

Personal income tax revenue is forecast to average 2.7 per cent growth over the next three years, in line with projected increases in wages and salaries and household income.

Corporate income tax revenue is mainly based on cash instalments and settlement adjustments for prior years; this often results in a year-over-year volatility which is exacerbated by the effects of the pandemic. Revenue is expected to decline 29.1 per cent in 2021/22 mainly due to a decrease in instalments for 2021 tax year reflecting the effects of COVID-19 pandemic on the national corporate tax base and a lower settlement payment for prior years. Average annual growth over the next two years is forecast to be 29.7 per cent due to annual increases in instalments reflecting the federal government's projection of national corporate taxable income as well as annual changes in settlement payments relating to prior years.

Table 1.5.2 Corporate Income Tax Revenue

($ millions)	2020/21	2021/22	2022/23	2023/24
Advance instalments:				
– Payment share	14.41%	13.32%	14.42%	14.32%
– Instalments	4,899	4,371	5,462	5,772
Prior-years' settlement payment	(92)	(962)	266	(36)
Corporate income tax revenue	**4,807**	**3,409**	**5,728**	**5,736**
Annual per cent growth	-4.1%	-29.1%	68.0%	0.1%

Provincial sales tax revenue is expected to average 6.0 per cent growth annually over the three-year fiscal plan, in line with expected increases in nominal GDP and consumer expenditures on taxable goods and services. The forecast incorporates the exemption for electric bicycles and tricycles effective April 21, 2021 outlined in *Part 2: Tax Measures* and the effect of delaying tax measures initially announced in *Budget 2020*.

Table 1.5.3 Sales Tax Revenue

($ millions)	2020/21	2021/22	2022/23	2023/24
Provincial sales taxes	**7,446**	**7,872**	**8,492**	**8,865**
Annual per cent change (calendar year)	2020	2021	2022	2023
Consumer expenditures on durable goods	-2.3%	2.6%	3.1%	2.8%
Consumer expenditures on goods and services	-4.8%	5.3%	5.9%	5.7%
Residential investment	-6.9%	3.5%	4.6%	4.8%
Government expenditures	13.6%	-0.4%	3.7%	2.2%
Nominal GDP	-4.5%	6.4%	5.4%	4.0%
Retail sales	2.6%	3.7%	3.4%	3.4%

Motor fuel tax revenue growth is expected to average 1.3 per cent annually over the three-year plan. Diesel volumes are forecasted to grow 2 per cent annually and other fuel volumes rise in line with real GDP growth. In 2023/24 the forecast assumes that gasoline purchases decline due to provincial policy measures relating to clean energy initiatives.

Carbon tax revenue is forecast to rise an average of 8.9 per cent annually over the next three years as the carbon tax rate increases from $45/tonne of CO_2 equivalent emissions in 2021/22 to $50 in 2022/23. In 2023/24 the revenue is projected to decline in line with provincial policy measures relating to clean energy initiatives.

Tobacco tax revenue is projected to be $780 million in 2021/22 and $800 million in the following two years of the fiscal plan. The forecast incorporates increased tobacco tax rates, effective July 1, 2021.

Property tax revenue is expected to grow 27.8 per cent in 2021/22 due to a return to pre-pandemic tax rates for commercial properties in the 2021 tax year. The temporary tax relief measure for commercial property owners in the 2020 tax year was estimated at $714 million. The tax revenue is expected to grow by an average of 4.3 per cent annually over the following two years, consistent with expected housing starts, non-residential investment and inflation.

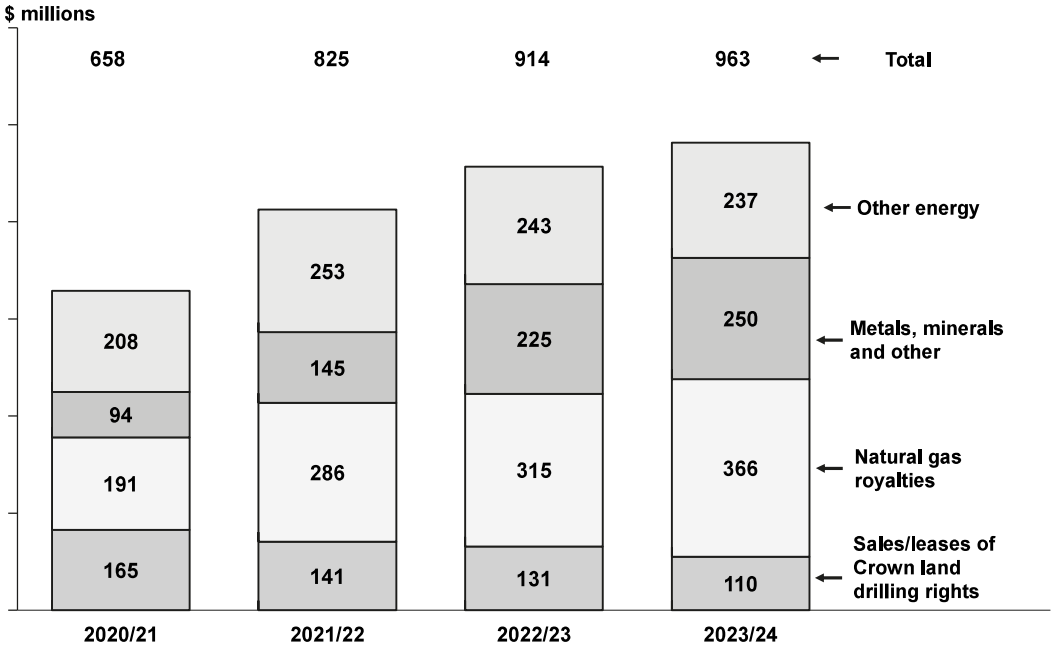
Property transfer tax revenue is expected to decline slightly in 2021/22 reflecting an anticipated moderation of market activity in 2022 and assuming a portion of strong revenues received in 2020/21 do not carry forward. This decline is expected to be followed by an average annual decline of 2.5 per cent over the next two years, consistent with the expected annual changes in residential sales values.

Employer health tax revenue is forecast at $1.9 billion in 2021/22. Over the next two years, revenue growth is expected to average 3.8 per cent annually, consistent with growth in wages and salaries.

More information on tax measures is detailed in *Part 2: Tax Measures*.

Natural resource revenue

Natural gas royalties are expected to increase 49.7 per cent in 2021/22 mainly due to higher natural gas prices, increased royalties from natural gas liquids and an improved outlook for natural gas production volumes, partially offset by increased utilization of royalty program credits. Over the next two years, royalties are expected to increase at a 13.1 per cent average annual rate as the effects of rising prices and production volumes and increasing royalties from natural gas liquids are partially offset by increased utilization of royalty programs and infrastructure credits.



The forecast assumes an average price of $1.48 ($Cdn/gigajoule, plant inlet) in 2021/22, up from $1.23 in 2020/21. This assumption is within the 20th percentile of the private sector forecasters, continuing the prudence incorporated since 2013/14. Prices are expected to increase over the next two years, averaging $1.48 in 2022/23 and $1.50 in 2023/24, consistent with the growth of the average of the private-sector forecasts. Over the three-year fiscal plan period, the projected natural gas prices average 14 cents lower than the average of the private-sector forecasters.

See Appendix Table A6 for more details regarding natural gas price forecasts.

Revenue from bonus bids and rents on drilling licences and leases is forecast to decline over the next three years, from $165 million in 2020/21 to $110 million in 2023/24. The decrease is due to declining deferred revenue. The bonus bid revenue recognition reflects ten-year deferral of cash receipts from sale of Crown land tenures. Cash sales are expected to increase from no sales in 2021/22 to $6 million in 2023/24. More detail is provided in Appendix Table A5.

Mining and minerals: Revenue from mineral tax, fees and miscellaneous mining receipts is forecast to increase 54.3 per cent in 2021/22 mainly due to improving prices and production volumes for coal and copper, reflecting increased global demand. Coal forecasts have improved due to increased demand from China while copper forecasts have benefited from global stimulus spending by governments and corporations through increased electrification and reductions to carbon emissions. Over the next two years revenue is projected to average a 31.3 per cent annual increase mainly due to the expected improvement in mining taxes from coal operations.

Chart 1.3 Revenue from Energy, Metals, and Minerals

Other energy revenue is comprised of electricity sales under the Columbia River Treaty, petroleum royalties, and fees collected by the Oil and Gas Commission. These revenues are expected to increase by an average of 4.4 per cent annually over the three-year fiscal plan mainly due to higher Mid-Columbia electricity prices.

Forest revenue is expected to increase 7.4 per cent in 2021/22 due to the impacts of higher overall stumpage rates and logging tax revenue mainly reflecting improved outlook for lumber prices. Forest revenue is expected to decline an average of 12.8 per cent annually over the following two years mainly due to lower expected overall stumpage rates, lower harvest levels and lumber prices decreasing from the historically high levels experienced in early 2021. Total harvest levels on Crown land are projected to decrease from 46 million cubic metres in 2021/22 to 45 million cubic metres over the next two years. Over the four years to 2023/24, the forecast assumes that the Ministry of Indigenous Relations and Reconciliation will recover $167 million of stumpage revenue in support of funding the Forest Consultation and Revenue Sharing Agreements with First Nations.

Other natural resource revenue is comprised of water rentals and fees for hunting and fishing licences collected under the *Wildlife Act*. These revenues are expected to increase an average of 5.4 per cent annually over the next three years mainly reflecting higher water rentals collected under the *Water Sustainability Act.*

Other Taxpayer-Supported Revenue

Fees and licences: Over the three-year fiscal plan, revenue from fees and licences is expected to average 3.1 per cent annual growth mainly due to increasing projections for post-secondary institutions, the K-12 sector and health authorities. Over the next three years, fee revenue projections from the Schools, Universities, Colleges, and Health (SUCH) sector account for over 70 per cent of the total fee revenue forecast.

Investment earnings are expected to decline an average of 0.5 per cent annually over the three-year fiscal plan mainly due to lower recoveries through the fiscal agency loan program. Lower revenue from these recoveries has an equal and offsetting lower expense resulting in no net impact on the projected annual surplus. These recoveries are expected to comprise approximately 74 per cent of total investment earnings.

Miscellaneous revenue is projected to average 4.9 per cent annual growth over the fiscal plan period. Over 54 per cent of the total miscellaneous revenue of approximately $3.5 billion is expected to be collected by SUCH sector entities.

Federal Government Transfers

Canada Health Transfer and Canada Social Transfer contributions are expected to decline 4.2 percent in 2021/22 mainly due to an additional one-time $542 million contribution included in 2020/21 forecast, supporting the recovery of the health care systems following the pandemic. Over the next two years, contributions are expected to increase at a 3.9 per cent average annual rate mainly reflecting increasing national cash transfers and a rising B.C. population share of the national total. The plan assumes the national Canada Health Transfer (CHT) cash disbursement increases 3.0 per cent in the first two years of the plan, followed by an increase of 5.5 per cent in 2023/24. The national CHT cash disbursement in 2021/22 is based on a three-year average (2019 to 2021) of Canada's nominal GDP growth, subject to a minimum annual growth rate of 3.0 per cent. The forecast adopts the most recent federal government outlook for national nominal GDP. The national CST cash disbursement is projected to increase 3.0 per cent annually, consistent with the federal government forecast.

COVID-19 pandemic relief funding in the 2020/21 to 2022/23 totals $2,831 million and includes funding in support of the following:

- Safe Return to Class funding ($242 million)
- Safe Restart Agreement ($1,963 million)
- COVID-19 Essential Workers Support Fund ($371 million)
- Canada's COVID-19 Immunization Plan ($135 million)
- Financial Assistance Agreement to Support Closure and Restoration of Oil and Gas Sites in British Columbia ($120 million)

Table 1.5.4 Federal Government Contributions

($ millions)	2020/21	2021/22	2022/23	2023/24
Canada Health Transfer	6,243	5,843	6,017	6,353
Canada Social Transfer	2,042	2,096	2,159	2,225
Total Health and Social Transfers	8,285	7,939	8,176	8,578
COVID-19 related funding	2,616	175	40	-
Disaster Financial Assistance Agreements	147	-	62	145
Low Carbon Economy Leadership Fund	29	13	2	-
BC Housing Management Commission	208	166	152	157
Ministry Vote Recoveries	1,094	1,294	1,068	1,046
Other Transfers to Ministries and Agencies	981	943	964	984
Total Other Contributions	2,459	2,416	2,248	2,332
Total Federal Government Contributions	**13,360**	**10,530**	**10,464**	**10,910**
BC share of national population (June 1)	13.55%	13.55%	13.55%	13.56%

Other federal government contributions are expected to decline an average of 1.8 per cent annually over the fiscal plan. These contributions include B.C.'s share of the federally imposed cannabis duty, funding under the Disaster Financial Assistance Arrangements, as well as transfers in support of housing initiatives, labour market development, home care, mental health, public transit and other ministry programs.

Commercial Crown Corporations

British Columbia Hydro and Power Authority (BC Hydro): BC Hydro's net income is set by regulation at $712 million in 2021/22 and 2022/23 and is forecast to remain at $712 million in 2023/24. The payment of dividends was phased out to assist with stabilizing rate increases and improve BC Hydro's capital structure to a 60:40 debt-to-equity ratio (currently 80:20). No dividend payments are forecast during the fiscal plan period.

British Columbia Liquor Distribution Branch (LDB): LDB is projecting a net income of $1.099 billion in 2021/22 and growing to $1.146 billion in 2023/24. The forecast is lower than at *Budget 2020,* which reflects a reduced mark-up after the Province's implementation of wholesale pricing for liquor licencees, such as restaurants, bars and pubs (estimated at $71 million annually).

British Columbia Lottery Corporation (BCLC): BCLC's operations were disrupted due to the pandemic, with the closure of all gambling facilities for the entire 2020/21 fiscal year in compliance with provincial health orders. BCLC's net income is forecast to recover to pre-pandemic levels over the fiscal plan from $383 million in 2020/21, to $1.4 billion in 2023/24 (net of payments under the Province's gaming revenue sharing agreement with First Nations, and $11 million in annual payments to the federal government). Government will distribute approximately 25 per cent of its gaming income to charities, First Nations, and local governments.

Insurance Corporation of British Columbia (ICBC): ICBC is forecasting positive net incomes for 2021/22 and beyond, including $154 million in 2021/22, $202 million in 2022/23, and $229 million in 2023/24. Amongst other changes, this forecast includes the continuation of the positive effects from the April 1, 2019 product reform changes; declining crash frequency trends; the COVID-19 rebate in respect of 2020/21; and the May 1, 2021 transition to the new enhanced care-based system.

For more information relating to commercial Crown corporations, please see Service Plans listed on the *Budget 2021* website or the corporations' respective websites.

A Collaborative Approach to Address COVID-19 Through Partnership with the Federal Government

British Columbians have benefitted from the complementary efforts of both the provincial and federal governments in responding to COVID-19.

Through the Safe Restart Program and other supports, the federal government provided B.C. with over $3 billion to increase pandemic response in health care, child care, schools, infrastructure and emergency supports for the province's most vulnerable people. This includes over $1.3 billion for a number of provincial-federal cost shared programs, including: supports for local governments and transit providers; financial relief for commercial tenants; and temporary pandemic pay for frontline workers. While these pandemic-related federal supports have largely ended, the pandemic and its wide-ranging impacts have not. The collaborative investments that have supported British Columbians during the pandemic will continue to be needed as we emerge from the pandemic and move towards recovery.

The pandemic's impacts made it clear that there were gaps in the social safety net in Canada, gaps which were addressed on a short-term basis through the B.C. Emergency Benefit for Workers, crisis supplements, and the B.C. Recovery Benefit, as well as federal measures such as Canada Emergency Response Benefit and the federal sickness, caregiver and recovery benefits, and temporary changes to make employment insurance more accessible and flexible. B.C. supports making the temporary changes to employment insurance permanent and welcomes any opportunities to work with the federal government to address other gaps in the safety net, such as permanent paid sick leave.

The pandemic increased health care costs substantially in 2020/21, and it will have lasting impacts on health care going forward. Even before the pandemic, provincial health care systems were under strain from known cost drivers such as inflation, population growth, and aging. System funding pressure was further exacerbated by the federal decision to proceed with a reduction in the growth rate of the Canada Health Transfer in 2017-18. While one-time federal funding has helped with the immediate pressures of the pandemic, it does not address the long-term funding partnership. The Parliamentary Budget Officer has indicated that the federal government is in a position to permanently increase spending over the long term. Premiers have made enhancing long-term federal health care funding their top priority for federal negotiations. This includes calling for increasing the Canada Health Transfer to 35 per cent of provincial/territorial health care spending and adopting a growth rate that maintains that federal share, as discussed in provincial/territorial finance ministers' February 2021 report to the Council of the federation.

B.C. joins other provinces in calling for additional improvements to the federal government's Fiscal Stabilization program that are needed to address significant annual declines in provincial revenues due to extraordinary economic circumstances such as those brought about as a result of the COVID-19 pandemic.

As the province looks ahead, there is an ongoing need for targeted federal investments to help B.C. to build back better; such investments are needed to support infrastructure projects, expand broadband and cellular access, increase skills training to help people get back in the workforce and increase access to child-care which is essential to our recovery. British Columbia joins other provinces and territories in requesting that a meaningful portion of federal stimulus funding be earmarked for key provincial priorities to recognize the important role provinces and territories are playing in fostering economic growth. This would help B.C. continue to boost recovery and bolster the province's economic resilience.

Capital Spending

In *Budget 2021*, capital spending on schools, hospitals, roads, bridges, housing, hydro-electric projects and other infrastructure around the province is expected to total $39.5 billion over the three-year fiscal plan period. These investments will help ensure that the necessary infrastructure is in place to deliver the services that people count on in communities around the province and create jobs that support a strong and sustainable economy. For more information on how infrastructure investments are supporting economic recovery and a stronger BC please see the topic box on page 28.

Taxpayer-Supported Capital Spending

Taxpayer-supported capital spending over the next three years will total $26.4 billion, the highest level ever. This includes completion of existing approved projects along with new investments to expand and sustain provincial infrastructure including schools, post-secondary facilities, affordable housing, roads, bridges and hospitals. The *Budget 2021* three-year total is $3.5 billion higher than *Budget 2020* mainly due to new capital spending in the areas of health, education and transportation, as well as revised timing for capital projects.

Table 1.6 Capital Spending

($ millions)	Updated Forecast 2020/21	Budget Estimate 2021/22	Plan 2022/23	Plan 2023/24
Taxpayer-supported				
Education				
Schools (K–12)	972	1,197	1,114	1,187
Post-secondary institutions	931	1,263	1,271	1,261
Health	1,533	2,245	2,603	2,972

Total capital spending	**10,089**	**13,455**	**13,665**	**12,361**

[1] Includes BC Housing Management Commission and Provincial Rental Housing Corporation.

[2] Includes BC Pavilion Corporation, Royal BC Museum and other service delivery agencies.

[3] Joint ventures of the Columbia Power Corporation and Columbia Basin Trust.

Investments in Schools

Over the three years of the fiscal plan, approximately $3.5 billion will be invested to maintain, replace, renovate or expand K-12 facilities. This includes continued investment in new school space to accommodate increasing enrollment in growth districts, as well as in the program to seismically upgrade or replace schools.

Examples of K-12 capital investments in *Budget 2021* include:

- The new Stitos Elementary Middle School in the Chilliwack School District will provide 930 new spaces for students in kindergarten to Grade 8. This new school has a total budget of $53.6 million, will be designed to meet LEED gold standards, and is scheduled to be complete in September 2022. It will feature a neighbourhood learning centre with space for child care programming.
- Cowichan Secondary in the Cowichan Valley School District is being replaced under the ministry's Seismic Mitigation Program. The school will be replaced with a 1,100-student-capacity secondary school on its current site. The $82-million replacement school is scheduled to be complete in 2024 and will be partially funded by the Cowichan Valley School District. The neighbourhood learning centre will include a Gathering Place, Elder Place and an Audio Recording Room for Indigenous language.
- Two schools in the Pacific Rim School District will be upgraded and partially replaced under the ministry's Seismic Mitigation Program. The $45-million project will deliver a 240-student-capacity Ucluelet Elementary and a 250-student-capacity Ucluelet Secondary. The schools are scheduled to open in 2022. Included in the project is a neighbourhood learning centre that will feature space for child care programming.
- The new Grandview Heights Secondary School is currently under construction in the Surrey School District and will provide 1,500 new spaces for students in Grade 8 to 12. This new school has a total budget of $82.8 million, is designed to meet LEED gold standards, and is scheduled to be complete in September 2021.
- The new Regent Road Elementary School is currently under construction in the Surrey School District and will provide 655 new spaces for students in Grade K to 7. This new school has a total budget of $33.3 million, is designed to meet LEED gold standards, and is scheduled to be complete in September 2022.
- The new Tatalu Elementary School in the Surrey School District will provide 655 new spaces for students in Grade K to 7. This new school has a total budget of $44.1 million, will be designed to meet LEED gold standards, and is scheduled to be complete in 2023. It will feature a neighbourhood learning centre with space for child care programming.
- The new Southwest Yorkson Elementary School is currently under construction in the Langley School District and will provide 555 new spaces for students in Grade K to 5. This new school has a total budget of $32.2 million, is designed to meet LEED gold standards, and is scheduled to be complete in September 2021. It will feature a neighbourhood learning centre with space for child care programming.
- The new Hornby Island Community School is currently under construction in the Comox Valley School District and will replace the old school, which was destroyed by fire in 2018. The new school has a budget of $10.4 million and is scheduled to be complete in early 2022. This school will provide 95 spaces for grades K to 7 students and will have a neighbourhood learning centre in the form of a larger gym. The gym is the largest indoor space on the island and will act as a community hub.

- The upgraded and renovated Gudangaay Tlaats'gaa Naay School in the Haida Gwaii School District will be made seismically safe and will convert a secondary school to accommodate students in Grade K to 12. This project has a total budget of $16.5 million and is scheduled to be complete in fall 2022. The project will reduce district costs associated with operating two underutilized facilities and will ensure students are in safe seats. The project also includes the construction of a tsunami tower, as this school is located in a low-lying area that is vulnerable to tsunamis and without an adequate evacuation route.
- The new Parkcrest Elementary School in the Kamloops-Thompson School District will replace the previous school destroyed by a fire in 2019 and will provide 510 spaces for students in Grade K to 6. This new school has a budget of $37.3 million, will be designed to reduce greenhouse gas emissions and annual energy costs, and is scheduled to be complete in September 2024. It will feature a neighbourhood learning centre with space for child care programming. The school will also feature a larger gymnasium funded by the City of Kamloops.
- Two new schools are approved for the Sooke School District. The $89 million project will bring a new 500-student-capacity Pexsisen Elementary, and a new 700-student-capacity Centre Mountain Lellum Middle school. The elementary school will feature a neighbourhood learning centre, with space for child care programming. The two new schools are scheduled to open in September 2022.
- Quesnel Junior School in the Quesnel School District is approved for replacement on a new site, to address the significant structural and building conditions issues at the school. This new 550-student-capacity middle school has a total budget of $52.4 million, will be designed to meet LEED gold standards, and is scheduled to be complete in 2022.

Spending to Support Post-Secondary Education

Budget 2021 includes $3.8 billion in total capital spending over the next three years by post-secondary institutions throughout the province. Investments in priority projects will build capacity and help meet the province's future workforce and economic development needs in key sectors, including health, science, trades and technology. A significant portion of this capital investment is funded through other sources, including foundations, donations, internal sources, revenues generated from services, and federal funding.

Current and planned investments in the post-secondary sector include:

- Construction of a new $88-million health science building at British Columbia Institute of Technology's Burnaby campus. The new building will provide flexible simulation space for health education.
- $10 million to modernize space to expand programming focused on the technology sector at British Columbia Institute of Technology's downtown Vancouver and Burnaby campuses.
- $13-million renovation to the Library & Academic Building at Coast Mountain College's Terrace campus to provide a dedicated space for students to study, modernized registration and learning spaces, and address issues following a flood in 2018.

- $27-million National Centre for Indigenous Laws as an addition to the Fraser Law building at the University of Victoria that will be home to the world's first joint degree in Indigenous legal orders and Canadian common law, as well as the Indigenous Law Research Unit.
- $15 million for a new First Peoples Gathering House at Simon Fraser University's Burnaby campus, which contains a large Ceremonial Hall for ceremonies and learning events.
- The provincial student housing program, announced in 2018, to build approximately 5,000 new student housing beds at B.C.'s public post-secondary institutions. Examples of approved projects include:
  - $68 million to construct five new mass timber student housing buildings with 376 beds at Okanagan College, across three campuses — Kelowna, Vernon and Salmon Arm.
  - $114 million to build a 12-storey mass timber student housing building with 464 beds at British Columbia Institute of Technology's Burnaby campus.
  - $232 million to construct two student housing buildings at the University of Victoria. The buildings include 621 net new beds, a dining facility and multi-purpose program space.
  - $104 million to build a student housing building with 386 beds and to renovate and expand the current dining facility at the Simon Fraser University Burnaby campus.
  - $25 million to build a 220-bed student housing building at the University of British Columbia Okanagan campus.
- Three grant-supported projects for student housing projects located in rural regions:
  - $5 million to construct 12 beds for Indigenous students at the College of New Caledonia Prince George campus.
  - $19 million to construct 100 student housing beds at the College of the Rockies in Cranbrook.
  - $22 million to replace and expand housing for 104 students (33 net new beds) at the Coast Mountain College's Terrace campus.
- The B.C. Knowledge Development Fund provides capital investment funding for vital research infrastructure for public post-secondary institutions, teaching hospitals and affiliated non-profit agencies across the province, enabling institutions to attract researchers and skilled technicians. Examples of approved projects include:
  - $11 million for specialized equipment to develop a facility, with capabilities for the study of quantum systems under normal and extreme conditions. Quantum mechanics, which provides a description of the microscopic world of atoms and their constituents, is fundamental to materials being developed for transformational technologies, such as green chemicals, electric vehicle batteries and efficient and safer nuclear power plants. Simon Fraser University is leading the collaboration with McMaster University, Mount Alison University, UBC, TRIUMF and the Université de Montréal.

- $10 million for specialized equipment for the development and installation of an independent, symbiotic target module at TRIUMF's ARIEL facility at the UBC Vancouver campus to harness residual proton beam remains left over from other experiments and use them to produce medical isotopes, which can be processed and distributed to partners across Canada for use in the development of novel therapeutic radiopharmaceuticals, helping to launch a new generation of cancer therapies at the BC Cancer Agency and other partners.
- $9.5 million for specialized equipment to develop a state-of-the-art facility intended to revolutionize understanding of the ocean and what drives ocean and climate variability, allowing better prediction of weather, climate changes, and fish stocks, to help move towards carbon-free energy sources by exploiting ocean waves and wind. The Canadian Pacific Robotic Oceanic Observing Facility (C-PROOF) will be led by the University of Victoria, and data sent to Ocean Networks Canada for distribution across the world.

Expanding and Upgrading Health Facilities

Capital spending on infrastructure in the health sector will total $7.8 billion over the next three years. These investments support new major construction projects and upgrading of health facilities, medical and diagnostic equipment, and information management/technology systems. These investments are supported by funding from the Province as well as other sources, such as regional hospital districts and foundations.

Key capital investments in the health sector include:

- A new St. Paul's Hospital at the Station Street site in Vancouver, which will include capacity for 548 inpatient beds, a new and larger emergency department, a surgical suite, consolidated specialty outpatient clinics and an underground parkade. Construction started in March 2021 and the new hospital is expected to be open for patients in early 2027.
- A net-new integrated hospital and cancer centre in Surrey to help meet the needs of a growing and aging population in the region. The new hospital will include 168 inpatient beds, emergency department, medical imaging department including computed tomography (CT) and magnetic resonance imaging (MRI), surgical suite, pharmacy, laboratory, and academic space. The new cancer centre will include an oncology ambulatory care unit, chemotherapy, radiation therapy, functional imaging, and a new cyclotron. Construction is planned to begin in summer 2023 and the new facility is expected to be open for patients in summer 2027.
- Phase 2 of the Royal Columbian Hospital Redevelopment, which includes a new 348-bed acute care tower with six floors of inpatient beds, including critical care and maternity, a new and expanded emergency department, a new surgical and interventional suite with 18 operating rooms and an underground parkade. Procurement started in fall 2018 and completed in 2020. Construction started in December 2020 and the new acute care tower is expected to open for patients in 2025.
- Replacement of the 54-year-old Cowichan District Hospital in Duncan with a new hospital on a greenfield site in North Cowichan. The replacement hospital will increase inpatient beds from 134 to 201 and increase emergency department treatment spaces from 17 to 36. The facility will also increase the number of operating rooms, replace the mobile MRI with a fixed MRI, and add a helipad to the roof of the inpatient tower. Construction is expected to start in spring 2022 and be completed in 2026.

- Replacement of the Mills Memorial Hospital in Terrace, which was originally built in 1959. The new hospital will include 78 inpatient beds, an increase of 34 beds. Construction is planned to start in 2021 and be completed in 2024. Demolition and site redevelopment will continue until 2026.
- Phase 1 of the Burnaby Hospital Redevelopment, which involves construction of a new patient care tower, new energy centre, renovation and expansion of the Support Facilities Building, minor renovation of the nursing tower and demolition of the West Wing and Cascade Buildings. The new six-storey tower will accommodate relocated services, including medical and surgical inpatient services, outpatient services, a consolidated maternity/labour and delivery unit, and a mental health and substance use patient unit. Renovations and expansion of the support facilities building will improve access to care by providing additional operating rooms, a new medical device reprocessing department, additional parking, and renovations to key support services. Construction is expected to start in 2021 and be completed in 2025.
- A new 107-bed patient care tower at the Royal Inland Hospital in Kamloops that will improve patient experience and outcomes by significantly increasing the number of single-patient rooms, providing new and larger operating rooms, and expanding the existing emergency department. Construction on the new patient care tower started in fall 2018 and it is expected to open to patients in 2022. Internal renovations to the emergency department, pediatric unit and morgue are scheduled to begin in 2022 and be completed in 2024.
- Replacement of the Dawson Creek and District Hospital on a 10-acre greenfield site in Dawson Creek. The new hospital will include 70 inpatient beds, an increase of 24 beds. The emergency department, surgical and operating room space and ambulatory care services will also be expanded. Construction of the new hospital is expected to commence in 2022 and be completed in 2026.
- A new patient care tower, including a surgical services centre, at the Penticton Regional Hospital that will improve patient experience and outcomes. The new patient care tower opened in April 2019. A second phase involving renovations to the existing emergency department and pharmacy started in 2019 and is planned to complete in 2022.
- Redevelopment of the Cariboo Memorial Hospital in Williams Lake. The project includes construction of a three-storey addition and renovation of vacated spaces in the existing hospital. Once the project is complete, the redeveloped hospital will include 53 inpatient beds, an increase of 25 beds, and a new and larger emergency department. Construction of the three-storey addition is planned to start in 2021 and expected to be completed in 2023. The renovations are planned to begin in 2023 and be completed in 2026.
- Replacement of the Stuart Lake Hospital in Fort St. James. The hospital will be built on the same site as the existing one. Once complete, the existing facility will be demolished to make way for parking. The new hospital will be three times larger than the current facility. The project scope includes an emergency department with two treatment rooms, a trauma bay and ambulance bay, and a primary care centre that will consolidate services currently offered in Fort St. James. Construction is expected to begin in 2022 and complete in 2024.

Supporting the Transportation Investment Plan

Budget 2021 includes further investments in government's Transportation Investment Plan. The Province has secured federal cost sharing on projects and has also leveraged investments through partnerships with private organizations. B.C. continues to work with federal and municipal governments to confirm priorities for funding under the Investing in Canada Infrastructure Program and pursue federal funding available through merit-based Investing in Canada Plan infrastructure programs.

Over the three years of the fiscal plan, transportation capital investments totalling $7.5 billion will maintain the flow of people and goods to support the B.C. economy. Timing of capital spending on these projects is subject to several factors, including funding from partners such as the federal government infrastructure programs and market conditions.

Examples of key capital investments in the transportation sector include:

- Replacing the Pattullo Bridge with a new four-lane bridge (expandable to six-lanes) that meets current seismic and road design standards and the removal of the existing bridge. It will provide a safe and reliable crossing for vehicles, pedestrians and cyclists, and network connections in Surrey and New Westminster.
- Obtaining a final decision on the scope, budget, delivery and schedule for the George Massey Crossing and interim works projects and completing planning for the Surrey-Langley SkyTrain and Highway 1 widening from Langley to Whatcom Road in Abbotsford projects, to meet the needs of growing regions and ease congestion in key corridors.
- Constructing the Broadway Subway, which will add 5.7 kilometres of SkyTrain line and six stations, to provide frequent and reliable access to one of the most congested transit corridors in Metro Vancouver, meet current and future transportation needs, reduce traffic congestion and air pollution, and improve livability.
- Four-laning the final 4.8 kilometres of the 26-kilometre section of Highway 1 through the Kicking Horse Canyon between Highway 95 and the western boundary of Yoho National Park to improve safety and reliability, and facilitate the movement of goods.
- Four-laning 16.4 kilometres of Highway 1 between Kamloops and Golden to improve safety and traffic flow and renew aging infrastructure, including: Illecillewaet (east of Revelstoke); Chase Creek Road to Chase Creek Bridge (Chase); 1st Avenue SW to 10th Street SW (Salmon Arm); Quartz Creek Bridge replacement (west of Golden) and R.W. Bruhn Bridge replacement (Sicamous).
- Widening ten kilometres of Highway 1 through Langley between 216th Street and 264th Street to accommodate new high-occupancy vehicle lanes, including reconfiguring the 232 Street interchange, new underpasses at Glover Road and the CP Rail crossing and a truck parking lot near Highways 1 and 17 for up to 150 commercial trucks and 45 passenger vehicles.
- Improvements along highway corridors in Delta to increase travel safety and efficiency, including: upgrading the Highway 91 at Nordel Interchange; Highway 91 Connector at Nordel Way intersection; Highway 17 at 80th Street intersection (Tilbury); 27B Avenue On-Ramp to Deltaport Way and 27B Avenue between Deltaport Way and 41B Street; and a new interchange at Highway 17 and Highway 91 Connector (Sunbury).

- Improvements to Highway 14 along the southern coast of Vancouver Island to improve safety and traffic flow and facilitate transit usage, including: widening and realigning 1.5 kilometres between Glinz Lake Road and Connie Road; a new park and ride facility on Gillespie Road; and wider shoulders between Otter Point Road and Woodhaven Road.
- Construction of a flyover from Highway 17 northbound to Keating Cross Road westbound in Central Saanich to improve safety by eliminating left turn across highway traffic onto Keating Cross Road and realigning the southbound highway on-ramp.
- Procuring an electric-ready ferry vessel for service on Kootenay Lake and upgrading the Balfour and Kootenay Bay terminals. The new vessel will have almost twice the capacity of the existing MV *Balfour* and be able to carry between 50 and 60 vehicles.
- Constructing a 5.4 kilometre two-lane realignment of West Fraser Road to bypass a section through active slides that was washed-out in 2018 and provide a safe, reliable, and efficient roadway to get local people to and from their homes, schools, jobs and appointments, including a new bridge over Narcosli Creek and rock stabilization work.
- Upgrading intersections and providing passing lanes on provincial highway corridors to improve safety and traffic flow, a signalized T-intersection on Highway 97 at Swan Lumber Road near Fort St. John, improvements along Highway 97 between Racing and Quesnel-Hydraulic Roads in Quesnel and westbound passing lanes on Highway 16 near Broman Lake east of Topley and Toboggan Lake west of Smithers.
- Expansion of SkyTrain fleet and upgrades to stations and facilities in Metro Vancouver to serve rapidly growing transit demand and to support the Broadway Subway project.
- Procurement and delivery of the first 10 battery electric buses for use by BC Transit in Victoria to reduce carbon emissions and improve rider experience.
- Construction of the Victoria HandyDART Centre for use by BC Transit, which will facilitate growth of Victoria's bus system and support introducing a low-carbon fleet of vehicles that will enhance HandyDART services.

Table 1.7 Provincial Transportation Investments

	Updated Forecast 2020/21	Budget Estimate 2021/22	Plan 2022/23	Plan 2023/24	Fiscal Plan Total
Provincial investments:					
– Highway corridor rehabilitation	258	314	292	213	819
– Side road improvements	129	162	115	118	395
– Pattullo Bridge replacement	228	225	310	288	823
– Highway 1 to Alberta border	136	267	311	259	837
– Broadway Subway	185	337	363	381	1,081
– Transit Infrastructure [1]	112	136	272	341	749
– Transportation and Trade Network Reliability[2]	226	360	442	299	1,101
– Safety improvements	40	41	30	30	101
– Community and other programs	19	18	13	26	57
Total provincial investments	**1,333**	**1,860**	**2,148**	**1,955**	**5,963**
Investments funded through contributions from other partners	385	534	581	532	1,647
Total investments in transportation infrastructure [3]	**1,718**	**2,394**	**2,729**	**2,487**	**7,610**

[1] Includes notional funding for Surrey-Langley SkyTrain.

[2] Includes notional funding for George Massey Crossing.

[3] Total investments include operating and capital spending.

The public and private sectors will provide about $7.6 billion for transportation operating and capital investments over the next three years, including:

- $6.0 billion of provincial investment in transportation infrastructure; and
- $1.6 billion of investment leveraged through federal cost sharing and partnerships with private organizations, local governments and other agencies.

Ministry Capital Spending

Budget 2021 includes $1.6 billion in capital spending by government ministries over the plan period. This will support investments in maintaining, upgrading and expanding infrastructure, such as provincial park amenities, courthouses, correctional centres, office buildings and information systems.

Current and planned capital investments made by government ministries include:

- An expansion of BC Parks facilities to enhance recreation opportunities across the province, including new campgrounds and amenities, as well as further development of accessible and back-country trails.
- A new Nanaimo Correctional Centre will replace the existing 190-bed outdated correctional centre and increase capacity with a 12-room unit for women. The centre will be culturally responsive and is designed to the LEED gold standard.
- In order to preserve, protect and provide better access to the human and natural history collections of British Columbia, government is planning for a capital project to modernize and renew the Royal BC Museum. The museum's new collections and research building is expected to break ground in Colwood in 2022 with anticipated completion in 2024.

Capital Project Reserves

The Province has included $220 million in project reserves in its three-year capital plan as a prudent planning measure. In addition to covering risks from unforeseen costs for ministry capital projects, the reserves may be used to fund emerging capital priorities of government ministries.

Financing Capital Projects

Provincial capital infrastructure spending is financed through a combination of sources:

- operating cash surplus;
- cost sharing with partners (e.g. federal government, regional hospital districts);
- partnerships with the private sector (public-private partnerships, or P3s); and
- direct borrowing.

Self-Supported Capital Spending

Capital investments of self-supported commercial Crown agencies are projected to total $13.1 billion over the fiscal plan period. Self-supported capital investments include:

- $12.5 billion (95 per cent) of total self-supported capital spending is for electrical generation, transmission and distribution projects to meet growing customer demand and to enhance reliability. Included in this total is construction of a third dam and hydroelectric generating station on the Peace River through the Site C project. BC Hydro's electricity system was largely built in the 1960s, 1970s, and 1980s and B.C.'s population and economy continue to grow. BC Hydro is upgrading and maintaining aging assets and building new infrastructure so that British Columbians continue to receive reliable and clean electricity.
- $306 million will be used for BC Lottery Corporation projects, including replacement of key legacy business systems, expansion of the lottery distribution network, and acquisition of gaming equipment to support lottery, PlayNow internet gaming, casino and community gaming activities.
- $156 million will be used for ICBC projects, including investment in information technology and facility maintenance and upgrades.
- $123 million will be used for Liquor Distribution Branch projects, including investments for updates and improvements to liquor stores, expansion of cannabis stores, technology-related projects and ongoing operating equipment replacements.

Table 1.8 provides information on major capital projects, and further details on provincial capital investments are shown in the service plans of ministries and Crown agencies.

Projects Over $50 Million

Approved major capital projects with multi-year budgets totaling $50 million or more, including provincial funding, are shown in Table 1.8. Annual allocations of the budget for these projects are included as part of the provincial government's capital investment spending shown in Table 1.6.

In addition to financing through provincial sources, major projects may be cost-shared with the federal government, municipalities and regional districts, and/or the private sector. Total capital spending for these major projects is $41.3 billion, reflecting provincial financing of $36.2 billion, including internal sources and P3 liabilities, as well as $5.1 billion in contributions from the federal government and other sources, including private donations.

Major capital investments include $3.0 billion for K-12 school projects; $732 million for post-secondary institutions; $11.2 billion for health facilities; $6.9 billion for major transportation capital infrastructure; $749 million for projects in other sectors; $18.5 billion for power generation and transmission capital projects by BC Hydro; and $96 million for ICBC's Enhanced Care Coverage Program.

Three projects have been added to the table since the *Fall 2020 Economic & Fiscal Update:*

- Okanagan College – Student Housing project ($68 million), expected to be complete in 2023;
- New Surrey Hospital and Cancer Centre ($1.66 billion), expected to be complete in 2028; and
- Mica modernize controls project through BC Hydro ($56 million), expected to be complete in 2023.

Since the *Fall 2020 Economic & Fiscal Update*, the Highway 97 Williams Lake Indian Reserve to Lexington Road project has been completed and is no longer listed in the table.

Changes since the *Fall 2020 Economic & Fiscal Update* for existing projects include:

- Centennial Secondary project's year of completion was amended from 2021 to 2017;
- Argyle Secondary project's year of completion was amended from 2020 to 2021 to align with the revised project schedule;
- Eric Hamber Secondary project's anticipated total cost increased from $105 million to $106 million. Internal borrowing was amended from $93 million to $94 million to reflect updated costing;
- West Langford Elementary and Middle project name changed to Pexsisen Elementary and Centre Mountain Lellum Middle;
- The Seismic Mitigation Program's anticipated total cost increased from $1.5 billion to $2.0 billion to reflect additional funding provided in *Budget 2021;*
- British Columbia Institute of Technology's Student Housing project's anticipated total cost was amended from $115 million to $114 million to reflect the revised project cost estimate. Internal borrowing decreased from $109 million to $108 million;
- Interior Heart and Surgical Centre's anticipated total cost of the direct procurement portion was amended from $248 million to $243 million to reflect the revised project cost estimate. Internal borrowing decreased from $213 million to $208 million;
- Children's and Women's Hospital project's anticipated total cost of the direct procurement portion was amended from $308 million to $298 million to reflect the revised project cost estimate. Internal borrowing decreased from $178 million to $168 million;
- Penticton Regional Hospital – Patient Care Tower project's anticipated total cost of the direct procurement portion was amended from $80 million to $76 million to reflect the revised project cost estimate. Internal borrowing decreased from $22 million to $18 million;
- Royal Columbian Hospital – Phase 1 project's anticipated total cost was amended from $259 million to $251 million to reflect the revised project cost estimate. Internal borrowing decreased from $250 million to $242 million;
- Royal Columbian Hospital – Phases 2 & 3 project's anticipated total cost was amended from $1.236 billion to $1.244 billion to reflect the revised project cost estimate. Internal borrowing increased from $1.174 billion to $1.182 billion;

- Peace Arch Hospital Renewal project's anticipated total cost was amended from $84 million to $91 million to reflect the updated project cost estimate. Funding from Other Contributions was revised from $76 million to $83 million to reflect increased contributions from the Peace Arch Hospital Foundation and Fraser Health Authority;
- St. Paul's Hospital's year of completion was amended from 2026 to 2027 to align with the revised project schedule. The project's anticipated total cost was revised from $2.083 billion to $2.174 billion to reflect updated costing. Internal borrowing increased from $1.158 billion to $1.327 billion and other contributions decreased from $925 million to $847 million;
- Dawson Creek and District Hospital project's year of completion was amended from 2025 to 2026 to align with the revised project schedule;
- Highway 1 Illecillewaet Four-Laning and Brake Check improvements project's year of completion was amended from 2022 to 2021 to align with the revised project schedule;
- Highway 14 Corridor improvements project's anticipated total cost was revised from $86 million to $77 million to reflect the post-tender budget. Internal borrowing decreased from $56 million to $48 million and federal contributions decreased from $30 million to $29 million;
- Highway 1 Chase Four-Laning project's anticipated total cost was revised from $260 million to $220 million to reflect the post-tender budget. Internal borrowing decreased from $248 million to $208 million;
- Highway 1 Salmon Arm West project's anticipated total cost was revised from $185 million to $155 million to reflect the post-tender budget. Internal borrowing decreased from $154 million to $124 million;
- Pattullo Bridge Replacement project's year of completion was amended from 2023 to 2024 to align with the revised project schedule;
- Nanaimo Correctional Centre Replacement project's anticipated total cost was amended from $157 million to $167 million to reflect updated costing;
- Horne Payne substation upgrade project's anticipated total cost increased from $71 million to $72 million to reflect revised estimates for the final designs;
- Fort St. John and Taylor Electric Supply project's anticipated total cost decreased from $53 million to $52 million to reflect the revised project cost estimate;
- UBC load increase Stage 2 project's year of completion was amended from 2021 to 2020 to align with the revised project schedule;
- Downtown Vancouver Electricity Supply – West End strategic property purchase project's year of completion was amended from 2020 to 2021 to align with the revised project schedule;
- Wahleach refurbish generator project's year of completion was amended from 2021 to 2022 to align with the revised project schedule;
- G.M. Shrum G1 to 10 control system upgrade project's year of completion was amended from 2023 to 2022 to align with the revised project schedule; and
- As announced on February 26, 2021, the cost of the Site C project is estimated at $16.0 billion, with a one year delay to 2025 for the project in-service date. BC Hydro continues to review the updated cost estimate, along with risks, further to recommendations in the Milburn Report.

Total power generation and transmission		8,344	10,175	18,519	18,495	-	-	24
Other self-supported								
Enhanced Care Coverage Program (ICBC)	2022	63	33	96	96	-	-	-
Total self-supported		**8,407**	**10,208**	**18,615**	**18,591**	**-**	**-**	**24**
Total $50 million projects		**13,976**	**27,292**	**41,268**	**34,750**	**1,400**	**1,770**	**3,348**

[1] Only projects that receive provincial funding and have been approved by Treasury Board and/or Crown corporation boards are included in this table. Ministry service plans may highlight projects that still require final approval. Capital costs reflect current government accounting policy.

[2] Assets have been put into service and only trailing costs remain.

[3] The Seismic Mitigation Program consists of all spending to date on Phase 2 of the program and may include spending on projects greater than $50 million included in the table above.

[4] Simon Fraser University and private donors contributed $26 million toward the project, and the university also contributed land valued at $10 million.

[5] The concept plan for Phase 2 of the Burnaby Hospital Redevelopment has been approved. Financial information will be added to the table upon business case approval.

[6] Pattullo Bridge forecasted to open to the public in 2024 with old bridge decommissioning to follow. Forecasted amount reflects total expenditures including capitalized and expensed items.

[7] Kicking Horse Canyon Project costs exclude $11 million of past planning costs which are expensed.

[8] Construction work on the South Fraser transmission relocation project is currently suspended pending the government's review of the George Massey Tunnel replacement.

[9] The total cost represents the gross cost of the project and has not been netted for Federal Government contributions. The Federal Government's contribution amount is dependent on the final actual project costs and what costs are eligible under the agreement.

[10] As announced on February 26, 2021, the cost of the Site C project is estimated at $16 billion, with a one year delay to 2025 for the project in-service date. BC Hydro continues to review the updated cost estimate, along with risks, further to recommendations in the Milburn Report. Site C project total anticipated cost and project cost to date include capital costs, charges subject to regulatory deferral and certain operating expenditures.

Provincial Debt

Table 1.9 Provincial Debt Summary[1]

($ millions unless otherwise indicated)	Updated Forecast 2020/21	Budget Estimate 2021/22	Plan 2022/23	Plan 2023/24
Taxpayer-supported debt				
Provincial government				
Operating	8,799	14,939	19,483	22,912
Capital [2]	33,823	37,180	41,145	45,740

Taxpayer-supported entities				
BC Transportation Financing Authority	13,441	15,538	17,779	19,962
Health Authorities and Hospital Societies	1,845	1,841	1,800	1,755
Post Secondary institutions	837	858	875	886
Social Housing [3]	932	990	1,362	1,098
Other	285	296	327	379
Total taxpayer-supported debt	**59,962**	**71,642**	**82,771**	**92,732**
Self-supported debt	**27,524**	**30,238**	**32,688**	**33,882**
Total debt before forecast allowance	**87,486**	**101,880**	**115,459**	**126,614**
Forecast allowance [4]	**-**	**1,000**	**750**	**400**
Total provincial debt	**87,486**	**102,880**	**116,209**	**127,014**
Taxpayer-supported debt to GDP ratio	**20.3%**	**22.8%**	**25.0%**	**26.9%**
Total provincial debt to GDP ratio	**29.6%**	**32.7%**	**35.1%**	**36.9%**
Taxpayer-supported debt per capita ($)	**11,648**	**13,829**	**15,779**	**17,443**
Taxpayer-supported interest bite (cents per dollar of revenue)	**3.1**	**3.4**	**3.4**	**3.6**

[1] Provincial debt is prepared in accordance with Generally Accepted Accounting Principles and presented consistent with the Debt Summary Report included in the *Public Accounts*. Debt is shown net of sinking funds and unamortized discounts, excludes accrued interest, and includes non-guaranteed debt directly incurred by commercial Crown corporations and debt guaranteed by the Province.

[2] Includes debt incurred by the government to fund the building of capital assets in the education, health, social housing and other sectors.

[3] Includes the BC Housing Management Commission and the Provincial Rental Housing Corporation. BC Housing Management Commission has been approved for up to $2 billion for future borrowing to fund investments in affordable housing through HousingHub. The debt forecast reflects projects that have been approved as of February 2021.

[4] Reflects the operating statement forecast allowance for each year (amounts are not cumulative). Since it is unknown as to which agency would require this debt, the forecast allowance is shown as a separate item over the plan.

Government obtains financing from outside sources mainly through debt instruments that are to be repaid on future dates.

Total provincial debt is projected to increase by $39.5 billion over the fiscal plan period to reach $127.0 billion by 2023/24.

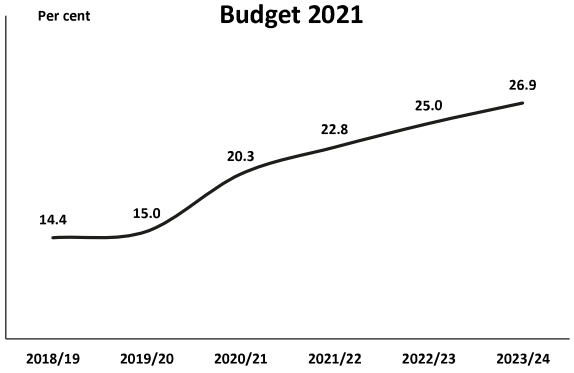
Taxpayer-supported debt is forecast to increase by $32.8 billion to $92.7 billion by 2023/24, resulting in an increasing taxpayer-supported debt-to-GDP ratio, which is forecast to remain below 30 per cent in each year of the fiscal plan. This increased borrowing is to finance the annual operating deficits and to fund significant investments in capital infrastructure over the next three years, including $7.3 billion for education, $7.8 billion for health facilities, $7.5 billion for transportation sector projects, $1.6 billion for social housing and $2.2 billion for other initiatives.

The Province's operating results have generally been better than forecast, reflecting the prudence built into the budget and fiscal plan; as a result, actual debt levels have been lower than projected. Furthermore, changes in the timing of capital project spending may reduce borrowing requirements and debt needed to fund capital investments in the near term.

The self-supported debt of commercial Crown corporations is forecast to increase by $6.4 billion over the fiscal plan period, ending at $33.9 billion. This increase is mainly for capital investments related to improving and expanding British Columbia's hydroelectric generation assets.

As is the case with other jurisdictions in Canada and around the world that have been impacted by the COVID-19 pandemic, B.C. government's debt is expected to increase significantly to finance the operating and capital investment needs of the province. In spite of the debt level increase, debt servicing costs remain at a historically low level due to prevailing low interest rates. A common metric of affordability is the interest bite, or the taxpayer-supported interest costs as a percentage of revenue, which is forecast at 3.4 per cent in 2021/22 and 3.6 per cent by 2023/24.

Chart 1.4 Debt to GDP



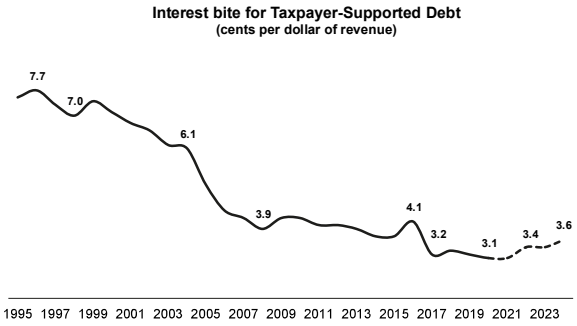


Chart 1.5 Debt Affordability

Government's borrowing requirements over the fiscal plan period are anticipated to total $51.9 billion, which will finance government's operating and capital investments, as well as refinancing of debt maturities.

Total provincial debt is presented consistent with the Debt Summary Report included in the *Public Accounts*. Debt is shown net of sinking fund investments and unamortized discounts, excludes accrued interest, and includes non-guaranteed debt directly incurred by commercial Crown corporations and debt guaranteed by the Province.

Table 1.10 Provincial Borrowing Requirements

($ millions)	Updated Forecast 2020/21	Budget Estimate 2021/22	Plan 2022/23	Plan 2023/24
Total provincial debt[1] at beginning of year	**72,161**	**87,486**	**102,880**	**116,209**
New borrowing [2]	17,914	18,248	17,969	15,249
Direct borrowing by Crown corporations and agencies	519	389	57	62
Retirement of debt [3]	(3,108)	(4,243)	(4,447)	(4,156)
Change in forecast allowance	-	1,000	(250)	(350)
Net change in total debt	15,325	15,394	13,329	10,805
Total provincial debt[1] at year end	**87,486**	**102,880**	**116,209**	**127,014**
Annual growth in debt (per cent)	**21.2**	**17.6**	**13.0**	**9.3**

[1] Provincial debt is prepared in accordance with Generally Accepted Accounting Principles and presented consistent with the Debt Summary Report included in the *Public Accounts*. Debt is shown net of sinking funds and unamortized discounts, excludes accrued interest, and includes non-guaranteed debt directly incurred by commercial Crown corporations and debt guaranteed by the Province.

[2] New long-term borrowing plus net change in short-term debt.

[3] Sinking fund contributions, sinking fund earnings and net maturities of long-term debt (after deduction of sinking fund balances for maturing issues).

The reconciliation between provincial debt and the financial statement debt is shown in Appendix Table A16.

Additional details on government's outstanding debt are provided in Appendix Tables A17 to A19.

Relationship Between Surplus (Deficit) and Debt

In addition to operating results, the change in debt is affected by cash balance changes and other working capital changes, as well as the debt financing requirements of government's capital plan. Table 1.11 reconciles the forecast deficits with changes in debt.

Table 1.11 Provincial Debt Changes

($ millions)	Updated Forecast 2020/21	Budget Estimate 2021/22	Plan 2022/23	Plan 2023/24
Total provincial debt[1] at beginning of year	**72,161**	**87,486**	**102,880**	**116,209**
Taxpayer-supported debt changes				
Annual deficit (before forecast allowance)	8,144	8,698	4,734	3,923
Non-cash items	(2,582)	(2,633)	(2,862)	(2,879)
Changes in cash balances [2]	837	(2,516)	201	176
Changes in other working capital balances [3]	1,057	(348)	31	(131)
Taxpayer-supported capital spending	6,277	8,479	9,025	8,872
Annual change in total taxpayer-supported debt	**13,733**	**11,680**	**11,129**	**9,961**
Self-supported debt changes				
Net operating cash flows	(2,220)	(2,262)	(2,190)	(2,295)
Commercial crown capital spending	3,812	4,976	4,640	3,489
Annual change in total self-supported debt	**1,592**	**2,714**	**2,450**	**1,194**
Annual change in forecast allowance	**-**	**1,000**	**(250)**	**(350)**
Annual change in total provincial debt	**15,325**	**15,394**	**13,329**	**10,805**
Total provincial debt[1] at year end	**87,486**	**102,880**	**116,209**	**127,014**

[1] Provincial debt is prepared in accordance with Generally Accepted Accounting Principles and presented consistent with the Debt Summary Report included in the *Public Accounts*. Debt is shown net of sinking funds and unamortized discounts, excludes accrued interest, and includes non-guaranteed debt directly incurred by commercial Crown corporations and debt guaranteed by the Province.

[2] Changes in cash balances include all cash balances from the Consolidated Revenue Fund, School Districts, Universities, Colleges, Health Authorities, Hospital Societies and other taxpayer-supported agencies.

[3] Changes in other working capital balances include changes in accounts receivables, accounts payable, accrued liabilities, deferred revenue, investments, restricted assets and other assets.

Risks to the Fiscal Plan

Table 1.12 provides the estimated fiscal impacts of the identified sensitivities for some of the key variables in the fiscal plan projections on an individual basis. However, inter-relationships between the variables may cause the actual variances to be higher or lower than the estimates shown in the table. For example, an increase in the US/CDN dollar exchange rate may be partly offset by higher commodity prices.

The assumptions and risk sensitivities for individual revenue sources and major program areas can be found in Appendix Tables A5 and A6, beginning on page 152.

Table 1.12 Key Fiscal Sensitivities

Variable	Increases of	Annual Fiscal Impact ($ millions)
Nominal GDP	1%	$150 – $250
Lumber prices (US$/thousand board feet)	$50	$125 – $175 [1]
Natural gas prices (Cdn$/gigajoule)	25 cents	$40 – $60 [2]
US exchange rate (US cent/Cdn $)	1 cent	-$25 to -$50
Interest rates	1 percentage point	-$156
Debt	$500 million	-$8 to -$10

[1] Sensitivity relates to stumpage revenue only.

[2] Sensitivities can vary significantly especially at lower prices.

Own Source Revenue

The main areas that may affect own source revenue forecasts are B.C.'s overall economic performance, the relative health of its major trading partners, the exchange rate and commodity prices.

Revenues are sensitive to economic performance. For example, taxation and other revenue sources are driven by economic factors, such as household income, consumer expenditures, housing starts, employment, population growth and the exchange rate. The revenue forecast contained in the fiscal plan is based on the economic forecast detailed in *Part 3: British Columbia Economic Review and Outlook*. As well, it incorporates commodity price forecasts developed by the Ministry of Forests, Lands, Natural Resource Operations and Rural Development and the Ministry of Energy, Mines and Low Carbon Innovation based on private sector information.

The continuation of investment incentives provided over the four years starting in 2019/20 due to B.C. joining with the federal government to enhance competitiveness, assumes a behavioural response from businesses in acquisition of capital assets. Changes in the timing or strength of the B.C. business response could result in different impacts. Income-tax revenue forecasts are based on projections of household income and net operating surpluses of corporations. The forecasts are updated from reports on tax assessments provided by the Canada Revenue Agency. As a result, revenue estimates and tax credits can be affected by timing lags in the reporting of current and prior year tax assessments by the Canada Revenue Agency as well as the federal government estimates of national corporate taxable income.

Natural resource revenues in British Columbia can also be volatile, largely due to the influence of the cyclical natural resource sector in the economy and the importance of natural resource revenues in the Province's revenue base. Changes in commodity prices, such as natural gas, lumber or coal may have a significant effect on natural resource revenues and economic growth.

The economic and revenue forecasts could be affected by trade related issues, such as the ongoing U.S.-Canada softwood lumber dispute. The imposition of countervailing and anti-dumping duties by the U.S. on Canadian softwood lumber exports has the effects of increasing market uncertainty and volatility as well as increasing costs for Canadian producers. B.C. disagrees with the views that the lumber industry is subsidized or that it sells lumber into the U.S. at below cost or sales value in Canada, and is supporting the federal government in its appeals of the application of duties to the World Trade Organization and under Chapter 19 of the *North American Free Trade Agreement* and under Chapter 10 of the *Canada US Mexico Free Trade Agreement*.

Over the fiscal plan period, the outlook for forest revenue incorporates declining stumpage rates, rising interest rates and an appreciation in the Canadian dollar. The impacts of the mountain pine beetle infestation and forest fires have reduced the supply of saw logs available to the forest industry. In addition, the industry continues to pay duties on their exports of softwood lumber products into the United States. As a result, some B.C. communities and residents that are reliant on the forest sector have been adversely affected by the continuing uncertainty and volatility. Actual results for a number of factors including assumptions for lumber prices, harvest volumes, interest and exchange rates could pose risks to the fiscal plan.

Details on major assumptions and sensitivities resulting from changes to those assumptions are outlined in Appendix Table A5.

Federal Government Contributions

Potential policy changes regarding federal government allocations, including health and social transfers and cost-sharing agreements, could affect the revenue and the expenditure forecasts.

Crown Corporations

Crown corporations provided financial forecasts and statements of assumptions approved by their boards, which were used to prepare the fiscal plan. These forecasts, along with further details on assumptions and risks, are also included in the service plans of these corporations and agencies, being released with the budget.

SUCH Sector

Health authorities have submitted an overall balanced financial plan for 2021/22 to 2023/24. The individual plans have been signed off by the board chairs of the respective health authorities. The Ministry of Health will continue to work with the health authorities to manage any emerging revenue and spending pressures.

Forecasts for the universities, colleges, and institutions have been signed off by chairs of the board or audit committee and lead financial officers.

Forecasts for the combined school districts have been compiled by the Ministry of Education based on the requirements of the *School Act,* the current year plans developed by the school districts, and ministry policy assumptions respecting future funding allocations. Variances from these assumptions could impact the fiscal plan.

The fiscal plan incorporates three-year projections for school districts, post-secondary institutions, and health authorities, based on plans submitted by those entities.

Spending

Government funds several demand-driven programs, including those delivered through third-party delivery agencies, such as health care, K-12 and post-secondary education, income assistance and community social services. The budgets for these programs reflect reasonable estimates of demand and other factors such as price inflation. If demand is higher than estimated, this will result in a spending pressure to be managed.

The spending plans for the Ministry of Forests, Lands, Natural Resource Operations and Rural Development, and the Ministry of Public Safety and Solicitor General include base amounts to fight wildfires and deal with floods and other public emergencies. Unanticipated or unpredictable occurrences may affect expenses in these ministries.

Increasing levels of debt result in a higher potential impact from the risk of interest rate increases.

Details on major assumptions and sensitivities resulting from changes to those assumptions are shown in Appendix Table A7 and in ministry service plans.

Capital Risks

The capital spending forecasts included in the fiscal plan may be affected by subsequent planning (i.e. design development) and procurement activities (i.e. receipt/review of construction bids) resulting in project costs that are higher than the initial approved budgets. For large capital projects, government will review the budget and scope risks, and the strategies to mitigate these risks.

Other risks affecting capital spending forecasts include:

- changes in the timing of capital project spending, which may reduce borrowing requirements and debt needed to fund capital investments in the near term;
- weather and geotechnical conditions, including the outcome of environmental impact studies, causing project delays and/or unexpected costs;
- changes in market conditions, including service demand, the impact of inflation on building material costs, the availability of, and wage rates for, skilled workers, and borrowing costs;
- the accuracy of capital project budget and construction schedule forecasts;
- the successful negotiation/timing of cost-sharing agreements with the federal government and other funding partners; and
- the timing and outcomes of public-private sector partnership negotiations.

Pending Litigation

The spending plan for the Ministry of the Attorney General contains provisions for payments under the *Crown Proceeding Act* based on estimates of expected claims, judgments and related costs of settlements likely to be incurred. Litigation developments may occur that are beyond the assumptions used in the plan (for example, higher-than-expected volumes, or size of claim amounts and timing of judgments and settlements). These developments may affect government revenues and/or expenditures in other ministries. Litigation may also impact government agencies and corporations.

Write-downs and Other Adjustments

Ministry budgets provide for anticipated levels of asset or loan write-downs where these expenses can be reasonably estimated. The overall spending forecast does not make allowance for extraordinary items other than the amount provided in the contingencies vote.

Prudence and Risk

The economic, financial, and external variables and factors that impact the estimates of revenues, expenditures, capital spending and debt will change throughout the year as new information becomes available with potentially material impacts. As a result, the actual operating surplus/deficit, capital expenditure and debt figures may differ from the current forecast. Government will continue to update the fiscal plan throughout the year.

Government incorporates four main levels of prudence to help mitigate risks to the budget plan projections. These prudence measures generally have resulted in government positively exceeding its budget targets.

- The *Budget 2021* economic outlook is lower than the average of the forecasts provided by the members of the Economic Forecast Council (EFC). The *Budget 2021* plan assumes annual real GDP growth of 4.4 per cent in 2021, 3.8 per cent in 2022, and range between 2.1 per cent and 2.5 per cent annually over the 2023 to 2025 period. This is lower than the EFC average by 0.5 percentage points in both 2021 and 2022 (somewhat more than usual), and by 0.2 percentage points in both 2023 and 2024. The prudent outlook compared to the private sector acknowledges the downside risks to the economic forecast over the forecast horizon.
- The *Budget 2021* natural gas price forecast is lower than the private sector average over the next three years, reflecting the recommendation of Dr. Tim O'Neill in 2013 to adopt more caution in preparing the natural gas royalty forecast. Over the ensuing three years, the *Budget 2021* natural gas price projection averages 14 cents lower than the average of the private sector forecasters (see Appendix Table A6 for details).
- *Budget 2021* includes higher than normal forecast allowances, recognizing the increased forecasting uncertainty, with $1.0 billion in 2021/22, $750 million in 2022/23, and $400 million in 2023/24. The forecast allowance helps offset the impacts of revenue volatility and statutory spending such as additional costs to fight wildfires and to deal with floods and other public emergencies.

- The *Budget 2021* expense forecast includes a contingencies allocation of $1.0 billion in 2021/22, $800 million in 2022/23 and $700 million 2023/24. The contingencies allocation is a prudent measure to provide for unforeseen and unbudgeted costs that may arise, and to fund priority initiatives. In addition to the usual contingency provisions, *Budget 2021* includes Pandemic and Recovery Contingencies of $3.25 billion in 2021/22, $1.0 billion in 2022/23, and $300 million in 2023/24. Furthermore, *Budget 2021* also includes notional allocations for caseload pressures and priority initiatives that may require funding in future budgets, providing $1.5 billion in 2022/23 and $2.0 billion in 2023/24.

The EFC provides advice to the Minister of Finance annually on issues facing the global economy and B.C.'s economic outlook, including areas of concern, risks and opportunities for the B.C. economy. The Minister of Finance receives advice from staff and colleagues on the various levels of prudence incorporated in the fiscal plan, tax policy initiatives for consideration and the potential risks that could arise over the next three years. Since the risks could be ongoing or one-time in nature and could impact both revenues and expenditures, consideration is given to both the forecast allowance and contingencies vote allocations. However, since a number of these risks are not readily quantifiable, there is no specific formulaic approach in the determination of the forecast allowance and contingencies vote allocations.

Table 2.1 Summary of Tax Measures

	Effective Date	Taxpayer Impacts 2021/22	2022/23
		($ millions)	
Income Tax Act			
• Extend book publishing tax credit	April 1, 2021	(3)	(3)
• Waive requirement to repay B.C. Emergency Benefit for Workers	March 1, 2020	-	-
• Extend mining flow-through share tax credit eligibility period	March 1, 2018	*	*
• Align climate action tax credit increase with carbon tax rate increase	July 1, 2021	33	10
Probate Fees			
• Provide remission of probate fees on memorial grants	July 1, 2021	*	*
Carbon Tax Act			
• Delay carbon tax rate increase	April 1, 2021	(228)	-
Motor Fuel Tax Act			
• Expand eligibility for the fuel tax refund for persons with disabilities	April 20, 2021	*	*
Provincial Sales Tax Act			
• Introduce exemption for electric bicycles and tricycles	April 21, 2021	(7)	(7)
• Expand exemption for new resident's effects	March 11, 2019	*	*
• Address provincial sales tax refunds on "grey market" vehicle transactions	Regulation	*	*
Tobacco Tax Act			
• Increase tobacco tax rates for cigarettes, heated tobacco products and loose tobacco	July 1, 2021	60	80
Home Owner Grant Act			
• Increase threshold for home owner grant phase-out to $1.625 million from $1.525 million	January 1, 2021	*	*
School Act			
• Set provincial residential class school property tax rates	January 1, 2021	*	*
• Set provincial non-residential class school property tax rates	January 1, 2021	*	*
Taxation (Rural Area) Act			
• Set provincial rural area property tax rates	January 1, 2021	*	*
Speculation and Vacancy Tax Act			
• Introduce exemption for corporations owned by agents of government	2021 tax year	*	*
• Introduce exemption for registered charities that hold property through a trustee	November 27, 2018	*	*
• Amend definition of beneficial owner	November 27, 2018	*	*
Various Acts			
• Various technical measures	Various	*	*
Total		**(145)**	**80**

* Denotes measures that have no material impact on taxpayers.

Tax Measures — Supplementary Information

For more details on tax changes see:
www.gov.bc.ca/budgettaxchanges

Income Tax Act

Book Publishing Tax Credit Extended

As announced on March 10, 2021, the book publishing tax credit is extended for five years to March 31, 2026.

The book publishing tax credit supports an industry with a predominantly female work force.

Requirement to Repay B.C. Emergency Benefit for Workers Waived

Self-employed individuals are not required to repay the B.C. Emergency Benefit for Workers if they would have qualified for the benefit or the Canada Emergency Response Benefit on their gross income. This mirrors a federal change to the Canada Emergency Response Benefit.

Approximately 57 per cent of individuals who benefit from this relief are women. The average age of individuals who benefit from this relief is higher than that of B.C. Emergency Benefit for Workers recipients as a whole.

Mining Flow-Through Share Tax Credit Eligibility Period Extended

As previously announced, the mining flow-through share tax credit eligibility period during which an expenditure must be incurred by the issuer to be renounced in favour of flow-through shares is temporarily extended by 12 months. This aligns with proposed temporary federal timelines due to COVID-19. The 12-month extension applies to flow-through share agreements entered into on or after March 1, 2018 and before 2021 when using the general rule. It also applies to agreements entered into in 2019 or 2020 when using the look-back rule.

Purchasers of mining flow-through shares who claim the tax credit tend to be high-income earners and are predominantly male. This measure is not expected to change who will be claiming the credit.

The credit also supports mining, which has a predominantly male work force with above-average wages. The proportion of mining industry workers who are Indigenous is higher than in the B.C. labour market overall.

Climate Action Tax Credit Increase Aligned with Carbon Tax Rate Increase

Effective July 1, 2021, the climate action tax credit rate remains at $174 per adult and $51 per child due to the delay in the carbon tax rate increase. Rates will increase to $193.50 per adult and $56.50 per child on July 1, 2022, in line with the corresponding carbon tax rate increase.

This alters the schedule established by *Budget 2019* by one year. Delaying the climate action tax credit increase aligns with the delay to carbon tax increases, which support businesses and families during the COVID-19 pandemic while keeping B.C. on track to reach the federally mandated price of $50 per tonne of carbon dioxide equivalent emissions by 2022.

Approximately 63 per cent of the climate action tax credit goes towards single people. Single people comprise 75 per cent of the recipients, of which 57 per cent are female and 43 per cent are male.

The climate action tax credit helps offset the effects of carbon taxes paid by low- to moderate-income individuals and families.

Probate Fees

Remission of Probate Fees on Memorial Grants Provided

Effective July 1, 2021, amounts received from the federal Memorial Grant Program for First Responders by a person's estate will not be subject to probate fees under the *Probate Fee Act*.

Carbon Tax Act

Carbon Tax Rate Increases Delayed

As announced on September 2, 2020, carbon tax rates are set at $45 per tonne of carbon dioxide equivalent emissions (CO_2e) effective April 1, 2021. Rates will increase to $50 per tonne of CO_2e on April 1, 2022.

This alters the schedule established by *Budget 2017 Update*, which would have increased carbon tax rates to $45 and $50 per tonne of CO_2e on April 1, 2020, and April 1, 2021, respectively. Delaying the carbon tax increases will support businesses and families during the COVID-19 pandemic while keeping B.C. on track to reach the federally mandated price of $50 per tonne of CO_2e by 2022.

The corresponding increase to the climate action tax credit is also delayed by one year.

Carbon tax applies broadly and does not specifically target individuals based on their gender, class, sexuality, race, ethnicity, religion, age or ability status. It is estimated that households pay approximately 28 per cent of the carbon tax, with businesses paying approximately 72 per cent. Research suggests that B.C.'s carbon tax is progressive. The negative effect on households with below-median income is smaller than that on households with above-median income. The climate action tax credit helps offset the effects of carbon taxes paid by low- to moderate-income individuals and families.

Motor Fuel Tax Act

Eligibility for the Fuel Tax Refund for Persons with Disabilities Expanded

Effective April 20, 2021, eligibility for the motor fuel tax refund for persons with disabilities is expanded to include recipients of disability assistance, or a disability supplement, from Indigenous Services Canada. Eligibility is also expanded to include anyone who is in receipt of a 100 per cent disability pension resulting from service as a member of Her Majesty's forces, whether or not this pension relates to an injury sustained in a war.

The motor fuel tax refund for persons with disabilities provides refunds of up to $500 per calendar year to people with qualifying disabilities.

If a person receives disability assistance or supplements under the *Employment and Assistance for Persons with Disabilities Act*, they are eligible to participate in the fuel tax refund program. Indigenous Services Canada provides comparable disability assistance or supplements to persons with disabilities who live on reserve lands. While people who live on reserve lands are eligible to participate in the fuel tax refund program if they meet other eligibility criteria, adding the on-reserve federal funding program to the eligibility criteria addresses a potential inequity.

Similarly, while an existing fuel tax refund program criterion relates to disability pensions that arise out of service in Her Majesty's forces, eliminating the requirement that the pension relate to active service in a war recognizes that disabilities can arise out of other forms of service.

Provincial Sales Tax Act

Exemption for Electric Bicycles and Tricycles Introduced

Effective April 21, 2021, electric bicycles and tricycles are exempt from provincial sales tax. In addition, conversion kits used to electrify conventional bicycles and tricycles, and parts and services for electric bicycles and tricycles, are exempt from provincial sales tax.

For the purpose of these exemptions, electric bicycles or tricycles must have pedals or hand cranks that allow for human propulsion, wheels with a minimum diameter of 350 millimetres and maximum motor power of 500 watts. Additionally, they must be limited to a motor-assisted speed of 32 kilometres per hour and must not have a combustion engine or be marketed or designed to have the appearance of a motorcycle, moped or scooter. These exemptions support the Province's Active Transportation Strategy goal of doubling the number of trips taken with active transportation by 2030.

Sixty-three per cent of British Columbians who commute to work by bicycle are male and 37 per cent are female. Older adults and people with physical limitations are also underrepresented. The adoption of electric bicycles or tricycles helps reduce these disparities by providing additional power to make longer and faster trips. Research shows that factors that keep women from biking more include increased concern for safety, the need to make multiple stops while hauling items such as groceries and transporting passengers. Electric bicycles and tricycles reduce these barriers by facilitating travel with cargo and children, as well as allowing for longer trips and providing trip times that are comparable to motor vehicle travel within 10 kilometres.

Increased usage of electric bicycles or tricycles by underrepresented groups enhances access to physical activity and the community, contributing to better health outcomes that result in societal benefits.

Exemption for New Resident's Effects Temporarily Expanded

Effective March 11, 2019, the exemption for a new resident's effects is expanded to provide more time for new residents to bring their vehicles and other goods into B.C. without being subject to provincial sales tax. Under normal conditions, the personal effects of a new resident are generally exempt from provincial sales tax if they are brought into B.C. within one year of the individual becoming a resident. The expanded time frame is provided in response to COVID-19 travel restrictions and recognizes that it could have been challenging for people who became residents up to one year before the pandemic to complete their moves within the time frame allowed by the exemption.

With this temporary expansion, a new time frame applies to any person who became a resident of B.C. on or after March 11, 2019. Individuals who would otherwise qualify for the exemption will now have until the earlier of January 1, 2023 or one year following the end of the most recent quarantine order made under the *Quarantine Act* (Canada), to bring their personal effects into B.C.

Government does not have data on individuals who would be expected to pay provincial sales tax in the absence of this measure, but expects the benefits to accrue primarily to new residents who originate from locations ordinarily accessible from B.C. by road, such as other Canadian provinces and the United States. The measure enables these individuals to delay travelling back to their former residences for the purpose of personally transporting their vehicles and other goods to B.C. for personal use.

Measures to Address Provincial Sales Tax Refunds on "Grey Market" Vehicle Transactions to be Introduced

Effective on a date to be set by regulation, the provincial sales tax refund for motor vehicles purchased in B.C. and resold within seven days will be eliminated. Concurrently, persons who purchase vehicles in B.C. will be deemed to have purchased the vehicles for their own use, and not for resale, unless they represent otherwise to the seller at the time of purchase.

Provincial sales tax is not payable on goods purchased solely for resale. Under the current rules, a person who intends to resell a vehicle could claim a provincial sales tax exemption by informing the seller of the vehicle of their intentions. However, many motor vehicle dealers will not sell vehicles to resellers. For this reason, "grey market" purchasers who intend to resell vehicles do not state their intentions, pay the provincial sales tax and apply to the government for a refund. The changes announced in *Budget 2021* maintain the longstanding provincial sales tax treatment of resale inventory but close the provincial sales tax refund process to the type of "grey market" activity described in Peter German's money laundering report.

The Ministry of Finance does not collect, or have readily available, data on the gender, class, sexuality, race, ethnicity, religion, age or ability status of provincial sales tax refund applicants. Therefore, the distributional effects of these measures to curtail provincial sales tax refunds associated with "grey market" vehicle transactions are not known.

Tobacco Tax Act

Tobacco Tax Rates for Cigarettes, Heated Tobacco Products and Loose Tobacco Increased

Effective July 1, 2021, the tax rate on cigarettes is increased to 32.5 cents from 29.5 cents per cigarette (to $65 from $59 per carton of 200 cigarettes). The default tax on heated tobacco products is also increased to 32.5 cents from 29.5 cents per heated tobacco product. A heated tobacco product is a product that contains tobacco and is designed to be heated, but not combusted, in a tobacco heating unit to produce a vapour for inhalation.

Also, effective July 1, 2021, the tax rate on loose tobacco (tobacco in a form other than cigarettes, cigars or heated tobacco products) is increased to 65 cents from 39.5 cents per gram. This increase better aligns the tax on "roll-your-own" tobacco with the level of tax that applies to premade cigarettes.

This measure will create an added incentive to reduce tobacco consumption. Smoking rates are higher among men and lower-income individuals. These populations will bear a greater proportion of the tax increase.

Home Owner Grant Act

Threshold for Home Owner Grant Set

As announced on January 5, 2021, the threshold for the phase-out of the home owner grant is increased to $1.625 million from $1.525 million for the 2021 tax year. For properties valued above the threshold, the grant is reduced by $5 for every $1,000 of assessed value that exceeds the threshold.

The home owner grant program provides a benefit to Canadian citizens and permanent residents of Canada who live in their home as their principal residence. The home owner grant program benefits home owners, who on average have higher incomes and wealth than renters. The program does not have an income test. The grant does not benefit renters or landlords, or owners for their second homes or vacation homes, corporate owners, foreign owners, or owners of vacant land or residential class improvements other than a home.

Canada-wide, homeownership is strongly related to age. For example, in 2016, a person aged 65 and older was 1.7 times more likely to own a home than a person aged 20 to 34. The homeownership rate was highest at 76.3 per cent for people aged 55-64, and was slightly lower, at 74.6 per cent for the population aged 65 and over.

Under the B.C. home owner grant program, seniors over the age of 65, certain veterans of older conflicts and their surviving spouses, and owners who house a person with disabilities are eligible for an additional grant amount of up to $275.

The reduction of the home owner grant amount for properties over the threshold means that otherwise-eligible owners of the most expensive homes receive only a partial grant or no grant at all. Low-income owners who would be eligible for the additional grant amount but who lose some of or all their grant because of the high value of their home can apply to the grant administrator for a low-income supplement which replaces the lost amount of grant. A similar program benefits all low-income veterans.

School Act

Provincial Residential Class School Property Tax Rates Set

The longstanding rate-setting policy is that average residential class school property taxes, before application of the home owner grant, increase by the previous year's provincial inflation rate. This rate-setting policy has been in place since 2003 and continues in 2021.

Provincial Non-Residential Class School Property Tax Rates Set

A single province-wide school property tax rate is set for each of the non-residential property classes. Consistent with longstanding policy, the rates for 2021, except for the rate for the industrial property classes, will be set so that non-residential class school tax revenue will increase by inflation plus tax on new construction from the 2019 tax revenues. The major industry class tax rate and the light industry class tax rate will be set at the same rate as the business class tax rate, consistent with the policy announced in *Budget 2008*.

This rate-setting policy has been in place since 2005, except for the 2020 tax year when significant property tax relief was delivered to commercial property classes through a reduction in school property tax rates.

The tax rate policy seeks to achieve an equitable balance between taxpayers in different areas of the province. Tax rates are lower in school districts that have the highest average assessed values. Still, a residential taxpayer with an average home value in a school district with low average values pays less school tax on their home than a taxpayer with an average home value in a school district with higher average assessed values.

The personal characteristics of the owners of non-residential property are generally not collected or available through the property tax system. Businesses most affected by a property tax are those that rely on brick and mortar operations.

Taxation (Rural Area) Act

Provincial Rural Area Property Tax Rates Set

A single rural area residential property tax rate applies province-wide. The longstanding rate-setting policy that average residential rural property taxes increase by the previous year's provincial inflation rate continues for 2021.

Consistent with longstanding policy, non-residential rural area property tax rates are set so that total non-residential rural area tax revenue increases by inflation plus tax on new construction.

With the exception of utility and industrial properties in the Peace River Regional District, there is one rural tax rate per property class, province-wide. This means the tax falls more heavily in areas where average values are higher. The effect is relatively minor because average values do not vary widely in rural areas across B.C.

Speculation and Vacancy Tax Act

Exemption for Corporations Owned by Agents of Government Introduced

Beginning in the 2021 tax year, corporations owned by agents of government can claim an exemption from the speculation and vacancy tax, consistent with corporations owned by municipalities, regional districts and Indigenous nations.

This exemption directly benefits agents of government rather than individuals.

Exemption for Registered Charities that Hold Property through a Trustee Introduced

Effective November 27, 2018, a residential property owned by a trustee of a trust who is holding legal title for the benefit of a registered charity can claim an exemption from the speculation and vacancy tax. The *Speculation and Vacancy Tax Act* already provides an exemption for owners that are registered charities. The new exemption ensures that registered charities are also exempt when they are not on legal title, and instead hold property through a trust.

The known cases of trustees who are holding legal title for the benefit of registered charities are all trustees of religious organizations. If these properties are liable for speculation and vacancy tax, they will presumably have less funds to perform their charitable activities, which will primarily negatively affect the people who rely on these charities.

Definition of Beneficial Owner Amended

Effective November 27, 2018, the *Speculation and Vacancy Tax Act* is amended to clarify that a beneficial owner, whose interest in a residential property is registered in the name of a trustee of a trust and contingent on the death of another individual, is not considered a beneficial owner for the purpose of the speculation and vacancy tax. This change harmonizes the definition of beneficial owner with the *Land Owner Transparency Act* and the *Business Corporations Act*.

Life interest trusts are commonly used by property owners as part of their end-of-life planning. This change to the definition of beneficial owner with respect to ownership interest contingent on death will most notably affect seniors and spouses of seniors who own homes and are residents of B.C.

Various Acts

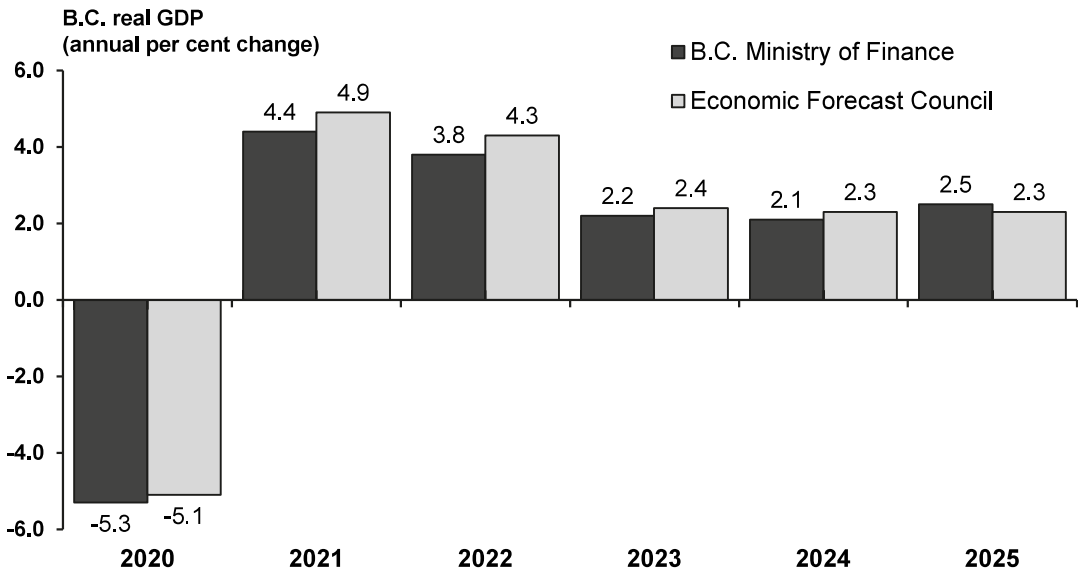
Various Technical Measures

Budget 2021 introduces a number of technical amendments to various tax acts including the *Assessment Act*, *Employer Health Tax Act*, *Hydro and Power Authority Act*, *Income Tax Act*, *Police Act*, *Ports Property Tax Act*, *Property Transfer Tax Act*, *Provincial Sales Tax Act*, *Speculation and Vacancy Tax Act* and *Vancouver Charter* for clarity and certainty:

- Effective on royal assent the *Assessment Act* is amended to:
  - allow BC Assessment to deliver notices electronically with taxpayer consent;
  - allow BC Assessment to make accessible through other online portals reports that are currently accessible only through BC Online; and
  - align with the terminology in the *Vancouver Charter*.
- Effective March 30, 2021, the *Employer Health Tax Act* is amended to provide administrative provisions in respect of the Increased Employment Incentive. The incentive provides a 15 per cent refundable tax credit for employers who created new jobs for B.C. workers or increased payroll for existing low- or middle-income employees over the last quarter (October to December) of 2020.
- Effective January 1, 2019, the *Hydro and Power Authority Act* is amended to clarify that the *Employer Health Tax Act* applies to BC Hydro.
- The *Income Tax Act* is amended:
  - effective March 13, 2020, to extend the deadline to file tax credits to the earlier of December 31, 2020 and six months from the original filing deadline for the book publishing tax credit, film tax credits, interactive digital media tax credit, mining exploration tax credits, scientific research and experimental development tax credit and the training tax credits;
  - effective March 25, 2020, to ensure that federal COVID-19 response measures do not affect the operation of B.C. income tax benefits and remittances of provincial income tax withholdings; and
  - effective December 18, 2020, to provide administrative provisions in respect of the BC Recovery Benefit. The benefit is a refundable tax credit of up to $500 for an individual and up to $1,000 for a family.
- Effective on royal assent, the *Carbon Tax Act*, *Employer Health Tax Act*, *Forest Act*, *Income Tax Act*, *Insurance Premium Tax Act*, *International Business Activity Act*, *Logging Tax Act*, *Mineral Tax Act*, *Motor Fuel Tax Act*, *Property Transfer Tax Act*, *Provincial Sales Tax Act*, *Speculation and Vacancy Tax Act* and *Tobacco Tax Act* are amended to harmonize appeal procedures with the *Court of Appeal Act*. This will allow parties to appeal a Supreme Court of British Columbia decision without having to first obtain leave of a justice of the Court of Appeal.
- Effective on royal assent, the *Carbon Tax Act*, *Home Owner Grant Act*, *Insurance Premium Tax Act*, *Land Tax Deferment Act*, *Logging Tax Act*, *Motor Fuel Tax Act*, *Property Transfer Tax Act*, *Provincial Sales Tax Act* and *Taxation (Rural Area) Act* are amended to allow Ministry of Finance officials to perform analysis of tax data to develop fiscal policy.

- Effective on a date to be specified by regulation, the *Employer Health Tax Act*, *Income Tax Act* and *Speculation and Vacancy Tax Act* are amended to further protect taxpayer information from unintended disclosures.
- Effective on January 1, 2022, the *Police Act* is amended to base the calculation of rates and apportionments on the estimate of costs by the Solicitor General for the previous taxation year rather than the current taxation year. This will allow tax rates to be set earlier in the taxation year.
- Effective for the 2021 taxation year, the *Ports Property Tax Act* is amended to add District of Stewart to the list of municipalities receiving compensation following the designation of Stewart World Port.
- Effective April 20, 2021, the *Property Transfer Tax Act* is amended to restrict a taxpayer's choice of arbitration to disputes about the fair market value portion of an assessment.
- The *Provincial Sales Tax Act* is amended to:
  - effective April 1, 2021, clarify that the exemption for water does not apply to beverages taxed under the soda beverage measures announced in *Budget 2020*;
  - effective on royal assent and on a date to be specified by regulation, make minor changes in terminology to provisions related to multi-jurisdictional vehicles;
  - effective on royal assent, clarify that an agent is authorized to use the registration number of their principal when acting on their behalf; and
  - effective April 1, 2021, make minor clarifications to provisions related to registration thresholds for Canadian sellers of goods, along with Canadian and foreign sellers of software and telecommunication services.
- The *Speculation and Vacancy Tax Act* is amended to:
  - effective on royal assent, update the reference to line 150 of an income tax return to line 15000; and
  - effective January 1, 2022, clarify that the administrator can assess within the specified time period.
- Effective on royal assent, minor changes in terminology are made to the *Vancouver Charter* for consistency with technical amendments to the *Assessment Act*.

Summary



The COVID-19 pandemic pushed economies all over the world into deep recessions. B.C. was no exception. Widespread job losses strained households and unprecedented challenges weighed on businesses. While the reopening of the economy and government emergency response programs have gone a long way to support economic recovery, the pandemic is not over and significant challenges remain. The swift development of effective vaccines together with stronger than expected economic activity in 2020 have improved the outlook.

While there is a high degree of uncertainty, the Ministry of Finance (Ministry) is returning to its regular practice of providing a five-year economic outlook. The outlook is conditional on assumptions which could change substantially over the coming months. As such, the outlook is subject to a larger than normal degree of risk and potential revision.

The economic outlook assumes that provincial, national, and global economic activity broadly returns to pre-pandemic levels sometime in 2022. Underpinning the projected recovery are the assumptions that large-scale immunization campaigns will be well underway and that global travel restrictions will ease. The exact timing will vary by jurisdiction and industry. High-contact service industries such as tourism, hospitality, recreation, and retail will likely be challenged by the need for containment measures for some time. As such, the recovery is expected to continue to be uneven.

The Ministry estimates that the economy contracted by 5.3 per cent in 2020 and forecasts that it will expand by 4.4 per cent in 2021 and then 3.8 per cent in 2022. Over the medium-term (2023 to 2025), growth is expected to range between 2.1 per cent and 2.5 per cent annually.

Chart 3.1 Ministry's Outlook for B.C. Prudent Compared to Private Sector

[1] Reflects information available as of April 7, 2021, unless otherwise indicated.

The Ministry's forecast for B.C. real GDP growth is lower than the outlook provided by the Economic Forecast Council (EFC), with 0.5 percentage points of prudence in both 2021 and 2022 (somewhat more than usual), and 0.2 percentage points of prudence in both 2023 and 2024. This differential is one of the levels of prudence built into the fiscal plan. The Ministry's outlook for 2025 is slightly higher than the average EFC forecast as LNG production is anticipated to provide more support to the economy in that year.

The main downside risk to B.C.'s economic outlook continues to be uncertainty regarding the duration of the COVID-19 pandemic and the degree to which it will have lasting effects on provincial, national, and global economies. Other risks include ongoing uncertainty regarding global trade policies and lower commodity prices.

British Columbia Economic Activity and Outlook

The economic outlook has improved over the forecast horizon. The Ministry's current estimate of a 5.3 per cent decline in B.C. real GDP in 2020 is up from the 6.2 per cent decline forecast in the *Fall 2020 Economic & Fiscal Update*. Recent data has shown that growth in retail sales, housing activity, exports, and aggregate wages and salaries have outpaced expectations.

Table 3.1 British Columbia Economic Indicators

All data seasonally adjusted	Fourth Quarter Oct. to Dec. 2020 change from Jul. to Sep. 2020	Annual* Jan. to Dec. 2020 change from Jan. to Dec. 2019	Year-to-Date Jan. to Feb. 2021 change from Jan. to Feb. 2020
	Per cent change	Per cent change	Per cent change
Employment	+4.0	-6.6	-1.1
Manufacturing shipments[1]	+4.8	-3.3	+19.5
Merchandise exports	+8.8	-8.2	+24.4
Retail sales[1]	+4.0	+2.6	+15.3
Housing starts	+4.5	-16.0	+11.1
Non-residential building permits	+3.4	-14.8	-8.3

* Annual non-seasonally adjusted data [1] Data to January

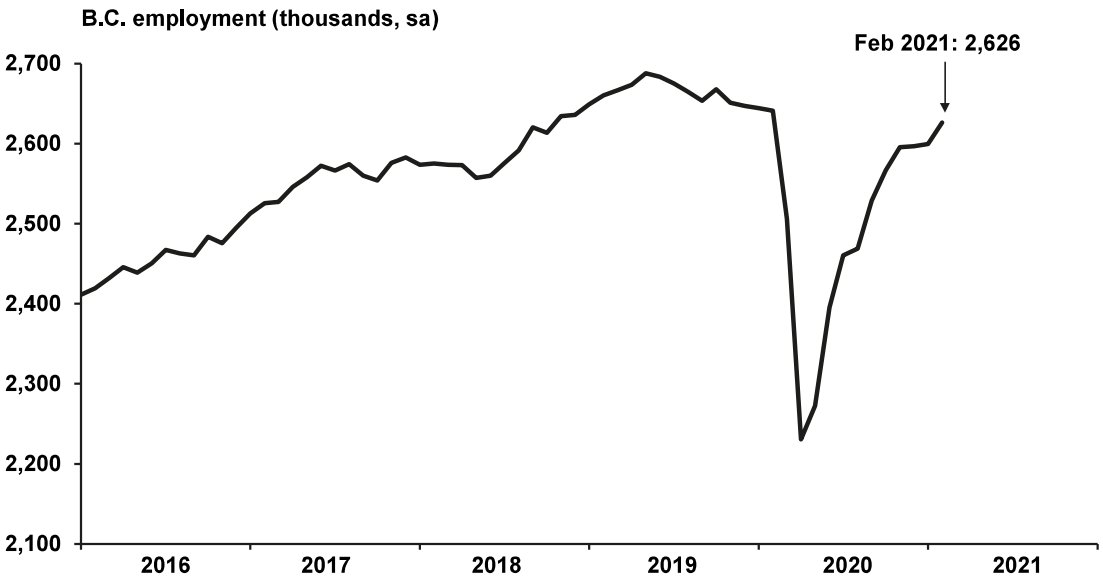
Expectations for the coming years are also higher. The most significant development driving this shift was the approval and rollout of COVID-19 vaccines. It is prudently assumed that all British Columbian's who are eligible and choose to be vaccinated will receive it by September 2021. Vaccine rollout has spurred optimism among households, businesses, and governments and brought forward expectations of the resumption of economic activities constrained by the pandemic. The outlook for global trade is also brighter. As such, the rebound in the economy in 2021 is now expected to be 4.4 per cent, up from the *Fall 2020 Economic & Fiscal Update* forecast of 3.0 per cent. In 2022, growth is expected to be 3.8 per cent. Nevertheless, while an end to the pandemic is now conceivable, the timing is uncertain and economic conditions remain challenging. Consequently, risks to the outlook remain elevated. Over the medium-term, B.C.'s economy is forecast to grow by 2.3 per cent on average from 2023 to 2025.

The Ministry estimates that B.C. nominal GDP fell by 4.5 per cent in 2020 and will grow by 6.4 per cent in 2021 and by 5.4 per cent in 2022. This is an improvement from the *Fall 2020 Economic & Fiscal Update* projection of a 6.0 per cent decline in 2020 and a 3.9 per cent increase in 2021. Over the medium-term, B.C.'s nominal GDP is forecast to grow by 4.1 per cent on average from 2023 to 2025.

Private sector forecasters have revised up their near-term economic growth projections for B.C. in recent months. An average of six private sector forecasters[2] (a subset of the Economic Forecast Council) estimates that B.C. real GDP declined by 5.0 per cent in 2020 and forecasts growth of 5.8 per cent in 2021 and 4.4 per cent in 2022. This is better than the estimated decline of 5.4 per cent on average across Canada in 2020 and the expected national growth of 5.7 per cent in 2021 and 4.2 per cent in 2022.

Labour Market

B.C. lost an unprecedented number of jobs following the onset of the COVID-19 pandemic. At the beginning of 2020, B.C. had one of the strongest labour markets in the country with unemployment rates near historic lows. Then in March and April 2020, employment fell by 410,600 persons (-15.5 per cent). These losses were much worse than what the province experienced during the depths of the 2008/09 recession when B.C. lost fewer jobs over a longer period of time (around 69,000 jobs over seven months). Furthermore, pandemic-related employment losses have been uneven, mainly concentrated among lower-wage workers in high-contact services, where women and youth are overrepresented. And many who remained employed experienced reduced hours.



Employment has nearly recovered since the low in April 2020. As of February 2021, about 96 per cent of pandemic-related employment declines had been reversed, labour market participation rates had bounced back, and average hours worked had mostly recovered (bringing B.C. to 99.4 per cent of pre-pandemic employment levels). However, there were still 15,100 fewer people employed than in February 2020 (-0.6 per cent). Moreover, while the unemployment rate had retreated from a peak of 13.4 per cent in May 2020 to 6.9 per cent in February 2021, long-term unemployment had risen. The share of unemployed people that have been without work for twenty-seven weeks or more was 33.0 per cent in February 2021, its highest reading in thirty-six years (in February 2020 it was 12.8 per cent). Long-term unemployment is associated with the risks of skill erosion and labour market detachment.

In 2020 overall, employment fell by 6.6 per cent (-175,300 jobs) and year-to-date to February 2021 it was down by 1.1 per cent compared to the first two months of 2020. The year-to-date decline translated to a net loss of around 29,900 jobs, driven by 29,200 fewer full-time jobs and 750 fewer part-time jobs. Service industries heavily impacted by social distancing and travel restrictions continue to be negatively impacted by the pandemic. Industries less affected by social distancing or more able to adapt through remote work, on the other hand, have generally experienced growth. Year-to-date to February 2021, significant job losses were seen in construction (-32,000 jobs), accommodation and food services (-26,150 jobs), and wholesale and retail trade (-17,200 jobs), while employment gains were led by professional, scientific, and technical services (+29,800 jobs), public administration (+21,300 jobs), and healthcare and social assistance (+10,900 jobs).

In 2020, employee compensation (aggregate wages, salaries, and employers' social contributions) in B.C. declined by 0.7 per cent compared to 2019. This decline is smaller in magnitude than that of employment because low-wage workers dominated job losses.

[2] A subset of the Economic Forecast Council that regularly forecasts economic performance in all provinces (BMO, CIBC, National Bank, RBC, Scotiabank, and TD), as of April 7, 2021.

Chart 3.2 B.C. Employment

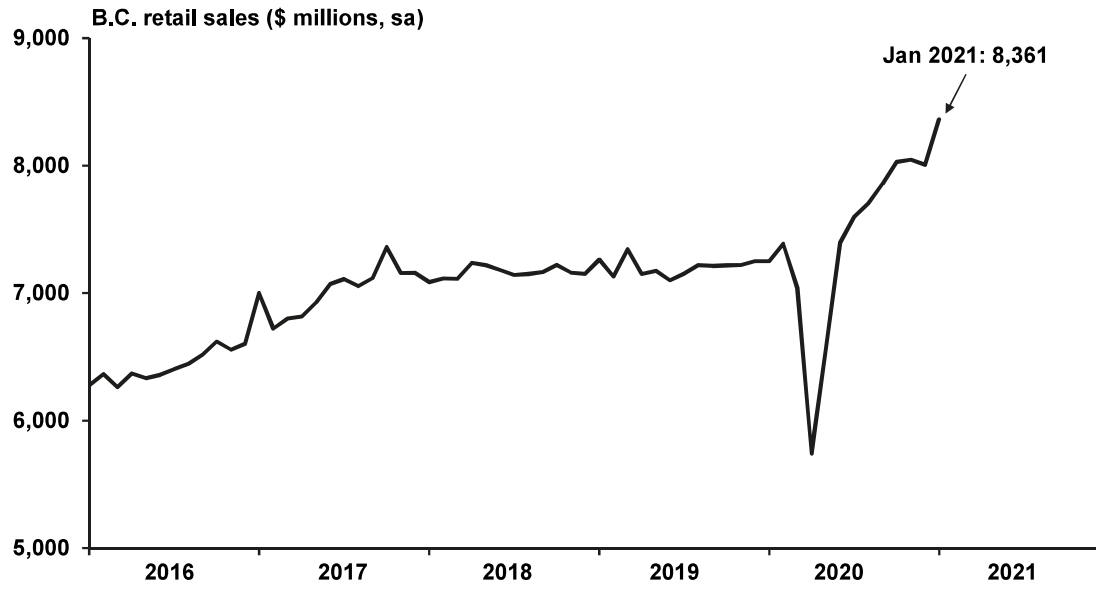
Sources: Statistics Canada (Labour Force Survey); Haver Analytics

Job losses in 2020 widened pre-pandemic inequalities. Among the industries hardest hit, youth, female, and visible minority workers tend to be overrepresented. Labour market outcomes among these groups have improved alongside the general employment recovery, but some gaps remain wider than before COVID-19. In February 2021, lower female youth employment accounted for over half of the remaining gap between pre-pandemic and current employment levels. And new labour force data shows that since at least July 2020 (when data became available), visible minorities in B.C. have experienced persistently higher unemployment rates than British Columbians who are neither Indigenous nor part of a group designated as a visible minority.

The B.C. unemployment rate averaged 8.9 per cent in 2020 and 7.5 per cent year-to-date to February 2021, up from 4.9 per cent in the first two months of 2020. Meanwhile year-to-date to February 2021, B.C.'s labour force grew by 1.7 per cent, reflecting population growth and a slight bump in the labour force participation rate from 64.9 per cent to 65.4 per cent.

Outlook

The outlook for B.C.'s labour market has improved. The approval and rollout of multiple COVID-19 vaccines has spurred optimism, but the path forward remains uncertain. Some sectors, such as tourism, hospitality, recreation, and retail, will take longer to operate near full capacity again. The Ministry forecasts employment in B.C. to increase by 4.7 per cent in 2021 (approximately +117,000 jobs), followed by annual growth of 2.4 per cent in 2022 (approximately +64,000 jobs). Growth is then expected to moderate over the medium-term, gradually slowing to 1.3 per cent by 2025.



The province's unemployment rate is expected to average 7.5 per cent in 2021 and 6.7 per cent in 2022. After that, it is expected to gradually drift down each year until reaching 5.9 per cent in 2025.

Consumer Spending and Housing

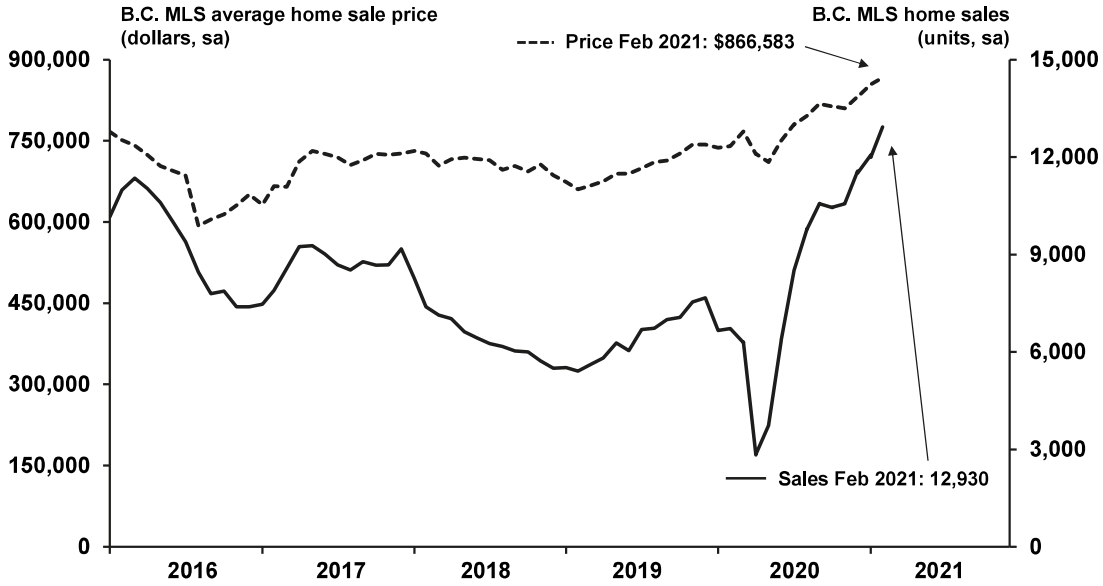
In the wake of the COVID-19 pandemic, job losses, precautionary saving behaviour, reduced confidence, and physical distancing weighed on consumer spending and housing. Sharp contractions in retail and home sales however quickly reversed course as restrictions eased. By mid-2020, both were above their pre-pandemic levels. The resilience in spending was supported by government emergency response programs, adjusted business practices, a consumer pivot towards goods purchases while services were disrupted by the pandemic, low interest rates, and an increased demand for larger homes as the pandemic wore on and people continued to spend significantly more time at home. Furthermore, higher-wage workers were more likely to retain employment and maintain their income levels during the pandemic.

In 2020, nominal retail sales were 2.6 per cent higher than in 2019. Underlying the headline growth figure, however, were mixed results across retailers. Marked increases in purchases at retailers such as food and beverage (+15.2 per cent), building material and garden equipment and supplies (+15.7 per cent), and general merchandise (+8.0 per cent) stores contrasted with declining sales at clothing and clothing accessories stores (-25.1 per cent), gasoline stations (-12.4 per cent), and motor vehicles and parts dealers (-2.7 per cent). In January 2021, retail sales were up by 15.3 per cent compared to the same month a year earlier, driven by somewhat similar component movements.

Chart 3.3 B.C. Retail Sales

Sources: Statistics Canada; Haver Analytics

Despite the strength in spending on goods, surveys suggest that consumer confidence has been slower to recover. However, a marked uptick in March 2021 meant that the B.C. consumer confidence index averaged 116.1 points in the first three months of this year, roughly the same as during the first few months of 2020 (+0.3 percentage points).



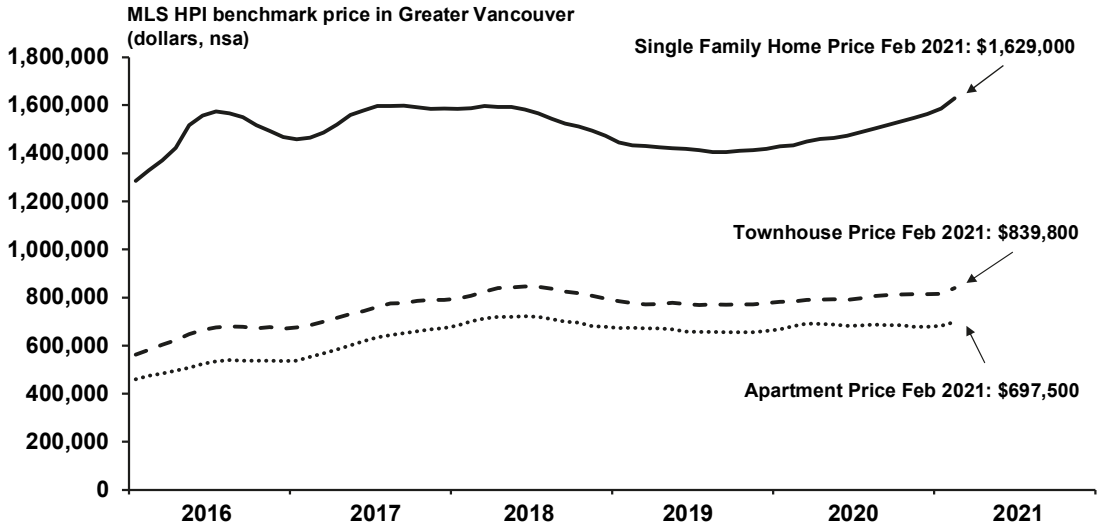
National and sector-specific data suggests that B.C. consumer spending on services has likely declined sharply during the pandemic. While retail trade data offers a clear indication of consumer spending on goods, there is a lack of timely comprehensive data for consumer spending on services at the provincial level. National data shows that

nominal Canadian consumer spending on services fell by 9.0 per cent in 2020, though. And data for sales at food services and drinking places in B.C., which provides a partial picture, showed a decline of 25.2 per cent in 2020 compared to 2019.

Monthly B.C. home sales reached record levels in late 2020 and have continued to grow in 2021. Resilient higher-wage employment, low interest rates, and increased demand for larger dwellings by remote workers fueled housing demand. MLS home sales increased by 21.5 per cent in 2020 compared to 2019. And year-to-date to February 2021, home sales were up by 86.7 per cent relative to the first two months of 2020. Underlying this year-to-date rise were higher sales in every region including the four largest: Greater Vancouver (+75.1 per cent), Fraser Valley (+110.8 per cent), Okanagan-Mainline (+94.6 per cent), and Victoria (+60.0 per cent). Sharp increases were also observed in Chilliwack (+153.0 per cent) and on Vancouver Island (+98.7 per cent). This may reflect a greater demand for housing outside of larger central business districts, as newly remote workers became less constrained geographically.

Meanwhile, the average home sale price in B.C. increased by 11.6 per cent in 2020 compared to 2019. Strong average sale price growth was observed in most markets in the province. Year-to-date to February 2021, prices were up by 16.5 per cent compared to the same period a year earlier.

Chart 3.4 B.C. Home Sales and Price



Sources: Canadian Real Estate Association; Haver Analytics

Regional MLS composite benchmark house prices (which incorporate all dwelling types) for Greater Vancouver and the Fraser Valley rose by 3.5 per cent and 3.6 per cent, respectively, in 2020. Price increases were observed across all dwelling types, but were strongest for single-family detached dwellings, followed by townhouses and then apartments. In February 2021, Greater Vancouver and Fraser Valley composite benchmark prices continued to rise, growing by 6.3 per cent and 10.6 per cent year-to-date, respectively.

Housing starts slowed but remained relatively strong in 2020, following a record high level in 2019. The 2016 to 2019 period was one of particularly strong housing starts in B.C. Although starts declined by 16.0 per cent in 2020, at 37,734 units, they were

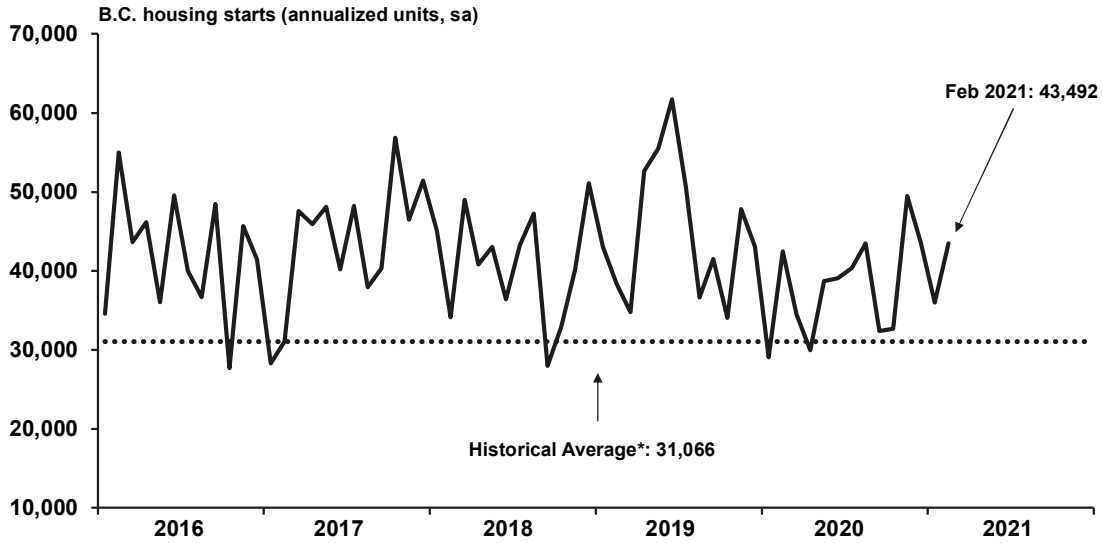


Chart 3.5 Greater Vancouver HPI Benchmark Price

Sources: Canadian Real Estate Association; Haver Analytics

well above the long-run historical average of around 31,100 units. Apartment and other multi-dwelling units were the key drivers of large increases in recent years and also the moderation in 2020. Year-to-date to February 2021, housing starts were 11.1 per cent higher than the same period a year earlier. The value of residential building permits, a leading indicator of home construction, fell by 9.6 per cent in 2020 overall but edged up 1.4 per cent year-to-date in February 2021.

Chart 3.6 B.C. Housing Starts

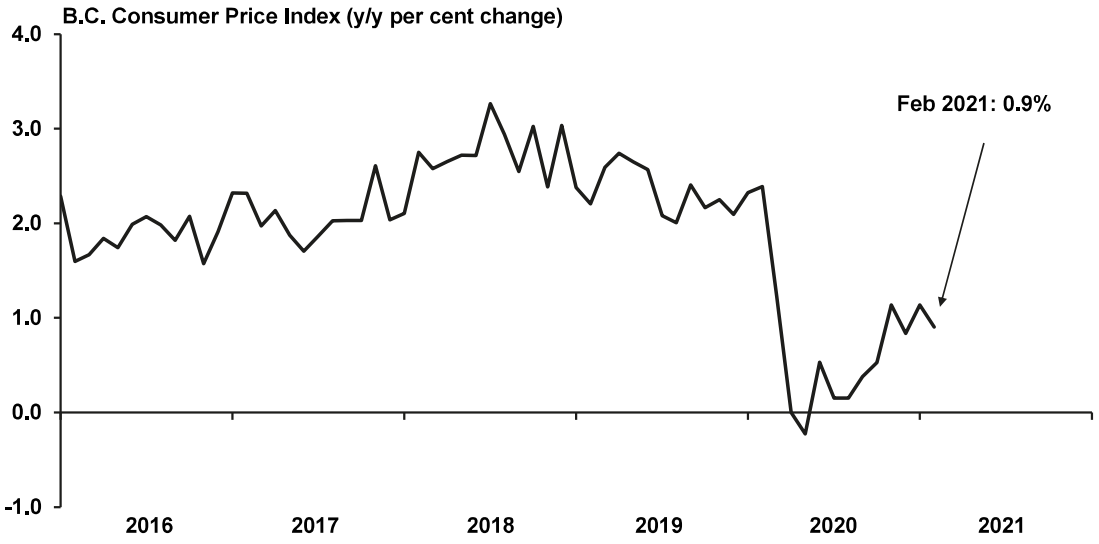
Sources: Canada Mortgage and Housing Corporation; Haver Analytics
* Historical average from Jan. 1990 to Dec. 2020

Outlook

Consumer spending is expected to pick up this year as employment prospects continue to improve and services move closer toward normal operations. Following an estimated decline of 5.6 per cent in 2020, the Ministry forecasts real household consumption of goods and services to increase by 3.7 per cent in 2021, followed by 3.8 per cent in 2022. Growth is then expected to moderate gradually to 2.1 per cent in 2025.

The Ministry expects nominal retail sales to continue to grow, expanding by 3.7 per cent in 2021 and then by 3.4 per cent in 2022. It is then expected to increase by 3.3 per cent each year on average over the 2023 to 2025 period.

The Ministry forecasts unit home sales to increase by 4.8 per cent in 2021, decline by 5.1 per cent in 2022 and a further 4.5 per cent in 2023, and then remain relatively flat over 2024 and 2025. The forecasted moderation in homes sales partly reflects an expectation of rising interest rates. Meanwhile, average home sale price growth in B.C. is expected to be relatively stable over the forecast horizon, rising 3.1 per cent in 2021, 1.9 per cent in 2022, and between 1.8 per cent and 2.0 per cent over the medium-term. Putting unit sales and prices together, the total value of home sales is forecast to increase by 8.0 per cent in 2021, fall by 3.3 per cent in 2022 and a further 2.7 per cent in 2023, and then average 2.2 per cent growth in 2024 and 2025.



The Ministry expects B.C. housing starts to total approximately 34,500 units in 2021, 33,500 units in 2022, and average 32,000 units per year over the 2023 to 2025 period (above the long-run historical average).

Inflation

The pandemic has led to lower inflation. Travel restrictions prompted declines in global demand for crude oil and social distancing and stay-at-home guidance led to rising demand for goods like groceries but decreased purchases of products like clothing and high-contact services. While categories such as food and health and personal care saw price rises, price declines in other categories (particularly gasoline, recreation, and clothing and footwear) have led to weak overall growth in B.C.'s Consumer Price Index (CPI). The annual CPI inflation rate in 2020 was 0.8 per cent.

In February 2021, consumer prices rose by 1.0 per cent year-to-date compared to the same period in 2020. The underlying price movements were similar to those of 2020 overall, with higher prices for food, shelter, health and personal care, and other categories partially offset by lower prices for clothing and footwear and gasoline.

Chart 3.7 B.C. Inflation

Sources: Statistics Canada; Haver Analytics

Outlook

Consumer price inflation in B.C. is forecast to be 1.7 per cent in 2021 and rise to 2.0 per cent in 2022. In the medium-term, inflation is expected to remain around the 2.0 per cent Bank of Canada target. For Canada, annual rates of inflation are expected to be similar: 1.8 per cent in 2021, 1.9 per cent in 2022, and around 2.0 per cent over the medium-term.

Business and Government

Non-residential construction permitting slowed in 2020, following strong gains over the preceding few years. The total value of non-residential building permits fell by 14.8 per cent in 2020 compared to 2019. Underlying this were significant declines in permit issuance for commercial buildings (-26.6 per cent) and industrial buildings (-22.0 per cent). Meanwhile, the value of permit issuance for institutional and governmental buildings increased (+36.5 per cent). In February 2021, the value of non-residential building permits was down by 8.3 per cent year-to-date.

Small business confidence in B.C. has largely recovered since experiencing a significant setback during the initial months of the pandemic, according to the Canadian Federation of Independent Business index for the twelve-month outlook of small businesses. However, the comparable index for the short-term outlook has not fully recovered. Businesses remain particularly concerned about conditions over the next few months.

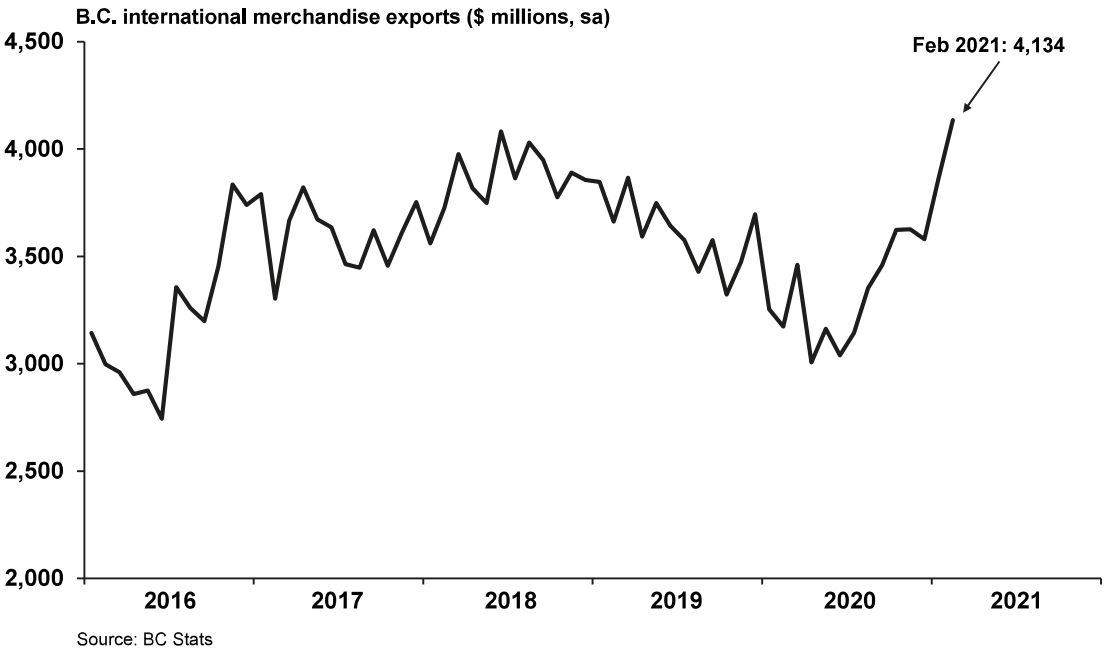
B.C.'s tourism sector has been severely impacted by COVID-19. The number of international travelers entering the province collapsed as travel restrictions were put in place to support containment. By April 2020, the inflow of international travelers had fallen by 96.7 per cent relative to February 2020. Visitor numbers have remained relatively unchanged since then. In 2020 overall, the number of international travelers visiting B.C. was down by 84.5 per cent compared to 2019 and in January 2021 it was down by 91.3 per cent relative to January 2020.

Outlook

Following an estimated decline of 4.8 per cent in 2020, the Ministry forecasts total real investment in B.C. (business and government) to rise by 5.8 per cent in 2021, 4.2 per cent in 2022, and range between 0.6 and 1.7 per cent growth annually over the 2023 to 2025 period.

Following an estimated decline of 9.2 per cent last year, real business investment is projected to grow by 5.6 per cent in 2021, with increases expected in all segments (non-residential, residential, machinery and equipment, and intellectual property). Looking further ahead, real business investment is forecast to grow by 4.2 per cent in 2022 and average 1.8 per cent growth annually over the medium-term. The LNG Canada project is expected to generate a significant amount of economic activity which will support B.C.'s economy over the forecast horizon.

Real expenditure on goods and services by all levels of government is estimated to have increased by 10.5 per cent in 2020, driven by the provincial and federal response to the COVID-19 pandemic. In 2021, real spending is forecast to tick down by 0.9 per cent as some of the extraordinary supports are temporary in nature, and then grow by 1.6 per cent in 2022. Over the 2023 to 2025 period, government expenditures are expected to be relatively flat.



Following an estimated decline of 13.6 per cent, the Ministry expects the nominal net operating surplus of corporations (an approximation of corporate profits) to increase by 9.2 per cent in 2021 and 8.8 per cent in 2022. Over 2023 to 2025, the net operating surplus of corporations is expected to grow between 3.0 per cent and 7.5 per cent annually.

External Trade and Commodity Markets

As the pandemic unfolded, global international trade experienced pronounced disruptions. For B.C., broad-based declines reflected a combination of weaker global demand and lower commodity prices. Provincial merchandise goods exports contracted by 8.2 per cent in 2020. The majority of the decline was attributable to lower exports of energy products (-26.1 per cent), primarily coal. Exports of pulp and paper products (-19.2 per cent) and machinery and equipment (-7.7 per cent) also experienced significant declines. Conversely, solid wood products rose by 5.7 per cent, seeing rapid increases in the second half of 2020 and into 2021. Over the first two months of 2021, surging exports of solid wood products to the U.S. (supported by strong construction activity and subsequently high lumber prices) were a key driver behind the 24.4 per cent year-to-date increase in overall goods exports. Exports of natural gas to the U.S. were also a large contributor to the year-to-date rise in merchandise exports.

The value of merchandise exports to the U.S. (the destination for over half of B.C. exports) increased by 0.5 per cent in 2020, while exports to non-U.S. destinations fell by 17.0 per cent. Energy products posted the largest declines to both U.S. and non-U.S. destinations. However, while exports of solid wood products to non-U.S. international destinations contracted by about one-quarter, their shipments to the U.S. increased by about one-quarter. In February 2021, exports to the U.S. were up by 38.0 per cent year-to-date and exports destined elsewhere grew by 7.9 per cent.

Chart 3.8 B.C. Exports

B.C.'s manufacturing shipments fell by 3.3 per cent in 2020 compared to 2019. Declines were relatively broad-based and consistent with the declines seen in merchandise exports. Among durable goods, the bulk of declines were driven by lower shipments of

fabricated metal products (-16.3 per cent), transportation equipment (-20.4 per cent), and machinery (-10.2 per cent). Higher wood products shipments (+11.2 per cent) partly offset the overall decline. Lower shipments of non-durables were largely attributable to paper products (-17.1 per cent), although higher food manufacturing shipments (+5.5 per cent) provided some offset. In January 2021, shipments were however up by 19.5 per cent compared to the same month a year earlier.

B.C. tourism data and national export data suggest that B.C.'s exports of services declined sharply during the pandemic. Provincial-level data on exports of services in 2020 will not be available until late 2021. However, available national-level data shows that Canadian service exports were down 17.7 per cent in 2020 relative to 2019, with most of the losses occurring in the travel services category. In B.C., the number of international travelers entering the province nearly stopped during the pandemic and remains very low, indicating a similar decline in service exports.

In 2020 and into 2021, limited lumber supply and resilient Canadian and U.S. housing markets have supported high lumber prices. Notably, the price of Western spruce-pine-fir (SPF) 2x4 lumber averaged $570 US/000 board feet in 2020 (up by 53.3 per cent from 2019) and has averaged $986 US/000 board feet in the first three months of 2021.

Falling energy demand due to pandemic-related travel restrictions and excess supply, due to a temporary lapse in production limit agreements between OPEC nations, led to lower crude oil prices in 2020. The West Texas Intermediate (WTI) price averaged $39.23 US/barrel in 2020, down by 31.2 per cent compared to 2019. The WTI price then increased in late 2020 and over the first three months of 2021, reaching $62.33 US/barrel in March. Meanwhile, the plant inlet price of natural gas averaged $0.96 C/GJ in 2020, up by 20.5 per cent from 2019. In March 2021 it averaged $2.00 C/GJ year-to-date (+136.9 per cent). Natural gas prices have been supported by improved market access (pipelines being reopened or brought online) and reduced production outlooks in parts of the U.S.

Base metal and mineral prices experienced broad-based declines in 2020, as reduced global demand weighed on prices. Prices for molybdenum, zinc, lead, and metallurgical coal all recorded declines compared to 2019, while copper prices posted a modest gain. By contrast, prices for gold and silver increased substantially in 2020. More recently, nearly all of the above metals saw significant price increases and were up on a year-to-date to March 2021 basis. The exception was metallurgical coal, which saw lower prices than the same period a year earlier.

Outlook

Following an estimated contraction of 10.3 per cent in 2020, growth in real exports of goods and services is projected to be 5.6 per cent in 2021, 4.4 per cent in 2022, and then range between 2.8 per cent and 5.3 per cent annually over the 2023 to 2025 period. The anticipated production of LNG toward the end of the forecast horizon also provides support to the outlook.

The price of lumber is forecast to average $650 US/000 board feet in 2021 and $475 US/000 board feet in 2022, before gradually declining to reach $400 US/000 board feet in the medium-term. The plant inlet price for natural gas is expected to average $1.48 C/GJ in 2021/22, $1.48 C/GJ in 2022/23, and $1.50 C/GJ in 2023/24. The outlook is subject to considerable uncertainty, as commodity prices can be volatile.

Demographics

On July 1, 2020, B.C.'s population was 5.15 million people, up 1.1 per cent from July 1, 2019. B.C.'s population has changed little since the onset of the pandemic, as travel restrictions significantly slowed international migration.

In 2020, the province welcomed 20,395 net new migrants, down from a net increase of 79,887 persons in 2019. Underlying the annual change was a collapse in net international migration (from +65,961 persons in 2019 to -599 persons in 2020) and increasing net interprovincial migration (from +13,926 persons in 2019 to +20,994 persons in 2020).

Outlook

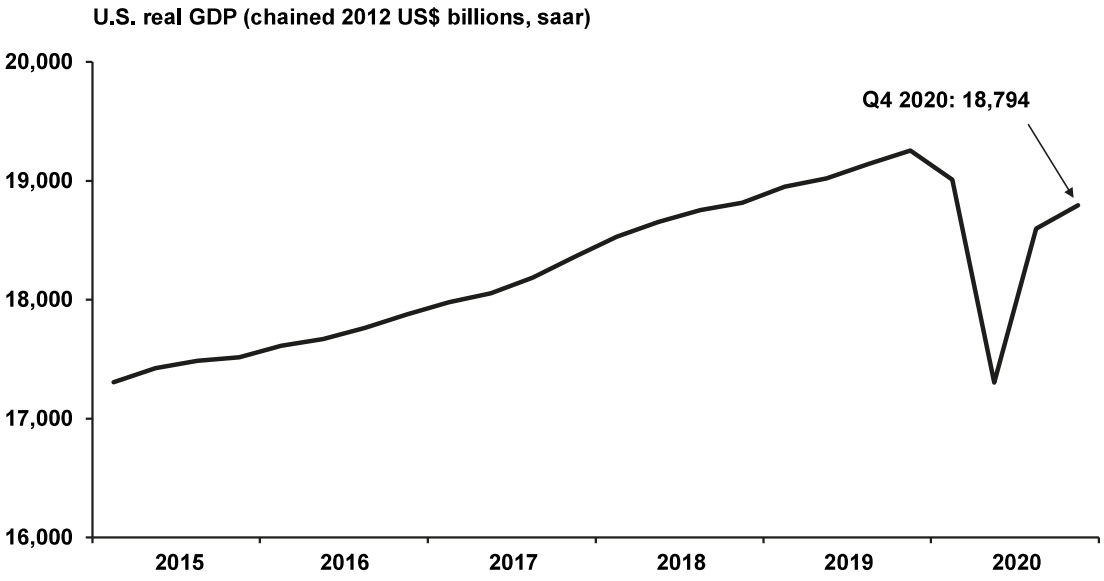
The forecast calls for B.C.'s July 1 population to increase by 0.6 per cent in 2021 and then by around 1.3 per cent each year between 2022 and 2025.

Total net migration is expected to be about 58,500 persons in 2021 and 68,100 persons in 2022. International migrants are expected to make up about 80 per cent of migrants, as they have in recent years (apart from 2020). Over the medium-term, total net migration is expected to reach about 68,800 persons. Expectations for the eventual easing of travel restrictions and the fall 2020 increase in federal immigration targets are supporting the forecast. However, the outlook is more uncertain than usual, as the COVID-19 pandemic could continue to have a material impact on international migration going forward.

Risks to the Economic Outlook

B.C.'s economy, like other provincial, national, and global economies, has been significantly impacted by the COVID-19 pandemic. There are various elements of uncertainty that will influence the depth and duration of the economic slowdown and recovery. The economic forecast is based on information that is currently available and assumptions about the future path of recovery, and the outlook is subject to a larger than normal degree of uncertainty and potential revision. While upside risks are present (primarily, faster than anticipated vaccine rollout), the current balance of risks are tilted to the downside. Downside risks to B.C.'s economic outlook include the following:

- delays in the achievement of broad immunity to COVID-19 through vaccination in B.C. or among B.C.'s trading partners;
- emergence of COVID-19 variants of concern and future outbreaks in B.C. or among B.C.'s trading partners;
- medium- to long-term damage to the economy due to the pandemic through channels such as persistent unemployment and labour market detachment, higher precautionary savings by households, business closures, or lower private capital investment;
- weakening global economic activity, exacerbated by COVID-19, resulting in reduced demand for B.C.'s commodity exports;
- ongoing global trade tensions and broader economic challenges in Asia, Europe, and the U.K.;
- higher volatility in international foreign exchange, stock, and bond markets;
- lower commodity prices, particularly for lumber, pulp, and coal; and
- timing of investment and hiring related to the LNG Canada project, similar to the risks that exist for other major capital projects.



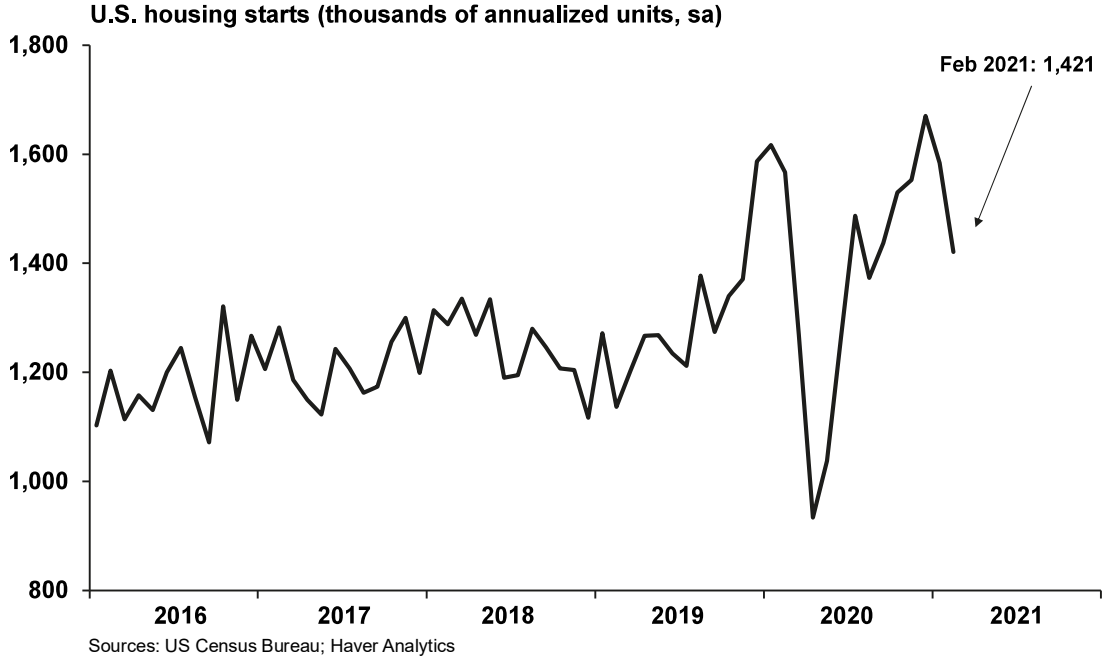
External Outlook

The external outlook deteriorated as the pandemic emerged and the global economy faced its largest annual contraction on record. The economic recovery has been protracted as many countries experienced second and third waves of COVID-19 cases. Faster than expected development of effective vaccines has fueled optimism though and provided more certainty around timelines for a return to pre-pandemic levels of economic activity. Nevertheless, near-term prospects are uneven across countries and industries. Prospects vary with the amount of time it is expected to take until broad immunity has been achieved through vaccines and the extent to which economic activities can take place in the presence of containment measures.

United States

U.S. real GDP shrank by 3.5 per cent in 2020. This was a more severe contraction than the 2009 2.5 per cent decline during the Great Recession and the largest contraction since the 1940's. Nevertheless, the decline in 2020 was smaller than those of other developed nations. Relatively less restrictive containment measures and generous government support programs contributed to the smaller contraction. Driving the declines in 2020 were lower consumption of services, exports, and business investment. Lower imports, higher consumption of goods, and increased government spending provided some offset. The U.S. economy finished the year growing by a 4.3 per cent annualized rate in the fourth quarter of 2020; this left real GDP 2.4 per cent lower than pre-pandemic (fourth quarter of 2019) levels.

Chart 3.9 U.S. Real GDP



Sources: US Bureau of Economic Analysis; Haver Analytics

After seeing record declines in the spring of 2020, the U.S. labour market has improved. However, only about 60 per cent of employment losses have been reversed. In 2020 overall, employment was 5.8 per cent lower than in 2019. And during the first three months of 2021, employment was still 5.6 per cent lower on a year-to-date basis. The unemployment rate was 6.0 per cent in March 2021, down from a peak of nearly 15 per cent but up from its pre-pandemic rate of 3.5 per cent. The number of long-term

unemployed has nearly quadrupled since the start of the pandemic and continues to rise. Meanwhile, the U.S. labour force participation rate averaged 61.4 per cent year-to-date to March 2021, down 1.7 percentage points compared to the same period of 2020.

U.S. home building activity has been resilient. Despite marked declines during the early months of the pandemic, housing starts rebounded and posted a 7.0 per cent increase in 2020 overall. However, year-to-date to February 2021, they were down 5.6 per cent compared to the first two months of 2020. Meanwhile, residential building permits (a leading indicator of building activity) were up 4.7 per cent in 2020 compared to 2019 and then up 21.3 per cent year-to-date to February 2021. Similar to B.C. and Canada, the home sale market has been strong in the U.S. Year-to-date to February 2021, new single-family home sales were up by 15.6 per cent compared to the same period of 2020, while their median sale price was up by 6.3 per cent.

Chart 3.10 U.S. Housing Starts

Sources: US Census Bureau; Haver Analytics

After experiencing record declines in March and April last year, U.S. nominal retail sales posted strong gains in the subsequent months. In 2020 overall, retail edged up by just 0.6 per cent compared to 2019. Year-to-date to February 2021 though, sales were 7.9 per cent higher relative to the first two months of 2020. Underlying the headline growth figures were strong gains in sales at businesses such as non-store retailers and food and beverage stores offsetting declines at food services and drinking places, clothing and accessory stores, and gasoline stations.

U.S. consumer confidence fell significantly in the early months of the pandemic and has shown relatively little improvement since then. Year-to-date to March 2021, the consumer confidence index averaged 96.3 points, down 30.9 points from the same period in 2020.

Already challenging international trade conditions worsened due to the global COVID-19 pandemic, ongoing U.S.-China trade tensions, and the slump in oil prices. Accordingly, the value of U.S. merchandise exports fell by 13.2 per cent annually in 2020. In February 2021 they were down by 3.0 per cent on a year-to-date basis.

Outlook

Consensus Economics (Consensus) forecasters have recently raised their near-term projections for U.S. economic growth. The February 2021 *Consensus* survey forecasts U.S. real GDP to expand by 4.7 per cent in 2021. Meanwhile, for 2022, *Consensus* forecasts growth of 3.6 per cent (Table 3.2).

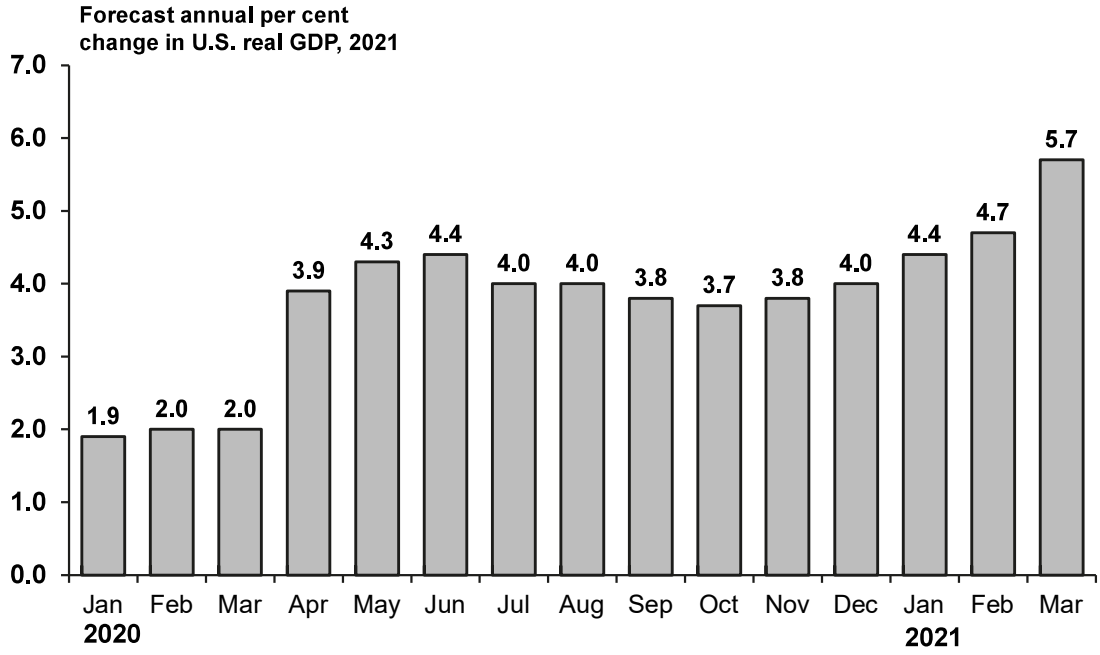


Table 3.2 U.S. Real GDP Forecast: Consensus versus B.C. Ministry of Finance

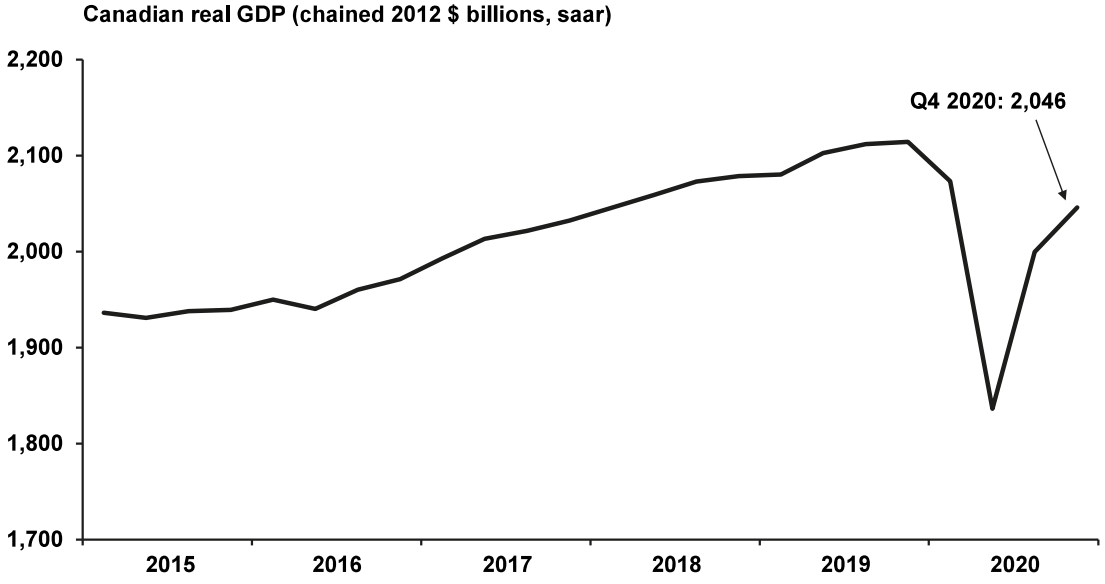
	2021	2022
	Per cent change in real GDP	
B.C. Ministry of Finance	4.2	3.1
Consensus Economics (February 2021*)	4.7	3.6

** Comparable month to B.C. Ministry of Finance forecast.*

Uncertainty regarding the pandemic and trade tensions continue to weigh on the economic outlook. In recognition of these uncertainties, the Ministry's assumptions for U.S. growth are prudent relative to the February 2021 *Consensus* (the *Consensus* comparable to when Ministry assumptions were developed). The Ministry assumes that U.S. real GDP will grow by 4.2 per cent in 2021 and by 3.1 per cent in 2022. Growth is then expected to gradually taper off to 1.7 per cent by 2025.

Chart 3.11 Consensus Outlook for the U.S. in 2021



Source: Consensus Economics
The chart above represents forecasts for U.S. real GDP growth in 2021 as polled on specific dates. For example, forecasters surveyed on January 13, 2020 had an average 2021 U.S. real GDP growth forecast of 1.9 per cent, while on March 8, 2021 they forecast 2021 U.S. real GDP to grow by 5.7 per cent.

Canada

The onset of the COVID-19 pandemic, in conjunction with the related plunge in oil prices, presented an unparalleled challenge for the Canadian economy. In 2020, real GDP fell by 5.4 per cent, a greater decline than the Great Recession's 2009 contraction of 2.9 per cent and the largest contraction on record (data available back to 1961). Last year's slowdown in economic activity was driven by substantial declines in household consumption (primarily services), exports, and investment in inventories. Falling imports provided some offset. By the fourth quarter of 2020, Canada had recovered approximately three-quarters of the economic activity lost due to the pandemic, leaving real GDP 3.2 per cent lower than pre-pandemic levels.

Chart 3.12 Canadian Real GDP

Sources: Statistics Canada; Haver Analytics

The Canadian economy shed nearly 3 million jobs in March and April 2020. As of February 2021, roughly 80 per cent of those employment losses had been reversed. However, there were still nearly 600,000 fewer Canadians employed relative to pre-pandemic (February 2020) levels. In 2020 on average, employment fell by 5.2 per cent and the unemployment rate averaged 9.5 per cent. Year-to-date to February 2021, employment was down by 3.7 per cent compared to the first two months of 2020 and the unemployment rate averaged 8.8 per cent. Participation rates retreated during 2020 and have yet to fully recover; participation averaged 64.7 per cent during the first two months of 2021, down 0.8 percentage points year-to-date. Underlying these headline labour market figures were several key factors: declines in both full- and part-time work; steep job losses in high-contact services and construction; overrepresentation of youth, women, and visible minorities among the unemployed; and rising long-term unemployment.

The housing market was strong in 2020. Declining activity as COVID-19 containment measures were first introduced swiftly gave way to strong rebounds in both construction and sales. Housing starts grew by 4.4 per cent annually in 2020 and by 24.4 per cent year-to-date to February 2021 compared to the same period a year earlier. The growth so far in 2021 was largely due to strong numbers in the urban centers of Montreal, Vancouver, and Quebec City. Meanwhile, MLS home sales were up by 12.6 per cent annually in 2020 and by 44.4 per cent year-to-date to February 2021 compared to the first two months of last year. Sales growth was broad-based in 2020, with double-digit gains observed in all provinces except Alberta. The average home sale price rose by 12.9 per cent in 2020 and was up by 23.7 per cent year-to-date to February 2021.

Canadian nominal retail sales also saw large contractions in March and April 2020 as containment measures began. However, rapid recovery in the subsequent months led to retail sales exceeding their pre-pandemic levels by early summer. Nevertheless, retail did not increase enough to make up for the sales lost during the early months of the pandemic, leaving annual sales 1.4 per cent lower than in 2019. In January 2021, retail sales were 1.3 per cent higher than in the same month a year earlier.

The challenging global trade conditions that faced exporters at the beginning of 2020 intensified due to the global COVID-19 pandemic and a slump in oil prices. In 2020 the value of Canadian merchandise exports fell by 12.4 per cent and the value of services exports shrank by 17.7 per cent compared to 2019. In February 2021, though, merchandise exports were 6.5 per cent higher year-to-date. Services exports, on the other hand, were down by 14.6 per cent. Shipments of Canadian manufactured goods were 11.4 per cent lower in 2020 and up by 1.1 per cent in January 2021 in year-over-year terms.

Outlook

The February 2021 *Consensus* forecasts Canadian real GDP to rise by 4.6 per cent in 2021 and by 4.0 per cent in 2022 (Table 3.3).

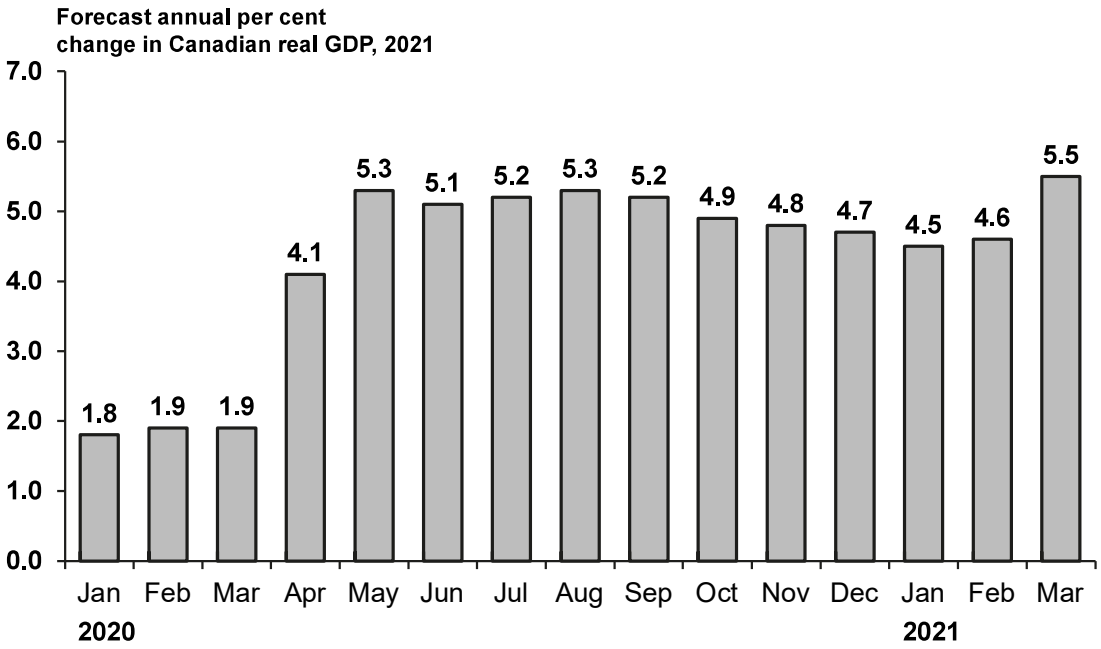


Table 3.3 Canadian Real GDP Forecast: Consensus versus B.C. Ministry of Finance

	2021	2022
	Per cent change in real GDP	
B.C. Ministry of Finance	4.1	3.5
Consensus Economics (February 2021*)	4.6	4.0

** Comparable month to B.C. Ministry of Finance forecast.*

The Canadian economic outlook continues to be clouded by uncertainty regarding the potential for medium- and long-term negative impacts from the pandemic recession. Additionally, ongoing global trade tensions and volatile commodity prices add risks to the outlook. Accordingly, the Ministry's outlook is lower than the February 2021 *Consensus* (the *Consensus* comparable to when Ministry assumptions were developed). The Ministry assumes that the Canadian economy will rebound by 4.1 per cent in 2021 and grow by 3.5 per cent in 2022. Over the medium-term, annual growth is expected to moderate, gradually reaching 1.6 per cent by 2025.

Chart 3.13 Consensus Outlook for Canada in 2021

Source: Consensus Economics

The chart above represents forecasts for Canadian real GDP growth in 2021 as polled on specific dates. For example, forecasters surveyed on January 13, 2020 had an average 2021 Canadian real GDP growth forecast of 1.8 per cent, while on March 8, 2021 they forecast 2021 Canadian real GDP to grow by 5.5 per cent.

Asia

Stringent and ultimately successful containment measures supported a V-shaped recovery in China. It was the only major economy to post positive economic growth in 2020. The 2.3 per cent annual real GDP growth was however China's slowest expansion since 1976. Industrial production and exports led the rebound, as goods from China filled the gaps created by COVID-19-induced manufacturing disruptions elsewhere. Domestic investment has also supported the recovery, along with accommodative monetary and fiscal measures.

Japan recorded a 4.8 per cent decline in real GDP in 2020, the largest contraction since 2009. Household consumption led the declines, followed by exports and private investment. Lower imports and higher government spending provided a partial offset. Underlying 2020's overall declines, though, was recovering economic activity through the second half of the year; by the fourth quarter real GDP was 1.3 per cent lower than before the pandemic (fourth quarter of 2019). Still, on March 19, 2021, the Bank of Japan continued to characterize the economic situation as severe and reiterated that monetary conditions would remain accommodative.

Outlook

The February 2021 *Consensus* forecasts China real GDP to grow by 8.4 per cent in 2021 and by 5.5 per cent in 2022. Ongoing U.S.-China trade tensions and the lingering potential for COVID-19 outbreaks until mass vaccination is complete, domestically and abroad, could dampen China's economic growth going forward. As such, the Ministry's prudent assumption is that China's economy will expand by 7.6 per cent in 2021, 5.1 per cent in 2022, and 5.0 per cent each year over the medium-term.

The February 2021 *Consensus* forecasts Japan real GDP to expand by 2.3 per cent in both 2021 and 2022. In recognition of enduring foreign and domestic challenges to Japan's economy, as well as risks associated with the virus, the Ministry assumes that Japan's real GDP will grow more slowly. The forecast is for economic activity to rise by 1.7 per cent in both 2021 and 2022 and then gradually soften over the medium-term to 0.7 per cent.

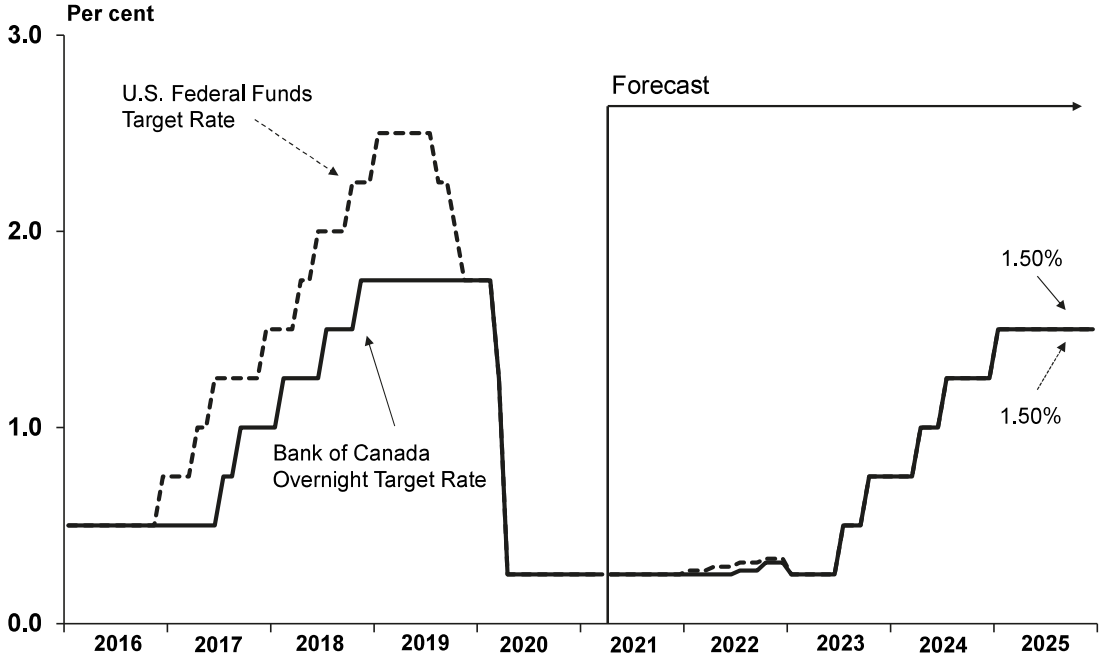
Europe

The euro zone has been acutely impacted by COVID-19. Containment measures had severe implications for the economy, especially for tourist-dependent countries in southern Europe. In 2020, real GDP in the euro zone fell 6.8 per cent compared to 2019, the largest annual contraction since data began in 1995. Declines were broad-based across nearly all sectors of the economy. Like many other economies, only lower imports and higher government spending made positive contributions to headline GDP growth. And despite improving economic activity through the second half of the year, fourth quarter real GDP was still 4.9 per cent lower than pre-pandemic (fourth quarter of 2019) levels.

On March 11, 2021 the European Central Bank maintained key interest rates at accommodative levels and increased the pace of its emergency bond-buying program. Last year (July 21, 2020), the 27 members of the European Union (EU) agreed to borrow up to 750 billion euro in a stimulus plan to reverse the economic downturn. This short-term stimulus plan is part of a broader 1.8 trillion euro seven-year budget plan. After long negotiations, the stimulus plan was approved by EU leaders on December 10, 2020.

Outlook

The February 2021 *Consensus* forecasts the euro zone economy to make a partial recovery in 2021, growing by 4.4 per cent, before expanding by a further 4.1 per cent in 2022. In light of uncertainties associated with COVID-19 and shifting trade conditions due to Brexit, the Ministry assumes the euro zone's economy will recover more slowly. The Ministry forecasts growth of 3.7 per cent in 2021, 3.4 per cent in 2022, and then a gradual deceleration over the medium-term toward 1.2 per cent growth in 2025.



Financial Markets

Interest Rates

The COVID-19 pandemic caused an unprecedented global economic contraction, prompting a broad array of extraordinary monetary and fiscal policy responses around the world.

On March 17, 2021, the US Federal Reserve (Fed) left the target range for the federal funds rate unchanged at 0.00 to 0.25 per cent. The target range has been at this level since March 2020, when the Fed cut its rate by 150 basis points. The Fed has also provided forward guidance by indicating its intention to keep interest rates at current levels until the economy has recovered, which includes improvements in the labour market as well as inflation that averages 2.0 per cent over time. The latter policy would allow for inflation to run above its long-standing target of 2.0 per cent for some time. Further, the Fed continues to make large-scale asset purchases (i.e. quantitative easing), support financial market functioning through several credit facilities, and execute a sequence of actions to support the flow of credit to households and businesses.

Chart 3.14 Interest Rate Forecasts

Sources: Bank of Canada; US Federal Reserve; and B.C. Ministry of Finance forecasts

On March 10, 2021, the Bank of Canada maintained its target for the overnight interest rate at its stated effective lower bound of 0.25 per cent and left its quantitative easing program unchanged. In March 2020, the Bank responded to the COVID-19 crisis by cutting its target rate by 150 basis points. It has also provided forward guidance, committing to maintain the current policy rate and quantitative easing program until its inflation target of 2.0 per cent is sustainably achieved and the recovery is well underway. On a related note, the conventional mortgage lending rate on a 5-year term mortgage held steady at 4.79 per cent in March 2021, its level since August 2020.

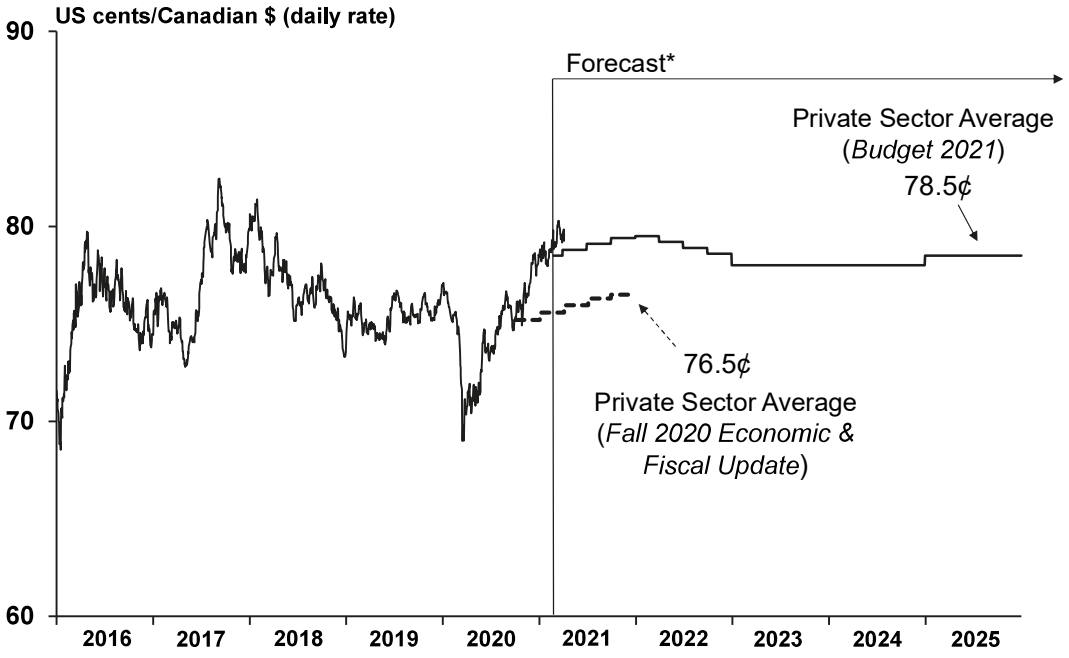
Outlook



The US Federal Reserve and the Bank of Canada have signaled their commitment to support their respective economies and provide liquidity to the financial system. Based on the average of six private sector forecasts as of February 26, 2021, the Ministry assumes the U.S. federal funds rate to average 0.25 per cent in 2021 and 0.30 per cent in 2022. By comparison, the Bank of Canada's overnight target rate is expected to average 0.25 per cent in 2021 and 0.27 per cent in 2022.

The Canadian three-month treasury bill interest rate is expected to average 0.13 per cent in 2021 and 0.24 per cent in 2022, according to the same six private sector forecasters. Meanwhile, the 10-year Government of Canada bond rate is assumed to be 1.20 per cent in 2021 and 1.59 per cent in 2022.

Exchange Rate

The value of the Canadian dollar has largely moved in step with oil prices during the pandemic. Following the onset of the pandemic, oil prices collapsed and the value of the Canadian dollar depreciated to a low of 71.1 US cents in April 2020. Since then, the Canadian dollar has gradually appreciated and surpassed pre-pandemic values, supported by recovering oil prices and a weakening U.S. dollar. The Canadian dollar averaged 74.6 US cents in 2020 and 79.0 US cents during the first three months of 2021.

Outlook

Based on the average of six private sector forecasts as of February 26, 2021, the Ministry assumes the Canadian dollar will average 79.0 US cents in both 2021 and 2022.

[e] B.C. Ministry of Finance estimate.

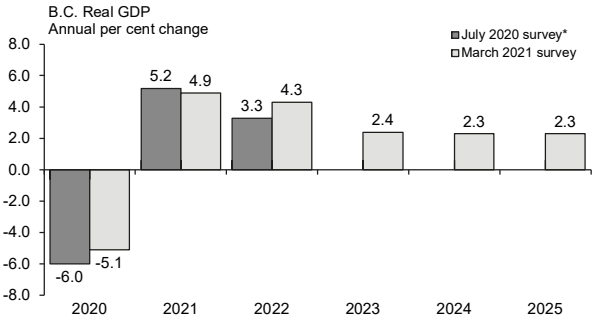
The Economic Forecast Council, *Budget 2021*

Introduction

In accordance with the *Budget Transparency and Accountability Act,* the Minister of Finance, in preparing the provincial budget, consults the Economic Forecast Council (the Council or EFC) on British Columbia's economic outlook. The 13-member Council is comprised of leading economists from several of Canada's major financial and private research institutions.



The most recent meeting between the Minister and the EFC was on February 26, 2021, with Council members presenting their estimates for economic performance in 2020 and their forecasts for 2021 through 2025. Key topics of discussion included: the varied impacts of the COVID-19 pandemic across industries and GBA+ identity factors; government policies to support the economy while maintaining fiscal discipline; issues around equity and inclusion; B.C.'s housing market; the outlook for immigration and trade; and uncertainty in the global economic outlook.

After the meeting, EFC members were welcome to revise their forecasts until March 3, 2021 (five of the thirteen members chose to resubmit). Forecast details from the Council's surveys are summarized in the table at the end of this topic box.

British Columbia Outlook

On average, the Council estimates that B.C.'s economy contracted by 5.1 per cent in 2020. This was an improvement of 0.9 percentage points compared to its prior projection in July 2020 (when the Council was resurveyed in advance of the *First Quarterly Report* given the unprecedented economic impacts and uncertainty caused by COVID-19). Members' latest forecast calls for B.C. economic growth of 4.9 per cent in 2021 and 4.3 per cent in 2022, down 0.3 percentage points in 2021 and up 1.0 percentage points in 2022 from their July outlook. Over the medium-term, the Council forecasts B.C.'s economy to grow by 2.4 per cent in 2023 and by 2.3 per cent annually in 2024 and 2025 (see Chart 1).

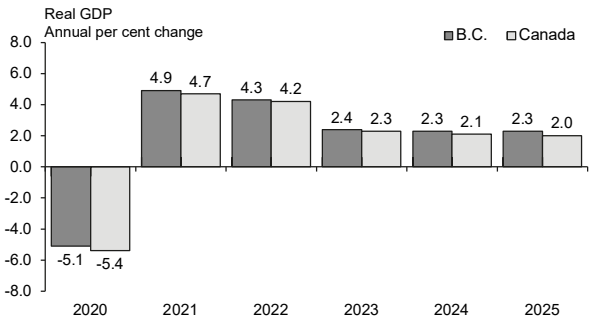


Chart 1 – EFC Outlook for B.C.

Source: Average of Economic Forecast Council forecasts.
*Forecasts for 2023-2025 were not part of the July 2020 survey.

The Council estimates that B.C.'s economy contracted less than Canada's in 2020, partly due to the province's relative success in limiting the spread of COVID-19. B.C.'s economy is expected to continue to outperform the national average throughout the forecast horizon (see Chart 2). While the outlook for B.C. is generally positive, the EFC noted the uncertain nature of current projections.

Chart 2 – EFC Outlook for B.C. and Canada

Source: Average of Economic Forecast Council forecasts.

Members generally expect B.C. real GDP to reach its pre-pandemic level around late 2021 or early 2022, but emphasised that the recovery will continue to be uneven across several dimensions. Among industries, they noted that real estate and professional sectors rebounded quickly following an initial fall

in activity. On the other hand, high-contact service industries, such as in-person retail, accommodation, restaurants, and particularly the broader tourism sector, have been harder hit by the pandemic and are expected to struggle until widespread immunization is achieved.

Among GBA+ identity factors, EFC members discussed the pandemic's disproportionately negative economic impacts on women, youth, and people with lower education levels. A common thread with these three groups is an over-representation in the hardest hit industries. Furthermore, women's disproportionate role in caring for children (during school and daycare closures) and other family members was also highlighted as a factor.

Government policies identified to support the economy included supports for childcare and skills training. The former may increase women's labour market participation, according to some members. Meanwhile skills training may reduce permanent job loss and help people adapt to the evolving economy. Looking to the future, the Council sees an increasingly digital economy with implications for e-commerce, technology sectors and post-secondary education. The Council also noted that expanding the labour force via immigration and improved inclusiveness of all British Columbians will be critical for sustained growth.

More immediately, the EFC noted that adaptive and targeted government supports are needed throughout the pandemic with careful consideration about when and how they are withdrawn in B.C. and Canada. However, they also advised against adding broad and untargeted new stimulus, given the various initiatives already underway across jurisdictions and the expectation that forthcoming vaccines will unleash pent-up consumer spending in hard hit sectors. From a longer-term perspective, it was agreed that the B.C. government should remain disciplined in its fiscal planning to maintain the solid fiscal position with which it entered the pandemic.

Some members described B.C.'s housing outlook as strong, while others expect it to cool somewhat following the robust sales and price gains in 2020. Low interest rates were the main factor identified as boosting recent activity. The demand for space among teleworkers was another common theme, with several members pointing to the relatively high demand for single detached versus multi-unit homes. Looking ahead, renewed international migration after a pandemic-induced lull is expected to help support B.C.'s housing

British Columbia Economic Forecast Council:
Summary of B.C. real GDP forecasts, annual per cent change

Participant	Organization	2020	2021	2022	2023	2024	2025
Robert Kavcic	Bank of Montreal	-4.6	5.7	4.7	3.2	2.2	2.2
Brendon Ogmundson	BC Real Estate Association	-5.0	5.0	3.8	2.6	2.2	2.2

[1] Updated subsequent to the February 26, 2021 meeting.

market. As in past years, many members noted B.C.'s desirability as a place to live, and the ongoing need to continue to increase housing supply and improve affordability to attract and retain talent.

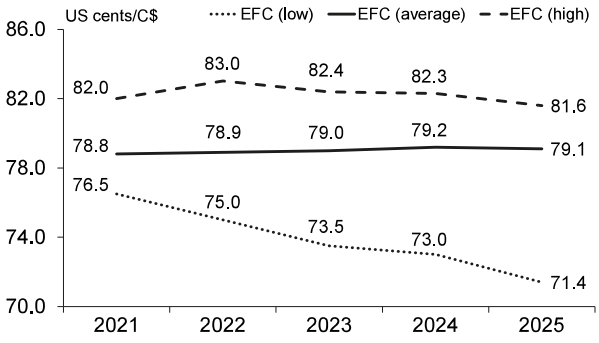
Other topics discussed by the Council included the general resilience of LNG development and other capital projects despite minor pandemic-related delays, recent strength in the natural resources sector (particularly forestry), and issues surrounding climate change.

Canadian Outlook

After falling by 5.4 per cent in 2020, the EFC expects Canadian real GDP to grow by 4.7 per cent in 2021. Economic growth is then forecast to taper off, with the economy expanding by 4.2 per cent in 2022, 2.3 per cent in 2023, 2.1 per cent in 2024, and 2.0 per cent in 2025.

Members generally anticipate the completion of widespread immunization across Canada over the second half of 2021, with a similar though slightly faster timeline in the U.S. This is expected to support cross-border mobility for trade (such as tourism) and immigration (alongside higher national immigration targets). The outlook for interest rates was also discussed, with some uncertainty around the timing and pace of monetary policy tightening as the economy recovers.

International Outlook



The Council forecasts U.S. real GDP growth of 5.1 per cent in 2021 following a decline of 3.5 per cent the previous year. The EFC is calling for 3.9 per cent growth in 2022, then 2.4 per cent, 2.1 per cent, and 2.0 per cent growth in 2023, 2024, and 2025, respectively.

The new U.S. fiscal stimulus package worth US$1.9 trillion was highlighted as a key international development, with potentially sizable impacts on B.C.'s exports. However, the Council also noted enduring trade barriers with the U.S., the uncertain evolution of global supply chains, and ongoing geopolitical tensions as risks to the outlook.

Canadian Dollar

Council members' projections for the Canadian dollar ranged from 76.5 US cents to 82.0 US cents in 2021 and from 75.0 US cents to 83.0 US cents in 2022. Over the medium-term, EFC forecasts ranged from lows of around of 71 to 74 US cents to highs of around 81 to 83 US cents (see Chart 3).

Introduction

The third-quarter fiscal outlook for 2020/21 forecasts a deficit of $8.1 billion, an improvement of $5.5 billion since the second-quarter outlook in the *Fall 2020 Economic & Fiscal Update*. The main changes are higher revenues ($3.5 billion), lower expenses ($956 million) and the unused forecast allowance, which was set at $1.0 billion to reflect the increased forecasting uncertainty. Changes are illustrated in Chart 4.1 below, with additional detail provided in Table 4.2.

The taxpayer-supported capital spending forecast is lower than at *Fall 2020 Economic & Fiscal Update* by $504 million and the self-supported capital spending is higher by $447 million (see Table 4.3 on page 124 for details). The taxpayer-supported debt forecast is lower by $584 million due to improved operating results and changes to cash and other working capital balances. (see Table 4.4 on page 125 for details).

Chart 4.1 2020/21 Deficit – Major Changes from the *Fall 2020 Update*

Deficit decreased by $5.5 billion

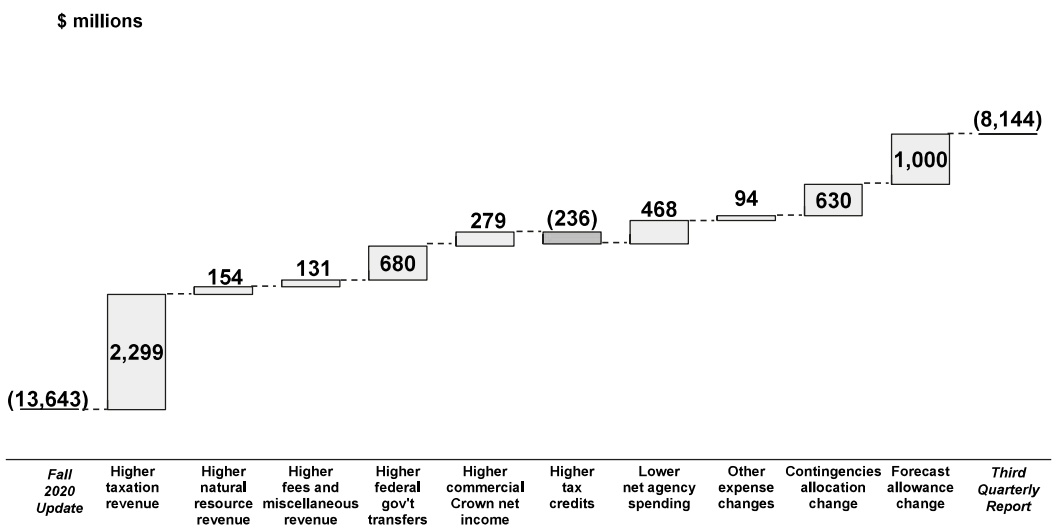

Table 4.2 2020/21 Financial Forecast Changes

	($ millions)			
2020/21 surplus at *Budget 2020* (February 18, 2020)	**227**			**227**
2020/21 deficit at the *First Quarterly Report* (September 10, 2020)		**(12,792)**		
2020/21 deficit at the *Fall 2020 Economic & Fiscal Update* (December 17, 2020)			**(13,643)**	
	Q1 Update	**Fall 2020 Update**	**Q3 Update**	**Total Changes**
Revenue changes:				
Personal income tax – mainly expected changes in 2020 household income	(978)	171	154	(653)
Corporate income tax – changes in instalments, mainly reflecting federal government outlook for 2020 national corporate taxable income partly offset by weaker 2019 tax assessments results	(1,144)	78	1,134	68
Provincial sales tax – lower retail sales and consumer expenditures and impacts of tax measures	(1,024)	(135)	700	(459)
Property taxes – mainly reflecting tax relief provided to commercial property owners, lower speculation and vacancy tax and updated 2021 assessment values and tax rate	(694)	7	(15)	(702)
Property transfer tax – changes in year-to-date sales activity in the housing sector	(315)	479	250	414
Fuel and carbon taxes – year-to-date sales activity and delay of the carbon tax rate increase from April 1, 2020 to April 1, 2021	(469)	(15)	79	(405)
Employer health tax – mainly expected changes in employee compensation	(148)	47	17	(84)
Other taxation sources – impacts of 2019/20 *Public Accounts* and year-to-date results	20	10	(20)	10
Mining – changes in coal and copper prices, changes in coal production and mining costs	(84)	(18)	2	(100)
Forests – higher stumpage rates partly offset by lower logging tax revenue and changes in harvest volumes	30	96	128	254
Other natural resources – commodity prices and production volumes, utilization of royalty infrastructure programs/credits and changes in water rentals revenue	(190)	78	24	(88)
Fees, licences, investment earnings and miscellaneous sources:				
Post-secondary institutions	(673)	67	145	(461)
K-12 school districts	(137)	(25)	78	(84)
Taxpayer-supported Crowns	(111)	(94)	(45)	(250)
Other sources – lower fees from Health Authorities and reduced motor vehicle fees and fines	(76)	4	(47)	(119)
Canada health and social transfers – mainly additional pandemic relief one-time funding supporting recovery of health care systems and changes in B.C. population share of national total	(2)	52	552	602
COVID-19 related federal government funding	2,376	242	(2)	2,616
Other federal government transfers – mainly higher transfers under the Disaster Financial Assistance Arrangements and higher funding in support of taxpayer-supported Crowns and SUCH sector agencies	(20)	69	130	179
Commercial Crown corporation net income – ICBC, BC Lottery Corp and the Liquor Distribution Branch	(933)	298	279	(356)
Total revenue changes	**(4,572)**	**1,411**	**3,543**	**382**
***Less*: expense increases (decreases):**				
Consolidated Revenue Fund changes:				
Pandemic Response and Economic Recovery Contingencies (Vote 52) – updated spending forecast	5,000	2,000	(300)	6,700
Contingencies (Vote 45) – updated spending forecast	-	-	(330)	(330)
Federal-Provincial cost-shared investments under the Safe Restart Agreement:				-
Provincial portion (COVID-19 Contingencies - Vote 53)	810	-	-	810
Federal portion	810	-	-	810
Statutory spending:				-
Fire management costs	76	2	2	80
Emergency Program Act	94	26	1	121
Signed agreements under the *Sustainable Services Negotiating Mandate*	310	37	2	349
COVID-19 temporary pandemic pay [1]	425	(41)	-	384
Housing Priority Initiatives Special Account – purchase of hotels to house decamped homeless populations	111	-	85	196
Other statutory spending	14	71	3	88
Refundable tax credits:				-
One-time enhancement of the Climate Action Tax Credit	500	-	-	500
Other refundable tax credits	(86)	31	236	181
Other expense changes – mainly favourable impacts of prior year liability	88	(15)	(97)	(24)
Spending funded by third party recoveries - mainly Safe Return to Class funding from the federal government	(30)	310	(90)	190
Changes in spending profile of service delivery agencies:				-
School districts	152	214	89	455
Universities	(61)	(14)	(14)	(89)
Colleges	(23)	2	13	(8)
Health authorities and hospital societies	229	1,137	580	1,946
Other service delivery agencies [2]	609	(165)	(75)	369
(Increase) decrease in transfers to service delivery agencies (elimination)	(1,281)	(1,333)	(1,061)	(3,675)
Total expense changes	**7,747**	**2,262**	**(956)**	**9,053**
Subtotal	**(12,319)**	**(851)**	**4,499**	**(8,671)**
Forecast allowance (increase) decrease	(700)	-	1,000	300
Total changes	**(13,019)**	**(851)**	**5,499**	**(8,371)**
2020/21 deficit at the *First Quarterly Report*	**(12,792)**			
2020/21 deficit at the *Fall 2020 Economic & Fiscal Update*		**(13,643)**		
2020/21 deficit at the *Third Quarterly Report*			**(8,144)**	**(8,144)**

[1] Total COVID-19 temporary pandemic pay remains at $425 million, however $41 million is included as part of Contingencies Vote 52 spending.

[2] Includes BC Transportation Financing Authority, BC Transit, BC Housing Management Commission, Community Living BC, and other entities.

Revenue

Total government revenue is now forecast to be $3,543 million higher than the *Fall 2020 Economic & Fiscal Update*. Major changes include:

- $2,299 million increase in taxation revenue, mainly reflecting higher income tax revenues due to corporate income tax installment payments from the federal government, and year-to-date information for provincial sales tax, property transfer tax and other taxation sources;
- $154 million increase in natural resource revenue mainly due to the effects of higher stumpage rates and higher natural gas price;
- $131 million increase in revenue from fees, licences, investment earnings and miscellaneous sources mainly due to improvements in post-secondary institutions and K-12 school districts projections;
- $680 million increase in federal government contributions mainly due to higher one-time funding for recovery of the health care systems following the pandemic as well as higher transfers to taxpayer-supported agencies; and
- $279 million increase in commercial Crown corporations' net income mainly due to higher net income projections from the Insurance Corporation of BC.

Expense

Total government spending is now forecast to be $956 million lower than the *Fall 2020 Economic & Fiscal Update*. Major changes include:

- $630 million lower in contingencies allocation, including $300 million from Pandemic Response and Economic Recovery contingencies (Vote 52). (For details on COVID-19 Pandemic Spending & Related Measures, please see the topic box on page 111);
- $97 million decrease in other expenses mainly due to favourable adjustments of prior year liability;
- $90 million in lower spending funded by recoveries from third parties; and
- $468 million in lower net expense by service delivery agencies due to the timing of expense recognition mainly related to health authorities' purchase of personal protective equipment. Funding was provided by the Province in the current fiscal year, while the accounting expense is recorded in the period when the inventory is used.

These spending reductions are partly offset by

- $236 million in higher refundable tax transfers mainly reflecting stronger 2019 tax assessments; and
- $93 million higher in statutory spending mainly to fund the purchases of hotels to house decamped homeless populations.

Table 4.2 provides a detailed breakdown of changes in the operating results by quarter from *Budget 2020*.

Government Employment (FTEs)

Full-time equivalent (FTE) staff utilization in core government ministries is forecast to be 32,400 FTEs in 2020/21. This is an increase of 600 FTEs from the forecast as presented in *Budget 2020*. The majority of this increase reflects staffing requirements to implement budgeted program growth in court facilities, the Civil Resolution Tribunal, and CleanBC. Government's COVID-19 response also required increased FTEs across the Ministry of Health and for various economic recovery job creation initiatives. Further details on FTEs are provided in Table A13 in the appendix.

COVID-19 Pandemic Spending & Related Measures

This section provides an overview of the Province's pandemic response measures, including an update on notional allocations within the Pandemic Contingencies votes as of February 28, 2021, as well as a summary of tax and payment relief and deferral measures.

Vote 52 Contingencies (All Ministries): Pandemic Response and Economic Recovery

On March 23, 2020, the Legislative Assembly authorized *Supplementary Estimates* of $5 billion and a new Vote 52 – Contingencies for Pandemic Response and Economic Recovery (Pandemic Contingencies).

Additional *Supplementary Estimates* of $2 billion for the Pandemic Contingencies was passed on December 17, 2020 for a total of $7 billion.

Details of the Pandemic Contingencies notional allocations as of February 28, 2021 are shown in Table 1.

Table 1: Vote 52 Pandemic Contingencies Allocations as of February 28, 2021

Category	Notional Allocation	Measures
Critical services	$2.0 billion[1]	Health and mental health
	$56 million[2]	Child care services
	$162 million	Temporary housing, meals and supports for vulnerable populations
	$130 million	Essential services for adults with developmental disabilities, vulnerable children and youth, courts, family justice and victim services, public health communications, Urban Indigenous Service Providers, food security and agriculture worker accommodations
Financial supports	$1.3 billion[3]	B.C. Recovery Benefit
	$645 million	B.C. Emergency Benefit for Workers
	$718 million	Temporary monthly increases and other supports for people in receipt of income and disability assistance including the Crisis Supplement and Recovery Supplement
	$129 million	Temporary Rental Supplement
	$70 million	Canada Emergency Commercial Rent Assistance Program
	$60 million	Emergency financial relief for organizations providing animal care, park operators and community tourism organizations, Domestic Motion Picture providers, local sports organizations, Royal BC Museum and the B.C. Pavilion Corporation.
	$40 million[4]	Increased Employment Incentive
Economic Recovery	$1.4 billion	See table starting on page 119 for updated forecasts for initiatives under the *StrongerBC Economic Recovery Plan*.
Total	**$6.7 billion**	**Pandemic Contingencies Spending Measures**

[1] An additional $230 million in new health care related job opportunities is included in the economic recovery envelope.

[2] The total estimate for the temporary emergency funding for child care providers is $319 million, however, the Ministry of Children and Family Development is redirecting some base budget to offset the new program costs, reducing the overall forecasted draw on Contingencies.

[3] The total program cost for the B.C. Recovery Benefit is forecast to be $1.4 billion, of which $1.3 billion is forecast for 2020/21 and $100 million is forecast for 2021/22.

[4] The total program cost for the Increased Employment Incentive is forecast to be $190 million, of which $40 million is forecast for 2020/21 and $150 million is forecast for 2021/22.

Critical services include health and mental health related responses, supports for child care providers, and providing essential social services to vulnerable populations such as adults with developmental disabilities, people experiencing homelessness, and children, youth and young adults receiving provincial supports.

Financial support measures include income supports, such as the BC Emergency Benefit for Workers and the BC Recovery Benefit, as well as top-up supports for income and disability assistance clients including low-income seniors. Measures also include rental relief assistance for individuals, families and businesses, and targeted financial relief for a number of sectors.

Economic recovery spending measures include a grant program for small and medium sized businesses, training and job creation initiatives including new jobs to help people enter the health sector. Other measures include community infrastructure grants and projects, support for the tourism sector and programs to increase food security. Economic recovery spending also includes provincial funding to support K-12 students to return to classrooms, and funding for CleanBC initiatives and other technology and innovation programs and initiatives.

Vote 53 Contingencies (All Ministries): Federal and Provincial Pandemic Support

On July 16, 2020, the federal, provincial and territorial governments announced plans for a Safe Restart Agreement, which aimed to support the reopening of provincial and territorial economies over the next six to eight months.

Under the Agreement, the federal government has committed close to $2 billion for B.C. While approximately $1.15 billion of the federal funding was used to help fund the cost of continuing significant measures in B.C. that were underway or planned, part of the agreement requires 50/50 provincial/federal cost-sharing. This relates specifically to municipal and transit-related relief and restart measures.

On August 14, 2020, the Legislative Assembly authorized Vote 53 Contingencies (All Ministries): Federal and Provincial Pandemic Support. The Vote 53 Contingencies provides up to $1 billion net spending appropriation for the Province to support the cost-share arrangement for municipal and transit funding, and other pandemic priorities.

The current provincial spending forecast for Vote 53 is $810 million with a total spending forecast of $1.62 billion for initiatives as shown in Table 2.

Other COVID-19 Response and Relief Measures

In addition to the Vote 52 and Vote 53 Pandemic Contingencies spending measures, government has implemented a number of other measures which include tax and revenue measures, and statutory spending related to COVID-19.

Tax measures include a reduction in school tax for commercial properties by an average of 25 per cent in the 2020 calendar year (estimated at $714 million in reduced taxes). Government has also delayed the scheduled increase to the carbon tax rate and other

Table 2: Vote 53 Federal and Provincial Contingencies Allocations as of February 28, 2021

	Provincial Allocation	Federal Allocation	Total
Municipalities	$270 million	$270 million	$540 million
Transit	$540 million	$540 million	$1.08 billion
Total	**$810 million**	**$810 billion**	**$1.620 billion**

Budget 2020 tax measures to April 1, 2021, estimated to reduce taxes by $268 million.

As part of the *StrongerBC Economic Recovery Plan*, government also introduced a temporary PST exemption on select machinery and equipment to support businesses that are pivoting their operations in response to the pandemic. The PST exemption is estimated to save businesses $470 million.

Revenue relief measures include the ICBC customer premium rebate (estimated $600 million), wholesale pricing for restaurants, bars and tourism operators with liquor licenses, and other ICBC payment relief and deferral measures.

Statutory spending directly related to COVID-19 includes funding for the Pandemic Pay for frontline workers in health and social sectors (a federal-provincial cost-sharing initiative), hotel purchases to support homelessness response measures, and spending related to COVID-19 emergency coordination and response.

Government also approved revised spending targets for the Forest Enhancement Society to ensure its tree planting continues as planned to secure future economic and environmental benefits while meeting the new COVID-19 related guidelines for industrial camps.

The estimated provincial value of these measures is nearly $3.0 billion as shown in Table 3.

Government also implemented payment deferral measures to provide administrative and financial relief to individuals, businesses

Table 3: Other Response and Temporary Relief Measures as of February 28, 2021

Estimated Cost	Measure
$714 million	Reduced school tax for commercial properties for the 2020 calendar year
$500 million	Climate Action Tax Credit one-time enhancement
$470 million[1]	Temporary PST rebate on select machinery and equipment
$600 million	ICBC COVID-19 Customer Premium Rebate
$96 million ($384 million total federal-provincial)	Pandemic Pay for Frontline Workers
$268 million	Delay in the increase of the carbon tax rate and other new tax measures
$196 million	Purchase of hotels to house decamped homeless populations
$68 million	*Emergency Program Act* – COVID-19 related coordination and measures
$31 million[2]	Temporary wholesale pricing model for liquor licensees
$17 million	ICBC temporary fee relief measures
$11 million	Forest Enhancement Society of BC – tree planting camps
$5 million	Columbia Basin Trust Regional Grants
$3 million	Commercial Recreation Tenures and Permits financial relief
$2 million	Fee Relief for the Gaming Sector
$3.0 billion	**Provincial Total for Other Response and Temporary Relief Measures**

[1] $235 million in 2020/21 and $235 million in 2021/22.

[2] Estimated cost represents foregone revenues for 2020/21, however, this measure was extended permanently.

and municipalities. This included a six-month moratorium on student loan collection, BC Hydro bill relief for residential and commercial customers, and bill deferrals for industrial customers and deferred school tax remittance for municipalities. Government also provided administrative relief by extending tax filing and payment deadlines for the employer health tax, provincial sales tax, municipal and regional district tax on short-term accommodation, tobacco tax, motor fuel tax, and carbon tax. The estimated value of eligible deferrals is over $6.2 billion as shown in Table 4. As of February 28, 2021, all deferral measures have since concluded, with the exception of the employer health tax instalment payment deadline extension.

As deferral payments are expected to be received at a later date, they do not directly impact the fiscal plan.

Descriptions of all measures can be found in the following pages.

Table 4 – Payment Deferral Measures (no direct operating fiscal impact)

Estimated value of deferral	Measure
$70 million	Six-month moratorium on student fee collection
$103 million	BC Hydro bill deferrals for industrial customers and bill relief measures
Over $1 billion	Postponing municipal remittance date for school taxes to the end of the calendar year
Over $5 billion	Extending tax filing and payment deadlines for the employer health tax, provincial sales tax, municipal and regional district tax on short-term accommodation, tobacco tax, motor fuel tax, and carbon tax.
Over $6.2 billion	**Total Value of Deferrals**

*Note: All deferral measures have since concluded, with the exception of the employer health tax instalment payment deadline extension.

Description of COVID-19 Measures

Vote 52 Pandemic Contingencies Spending Measures as of February 28, 2021

Health care ($1.95 billion): Funding related to health related COVID-19 response measures includes:

- Increased lab testing, including the establishment of over 100 separate testing sites to help avoid the transmission of COVID-19 within existing health care settings;
- Additional funding for long-term care and assisted living facilities, including addressing increased COVID-19 related costs, implementing single-site work orders to help prevent the spread of disease between facilities, and hiring of up to three full-time equivalent staff at each of the 584 facilities;
- Prevention and contact tracing measures, including plans to hire over 900 contact tracers between September 2020 and March 2021 to help with the projected rise in cases of COVID-19;
- Health related costs wrap-around support services for those that were living in unsafe decampments who have been moved to temporary housing;
- Free parking at health authority sites to remove barriers for anyone who needed access and reduce the burden on health care workers; and
- Other increased operating costs including personal protective equipment, accelerating rescheduled surgeries, and increased staffing across the health spectrum including general screening staff at health facility entrances to specialist physicians and nurses, and staff within the BC Center for Disease Control.

Mental health and addictions support ($39 million): Funding includes mental health supports such as expanded virtual mental health supports for seniors, adults and youth and a Mobile Response Team to support the mental well-being and psychological safety of front-line health-care workers. In addition, this includes a number of addiction support services such as:

- Opioid response and addictions supports including funding for supportive recovery providers and youth substance use treatment services;
- Youth supports provided through Foundry and Foundry Virtual which offers health and wellness resources, services and supports online and through integrated service centres;
- Scaling up existing overdose prevention services and adding new outreach teams to further help prevent overdose deaths, including opening 17 new supervised consumption services and 12 new inhalation consumption sites in communities that have been hit the hardest by the overdose crisis;
- Funding to hire 42 new full-time registered nurses, psychiatric nurses, social workers and peer support workers for 14 interdisciplinary outreach teams across the province;
- The Lifeguard application, which provides a means to call emergency services if individuals with addictions become unresponsive while using substances;

- Establishing the Rapid Access to Consultative Expertise Line to connect first responders with overdose health emergency physicians when treating patients with substance use disorders; and
- Funding to create six new Assertive Community Treatment (ACT) teams, who use a psychosocial rehabilitation approach for individuals with severe and complex mental illness, with or without substance use or addiction.

Child care services ($319 million): Temporary emergency funding was provided from April to August to ensure child care spaces remained available for essential service workers and to provide financial relief and preserve spaces for parents during any temporary closures. Licensed child care providers that stayed open received funding to keep operations going. These centres were eligible to receive seven times their average monthly funding from government which is expected to cover approximately 75 per cent of a group facility's average monthly operating expenses. Licensed child care providers who closed their facilities were eligible to receive two times their average monthly government funding which is expected to cover approximately 20 per cent of an average group facility's monthly operating expenses.

Temporary housing, meal and health supports for vulnerable populations ($162 million): Spaces at hotels, motels and community centres are providing shelter to assist a range of people, including people experiencing homelessness, to self-isolate and follow health orders as well as receive food and support services. In addition to funding for these supports, the Province has made capital investments (approximately $196 million) to purchase hotels to help move people living in unsafe, dense encampments. Approximately 3,000 leased spaces are currently secured at sites throughout B.C.'s health regions to enable safe physical distancing in homeless shelters and help people self-isolate, with close to 150 spaces in communities secured for people leaving violent or unstable situations.

Other Essential services ($130 million): Funding to ensure continuity of services for adults with developmental disabilities receiving care from Community Living BC. Funding also provides a range of supports for children and youth that access provincial supports, including $225 per month for eligible B.C. families with children with special needs that ended September 30, 2020. Continuing existing care-giver arrangements for youth aging out of foster care and extend the maximum duration of Agreements with Young Adults program beyond 48 months is also being funded. Other essential service supports include funding to facilitate virtual and in-person court proceedings, accelerate the resolution of family law matters, and provide supports for victim services including sexual assault centres. Funding was also provided to support Indigenous service providers, support food security, and support the agriculture sector workers with temporary accommodations, and COVID-19 related public awareness campaigns to communicate health and safety information.

BC Recovery Benefit ($1.4 billion): the BC Recovery Benefit is a one-time payment of up to $1,000 for families with household incomes under $175,000 annually and up to $500 to single people earning less than $87,500 annually. The benefit is anticipated to help up to 2.7 million individuals and families, including those in receipt of income and disability assistance. The spending for this program for fiscal 2020/21 and 2021/22 are forecasted to be $1.3 billion and $100 million respectively. As of February 28, 2021, nearly 1.7 million applications have been approved, benefiting over 2.3 million British Columbians.

B.C. Emergency Benefit for Workers ($645 million): Provided a one-time, tax-free $1,000 payment to British Columbians who lost income because of COVID-19. B.C. residents who lost their employment or self-employment income for reasons related to COVID-19 on or after March 1, 2020 and that were eligible for the Canada Emergency Response Benefit (CERB) were eligible for the B.C. Emergency Benefit for Workers. Over 643,000 British Columbians received this benefit.

Supports for Income and Disability Assistance Clients ($718 million): From April to December 2020, income and disability assistance clients, including low-income seniors receiving the Seniors Supplement, received a temporary crisis supplement of $300 per month. This new emergency funding was put in place to ensure that those in greatest need do not encounter additional barriers while some service organizations closed or reduced service hours during the pandemic, and to help cover the increased costs of food and shelter. In January - March 2021, the BC Recovery Supplement provided $150 monthly increase to existing income and disability assistance benefits. Other measures include increased funding for the transportation supplement and temporary earning exemptions related to federal support measures such as the Canada Emergency Response Benefit (CERB) to ensure that provincial supports are not reduced due to these supports. Over 200,000 people, including clients and their families, have benefited from these additional supports.

Temporary Rental Supplement ($129 million): A temporary rental supplement of $500 per month for eligible households with dependents and $300 per month for eligible households with no dependents, which was available for the months of April through to August 2020 on a per-household basis for low-to-middle income households where the income has been affected by COVID-19. Over 87,000 applications were approved for this supplement.

Canada Emergency Commercial Rent Assistance Program ($70 million provincial contribution): This was a federal-provincial cost share program that provided forgivable loans to qualifying commercial property owners to cover 50 per cent of monthly rent payments that are payable by eligible small business tenants who experienced financial hardship between April and September. The loans were forgiven if the mortgaged property owner agreed to reduce the small business tenants' rent by at least 75 per cent under a rent forgiveness agreement, which included a term not to evict the tenant while the agreement is in place. The small business tenant covered the remainder, up to 25 per cent of the rent. The federal government has subsequently introduced a new Canada Emergency Rent Subsidy program.

Emergency financial relief for businesses/sectors ($60 million): Targeted funding to support businesses, non-profit organizations and sectors which includes:

- Emergency funding to support the continued care of animals in major facilities, tourism attractions, and refuge and re-habitation centres that have reduced their operations due to COVID-19;
- Support for park operators to prepare BC Parks for re-opening and to implement a day use reservation system for 12 high-use parks;
- Financial relief to Community Destination Marketing Organizations to offset Municipal Regional District Tax (MRDT) revenue loss and to support local recovery efforts;

- Support for the domestic film and television industry to assist with restart and recovery and maintain B.C.'s competitive motion picture sector;
- Financial relief to Local Sport Organizations (LSOs) to support their administration and operational needs to help restart in sports; and
- Financial relief for the Royal BC Museum and the BC Pavilion Corporation to maintain operations during prolonged closures and health restrictions on major events.

Increased Employment Incentive ($190 million): the Increased Employment Incentive is a new refundable tax credit to employers who increase their total payroll for B.C. employees from the third to the fourth quarter of 2020. The incentive is intended to help B.C. businesses that were affected by the COVID-19 pandemic to recover and help create good jobs for people. Employers can increase their payroll by hiring new employees, increasing the hours of existing employees, or giving existing employees a raise. Applications for this program is anticipated to begin in March 2021. The spending for this program for fiscal 2020/21 and 2021/22 are forecasted to be $40 million and $150 million respectively.

Economic Recovery Spending Measures ($1.4 billion): Government has implemented a number of measures as part of the *StrongerBC Economic Recovery Plan* to support job creation and training opportunities and to provide recovery supports for businesses and community. Initiatives also aim to strengthen food security and supply chains and to improve economic resiliency in B.C. through investments in connectivity, clean energy, manufacturing and forestry. An updated list of economic recovery measures and forecasts as of February 28, 2021 is listed in the following table. Updated forecasts or newly introduced initiatives since the *StrongerBC Economic Recovery Plan* was introduced in September 2020 are shown in bold.

Economic Recovery Category and Measures	Allocation ($M)
Recovery for People - Jobs and Training	**361.663**
BC Parks and Conservation Officer Service Youth Employment	1.800
Community Job Creation Projects	25.000
Digital Superclusters – Youth Training & Job Placement	**7.000**
Early Retirement Bridging Program	**18.000**
Forest Employment Program	12.000
Jobs in Health Care	**229.900**
Indigenous Community Skills Training and Education	15.000
Micro-Credentialing	2.000
Employment Supports for People with Disabilities and with Barriers	20.000
Recreation Sites and Trails Youth Crew Program Expansion	0.428
Short-Term Skills Training for in-demand Jobs	20.000
Targeted Training for Health and Human Services	10.535
Recovery for People – Supports	**52.651**
Anti-Racism Restart and Recovery	**2.716**
K-12 Return to School Funding	45.600
Mental Health Support for the Workforce	2.000
Youth Suicide Prevention and Life Promotion	2.335
Recovery for Businesses	**277.200**
Amplify BC	**22.500**
Amateur Sports	**15.000**
Building Confidence App	2.000
Destination B.C. Tourism Recovery Strategy	5.000
Digital Marketing and Launch Online	**44.000**
Indigenous Tourism BC	**5.000**
Small Business Recovery Grant[1] **including Tourism Top-up**	**150.000**
Technology & Innovation - Digitization of the Industrial Lands Inventory	0.700
Tourism Dependent Communities	19.400
Tourism Regional Destination Marketing Initiatives	13.600
Recovery for Communities - Community Infrastructure	**366.533**
Active Transportation - Connections, Road Widening and Maintenance	16.675
Air Access Grants	15.750
COVID-19 Community Economic Recovery Infrastructure Program	100.000
Highways Climate Change Adaptation	20.700
Anacla/Bamfield Economic Recovery Initiative	25.700
Intercity Bus Grants	**10.750**
Investing in Canada Infrastructure Program	**41.188**
Regional/ Local Airports Medivac Grants	**16.500**

Economic Recovery Category and Measures	Allocation ($M)
Regional Port Enhancement Program	40.000
Remote and Rural Community Access Program	25.650
Species and Ecosystems Conservation and Restoration	10.215
Shoreline Clean-up, Derelict Vessel and Illegal Dumping Clean-Up	14.830
Tulsequah Chief Mine Remediation	1.575
Watershed Initiative and Wetlands Projects (Watersheds B.C.)	27.000
Recovery for Communities - Social Supports	**133.760**
Arts and Culture Resilience Plan	**35.000**
Child Care Spaces and Safety Grants	**98.760**
Building for a Better Future - Food Security and Farming	**29.540**
Agritech	**7.500**
Expanding B.C.'s Food Hub	5.600
Increasing B.C. Food Production and Processing	1.950
Invasive Species Detection and Removal	12.000
New Entrant Land Matching Program and Provincial Replant Program	0.890
On-Farm Innovation Top-Up Program	1.600
Building for a Better Future - Self-Resilience	**188.750**
Building Innovation Fund Recapitalization	8.000
Centre for Innovation and Clean Energy[2]	**0.000**
Commercial Vehicle Innovation Challenge	30.000
Convert Underperforming Forests	5.000
Go Electric Specialty Use Vehicle Incentive Program	31.000
Mass Timber Demonstration Projects	3.000
Property Assessed Clean Energy (PACE) Roadmap and Pilot Program	**0.500**
Recycled Plastics Manufacturing Stimulus	5.000
Technology & Innovation – Connectivity	90.000
Value Added Manufacturing and Supply Chains	**16.250**
Vote 52 Operating Total	**1,410.097**
CRF Capital Measures – Community Infrastructure	**7.400**
BC Parks Stimulus Proposal – Capital Construction Projects	5.000
Remote and Rural Roads Access	2.400
Total Economic Recovery Spending	**1,417.497**

[1] The Small and Medium Sized Business Program has a total program allocation of $345 million, with the application period extended until August 31, 2021. The spending forecast for this program is $150 million in 2020/21 and $195 million in 2021/22.

[2] The $35 million allocated for the Centre for Innovation and Clean Energy has been included in the budget for 2021/22 due to changes in the implementation timelines.

Vote 53 Federal-Provincial Pandemic Contingencies

Municipalities ($270 million provincial and $270 million federal funding for a total of $540 million): Funding to local governments in response to revenue loss and additional service needs, such as increased funding to address homelessness and community safety, as a result of COVID-19.

Transit ($540 million provincial and $540 million federal funding for a total of $1.08 billion): Funding to BC Transit, TransLink and BC Ferries in response to revenue loss and additional service needs as a result of COVID-19.

Statutory Spending, Tax and Other Relief Measures

Reduced school tax for commercial properties for the 2020 calendar year ($714 million): Reduced the school property tax rate for commercial properties (property classes 4, 5, 6, 7, and 8) to achieve an average 25 per cent reduction in the total property tax bill for most businesses for the 2020 calendar year.

ICBC COVID-19 Customer Premium Rebate ($600 million): ICBC customers will receive one-time rebates averaging $190 this spring as part of the $600 million that was saved due to a major decrease in crashes and costs during the COVID-19 pandemic. Most customers who had an active policy from April 1 to September 30, 2020, will be eligible, with their rebate amount based on a portion of what they paid for coverage during that period.

B.C. Climate Action Tax Credit one-time enhancement ($500 million): Approximately 80 per cent of British Columbians benefited from a one-time enhancement to the B.C. Climate Action Tax Credit in July 2020 with up to $174.50 for adults and up to $51.25 per child. With this enhancement and the regular credit amount, an eligible family of four received a combined payment of up to $564 and eligible individuals received a combined payment up to $218. This boosts the regular Climate Action Tax Credit payment by up to $112.50 per family of four and by up to $43.50 per adult.

Temporary PST Rebate on Select Machinery and Equipment ($470 million): Effective September 17, 2020, eligible businesses will receive a 100 per cent PST rebate on select machinery and equipment. This program will run for one year, ending on September 30, 2021. This will support businesses to pivot operations to meet provincial health orders and adjust to a post-COVID economy.

Pandemic Pay for Frontline Workers ($384 million): A federal-provincial cost-shared program to provide a one-time temporary wage boost for health, social services and corrections employees delivering in-person, front-line care during the COVID-19 pandemic. Pandemic pay is anticipated to benefit over 250,000 front-line workers in health and social services by providing an hourly wage boost over the 16-week period starting on March 15, 2020, during the height of the Province's initial response to the pandemic.

Delays to the planned increase in the carbon tax rate and delays in the effective date of other new tax measures ($268 million): Postponing the scheduled April 1, 2020 increase to the carbon tax rate and delaying the July 1, 2020 implementation of the PST on sweetened, carbonated drinks and change to PST registration requirements to April 1, 2021.

Housing Priority Initiatives (HPI) Special Account hotel purchases ($196 million): To provide temporary housing for those formerly living in the encampments in Oppenheimer Park, Pandora Avenue, Topaz Park, and other Victoria and Vancouver encampments. As of February 28, 2021, the Province has purchased 4 hotels:

- Comfort Inn (Victoria) – approx. $19.6 million
- Paul's Motor Inn (Victoria) – approx. $14.5 million
- Howard Johnson Hotel (Vancouver) – approx. $56.9 million
- Buchan Hotel (Vancouver) – approx. $19.7 million

The Province also continues to pursue other properties to support resolving encampments in Victoria and Vancouver. Statutory spending under the HPI special account for the hotels (and related closing costs) will support temporary housing for those formerly living in the encampments in the short and medium term while a permanent long-term housing plan is under development.

Emergency Program Act (EPA) – COVID-19 related costs ($68 million): Under the EPA, the Province anticipates statutory spending above the voted allocation to manage emergency costs within scope of the act. This includes an estimated $44 million for COVID-19 related emergency management costs such as costs related to managing emergency operations centres to support provincial, regional and local coordination, and emergency measures to support returning travellers and temporary foreign workers with self-isolation requirements.

Wholesale pricing for liquor licenses ($31 million): Wholesale pricing that will allow liquor licensees, such as restaurants, bars and tourism operators, to purchase beer, wine and spirits at reduced cost from the end of July 2020 to March 31, 2021. This measure has now been extended permanently.

ICBC temporary fee relief measures ($17 million): Temporary relief measures to August 2020 which included:

- Waiving the $30 fee for cancelled insurance
- Waiving the $18 plating fee for reinstating a vehicle policy
- Suspension of insurance for fleet vehicle customers

Forest Enhancement Society ($11 million): Revised spending targets for the Forest Enhancement Society to ensure that its tree planting continues as planned to secure future economic and environmental benefits while meeting the new COVID-19 related guidelines for industrial camps.

Columbia Basin Trust Regional Grants ($5 million): To support the Province's response to the impacts of the COVID-19 pandemic , the Columbia Basin Trust increased its spending on regional grants by allocating its 2020/21 forecasted net income surplus of $5 million on new regional grants to support enhancements to internet connectivity, affordable housing, business supports, and outdoor spaces.

Commercial Recreation Tenures and Permits Financial Relief ($3 million): Financial relief for rent owing for *Land Act* commercial recreation tenures, adventure guides, and commercial recreation park use permits under the Park Act to support tourism operators experiencing financial hardship due to the COVID-19 pandemic.

Fee Relief for the Gaming Sector ($2 million): Waives the fee obligation for gaming services facilities providers and their senior officials to pay one anniversary fee in light of year-long facility closures.

Temporary Deferral Measures

Six-month moratorium on student loan collection ($73 million in deferrals): Starting March 30, 2020, all B.C. student loan repayments were automatically frozen until September 30, 2020.

BC Hydro bill deferrals for industrial customers and other relief measures ($104 million): Qualifying major industrial customers, like pulp and paper mills and mines, were able to defer 50 per cent of their bill payments for six months, to the end of August 2020. In addition, the industrial relief includes bill relief to certain large industrial customers in the form of reduced demand charges. BC Hydro also provided bill relief and credit to residential and commercial customers.

Stumpage Fee Deferrals ($2 million): To support companies with financial liquidity while navigating through the COVID-19 crisis, a stumpage fee deferral was available to holders of tree farm licenses, replaceable forest licenses and First Nations woodlands license. The deferral period was for 3 months (May 1, 2020 to July 31, 2020) and interest accrued on any outstanding balances that carried through the deferral period. The revenue deferred from this program was estimated at $2 million and has since been repaid.

Postponing municipal remittance date for school taxes to the end of the 2020 calendar year (over $1 billion in deferrals): Delayed the remittances from the summer to the end of the year to provide significant relief to local governments facing cash flow issues.

Extending tax filing and payment deadlines (over $5 billion in deferrals): Provided administrative relief to businesses by postponing the filing and payment date by six months for PST, municipal and regional district tax on short-term accommodation, tobacco tax, motor fuel tax, and carbon tax; and until April 1, 2021 for the employer health tax instalment payment deadlines.

2020/21 capital spending at the *Third Quarterly Report*			**10,089**	**10,089**

Provincial Capital Spending

Capital spending is projected to total $10.1 billion in 2020/21 — $57 million lower than the forecast in the *Fall 2020 Economic & Fiscal Update* (see Table 4.3).

The forecast for taxpayer-supported capital spending is $504 million lower than in the *Fall 2020 Economic & Fiscal Update*, mainly due to changes in the timing of capital project spending in the health and transportation sectors, and timing of maintenance and acquisition of core government assets.

Self-supported capital spending is expected to be $447 million higher than the forecast in the *Fall 2020 Economic & Fiscal Update*, primarily due to higher capital spending by BC Hydro, which is partially offset by lower capital spending in the other commercial Crown corporations.

2020/21 provincial debt forecast at the *Third Quarterly Report*			**87,486**	**87,486**

Provincial Debt

The provincial debt is projected to total $87.5 billion by the end of the fiscal year — $11.1 billion higher than the projection at *Budget 2020*, and $1.1 billion lower from the projection in the *Fall 2020 Economic & Fiscal Update*.

Taxpayer-supported debt is projected to be $60.0 billion — $10.8 billion higher than the projection at *Budget 2020*. The forecast is $584 million lower than at the *Fall 2020 Economic & Fiscal Update* mainly due to improved operating results, partially offset by changes in working capital balances.

Self-supported debt is projected to be $27.5 billion — $634 million higher than the projection at *Budget 2020*, and $444 million higher than at the *Fall 2020 Economic & Fiscal Update* mainly due to higher capital spending.

The $1 billion forecast allowance from the *Fall 2020 Economic & Fiscal Update* has been removed to mirror the operating statement forecast allowance.

Details on changes in provincial debt by quarter are shown in Table 4.4.

Risks to the Fiscal Forecast

Although the publication date for *Budget 2021* is after the fiscal year end of March 31, the fiscal forecast for 2020/21 is based on information obtained from ministries, agencies, and other sources in February, and does not constitute final results. However, the range of potential change to the current forecast is expected to be low, and does not necessitate maintaining an amount for forecast allowance.

The forecasts of revenues, expenditures, capital spending and debt are estimates based on multiple economic, financial and external factors. In addition, capital spending and debt figures may be influenced by several factors including design development, procurement activity, weather, geotechnical conditions and interest rates. As a result, the actual operating surplus, capital expenditure and debt figures may differ from the current forecast.

Revenues can be volatile due in part to the influence of the cyclical nature of the natural resource sector in the economy. Changes in energy or commodity prices, such as natural gas and lumber, may have a significant effect on revenue and the fiscal forecast.

The spending forecast in the fiscal plan is based on ministry and service delivery agency plans and strategies. The main risks are changes to planning assumptions, such as utilization or demand rates for government services in the health care, education, or community social services sectors, and costs associated with natural disaster responses.

Supplementary Schedules

The following tables provide the financial results for the nine months ended December 31, 2020, and the 2020/21 full-year forecast.

[1] Restated to reflect government's current organization and accounting policies as of December 31, 2020.

[2] On March 23, 2020, the Legislative Assembly passed *Supplementary Estimates* of $5 billion to establish a new Vote 52 - Contingencies (All Ministries): Pandemic Response and Economic Recovery. An additional $2 billion in appropriation was authorized on December 17, 2020 to fund further COVID-19 measures.

[3] On August 14, 2020, the Legislative Assembly passed *Supplementary Estimates No. 2* of $1 billion to establish a new Vote 53 - Contingencies (All Ministries): Federal and Provincial Pandemic Support. The forecast reflects the provincial portion of the federal-provincial cost-shared investments under the Safe Restart Agreement.

[4] As of December 31, 2020, COVID-19 spending funded by Vote 52 is as follows (by ministry): $1,490 million Finance - B.C. Emergency Benefits for Workers; $992 million Health; $642 million Social Development and Poverty Reduction; $296 million Children and Family Development; $191 million Attorney General (Housing); $234 million other ministries. Additional COVID-19 spending include: $405 million from Vote 53 and $176 million from the base budgets of various ministries; bringing the total Q3 actual COVID-19 spending to $4.426 billion.

[5] Reflects payments made under an agreement where an expense from a voted appropriation is recorded as revenue by a special account.

A1: Tax Expenditures

Introduction

Tax expenditures reduce the amount of tax a taxpayer pays and are used to deliver government programs or benefits through the tax system. Tax expenditures are usually made by offering special tax rates, exemptions or credits. Governments introduce tax expenditures primarily to achieve social policy objectives such as transfers to lower-income families or to promote economic development and job creation.

Reporting tax expenditures improves government accountability by providing a more complete picture of government activities. The tax expenditure appendix does not include tax expenditures introduced or expanded in *Budget 2021*; these are described in *Part 2: Tax Measures*. Beginning with *Budget 2012*, refundable tax transfers are accounted for in a voted appropriation. For transparency and consistency with previous tax expenditure reports, Tables A1.1.1 and A1.1.2 also report on these tax transfers.

The Role of Tax Expenditure Programs

Using the tax system to deliver programs can reduce administration costs and compliance costs for recipients. In certain situations, the tax system allows intended beneficiaries to be readily identified from information that is already collected. In these cases, setting up a separate expenditure program would result in costly overlap and duplication of effort. An example is the climate action tax credit, which is delivered through the income tax system by the Canada Revenue Agency. If this were a direct provincial expenditure program, a provincial agency or office would have to be established to duplicate much of the work already done by the Canada Revenue Agency. In addition, it would require individuals to undertake a separate, time-consuming application process to qualify for the benefit.

There are several potential drawbacks to tax expenditure programs. First, their overall cost often receives less public scrutiny than is the case for spending programs because annual budget appropriations by the legislature are not typically required. Second, tax expenditure programs do not always effectively target those who are intended to benefit from them. Some tax expenditure programs that are intended to provide tax relief for lower-income earners may, in reality, provide the greatest benefit to higher-income earners who pay the most taxes. Finally, costs are often more difficult to control under a tax expenditure program because the benefits tend to be more open-ended and enforcement is often more difficult than for spending programs.

Tax Expenditure Reporting

Not all tax reductions, credits, exemptions and refunds are classed as tax expenditures.

The emphasis is on tax reductions, credits, exemptions and refunds that are close equivalents to spending programs. By implication, the list does not include tax measures designed to meet broad tax policy objectives such as improving fairness in the tax system or measures designed to simplify the administration of a tax. The list also does not include anything that is not intended to be part of a tax base.

Tax expenditures that cost less than $2 million annually are generally not included. Where practical, smaller items have been presented together as an aggregate figure.

British Columbia Tax Expenditures

Tables A1.1.1 to A1.5 report tax expenditure estimates.

The cost of individual tax expenditures cannot be added together to reach a total tax expenditure figure for two reasons: in some cases, the programs interact with one another so that eliminating one program could increase or decrease the cost of another; and eliminating certain tax expenditure programs could change the choices taxpayers make, which in turn would affect the cost estimates.

The estimates for each tax expenditure are based on a static analysis of the costs and do not consider any behavioural changes, which could change the costs over time. In addition, estimates are generally recalculated each year using current data sources and using refinements to the methods of estimation, which can result in significant changes to the value of a given tax expenditure from prior years' reports.

Tables A1.1.1 and A1.1.2 list tax programs delivered through refundable personal and corporate income tax credits, respectively. Refundable tax credits can be used to reduce income tax liabilities with any remainder refunded to the taxpayer. These tax credits are reported in a voted appropriation.

Tables A1.2.1 and A1.2.2 list tax expenditures that are deductions, exemptions or non-refundable tax credits for personal and corporate income tax, respectively. Deductions reduce taxable income, whereas non-refundable tax credits can only be used to reduce income taxes payable. The tables include both provincial measures and federal measures. Federal measures are deductions and exemptions that reduce British Columbia income tax. Under the tax collection agreement between British Columbia and the federal government, the federal government has sole responsibility for determining income subject to tax, including British Columbia tax.

Table A1.3 lists property tax exemptions and grants. Property tax exemptions can reduce the tax owing or remove a property from tax. Grants reduce the final tax owing and may be refunded after full payment has been received. Exemptions are used to define the tax base; estimates for property tax expenditures for government entities, municipalities, colleges, schools, hospitals and similar public facilities are not shown.

Table A1.4 lists consumption tax exemptions. Fuel tax estimates include point-of-sale exemptions for certain individuals and businesses, and refunds if fuel is purchased then subsequently used for an exempt purpose. Provincial sales tax exemptions are typically point-of-sale exemptions and either apply to everyone at the point of sale or apply in certain circumstances with appropriate documentation.

Table A1.5 reports a refundable employer health tax credit provided as part of B.C.'s Economic Recovery Plan.

More information on British Columbia tax expenditures in Tables A1.1.1 to A1.5 can be found at https://www2.gov.bc.ca/gov/content/taxes. Information on federal tax expenditures in Tables A1.2.1 and A1.2.2 can be found at https://www.canada.ca/en/services/taxes/income-tax.html.

Table A1.1.1 Personal Income Tax – Tax Expenditures (Refundable Tax Credits)

	2019/20 Actual Cost ($ millions)	2020/21 Estimated Cost[1] ($ millions)	2021/22 Planned Cost ($ millions)
BC Child Opportunity Benefit	-	141	410
• Tax-free monthly payment made to eligible families to help with the cost of raising children under age 18.			
• The maximum benefit is $1,600 for a family's first child, $1,000 for a second child and $800 for each subsequent child.			
• Started October 1, 2020.			
BC Recovery Benefit	-	1,307	100
• Provides a one-time tax-free payment to British Columbians of $500 per individual or $1,000 per family.			
• The benefit is reduced between $62,500 and $87,500 of net income for individuals and $125,000 and $175,000 of family net income for families.			
• Application period commenced December 18, 2020.			
Climate action tax credit	252	802	312
• Helps offset the impact of the carbon taxes paid by low- to moderate-income individuals and families.			
• The benefit varies based on the composition of the family and their family net income.			
• Includes a one-time enhanced payment in July 2020 made as part of B.C.'s COVID-19 Action Plan.			
• Introduced in 2008 with the carbon tax.			
Early childhood tax benefit	132	133	-
• Tax-free monthly payment made to eligible families to help with the cost of raising children under age 6.			
• The maximum benefit was $660 per year per child under the age of 6 and was reduced between family net income of $100,000 and $150,000.			
• The early childhood tax benefit was replaced with the BC Child Opportunity Benefit effective October 1, 2020.			
Emergency Benefit for Workers	-	645	-
• Provided a one-time tax-free payment of $1,000 to British Columbians who lost income or employment between March 1, 2020 and September 26, 2020 due to the COVID-19 pandemic.			
• Introduced as part of BC's COVID-19 Action Plan and ended on December 2, 2020.			
Home renovation tax credit for seniors and persons with disabilities	2	4	3
• Assists eligible individuals 65 and over and persons with disabilities with the cost of certain permanent home renovations to improve accessibility or be more functional or mobile at home.			
• Recipients may receive up to 10 per cent of qualifying renovation expenses, up to a maximum of $10,000 of qualifying renovation expenses or $1,000.			
• Introduced in 2012.			
Sales tax credit	51	65	58
• Helps offset the cost of provincial sales tax for low-income individuals and families.			
• The maximum benefit is $75 for individuals and $150 for couples.			
• Reintroduced in 2013 in conjunction with reimplementation of the provincial sales tax.			
Small business venture capital tax credit	26	29	30
• Encourages investors to make early-stage equity investments that help B.C. small businesses develop and grow.			
• Individuals receive a credit of up to 30 per cent of their investment and may claim a benefit of up to $120,000 per tax year.			
• Introduced in 1979.			
Training tax credits [2]	11	12	12
• Provides refundable income tax credits for apprentices based on the apprenticeship level completed.			
• Provides refundable income tax credits for employers who employ apprentices of up to 15 per cent of the apprentices' salaries.			
• Introduced in 2007. Sunset date of December 31, 2022.			

[1] Figures include prior year adjustments of -$3 million for the sales tax credit.

[2] Training tax credits for corporations are listed in Table A1.1.2. The training tax credit for individuals includes tax credits for apprentices and unincorporated employers.

Table A1.1.2 Corporate Income Tax – Tax Expenditures (Refundable Tax Credits)

	2019/20 Actual Cost	2020/21 Estimated Cost[1]	2021/22 Planned Cost
	($ millions)	($ millions)	($ millions)
Book publishing tax credit	2	2	3
• Supports book publishers that carry out business primarily in B.C.			
• Introduced in 2003.			
• *Budget 2021* extends this credit for five years to March 31, 2026.			
Film Incentive BC tax credit	69	171	118
• Supports the production of film or television productions in B.C. The Film Incentive BC tax credit is for domestic productions meeting Canadian content requirements.			
• Basic, regional location and film training tax credits were introduced in 1998.			
• Digital animation and visual effects (DAVE) tax credit was introduced in 2008, and expanded to post-production activities in 2015.			
• Distant location tax credit was introduced in 2009.			
• B.C.-based scriptwriters tax credit was introduced in 2018.			
• Tax credit does not have a sunset date.			
Production services tax credit	631	704	667
• Supports the production of film or video productions in B.C. The production services tax credit is available to both domestic and foreign producers.			
• Introduced in 1998.			
• Regional location tax credit and digital animation and visual effects (DAVE) tax credit introduced in 2008. Post-production activities became eligible for the DAVE credit in 2015.			
• Distant location tax credit was introduced in 2009.			
• Tax credit does not have a sunset date.			
Interactive digital media tax credit	86	91	71
• Supports the development of interactive digital media products in B.C.			
• In 2017, eligibility was expanded to small business venture capital corporations, and principal business requirements were relaxed for corporations with annual qualifying B.C. labour expenditures greater than $2 million.			
• Introduced in September 2010. Sunset date of August 31, 2023.			
International business activity program tax refunds	3	2	-
• Provided eligible corporations, certain foreign banks authorized to carry on business in Canada and specialists employed by these entities a refund of B.C. income tax paid on income related to the corporation's international business carried on in B.C.			
• Program eliminated effective September 12, 2017. The 2019/20 cost represents refunds paid in respect of eligible income earned before September 12, 2017.			
Mining exploration tax credit	36	29	20
• Supports eligible corporations conducting grassroots mineral exploration in B.C.			
• Introduced for expenditures incurred after July 31, 1998; expanded to active partners in partnerships effective after March 31, 2003 and enhanced tax credit for prescribed areas introduced effective after February 20, 2007.			
• Tax credit does not have a sunset date.			
Scientific research and experimental development tax credit[2]	71	121	101
• Supports research and development carried on in B.C.			
• Capital expenditures removed from qualifying expenditures effective after 2013 and taxable income removed from calculation of refundable tax credit expenditure limit for taxation years ending after March 18, 2019.			
• Introduced effective September 1, 1999. Sunset date of August 31, 2022.			

[1] Figures include prior year adjustments of -$1 million for the book publishing tax credit, $53 million for the Film Incentive BC tax credit, $18 million for the production services tax credit, $17 million for the interactive digital media tax credit, $25 million for the refundable portion of the scientific research and experimental development tax credit and -$9 million for the mining exploration tax credit.

[2] The scientific research and experimental development tax credit has a non-refundable component, which is reported in Table A1.2.2.

Table A1.1.2 Corporate Income Tax – Tax Expenditures (Refundable Tax Credits) (continued)

	2019/20 Actual Cost	2020/21 Estimated Cost	2021/22 Planned Cost
	($ millions)	($ millions)	($ millions)
Training tax credits [1]	10	12	10
• Provides refundable income tax credits for employers who employ apprentices of up to 15 per cent of the apprentices' salaries.			
• Enhanced tax credit for shipbuilders and ship repair industry for expenditures made on or after October 1, 2012.			
• Introduced effective January 1, 2007. Sunset date of December 31, 2022.			

[1] Training tax credits for individuals are reported in Table A1.1.1.

Table A1.2.1 Personal Income Tax – Tax Expenditures (Deductions and Non-Refundable Tax Credits)

	2019/20 Actual Cost	2020/21 Estimated Cost	2021/22 Planned Cost
	($ millions)	($ millions)	($ millions)
Provincial Measures			
Age tax credit	101	105	109
• Provides an income-tested tax credit to elderly British Columbians.			
• Introduced in 2000.			
BC caregiver tax credit	6	6	6
• Provides a tax credit to individuals who care for family members with a disability.			
• Introduced in 2018 in response to changes to the federal caregiver tax credit.			
Canada Pension Plan tax credit	198	210	211
• Provides a tax credit to individuals who make Canada Pension Plan contributions.			
• Introduced in 2000.			
Charitable donations tax credit	277	281	284
• Provides a tax credit to individuals who make charitable donations to registered charities and eligible donees.			
• Introduced in 2000.			
Disability tax credit	37	39	40
• Provides a tax credit to persons with a disability.			
• Introduced in 2000.			
Employment Insurance tax credit	59	63	63
• Provides a tax credit to individuals who pay Employment Insurance premiums.			
• Introduced in 2000.			
Medical expense tax credit	77	79	79
• Provides a tax credit to individuals who make sufficient qualifying medical expenditures.			
• Introduced in 2000.			
Mining flow-through share tax credit	20	20	20
• Provides a tax credit to individuals who invest in flow-through shares on renounced mining expenditures.			
• Introduced in 2001. Sunset date removed in 2019.			
Pension tax credit	30	30	31
• Provides a tax credit to individuals who receive amounts from private pension plans.			
• Introduced in 2000.			
Political contribution tax credit	3	3	3
• Provides a tax credit to individuals who donate to provincial political parties, constitutency associations or candidates.			
• Introduced in 2000. Prior to 2000, B.C. had a similar deduction, rather than a credit.			

Table A1.2.1 Personal Income Tax – Tax Expenditures (Deductions and Non-Refundable Tax Credits) (continued)

	2019/20 Actual Cost	2020/21 Estimated Cost	2021/22 Planned Cost
	($ millions)	($ millions)	($ millions)
Provincial Measures (continued)			
Spousal and eligible dependant tax credits	88	90	91
• Provides a tax credit to an individual who has a low-income spouse, or to a single parent who supports a minor child.			
• Introduced in 2000.			
Tuition tax credit	60	61	62
• Provides a tax credit for tuition paid to a post-secondary institution.			
• Costs also include education tax credit amounts in respect of studies prior to the elimination of that tax credit in 2019, which have been carried forward.			
• Unused tax credits may be carried forward to future years.			
• Introduced in 2000.			
Federal Measures [1]			
Child care expense deduction	74	51	60
• Allows families to deduct child care costs from taxable income.			
• Introduced in 1972.			
Non-taxation of business-paid health and dental benefits	153	181	190
• Allows for private health and dental benefits to not be taxed.			
• Introduced in 1948.			
Northern residents deduction	17	15	21
• Provides a deduction to individuals living in northern communities.			
• Introduced in 1987.			
Pension income splitting	83	92	101
• Allows for spouses to split pension income, other than income from the Canada Pension Plan and Old Age Security.			
• Introduced in 2007.			
Registered pension plans	1,526	1,395	1,425
• Allows amounts contributed to a pension plan to be deducted from taxable income.			
• Introduced in 1919.			
Registered retirement savings plans (RRSPs)	891	826	812
• Allows amounts contributed to an RRSP to be deducted from taxable income.			
• Introduced in 1957.			
Tax-free savings accounts (TFSAs)	83	66	67
• Allows for investment income to be earned tax-free within a TFSA.			
• Introduced in 2009.			

[1] These measures show the foregone provincial revenue resulting from federal measures . Each measure is calculated from the 2021 federal cost projections as reported in the Government of Canada's *Report on Federal Tax Expenditures 2021* by applying British Columbia residents' share of the measure and the relevant tax rates. Certain tax expenditure items have been excluded where no data is available or the amounts are immaterial.

Table A1.2.2 Corporate Income Tax – Tax Expenditures (Deductions and Non-Refundable Tax Credits)

	2019/20 Actual Cost ($ millions)	2020/21 Estimated Cost ($ millions)	2021/22 Planned Cost ($ millions)
Provincial Measures			
Small business venture capital tax credit	3	3	3
• See description under Table A1.1.1.			
• Corporations receive a credit of up to 30 per cent of their investment. There is no annual limit on the benefit that can be claimed.			
Scientific research and experimental development tax credit [1]	108	77	89
• See description under Table A1.1.2.			
Small business corporate income tax rate	1,394	1,460	1,271
• Provides a reduced income tax rate for Canadian-controlled private corporations on active business income up to $500,000.			
• The small business corporate income tax rate was reduced to 2 per cent from 2.5 per cent effective April 1, 2017.			
• Introduced in 1975.			
Additional access to small business corporate income tax rate for credit unions	43	25	22
• Provides a reduced income tax rate for credit unions on a portion of taxable income.			
• Introduced in 1977.			
• In 2017, expanded access for credit unions to the provincial reduced tax rate continued despite the phase-out of the corresponding federal measure.			
Federal Measure [2]			
Charitable donations deduction	83	83	82
• Generally permits corporations to deduct charitable donations made to registered charities up to a maximum of 75 per cent of the corporation's taxable income. The limit may be exceeded for donations of certain items.			
• Encourages corporations to make donations to charities.			
• Introduced in 1929 for certain charities, and expanded to all charities by 1933.			

[1] The scientific research and experimental development tax credit has a refundable component, which is reported in Table A1.1.2.

[2] The deduction for corporate charitable donations is a federal measure but the estimate shows only the foregone provincial revenue. This is calculated from the 2021 federal cost projection as reported in the Government of Canada's *Report on Federal Tax Expenditures 2021* by applying British Columbia's share of corporate taxable income and the relevant tax rates to the federal estimate.

Table A1.3 Property Taxes – Tax Expenditures

	2019/20 Actual Cost ($ millions)	2020/21 Estimated Cost ($ millions)	2021/22 Planned Cost ($ millions)
School and Rural Area Property Tax			
Assessment exemption of $10,000 for business properties [1]	6	6	6
• Assessed improvement values for property tax are reduced by $10,000 for each industrial and business property.			
• Introduced in 1984.			
Overnight tourist accommodation assessment relief [1]	2	2	2
• Reduces the taxable assessed value of smaller tourist accommodation properties.			
• Introduced in 1988. Assessment reductions for properties in rural areas were increased in 2016.			
Home owner grant [2]	852	870	887
• Reduces property taxes for Canadians and permanent residents of Canada who use the property as their principal residence. The benefit relative to tax paid is greater for lower-valued homes.			
• The grant is phased out on properties with an assessed value above a threshold value. Low-income seniors and some other low-income individuals may be eligible for a low-income grant supplement if some or all of the grant is reduced because of the phase-out.			
• The grant is up to $275 higher for seniors, eligible veterans and people with disabilities.			
• The northern and rural area home owner benefit was introduced in 2011, which provides a $200 higher grant outside the Metro Vancouver, Capital and Fraser Valley regional districts.			
• Introduced in 1957.			

[1] Estimates are for the calendar years and include only school and rural area property taxes levied by the Province.

[2] The home owner grant includes the northern and rural area home owner benefit.

Table A1.3 Property Taxes – Tax Expenditures (continued)

	2019/20 Actual Cost ($ millions)	2020/21 Estimated Cost[1] ($ millions)
Property Transfer Tax		
Exemptions for the following:		
First Time Home Buyers	65	74
• Exempts Canadian citizens and permanent residents of Canada who purchase their first home.		
• The homeowner must live in the home as their principal residence for at least one year after purchase and the property must have a fair market value of $500,000 or less. A phase-out applies for homes up to $525,000.		
• Introduced in 1994.		
Newly Built Home	76	76
• Exempts Canadians and permanent residents of Canada from property transfer tax for a newly built home with a fair market value of up to $750,000. A partial exemption applies up to $800,000.		
• The homeowner must live in the home for at least one year after purchase. There is no requirement to live in B.C. before the purchase.		
• Introduced in 2016.		
Property transfers between related individuals	168	143
• Long-standing exemption for spousal and intergenerational transfers for principal residences, recreational properties and family farms and in the event of a division of property due to divorce or marital breakdown. Available to Canadians citizens and permanent residents of Canada.		
Property transfers to municipalities, regional districts, hospital districts, library boards, school boards, water districts	13	15
• Long-standing exemption for transfers to specified public bodies.		
Property transfers to charities registered under the *Income Tax Act* (Canada)	15	17
• Long-standing exemption for transfers of properties to a registered charity or a specified individual where the land will be used for a charitable purpose.		
Speculation and Vacancy Tax[2]		
$2,000 tax credit for B.C. residents	3	
• Provides a tax credit of up to $2,000 for owners who are B.C. residents on the first $400,000 of their property value subject to the tax.		
Income tax credit for non-B.C. residents who pay B.C. income tax	4	
• Provides a tax credit to reduce a non-B.C. resident's tax payable based on their B.C. income.		
Exemptions for the following:[3]		
Recently acquired or inherited properties	85	
• Provides an exemption from tax for a property that is purchased or acquired in the calendar year.		
Properties with no residence	60	
• Provides a temporary exemption from tax for vacant land. Ended after the 2019 tax year.		
Separation or divorce	7	
• Provides an exemption from tax for owners who are going through a separation or divorce.		
Death of an owner	15	
• Provides a two year exemption from tax for owners of a property that applies in the year of an owner's death and the following year.		
Rental restricted properties	32	
• Provides a temporary exemption from tax for properties with a rental restriction bylaw or covenant until 2022.		
Exemption for hazardous or damaged residential property	9	
• Provides an exemption from tax for property that is damaged by natural disaster or is uninhabitable.		
Exemption for strata accommodation property	3	
• Provides a temporary exemption from tax for properties that are strata hotels until 2021.		
Exemption for daycares	2	
• Provides an exemption from tax for property that is used as a licenced daycare.		

[1] Future costs for First Time Home Buyers' Program and Newly Built Home Exemption will vary depending on completion and sale of new homes below the threshold value and by activity of first-time buyers in the market. Other property transfer tax exemptions will be more stable over time.

[2] Certain exemptions such as the principal residence exemption, occupied by a tenant exemption and land under development exemption, are intended to exclude principal residences, rental properties and properties under development from the tax base.
Exemptions resulting in immaterial expenditures were excluded from this table.
Costs are for the 2019 calendar year. In calculating the cost of the expenditure no credits have been applied that an owner may have been entitled to receive had they been assessed tax. The calculations are based on actual exemptions claimed not what an owner would have otherwise been entitled to claim had they not chosen this particular exemption and are based on a 50 per cent ownership share which may not reflect the true mixture of owner types who jointly own property. All measures were introduced when the tax was introduced in 2018.

[3] This is the revenue spent on exemptions without applying any credits. Ownership percentage is assumed to be split into equal parts based on the number of owners on title (i.e., if a property has 3 owners, each owner is assumed to have 1/3 ownership). The tax rate of either 0.5 per cent or 2 per cent based on their ownership type is then applied to their ownership percentage.

Table A1.4 Consumption Taxes – Tax Expenditures

	2019/20 Estimated Cost[1] ($ millions)	2020/21 Estimated Cost ($ millions)	2021/22 Planned Cost ($ millions)
Fuel Taxes [2]			
Tax exemption for alternative fuels	3	3	3
• Exempts hydrogen used in a fuel cell vehicle, natural gas, and gasoline and diesel that contains at least 85 per cent methanol from motor fuel tax.			
• Introduced in 2009 for hydrogen used in a fuel cell vehicle, 1982 for natural gas and 1992 for 85 per cent methanol.			
Tax exemption for international flights (jet fuel)	23	12	18
• Exempts fuel purchased by interjurisdictional airlines from motor fuel tax.			
• Introduced in 2012.			
Tax exemptions for farmers [2]	12	11	12
• Exempts coloured gasoline and coloured diesel purchased by qualifying farmers from motor fuel and carbon tax.			
• Introduced in 2008 for motor fuel tax and 2014 for carbon tax.			
Provincial Sales Tax [3]			
Rebate for select machinery and equipment	-	235	235
• Provides, as part of B.C.'s Economic Recovery Plan, a temporary rebate to encourage business investment.			
Exemptions for the following:			
Food for human consumption [4]	1,554	1,594	1,585
• Provides an exemption to reduce the cost of basic necessities.			
Production machinery and equipment	225	175	186
• Provides an exemption to help reduce the cost of certain machinery and equipment for businesses in the manufacturing, oil and gas, mining and logging industries.			
Residential energy (e.g., electricity, natural gas, fuel oil)	266	276	281
• Provides an exemption to reduce the cost of residential energy.			
Non-residential electricity	172	198	198
• Provides an exemption to help businesses become more competitive and support increased investment, growth and job creation. Phased in starting January 1, 2018 and fully implemented on April 1, 2019.			
Prescription and non-prescription drugs, vitamins and certain other health care products	255	259	261
• Provides exemptions to reduce the cost of certain drugs, vitamins and health care products.			
Children's clothing and footwear	43	37	43
• Provides an exemption to reduce the cost of clothing and footwear for children under 15.			
Clothing patterns, fabrics and notions	8	8	8
• Provides an exemption to reduce the cost of patterns, yarns, natural fibres, threads and fabric that are commonly used in making or repairing clothing.			
Specified school supplies	46	46	46
• Provides an exemption to reduce the cost of school supplies.			
Books, magazines and newspapers	45	46	47
• Provides an exemption to reduce the cost of reading material.			
Basic land-line telephone and cable service	54	54	54
• Provides exemptions to reduce the cost of basic land-line telephone and basic cable television service.			
"1-800" and equivalent telephone services	4	4	4
• Provides an exemption to reduce the cost of offering toll-free telephone services.			
Specified safety equipment	39	42	42
• Provides exemptions to reduce the cost of specified work-related and general-use protective gear and safety equipment.			

[1] Exemptions are largely point-of-sale exemptions - they can only be estimated unlike expenditures provided through the income or property tax systems.

[2] Estimate is for both motor fuel tax and carbon tax.

[3] Estimates are based on internal data, publicly-available industry data and Statistics Canada data. All exemptions for provincial sales tax existed prior to the implementation of the *Provincial Sales Tax Act* in 2013 except for the exemption for non-residential electricity, which was introduced in 2018, and the expansion of the exemption for bicycles and tricycles in 2021 to include electric bicycles and tricycles.

[4] Effective April 1, 2021, carbonated sodas and certain other beverages are subject to provincial sales tax.

Table A1.4 Consumption Taxes – Tax Expenditures (continued)

	2019/20 Estimated Cost[1] ($ millions)	2020/21 Estimated Cost ($ millions)	2021/22 Planned Cost ($ millions)
Provincial Sales Tax[2]			
Exemptions for the following:			
Labour to repair major household appliances, clothing and footwear	15	15	15
• Provides exemptions to reduce the cost of repairing certain essentials.			
Livestock for human consumption and feed, seed and fertilizer	64	67	68
• Provides exemptions to reduce the cost of animals that are part of the food system.			
Specified energy conservation equipment	21	22	22
• Provides exemptions to reduce the cost of certain energy conservation equipment.			
Bicycles	14	15	22
• Provides exemptions to reduce the cost of non-motorized bicycles, adult-sized tricycles and parts and services. Expanded on April 21, 2021 to include electric bicycles and adult-sized tricycles, conversion kits and parts and services.			

[1] Exemptions are largely point-of-sale exemptions - they can only be estimated unlike expenditures provided through the income or property tax systems. Estimates are based on internal data, publicly-available industry data and Statistics Canada data. All exemptions for provincial sales tax existed prior to the
[2] implementation of the *Provincial Sales Tax Act* in 2013 except for the exemption for non-residential electricity, which was introduced in 2018, and the expansion of the exemption for bicycles and tricycles in 2021 to include electric bicycles and tricycles.

Table A1.5 Employer Health Tax – Tax Expenditures (Refundable Tax Credit)

	2019/20 Actual Cost ($ millions)	2020/21 Estimated Cost ($ millions)	2021/22 Planned Cost ($ millions)
Increased Employment Incentive	-	38	152
• Provides a refundable tax credit to employers who increase their payroll for low-to middle-income workers between the third and fourth quarters of 2020.			
• Introduced for the quarter ended December 31, 2020 as part of BC's Economic Recovery Plan.			

Table A2 Interprovincial Comparisons of Tax Rates – 2021 (Rates known and in effect as of April 1, 2021)

Tax	British Columbia	Alberta	Saskat-chewan	Manitoba	Ontario	Quebec	New Brunswick	Nova Scotia	Prince Edward Island	Newfound-land and Labrador
Corporate income tax (per cent of taxable income)										
General rate	12	8	12	12	11.5	11.5	14	14	16	15
Manufacturing rate [1]	12	8	10	12	10	11.5	14	14	16	15
Small business rate	2	2	2	0	3.2	3.2	2.5	2.5	2	3
Small business threshold ($000s)	500	500	600	500	500	500	500	500	500	500
Corporation capital tax (per cent)										
Financial [2]	*Nil*	*Nil*	0.7/4	6	*Nil*	1.25	4/5	4	5	6
Health care premiums/month ($)										
Individual/family [3]	*Nil*	*Nil*	*Nil*	*Nil*	*Nil*	*Nil*	*Nil*	*Nil*	*Nil*	*Nil*
Payroll tax (per cent) [4]	1.95	*Nil*	*Nil*	2.15	1.95	4.26	*Nil*	*Nil*	*Nil*	2
Insurance premium tax (per cent) [5]	2-7	3/4	3/4	2-4.25	2-3.5	3.48	2/3	3/4	3.75/4	5
Fuel tax (cents per litre) [6]										
Gasoline	24.46	21.84	23.84	22.84	31.87	29.7	29.5	25.5	25.1	32.5
Diesel	26.71	23.73	25.73	24.73	33.11	30.2	36.4	25.2	32.8	36.1
Sales tax (per cent) [7]										
General rate	7	*Nil*	6	7	8	9.975	10	10	10	10
Tobacco tax ($ per carton of 200 cigarettes) [8]	59	55	61.71	69.41	45.86	29.80	63.59	72.39	67.99	72.34

[1] In British Columbia (and some other provinces), the general rate applies to income from manufacturing and processing.

[2] In Saskatchewan, small financial corporations pay the rate of 0.7 per cent on their capital. A small financial corporation has less than $1.5 billion in taxable capital. Large financial corporations are subject to the 4 per cent rate. Manitoba's tax only applies to large financial corporations with taxable paid-up capital of at least $4 billion on taxable capital exceeding $10 million. Quebec's tax only applies to life insurance companies. In New Brunswick, trust and loan companies are subject to the rate of 4 per cent, while banks are subject to the rate of 5 per cent. Financial institutions in Prince Edward Island pay tax on their paid-up capital exceeding $2 million.

[3] British Columbia Medical Services Plan premiums were eliminated effective January 1, 2020. Ontario levies a health premium, as part of its provincial personal income tax system, of up to $900 per year per person.

[4] Provinces with payroll taxes provide payroll tax relief for small businesses. Quebec also levies a compensation tax of up to 4.29 per cent on salaries and wages paid by financial institutions.

[5] Lower rates apply to premiums for life, sickness and accident insurance; higher rates apply to premiums for property insurance including automobile insurance. In British Columbia, the highest rate applies to unlicensed insurance. In Manitoba, Ontario, Quebec and Newfoundland and Labrador, sales taxes also apply to certain insurance premiums except, generally, those related to individual life and health.

[6] Tax rates are for regular fuel used on highways and include all provincial taxes payable by consumers at the pump. The British Columbia rates include 6.75 cents per litre dedicated to the BC Transportation Financing Authority and the carbon tax rates of 9.96 cents per litre for gasoline and 11.71 cents per litre for diesel. The British Columbia rates do not include regional taxes that increase the gasoline and diesel rates by 12.5 cents per litre in the South Coast British Columbia Transportation Authority service region and by 5.5 cents per litre in the Capital Regional District. The rates for Ontario, Quebec, New Brunswick, Nova Scotia, Prince Edward Island, and Newfoundland and Labrador include provincial sales tax based on average pump prices as of February 2021. The rates for Alberta, Saskatchewan, Manitoba, and Ontario include federal carbon pricing backstop rates of 8.84 cents per litre for gasoline and 10.73 cents per litre for diesel. The rates for New Brunswick include a provincial carbon tax rate of 8.84 cents per litre for gasoline and 10.73 cents per litre for diesel. The rates for Prince Edward Island and Newfoundland and Labrador include provincial carbon tax rates of 6.63 cents per litre for gasoline and 8.05 cents per litre for diesel. Quebec's rates do not include increased or reduced regional tax rates, such as an additional 3 cents per litre on gasoline in the Montreal area.

[7] Tax rates shown are statutory rates. Ontario, Quebec, New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland and Labrador have harmonized their sales taxes with the federal GST. Alberta imposes a 4 per cent tax on short-term rental accommodation.

[8] Includes estimated provincial sales tax in all provinces except British Columbia, Alberta and Quebec.

Table A3 Comparison of Provincial and Federal Taxes by Province – 2021

Tax	British Columbia	Alberta	Saskat-chewan	Manitoba	Ontario	Quebec	New Brunswick	Nova Scotia	Prince Edward Island	New-foundland and Labrador

Personal Income Tax

- Income tax is based on basic personal credits, applicable credits and typical major deductions at each income level. Quebec residents pay federal income tax less an abatement of 16.5 per cent of basic federal tax. This abatement has been used to reduce Quebec provincial tax rather than federal tax, for comparative purposes.
- The amounts noted for each family are their family total incomes. Total income is used for these tables as it provides a more accurate view of the taxes paid by a family at a particular level of earnings. The two income family of four with $120,000 of income is assumed to have one spouse earning $80,000 and the other $40,000, the family with $90,000 of income is assumed to have one spouse earning $50,000 and the other $40,000, and each spouse in the senior couple is assumed to have $20,000 of income. The senior couple is assumed to have pension income and the remaining representative families are assumed to have employment income.

Net Child Benefits

- Net child benefits are provincial measures affecting payments to families with children. Provincial child benefit measures are available in B.C. (BC Child Opportunity Benefit), Alberta (Alberta Child and Family Benefit), Ontario (Child Benefit), Quebec (Child Assistance Payments), New Brunswick (Child Tax Benefit), Nova Scotia (Child Benefit) and Newfoundland and Labrador (Child Benefit).
- The single parent is assumed to have one child aged 5. The family earning $90,000 of income is assumed to have two children aged 5 and 7. The family earning $120,000 of income is assumed to have two children aged 15 and 17.

Property Tax

- Property taxes are based on a representative two-storey home, townhouse or condominium in a major city in each respective province.
- It is assumed that the single parent and the individual at $30,000 of income rent accommodation, the family at $90,000 of income and senior couple own townhouses, the family at $120,000 of income owns a single family detached home, and the individual at $80,000 of income owns a condominium in a major city for each province. Net local and provincial property taxes are estimated as taxes owing, after credits provided through the property tax system are subtracted.

Sales Tax

- Estimates are based on expenditure patterns from the Survey of Household Spending. In estimating individual and family taxable consumption, disposable income is reduced by 20 per cent to reflect housing (mortgage and property taxes or rent) costs. The senior couple is assumed to own their home and have no mortgage costs. For each province, disposable income is further reduced by estimated federal and provincial income taxes. In addition, the single individual with $80,000 of income and the family with $90,000 of income are assumed to have savings equal to 5 per cent of their disposable income. For each family, disposable income is distributed among expenditures using the consumption pattern of a typical family with the relevant characteristics as estimated using family expenditure data, and the relevant sales tax component is extracted. Sales tax includes provincial retail sales taxes in British Columbia, Saskatchewan, and Manitoba; Quebec's value-added tax; the provincial component of the harmonized sales tax in Ontario, New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland and Labrador; and Alberta's Tourism Levy. Sales tax estimates have been reduced by sales tax credits where applicable.

Fuel and Carbon Taxes

- Fuel tax is based on annual consumption: all families are assumed to consume 1,500 litres of gasoline.
- Net carbon tax is estimated as carbon tax liabilities minus rebates such as B.C.'s climate action tax credit, where applicable. Carbon tax liabilities are based on direct fuel charges on gasoline, natural gas and home heating fuel where such charges apply (fuel charges do not apply to home heating fuel in New Brunswick, Prince Edward Island and Newfoundland and Labrador). Estimated carbon tax liabilities are based on natural gas and home heating fuel consumption amounts from household energy consumption data produced by Natural Resources Canada. Carbon tax liabilities do not include the effect of cap-and-trade or output-based pricing systems.
- The federal government requires provinces to implement a price on carbon of at least $40/tonne of CO_2e starting April 2021 and $50/tonne of CO_2e starting April 2022. Provinces that do not have a carbon pricing program have the federal carbon pricing backstop rates applied to the price of the fuel. As of December 31, 2020, Ontario, Manitoba, Saskatchewan and Alberta are subject to the federal carbon pricing on fuel purchases. Families in these provinces receive the federal climate action incentive to offset the cost of the carbon pricing.

Health Care Premiums

- B.C. Medical Services Plan premiums were eliminated January 1, 2020.

Effective Tax Rates

- B.C. taxes are calculated using rates in effect for 2021. Taxes for other provinces are calculated using rates that were announced prior to February 28, 2021, and that come into effect during 2021. The effect of federal or provincial COVID-19-related measures are not included in the table.

[1] Calculated for a single individual with wage income and claiming credits for Canada Pension Plan and Quebec Pension Plan contributions, Employment Insurance premiums, Quebec Parental Insurance Plan premiums, and the basic personal amount.

[2] Quebec residents pay federal tax less an abatement of 16.5 per cent of federal tax. In the table, the Quebec abatement has been used to reduce Quebec provincial personal income tax for comparative purposes.

[3] Includes provincial low income reductions, surtaxes payable in Ontario and Prince Edward Island, and the Ontario Health Premium tax. Excludes credits for sales and property tax credits.

8. Net Provincial Tax	7,473	7,444	6,547	6,553	4,431	5,752

Personal Income Tax

- For each family, the amount noted is the family net income. Net income forms the basis of many benefits provided through the tax system and, therefore, will provide a more accurate illustration of benefits received and premiums paid by a family at their respective family net income level. Income tax is calculated based on applicable tax rates and credits. All families are assumed to have each spouse earning an equal amount of employment income.
- Families are assumed to have two children aged 5 and 12.

Net Child Benefits

- Net child benefits are provincial measures affecting payments to families with children. The BC early childhood tax benefit was in effect until September 2020. The BC Child Opportunity Benefit was effective October 1, 2020.

Sales, Fuel and Carbon Tax Estimates

- Disposable income is estimated based on the total amounts received in 2016 and then adjusted for inflation. In estimating taxable consumption, disposable income is reduced by 20 per cent to reflect rent. Cost of groceries and utilities are estimated based on the Survey of Household Spending and subtracted, thereafter.
- For each family, income after rent, groceries and utilities is distributed among the remaining expenditures using the consumption pattern of a typical family with two children estimated based on expenditure patterns from the Survey of Household Spending. The relevant sales tax component is extracted based on the estimates.
- Fuel tax is based on annual consumption: 1,000 litres of fuel for the family at $30,000; 1,500 litres of fuel for the family at $60,000 and at $80,000; and 2,000 of fuel for the family at $100,000.
- Net carbon tax is estimated as carbon tax liabilities minus the BC climate action tax credit. Carbon tax liabilities are based on direct fuel charges on gasoline, natural gas and home heating fuel. Estimated carbon tax liabilities are based on natural gas and home heating fuel consumption amounts from household energy consumption data from Natural Resources Canada.

Health Care Premiums

- B.C. Medical Services Plan premiums were eliminated January 1, 2020. This table assumes that the full Medical Services Plan premium is paid by the family and not paid by the employer.

COVID-19 Relief in 2020

- As part of COVID-19 relief, a one-time enhancement to the climate action tax credit was paid with the July 2020 payment. The amount of the benefit is included in net carbon taxes.
- The BC Recovery Benefit provided families up to $1,000 per family reduced by family net income over $125,000. Payments for the benefit commenced in December 2020. The amount of the benefit is net against provincial income taxes for 2020.

Non-refundable B.C. tax credits	(75)				

* Reflects information as at March 18, 2021

Cash received from the federal government is used as the basis for estimating revenue. Due to lags in the federal collection and instalment systems, changes to the B.C. net operating surplus and tax base forecasts affect revenue in the succeeding year. The 2021/22 instalments from the federal government reflects two-third of payments related to the 2021 tax year (paid during Apr-July 2021 and adjusted in Sept and Dec) and one-third of 2022 payments. Instalments for the 2021 (2022) tax year are based on B.C.'s share of the national tax base for the 2020 (2021) tax year and a forecast of the 2021 (2022) national tax base. B.C.'s share of the 2019 national tax base was 14.1%, based on tax assessments as of December 31, 2020. Cash adjustments for any under/over payments from the federal government in respect of 2020 will be received/paid on March 31, 2022.

Table A7 Material Assumptions – Expense

Ministry Programs and Assumptions ($ millions unless otherwise specified)	Updated Forecast 2020/21	Budget Estimate 2021/22	Plan 2022/23	Plan 2023/24	2021/22 Sensitivities
Advanced Education, Skills and Training	**2,366**	**2,592**	**2,583**	**2,592**	
Student spaces in public institutions	192,954	206,513	205,886	205,904	Student enrolments may fluctuate due to a number of factors including economic changes and labour market needs.
Attorney General	**1,154**	**1,272**	**1,311**	**1,337**	
New cases filed/processed (# for all courts)	240,000	242,000	242,000	242,000	The number of criminal cases proceeded on by the provincial and federal Crown (including appeals to higher courts in BC), the number of civil and family litigation cases, the number of violation tickets disputed, and the number of municipal bylaw tickets disputed which would go to court for resolution.
Crown Proceeding Act (CPA)	25	25	25	25	The number of new cases, and the difference between estimated settlements and actual settlements.
Children and Family Development	**2,224**	**2,393**	**2,427**	**2,430**	
Average children-in-care caseload (#)	5,488	5,160	4,924	4,805	The average number of children-in-care is decreasing as a result of ministry efforts to keep children in family settings where safe and feasible. The average cost per child in care is projected to increase based on the higher cost of contracted residential services and an increasing acuity of need for children in care. A 1% increase in the cost per case or a 1% increase in the average caseload will affect expenditures by $2.4 million (excluding Delegated Aboriginal Agencies).
Average annual residential cost per child in care ($)	85,058	92,137	100,027	108,824	
Education	**6,694**	**7,132**	**7,162**	**7,162**	
Public School Enrolment (# of FTEs)	558,081	567,675	572,356	576,587	Updated forecast enrolment figures are based on submissions from school districts of their actual enrolment as at September 30, 2020 for the 2020/21 school year and projected enrolment for February and May 2021 for Distributed Learning and Adults. Projections for 2021/22 and 2022/23 are based on the Ministry of Education's enrolment forecasting model.
School age (K–12)	534,215	541,741	550,384	554,596	
Continuing Education	824	962	962	962	
Distributed Learning (online)	18,090	15,460	11,410	11,429	
Summer	3,376	7,279	7,279	7,279	
Adults	1,577	2,233	2,321	2,321	
Forests, Lands, Natural Resource Operations and Rural Development	**929**	**888**	**858**	**854**	
BC Timber Sales	224	234	204	200	Targets can be impacted by changes to actual inventory costs incurred. There is a lag of approximately 1.5 years between when inventory costs are incurred and when they are expensed. Volume harvested can also impact targets. For example, if volume harvested is less than projected in any year, then capitalized expenses will also be reduced in that year.
Fire Management	213	136	136	136	Costs are driven by length of season and severity of weather conditions, severity of fires, proportion of interface fires, size of fires and damaged caused. Costs have ranged from a low of $47 million in 2006 to a high of $650 million in 2017.
Health	**22,190**	**23,873**	**24,650**	**25,414**	
Pharmacare	1,411	1,470	1,514	1,539	A 1% change in utilization or prices affects costs by approximately $12 million.
Medical Services Plan (MSP)	5,243	5,550	5,838	6,043	A 1% increase in volume of services provided by fee-for-service physicians affects costs by approximately $30 million.
Regional Services	15,233	16,536	16,981	17,503	
Public Safety and Solicitor General	**992**	**901**	**907**	**907**	
Policing, Victim Services and Corrections	763	744	743	743	Policing, Victim Services and Corrections costs are sensitive to the volume and severity of criminal activity, the number of inmate beds occupied and the number of offenders under community supervision.
Emergency Program Act (EPA)	158	36	36	36	For authorized expenditures under the EPA, including those for further disasters, and the difference between initial estimates for disaster response and recovery costs and final project costs.

Table A7 Material Assumptions – Expense (continued)

Ministry Programs and Assumptions ($ millions unless otherwise specified)	Updated Forecast 2020/21	Budget Estimate 2021/22	Plan 2022/23	Plan 2023/24	2021/22 Sensitivities
Social Development and Poverty Reduction	**3,682**	**4,360**	**4,455**	**4,478**	
Temporary Assistance – annual average caseload (#)	46,370	43,800	44,000	44,100	The expected-to-work caseload is sensitive to fluctuations in economic and employment trends. Costs are driven by changes to cost per case and caseload. Cost per case fluctuations result from changes in the needed supports required by clients, as well as caseload composition.
Disability Assistance – annual average caseload (#)	114,341	116,800	118,500	119,100	The caseload for persons with disabilities is sensitive to the aging of the population and longer life expectancy for individuals with disabilities. Cost per case fluctuations are driven primarily by earnings exemptions which is dependent on the level of income earned by clients.
Adult Community Living:					
Developmental Disabilities Programs					The adult community living caseload is sensitive to an aging population and to the level of service required. Cost per case fluctuations are driven by the proportion of clients receiving certain types of services at differing costs. For example, residential care services are significantly more costly than day programs.
Average caseload (#)	21,590	22,470	23,380	24,330	
Average cost per client ($)	52,200	52,800	52,000	50,600	
Personal Supports Initiative (PSI)					
Average caseload (#)	2,370	2,690	3,040	3,400	
Average cost per client ($)	15,900	15,100	13,600	12,200

Service delivery agencies ……..….	3.4	0.1	1.0	4.7	3.6	13.8	1.2	14.1	13.0	1.8	5.7
Population per FTE: [3]											
Total FTEs ……	149.5	149.3	148.2	143.4	138.6	134.8	133.9	130.6	129.3	130.6	-1.5

[1] Full-time equivalents (FTEs) are a measure of staff employment. FTEs are calculated by dividing the total hours of employment paid for in a given period by the number of hours an individual, full-time person would normally work in that period. This does not equate to the physical number of employees. For example, two half-time employees would equal one FTE, or alternatively, three FTEs may represent two full-time employees who have worked sufficient overtime hours to equal an additional FTE.

[2] Service delivery agency FTE amounts do not include SUCH sector staff employment.

[3] Population per FTE is calculated using July 1 population (e.g. population on July 1, 2021 divided by 2021/22 FTEs).

Real Per Capita Capital Spending (2020 $) [5]	**1,395**	**1,391**	**1,421**	**1,426**	**1,761**	**1,813**	**1,960**	**2,555**	**2,512**	**2,195**	5.2
Growth rate (per cent)	1.2	-0.3	2.2	0.4	23.5	2.9	8.1	30.4	-1.7	-12.6	5.4

[1] Includes Transportation Investment Plan capital spending and, beginning in 2017/18, Transportation Investment Corporation rehabilitation costs for the Port Mann Bridge due to reclassification from self-supported commercial Crown corporation to a taxpayer-supported agency in response to the cancellation of tolls. Effective April 1, 2018, Transportation Investment Corporation became a subsidiary of BCTFA.

[2] Includes post-secondary institutions' self-supported subsidiaries.

[3] Capital spending as a per cent of GDP is calculated using nominal GDP for the calendar year ending in the fiscal year (e.g. 2021/22 amounts divided by nominal GDP for the 2021 calendar year).

[4] Per capita capital spending is calculated using July 1 population (e.g. 2021/22 amounts divided by population on July 1, 2021).

[5] Capital spending is converted to real (inflation-adjusted) terms using the consumer price index (CPI) for the corresponding calendar year (e.g. 2021 CPI for 2021/22 capital spending).

[1] Beginning in 2017/18, debt related to the Port Mann Bridge was reclassified as taxpayer-supported due to the elimination of tolls effective September 1, 2017.

[2] Includes debt incurred by the government to fund the building and construction of capital assets in the education, health, social housing and other sectors.

[1] Numbers may not add due to rounding.

[2] Debt as a per cent of GDP is calculated using nominal GDP for the calendar year ending in the fiscal year (e.g. 2021/22 debt divided by nominal GDP for the 2021 calendar year).

[3] Per capita debt is calculated using July 1 population (e.g. 2021/22 debt divided by population on July 1, 2021).

[4] Debt is converted to real (inflation-adjusted) terms using the consumer price index (CPI) for the corresponding calendar year (e.g. 2021 CPI for 2021/22 debt).

Population (thousands at July 1) [9]	4,707	4,776	4,859	4,929	5,010	5,091	5,148	5,181	5,246	5,316	1.4

[1] The ratio of debt to population (e.g. 2021/22 debt divided by population at July 1, 2021).

[2] The ratio of debt outstanding at fiscal year end to provincial nominal gross domestic product (GDP) for the calendar year ending in the fiscal year (e.g. 2021/22 debt divided by 2021 nominal GDP).

[3] The ratio of interest costs (less sinking fund interest) to revenue. Figures include capitalized interest expense in order to provide a more comparable measure to outstanding debt.

[4] Weighted average of all outstanding debt issues.

[5] Includes revenue of the consolidated revenue fund (excluding dividends from enterprises) plus revenue of all government organizations and enterprises.

[6] Excludes revenue of government enterprises, but includes dividends from enterprises paid to the consolidated revenue fund.

[7] Excludes debt of commercial Crown corporations and agencies and funds held under the province's warehouse borrowing

[8] Nominal GDP for the calendar year ending in the fiscal year (e.g. nominal GDP for 2021 is used for the fiscal year ended March 31, 2022).

[9] Population at July 1st within the fiscal year (e.g. population at July 1, 2021 is used for the fiscal year ended March 31, 2022).

REPORT TO FINANCE COMMITTEE
MEETING OF WEDNESDAY, MAY 05, 2021

SUBJECT **2021 Federal Budget Highlights**

ISSUE SUMMARY

To provide the Committee with a high level review of potential impacts on CRD services in the 2021 Federal Budget.

BACKGROUND

On April 19, 2021, Deputy Prime Minister and Finance Minister Chrystia Freeland tabled the 2021 Federal Budget in the House of Commons. This information report is intended to provide highlights on items potentially relating to the Capital Regional District, Capital Regional Hospital District, and Capital Region Housing Corporation. While these highlights have been focused on organizational impacts, there was an attempt to include potential implications for member municipalities and electoral areas.

This is not intended to be a comprehensive budget review.

IMPLICATIONS

Refer to Appendix A for a CRD, CRHD, and CRHC perspective on the Federal Budget including potential impacts to member municipalities and electoral areas. Highlights also include potential services that may be impacted by provincial initiatives.

Refer to Appendix B: Federal Budget and Fiscal Plan, the main budget document from the Ministry of Finance that lays out the Government's three-year fiscal plan, including economic outlook, revenues, spending, tax measures, and forecasting risks and assumptions.

RECOMMENDATION

The Finance Committee recommends to the Capital Regional District Board:
That the 2021 Federal Budget Highlights report be received for information.

Submitted by:	Nelson Chan, MBA, FCPA, FCMA, Chief Financial Officer
Concurrence:	Robert Lapham, MCIP, RPP, Chief Administrative Officer

Appendix A: 2021 Federal Budget Highlights
Appendix B: Ministry of Finance – Federal Budget and Fiscal Plan

Highlights of 2021 Federal Budget

On April 19, 2021, Deputy Prime Minister and Finance Minister Chrystia Freeland tabled the 2021 Federal Budget in the House of Commons. This was the first official budget since the COVID-19 pandemic. Budget 2021 was historic in both in size and scope. With more than $650B in expenditures against $296B in revenue, the net result is a projected $354B deficit.

Federal Budget Highlights *Potentially* Impacting CRD & Member Municipalities

1. COVID Response

- $553M over five years to create BC economic development agency with ongoing support **[specific to BC! economic development, local impacts]**
- $500M Tourism Relief Fund supporting local business' adaption to meet public health measures **[economic development, local impacts]**
- $400M to create Community Services Recovery Fund for non-profits to adapt, modernize, and support economic recovery **[non-profit entities, economic development, local impacts]**
- $500M over two years to regional development agencies for community infrastructure **[local impacts]**
- $595M for a new Canada Recovery Hiring Program; employers experiencing declining revenue related to COVID, available June 6th to November 20th, 2021 **[business and non-profit entities]**

2. Affordable Housing

- New 1% tax foreign owned vacant or underused residential real estate **[to fund affordable housing initiatives, CRHC, grants]**
- Incremental $2.5B over seven years to CMHC, including $1.5 billion for the Rapid Housing Initiative **[CRHC, grants]**
- Incremental $567M over two years started in 2022 the Reaching Home Program **[CRHC, grants]**
- $1.9B to extend the Canadian Emergency Rent Subsidy and Lockdown Support until September 25, 2021 **[COVID response, affordable housing]**

3. Environment

- Incremental $5B over seven years for the Net Zero Accelerator program, supporting projects that reduce GHGs **[Grants, various services across the CRD, climate]**
- In partnership with BC, $35M to establish the Centre for Innovation and Clean Energy, scale-up and commercialization of clean technologies **[specific to BC!, advocacy partnership opportunities]**
- Creation of the Federal Green Bond with $5B target to fund green projects **[financing, climate, advocacy]**
- $67.2M for the Clean Fuel Standard for biofuel producers **[RTF? core service?]**

- $4.4B in interest-free loans for home energy retrofits **[Grants, various outreach and education programs across the CRD, climate]**
- $200M over three years to establish a Natural Infrastructure Fund to support natural and hybrid infrastructure projects TO mitigate impacts of climate change **[various services across the CRD, climate]**
- $10M increase, to Sustainable Fisheries Solutions and Retrieval Support Program and the Ghost Gear Fund at Fisheries and Oceans Canada, to retrieve, dispose of plastic waste, test new technology, etc **[climate, waste]**
- $1.9B over four years to the National Trade Corridors Fund to spur investments to roads, rail, and shipping routes **[E&N rail if trade/transport route?]**
- $2.3B to conserve land and inland waters, accelerate new protected areas, and protect priority species at imminent risk **[environment, parks?]**
- Regional Relief and Recovery Fund and the Indigenous Business Initiative programs have been extended to June 30th, 2021 **[FNR, COVID response]**
- $6B over five years with $388.9M ongoing invested to support infrastructure in Indigenous communities **[FNR, economic development, capacity building]**
    - $4.3B over four years for the Indigenous Community Infrastructure Fund to support shovel-ready infrastructure projects
    - $1.7B over five years to cover the operations and maintenance costs of community infrastructure **[core sewer?]**

4. Emergency Management

- $1.4B over 12 years to top up the Disaster Mitigation and Adaptation Fund to support wildfire mitigation, rehabilitation of stormwater systems, and restoration of wetlands and shorelines **[emergency management]**

5. Support Services

- Incremental $27.2B over five years for child care – to be delivered by way of provincial agreement in 50-50 cost sharing **[recreation?]**
- $3B over five years, starting in 2022 to revamp standards in long-term care homes **[health?]**
- $10B to extend the Canada Emergency Wage Subsidy until September 25, 2021 **[COVID response, local economic impacts, SMBs]**
- Incremental $708M over five years to MITACS to create 85,000 work integrated learning providing on-the-job learning **[HR learning & development]**
- Incremental $100M over 2 years to Enabling Accessibility Fund to enhance accessibility **[health, all CRD facilities]**
- $470M over three years to Employment and Social Development Canada for a new Apprenticeship Service in construction, manufacturing, Red Seal trades. Employers would be eligible to receive up to $5,000 for all first-year apprenticeships **[IWS?]**
- $960M over three years to Employment and Social Development Canada for a new Sectoral Workforce Solutions Program to design and deliver training on how to recruit and retain a diverse workforce **[HR learning & development, ODP, EDI]**

6. Other Budget Items of Interest

- $100M over three years to support innovative mental health interventions **[health]**
- $50M over two years to support COVID-19 trauma and PTSD programming **[COVID Response, health]**
- $1.4B over four years for the new Canada Digital Adoption Program to adopt new digital technologies **[COVID Response, economic development]**
- $2.6B over four years to the Business Development Bank of Canada to help businesses finance technology adoption **[COVID Response]**
- Incremental $60M over two years to support the Innovation Superclusters Initiative **[COVID Response, economic decelopment]**

Foreword **13**

Creating Jobs And Growth. 15
Building a Better, Fairer Canada 23

Overview Our Shared Economic and Social Foundations — Challenges and Opportunities Ahead **27**

1. The Course of COVID-19 in Canada 27
    An unprecedented global disruption 27
    The recovery path has been uneven over the fall and winter 28
    Canada's economic performance has exceeded expectations 29
    Canada's COVID-19 Economic Response has bridged Canadians through the crisis 30
    Jobs recovery continues to progress at an uneven pace for many Canadians 34
2. Gaining Economic Momentum through 2021 37
    Progress controlling the virus will determine the path forward 37
    Potential for tailwinds to boost the recovery 38
    Economists expect the pace of economic activity to pick-up as vaccination progresses 39
3. Securing the Recovery and Building a Stronger Economy 41
    Securing the recovery 42
    Building a stronger economy 45
4. An Historic Plan for a Stronger and More Resilient Canada 46
    Delivering on the government's one million jobs commitment 49
5. A Responsible Fiscal Plan 52
    Building a stronger and more resilient economy will improve fiscal sustainability 54

Part I - Finishing the Fight Against COVID-19 ..... **57**

Chapter 1 Keeping Canadians Healthy and Safe **59**

1.1 Providing Access to Vaccines 62
    Canada's COVID-19 Immunization Plan 63
    International COVID-19 Response 64
1.2 Protecting Our Seniors 64
    Strengthening Long-term Care and Supportive Care 64
    Helping Seniors Age Well at Home 65
1.3 Strengthening Our Health System 66
    Helping Our Health Care Systems Recover 66
    Regulatory Cooperation with Trusted International Partners 66
    Renewing the Territorial Health Investment Fund 67
1.4 Supporting Mental Health 67

National Standards for Mental Health Services 69
Supporting the Mental Health of Those Most Affected by COVID-19 69
Investing in the Wellness Together Canada Portal 70
Working Towards a New Crisis Hotline 70
1.5 Investing in Research and Science 71
Strengthening Canada's Bio-manufacturing and Life Sciences Sector 72
Action to Address Antimicrobial Resistance 73
1.6 A Plan for the Safe Reopening of Our Borders 73
Supporting Safe Air Travel 74
Continuing to Protect Air Travellers 74
Supporting Temporary Foreign Workers while they Quarantine 75

Chapter 2 Seeing Canadians and Businesses Through to Recovery 79

2.1 Protecting Jobs and Supporting Businesses 80
Extending the Canada Emergency Wage Subsidy 83
Extending the Canada Emergency Rent Subsidy and Lockdown Support 84
Extending the Canada Emergency Business Account 85
2.2 Supporting Affected Workers 85
Temporarily Waiving the One-week Waiting Period for Employment Insurance Claims 86
Providing Additional Weeks of Recovery Benefits and EI Regular Benefits 87
Maintaining Flexible Access to Employment Insurance Benefits 88
Extending Employment Insurance Sickness Benefits to Better Support Canadians Suffering From Illness or Injury 89
Extending Temporary Support for Seasonal Workers Who Continue to be Affected by the Pandemic 90

Part II - Creating Jobs and Growth 93

Chapter 3 New Opportunities for Canadians 95

3.1 Women in the Economy 96
A Canada-wide Early Learning and Child Care Plan 97
Establishing a Canada-Wide Early Learning and Child Care System 101
Strengthening Diversity in Corporate Governance 106
3.2 Opportunities for Canada's Youth 106
Providing Relief from Student Debt 107
Doubling the Canada Student Grants for Two Additional Years 108
Expanding Access to Supports for Students and Borrowers with Disabilities 109
Supporting Vulnerable Children and Youth During the Recovery 110
Helping Youth and Students Build Job Skills and Connect with Employers 110
3.3 Investing in Skills, Training, and Trades 111
Helping Employers Train and Recruit Workers 112

Creating New Opportunities for Skilled Tradespeople 113
Supporting Skills for Success 113
Ensuring Communities Recover Through Skills Training and Workforce Planning 114
Helping Workers Transition to New Jobs 114
Extending Federal Supports for Adults Who Return to School Full-Time. 115
Teaching Kids to Code 115
3.4 Valuing Canada's Workers 116
Establishing a $15 Federal Minimum Wage 116
Supporting Canada's Low-Wage Workers 117
Better Labour Protection for Gig Workers 121
Enhancing Protections for Contract Workers in the Air Transportation Sector 121
Simplifying Wage Earner Protection Program Payments 122
Support for Personal Support Workers 122
Employee Ownership Trusts 123
Taking Action to Address Predatory Lending 123

Chapter 4 Helping Canadian Businesses Grow and Succeed 127

4.1 Helping Canadians Get Back to Work 128
Helping Hard-hit Businesses Hire More Workers 128
Opportunities for Businesses and Young Workers Through Mitacs 130
4.2 Helping Small and Medium-sized Businesses Recover and Grow 130
Helping Small and Medium-sized Businesses Move into the Digital Age 131
Helping Businesses Seize New Technological Opportunities 133
Supporting Business Investments 134
Enhancing the Canada Small Business Financing Program 134
Preparing Canada's Aerospace Sector for Recovery 135
4.3 Investing in Canada's Entrepreneurs 136
Supporting Entrepreneurs, Including Equity Deserving Entrepreneurs 136
Supporting Women Entrepreneurs 136
Supporting Black Entrepreneurs 137
Leveraging Procurement Opportunities 137
Expanding the Industrial Research Assistance Program 139
Investing in Canadian Innovators Through a Renewed Venture Capital Catalyst Initiative 139
To increase venture capital funding and support the continued growth of Canada's innovative companies: 139
Boosting Canada's Clean Technology Exports 140
4.4 Making it Easier to do Business in Canada 140
Removing Barriers to Internal Trade 140
Lowering the Cost of Doing Business by Reducing Credit Card Transaction Fees 141
A Fair and Competitive Marketplace 141

Maintaining Momentum on Regulatory Modernization 142
4.5 Building Infrastructure to Boost Trade 143
Renewing our National Trade Corridors 143
Strengthening Canada's Trade Remedy System 145
Administration of Trade Controls 145
Better Supports for Exporters 145
4.6 Investing in World-leading Research and Innovation 146
Supporting Innovation and Industrial Transformation 146
Renewing the Pan-Canadian Artificial Intelligence Strategy 148
Launching a National Quantum Strategy 149
Revitalizing the Canadian Photonics Fabrication Centre 149
Launching a Pan-Canadian Genomics Strategy 150
Conducting Clinical Trials 150
Supporting the Innovation Superclusters Initiative 151
Promoting Canadian Intellectual Property 151
Capitalizing on Space-based Earth Observation 152
Science and Technology Collaboration with Israeli Firms 152
4.7 Supporting a Digital Economy 153
Accelerating Broadband for Everyone 153
Establishing a New Data Commissioner 154
Enhancing Business Condition Data 154

Chapter 5 A Healthy Environment for a Healthy Economy 159

5.1 Growing Our Net-zero Economy 160
Accelerating Canada's Net-zero Transformation Through Innovation 160
Propelling Clean Tech Projects 161
Growing Zero-emission Technology Manufacturing 161
Accelerating Investment in Clean Energy Technologies 162
Enhancing Canada's Supply of Critical Minerals 163
Charging and Fueling Zero-emission Vehicles 164
Federal Clean Electricity Fund 164
Reducing Transportation and Landfill Emissions 165
Investing in the Forest-based Bio-economy 165
First Federal Green Bond 166
5.2 Investing in Our Clean Industry Future 166
Carbon Capture, Utilization, and Storage 167
Tax Incentive for Carbon Capture, Utilization, and Storage 168
Advancing Carbon Capture, Utilization, and Storage Technologies 169
Cleaner Fuels for a Cleaner Environment 169
Supporting the Production and Use of Clean Fuels 170
Low-Carbon Fuel Procurement Program 170
Supporting a Centre for Innovation and Clean Energy in British Columbia 171
Investing in Clean Energy in Northern and Indigenous Communities 171

5.3 Advancing Canada's Climate Plan 172
Steering Canada's Strengthened Climate Plan 173
Returning the Proceeds from the Price on Pollution 173
Support for Farmers 174
Agricultural Climate Solutions 174
Integrating Climate into Federal Decisions 175
Strengthening Public Climate-related Disclosures 175
Border Carbon Adjustments 176
5.4 Building Green Homes and Communities 176
Lower Home Energy Bills Through Interest-free Loans for Retrofits 177
5.5 Adapting to Climate Change for a More Resilient Future 178
Strengthening Climate Resiliency 178
Keeping Canadians Safer from Floods 179
Improving Wildfire Resilience and Preparedness 179
Supporting Provincial and Territorial Disaster Response and Recovery 180
Addressing Climate Change in Yukon 180
Preserving the *HMS Erebus* and *HMS Terror* 180
5.6 Protecting Nature 181
Historic Investments in Canada's Natural Legacy 181
Conserving Canada's Oceans 184
Reducing Ocean Plastics that Threaten Marine Life 184
Preserving Wild Pacific Salmon 185
Developing the Canada Water Agency 186
Better Understanding Our Environment 186
Support for the Polar Continental Shelf Program 187
Continuing Canada's Chemicals Management Regime 187

Chapter 6 Strengthening the Cities and Communities We Call Home 193

6.1 A Place to Call Home 193
More Affordable Housing 194
Ending Homelessness 198
6.2 Restoring Tourism, Arts, Culture, and Sport 199
Revitalizing Tourism 200
Supporting Canada's Arts, Culture, Heritage, and Sport Organizations and Workers 202
Supporting Canadian TV and Film Productions through COVID-19 204
Investing in Telefilm Canada 204
Encouraging Diverse Voices in Canadian TV and Film 204
Support for the Canadian Broadcasting Corporation / Radio-Canada 205
Support for the Canadian Book Industry 205
Protecting Canada's Historic Places 205
Memorial to the Victims of Communism 206
6.3 Building Stronger Communities 206
Helping Charities, Non-profits, and Social Purpose Organizations Grow 206

Supporting Community Service Organizations 207
Boosting Charitable Spending in Our Communities 208
Consulting on a New Canadian Social Bond 209
Improving Food Security 209
6.4 Jobs and Growth Through Infrastructure Investments 209
Permanent Public Transit Fund 210
Canada Community-Building Fund 211
National Infrastructure Assessment 211
Next Step Towards High Frequency Rail in the Toronto-Quebec City Corridor 211
Assisting Homeowners Affected by Pyrrhotite 212
Bonaventure Expressway 212
Canada's National Capital Region 213
6.5 Local and Regional Development 214
Supporting Jobs and Growth in All Communities 214
Creating a New Regional Development Agency for British Columbia 215
Canada Community Revitalization Fund 215
Investing in Small Craft Harbours 215
6.6 Rural and Northern Communities 216
Extending the Northern Residents Deduction 216
Supporting Post-secondary Education in the North 217
Ensuring Food Security in the North 217
Support for Jobs in the Canadian Wine Sector 217
Supporting Food Processors Following Ratification of New Trade Agreements 218
6.7 Strengthening Canada's Immigration System 218
Delivering a Modern Immigration Platform 219
Enhancing the Temporary Foreign Worker Program 219
Supporting Racialized Newcomer Women 220
Accelerated Pathways to Permanent Residence 220
Streamlining Express Entry 220

Part III - A Resilient and Inclusive Recovery 225

Chapter 7 A More Equal Canada 227

7.1 Fighting Systemic Racism and Empowering Communities 227
Strengthening the Canadian Race Relations Foundation and Helping Communities Respond to an Increase in Racism 228
Supporting Black Canadian Communities 229
Better Data for Better Outcomes 230
Making the Public Service More Diverse 231
7.2 An Economic Recovery that Includes Everyone 232
Increasing Old Age Security for Canadians 75 and Over 232
Towards a New Disability Benefit 233

Improving Access to the Disability Tax Credit 234
Making Our Communities and Workplaces More Accessible 235
Supporting Greater Equality for LGBTQ2 Communities 235
Supporting Our Veterans 236
Recognizing the Contributions of Atomic Workers 236

Foreword

After thirteen months of uncertainty and hardship, Canadians continue to battle COVID-19, with determination and grit.

We are all tired, frustrated, and sometimes even afraid. Yet, it's our responsibility to finish this fight – and to ensure that nothing like it ever threatens our country in this way again. That is our job.

It's also our job to tackle the work of recovery, to create the conditions for new employment and new growth, now and in the years ahead.

This budget is about finishing the fight against COVID. It's about healing the economic wounds left by the COVID recession. And it's about creating more jobs and prosperity for Canadians in the days – and decades – to come.

It's about meeting the urgent needs of today, and about building for the long-term. It is a budget focused on middle class Canadians, and on pulling more Canadians up into the middle class. It's a plan that embraces this moment of global transformation to a green, clean economy.

This budget addresses three fundamental challenges.

First, we need to conquer COVID. That means buying vaccines and supporting provincial healthcare systems. It means enforcing our quarantine rules at the border and within the country. It means providing Canadians and Canadian businesses with the support they need to get through these final, third-wave lockdowns, and to come roaring back when the economy fully reopens.

Second, we must punch our way out of the COVID recession. That means ensuring lost jobs are recovered as swiftly as possible, and that hard-hit businesses rebound quickly and are able to flourish.

It means providing support where COVID has struck hardest – to women and young people and low-wage workers, and to small and medium-sized businesses, especially in hospitality and tourism.

The final challenge is to build a better, fairer, more prosperous, more innovative future. That means investing in Canada's green transition and the green jobs that go with it; in Canada's digital transformation and Canadian innovation; and in building infrastructure for a dynamic, growing country.

And it means providing Canadians with social infrastructure – from early learning and child care, to student grants – so the middle class can flourish and more Canadians can join it.

When this global pandemic hit Canada over a year ago, our government made a covenant with Canadians. We knew that fighting the virus would require all of us to accept unprecedented restrictions.

In exchange, we pledged to do whatever it takes to support Canadians in the face of those restrictions and, ultimately, to conquer this disease. We have kept that pledge. We will continue to do so.

When COVID first struck, we immediately provided $500 million to bolster our country's health-care system. Then last summer, we invested nearly $20 billion, through the Safe Restart Agreement, to support provinces and territories in the fight against COVID. Last fall we helped children return to school with $2 billion in the Safe Return to Class agreement.

Just last month, we committed to providing provinces and territories with an additional $4 billion to shore up the healthcare system as we fight the third wave, and an additional $1 billion to speed up the roll-out of vaccines.

Our elders have been this virus's principal victims. The disease has preyed on them mercilessly, cutting short thousands of lives and forcing all seniors into fearful isolation, for more than a year.

We have tragically failed so many of those living in long-term care facilities. To them, and to their families, let me say this: I am so sorry.

We owe you so much better than this. As a country, we must fix what is so clearly and utterly broken.

That's why we propose a $3 billion investment to ensure that provinces and territories provide a high standard of care in their long-term care facilities. We are delivering today on our promise to increase Old Age Security for Canadians aged 75 and older, which will provide up to $766 more for eligible seniors in the first year, and that will grow with indexation.

We owe our elders a great debt. This is a partial repayment.

Our government has been urgently procuring vaccines since last spring – and providing them – at no cost – to Canadians. More than 10 million vaccines were distributed to provinces and territories by the end of March; a further six million will be distributed by the end of this month.

And by the end of September, Canada will have received 100 million doses – more than enough for every adult Canadian to have received two doses of vaccine.

We need to be ready for new variants of COVID-19, and we must have the booster shots that will allow us to keep them in check.

That is why we must begin to rebuild our national capacity in bio-manufacturing and vaccine development and production. Making our own vaccines is essential to our national security. Canada has brilliant scientists and entrepreneurs. We will support them with an investment of $2.2 billion in Canada's bio-manufacturing and life-sciences sector. And, together, we will rebuild this vital industry.

Creating Jobs And Growth.

When COVID-19 first hit, it pushed our country into its deepest recession since the Great Depression.

But this is an economic shock of a very particular kind. We are not suffering because of endogenous flaws or imbalances within our economy.

Rather, the COVID recession is driven by an entirely external event – much like the economic devastation of a flood, blizzard, wildfire or other natural disaster.

That is why an essential part of Canada's fight against COVID-19 has been unprecedented federal support for Canadians and Canadian businesses. Our over-riding objective, from the very beginning, has been to prevent the long-term scarring of Canadian society and the Canadian economy.

And it has worked. Our support helped keep food on the tables of millions of families

This unprecedented federal action staved off a flood of bankruptcies and preserved our country's economic muscle.

The government's economic support measures have been a cost-effective investment – as the IMF has confirmed – averting an economic collapse that would have been truly devastating.

Indeed, thanks to the investments our government made in averting economic scarring, the Canadian economy is poised to come roaring back. The rebound has already started: Canada's GDP rose by almost 10 percent, annualized, in Q4 of 2020.

We will continue to honour our covenant with Canadians, until COVID-19 is fully behind us. The government is prepared to extend support measures, as long as the fight against this virus requires.

But as Canada pivots to recovery, our economic measures will, too. And as we look to brighter days, our efforts will be relentlessly focused on jobs and growth.

****

We promised last November to spend up to $100 billion over three years to get Canada back to work and to ensure the lives and prospects of Canadians are not permanently stunted by this pandemic recession.

This budget keeps that promise. It is an ambitious plan for jobs and growth that is precisely designed to heal the specific wounds of the COVID-19 recession, and to build new economic muscle, creating prosperity for us and for our children, for years to come.

Altogether, this budget creates nearly 500,000 new training and work experience opportunities for Canadians.

It will keep our Throne Speech promise of creating one million jobs by the end of this year.

Some will say our sense of urgency is misplaced.

To them, I ask this: Did you lose your job during a COVID lockdown? Were you reluctantly let go by your small-business employers who were like a family to you, but simply could not afford your salary any longer?

Are you a young mother, forced to quit the dream job you fought to get, because there was no way to keep working while caring for your pre-school children? Did you graduate from university last spring, and are you still struggling to find work in the worst job market since the Great Depression?

Is your family business – launched perhaps, by your parents, and which you'd hoped to pass on to your children – now struggling under a sudden burden of debt, and fending off bankruptcy through sheer grit, every day?

Yet this is the bitter harvest millions of Canadians have reaped during the pandemic.

The ravages of COVID have been uneven. Some parts of our economy, and workers in those sectors – people who work in forests, banks and technology companies, building homes and selling them, for example – are already doing better than they were before the pandemic struck. All of us admire their ingenuity and are grateful for their resilience.

But many others have been grievously hurt by the pandemic and the lockdowns it has required: women, young people, low wage workers and small businesses. Very often, these four groups intersect. To support Canadian workers as we finish our fight against the third wave, and to provide an economic bridge to a fully reopened economy, we will build on the enhancements we've made during the pandemic to maintain flexible access to EI benefits for another year, until the fall of 2022The CRB, which we created to support Canadians not covered by EI, will remain in place until September, offering an additional 12 weeks of benefits, but

stepping down to $300 a week after July 17 as our economy fully reopens over the summer.

About 300,000 Canadians who had a job before the pandemic are still out of work. This month's lockdowns are essential, but they may temporarily make things worse. We need to be there to support Canadian workers – and we will be.

Low-wage workers in Canada work harder than anyone else in this country, for less pay. In the past year they've faced either layoffs or significant infection risks, and often both in succession. We cannot ignore their contribution and their hardship – and we will not.

So, Budget 2021 proposes to expand the Canada Workers Benefit, to invest $8.9 billion over six years in additional support for low-wage workers – extending support to about a million more Canadians and lifting nearly 100,000 people out of poverty.

I am sure all Canadians would agree that no one working full-time in our great country should live in poverty. This investment will help make that very Canadian value a reality. To further support Canadians working hard to join the middle class, this budget will introduce a $15 an hour federal minimum wage.

And Budget 2021 reiterates the government's commitment to amend the Canada Labour Code to improve labour protection for Canadians working in the gig economy.

We know the pandemic has exacerbated systemic barriers faced by racialized Canadians. So, Budget 2021 provides additional funding for the Black Entrepreneurship Program, as well as an investment in a Black-led Philanthropic Endowment Fund, to help fight anti-Black racism and improve social and economic outcomes in Black communities.

One of the most striking aspects of the pandemic has been the historic sacrifice young Canadians have made to protect their parents and grandparents. Our youth have paid a high price to help keep the rest of us safe.

Unemployment among young people is now 14 per cent, compared to 7.5 per cent among Canadians as a whole.

And the mental strain on our youth, who have been sequestered at home at a time of life when people most need to hang out with their friends, has been extraordinary.

We will not allow young Canadians to become a lost generation. They need our support to launch their adult lives and careers in post-COVID Canada – and they will get it. This budget proposes to invest $5.7 billion over five years in Canada's youth. This is an investment in our future and it will yield great dividends.

We will make college and university more accessible and affordable. We will create job openings in skilled trades and high-tech industries. And we will double the Canada Student Grant for two more years, extending the waiver of interest on federal student loans through March 2023.. More than 450,000 low-income student borrowers will also have access to more generous repayment assistance.

We will help young Canadians launch their careers by helping to create 215,000 additional quality job skills development and work opportunities to help youth and students join or return to the workforce over the next two years, including through Canada Summer Jobs, the Youth Employment and Skills Strategy and through work-integrated learning for students.

COVID has brutally exposed something women have long known: Without childcare, parents – usually mothers – can't work. The closing of our schools and daycares drove women's participation in the labour force down to its lowest level in over two decades. Early learning and childcare has long been a feminist issue; COVID has shown us all that it is an urgent economic issue, too.

This is a cause forward-thinking Canadians have championed for more than 50 years. I was two years old when the Royal Commission on the Status of Women urged Canada to establish a universal system of early learning and childcare.

My mother was one of Canada's redoubtable second wave of feminists who fought – and outside Quebec, failed – to make that recommendation a reality. A generation after that, another minister, Ken Dryden, almost got this done.

Their long labour is a testament to the difficulty and complexity of this task.

But we are going to do it. This budget is the map and the trailhead.

For there is agreement, across the political spectrum, that early learning and childcare is the national economic policy we need now.

It delivers a jobs-and-growth hat-trick, allowing both mothers and fathers to work, thus increasing our workforce and boosting our growth, creating jobs for mostly women childcare workers, and helping to raise a smarter, better educated next generation.

The evidence from Quebec – which began building a universal early learning and childcare system more than two decades ago – is incontrovertible. Early learning and childcare is an investment in social infrastructure that pays for itself. Quebec has among the highest labour force participation of women with children under three, in the world. TD Economics has pointed to a range of studies showing that , for every dollar invested in early learning and childcare in Quebec, between $1.50 and $2.80 comes back to the broader economy.

Canadians have been fighting for early learning and childcare unsuccessfully for so long, that some may question whether our government has the determination and staying power to finally get this done.

To those who doubt us, I say this: This budget commits up to $30 billion over five years, reaching $8.3 billion on a permanent basis, to build a high-quality, affordable and accessible early learning and childcare system across Canada.

This funding will allow for a 50 per cent reduction in average fees for regulated early learning and child care in all provinces outside of Quebec, to be delivered by the end of 2022. It will also ensure annual growth in quality and affordable child care spaces across the country in partnership with provinces and territories

That said, this is not an effort that will deliver instant gratification. I am well aware of the political challenges ahead, particularly given our federal political structure. We are building something that, of necessity, must be constructed gradually, collaboratively, and for the long-term.

But I have confidence in us. I have confidence that we are a country that believes in investing in our future; in our children; and in our young parents. Here is our goal: That, in the next 5 years, Canadian parents across the country have access to high quality early learning and child care, for an average of $10 a day.

The truth is that the tragedy of COVID-19 has created a window of opportunity, which we can open to finally build a system of early learning and childcare across our country.

This is social infrastructure that will drive jobs and growth. This is feminist economic policy. This is smart economic policy.

I make this promise to Canadians, speaking as your Minister of Finance and as a working mother: We will get it done.

Small businesses are the bustling, thriving heart of our economy. They are the spine of Main Street in every city, town and village in Canada. And while many big, multinational companies have actually prospered during this low-interest rate COVID year, our small businesses have been battered.

Healing the wounds of COVID requires a rescue plan for them.

Budget 2021 proposes to extend the wage subsidy, rent subsidy, and Lockdown Support for businesses and other employers until September 25, 2021, for an estimated total of $12.1 billion in additional support.

To help the hardest-hit businesses pivot back to growth, we propose a new Canada Recovery Hiring Program, which will run from June to November and will provide $595 million to make it easier for businesses to hire back laid-off workers or to bring on new ones. We supported Canadian businesses when lockdowns forced them to shut their doors. And we will continue to provide support as they come roaring back over the summer and fall.

But our government proposes to do much more than execute a rescue.

With this budget, we will make unprecedented and historic investments in Canada's small businesses – helping them invest in new technologies and innovation.

This will help Canadian small businesses become more productive and prosperous. It will give them a shot at becoming the Canadian-headquartered global champions of tomorrow.

The future and resilience of Canada's small businesses depends on their ability to adopt new technology. We propose to invest $4 billion in a game-changing new effort that will help up to 160,000 small and medium-sized businesses buy the new technologies they need to grow.

The new Canada Digital Adoption Program will also provide these businesses with the advice and help they need to get the most out of these new technologies by training 28,000 young Canadians – a Canadian technology corps – and sending them out to work with our small and medium sized businesses.

This groundbreaking new program will help Canadian small businesses become more efficient, go digital, take advantage of e-commerce, and become more competitive in Canada and abroad. Increased funding for the Venture Capital Catalyst Initiative will help provide financing to innovative Canadian businesses, so they can grow and create well-paying jobs in Canada.

Budget 2021 also provides an important boost for business investments. It proposes to allow immediate expensing of up to $1.5 million of eligible investments by Canadian-controlled private corporations in each of the next three years. It is estimated that these larger deductions will represent $2.2 billion in additional support that will help drive growth and create jobs today and in the future. This will support 325,000 businesses in making critical investments to grow their output.

Building for the future means investing in innovation and entrepreneurs.

This budget proposes to help our innovators turn Canadian research, talent and discoveries into new products, services and companies.

We propose to invest in the next phase of the Pan-Canadian Artificial Intelligence Strategy and to launch similar strategies in genomics and quantum science, areas where Canada is a global leader.

To jumpstart tourism, this budget proposes $[1 billion], including to support festivals and other events that provide jobs and growth, and enhance the life of our communities.

As we emerge from our COVID lockdowns, let's spend the next year supporting each other and exploring our own breathtaking country.

In 2021, job growth means green growth.

Putting a price on carbon was no simple task. But we did it and made it stick, resulting in the first credible carbon-reduction program put forward by any Canadian government in history.

The government's updated climate plan, presented in December, was another turning point towards the green economy.

Building a net zero economy is no longer a matter of debate. It is not a matter of right versus left. It is about leaving a healthy planet, with clean water and clean air, for our children and their children. It is about averting a climate catastrophe. And it's about securing jobs today and creating the careers of the future.

This budget sets out a plan to help achieve GHG emissions reductions of 36 per cent from 2005 levels by 2030, and puts us on a path to achieve net-zero emissions by 2050. And it puts in place the funding to achieve our 25 per cent land and marine conservation targets by 2025.

By making targeted investments in transformational technologies, we can ensure that Canada benefits from the next wave of global investment and growth. Investing now in areas such as clean fuels and carbon capture, will foster well-paying middle-class jobs now and for many years into the future.

We can and will foster jobs and growth by building on what we already do well. The resource and manufacturing sectors that are Canada's traditional economic pillars – energy, mining, agriculture, forestry, steel, aluminum, autos, aerospace – will be the foundation of our new, sustainable economy.

That is why we propose a historic investment of a further $5 billion over seven years, starting in 2021-22, in the Net Zero Accelerator.

With this added support, on top of the $3 billion we committed in December, the Net Zero Accelerator will help even more companies invest to reduce their

greenhouse gas emissions, while growing their businesses. This will help build Canada's clean industrial advantage and bolster the domestic market for Canada's own clean technology innovators.

Budget 2021 further proposes to incentivize the green transformation through new tax measures, including for zero emissions technology manufacturing, carbon capture and storage, and green hydrogen.

We are at a pivotal moment. Just as the invention of the steam engine and of the personal computer triggered transformative economic shifts, today, the global economy is turning swiftly, decisively and irreversibly green. It is essential for the prosperity of the next generation of Canadians – and indeed, for those of us working today – for Canada to be at the forefront of this great transformation.

We can lead, or we can be left behind. Our government knows that the only choice for Canada is to be in the vanguard.

Throughout this crisis, we've found ourselves relying on our devices more than ever – for grieving and for celebrating, for work, for school and for fun. This is essential infrastructure. Therefore we propose to provide another $1 billion over six years for the Universal Broadband Fund, to support access to high-speed internet by Canadians in rural and remote communities.

This puts us on track to achieve our 98-per-cent high-speed coverage initiative by 2026.

***

Canadians are the most educated people in the OECD; we are the lucky stewards of a vast and beautiful land; and in contrast to so much of the rest of the world, we have built a thriving, multicultural society that embraces new arrivals. Our growing population is one of our great structural economic strengths.

But a growing country needs to build. We need to build housing. We need to build public transit. We need to build infrastructure. And we will.

A long-term plan for a faster-growing Canadian economy must include housing that is plentiful and affordable for working Canadians, especially young families. So, we propose to invest $2.5 billion and reallocate $1.3 billion in existing funding in order to help build, repair or support 35,000 housing units.

And we will support the conversion to affordable housing of the empty office space that has appeared in our downtowns, by reallocating $300 million from the Rental Construction Financing Initiative.

Making housing affordable for all Canadians will require significant investments. That is why, on January 1st, 2022, our government will introduce Canada's first national tax on vacant property owned by non-residents.

Strong, sustained growth also depends on modern transit. That's why, in February, we announced $14.9 billion over eight years to build new public transit, electrify existing transit systems, and develop transit solutions to connect rural, remote and Indigenous communities.

Once public health allows, we will seize the opportunity to draw even more talented, highly skilled people to Canada, including international students, to drive growth and create jobs.

Investments in this budget will support an immigration system that is easier to navigate, and more efficient in welcoming the dynamic new Canadians who add to our country's strength.

Building a Better, Fairer Canada

Our government has made progress in righting the historic wrongs in Canada's relationship with Indigenous Peoples. But we have a lot of work still ahead.

It's important to note that Indigenous peoples have led the way in battling COVID-19. This success is a credit to Indigenous leadership and self-governance.

This budget proposes more than $18 billion in investments to further narrow gaps between Indigenous and non-Indigenous peoples, support healthy, safe, and prosperous Indigenous communities, and advance meaningful reconciliation with First Nations, Inuit, and the Métis Nation.

That includes more than $6 billion to help close infrastructure gaps in Indigenous communities, and $2.2 billion for actions to end the national tragedy of missing and murdered Indigenous women and girls.

This has been a year when we have been reminded of the power of solidarity, when we have learned that each of us truly is our brother's – and our sister's – keeper. Solidarity is getting us through this pandemic. And solidarity depends on fairness, on each of us bearing our share of the collective burden.

That is why, now more than ever, fairness in our tax system – which is the practical underpinning of so much of our collective ability to support each other – is essential.

To ensure our system is fair, this budget will invest in the fight against tax evasion, shine a light on beneficial ownership arrangements, and close significant tax loopholes that allow multinational corporations to jurisdiction-shop.

Our government is also committed to working with our partners at the OECD to find multilateral solutions to the dangerous race to the bottom in corporate taxation. That includes work to conclude a deal on taxing large digital services companies. We are optimistic that such a deal can be reached this summer. But

meanwhile, this budget reaffirms our government's commitment to impose such a tax until an acceptable multilateral approach comes into effect.

The economic impact of COVID has been breathtakingly uneven. While hundreds of thousands of Canadians have lost their jobs, and small businesses have been pushed to the brink – and beyond – stock prices have soared, homes are worth more than ever, and the personal savings of the most affluent Canadians have surged.

The success of Canadians, and Canadian companies, in such a difficult year is cause for celebration.

Yet, it is also fair to ask those who have prospered in this bleak year to do a little more to help those who have not. That is why we are introducing a luxury tax on new cars and private aircraft worth more than $100,000 and pleasure boats worth more than $250,000.

If you've been lucky enough, or smart enough, or hard-working enough, to afford to spend $100,000 on a car, or $250,000 on a boat – congratulations! And thank you for contributing a little bit of that good fortune to help heal the wounds of COVID and invest in our future collective prosperity.

This budget lives up to our promise to do whatever it takes to support Canadians in the fight against COVID, and it makes significant investments in our future. It follows a year when we acted with speed and at scale to support Canadians during our country's biggest economic shock since the Great Depression. All of this costs a lot of money.

So it is entirely appropriate to ask: Can we afford it?

We can. And here is why.

First, because this is a budget that invests in growth. The best way to pay our debts is to grow our economy. The investments this budget makes in early learning and childcare, in small businesses, in students, in innovation, in public transit, in housing, in broadband, and in the green transition are all investments in jobs and growth.

We are building Canada's social infrastructure, and our physical infrastructure. We are building our human capital, and our physical capital. Canada is a young, vast country, with a tremendous capacity for growth. This budget will fuel that. These are investments in our future, and they will yield great dividends.

In today's low interest rate environment, not only ***can*** we afford these investments in Canada's future, it would be short-sighted of us ***not*** to make them.

Second, because our decision last year to support Canadians – at great cost, to be sure – is already paying off. Decisive government action prevented economic scarring in our businesses and our households, allowing the Canadian economy to begin strongly rebounding from the COVID recession, even before we have finished our fight against the virus.

The current, and necessary, lockdowns, are likely, of course, to slow that recovery. But we know – because we took the decision to preserve our economic capacity – that we can come roaring back.

Third, because our government has a plan, and we keep our promises. We said in the Fall Economic Statement that we would spend up to $100 billion over three years to support Canada's economic recovery – and that is what we are outlining here today.

We predicted a deficit for 2020/2021 of up to $382 billion dollars. But, thanks to a stronger-than-expected economic recovery, aided by this government's investments to support Canadians – and the remarkable ingenuity and resilience of Canadians across this great country – we have spent less than we provisioned for. Our deficit for 2020-2021 is $354 billion, significantly below our forecast.

Finally, and crucially, we can afford this ambitious budget because the spending we propose today is responsible, and sustainable.

We understand that there are limits to our capacity to borrow and that the world will not write Canada any blank cheques. We don't expect any.

That's why this budget shows a declining debt-to-GDP ratio and a declining deficit, with the debt-to-GDP ratio falling to 49.2 per cent by 2025-2026 and the deficit falling to 1.1 percent of GDP.

These are important markers. They show that the spending proposed today is sustainable, and that the extraordinary spending we have undertaken to support Canadians through this crisis, and to stimulate a rapid recovery in jobs, is temporary and finite. And our proposed long-term spending on social infrastructure, physical infrastructure, small and medium sized businesses, new technology and innovation and the green transition will permanently boost Canada's economic capacity.

****

Canadians have been profoundly wounded by this virus, and by the recession it has caused. But we are resilient. We keep on keeping on.

This budget represents a starting point for the healing that will follow our victory over this pandemic, and invests in a more prosperous future for us all.

In 2015, this federal government was elected on a promise to help middle class Canadians, and people working hard to join the middle class.

We offered a plan to invest in workers and their prosperity, in long-term growth for us all. We did that.

Today, we meet this new challenge, the greatest our country has faced in modern history, with a renewed promise, built on those earlier ones:

Opportunity is coming.

Growth is coming.

Jobs are coming.

After a long year of retrenchment, Canadians are ready to recover and rebuild.

We will finish the fight against COVID-19. We will put our shoulders to the wheel. We will bounce back. And we will grow, not just to where we have been before, but to new heights.

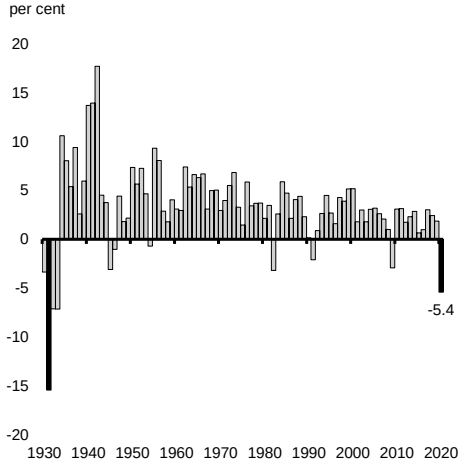
The Honourable Chrystia Freeland, P.C., M.P.
Deputy Prime Minister and Minister of Finance

Overview

Our Shared Economic and Social Foundations — Challenges and Opportunities Ahead

Canada entered 2020 in the midst of a sustained period of economic expansion. More than a million jobs had been created since 2015, unemployment was at historically low rates, wages were on the rise, the labour market was broadening to include more Canadians traditionally under-represented, over 1.3 million Canadians had been lifted out of poverty including 400,000 children since 2015, businesses were reporting above-average profits, and Canada had a strong and growing middle class. Canada was the second fastest growing economy in the G7 with the enviable position of having the lowest debt-to-GDP ratio in the group.

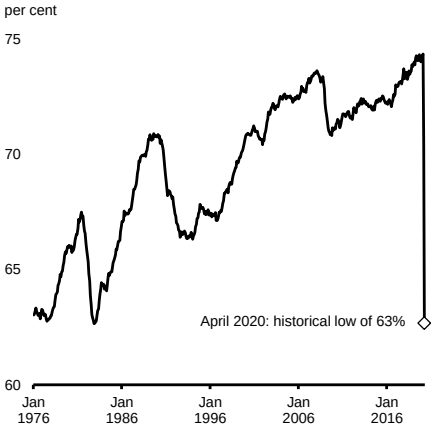
In the early weeks of 2020, news of a novel coronavirus began to spread. By March a global pandemic was declared. Canada went into a widespread lockdown and the global economy was facing unprecedented uncertainty.



1. The Course of COVID-19 in Canada

An unprecedented global disruption

The COVID-19 pandemic brought about the deepest and fastest recession, worldwide, since the Great Depression (Chart 1). Here at home, real GDP fell by a record 13 per cent over the first half of 2020. Activity in Canada declined about three times as much as in the 2008-09 recession, in a much shorter time.



The crisis had an unprecedented impact on the Canadian labour market, with more than 3 million Canadians losing their jobs and another 2.5 million Canadians working significantly reduced hours—representing about 30 per cent of the pre-pandemic workforce. By the end of April, the employment rate for Canadians aged 15 to 64 fell from record highs to record lows (Chart 2). The pandemic had its worst impacts on many of the most vulnerable people in Canada—primarily low-wage workers, young people, racialized workers, and women. On the disproportionate effects on women in particular, this has led to what many experts call a "She-cession."

The recovery path has been uneven over the fall and winter

Following the first wave of infections, economic activity and employment rebounded at a faster pace than expected over the summer of 2020 as restrictions eased, businesses reopened, and Canadians adapted. The Canadian economy saw a bounce-back in real GDP at over 40 per cent (annualized) in the third quarter, and over three-quarters of the 3 million jobs lost at the peak of the pandemic were recovered by the end of September.

Nevertheless, the recovery shifted into a slower gear in the fall and remaining gains were harder fought, with virus risks still hindering tourism, indoor dining, and activities involving large gatherings (Chart 3). Restrictions on these activities intensified over recent months as virus cases surged and hospitalizations surpassed their earlier peaks. This made for highly uneven impacts across sectors, with layoffs concentrated once again in contact-sensitive businesses with a larger share of part-time workers like retail, hotels, entertainment, and restaurants, while many other industries were virtually unaffected (Chart 4). Many small businesses in these sectors continue to face acute challenges.

Canada's economic performance has exceeded expectations

Economic activity during the second wave has proved more resilient than during the initial wave, showing that Canadians and businesses have adapted to operating under restrictions. While some peers saw contractions amid the second wave (Chart 5), Canada closed out 2020 far ahead of forecasters' mid-2020 predictions (Chart 6).

Early indications suggest that this momentum has carried over to the beginning of the year. Forecasts point to real GDP increasing for the third quarter in a row, in stark contrast to expectations for second wave impacts set out in the *Fall Economic Statement*.

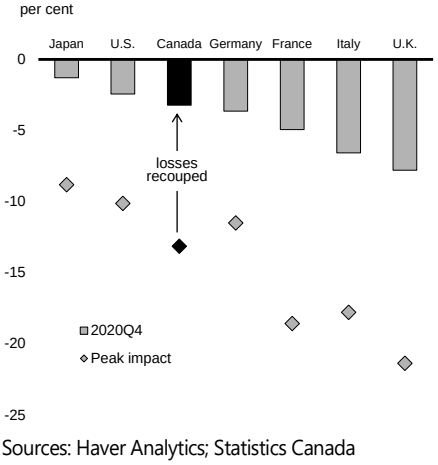
Canada's COVID-19 Economic Response has bridged Canadians through the crisis

Canada's COVID-19 economic response — including job protections through the Canada Emergency Wage Subsidy, liquidity support through programs like the Canada Emergency Business Account, and income support through the Canada Emergency Response Benefit and the suite of Recovery Benefits — has been key in bridging Canadians and businesses through the COVID-19 shock waves and stabilized the economy. With fiscal policy support exceeding 23 per cent of GDP, Canada's response including Budget 2021 investments has been one of the largest and fastest among G7 countries (Chart 7).

Chart 7

Significant Fiscal Policy Support Announced across G7 Countries

Notes: The timeframe for the announced measures is country-specific. Excludes the proposed *American Jobs Plan* for the U.S. (unveiled March 31, 2021) and Germany's supplementary budget for 2021 and Budget 2022 planned net new borrowing (unveiled March 24, 2021).



* Includes commitments made in Chapter 3 of the 2020 *Fall Economic Statement* and policy actions since, including Budget 2021.

Source: International Monetary Fund, April 2021 *Fiscal Monitor*, includes announced measures as at March 17, 2021; Department of Finance Canada calculations.

Overall, Canada's comprehensive and flexible response plan has helped engineer a near-term economic turnaround at a faster-than-anticipated pace compared with some peers (Charts 8 and 9).

A recent IMF analysis indicates that without direct support measures, Canada's real GDP would have declined by about 13.2 per cent in 2020 (versus an actual decline of 5.4 per cent), a difference of about 8 percentage points (Chart 10). Further, in its scenario without support measures, the IMF estimates that the unemployment rate would have risen by an additional 3.2 percentage points in 2020 (Chart 11).

Chart 10
Real GDP

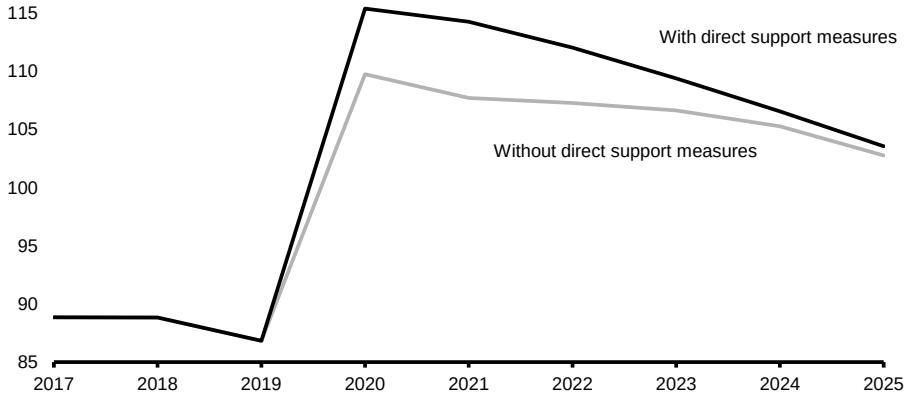

Chart 11
Unemployment Rate

Source: International Monetary Fund, *Canada: 2021 Article IV Consultation, Staff Report.*

While the fiscal costs have been steep, the impact on the government's fiscal position would have still been severe if the government had done less. The IMF analysis suggests that, absent direct support measures, the gross debt-to-GDP ratio would not have been significantly smaller than the IMF's baseline projection (Chart 12).

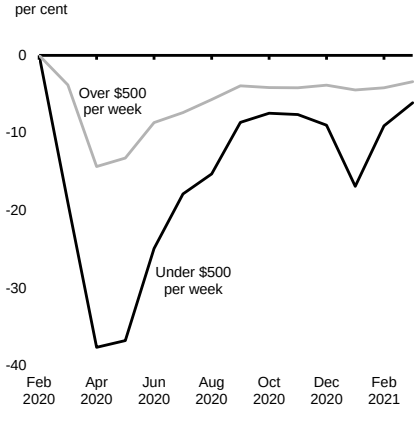
What this means is that a failure to provide support to Canadians and businesses would have resulted in almost as large a debt burden, greater human misery, and greater long-term economic scarring.



> *"…Decisive actions and unprecedented fiscal support helped to avert an even sharper fall in output. While the fiscal deficit and public debt have increased sharply, sizeable fiscal support was necessary to help avert larger economic and social losses…"*

Jobs recovery continues to progress at an uneven pace for many Canadians

The re-tightening of restrictions has an outsized impact on employment and exacerbated an already-difficult labour market for many Canadians. Workers in close-contact sectors once again bore the brunt of second-wave impacts. Youth, women, and older Canadians, as well as low-wage workers were disproportionally likely to be laid off or to have their hours worked sharply reduced (Charts 13 and 14). Early in the crisis, women's labour market outcomes deteriorated more than men's, unlike most previous downturns, with larger rises in unemployment rates and declines in labour force participation.

These uneven impacts across demographic groups — which reflected a combination of women working in affected sectors and taking on unpaid care work when schools or child care centres closed – diminished somewhat as we emerged from the second wave. The risk is exacerbated amidst the latest wave, highlighting the importance of sustained growth for these groups to recover.

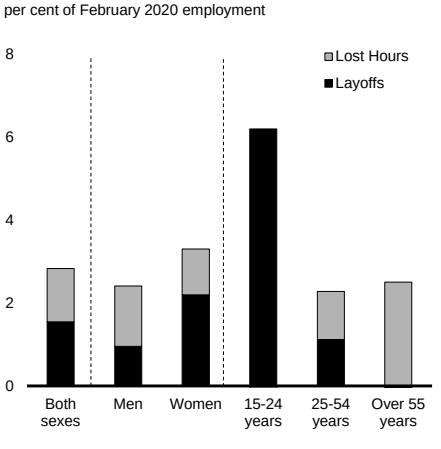

Chart 13

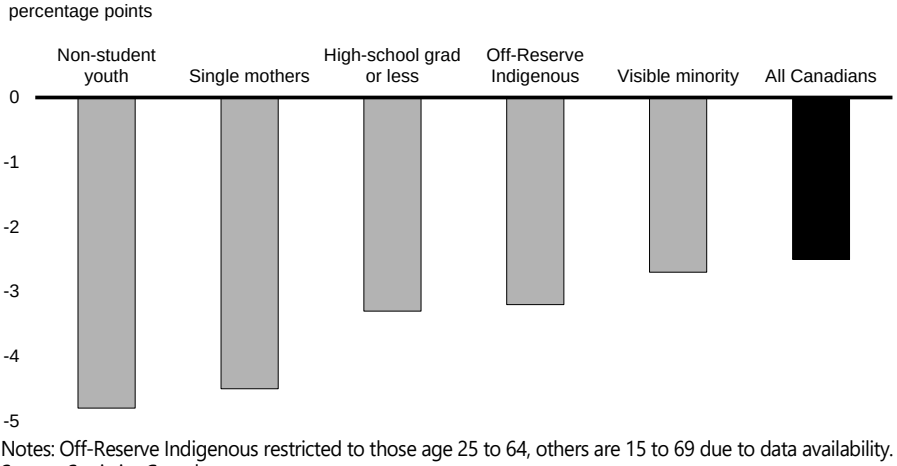
Chart 14
Workers Affected by COVID-19 by Age and Sex, March 2021

Note: Affected means laid off or working less than half of their usual hours (including no hours) for reasons likely related to COVID-19.



Source: Statistics Canada.

Many vulnerable people remain much more deeply affected than the average worker. Employment rates of single mothers, less educated Canadians, Indigenous peoples, and racialized Canadians, which already tend to be at lower levels, have declined much more than the economy-wide average during this crisis (Chart 15).

Long unemployment spells mean that many vulnerable workers risk withdrawing from the workforce or seeing their skills erode, with lasting impacts on their lifelongs earnings, and on the wider labour market, that could take years to reverse. Not surprisingly, these vulnerable groups are also those that have seen the strongest decline in their mental health and life satisfaction.

Fiscal guardrails continue to guide the policy stance

As announced in the *Fall Economic Statement*, the government tracks progress against several economic indicators to assess and gauge the impact of fiscal policy support, recognizing that no one data point is a perfect representation of the health of the economy.

These indicators include key measures of labour market conditions like the employment rate, total hours worked, and the unemployment rate. A comprehensive range of indicators show that the Canadian economy is still far from seeing a strong labour market with broadly shared benefits (Charts 16 to 19). Forward looking expectations will also guide the government's response.

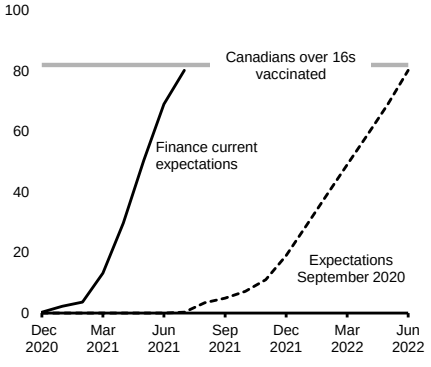
2. Gaining Economic Momentum through 2021

Progress controlling the virus will determine the path forward



Progress controlling the virus and inoculating Canadians are key factors in how the economic recovery in Canada will unfold in the coming months (Chart 20). The approval of a number of highly effective vaccines and expectations of a near-term acceleration in vaccinations has significantly raised the outlook for growth (Chart 21).

The best way to keep the economy strong is to keep Canadians healthy. Some restrictions will be necessary to limit the spread of the virus and will continue to temporarily impact economic activity. This issue is being compounded by the variant-driven third wave.

Potential for tailwinds to boost the recovery

Economic activity could recover faster than in a typical recession due to the fact that the effects of this crisis on the economy are the result of a public health emergency rather than an unwillingness to spend. Over the last year, Canadian households, in particular, have built up significant savings (Chart 22). When the pandemic recedes, the release of pent-up demand could translate into a tangible if temporary boost to economic activity. Additional benefits are possible from the large-scale fiscal support and investment in the U.S., which could have substantial spillover into the Canadian economy (Chart 23).

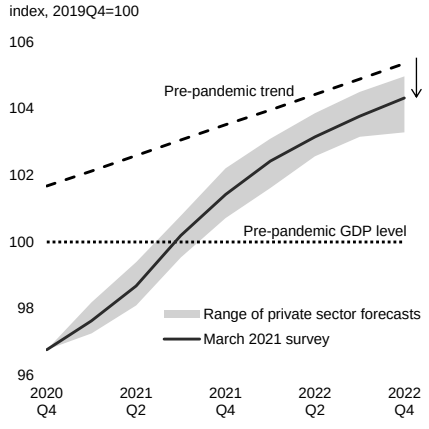
Economists expect the pace of economic activity to pick-up as vaccination progresses

Altogether, economists have significantly revised up their views for the recovery path since the *Fall Economic Statement* (Chart 24). Following a record decline of 5.4 per cent in 2020, real GDP is expected to grow by 5.8 per cent in 2021 and by 4 per cent in 2022. The projected level of real GDP by the end of 2022 is almost 2 per cent higher than projected in the *Fall Economic Statement*.

Chart 24
Real GDP Growth Forecasts
per cent, period to period at annual rates



Sources: Statistics Canada; Department of Finance Canada March 2021 survey of private sector economists; Department of Finance Canada calculations.

Real GDP is expected to reach its pre-pandemic level over the course of 2021, about six months earlier than previously expected, but there is a high degree of uncertainty among private sector forecasters with respect to this outcome (Chart 25).

The recovery of the labour market is expected to lag behind the GDP recovery, given the scale of disruptions in labour-intensive sectors and the prospect of workers or businesses facing difficulty reintegrating into the post-pandemic economy (Chart 26). The unemployment rate is expected to decline over the course of the year, but will still be around 7 per cent at the end of this year and 6.3 per cent at the end of next year, reaching around 6 per cent only by 2024.

Sources: Statistics Canada; Department of Finance Canada March 2021 survey of private sector economists.

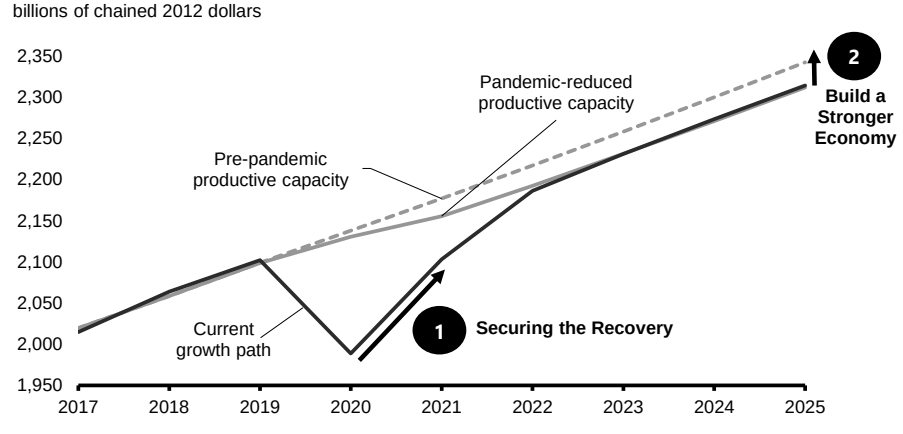
Indeed, there remains a high degree of uncertainty around the trajectory of the recovery, with transmission of more contagious variants of the virus causing regions to re-tighten restrictions yet again. Consistent with this dynamic situation, emergency support measures, such as the Canada Emergency Wage Subsidy and Canada Recovery Benefit, will continue to support workers and businesses until the pandemic abates.

In this context, to illustrate the consequences of different health outcomes and the associated responses of households and businesses, the Department of Finance has also considered two alternative scenarios to the baseline projections: (i) one scenario where improved health outcomes and the current momentum in activity is sustained enabling a stronger recovery; and (ii) another scenario where an acute third wave of infections and delayed, or less effective, vaccination program lead to a slower recovery.

Under the acute third wave 'slower recovery' scenario described above, economic growth is reduced by 0.7 percentage points in 2021. In this scenario, slower economic activity would drag on tax revenues, and the costs of the government's COVID-19 emergency response programs would be expected to increase due to necessary extensions of support, resulting in an estimated fiscal impact of approximately $15 billion in 2021-22. Under the 'faster recovery' scenario, estimated *positive* fiscal impacts are approximately $10 billion in 2021-22. Details of these scenarios can be found in Annex 1.

3. Securing the Recovery and Building a Stronger Economy



The recovery has a long way to go—the longer it takes, the more scars the pandemic recession will leave. Canadians remain underemployed and business activity in some sectors remains sluggish. The pandemic's severe impacts on investment, immigration, and workers have also placed Canada on a slower long-term growth path. As we emerge from the crisis, we must make up lost ground and put Canada's economy on a stronger footing, both for Canadians today and future generations. We can build this stronger, more resilient economy by investing in a green recovery, and making sure that every Canadian can participate in a growing economy and benefit from it.

The government's plan is twofold: first, *securing the recovery* with effective and time-limited measures; and second, *building a stronger economy* through smart, forward-looking investments (Chart 27).

Budget 2021 does this by putting forward a plan that concentrates spending in the earliest part of the recovery in order to drive as fast of a return to normal as possible, making long-term investments in initiatives that generate large returns to society and the economy, and producing a fiscal framework that is far stronger and more sustainable than forecasted in the *Fall Economic Statement*.

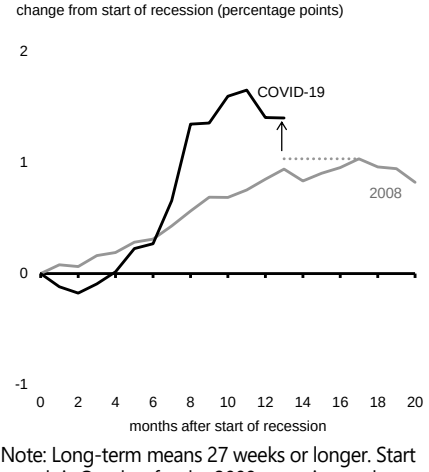
Chart 27

Impact of COVID-19 on the Canadian Economy

Sources: Statistics Canada; Department of Finance Canada March 2021 survey of private sector economists; Department of Finance Canada calculations.

Securing the recovery

While there is evidence that Canada is well positioned for recovery, the risk of doing too little is very high. Past experience has shown that there are lasting social and economic consequences from deep recessions and slow recoveries.



Overall, there remain over 500 thousand workers that have been laid off or faced working hours cuts due to the pandemic, including over 280,000 Canadians who have been unemployed for at least six months, still much higher than at the worst of the 2008-09 recession (Chart 28). The impacts of COVID-19 have also been disproportionate across the population, with adverse labour market outcomes for those that were vulnerable prior to the pandemic. Young people graduating into a weak labour market face lower lifetime earnings. This is an even more pointed concern for young women and racialized communities.

Many businesses remain closed, with the number of active businesses still nearly 4 per cent—or about 30,000 businesses—below pre-crisis levels with closures disproportionally concentrated among smaller businesses (Chart 29). Many of these closures are likely temporary, but risk becoming permanent if not enough is done.

Budget 2021 recognizes that a rapid and sustained economic recovery is the most reliable way to secure higher employment and income levels, improved and expanded job opportunities, and narrower economic disparities. That is why the goverment has a plan for a targeted and robust stimulus.

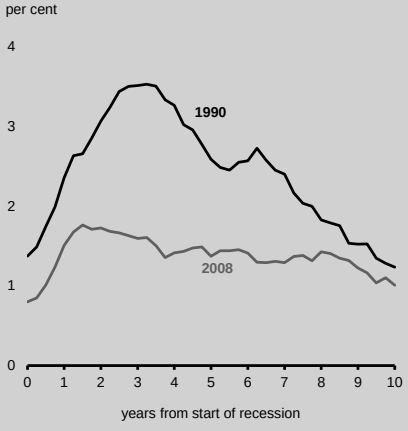
The Economic and Social Benefits of Investing in a Strong and Sustained Recovery

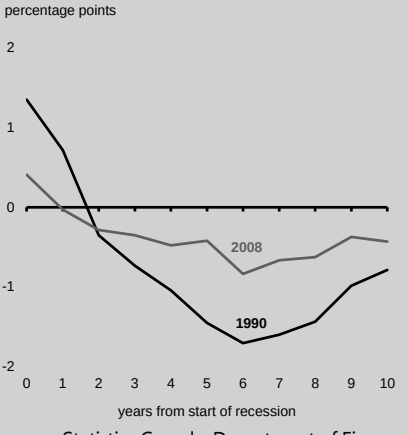
There are lessons to be learned from the recent past. After the 2008-09 recession, many Canadians struggled to find work for an extended period of time, leading many to drop out of the labour force entirely (Charts 30 and 31). Faced with lower demand and an uncertain outlook, businesses remained reluctant to invest (Chart 32). Economic inequalities widened as economic growth failed to bring every one along.



A swift and sustained recovery can prevent this type of long-term scarring and stem rising inequalities by drawing in potential workers who would otherwise sit on the sidelines. In strong labour markets, the persistent disparities facing many vulnerable groups like those with lower education, youth, and recent immigrants, diminish. In fact , just before the pandemic hit, the labour force participation rate of working-age Canadians reached an all-time high, reflecting increasing participation of women and vulnerable groups into the labour market. Many of these gains had emerged only years after the recession when eventually improved job opportunities provided more scope for participation to recover. In strong labour markets the persistent disparities facing many vulnerable groups tend to shrink, particularly for those with lower education, youth, or who are recent immigrants (Chart 33).

A strong recovery may also help rebalance the economy in a more sustainable manner, allowing interest rates to normalize and avoiding excessive dependence on interest-sensitive activities like consumer spending and housing to drive growth.

The risks of sustaining strong labour markets may also be lower now than previously believed. The relationship between the tightness of the labour market and inflation appears to have weakened in recent decades in many advanced economies. This suggests that a strong economy with low levels of unemployment could persist for an extended period before running up against higher inflation.



Accelerating the recovery would help to keep permanent economic harm to a minimum. The pandemic was initially expected to lower potential GDP relative to pre-pandemic by 2 per cent by the end of 2025 – or about $50 billion, meaning more than $2,000 on average for every Canadian aged 15 to 64. Although uncertainty surrounding this estimate remains high, medium-term GDP losses are now expected to be minimal partly reflecting extraordinary policy support and additional investments to safeguard a strong recovery.

Building a stronger economy

Securing the recovery is not enough. Budget 2021 recognizes that the government needs to take action to protect Canada's long term economic growth prospects. The challenges and fundamental shifts faced by Canada prior to the pandemic, such as climate change, population aging, and unrealized workforce participation by women, will not disappear. These challenges on the horizon will have longer lasting impacts on our future prosperity if not addressed (Chart 34).

Chart 34
Potential Real GDP Growth

Sources: Statistics Canada; Department of Finance Canada calculations.

With this context in mind, Budget 2021 will focus on pillars of growth to act as the foundation on which to build the economic recovery and move the Canadian economy onto a higher and more inclusive growth path.

Breaking down barriers that prevent people from joining the labour force, such as child care, creating opportunities for young Canadian workers, and helping workers find positions that match their skills will help each worker reach their full potential. Restarting Canada's immigration system and generating labour market market momentum for new Canadians will restore this key driver of working-age population growth.

As the world confronts the climate emergency and the economy shifts, investments that fight climate change and hasten the development of Canada's green economy help to create new industries and jobs now. And, as a result, they secure the well-being and prosperity of the next generations of Canadians.

Further, massive disruptions over the last year have potentially derailed new business investments, a critical pillar of Canada's long-term growth trajectory. Additional incentives to encourage businesses to invest and to adapt new

technologies to take advantage of an increasingly digitized economy will help business compete locally and globally.

The crisis has also demonstrated that not everything that matters to Canadians is easily measured or described in economic and financial terms. Important issues such as inequality, housing affordability, access to mental health support and the existential threat from climate change, are fundamental to Canadians' quality of life. To ensure that it continues to broaden the focus of its policy objectives and takes into account all aspects of Canadians' quality of life in its decisions, the government is moving forward in developing and refining a quality of life framework, further details of which can be found in Annex 4.

4. An Historic Plan for a Stronger and More Resilient Canada

Budget 2021 outlines a plan that will get Canadians back to work and begin improving Canada's growth potential. The actions in this budget will build upon the commitments made in the 2020 *Fall Economic Statement* and the *Enhanced Climate Plan*, which together comprise a recovery plan that will create shared prosperity, improve Canadians' quality of life, and power our green transformation.

Overall, better-than-expected economic outcomes and revisions to the estimated costs of some large economic response plan measures since the *Fall Economic Statement* have had a positive impact on the projected budgetary balance over the forecast horizon.

After accounting for Budget 2021 measures, the budgetary balance is expected to show a deficit of $354.2 billion in 2020-21, improving to $154.7 billion in 2021-22, and gradually declining to a deficit of $30.7 billion in 2025-26, or approximately one per cent of GDP. The federal debt is expected to peak at 51.2 per cent of GDP in 2021-22 before declining to 49.2 per cent of GDP in 2025-26. This balance includes the cost of incremental investments since FES 2020 of $101.4 billion, or 4.2 per cent of GDP, over the next three fiscal years.

As noted in Table 1, the deficit and the federal debt-to-GDP ratio remain below levels shown in the 2020 *Fall Economic Statement* that incorporated the planned $100 billion in incremental spending and forecasted economic and fiscal impacts of the second wave.

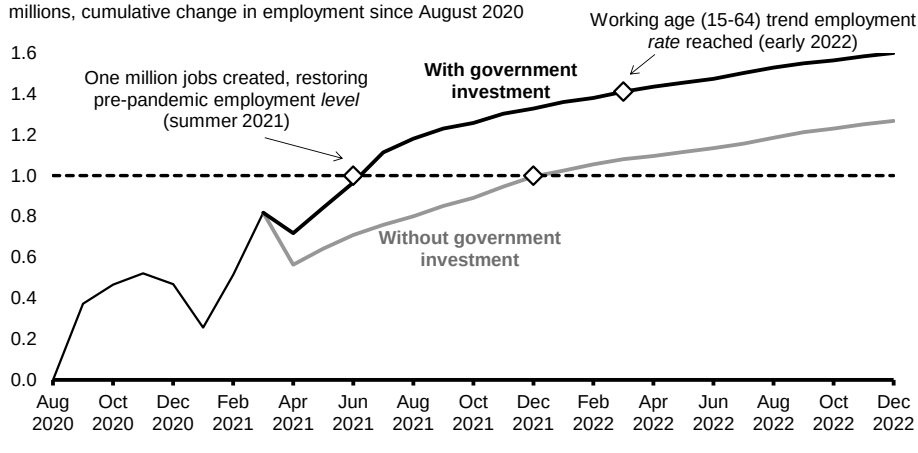
Accelerating the Rescue and Recovery—International Comparisons

To address the pandemic, governments across the globe have taken swift fiscal policy actions totalling more than 16% of the world's GDP as of March 17, 2021. The IMF estimates that without such support, the collapse in economic activity registered in 2020 could have been three times worse.

Similar to Canada, a number of peer countries have mobilized additional fiscal resources since the 2020 *Fall Economic Statement* —ranging from 1.9% of GDP to more than 12% of GDP.

Selected Country	Fiscal Support Announcements	Size (% of 2021 GDP)
United States	COVID-19 *Response and Relief Act* (4.1% of GDP - Dec. 2020) and *American Rescue Plan Act* (8.2% of GDP - Mar. 2021)	12.3% of GDP
Canada	Commitments made in Chapter 3 of FES 2020 (0.3% of GDP) and policy actions since, including Budget 2021 (4.2% of GDP)	4.6% of GDP
Germany	Supplementary Budget for 2021 and Budget 2022 net new borrowing for 2022 (Mar. 2021)	4.0% of GDP
Japan	Third Supplementary Budget for 2020 – net new COVID-19 related measures and Budget 2021 – Additional COVID-19 Contingency Fund (Dec. 2020)	3.6% of GDP
UK	Budget 2021 - net borrowing impact of policy decisions over 2020-21 and 2021-22 (Mar. 2021)	2.9% of GDP
Italy	Additional fiscal room through rise in borrowing limit (Jan. 2021)	1.9% of GDP

Sources: Committee for a Responsible Federal Budget; UK Treasury, Bundesministerium der Finanzen; Ministero dell'Economia e delle Finanze; Japan Ministry of Finance; Australian Treasury; Department of Finance Canada calculations.
NOTE: For the United States, the table excludes the proposed *American Jobs Plan* unveiled on March 31, 2021. Announcements above are not directly comparable as they can cover multiple years (largely focused on 2021 and 2022) and include varying combinations of on-budget items, additional COVID-19 health spending, the extension of existing support measures, off-budget items, as well as contingency or reserve funds yet to be allocated to specific measures. They also generally exclude offsetting financing measures. Totals may not add due to rounding



Delivering on the government's one million jobs commitment

In last fall's Speech from the Throne, the government announced its commitment to create one million jobs and restore employment to previous levels. Despite the severe impacts of the second wave on Canadian workers and businesses, we are on path to create one million jobs by the end of the year (Chart 35)—ahead of the schedule predicted in the 2020 *Fall Economic Statement*. The plan outlined in Budget 2021 will continue to support a strong recovery creating more good jobs in the years to come.

Even once this goal is reached there will still be work to do. Population growth means that we will still be short of our pre-pandemic employment rate level. The investments announced in this budget have put us on a path to reach this overall objective by early 2022, almost two years earlier than if the government had failed to make the extraordinary investments that get Canadians back to work and level-up Canada's growth potential.

Chart 35

Path to One Million Jobs

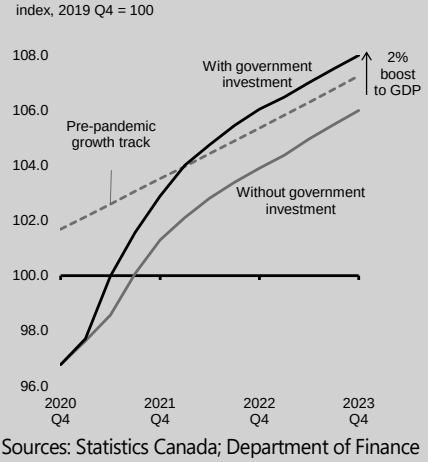
Note: Last actual data point is March 2021.

Estimated Short-Term Economic Impacts



Government investments in the *Fall Economic Statement*, the *Enhanced Climate Plan*, and Budget 2021 are expected to raise the level of real GDP by 2.0 per cent by the second year (Table 2). This is expected to translate into an increase in employment of more than 330 thousand jobs created or maintained by 2022-2023 (Charts 36 and 37). Details of these estimates can be found in Annex 1.

Most forecasters see the Canadian economy having a material amount of slack over the medium term—providing some indication that a full recovery will take time. Based on the current track, the output gap is expected to remain open over the near term. Accordingly, while the unemployment rate is expected to decline from where it sits today, it is still expected to be above its pre-crisis level for some time (Charts 38 and 39).

Table 2
Impacts on Real GDP and Employment
per cent, unless otherwise indicated

	2021–2022	2022–2023	2023–2024
Real GDP (per cent)	1.6	2.0	1.9
Employment (jobs created or maintained, thousands)	315	334	280

5. A Responsible Fiscal Plan

Canada entered this crisis in a strong fiscal position, allowing the government to take decisive action to put in place the support necessary for people and businesses to weather the storm and support a robust and inclusive recovery of the Canadian economy.

However, those actions, combined with lower revenues due to the recession, have increased public debt sharply. Canada's history of prudent fiscal management means that, despite the unprecedented actions we took to fight the virus, we continue to have, by far, the lowest net debt-to-GDP balance relative to international peers (Chart 40).

Chart 40

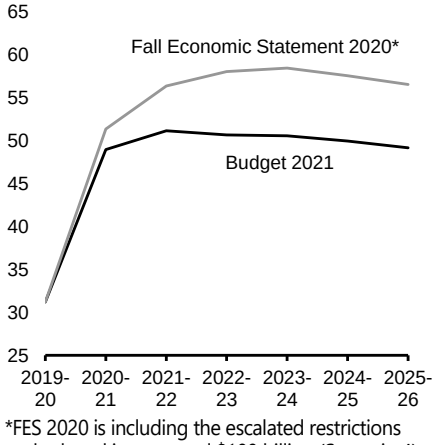
General Government Net Debt, G7 Countries

Note: The general government definition includes the central, state, and local levels of government, as well as social security funds. For Canada, this includes the federal, provincial/territorial, and local government sectors, as well as the Canada Pension Plan and the Quebec Pension Plan.

Source: IMF, April 2021 *Fiscal Monitor*; Department of Finance Canada calculations.

The government is committed to responsible fiscal policy. Budget 2021 deficits and the federal debt-to-GDP ratio remain below levels shown in FES 2020 that incorporated the planned $100 billion in incremental spending and forecasted economic and fiscal impacts of the second wave (Charts 41 and 42).

The government is committed to unwinding COVID-related deficits and reducing the federal debt as a share of the economy over the medium-term. This fiscal anchor will continue to protect Canada's low debt advantage so that borrowing costs remain low, and future generations are not burdened with COVID-19-related debt. Budget 2021 meets this test, by providing a prudent and sustainable path forward for public finances, as demonstrated by several important indicators:



- After rising over the next year to support concentrated investments to kickstart the recovery, the federal debt-to-GDP ratio returns to a downward track over the following years, and is forecast to be approximately 49 per cent in 2025-26 (Chart 41);
- The deficit-to-GDP ratio, which measures the size of the deficit in relation to the economy, is on a path to fall to 1.1 per cent over the planning horizon (Chart 42), a level that is lower than the forecasted size of the deficit for 2019-20 and 2020-21 when the government tabled its Economic and Fiscal Update in December 2019.

Notwithstanding the sharp increase in the federal debt-to-GDP ratio, public debt charges are projected to remain historically low. Despite recent increases in interest rates in Canada and elsewhere due to a stronger and faster-than-expected recovery (Chart 43), public debt charges as a per cent of GDP are expected to stay near their lowest level in over a century over the forecast horizon (Chart 44).

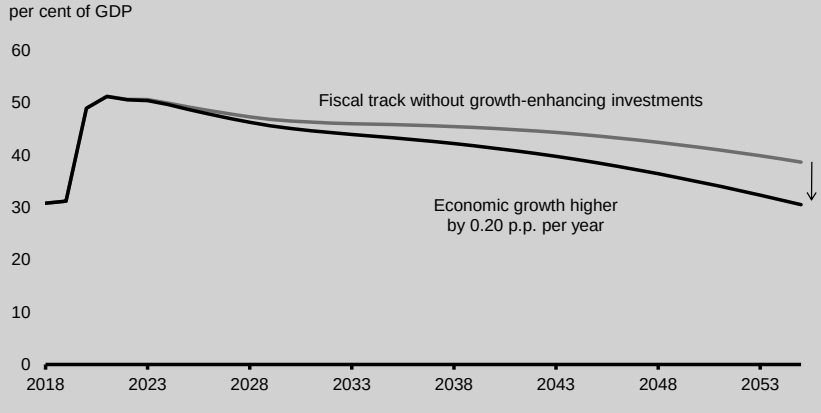
Building a stronger and more resilient economy will improve fiscal sustainability

In the current low-interest rate environment, growth-enhancing investments can help improve fiscal sustainability by raising GDP growth more than they raise costs in terms of increased debt service over the longer term. Budget 2021 is a plan that uses public investment to address these challenges head-on, by making investments in key measures that will drive future growth and prosperity, including:

- **Building Opportunities and Investing in People:** Budget 2021 aims at making it easier for parents to fully participate in the labour market by introducing a National Early Learning and Child Care Plan. The addition of 240,000 workers in the labour force stemming from greater access to high quality day care could raise real GDP by as much as 1.2 per cent over the next two decades, boosting real GDP growth by 0.05 p.p. per year over that period. This is one of the most significant actions taken since the introduction of North American Free Trade Agreements to expand economic opportunity for Canadians.

- **Connecting People and Businesses and Unleashing Innovation:** Budget 2021 supports investments in infrastructure, including public transit and trade infrastructure, and supports firms, particularly SMEs, in innovating and investing in technology so that they grow and take advantage of the new opportunities. Efforts to boost the productivity of Canadian workers will pay long-term dividends. For instance, working to reduce Canada's productivity gap with the U.S. by just one tenth could raise real GDP by 3 per cent over the next two decades, boosting real GDP growth by 0.15 p.p. per year over that period.

While no single initiative in this budget accomplishes the government's mission, the potential payoff from acting now in a broad range of policy areas is substantial, as measures tend to reinforce themselves over time and build momentum for further action to boost Canada's growth trajectory.



Investing to Grow the Economy

Long-term fiscal and economic projections can help assess whether the current fiscal policy trajectory is sustainable or whether fiscal policy adjustments are required. These estimates are not predictions of the future, but useful indicators of how economic and fiscal variables interact under specific conditions and assumptions.

They also help to illustrate that Canada's long-term fiscal sustainability depends not only on sound fiscal policies as exemplified through a declining debt-to-GDP ratio but also on strong economic policies and growth enhancing investments that contribute to sustained increases in economic growth over the longer term.

Chart 45

Impact of Higher Economic Growth Scenarios on Federal Debt

Note: Alternative simulation assumes a gradual increase in growth over the 2021 to 2025 period before reaching the longer term higher growth rate starting in 2026. Last data point is 2055.

Part I

Finishing the Fight Against COVID-19

Chapter 1
Keeping Canadians Healthy and Safe

For over a year, Canadians have been living through the greatest global public health challenge of our lifetime. Across Canada, governments of all orders have worked tirelessly to prevent outbreaks and protect lives.

Since day one of this crisis, the government moved quickly to provide rapid support to Canadians. Whether with the Canada Emergency Response Benefit, the Canada Emergency Wage Subsidy, or the business support measures, these programs meant that people could stay home and stay safe. At the same time, the government secured the most vaccines per capita of any country, and ensured some of the toughest border rules in the world, including with the U.S., while keeping vital supplies moving. The government also supported domestic manufacturing, including of personal protective equipment, and started to restore bio-manufacturing capabilities that have not been in Canada for decades.

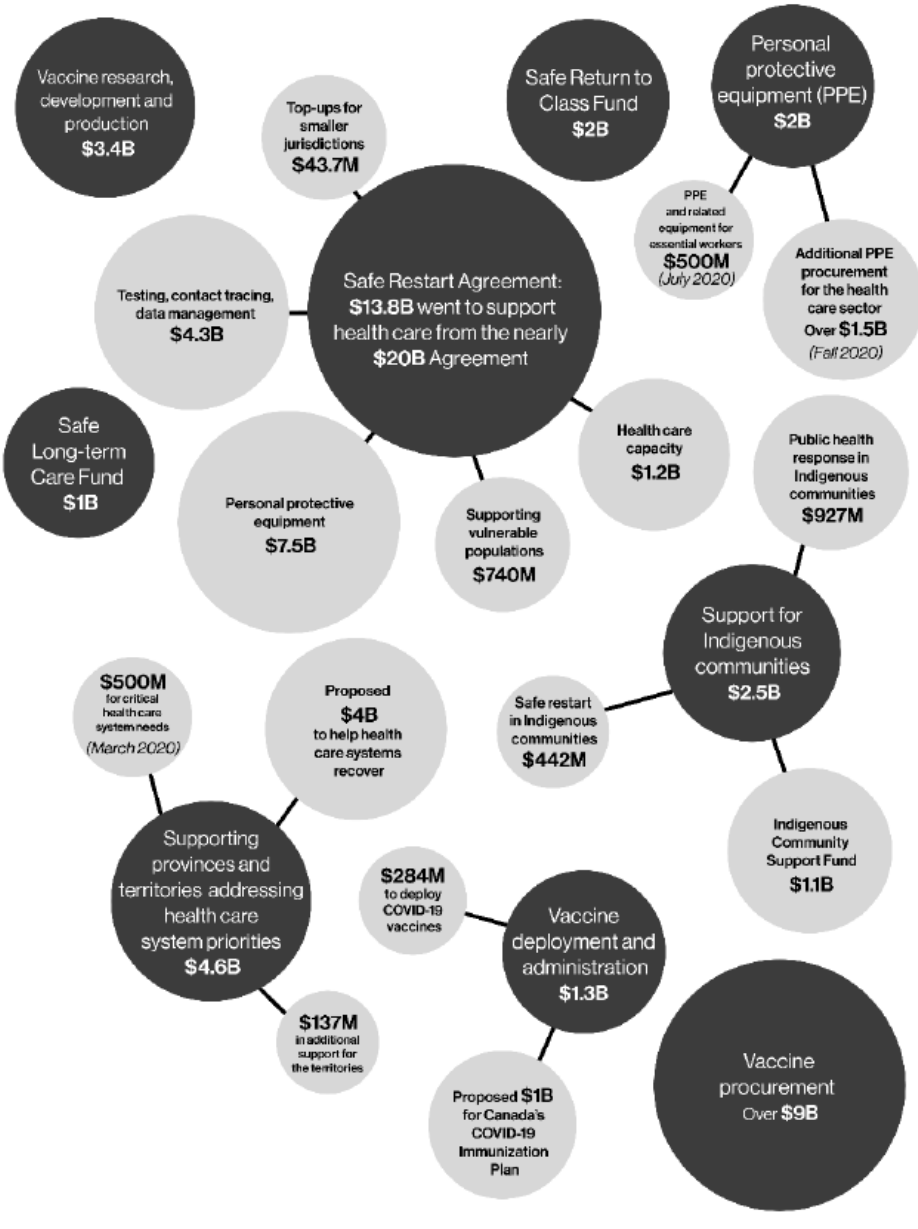
Canada took further action to close its borders, encourage Canadians to avoid non-essential travel, and put in place mandatory testing and quarantine orders, including hotel quarantine when waiting on testing results after arriving by air. Continually informed by the latest evidence and advice, these are some of the toughest border measures in the world. Keeping Canadians healthy and safe has been, and continues to be, the Government of Canada's top priority.

Nothing is more important than saving lives and keeping Canadians safe. We have witnessed the devastation this virus brought to long-term care homes. And we have seen racialized Canadians and Indigenous communities face higher infection rates.

Nurses, doctors, personal support workers, emergency medical technicians, and other front-line workers have bravely treated patients, putting themselves at risk, and experiencing some of the highest infection rates.

Canadians have made great sacrifices to try to contain the virus. The isolation, stress, economic damage, and disruption to lives has taken its toll on mental health.

While we are in the midst of the virus' third wave here in Canada, the rollout of safe and effective vaccines is a light at the end of what has been a long, dark tunnel.



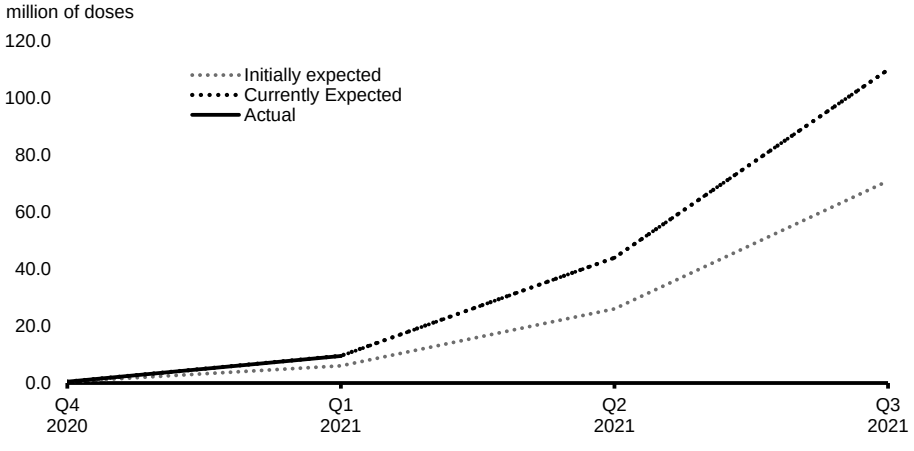
The largest immunization campaign in Canada's history is well underway. Canada is on track to meet the commitment that every Canadian who wants to will be fully vaccinated by September.

While finishing the fight, Canada must also learn lessons and take steps so it can be prepared for future threats. Rebuilding domestic bio-manufacturing capacity is a key part of this work. Better support and protections for our seniors, particularly those in long-term care facilities, is also essential.

The past year has been difficult, but better days are ahead. Until then, the Government of Canada will do whatever it takes to keep Canadians safe.

Figure 1.1

Major Federal Investments to Fight COVID-19*



* Does not include proposed Budget 2021 measures.

1.1 Providing Access to Vaccines

Canada has secured the most diverse portfolio of vaccines in the world. As vaccine programs accelerate across the country, the government is ensuring that provinces, territories, and Indigenous communities have the resources they need to deliver vaccine doses to people as quickly as possible. Canada is on track to meet the commitment that every Canadian who wants to will be fully vaccinated by September. As a result of the federal government's ongoing efforts to accelerate the delivery of COVID-19 vaccines, Canada received a total of 9.5 million doses by the end of March 2021, 3.5 million more than the initial target of 6 million doses. (Chart 1.1).

Chart 1.1

Expected Supply of Authorized Vaccines (Cumulative)

Notes: Initially expected reflects expected deliveries up to the next four quarters as of January 26, 2021, i.e. before approval of the AstraZeneca vaccine and the Johnson and Johnson vaccine. Actual reflects what have been received so far, week of March 29. Currently Expected reflects doses to come as of April 1, 2021.

Currently Expected reflects revised delivery schedules for the Pfizer vaccine. Notably, Pfizer recently committed to advance 1 million doses ahead of schedule in both April and May 2021 (March 5, 2021). This is in addition to another commitment from Pfizer on March 30, 2021, to advance 5 million doses.

Sources: Public Services and Procurement Canada and Public Health Agency of Canada.

Bilateral Agreements with COVID-19 Vaccine Suppliers

Vaccines (Authorized by Health Canada)	Type of Vaccine	Number of Doses
Pfizer	mRNA	Up to 76 million
Moderna	mRNA	44 million
AstraZeneca	Viral vector	20 million
Verity Pharmaceuticals Canada/ Serum Institute of India (in collaboration with AstraZeneca Canada Inc)	Viral vector	2 million
Janssen	Viral vector	Up to 38 million
Vaccines (Yet to be authorized by Health Canada)		
Medicago	Virus-like particle	Up to 76 million
Novavax	Protein subunit	Up to 76 million
Sanofi and GlaxoSmithKline	Protein subunit	Up to 72 million
International		
International COVAX Facility	-	Up to 15 million

Canada's COVID-19 Immunization Plan

The Government of Canada is covering the full cost of vaccines we procure, and ensuring they are free of charge to every person in Canada. On the rollout, the government is coordinating delivery with all provinces and territories, providing nationwide logistical support, warehousing services to supplement provincial and territorial capacity, and providing support for vaccine rollout campaigns. In addition, the Canadian Armed Forces are assisting with vaccination efforts in remote communities.

On March 25, 2021, the government tabled legislation in the House of Commons in order to provide a one-time payment of up to $1 billion to the provinces and territories, on an equal per capita basis, to help get shots into arms as quickly as possible.

Provinces and territories, with the support of municipalities, will be able to use this funding for a variety of vaccine-related costs, such as to recruit and train immunizers, establish mass vaccination clinics, set up mobile vaccination units, engage Indigenous communities to advance vaccine rollout, and reach vulnerable populations through community-based vaccination efforts.

International COVID-19 Response

To end this pandemic anywhere, we have to end it everywhere. Canada is part of the robust global pandemic response and has committed more than $2 billion, to date, to international efforts to fight and address the impacts of the virus. Canada is a founding member of the Access to COVID-19 Tools (ACT) Accelerator and the COVID-19 Vaccines Global Access Facility (COVAX), and plays a major role within the Advance Market Commitment initiative.

To ensure we prevail in the global fight against COVID-19:

- Budget 2021 proposes to provide up to $375 million, in 2021-22, to Global Affairs Canada to support Canada's international COVID-19 response, with a focus on addressing the health needs of developing countries. This would facilitate the world's poorest countries to access the tools necessary to help contain the spread of COVID-19.

1.2 Protecting Our Seniors

The COVID-19 pandemic has been devastating for Canada's seniors.

Many have spent the past thirteen months isolated from family and friends. For far too many seniors who live in long-term care, this year has been tragic; they have been the overwhelming casualties of this pandemic. Every senior in Canada deserves to live in dignity, safety, and comfort, regardless of which province or territory they call home.

It is essential that we protect the health and well-being of our seniors, and the personal support workers who care for them—many of whom are women, many of whom are racialized—through this difficult time and into the future.

The government is taking action, including through the $1 billion Safe Long-term Care Fund announced in the 2020 *Fall Economic Statement*, to ensure seniors, and those who help them, are well protected and well supported through the pandemic and for years to come.

Strengthening Long-term Care and Supportive Care

The pandemic has shone a light on systemic issues affecting long-term care facilities across the country. The government welcomes the news that the Heath Standards Organization and Canadian Standards Association are launching a process to help address those issues in Canada. The Health Standards Organization's and Canadian Standards Association's work with governments, stakeholders, and Canadians to develop national standards will help inform our ongoing discussions with provinces and territories on improving the quality of life of seniors in long-term care.

To protect seniors across Canada and build on this work:

- Budget 2021 proposes to provide $3 billion over five years, starting in 2022-23, to Health Canada to support provinces and territories in ensuring standards for long-term care are applied and permanent changes are made. To keep seniors safe and improve their quality of life, the federal government will work collaboratively with provinces and territories, while respecting their jurisdiction over health care, including long-term care. This work would ensure seniors and those in care live in safe and dignified conditions.
- Budget 2021 proposes to provide $41.3 million over six years, and $7.7 million ongoing, starting in 2021-22, for Statistics Canada to improve data infrastructure and data collection on supportive care, primary care, and pharmaceuticals.

Helping Seniors Age Well at Home

After a lifetime of hard work, seniors want to live healthy, safe, and independent lives. Seniors want to stay at home, in the communities that support them, for as long as possible. But that can become difficult as they age. This leads to many vulnerable seniors transitioning to supportive care before they would otherwise need to if they were better supported at home. To look at new ways to support seniors in their homes for longer:

- Budget 2021 proposes to provide $90 million over three years, starting in 2021-22, to Employment and Social Development Canada to launch the Age Well at Home initiative. Age Well at Home would assist community-based organizations in providing practical support that helps low-income and otherwise vulnerable seniors age in place, such as matching seniors with volunteers who can help with meal preparations, home maintenance, daily errands, yard work, and transportation. This initiative would also support regional and national projects that help expand services that have already demonstrated results in helping seniors stay in their homes. For example, knowledge hubs can help seniors access the local services available to them or provide information, resources, and training to community-based organizations delivering practical supports to seniors.

The government is also proposing to increase Old Age Security for seniors 75 and over, beginning in 2022. Details are outlined in Chapter 7.

1.3 Strengthening Our Health System

Throughout the pandemic, public health officials, hospital administrators, and health care workers have worked hard to protect Canadians and save lives. But the pandemic has put health care under enormous strain.

The federal government is making investments to shore up public health systems so that they can continue to provide world-class care to Canadians throughout the COVID-19 pandemic.

Every year, the federal government provides significant support to provincial and territorial health care systems through the Canada Health Transfer. For 2021-22, this amounts to $43.1 billion. This is in addition to other supports for the health care system provided during the pandemic, such as procurement of vaccines and personal protective equipment, and more (see Figure 1.1).

Helping Our Health Care Systems Recover

In the fight against COVID-19, doctors and patients have deferred many procedures. Health care systems are facing substantial backlogs that require time and resources to clear. The federal government continues to support provinces and territories, including addressing urgent health care needs.

As announced in March 2021, the federal government is proposing to provide provinces and territories with $4 billion through a one-time top-up to the Canada Health Transfer. This will help health systems ensure Canadians get the procedures and treatments they need to stay healthy and clear through the backlog of delayed procedures. The government has been clear that it will be there to support provinces' increasing health care needs in the long term, once we get through the COVID crisis.

Regulatory Cooperation with Trusted International Partners

The government is committed to enhancing Canada's drug approval process by promoting alignment and collaboration with trusted regulators in other countries. Regulatory cooperation with trusted authorities will make accessing life-saving medicines faster and simpler, ensuring that safe and effective drugs are available to Canadians more quickly.

Renewing the Territorial Health Investment Fund

No matter where anyone lives in Canada, they should be confident that they have access to reliable, well-funded public health care. To support the territories in overcoming the challenges of delivering health care services in the North:

- Budget 2021 proposes to provide $54 million over two years, starting in 2021-22, to renew the Territorial Health Investment Fund. Of this amount, $27 million would be allocated to Nunavut, $12.8 million would be allocated to Yukon, and $14.2 million would be allocated to the Northwest Territories.

1.4 Supporting Mental Health

Forty per cent of Canadians reported that their mental health deteriorated last year, and for those with pre-existing mental health conditions that number rose to 61 per cent.

Since 2015, the government has provided funding to the provinces and territories to improve mental health services, made significant investments to support Indigenous mental health services, and has launched innovative virtual mental health care tools throughout the pandemic.

The federal government understands that supporting mental health requires a comprehensive approach. The many investments the government is making to foster a strong and inclusive recovery recognize the social and economic factors of mental health, will support better mental well-being among all Canadians, and will complement investments to improve mental health services.

Figure 1.2

Budget 2021 Measures that Address the Social and Economic Factors of Mental Health

*Please see Chapter 8 for information on broader measures on action to address the tragedy of missing and murdered Indigenous women and girls.

*Please note that total amounts are over a five-year period.

National Standards for Mental Health Services

Before the pandemic began, almost one in ten Canadians reported that their mental health care needs were not met. A set of clear national standards is needed so that Canadians can access timely care, treatment, and support. To move forward on establishing national mental health standards:

- Budget 2021 proposes to provide $45 million over two years, starting in 2021-22, to Health Canada, the Public Health Agency of Canada, and the Canadian Institutes of Health Research to help develop national mental health service standards, in collaboration with provinces and territories, health organizations, and key stakeholders.

Supporting the Mental Health of Those Most Affected by COVID-19

Young people have seen the greatest decline in good mental health compared to pre-pandemic levels. Seven in ten health care workers reported worsening mental health during the pandemic. Sixty-four per cent of Indigenous people said their mental health had worsened. Racialized and Black Canadians can also face distinct challenges with mental health including structural racism and inequities in access to care.

To support populations most affected by COVID-19 in dealing with mental health challenges:

- Budget 2021 proposes to provide $100 million over three years, starting in 2021-22, to the Public Health Agency of Canada to support projects for innovative mental health interventions for populations disproportionately impacted by COVID-19, including health care workers, front-line workers, youth, seniors, Indigenous people, and racialized and Black Canadians.
- Budget 2021 proposes to provide $50 million over two years, starting in 2021-22, to Health Canada to support a trauma and post-traumatic stress disorder (PTSD) stream of mental health programming for populations at high risk of experiencing COVID-19 trauma and those exposed to various trauma brought about by COVID-19.

Additional support for veterans' mental health is outlined in Chapter 7. Investments to support mental health in First Nations, Inuit, and Métis Nation communities are outlined in Chapter 8.

Investing in the Wellness Together Canada Portal

In April of last year, the Government of Canada launched the Wellness Together Canada portal to provide Canadians with free access to live support, treatment, and credible information. Wellness Together Canada is available in all provinces and territories and to date over 1.1 million individuals have accessed the portal in over 3.5 million web sessions.

- Budget 2021 proposes to provide $62 million, in 2021-22, to Health Canada for the Wellness Together Canada portal so that it can continue to provide Canadians with tools and services to support mental health and well-being.

Since 2015, the federal government has invested over $8 billion to provide Canadians with better mental health care services.

Past Investments in Mental Health Care

As part of the 2017 Agreements on Home Care and Mental Health, the federal government provided $5 billion over 10 years to provinces and territories to improve access to mental health and addiction services.

Over this period, nearly $1.9 billion has been invested to support Indigenous mental health services, including $1 billion in Budget 2021 (more details can be found in Chapter 8). These investments are on top of existing mental wellness programs as well as supports available under Jordan's Principle for Indigenous youth and the Non-Insured Health Benefits Program.

Since the start of the pandemic, the government has invested nearly $250 million to develop virtual care and mental health tools and support the Kids Help Phone. Proposed funding would provide further support to the Wellness Together Canada portal.

Working Towards a New Crisis Hotline

The COVID-19 pandemic has exacerbated existing mental health challenges for Canadians and increased the number of Canadians in crisis. Making mental health services easier to access will have substantial benefits for Canadians and help save lives. The funding for the Kids Help Line that was initially provided in 2020-21 was extended into 2021-22 to ensure that it can continue to deliver counselling services to youth during the COVID-19 pandemic.

The Public Health Agency of Canada is continuing to work with the Centre for Addiction and Mental Health and partners to implement and sustain an expanded pan-Canadian suicide prevention service. Once fully implemented, people across Canada will have bilingual access to 24 hours a day, 7 days a week, crisis support using the technology of their choice: voice, text, or online chat.

The Canadian Radio-television and Telecommunications Commission is launching a regulatory proceeding to consult on a proposed three-digit hotline so Canadians have a memorable number they can call when they need help. The government is supportive of these efforts including ensuring funds are available to support the creation of this hotline.

Support for Canadians in Distress

In addition to the Wellness Together Canada portal (wellnesstogether.ca), if you or someone you know is in distress, call the Canada Suicide Prevention Service at **1-833-456-4566**. Canadians aged 5 to 29 can call the Kids Help Phone at **1-800-668-6868**.

Indigenous peoples can also reach out to Hope for Wellness at **1-855-242-3310**.

1.5 Investing in Research and Science

A resilient and long-lasting recovery must include a plan for future pandemic preparedness. Strategic investments in cutting edge life sciences research and biotechnology is a critical part of that. These growing fields are not only critical to our safety, but are fast-growing sectors that support well-paying jobs and attract investment.

From the start of the pandemic, the government has funded and coordinated our biomedical and scientific response. From the National Microbiology Laboratory in Winnipeg, which leads dozens of COVID-19 response projects in its Level 4 labs; to investing in AbCellera in Vancouver, which helped create a leading antibody therapeutic; to Quebec City's Medicago working to develop a leading vaccine candidate; to building the Biologics Manufacturing Centre at the National Research Council to manufacture vaccines, Canada has been building on its strengths to respond to this pandemic.

Raising the bar on our domestic life sciences and bio-manufacturing capacity will provide Canada with a more secure pipeline for vaccines in the future.

Strengthening Canada's Bio-manufacturing and Life Sciences Sector

Growing Canada's life sciences and bio-manufacturing sector is a priority that goes beyond responding to COVID-19. This is a growing sector that supports thousands of good, middle class jobs.

- Budget 2021 proposes to provide a total $2.2 billion over seven years towards growing a vibrant domestic life sciences sector. This support would provide foundational investments to help build Canada's talent pipeline and research systems, and support the growth of Canadian life sciences firms, including:
  - $500 million over four years, starting in 2021-22, for the Canada Foundation for Innovation to support the bio-science capital and infrastructure needs of post-secondary institutions and research hospitals.
  - $250 million over four years, starting in 2021-22, for the federal research granting councils to create a new tri-council biomedical research fund.
  - $92 million over four years, starting in 2021-22, for adMare to support company creation, scale up, and training activities in the life sciences sector.
  - $59.2 million over three years, starting in 2021-22, for the Vaccine and Infectious Disease Organization to support the development of its vaccine candidates and expand its facility in Saskatoon.
  - $45 million over three years, starting in 2022-23, to the Stem Cell Network to support stem cell and regenerative medicine research.

Several other initiatives proposed in Budget 2021 also include targeted support for the life sciences and bio-manufacturing sector. These measures form an important part of the government's investment in the sector and include:

- $1 billion on a cash basis over seven years, starting in 2021-22, of support through the Strategic Innovation Fund would be targeted toward promising domestic life sciences and bio-manufacturing firms. This is a key component of the total investment in the Strategic Innovation Fund proposed in Chapter 4.
- $250 million over three years, starting in 2021-22, to increase clinical research capacity through a new Canadian Institutes of Health Research Clinical Trials Fund, as proposed in Chapter 4.
- $50 million on a cash basis over five years, starting in 2021-22, to create a life sciences stream in the Venture Capital Catalyst Initiative, as part of a larger venture capital investment proposed in Chapter 4.

These investments would be reinforced by other measures proposed in Budget 2021, including: the Pan-Canadian Genomics Strategy; the Pan-Canadian Artificial Intelligence Strategy; the expansion of the Industrial Research Assistance Program; support to help firms tap intellectual property expertise; efforts to upskill and attract workers; as well as the expansion of work-integrated learning opportunities. These investments offer support to firms at various stages of maturity, and allow Canada's research and development efforts to be more closely connected to commercialization and business development supports. More details can be found in Chapters 3 and 4.

Action to Address Antimicrobial Resistance

The World Health Organization has declared that antimicrobial resistance is one of the top 10 global public health threats facing humanity. It occurs when bacteria, viruses, fungi, and parasites mutate and no longer respond to medicines. By 2050, it is estimated that as many as 396,000 lives in Canada could be lost to antimicrobial resistance if the phenomenon is not addressed.

- Budget 2021 proposes to provide $28.6 million over five years, beginning in 2021-22, with $5.7 million per year ongoing, to the Public Health Agency of Canada, Health Canada, and the Canadian Food Inspection Agency, to help address antimicrobial resistance. Investments would support efforts to prevent the inappropriate use of antimicrobials and expand efforts to monitor the emergence of antimicrobial resistance in Canada.

1.6 A Plan for the Safe Reopening of Our Borders

The government has implemented stringent travel restrictions and strict public health measures at border crossings and airports to slow the spread of COVID-19. At this time, the government continues to strongly advise against all non-essential travel.

Ahead of any reopening of borders, the government is working to improve the safety and efficiency of our borders so that Canada is ready for a strong and safe recovery.

Supporting Safe Air Travel

Air travel has declined sharply due to the COVID-19 pandemic. To facilitate the safe restart of air travel, when conditions allow, in a way that limits transmission of COVID-19 and protects travellers:

- Budget 2021 proposes to provide $82.5 million in 2021-22 to Transport Canada to support major Canadian airports in making investments in COVID-19 testing infrastructure.
- Budget 2021 also proposes to provide $105.3 million over five years, starting in 2021-22, with $28.7 million in remaining amortization and $10.2 million per year ongoing to Transport Canada to collaborate with international partners to further advance the Known Traveller Digital Identity pilot project, which will test advanced technologies to facilitate touchless and secure air travel.

To improve sanitization at screening checkpoints:

- Budget 2021 proposes to provide $6.7 million in 2021-22 to the Canadian Air Transport Security Authority to acquire and operate sanitization equipment.

These measures would help restore Canadians' confidence in the safety of air travel when public health restrictions and border measures are adjusted and would support the recovery of Canada's hard-hit air and tourism sectors, which so many Canadians rely on for their jobs and livelihoods.

Continuing to Protect Air Travellers

The Canadian Air Transport Security Authority (CATSA) plays a critical role in ensuring the safety of air travel by screening travellers and their baggage (as well as airport workers). CATSA has adopted additional screening practices, such as temperature checks at Canada's busiest airports, to help prevent the transmission of COVID-19. To help protect air travellers:

- Budget 2021 proposes to provide $271.1 million in 2021-22 to CATSA to maintain operations and enhanced screening services at the 89 airports where it works.

Supporting Temporary Foreign Workers while they Quarantine

Approximately 4,000 Canadian employers in the farming, fish harvesting, and food production and processing sectors rely on temporary foreign workers each year to fill up to 60,000 jobs and address domestic labour shortages. These workers are important to ensure critical operations of the agriculture sector and help to safeguard Canadian food production. These workers must follow isolation requirements under the *Quarantine Act*, which is a cost for employers.

- Budget 2021 proposes to provide $57.6 million in 2021-22 to extend the Mandatory Isolation Support for Temporary Foreign Workers Program to help employers offset costs associated with temporary foreign workers fulfilling isolation requirements upon entering Canada. Support of up to $1,500 per worker would be provided to employers until June 15, 2021 for costs of the 14-day isolation period. If workers are required to quarantine at a government approved facility, due to a lack of suitable facilities at their employers' facilities, employers can receive up to $2,000 per worker for costs associated with mandatory isolation requirements.

This program was launched to stabilize the labour market and the food supply chain and make sure there was food on the shelves for Canadians when the pandemic first hit. It also ensures that migrant workers do not unfairly carry the costs of their quarantine period.

- After June 15, 2021, employers would receive $750 per worker until the wind-down of the program on August 31, 2021. After August 31st, the government intends on phasing-out this program and will consult with employers on the transition to ensure that migrant workers are similarly compensated through their quarantine period by their employers.

Further measures that propose to reform the Temporary Foreign Worker Program can be found in Chapter 6.

Chapter 2
Seeing Canadians and Businesses Through to Recovery

In the face of the COVID-19 pandemic, the government acted swiftly to protect Canadians and support people and businesses, adapting as the pandemic evolved.

The government's broad suite of support measures has helped families, protected jobs, and supported businesses across Canada. More than eight of every ten dollars spent to fight COVID-19 and support Canadians continues to come from the federal government.

Table 2.1

Thanks to Canadians' hard work and sacrifice over the past year, these measures have worked effectively to stabilize the economy and prevent scarring. There have been early signs that we will have a robust recovery. So far, Canada's economic rebound has outpaced forecasters' expectations and compares favourably with that of peers. Canada saw record gains of about 40 per cent annualized real GDP in the third quarter of 2020, and 10 per cent annualized GDP growth in the fourth quarter, which was the second highest in the G7. Canada has also recovered about 90 per cent of jobs lost during the pandemic and is outpacing the United States in this respect, where less than two-thirds of lost jobs have been recouped.

Despite these encouraging signs, the virus remains a serious threat to Canadians. Public health restrictions are ongoing and new variants of COVID-19 make economic conditions uncertain for the months ahead.

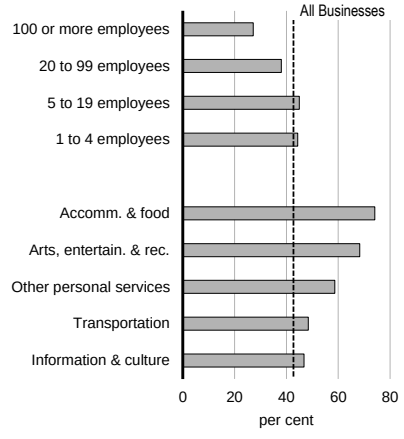
Today, over half a million Canadians who had a job before the crisis are still out of work or working sharply reduced hours, worse than in the depths of the 2008 recession. Many businesses, particularly those that rely on close in-person contact or travel, continue to struggle.

The government will do whatever it takes to see Canadians through to recovery. To this end, the government has developed a framework to guide key decisions on how temporary programs such as the recovery benefits, the wage subsidy, and the rent subsidy are transitioned as we move from crisis to recovery. These economic support measures will remain in place without change until at least July 2021, after which they will begin a gradual but purposeful transition through the early fall.

This timing is based on continued progress in vaccine roll-out through the spring and early summer, and that by September, all Canadians who want to be vaccinated, will be fully vaccinated. Should there be a change in the course of the pandemic, the government will take a flexible approach to ensure that Canadians and Canadian businesses have the support they need.

The government recognizes that some harder-hit industries will require support beyond the fall, which is why Budget 2021 proposes a series of investments to continue supporting the hardest-hit workers and employers.

2.1 Protecting Jobs and Supporting Businesses



The economic situation remains uneven in different sectors across the country.

Close contact businesses, such as retail, restaurants, and performing arts face intermittent restrictions and weak demand as Canadians continue to stay home. These businesses, many of them small businesses, employ women, young people, and racialized Canadians in greater proportion—and they have faced severe and ongoing revenue declines (Chart 2.1). In sectors less affected by restrictions, such as professional services and construction, the number of fully open businesses has rebounded sharply (Chart 2.2).

Overall, business confidence is markedly up, buoyed by the prospect of mass vaccination and a gradual return to normal. But a complete recovery will take time.

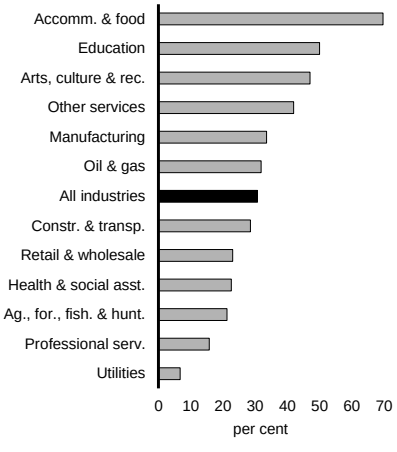
Share of Small Businesses Fully Open, Selected Industries



Note: For months where there was more than one survey, results were averaged. Last data point is April 2021 and is subject to revision once the CFIB completes its April survey.

Source: Canadian Federation of Independent Business.

Federal support measures have protected jobs and helped limit the number of permanent business closings. By preventing scarring the government has made it easier for Canada to quickly rebound. The Canada Emergency Wage Subsidy has, at times, supported over a quarter of private sector employment, and an even higher share in some hard-hit industries like accommodation and food services (Chart 2.3). Business insolvencies have, so far, remained low and below historical levels (Chart 2.4).

Extending the Canada Emergency Wage Subsidy

The Canada Emergency Wage Subsidy has helped more than 5.3 million Canadians keep their jobs and provided more than $73 billion in support to the Canadian economy.

The wage subsidy program is currently set to expire in June 2021. In order to bridge Canadians through the rest of this crisis to recovery, continued support is needed. To give workers and employers certainty and stability over the coming months:

- Budget 2021 proposes to extend the wage subsidy until September 25, 2021. It also proposes to gradually decrease the subsidy rate, beginning July 4, 2021, in order to ensure an orderly phase-out of the program as vaccinations are completed and the economy reopens.

Extending this support will mean that millions of jobs will continue to be protected. In addition, the government is proposing to introduce the new Canada Recovery Hiring Program, outlined later in Chapter 4. This would provide an alternative support for businesses affected by the pandemic to help them hire more workers as the economy reopens. The hiring program would be in place from June until November 2021, allowing firms to shift from the Canada Emergency Wage Subsidy to this new support.

It is estimated that the extension of the wage subsidy will cost $10.1 billion in 2021-22.

The government will seek the legislative authority to have the ability to further extend the wage subsidy program through regulations until November 20, 2021, should the economic and public health situation require it beyond September 2021.

For more information, please see Annex 6.

Ensuring the Canada Emergency Wage Subsidy Supports Workers

The intention of the wage subsidy has always been to preserve and protect Canadians' jobs. It was designed to do this by making sure employers who had suffered revenue declines during the pandemic had the support they needed to keep employees on the payroll and encourage them to re-hire laid off employees. Canadians expect businesses that use government support for their operations—especially at a time of widespread personal difficulty—to not increase the compensation of their top executives.

Any publicly listed corporation that decides to increase executive pay during this difficult time, while receiving taxpayer support, may have their wage subsidy funds clawed back.

- Budget 2021 proposes to require that any publicly listed corporation receiving the wage subsidy and found to be paying its top executives more in 2021 than in 2019 will need to repay the equivalent in wage subsidy amounts received for any qualifying period starting after June 5, 2021 and until the end of the wage subsidy program.

This is in recognition that the program is meant to serve workers and that, during recovery, businesses boosting top executive pay have clearly demonstrated that they have the resources to support workers.

Extending the Canada Emergency Rent Subsidy and Lockdown Support

The Canada Emergency Rent Subsidy and Lockdown Support have helped more than 154,000 organizations with rent, mortgage, and other expenses. The rent subsidy provides eligible organizations with direct and easy-to-access rent support. Importantly, it is available directly to tenants. Lockdown Support provides organizations eligible for the rent subsidy with additional support if they are subject to a lockdown or must significantly restrict their activities under a public health order. To date, these measures have provided $2.6 billion in support to Canadian businesses.

The program is set to expire in June 2021. To bridge Canadians through the rest of this crisis to recovery, continued support is needed.

- Budget 2021 proposes to extend the rent subsidy and Lockdown Support until September 25, 2021. It also proposes to gradually decrease the rate of the rent subsidy, beginning July 4, 2021, in order to ensure an orderly phase-out of this program as vaccinations are completed and the economy reopens.

It is estimated the extension of the rent subsidy and Lockdown Support will cost $1.9 billion in 2021-22.

The government will seek the legislative authority to have the ability to extend further the program through regulations until November 20, 2021, should the economic and public health situation require further support beyond September 2021.

For more information, please see Annex 6.

Extending the Canada Emergency Business Account

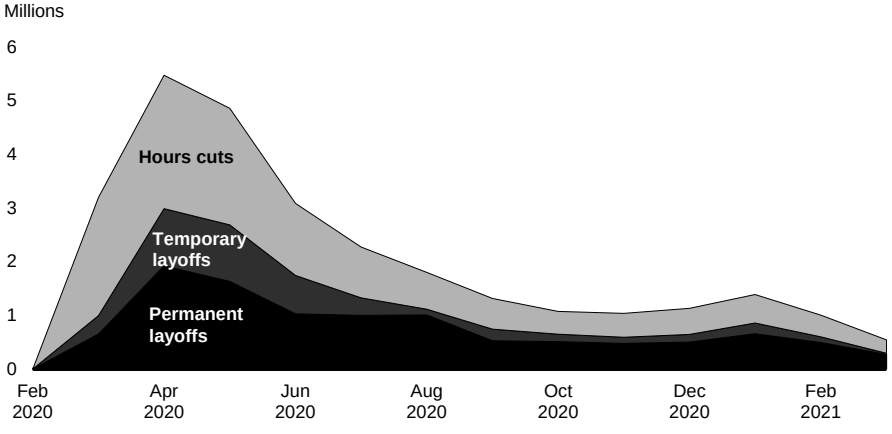
The Canada Emergency Business Account (CEBA) has provided interest-free, partially forgivable loans to more than 850,000 Canadian small businesses. In December 2020, the government increased the value of the loan from $40,000 to $60,000 to help small businesses bridge to recovery. If a business repays their loans by December 31, 2022, up to a third of the value of their loans (meaning up to $20,000) will be forgiven. In further recognition of the ongoing pandemic, the government recently extended the application deadline for CEBA to June 30, 2021.

A small number of businesses have faced challenges accessing the program, including Indigenous and rural businesses. To make sure these businesses are not left behind, the government provides similar support through the Regional Relief and Recovery Fund and Indigenous Business Initiative. To make sure these businesses can continue to access support:

- Budget 2021 proposes to extend the application deadline for similar support under the Regional Relief and Recovery Fund and the Indigenous Business Initiative until June 30, 2021.
- Budget 2021 proposes to provide up to $80 million in 2021-22, on a cash basis, for the Community Futures Network of Canada and regional development agencies, and to shift remaining funds under the Indigenous Business Initiative into 2021-22, to support an extended application deadline for the Regional Relief and Recovery Fund and Indigenous Business Initiative until June 30, 2021. This would support small businesses in rural communities so they can continue to serve local populations.

2.2 Supporting Affected Workers

More than two and a half million Canadians have returned to work since the pandemic began, but the uneven and evolving public health environment means many workers continue to face challenges finding and keeping work. The virulent third wave of the virus and the unpredictable impact of new variants add to the uncertainty for Canadian workers.



Some jobs lost during the pandemic may also be lost for good because businesses have found new ways to operate. That means that roughly half the Canadians out of work now may not be returning to their previous jobs when restrictions lift—they may have been permanently laid off (Chart 2.5). These workers are disproportionately women, young people, and racialized workers. If they are not supported, this could have long-term impacts on the economy's potential, and, most importantly, on the livelihoods of people and their families.

Capable and willing workers are at risk of being underemployed, underpaid, or even withdrawing from the workforce entirely. Chapters 3 and 4 outline key measures the government is taking to help workers retrain, reskill, and re-establish their careers to help accelerate recovery and ensure all workers are brought along.

But until enough people are vaccinated and the economy reopens, withdrawing income support programs too rapidly would be counterproductive and costly.

Chart 2.5

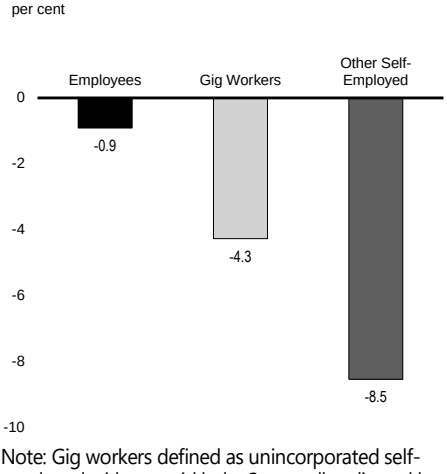
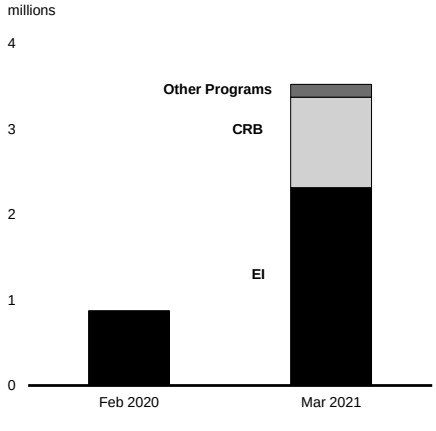
Temporarily Waiving the One-week Waiting Period for Employment Insurance Claims



Last fall, the government made temporary changes to Employment Insurance (EI) to support Canadians during the pandemic. The changes have ensured that Canadians who continue to face challenges in finding and keeping work have the support they need.

In response to ongoing restrictions in many parts of the country this winter, the government announced that the waiting period would be waived for EI beneficiaries who establish a new claim between January 31, 2021, and September 25, 2021. This includes claims for regular, fishing, and special benefits. This temporary change allows people who apply for benefits to be paid their first week of unemployment, helping ease their financial stress.

Providing Additional Weeks of Recovery Benefits and EI Regular Benefits



Despite temporary changes to the Employment Insurance system, the government recognized that certain workers who did not qualify for EI regular benefits needed support during the pandemic. These include self-employed workers, particularly gig workers, Canadians who have small amounts of part-time work, and those who cannot take jobs because the pandemic has forced them to shoulder greater-than-usual caregiving duties (Chart 2.6). After the creation of the Canada Emergency Response Benefit, which supported over 8 million Canadians, the government transitioned the support to a suite of new temporary benefits: the Canada Recovery Benefit, the Canada Recovery Caregiving Benefit, and the Canada Recovery Sickness Benefit. In March 2021, about 3.5 million Canadians received income support through the recovery benefits and EI (Chart 2.7).

Chart 2.6
Change in Employment by Class of Worker, Feb 2020 to Mar 2021

Chart 2.7
Income Support Beneficiaries by Program

Note: CRB = Canada Recovery Benefit. Other Programs are the Canada Recovery Caregiving Benefit and the Canada Recovery Sickness Benefit.
Sources: Employment and Social Development Canada; Canada Revenue Agency; Statistics Canada.

In February 2021, to ensure continued support for Canadians, the government increased the number of weeks available under the Canada Recovery Benefit and the Canada Recovery Caregiving Benefit by 12 weeks to a total of 38 weeks, the number of weeks available under the Canada Recovery Sickness Benefit from 2 weeks to 4 weeks, and the number of weeks of EI regular benefits available by 24 weeks up to a maximum of 50 weeks. These previously announced changes are expected to cost an estimated $12.1 billion over three years.

- To continue to support workers through a transition away from emergency income supports and position Canadians for the recovery, the government proposes to provide up to 12 additional weeks of Canada Recovery Benefit to a maximum of 50 weeks. The first four of these additional 12 weeks will be paid at $500 per week. As the economy reopens over the coming months, the government intends that the remaining 8 weeks of this extension will be paid at a lower amount of $300 per week claimed. All new Canada Recovery Benefit claimants after July 17, 2021 would also receive the $300 per week benefit, available up until September 25, 2021.
- Budget 2021 also proposes to extend the Canada Recovery Caregiving Benefit an additional 4 weeks, to a maximum of 42 weeks, at $500 per week, in the event that caregiving options, particularly for those supporting children, are not sufficiently available in the interim as the economy begins to safely reopen.

It is estimated that the Budget 2021 extension of the Canada Recovery Benefit and the Canada Recovery Caregiving Benefit will cost $2.5 billion over two years, starting in 2021-22.

If additional flexibility is required based on public health considerations later this year, the government will continue to do whatever it takes to be there for Canadians. To ensure this flexibility:

- Budget 2021 proposes legislative amendments to provide authority for additional potential extensions of the Canada Recovery Benefit and its associated suite of sickness and caregiving benefits, as well as regular EI benefits until no later than November 20, 2021, should they be needed.

Maintaining Flexible Access to Employment Insurance Benefits

Following the end of the Canada Emergency Response Benefit last fall, over 3.3 million Canadians have accessed EI and $25.3 billion in benefits have been paid since.

As the economy reopens, the EI system must remain responsive to the needs of Canadians.

- Budget 2021 proposes $3.9 billion over three years, starting in 2021-22, for a suite of legislative changes to make EI more accessible and simple for Canadians over the coming year while the job market begins to improve. The changes would:
  - Maintain uniform access to EI benefits across all regions, including through a 420-hour entrance requirement for regular and special benefits, with a 14-week minimum entitlement for regular benefits, and a new common earnings threshold for fishing benefits.

- Support multiple job holders and those who switch jobs to improve their situation as the recovery firms up, by ensuring that all insurable hours and employment count towards a claimant's eligibility, as long as the last job separation is found to be valid.
- Allow claimants to start receiving EI benefits sooner by simplifying rules around the treatment of severance, vacation pay, and other monies paid on separation.
- Extend the temporary enhancements to the Work-Sharing program such as the possibility to establish longer work-sharing agreements and a streamlined application process, which will continue to help employers and workers avoid layoffs.

As has been identified by the International Monetary Fund, the Organisation for Economic Co-operation and Development, and other experts, the pandemic has shown that Canada needs a more effective income support system for the 21st century. For this reason:

- Budget 2021 announces forthcoming consultations on future, long-term reforms to EI. To support this effort, the government proposes to provide $5 million over two years, starting in 2021-22, to Employment and Social Development Canada to conduct targeted consultations with Canadians, employers, and other stakeholders from across the country. Consultations will examine systemic gaps exposed by COVID-19, such as the need for income support for self-employed and gig workers; how best to support Canadians through different life events such as adoption; and how to provide more consistent and reliable benefits to workers in seasonal industries. Any permanent changes to further improve access to EI will be made following these consultations and once the recovery is fully underway.

Extending Employment Insurance Sickness Benefits to Better Support Canadians Suffering From Illness or Injury

When Canadians are facing illness or injury, they should feel confident that they are supported and that their jobs are protected as they recover. However, for some Canadians, the 15 weeks of sickness benefits available under EI is simply not enough. Workers receiving cancer treatments or requiring a longer period to recover from an illness or injury can face a stressful income gap between the time they exhaust their EI sickness benefits and when they are healthy enough to return to work.

- Budget 2021 proposes funding of $3.0 billion over five years, starting in 2021-22, and $966.9 million per year ongoing to enhance sickness benefits from 15 to 26 weeks, as previously committed to in the Minister of Employment, Workforce Development and Disability Inclusion's mandate letter. This extension, which would take effect in summer 2022, would provide approximately 169,000 Canadians every year with additional time and flexibility to recover and return to work.

- Budget 2021 also proposes to make amendments to the *Employment Insurance Act*, as well as corresponding changes to the *Canada Labour Code* to ensure that workers in federally regulated industries have the job protection they need while receiving EI sickness benefits.

The government also intends to launch consultations with employers, labour organizations and private insurers regarding improvements that may be required to the EI Premium Reduction Program. Under the Premium Reduction Program, employers who provide short-term disability plans to their employees can obtain a reduction in EI premiums.

Extending Temporary Support for Seasonal Workers Who Continue to be Affected by the Pandemic

Self-employed fishers and seasonal workers have shown incredible resilience throughout the COVID-19 pandemic. Federal income support has been a lifeline to approximately 20,000 fishers and thousands of seasonal workers since September, especially in Atlantic Canada. With restrictions ongoing and recovery only just underway, these Canadians continue to need support. To better support fishers and seasonal workers and ensure they do not lose access to needed financial support:

- Budget 2021 proposes legislative changes to ensure that all self-employed fishers who submit an Employment Insurance (EI) claim for the winter 2021 fishing benefit period are treated equally, by extending temporary eligibility changes for the entire benefit period.

- Budget 2021 also proposes legislative changes and funding of $99.9 million over three years, starting in 2021-22, to extend the rules of an existing EI seasonal pilot project for an additional year, until October 2022. The measure would provide up to 5 additional weeks of EI regular benefits to seasonal claimants in 13 regions of Atlantic Canada, Quebec, and Yukon.

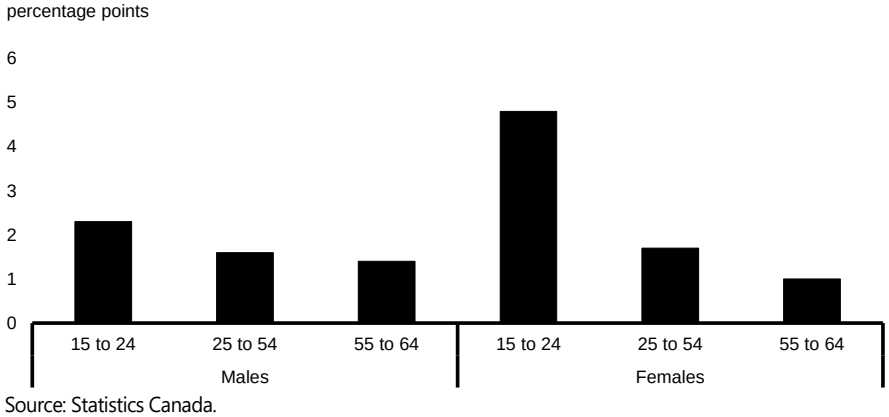
Part II

Creating Jobs and Growth



Chapter 3
New Opportunities for Canadians

In planning for Canada's economic recovery, the government's first order of business is to heal the specific wounds of the COVID-19 recession.

The impact has been even more uneven than previous recessions. Some sectors, many large businesses, and many wealthier Canadians have done quite well. They have managed to keep working during the pandemic, have absorbed the customers from locked-down small business competitors, and have seen their homes and other assets grow in value.

The COVID-19 recession has had its worst impact on many of the most vulnerable people in Canada—primarily low-wage workers, young people, racialized workers, and women. It has affected businesses that disproportionately employ these people.

Chart 3.1
Change in the Unemployment Rate, by Age and Sex, February 2020 to March 2021

Source: Statistics Canada.

Today, about 296,000 people are still out of work, and 247,000 are facing sharply reduced work hours, and with that reduced wages, and reduced access to opportunities.

> *"The labour market is a long way from recovery, with employment still well below pre-COVID levels. Low-wage workers, young people and women have borne the brunt of jobs losses."*
>
> — Bank of Canada, March 10, 2021

Lessons from recessions of the past make it clear that a recovery that focuses on GDP alone is one that risks leaving people behind.

The government's COVID-19 recovery plan puts people first. It is targeted at the groups that have been most affected, to make sure they are part of our recovery. It does so by making higher education more affordable and reducing the burden of student debt for more Canadians in need. It does so by improving conditions for workers struggling to make ends meet—or those trying to rejoin the workforce after a difficult time. It is about supporting the middle class and helping more people join the middle class.

In the 2020 Speech from the Throne, the Government of Canada launched a campaign to create over one million jobs, restoring employment to pre-pandemic levels including through historic investments in training that will skill up workers.

Budget 2021 will create almost 500,000 new job and training opportunities for workers over coming years—including 215,000 new opportunities for youth.

Most importantly, Budget 2021 makes a generational investment in a Canada-wide system of affordable child care.

3.1 Women in the Economy

COVID-19 has affected all Canadians, but women have been disproportionately affected.

In the labour market, women were hit earlier and harder, and their jobs continue to recover more slowly.

The closure of schools and child care centres has exacerbated work-life balance challenges for women as they have overwhelmingly borne the burdens of unpaid care work. This has made it more difficult for some women to work full time, for some to work at all, and for many women it has worsened their mental health.

For far too long, the work women do, paid and unpaid, has been systematically devalued by our economy and by our society. Long-standing gender inequities have only been amplified over the course of the pandemic—and it has put decades of hard-fought gains for women in the workplace at risk. Today, more than 16,000 women have dropped out of the labour force completely, while the male labour force has grown by 91,000. This is a she-cession.

Budget 2021 lays out an expansive jobs and growth plan that is very much a feminist plan. It seeks to build a recovery that gives all women in Canada the ability to fully participate in our economy.

The government recognizes the many different lived experiences of women—experiences shaped by racial identity, income level, disabilities, geography, and more. Budget 2021 seeks to build a recovery that acknowledges that many women start from a position of disadvantage in the workforce, in the demands placed upon them in the care economy, in their access to resources and capital as entrepreneurs, in their access to health care, and in the threat of violence they disproportionately face.

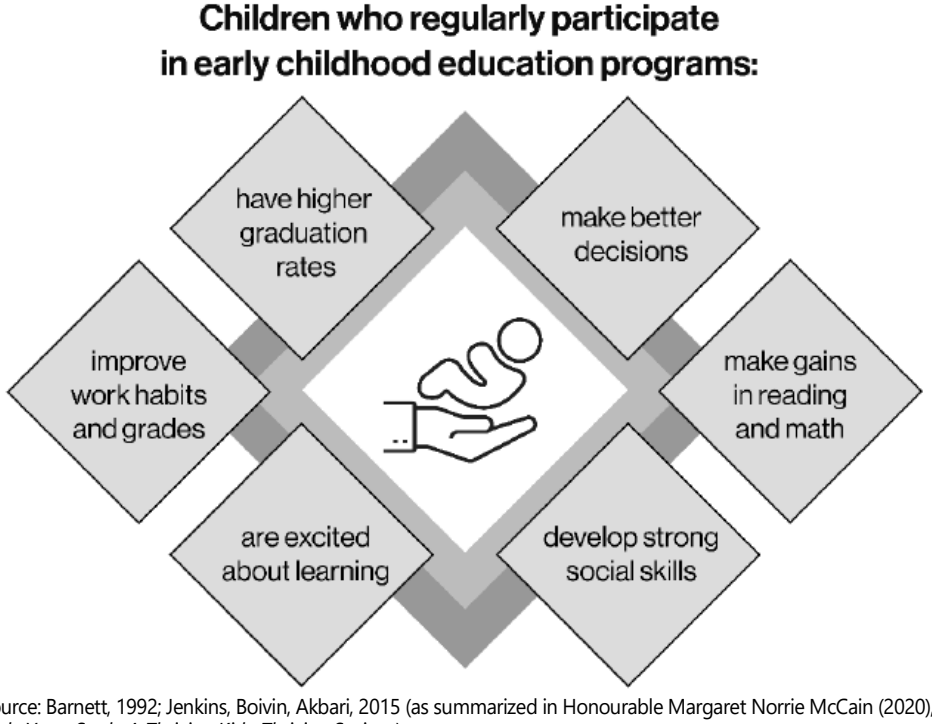
In March, the Government of Canada created a Task Force on Women in the Economy to help guide a robust, inclusive, and feminist recovery and to help address long-standing systemic barriers. Composed of a diverse group of experts and leading voices, the task force has begun advising the government on policies and measures to support women's employment and address issues of gender equality in the wake of the pandemic. In particular, the task force has provided advice on early learning and child care, support for youth, and women who work in low-wage jobs. The members provide feedback with an intersectional lens that is instrumental in this budget and will continue to provide advice on the path forward.

The work of creating a more inclusive, sustainable, feminist, and resilient economy that values women's work will take time. The government will continue its progress to build a feminist, intersectional Action Plan for Women in the Economy that will work to push past systemic barriers and inequities, for good. This will create an economy that works for everyone and build a stronger middle class.

A Canada-wide Early Learning and Child Care Plan

More than 50 years ago, the Royal Commission on the Status of Women in Canada called on the federal government to immediately begin working with provinces and territories to establish a national daycare plan. Generations of Canadians have waited for their government to answer this call.

The pandemic has made access to early learning and child care a universal issue that is resonating across sectors, regions, and income brackets. School and child care centre closures have been difficult for parents. Some have had to leave their jobs, or reduce their hours significantly. Without access to child care, parents cannot fully participate in our economy.



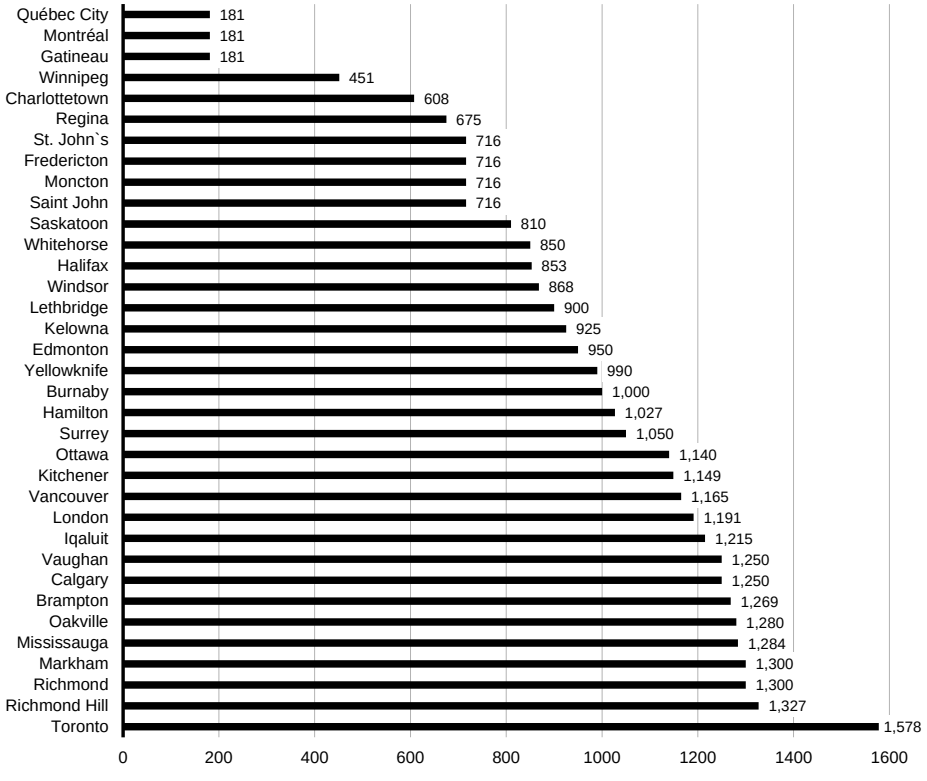
This is an economic issue as much as it is a social issue. Child care is essential social infrastructure. It is the care work that is the backbone of our economy. Just as roads and transit support our economic growth, so too does child care.

Investing in early learning and child care offers a jobs-and-growth hat trick: it provides jobs for workers, the majority of whom are women; it enables parents,

particularly mothers, to reach their full economic potential; and it creates a generation of engaged and well prepared young learners.

Studies by Canadians Dr. Fraser Mustard and the Honourable Margaret McCain have shown that early learning is at least as important to lifelong development as elementary, secondary, and post-secondary education—it improves graduation rates, promotes lifelong well-being, boosts lifetime earnings, and increases social equity.

Figure 3.1
Benefits of Early Learning and Child Care for Children



Source: Barnett, 1992; Jenkins, Boivin, Akbari, 2015 (as summarized in Honourable Margaret Norrie McCain (2020), *Early Years Study 4: Thriving Kids, Thriving Society.)*

Yet, early learning and child care can be more expensive than university tuition in some cities—something families have decades longer to save up for. The pandemic has shifted the public understanding of how access to child care supports children, their families, and our economy. The clear benefits of early learning and child care should not be a luxury for only the Canadian families that can afford it. Lack of access is not a choice, nor are unaffordable fees. The current system is leaving too many children and families behind, particularly low-income and racialized families. Every child deserves a fair start.

The high cost of child care—in some urban centres fees for one child can be as much as rent or mortgage payments—is a tax on a segment of the population that Canada requires to drive economic growth. Young families are juggling sky high housing costs, the increasing cost of living, expected to save up for their retirements, while managing child care fees.

Chart 3.2

Median Toddler Fees in 2020 (gross, monthly)

Note: These data represent gross child care fees and do not include reductions from means-tested child care subsidies or tax-based supports.

Source: Canadian Centre for Policy Alternatives (2021).

The very best example of the economic power of an affordable, well-run early learning and child care system is Quebec. At the time the *Québec Educational Childcare Act* was instituted in 1997, women's labour force participation rate in Quebec was four percentage points lower than the rest of Canada. Today it is four points higher. And Quebec women with children under three have some of the highest employment rates in the world. Furthermore, studies show that child care alone has raised Quebec's GDP by 1.7 per cent.

Furthermore, TD Economics has pointed to a range of studies that have shown that for every dollar spent on early childhood education, the broader economy receives between $1.50 and $2.80 in return.

Beyond the simple economic facts, it is also a question about the kind of Canada we want. Early learning and child care represents a chance for the country to offer each and every child the best start in life. It represents an equalizer, a way to build communities, a bold feminist policy, and the most effective step we can take to support our economy in the short, medium and long term. It is about making sure that everyone has the same access to opportunities, even from their youngest age.

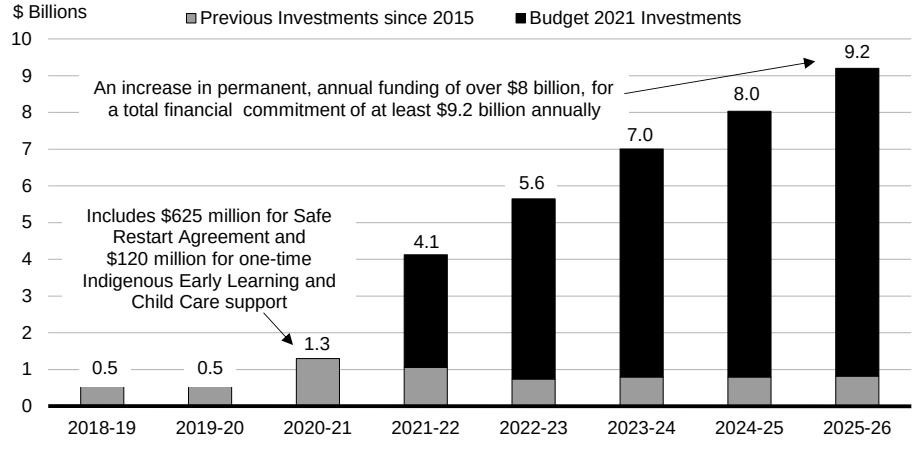
It is time for the rest of Canada to learn from Quebec's example. A Canada-wide early learning and child care plan is a plan to drive economic growth, a plan to secure women's place in the workforce, and a plan to give every Canadian child the same head start. It is a plan to build an economy that is more productive, more competitive, and more dynamic. It is a plan to grow the middle class and help people working hard to join it.

Figure 3.2
The Dividends of Investing in Early Learning and Child Care

Establishing a Canada-Wide Early Learning and Child Care System

The federal government will work with provincial, territorial, and Indigenous partners to build a Canada-wide, community-based system of quality child care. This will be a transformative project on a scale with the work of previous generations of Canadians, who built a public school system and public health care. This is a legacy investment for today's children who will not only benefit from, but also inherit this system.

Just as public school provides children with quality education in their neighbourhoods, the government's goal is to ensure that all families have access to high-quality, affordable and flexible early learning and child care no matter where they live. The government will also ensure that families in Canada are no longer burdened by high child care costs—with the goal of bringing fees for regulated child care down to $10 per day on average within the next five years. By the end of 2022, the government is aiming to achieve a 50 per cent reduction in average fees for regulated early learning and child care to make it more affordable for families. These targets would apply everywhere outside of Quebec, where prices are already affordable through its well-established system.



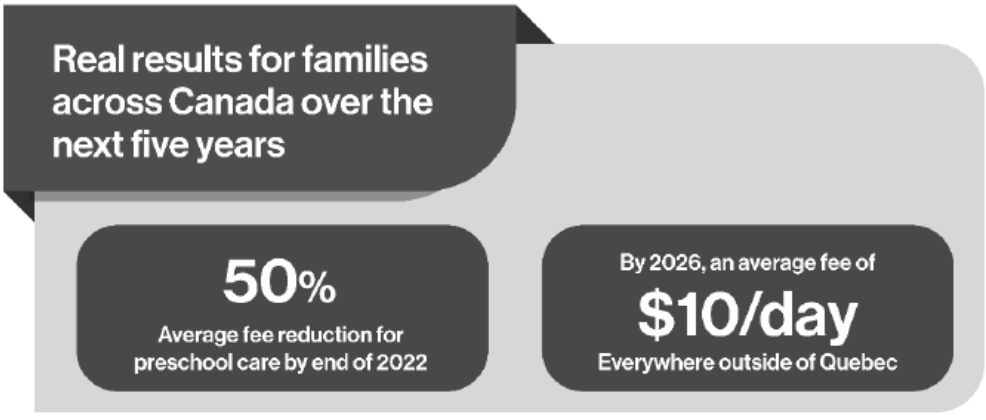
To support this vision, Budget 2021 proposes new investments totaling **up to $30 billion over the next 5 years, and $8.3 billion ongoing** for Early Learning and Child Care and Indigenous Early Learning and Child Care, as outlined below.

The government's plan ensures that gains are secured for generations to come by making this historic commitment a lasting one, while also recognizing that building the quality system we want will take time.

Combined with previous investments announced since 2015, a minimum of $9.2 billion per year ongoing will be invested in child care, including Indigenous Early Learning and Child Care, starting in 2025-26.

Chart 3.3

A Historic, Permanent Federal Financial Commitment to Early Learning and Child Care



This once-in-a-generation transformation will take time and hard work from all orders of government—and that is why the next five years are focused on meaningful goals for families and setting the right foundations for success.

- Up to $27.2 billion over five years, starting in 2021-22 will bring the federal government to a 50/50 share of child care costs with provincial and territorial governments, as part of initial 5-year agreements. Future objectives and distribution of funding, starting in year six, would be determined based on an understanding of need and progress achieved as part of this initial plan.

Over the next five years, the government will work with provinces and territories to make meaningful progress towards a system that works for families. The aforementioned federal funding would allow for:

- A 50 per cent reduction in average fees for regulated early learning and child care in all provinces outside of Quebec, to be delivered before or by the end of 2022.
- An average of $10 a day by 2025-26 for all regulated child care spaces in Canada.
- Ongoing annual growth in quality affordable child care spaces across the country, building on the approximately 40,000 new spaces already created through previous federal investments.
- Meaningful progress in improving and expanding before- and after-school care in order to provide more flexibility for working parents.

Figure 3.3
Real Progress Towards the Goal of $10 Per Day Average

The next five years of the plan will also focus on building the right foundations for a community-based and truly Canada-wide system of child care. This includes:

- Working with provinces and territories to support primarily not-for-profit sector child care providers to grow quality spaces across the country while ensuring that families in all licensed spaces benefit from more affordable child care.
- A growing, qualified workforce—with provincial and territorial partners, the government will work to ensure that early childhood educators are at the heart of the system, by valuing their work and providing them with the training and development opportunities needed to support their growth and the growth of a quality system of child care. Over 95 per cent of child care workers are women, many of whom are making low wages, with a median wage of $19.20 per hour.
- A strong basis for accountability to Canadians—the government will work with provincial and territorial partners to build a strong baseline of common, publicly available data on which to measure progress, report to Canadians, and help continuously improve the system.

Quebec has been a pioneer of early learning and child care in Canada, with outcomes for children and families that have been studied around the world. However, the Quebec experience has also illustrated that building a system is complex, and that phased and sustained investments are required to ensure that everyone has access to the same quality of care at affordable prices. These are valuable lessons for a pan-Canadian system. To build on the current bilateral agreements:

- Budget 2021 proposes to proceed with an asymmetrical agreement with the province of Quebec that will allow for further improvements to their system, which the people of Quebec are rightly proud of.

In addition, the federal government will authorize the transfer of 2021-22 funding as soon as bilateral agreements are reached with the provinces and territories, enabled by a proposed statutory appropriation.

Supporting Accessible Child Care Spaces

For families that have children with disabilities, it is often challenging to find affordable and accessible child care spaces that meet their needs.

- To make immediate progress for children with disabilities, Budget 2021 proposes to provide $29.2 million over two years, starting in 2021-22, to Employment and Social Development Canada through the Enabling Accessibility Fund to support child care centres as they improve their physical accessibility. This funding, which could benefit over 400 child care centres, would support improvements such as the construction of ramps and accessible doors, washrooms, and play structures.

Addressing the Needs of Indigenous Families and Communities

Early learning and child care programs designed by and with Indigenous families and communities give Indigenous children the best start in life. This is a critical part of reconciliation.

Canada's Indigenous Early Learning and Child Care Framework, co-developed with Indigenous partners in 2018, adopts a distinctions-based approach to strengthening high-quality, culturally appropriate child care for Indigenous children guided by Indigenous priorities.

- Budget 2021 builds on this framework, and on recent investments in the 2020 *Fall Economic Statement*, to continue the progress towards an early learning and child care system that meets the needs of Indigenous families, wherever they live. A proposed investment of $2.5 billion over the next five years in Indigenous Early Learning and Child Care will include:
    - $1.4 billion over five years, starting in 2021-22, and $385 million ongoing, to ensure that more Indigenous families have access to high-quality programming. Guided by Indigenous priorities and distinctions-based envelopes, this investment will build Indigenous governance capacity and allow providers to offer more flexible and full-time hours of care, build, train and retain a skilled workforce, and create up to 3,300 new spaces. This will include new investments in Aboriginal Head Start in Urban and Northern Communities.

- $515 million over five years, starting in 2021-22, and $112 million ongoing, to support before and after-school care for First Nations children on reserve.
- $264 million over four years, starting in 2022-23, and $24 million ongoing, to repair and renovate existing Indigenous early learning and child care centres, ensuring a safe and healthy environment for children and staff.
- $420 million over three years, starting in 2023-24, and $21 million ongoing, to build and maintain new centres in additional communities. The government will work with Indigenous partners to identify new infrastructure priorities.

To ensure these vital programs continue to grow along with the communities they serve, program funding will increase by 3 per cent each year starting in 2027-28.

Bringing Partners Together to Build and Maintain a Canada-Wide Child Care System

This ambitious plan requires strong leadership from the federal government—built on an open and collaborative relationship with partners and stakeholders in order to meet the needs of families. Early learning and child care investments in Budget 2017 brought all provinces and territories into bilateral agreements that have been successfully delivering results driven by quality, accessibility, and affordability. These shared priorities will be the platform for the development of a quality pan-Canadian system.

- Building on recent investments in the 2020 *Fall Economic Statement*, an additional $34.5 million over five years, starting in 2021-22, and $3.5 million ongoing, would be provided to Employment and Social Development Canada to strengthen capacity within the new Federal Secretariat on Early Learning and Child Care.

This will include, in the coming months, the creation of a new National Advisory Council to provide expert advice and a forum for consultation on issues and challenges facing the early learning and child care sector. This council would reflect Canada's geographic, cultural, linguistic, and socio-economic diversity and would include experts from across the sector.

To further support a lasting federal commitment over time, the government is committed to tabling federal early learning and child care legislation in fall 2021—following consultations with stakeholders, provincial, territorial, and Indigenous partners—to enshrine the principles of a Canada-wide child care system in law.

Strengthening Diversity in Corporate Governance

To foster inclusivity in the financial sector and ensure Canada's financial institutions are responding to changing social and economic conditions:

- Budget 2021 proposes a public consultation on measures that would adapt and apply the *Canada Business Corporations Act* diversity requirements to federally regulated financial institutions. This objective is to promote greater gender, racial, ethnic, and Indigenous diversity among senior ranks of the financial sector and ensure more Canadians have access to these opportunities. Details on the consultation will be announced in the near future.

In addition, Budget 2021 proposes that Crown corporations will be required to implement gender and diversity reporting, starting in 2022.

3.2 Opportunities for Canada's Youth

In many ways, the COVID-19 recession has been a sacrifice of younger generations to protect their elders. Young people have been isolated at a time of life normally marked by studying, vibrant and growing social lives, travel, and a variety of crucial work experiences that help them find their path.

Instead, young people have stayed home—and many have lost their jobs.

Young people were among the hardest and fastest hit when the pandemic struck—experiencing more job losses than any other age demographic. They have also experienced the worst decline in mental health of any age group. And even through these challenges, young people stepped up to advocate, volunteer, and serve in their communities, helping them get through the pandemic.

We cannot let them be a lost generation. Young Canadians must be at the centre of our recovery not only to help them rebound today, but to invest in their future success and the future success of our economy.

Since the start of the pandemic, the government has had young people's backs, providing over $7.4 billion to support young Canadians through this difficult time. This included a six-month moratorium on student loan payments at the start of the pandemic, doubling the Canada Student Grants for the 2020-2021 school year, supporting almost 200,000 new youth work opportunities and experiences, and providing income support to over 700,000 students through the Canada Emergency Student Benefit.

Budget 2021 builds on Canada's investments in youth with over $5.7 billion over the next five years to help young Canadians—including from low-income households—pursue and complete their education, to provide additional relief from student loan debt for young graduates, and to create 215,000 new job skills development and work opportunities.

Taken together, the Government of Canada's response to the current crisis represents the largest ever investment in young Canadians—totaling $13.1 billion over six years. This represents one of the largest youth support packages from around the world. Canada's growth and prosperity well into the future depends on new opportunities for young people today.

Providing Relief from Student Debt

Education is the smartest investment anyone can make. To ease new grads into working life and make sure they are not prematurely burdened by loan repayments, Budget 2019 made the six-month grace period after leaving studies interest free. And during the pandemic, the government imposed a six-month moratorium on all student loan repayment, and committed to a one-year suspension of interest accrual on student loans in 2021-22.

To provide even further support to students and recent graduates, Budget 2021 is reforming the Canada Student Loans Program. The new Canada Student Financial Assistance Program will make student debt easier to pay down and provide direct support to students with the greatest need.

Provinces and territories that do not currently participate in the Canada Student Loans Program will continue to receive equivalent compensation from the Government of Canada for their own student financial assistance programs that offer comparable benefits to the Canada Student Financial Assistance Program.

Waiving Interest on Student Loans for an Additional Year

To ensure that the cost of post-secondary education in Canada remains predictable and affordable for everyone during the economic recovery:

- The government proposes to introduce legislation that would extend the waiver of interest accrual on Canada Student Loans and Canada Apprentice Loans until March 31, 2023. This change has an estimated cost of $392.7 million in 2022-23.

This action would mean savings for approximately 1.5 million Canadians repaying student loans, the majority of whom are women.

Enhancing Repayment Assistance

Every year, the Government of Canada provides repayment assistance to approximately 350,000 borrowers with low incomes. Currently, the threshold for this support is earning $25,000 per year or less, for a single borrower. To ensure that no federal student loan borrower ever has to make a payment they cannot afford:

- Budget 2021 proposes to increase the threshold for repayment assistance to $40,000 for borrowers living alone, so that nobody earning $40,000 per year or less will need to make any payments on their student loans.
    - This will support an estimated 121,000 additional Canadians with student loan debt each year.
    - For students from larger households the threshold will be modified to match the Canada Student Grants. For example, for a household with four individuals, the 2020-21 Canada Student Grant cut-off is $63,735, which rises with inflation, while the current repayment assistance threshold is $59,508.
    - Additionally, the cap on monthly student loan payments will be reduced from 20 per cent of household income to 10 per cent.
    - To ensure that the eligibility for repayment assistance keeps pace with the cost of living, the new income cut-offs will be indexed to inflation.
    - Beginning in 2022-23, these changes will cost an estimated $203.5 million over four years, and $64.2 million per year ongoing.

Doubling the Canada Student Grants for Two Additional Years

Over 580,000 students each year rely on federal grants and loans to help them cover the cost of their tuition, school supplies, and living expenses. When the pandemic caused other sources of income for students—such as part-time jobs—to dry up, the Government of Canada helped out by doubling Canada Student Grants for the 2020-2021 school year, providing an additional $2,600, on average, of non-repayable aid to students in need. This effectively covered 90 per cent of the average undergraduate tuition in Canada for low-income students during the pandemic.

Table 3.1

Canada Student Grants

	Maximum Amount in 2014	Maximum Amount in 2019	Maximum Amount in 2021
Full-Time Students	$2,000	$3,000	$6,000
Part-Time Students	$1,200	$1,800	$3,600
Students with Dependants (Full-Time)	$1,600 (per dependant)	$1,600 (per dependant)	$3,200 (per dependant)
Students with Dependants (Part-Time)	$1,920	$1,920	$3,840
Students with Disabilities	$2,000	$2,000	$4,000

To ensure students from low-income households remain supported throughout COVID-19 and continue to have access to this opportunity as the economy recovers:

- The government is announcing its intention to extend the doubling of the Canada Student Grants until the end of July 2023.

The cost of this measure is estimated at $3.1 billion over two years starting in 2021-22.

Provinces and territories that do not currently participate in the Canada Student Loans Program will continue to receive equivalent compensation from the Government of Canada for their own student financial assistance programs that offer comparable benefits to the Canada Student Financial Assistance Program.

Expanding Access to Supports for Students and Borrowers with Disabilities

Students with disabilities face some of the highest costs and most significant barriers to long-term success. Every year, the Canada Student Loans Program supports over 75,000 students and borrowers with permanent disabilities through enhanced grants and repayment assistance. But these supports are not available to students whose disabilities are not lifelong.

- The government is announcing its intention to extend disability supports under the Canada Student Loans Program to recipients whose disabilities are persistent or prolonged, but not necessarily permanent.

This change will benefit an estimated 40,000 recipients with non-permanent disabilities each year through access to up to $22,000 in grants, in-study supports, and specialized repayment assistance on their loans. Beginning in 2022-23, the estimated cost of this measure will be $428.9 million over four years, and $118.6 million per year ongoing.

Supporting Vulnerable Children and Youth During the Recovery

COVID-19 has made life especially difficult for students at risk of dropping out of school. These students rely on local after-school programs for tutoring, counselling, and other social supports that help them stay in school, graduate on-time, and access post-secondary education. As the pandemic drives education online and dries up private donations, these organizations continue to rely on their government to bridge the gap and support their vital missions.

- Budget 2021 proposes to provide $118.4 million over two years starting in 2021-22, for Employment and Social Development Canada to conduct a two-year pilot expansion of federal investments in after-school programming under the Supports for Student Learning Program. These funds would support national and local after-school organizations who work to ensure that vulnerable children and youth can graduate high school and do not become further marginalized because of the pandemic. Of this amount, $20 million will be reallocated from internal resources within the department.

Helping Youth and Students Build Job Skills and Connect with Employers

Young Canadians have seen more job losses due to COVID-19 than any other age demographic. This not only deprives them of income that could be used to pay for schooling, build their savings, or cover basic living expenses, but can also lead to long-term consequences by disrupting important experiences in the crucial early years of their working lives. These impacts are often more severe for youth facing multiple barriers to employment such as Indigenous youth, racialized and Black youth, and newcomers to Canada.

To ensure youth and students can access valuable job skills and experience, Budget 2021 is proposing to invest $721 million in the next two years to help connect them with employers and provide them with quality job opportunities.

Student Work Placement Program

- Budget 2021 proposes to invest $239.8 million in the Student Work Placement Program in 2021-22 to support work-integrated learning opportunities for post-secondary students. This funding would increase the wage subsidy available for employers to 75 per cent, up to $7,500 per student, while also increasing employers' ability to access the program. This is expected to provide 50,000 young people (an increase of 20,000) with valuable experience-building opportunities in 2021-22.

Youth Employment and Skills Strategy

- Budget 2021 proposes to invest $109.3 million in 2022-23 for the Youth Employment and Skills Strategy to better meet the needs of vulnerable youth facing multiple barriers to employment, while also supporting over 7,000 additional job placements for youth. This builds on funding announced in the 2020 *Fall Economic Statement*, which is expected to result in over 30,600 new placements in 2021-22. This will make it easier for young people to get good jobs.

Canada Summer Jobs

- Budget 2021 proposes to invest $371.8 million in new funding for Canada Summer Jobs in 2022-23 to support approximately 75,000 new job placements in the summer of 2022. This is in addition to 2020 *Fall Economic Statement* funding for approximately 94,000 additional job placements in 2021-22. In total, the Canada Summer Jobs program will support around 220,000 summer jobs over the next two years.

3.3 Investing in Skills, Training, and Trades

COVID-19 laid bare the inequalities in our workforce. From single mothers, to newcomers, to racialized Canadians, to young Canadians gaining their first job experience, many who could not work from home were those who faced barriers to work in the first place.

As the economy reopens, those opportunities will come back, but our need to adapt to the changing nature of work—including new technologies, industries, and ways of working—will only increase.

Getting Canadians back to work means giving workers in all sectors—from energy, to manufacturing, to construction, to customer service—the skills they need for good jobs. COVID-19 has changed the way many employers do business, eliminating certain jobs, and growing the need for new skills. Investing in new skills gives Canadians opportunities to find good jobs, in growing fields, and strengthen the middle class.

Every year, the federal government transfers around $3 billion to the provinces and territories so they can support workers and help them develop the in-demand skills for their economies.

Budget 2021 looks to the future by better connecting workers to good jobs in growing sectors, by creating new opportunities and increasing diversity in the trades, and helping Canadians gain the foundational skills needed to succeed in today's economy.

Table 3.2
Almost 500,000 New Training and Work Opportunities for Canadians, starting 2021

Measure	Number of new opportunites (5 year timeframe)
For Youth	
Student Work Placement Program	20,000
Youth Employment and Skills Strategy	7,000
Canada Summer Jobs	75,000
Mitacs (see Chapter 4)	85,000
Canada Digital Adoption Program (see Chapter 4)	28,000
For Core Working Age	
Sectoral Workforce Solutions Program	90,000
Apprenticeship Service	55,000
Skills for Success	90,000
Community Workforce Development Program	25,000
Transitioning Workers to New Jobs	15,500

Helping Employers Train and Recruit Workers

Certain sectors like health, clean tech, and construction have grown and are struggling to find workers with the right skills to fill jobs. The government wants these sectors to keep growing so that Canada can build a healthy and clean economy. That is why it is taking action to help employers train and reskill people and help the workforce grow and meet demand. To help Canadians gain skills for good jobs in growing sectors:

- Budget 2021 proposes to provide $960 million over three years, beginning in 2021-22, to Employment and Social Development Canada for a new Sectoral Workforce Solutions Program. Working primarily with sector associations and employers, funding would help design and deliver training that is relevant to the needs of businesses, especially small and medium-sized businesses, and to their employees. This funding would also help businesses recruit and retain a diverse and inclusive workforce.

This investment will help connect up to 90,000 Canadians with the training they need to access good jobs in sectors where employers are looking for skilled workers. This includes sectors like health, including the need for more accredited personal support workers, clean energy, as well as construction. It will also help diversify sectors by ensuring that 40 per cent of supported workers are from underrepresented groups, including women, persons with disabilities, and Indigenous people.

Creating New Opportunities for Skilled Tradespeople

The skilled trades are vital to our economy, and apprenticeships are the bridge that help skilled workers, especially young people starting their careers, connect with businesses and find well-paying jobs. Since 2014, Canada has seen a decline in new apprentices for well-paying middle class jobs. In 2019, it was estimated Canada needs to attract 167,000 new apprentices over the next five years just to align with existing levels of demand.

Every year, the Government of Canada provides about $90 million through 60,000 grants to support apprentices—but more is needed to ensure that those apprentices can find valuable work experiences and that employers can tap into this pool of skilled workers.

- Budget 2021 proposes to provide $470 million over three years, beginning in 2021-22, to Employment and Social Development Canada to establish a new Apprenticeship Service. The Apprenticeship Service would help 55,000 first-year apprentices in construction and manufacturing Red Seal trades connect with opportunities at small and medium-sized employers.

Employers would be eligible to receive up to $5,000 for all first-year apprenticeship opportunities to pay for upfront costs such as salaries and training.

In addition, to boost diversity in the construction and manufacturing Red Seal trades, this incentive will be doubled to $10,000 for employers who hire those underrepresented, including women, racialized Canadians, and persons with disabilities.

Supporting Skills for Success

The skills needs of businesses are changing as they adopt new technologies and new ways of doing things. Yet, today, 45 per cent of Canadians lack the literacy, numeracy, and digital skills that are increasingly necessary to succeed in jobs in the knowledge economy.

- Budget 2021 proposes to invest $298 million over three years, beginning in 2021-22, through Employment and Social Development Canada, in a new Skills for Success program that would help Canadians at all skills levels improve their foundational and transferable skills.

The program will fund organizations to design and deliver training to enhance foundational skills such as literacy and numeracy, as well as transferable and soft skills. This could include helping employers deliver training to increase communication and teamwork skills of their employees, or community organizations looking to strengthen basic literacy and numeracy of marginalized

groups. Additionally, funding will support the creation of assessments and training resources available online to all Canadians at no cost.

Approximately 90,000 Canadians will be able to improve their literacy and essential skills to better prepare for, get and keep a job, and adapt and succeed at work.

Ensuring Communities Recover Through Skills Training and Workforce Planning

For the recovery to succeed, communities must be at the heart of determining their economic futures by diversifying their economies and improving resilience.

- Budget 2021 proposes to provide $55 million over three years, starting in 2021-22, to Employment and Social Development Canada for a Community Workforce Development Program. The program will support communities to develop local plans that identify high potential growth organizations and connect these employers with training providers to develop and deliver training and work placements to upskill and reskill jobseekers to fill jobs in demand.

Funding would be delivered through calls for proposals under two streams: A national stream focused on priority areas, like de-carbonization and supporting a just transition for workers in transforming sectors like energy, which would dedicate 75 per cent of funding to projects that support underrepresented groups; and a regional stream delivered by Service Canada regional offices, in partnership with regional development agencies, and focused on regional priorities.

This initiative will benefit approximately 25,000 workers, 250 businesses, and 25 communities, by accelerating job creation and the re-employment and deployment of workers to growth areas to meet employers' needs.

Helping Workers Transition to New Jobs

As the economy reopens, many people will return to their previous jobs. But for some, shifts in the economy mean that they need to find new jobs. To address this need, and help Canadians find new jobs as quickly and as easily as possible, workers need to be able to rapidly adapt and upgrade their transferable skills for newer industries.

- Budget 2021 proposes to provide $250 million over three years, starting in 2021-22, to Innovation, Science and Economic Development Canada for an initiative to scale-up proven industry-led, third-party delivered approaches to upskill and redeploy workers to meet the needs of growing industries.

This initiative will help approximately 15,500 Canadians connect with new work opportunities.

Extending Federal Supports for Adults Who Return to School Full-Time

In 2018, the government launched Skills Boost, a three-year pilot program to help working adults afford the cost of returning to school full-time to upgrade their skills.

- The government intends to extend the $1,600 adult learner top-up to the full-time Canada Student Grant for an additional two school years—until July 2023. This will ensure that benefits to adult students are not interrupted.
- Additionally, the government intends to make permanent the flexibility to use current year income instead of the previous year's to determine eligibility for Canada Student Grants, so students with financial need won't have their previous workforce participation count against them.

Together, these measures are expected to cost $365.8 million over the next five years, and $26.7 million per year ongoing.

Teaching Kids to Code

The CanCode program helps young people gain coding and digital skills needed to succeed in a 21st century economy. It provides training support for their teachers, and has a special focus on reaching young people who are traditionally underrepresented in science, technology, engineering and mathematics, such as girls and Indigenous youth.

- Budget 2021 proposes to provide $80 million over three years, starting in 2021-22, to Innovation, Science and Economic Development Canada, to help CanCode reach 3 million more students—with an even greater focus on underrepresented groups—and 120,000 more teachers.

With more opportunities to acquire and develop digital skills, young Canadians—from kindergarten to grade 12—will have a head start in building the skills they need for good jobs in the future.

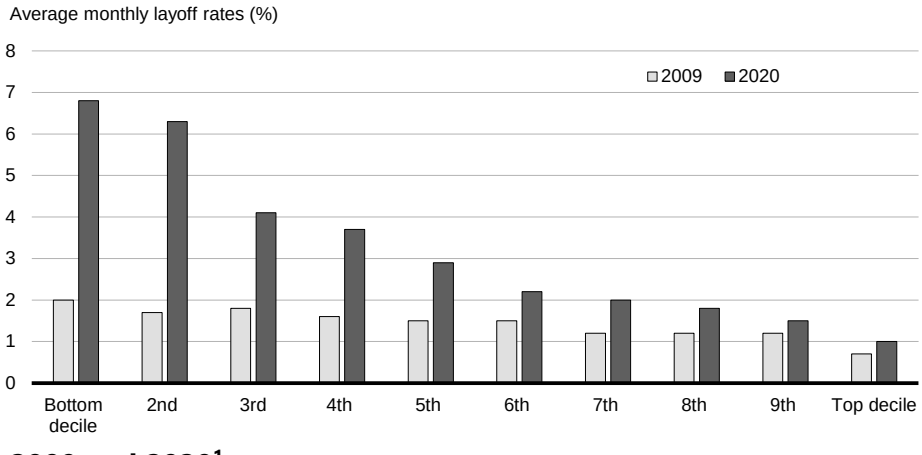
3.4 Valuing Canada's Workers

The pandemic exposed what we already knew: Too many Canadians work in precarious jobs and have barely enough to make ends meet.

Many of these workers are young people, new Canadians, racialized and Black Canadians, and women.

Recovery must start with improving working wages and addressing income inequality in Canada. Measures like an enhanced Canada Workers Benefit, a new $15 federal minimum wage, and better protections for vulnerable workers will lift more Canadians out of poverty, improve the lives of workers, and protect the resilience of our workforce well into the future.

Establishing a $15 Federal Minimum Wage



Canada's prosperity and stability depend on every Canadian having a fair chance to join the middle class. Yet some Canadians struggle to do so while supporting families in part-time, temporary, and low-wage jobs—often working several jobs to make ends meet. The COVID-19 pandemic has also increased focus on the essential work done by a large proportion of minimum wage-earning workers. To support low-wage workers in the federally regulated private sector:

- The Government of Canada is announcing its intention to introduce legislation that will establish a federal minimum wage of $15 per hour, rising with inflation, with provisions to ensure that where provincial or territorial minimum wages are higher, that wage will prevail. This will directly benefit over 26,000 workers who currently make less than $15 per hour in the federally regulated private sector.

Supporting Canada's Low-Wage Workers

Chart 3.4

Average Monthly Layoff Rates of Employees, by Wage Decile,

2009 and 2020[1]

[1] January to February, February to March, up to November to December 2020; all pairs of months for 2009.

Source: Statistics Canada, Labour Force Survey.

The worst economic impacts of the pandemic have been suffered by those who could least afford it. Low-wage workers have been up to six times more likely to suffer layoffs than wealthy Canadians. Not only that, estimates suggest that today there have been about 268,000 net job losses among low-wage workers since February of 2020, compared to about 40,000 over the same time period during the Great Recession, adjusting for population growth.

Our economic recovery plan must address the unique challenges of the pandemic recession—and must include all Canadians. Racialized and Black Canadians have much higher representation in low-wage work. The pandemic has shown everyone just how essential many of the lowest-paying jobs in Canada are to our economy and our health—the grocery clerks, cleaners, caregivers, truck loaders, and more.

If we are to have a full and fair recovery, Canada needs all of these workers to rejoin the workforce and to make sure they earn a decent living. The full participation of all Canadians in the labour market generates economic growth, and improves the standard of living and quality of life for everyone.

Enhancing the Canada Workers Benefit

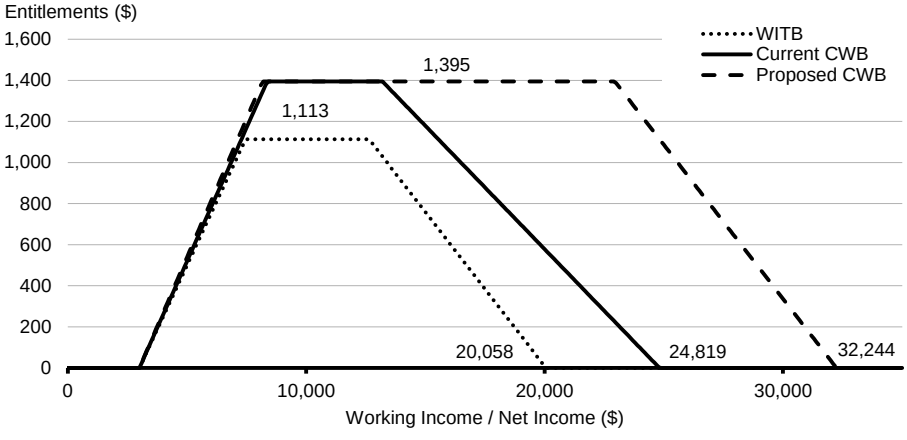
The Canada Workers Benefit was designed to reduce barriers to employment for low-income workers by providing them with a sizable tax refund—up to almost $1,400 for single individuals without children and $2,400 for families—delivered through the tax system.

But currently, the threshold of eligibility leaves many of Canada's low-wage workers out of the program; a person earning minimum wage and working full-time can still be living in poverty, but receive nothing from the Canada Workers Benefit.

In Canada, hard-working people with full-time, low-wage jobs should be able to make ends meet for themselves and their families. To support low-wage workers who have been most negatively affected by the pandemic and make our workforce stronger:

- Budget 2021 proposes to expand the Canada Workers Benefit to support about 1 million additional Canadians in low-wage jobs, helping them return to work and increasing benefits for Canada's most vulnerable.

The government would raise the income level at which the benefit starts being reduced to $22,944 for single individuals without children and to $26,177 for families. This means that for the first time, most full-time workers earning minimum wage will receive significant support from this important benefit.



Benefit to Full-Time Workers

A single, full-time, minimum wage worker could receive about $1,000 more in benefits than they would under the current system, and could continue to receive the benefit at up to $32,000 of net income in 2021.

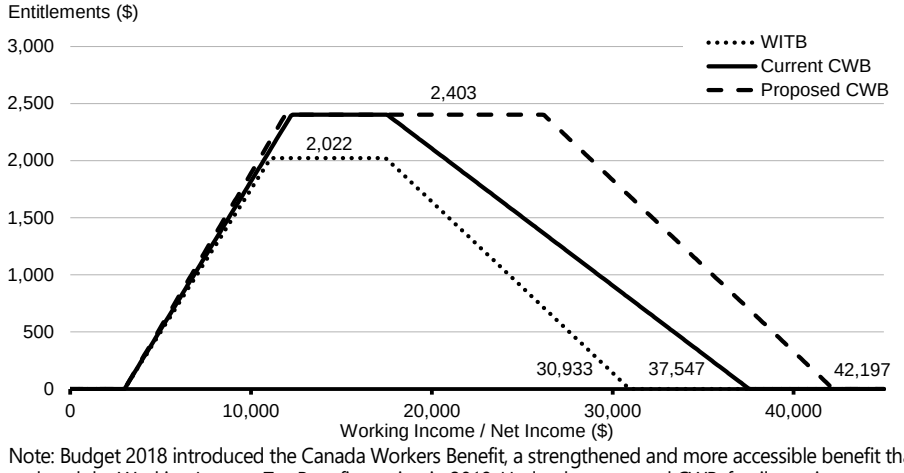
The proposed enhancement will especially benefit single workers without children. These are workers who often have few other federal supports available to them. For example, a typical worker living in Toronto working full time at the minimum wage does not receive any Canada Workers Benefit under the current system. By raising their entitlement to $1,100, the proposed enhancement would lift this worker out of poverty.

Chart 3.5

Entitlements for Single Individuals Without Children Under the Former Working Income Tax Benefit, the Current Canada Workers Benefit, and the Proposed Canada Workers Benefit, 2021

Note: Budget 2018 introduced the Canada Workers Benefit, a strengthened and more accessible benefit that replaced the Working Income Tax Benefit starting in 2019.

The government also recognizes that benefits targeted on the basis of family income can deter secondary earners in couples from going back to work. More often than not, this impacts women. An inclusive recovery is a feminist recovery, and the Canadian economy cannot be competitive when everyone does not have the chance to succeed. To further boost workforce participation by reducing these barriers:



- Budget 2021 proposes to allow secondary earners to exclude up to $14,000 of their working income when income-testing the Canada Workers Benefit.

Example

Maria's partner earns $25,000 per year. Because of the pandemic, Maria was out of work for some time, but she has found a job and will earn $20,000 this year. Without the proposed secondary earner exemption, Maria's family's entitlement to the Canada Workers Benefit (CWB) would be reduced from $2,403 to $0 when Maria goes back to work. With the secondary earner exemption, $14,000 is excluded from Maria's family's net income, which means Maria's family's net income is about $31,000, and her family's CWB entitlement is $1,708.

Chart 3.6

Entitlements for Families Under the Former Working Income Tax Benefit, the Current Canada Workers Benefit, and the Proposed Canada Workers Benefit, 2021

Note: Budget 2018 introduced the Canada Workers Benefit, a strengthened and more accessible benefit that replaced the Working Income Tax Benefit starting in 2019. Under the proposed CWB, family net income excludes up to $14,000 of a secondary earner's working income.

Increasing support through the Canada Workers Benefit will provide incentives for more workers to rejoin the workforce, and ensure that they have more disposable income to spend, stimulating the broader economy. Raising the Canada Workers Benefit raises low-wage workers' quality of life, and raises prosperity for everyone.

These changes will extend support to about 1 million more Canadians, helping them return to work and increasing benefits for Canada's most vulnerable. Combined, these actions would provide $8.9 billion of support to low-income workers over six years, and $1.7 billion per year ongoing.

Almost 100,000 people will be lifted out of poverty by this investment. Because lower-wage work is often done by younger Canadians, it is estimated that about 45 per cent of adults raised out of poverty as a result of this measure will be those under age 35.

This is a key part of the government's plan to make sure Canada's recovery addresses those most impacted by the COVID-19 pandemic and that it is a plan for a recovery that includes everyone. This is good economic policy. It is also the right thing to do. No Canadian working full time should live in poverty.

Better Labour Protection for Gig Workers

As demand for gig work (short-term contracts with firms or individuals to complete specific and often one-off tasks) increases with the rise in new digital platforms, more and more Canadians are relying on jobs that do not come with the same level of job protection as other employees in the economy. The COVID-19 pandemic has exposed the vulnerability of these workers to income shocks when demand for their services suddenly drops. For this reason:

- Budget 2021 reiterates the government's commitment to making legislative changes to improve labour protection for gig workers, including those who work through digital platforms. Following the conclusion of consultations recently launched on this topic by the Minister of Labour, the government will bring forward amendments to the *Canada Labour Code* to make these new, modernized protections a reality.

Enhancing Protections for Contract Workers in the Air Transportation Sector

The pandemic has highlighted the importance of protecting employees, particularly those who provide essential services to Canadians. Many employees in the air transportation sector have continued to work through the pandemic, deep cleaning aircraft, safely handling baggage, and performing the other critical services that have allowed necessary air travel to continue safely.

Many of the services provided by these employees are contracted out by airports and air carriers. When these contracts change hands, workers are at risk of earning less money for the same job.

- To better protect these employees, the government is announcing its intention to introduce legislation that would extend equal remuneration protection to more employees in the air transportation sector. This would ensure that, when a service contract changes hands, affected employees are not paid less, if they are laid off and rehired to do the same work they were doing before.

Simplifying Wage Earner Protection Program Payments

The Wage Earner Protection Program provides financial support to Canadian workers who have lost their job and are owed wages by their insolvent employer. Since 2008, the Program has paid more than $337 million in wages to nearly 129,000 Canadian workers. Currently, all payments through the Program are subject to a 6.82 per cent deduction that represents the deductions at source a worker would normally see on their pay. However, given that there is a cap to overall payments, the amount received in relation to owed wages varies from worker to worker.

- In order to simplify payments, and ensure that Canadian workers are paid more of what they're owed when they need it most, Budget 2021 proposes to eliminate the 6.82 per cent deduction applied to all Wage Earner Protection Program payments. This change is estimated to cost $16.2 million over five years, starting in 2021-22, and $3.3 million ongoing.

The removal of this offset would put an average of $300 more in the pockets of Canadians who have lost their job and are owed wages by their employer.

Support for Personal Support Workers

The caring economy is an economic engine of Canada. As our population ages it will become even more important. Throughout the pandemic, this largely female and disproportionately racialized workforce did essential and heroic work, often at great personal cost.

Personal support workers have had to stand in for family members as our parents and grandparents have been isolated, lonely, and afraid. Personal support workers perform jobs that are mentally and physically exhausting, and do not enjoy the same job protections, compensation, and benefits of their peers in the health care sector. They are the backbone of long-term care for elders and adults with disabilities who are unable to live on their own.

As the work around national standards for long-term care unfolds, Budget 2021 proposes to address a key issue for these workers to whom we owe a debt of gratitude. Care workers deserve more financial security, and better options for retirement savings to give them the certainty that after a life of hard work caring for others, they will be cared for, too.

The 2020 *Fall Economic Statement* announced that, to support personal support workers, homecare workers and essential workers involved in senior care, the government would work with labour and healthcare unions, among others, to seek solutions to improve retention, recruitment, and retirement savings options for low and modest-income workers, particularly those without existing workplace pension coverage.

To follow through on this commitment:

- Budget 2021 proposes to provide funding of $27.6 million over three years for my65+, a Group Tax-Free Savings Account offered by the Service Employees International Union Healthcare.

The funding will support incentives for worker participation. The Service Employees International Union Healthcare will work with other unions and employers across the country to make this portable savings tool available to other workers in the elder care sector. The government also remains open to engaging with other interested unions and employer sponsors who wish to come forward with other targeted, kick-start options to strengthen retirement security for those involved in senior care who do not currently have workplace retirement security coverage.

Employee Ownership Trusts

Employee ownership trusts encourage employee ownership of a business, and facilitate the transition of privately owned businesses to employees. Both the United States and the United Kingdom support and encourage employee ownership though these types of arrangements.

- Budget 2021 announces that the government will engage with stakeholders to examine what barriers exist to the creation of employee ownership trusts in Canada, and how workers and owners of private businesses in Canada could benefit from the use of employee ownership trusts.

Taking Action to Address Predatory Lending

Many lower and modest-income Canadians rely on high-interest short-term loans to make ends meet, such as paying for everyday living expenses, or for unanticipated emergencies. This leaves some Canadians living in a cycle of debt.

- To help fight predatory lending, the Government of Canada will launch a consultation on lowering the criminal rate of interest in the *Criminal Code of Canada* applicable to, among other things, installment loans offered by payday lenders.

Chapter 4
Helping Canadian Businesses Grow and Succeed

Canadian businesses have been resilient through the pandemic, adapting and reinventing themselves in tough times. The government has provided a suite of measures that have helped, and are still helping, support Canadian businesses and Canadian workers through the crisis. As we look to turn the page from crisis to recovery, the government has a plan to restore business confidence, create jobs, and ensure that growth is being sustained through innovation and greater productivity for the long-term.

To do this requires an approach that takes specific aim at the businesses that have been hardest hit by the pandemic.

This has, in many ways, been a two speed recession. There have been businesses that have managed to adapt to the pandemic and to prosper. But others have been shut down outright by necessary public health restrictions or deeply limited in what they can do—and many of these highly affected businesses have been our small businesses. We need them to get back on their feet. They are the backbone of our economy, our main streets, and our communities.

Restoring permanent and long-term economic growth means that we must help our businesses to come back stronger than ever before. We must make sure we go where the puck is going—that we are investing strategically in emerging technologies, whether clean technologies, net-zero technologies, quantum technologies, or more. This is where many of the jobs of the future lie, and we will bring people from across Canada along. And we must do things better. We must support the growth of start-ups and scale-ups. We must make sure that entrepreneurs from disadvantaged communities are able to access the same financing and growth opportunities as every other entrepreneur and business owner in Canada.

Budget 2021 is a plan to make targeted investments in Canada's businesses so they can hire and train Canada's workers, who will then have more money to spend, spurring our recovery and growing an economy with more opportunities for everyone. It is a plan to help our businesses, especially small businesses, adopt new technologies. And it is a plan to invest in Canadian innovation, for long-term growth.

4.1 Helping Canadians Get Back to Work

COVID-19 has shaken the foundations of the Canadian economy and cost millions of Canadians their jobs. While the majority of job losses across most sectors have been recouped, many Canadians are still struggling to find steady work.

Getting the Canadian economy quickly back to its full potential, and stimulating robust growth, is critical to preventing long-term damage, and making sure that workers and communities are not left behind, as they were in previous recessions. Budget 2021 takes timely action to help businesses and other employers drive growth by hiring more workers and developing their talent to its fullest potential.

Helping Hard-hit Businesses Hire More Workers

For businesses that have been hit hardest by the pandemic, hiring the workers they need to grow is a cost they may worry about taking on. The government wants these businesses to be able to recover and grow by hiring more people so that workers are at the forefront of our recovery:

- Budget 2021 proposes to introduce the new Canada Recovery Hiring Program for eligible employers that continue to experience qualifying declines in revenues relative to before the pandemic. The proposed subsidy would offset a portion of the extra costs employers take on as they reopen, either by increasing wages or hours worked, or hiring more staff. This support would only be available for active employees and will be available from June 6 to November 20, 2021. Eligible employers would claim the higher of the Canada Emergency Wage Subsidy or the new proposed subsidy. The aim is to make it as easy as possible for businesses to hire new workers as the economy reopens.

As the rates for both the wage subsidy and the hiring program will slowly ramp down over time, employers will have a strong incentive to begin hiring as soon as possible and maximize their benefit. Further details can be found in Annex 6.

The Canada Recovery Hiring Program will help Canadian-controlled private corporations, individuals, charities, and non-profits hire the workers they need so that the economy can fully recover, more quickly and without leaving people behind. It is estimated that this program will cost $595 million in 2021-22.

Dorothy and **Stan** run a bookstore whose storefront was shut down sporadically through the winter and spring due to public health restrictions. While their business survived, they had to lay off three of their 10 employees, whom they pay $600 per week. Their baseline payroll from March 14 to April 10 was $16,800 (i.e., 7 employees x $600 x 4 weeks).

As public health restrictions are lifted and the vaccination campaign continues, their business begins to recover. In May, their revenues are still down 50 per cent from their level before the pandemic, but are only down 20 per cent in June, and by July are close to their pre-pandemic level. As a result, they are able to hire back their three laid-off employees starting June 6, and are even able to add an additional employee starting July 4.

As a result of measures proposed in this Budget, Dorothy and Stan's business will benefit from either the extended Canada Emergency Wage Subsidy or the new Canada Recovery Hiring Program:

- For June 6 to July 3, their payroll is $24,000. Their business would be eligible for a wage subsidy rate of 40 per cent (based on a 50-per-cent revenue decline), resulting in a wage subsidy of $9,600. Alternatively, the business would be eligible for a hiring subsidy rate of 50 per cent, which would be applied to the difference between its current payroll and its baseline payroll, resulting in a hiring incentive of $3,600. They are better off claiming the wage subsidy of $9,600 for this period.
- For July 4 to July 31, their payroll is $26,400. Their business would be eligible for a wage subsidy rate of 8.75 per cent (based on a 20-per-cent revenue decline), resulting in a wage subsidy of $2,310. Alternatively, the business would be eligible for a hiring subsidy rate of 50 per cent, which would be applied to the difference between its current payroll and its baseline payroll, resulting in a hiring incentive of $4,800. In this instance, they are better off claiming the hiring incentive of $4,800 for this period.

In total, Dorothy and Stan will be eligible for at least $14,400 in support from these two measures to help their business rebuild as the economy recovers.

Opportunities for Businesses and Young Workers Through Mitacs

Mitacs is a not-for-profit organization that connects young workers with innovative businesses for research and training opportunities. Mitacs focusses on supporting research-based innovation in industry and developing a talent stream of highly educated students and graduates through its internship programs. These students bring cutting-edge scientific and technical knowledge from universities and colleges that will strengthen the innovation capabilities of industry. This combination of innovation and skill development for the next generation of leaders will help drive growth now and ensure long-term competitiveness and prosperity.

- Budget 2021 proposes to provide $708 million over five years, starting in 2021-22, to Mitacs to create at least 85,000 work-integrated learning placements that provide on-the-job learning and provide businesses with support to develop talent and grow.

4.2 Helping Small and Medium-sized Businesses Recover and Grow

Small and medium-sized businesses have been hit hard by the pandemic. Successful, innovative, and competitive small businesses are what drive a strong and growing middle class. Canada needs them to recover and grow. To do this, they need well trained employees, stable and accessible financing, and support to help them keep up with the digitization of our economy.

The government has a plan to help small businesses grow and expand to new markets locally, regionally, and beyond. These investments will encourage small businesses to scale up, hire more workers, and embrace new technologies that make them more productive and competitive.

Helping Small and Medium-sized Businesses Move into the Digital Age

The pandemic has hastened the economy's digital transformation as companies, workers, and consumers conduct more and more business online. From 2002 to 2019, labour productivity in digitally intensive industries grew 3.5 times faster than in non-digitally intensive industries. And over the course of the pandemic, digitally intensive businesses actually grew, even though hours worked were down. Building a digital economy is critical to growing a more prosperous economy.

Canadian businesses need to adopt new technologies and digitize to meet customer needs and stay competitive. Embracing these changes also makes our businesses more efficient and more productive, and therefore more prosperous—and able to create more Canadian good middle class jobs.

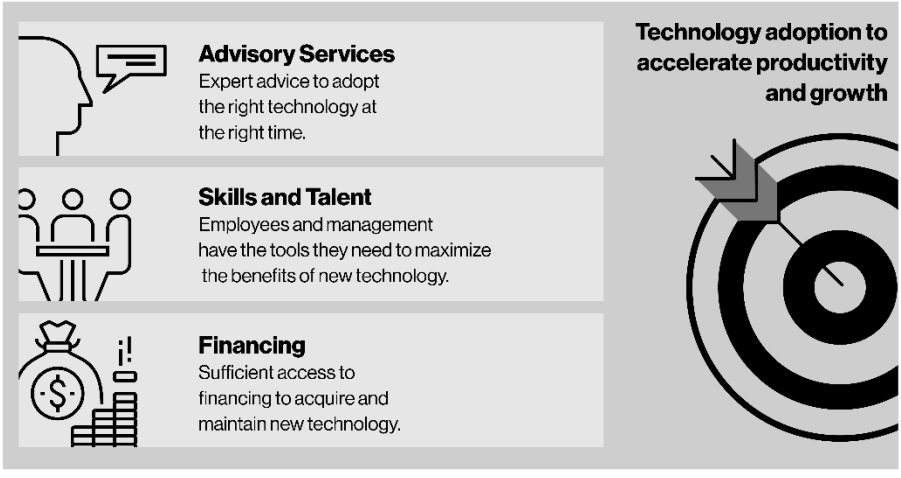
Digital Main Street

In June 2020, the federal government in partnership with the Province of Ontario supported the province-wide expansion of Digital Main Street, which helps main street small businesses adopt e-commerce tools and move their business online. The program is built around an online learning platform, structured training programs, and a "Digital Service Squad," which is a team of recent graduates who help small businesses grow and manage their businesses through the adoption of digital tools and technology.

To fuel the recovery, jobs, and growth, the government is launching the Canada Digital Adoption Program, which will create thousands of jobs for young Canadians and help as many as 160,000 small and medium-sized businesses adopt new digital technologies.

This program will provide businesses with two streams of support.

- To help main street businesses expand their customer bases online, they can access support to digitize and take advantage of e-commerce opportunities. Eligible businesses will receive microgrants to help offset the costs of going digital—and support to digital trainers from a network of up to 28,000 well trained young Canadians.
- Some businesses will require more comprehensive support to adopt new technology, and a second stream will be in place for "off-main street" businesses, such as small manufacturing and food processing operations. Support for these businesses will emphasize advisory expertise for technology planning and financing options needed to put these technologies to use.



Canada Digital Adoption Program

Tim owns a fine foods shop that has specialty imported and domestic products such as meats, cheeses, pasta, and coffee that has been operating at reduced capacity for the past year because of public health guidance. To get his products to his customers and to expand his customer base, Tim is ready to build an online store, but does not know how best to do so. Through the Canada Digital Adoption Program, Tim is able to connect with a trained, young person to help him understand the tools available to him, has access to support to develop an e-commerce strategy, and is eligible for a grant to help cover the costs associated with implementation.

Margot owns a t-shirt manufacturing company. She has been turning down orders that she cannot fill and wants to grow her business and hire more people but is unsure where to start. Through support from the Canada Digital Adoption Program, Margot has access to a local business advisor. The business advisor and Margot review her business plan and develop an investment plan. Working with her advisor, Margot determines that investing in an inventory management system and packaging automation would allow her to increase the number of t-shirts she can produce and ship each month. To help with the costs associated with this new technology, Margot is connected with the Business Development Bank of Canada to access a zero-interest loan. Through the program, Margot also has access to a talent pool of young Canadians to help ensure a smooth rollout of the new technology, and the digital enhancement of her business.

- Budget 2021 proposes to provide $1.4 billion over four years, starting in 2021-22, to Innovation, Science and Economic Development Canada, to:
  - Work with organizations across Canada to provide access to skills, training, and advisory services for all businesses accessing this program.
  - Provide microgrants to smaller, main street businesses to support costs associated with technology adoption.
  - Create training and work opportunities for as many as 28,000 young people to help small and medium-sized businesses across Canada adopt new technology.
- Budget 2021 proposes to provide $2.6 billion on a cash basis over four years, starting in 2021-22, to the Business Development Bank of Canada to help small and medium-sized businesses finance technology adoption.

Figure 4.1
Technology adoption to accelerate productivity and growth

Helping Businesses Seize New Technological Opportunities

Small and medium-sized businesses sometimes require unique technological or process solutions for their businesses that cannot be achieved through the purchase and installation of available "off-the-shelf" solutions. These businesses can seize new opportunities by applying new research and technologies or developing them into useful new products and services. This real-world innovation and technical development helps businesses grow and become more competitive.

Much of this applied research is happening at Canada's colleges, CEGEPs, and polytechnic institutes—institutions that have a strong presence in Canada's small and rural communities.

To support applied research and development projects led by Canadian businesses in collaboration with colleges, CEGEPs, and polytechnics:

- Budget 2021 proposes to provide $46.9 million over two years, starting in 2021-22, to support additional research partnerships between colleges, CEGEPs, polytechnics, and businesses through the Natural Sciences and Engineering Research Council's College and Community Innovation Program.
- Budget 2021 proposes to invest $5.7 million over two years, starting in 2021-22, to provide more businesses with access to the National Research Council's Industrial Research Assistance Program's Interactive Visits, where firms can access equipment, facilities, and expertise at college-affiliated Technology Access Centres.

The program design will ensure that businesses owned by underrepresented groups that may face barriers to entering Canada's innovation pipeline have greater access to this support.

Supporting Business Investments

For Canada's economic recovery to take root, businesses will need to invest in new technologies and move forward with capital projects. Building on the significant tax incentives introduced in the 2018 *Fall Economic Statement*, additional support is needed to further boost business investments that will create jobs today and in the future.

- Budget 2021 proposes to allow immediate expensing of up to $1.5 million of eligible investments by Canadian-controlled private corporations made on or after Budget Day and before 2024. Eligible investments will cover over 60 per cent of capital investments typically made by Canadian-controlled private corporations.

This incentive targets short- and medium-term capital investments that can accelerate our recovery. This includes investments in a broad range of assets, including, helping to further incentivize businesses to transition to a more productive, knowledge-intensive economy and will include digital assets and intellectual property.

These larger deductions will help businesses—particularly small and medium-sized businesses—by making it more attractive to invest in assets that drive growth. Larger deductions will also free up capital that businesses can use to create more good middle class jobs.

It is estimated that this measure will reduce federal revenues by $2.2 billion over five years starting in 2021-22.

Enhancing the Canada Small Business Financing Program

Small businesses need access to financing in order to invest in people and innovation, and to have the space to operate and grow. But many small businesses are facing financing challenges, especially Canada's innovative, entrepreneurial start-ups that are built on intellectual property and other intangibles that could be the next world-changing ideas.

To make sure small business and independent entrepreneurs can access the capital they need to recover, innovate, and grow in the long-term:

- Budget 2021 proposes to improve the Canada Small Business Financing Program through amendments to the *Canada Small Business Financing Act* and its regulations. These proposed amendments are projected to increase annual financing by $560 million, supporting approximately 2,900 additional small businesses. They include:
    - Expanding loan class eligibility to include lending against intellectual property and start-up assets and expenses.
    - Increasing the maximum loan amount from $350,000 to $500,000 and extending the loan coverage period from 10 to 15 years for equipment and leasehold improvements.
    - Expanding borrower eligibility to include non-profit and charitable social enterprises.
    - Introducing a new line of credit product to help with liquidity and cover short-term working capital needs.

Preparing Canada's Aerospace Sector for Recovery

In 2019, aerospace contributed more than $28 billion to Canada's GDP, directly and indirectly supporting 234,500 jobs. As one of the most research intensive manufacturing industries, aerospace is an important driver of Canada's innovation economy. Highly dependent on purchases from airlines hit hard by the pandemic, the sector is facing reduced demand and a longer path to recovery, relative to other sectors of the economy. To help position Canada's aerospace sector once restrictions on travel are lifted and the industry begins to recover:

- Budget 2021 proposes to provide $250 million over three years, on a cash basis, starting in 2021-22, for the regional development agencies to deliver an Aerospace Regional Recovery Initiative, which would support small and medium-sized firms in improving productivity, strengthening commercialization, and greening their operations and products.

This is in addition to the $1.75 billion in the Strategic Innovation Fund, outlined in section 4.6, providing a combined support of $2 billion to help this innovative sector recover and grow out of the crisis.

4.3 Investing in Canada's Entrepreneurs

Reinvigorating our entrepreneurial spirit is critical to the revitalization of our economy. The women and men who start and grow business, who create jobs and seize new opportunities, face enormous risks. There is enormous potential for their businesses to grow and create jobs in the recovery, but they need access to the right type of support, at the right time. In looking forward to recovery, it is important that it be inclusive, with all Canadians having an equal opportunity to succeed.

These measures are complemented by investments to support Indigenous entrepreneurs, outlined in Chapter 8.

Supporting Entrepreneurs, Including Equity Deserving Entrepreneurs

Entrepreneurs, especially those from equity deserving groups such as racialized Canadians, young people, LGBTQ2 people, and more, face barriers to starting and growing a business. This holds our economy back. To help simplify and streamline the government's support programs, and to help equity deserving entrepreneurs access funding and capital, mentorship, financial planning services, and business training, the government will launch the Small Business and Entrepreneurship Development Program. This will help all Canadians have an equal chance to succeed and contribute to economic recovery and growth:

- Budget 2021 proposes to provide up to $101.4 million over five years, starting in 2021-22, to Innovation, Science and Economic Development Canada for the Small Business and Entrepreneurship Development Program.

Supporting Women Entrepreneurs

Canadian women entrepreneurs are important to Canada's economic success, but women still face unique and systemic barriers to starting and growing a business, and they remain underrepresented in the economy. The pandemic has disproportionately impacted women and the government is committed to supporting Canadian women entrepreneurs.

- To provide affordable financing, increase data, and strengthen capacity within the entrepreneurship ecosystem, Budget 2021 proposes to provide up to $146.9 million over four years, starting in 2021-22, to strengthen the Women Entrepreneurship Strategy. Women entrepreneurs would have greater access to financing, mentorship, and training. Funding would also further support the Women Entrepreneurship Ecosystem Fund and the Women Entrepreneurship Knowledge Hub.

- The government will work with financial institutions to develop a voluntary code to help support the inclusion of women and other underrepresented entrepreneurs as clients in the financial sector.

Since 2018, the government's support to the Women Entrepreneurship Strategy is close to $5 billion, which includes $1.4 billion of lending through the Business Development Bank of Canada and $2 billion in facilitated trade through Export Development Canada. Moving forward, the Business Development Bank of Canada will seek to support 19,000 direct women-owned businesses in 2024, an increase of nearly 7,000.

Supporting Black Entrepreneurs

The pandemic has highlighted and exacerbated systemic barriers faced by Black entrepreneurs and owners of small and medium-sized businesses in Canada. Black business owners make invaluable contributions to communities across the country, and their success will contribute to Canada's economic recovery. In September 2020, the Government of Canada, in partnership with financial institutions, announced an investment of up to $221 million—including up to $93 million from the government—to launch Canada's first ever Black Entrepreneurship Program.

- Budget 2021 proposes to provide up to an additional $51.7 million over four years, starting in 2021-22, to Innovation, Science and Economic Development Canada and the regional development agencies for the Black Entrepreneurship Program.

Leveraging Procurement Opportunities

Since the Government of Canada is one of the largest public buyers of goods and services in the country, procurement policy is a fundamental lever to achieve social and economic objectives. Purchasing domestically sourced or manufactured goods helps to strengthen our supply chains and secure domestic supply of goods. For example, government procurement investments at the start of the pandemic have spurred a made-in-Canada pipeline of personal protective equipment.

COVID-19 has had a pronounced impact on businesses owned by racialized Canadians. As of November 2020, businesses that are majority-owned by racialized Canadians were more likely than other businesses to see lower revenues compared to August 2019. Almost one-quarter of businesses that are majority-owned by racialized Canadians reported a decrease in revenue of 40 per cent or more, compared to one-fifth of all businesses in Canada.

To increase diversity in procurement, economically empower historically disadvantaged businesses, support small businesses and our supply chains, improve fairness in procurement opportunities for Canadian suppliers, create jobs, and contribute to a more inclusive economy:

- Budget 2021 proposes to provide Public Services and Procurement Canada $87.4 million over five years starting in 2021-22, and $18.6 million ongoing. This funding will be used to modernize federal procurement and create opportunities for specific communities by diversifying the federal supplier base. Specifically, Public Services and Procurement Canada would:
  - Implement a program focused on procuring from Black-owned businesses.
  - Continue work to meet Canada's target of 5 per cent of federal contracts being awarded to businesses managed and led by Indigenous peoples.
  - Improve data capture, analytics, and reporting.
  - Incorporate accessibility considerations into federal procurement, ensuring goods and services are accessible by design. Public Services and Procurement Canada will develop new tools, guidance, awareness, and training for federal departments.
- Budget 2021 also proposes to leverage supplier diversity opportunities through domestic procurement, such as running competitions open to businesses run by Canadians from equity deserving groups. This would help build a more inclusive economy and boost the competitiveness of these businesses, and all Canadian businesses.
- In addition, in order to demonstrate to Canada's trading partners the importance of balanced procurement opportunities, the government will pursue reciprocal procurement policies to ensure that goods and services are only procured from countries that grant Canadian businesses a similar level of market access. This will protect Canadian supply chains and ensure that Canada's trading relationships are mutually beneficial economic relationships.

Expanding the Industrial Research Assistance Program

Canada's most innovative small and medium-sized businesses have an outsized impact on job creation and economic growth. But they need access to expertise and capital to grow. For several decades, the National Research Council's Industrial Research Assistance Program has provided expertise and capital and has helped business to scale up.

- Budget 2021 proposes to provide $500 million over five years, starting in 2021-22, and $100 million per year ongoing, to expand the Industrial Research Assistance Program to support up to 2,500 additional innovative small and medium-sized firms.

Investing in Canadian Innovators Through a Renewed Venture Capital Catalyst Initiative

Canadian start-ups and businesses need access to financing to grow and create high-quality jobs. Venture capital financing takes educated risks on great ideas and smart people, giving young companies the opportunity to take their ideas to market, and grow. A healthy venture capital network allows businesses and entrepreneurs to scale up, create well-paying Canadian jobs, invest in innovation, and be globally competitive. The government has made $390 million available through the Venture Capital Action Plan and $450 million through the Venture Capital Catalyst Initiative. This federal investment has helped to provide a total of over $3 billion to grow Canadian companies and support thousands of middle class jobs.

To increase venture capital funding and support the continued growth of Canada's innovative companies:

- Budget 2021 proposes to make available up to $450 million on a cash basis over five years, starting in 2021-22, for a renewed Venture Capital Catalyst Initiative that would increase venture capital available to entrepreneurs.
    - $50 million of this amount would be dedicated to support venture capital investments in life science technologies.
    - $50 million of this amount would support a new Inclusive Growth Stream to increase access to venture capital for underrepresented groups, such as women and racialized communities.

Boosting Canada's Clean Technology Exports

Canadian firms are leading the way in the development of the clean technologies and climate solutions the world is seeking. Reaching beyond the Canadian market and scaling up internationally can help these firms to grow and meet their full potential, and help fight climate change. A pilot phase of the International Business Development Strategy for Clean Technology has proven successful at helping Canadian firms tap into export opportunities and the rapidly growing pools of global climate finance.

- Budget 2021 proposes to provide $21.3 million over five years, starting in 2021-22, and $4.3 million per year ongoing, to Global Affairs Canada for the continuation of the International Business Development Strategy for Clean Technology.

More details on Budget 2021's plan to invest in a green recovery and clean technologies can be found in Chapter 5.

4.4 Making it Easier to do Business in Canada

The government is investing to ensure the Canadian marketplace is efficient and fair. Renewed efforts to eliminate internal trade barriers will help support the economic recovery and lay the groundwork for long-term growth. As the economy becomes increasingly digital, new measures to enhance competition will protect consumers, lower prices, and spur innovation. Together, these measures will ensure Canada becomes an even better place to do business.

Removing Barriers to Internal Trade

For too long, trade barriers within our own country have held back Canadian businesses from reaching the full force of the Canadian market. Removing barriers to trade between provinces and territories will help build a more prosperous economy—creating jobs, fueling business expansion, expanding consumer choice of Canadian goods and services, and helping regional economies grow.

In Budget 2019, the federal government removed all federal restrictions on the interprovincial trade of liquor. The federal government remains steadfast in its efforts to remove internal trade barriers and continues to work closely with provincial, territorial, and industry partners to accelerate action on this front.

- Budget 2021 proposes to allocate $21 million over three years, starting in 2021-22, to:
    - Work with provincial and territorial partners to enhance the capacity of the Internal Trade Secretariat that supports the Canadian Free Trade Agreement in order to accelerate the reduction of trade barriers within Canada.
    - Advance work with willing partners towards creating a repository of open and accessible pan-Canadian internal trade data to identify barriers, including licensing and professional certification requirements, so that we can work together to reduce them.
    - Pursue internal trade objectives through new or renewed discretionary federal transfers to provinces and territories.

Lowering the Cost of Doing Business by Reducing Credit Card Transaction Fees

The pandemic has brought a rapid and significant increase in electronic payments and online transactions. Small and medium-sized businesses, which have been hard hit by COVID-19, incur fees for these transactions also known as interchange fees, which are amongst the highest in the world.

The government will engage with key stakeholders to work towards three objectives:

- Lower the average overall cost of interchange fees for merchants
- Ensure that small businesses benefit from pricing that is similar to large businesses
- Protect existing rewards points of consumers

Following consultations with stakeholders, detailed next steps will be outlined as part of the *2021 Fall Economic Statement*, including legislative amendments to the Payment Card Networks Act that would provide authority to regulate interchange fees, if necessary.

A Fair and Competitive Marketplace

Empowering the Competition Bureau through increased capacity and new digital tools will help ensure a competitive marketplace that Canadians can trust.

- Budget 2021 proposes to provide $96 million over five years, starting in 2021-22, and $27.5 million ongoing, to enhance the Competition Bureau's enforcement capacity and ensure it is equipped with the necessary digital tools for today's economy.

Maintaining Momentum on Regulatory Modernization

As Canada recovers from the pandemic, regulatory modernization will reduce unnecessary burdens on businesses in order to unleash innovation and accelerate economic growth.

Targeted Regulatory Reviews

Since 2018, the government has been conducting targeted regulatory reviews to identify and eliminate bottlenecks to economic growth. The first round of reviews led to the publication of Regulatory Roadmaps on the high-growth sectors of agri-food and aquaculture, health and bio-sciences, and transportation and infrastructure.

The second round of Regulatory Roadmaps on digitization and technology neutral regulations, international standards, and clean technology will be released in the coming weeks.

Later this year, the government will launch a third round of targeted regulatory reviews focused on how regulations can accelerate Canada's recovery from the pandemic.

Regulatory Competitiveness

The Annual Regulatory Modernization Bill helps implement improvements and removes outdated and redundant requirements across multiple regulations. Informed by consultation with Canadians, the government intends to table in Parliament the second Annual Regulatory Modernization Bill.

The External Advisory Committee on Regulatory Competitiveness provides expert advice on a wide range of initiatives, ensuring that regulatory modernization is informed by affected businesses and Canadians, including targeted regulatory reviews and the Annual Regulatory Modernization Bill.

- To maintain momentum on strengthening Canada's regulatory systems, Budget 2021 proposes to provide up to $6.1 million over two years, starting in 2021-22, to renew the External Advisory Committee on Regulatory Competitiveness and to continue targeted regulatory reviews.

4.5 Building Infrastructure to Boost Trade

Canada is a trading nation. The free and efficient flow of goods, services, and people, internationally and between provinces and territories, is critical to our prosperity. In order for Canadian businesses to grow and for the Canadian economy to be a part of the global recovery from the COVID-19 recession, trade with international partners needs to be open, efficient, and fair.

Budget 2021 proposes investments in physical and digital infrastructure and other measures to transform our borders and ensure that trade and travel continue to drive Canada's economy.

Renewing our National Trade Corridors

To support a robust and quick recovery, Canada needs to address capacity constraints, bottlenecks, and inefficiencies in our own transportation infrastructure. This will support businesses across our supply chains and boost the potential for small and medium-sized businesses in all regions, including rural and remote communities.

The National Trade Corridors Fund is well-positioned to spur private-sector investment in Canada's transportation system. To reduce barriers to trade, help our businesses grow, create jobs, and ensure our businesses are competitive in the recovery:

- Budget 2021 proposes to invest $1.9 billion over four years, starting in 2021-22, to recapitalize the National Trade Corridors Fund. This funding could attract approximately $2.7 billion from private and other public sector partners, resulting in total investments of $4.6 billion. This would spur investments in much-needed enhancements to our roads, rail, and shipping routes, build long-term resilience for the Canadian economy, and support internal trade. It would make Canada's transportation system more fluid, supporting economic recovery and increasing prosperity across Canada. Alleviating bottlenecks and congestion will also reduce greenhouse gas emissions in Canada.
    - Of this total funding, 15 per cent would be dedicated to building and improving transportation networks in Canada's North. Investments will bring growth and jobs to northern communities, and help more of our resources and goods get to markets in faster, cleaner, more cost-efficient ways.

Investments Made Through the National Trade Corridors Fund

Since its inception in 2017, the National Trade Corridors Fund has invested in transportation infrastructure across Canada, for example:

- **Western Canada**: Projects in the Lower Mainland of British Columbia, including new overpasses, upgrades to existing rail tracks, and expansion of port terminals, to improve the flow of passenger and freight traffic.
- **Eastern Canada**: Projects at the Port of Montreal, including construction of new roads and the development of an intelligent communications network, to increase the port's capacity and optimize its rail network.
- **Northern Canada**: Improvement of the Mackenzie Valley Highway between Yellowknife and the Arctic Ocean to ensure reliable, year-round road access to isolated communities and support the economic development of the region's mineral-rich resources.

Modernizing Travel and Trade at Our Borders

The safe and timely flow of people and goods across our borders is integral to Canada's economic recovery. In the years ahead, a modern border should facilitate seamless and safe travel and trade, while protecting Canada from public health and security threats.

- Budget 2021 proposes to provide $656.1 million over five years, beginning in 2021-22, and $123.8 million ongoing, to the Canada Border Services Agency (CBSA) to modernize our borders. Funding will transform the border experience for travellers through touchless and automated interactions, enhance CBSA's ability to detect contraband, and help protect the integrity of our border infrastructure. Funding will also support three Canadian preclearance pilots in the United Sates that would enable customs and immigration inspections to be completed before goods and travellers enter Canada.

These initiatives will help preserve the security and integrity of Canada's borders while expediting the flow of legitimate travel and trade.

Strengthening Canada's Trade Remedy System

Maintaining a robust trade remedy system will ensure Canadian businesses can fully participate in the economic recovery and mitigate the impacts of unfairly traded imports.

- Budget 2021 announces the government's intention to launch public consultations on measures to strengthen Canada's trade remedy system and to improve access for workers and small and medium-sized enterprises (SMEs). This may result in proposed amendments to the *Special Import Measures Act* and the *Canadian International Trade Tribunal Act*.

Administration of Trade Controls

The government has been taking steps to bolster its system of trade controls to ensure that Canada effectively manages the cross-border flow of sensitive goods. This includes strengthening Canada's oversight of the movement of prohibited firearms and arms exports. It also includes additional monitoring and controls for imports of certain steel and aluminum products and supply-managed goods to better monitor trade flows.

- Budget 2021 proposes to provide $38.2 million over five years, starting in 2021–22, and $7.9 million per year ongoing, to Global Affairs Canada, as additional resourcing to support Canada's trade controls regime.

Better Supports for Exporters

Export Development Canada (EDC) helps Canadian companies of all sizes compete and succeed in the global marketplace. EDC recognizes its responsibility to uphold Canadian values and human rights when doing business.

- Budget 2021 announces the government's intention to work with Export Development Canada to enhance supports to small and medium-sized exporters and to strengthen human rights considerations in export supports. The government may propose amendments to the *Export Development Act*.

4.6 Investing in World-leading Research and Innovation

A plan for a long-term recovery must look to challenges and opportunities that lie ahead in the years and decades to come. It must be led by a growth strategy that builds on the unique competitive advantages of the Canadian economy, and make sure that Canada is well-positioned to meet the demands of the next century. This work begins with innovation.

To drive growth and create good, well-paying jobs, entrepreneurs and businesses need to be able to translate Canada's world-class leadership in research into innovative products and services for Canadians, and for the world.

These investments will help cement Canada's position as a world leader in research and innovation, building a global brand that will attract talent and capital for years to come.

Supporting Innovation and Industrial Transformation

Since its launch in 2017, the Strategic Innovation Fund has been helping businesses invest, grow, and innovate in Canada. Through its efforts to help businesses make the investments they need to succeed, the fund is well-placed to support growth and the creation of good jobs across the Canadian economy—both now and in the future.

- Budget 2021 proposes to provide the Strategic Innovation Fund with an incremental $7.2 billion over seven years on a cash basis, starting in 2021-22, and $511.4 million ongoing. This funding will be directed as follows:
    - $2.2 billion over seven years, and $511.4 million ongoing to support innovative projects across the economy—including in the life sciences, automotive, aerospace, and agriculture sectors.
    - $5 billion over seven years to increase funding for the Strategic Innovation Fund's Net Zero Accelerator, as detailed in Chapter 5. Through the Net Zero Accelerator the fund would scale up its support for projects that will help decarbonize heavy industry, support clean technologies and help meaningfully accelerate domestic greenhouse gas emissions reductions by 2030.

The funding proposed in Budget 2021 will build on the Strategic Innovation Fund's existing resources, including the $3 billion over five years announced in December 2020 for the Net Zero Accelerator. With this additional support, the Strategic Innovation Fund will target investments in important areas of future growth over the coming years to advance multiple strategic objectives for the Canadian economy:

- $1.75 billion in support over seven years would be targeted toward aerospace in recognition of the longer-lasting impacts to this sector following COVID-19. This is in addition to the $250 million Aerospace Regional Recovery Initiative, outlined in section 4.2, providing a combined support of $2 billion to help this innovative sector recover and grow out of the crisis.
- $1 billion of support over seven years would be targeted toward growing Canada's life sciences and bio-manufacturing sector, restoring capabilities that have been lost and supporting the innovative Canadian firms and jobs in this sector. This is an important component of Canada's plan to build domestic resilience and improve long-term pandemic preparedness proposed in Chapter 1, providing a combined $2.2 billion over seven years.
- $8 billion over seven years for the Net Zero Accelerator to support projects that will help reduce Canada's greenhouse gas emissions by expediting decarbonization projects, scaling-up clean technology, and accelerating Canada's industrial transformation. More details are in Chapter 5.

Strategic Innovation Fund Support	Strategic Objective
• Invest $8 billion through the Net Zero Accelerator • Target $1.75 billion to the aerospace sector • Target $1 billion to the bio-manufacturing and life sciences sector • Leverage all other resources to target strategic investments in innovative and dynamic projects, including in traditional areas of Canadian strength.	• Help achieve net-zero greenhouse gas emissions by 2050 and support economic transformation • Support sector recovery and sustainable growth • Build domestic resilience and improve long-term pandemic preparedness • Promote growth and the creation of good jobs across the Canadian economy

It is important that the Strategic Innovation Fund has the right tools to support businesses across Canada. To this end, the government will explore potential opportunities to add new investment structures to the Strategic Innovation Fund's toolkit.

Renewing the Pan-Canadian Artificial Intelligence Strategy

Artificial intelligence is one of the greatest technological transformations of our age. Canada has communities of research, homegrown talent, and a diverse ecosystem of start-ups and scale-ups. But these Canadian innovators need investment in order to ensure our economy takes advantage of the enormous growth opportunities ahead in this sector. By leveraging our position of strength, we can also ensure that Canadian values are embedded across widely used, global platforms.

- Budget 2021 proposes to provide up to $443.8 million over ten years, starting in 2021-22, in support of the Pan-Canadian Artificial Intelligence Strategy, including:
  - $185 million over five years, starting in 2021-22, to support the commercialization of artificial intelligence innovations and research in Canada.
  - $162.2 million over ten years, starting in 2021-22, to help retain and attract top academic talent across Canada—including in Alberta, British Columbia, Ontario, and Quebec. This programming will be delivered by the Canadian Institute for Advanced Research.
  - $48 million over five years, starting in 2021-22, for the Canadian Institute for Advanced Research to renew and enhance its research, training, and knowledge mobilization programs.
  - $40 million over five years, starting in 2022-23, to provide dedicated computing capacity for researchers at the national artificial intelligence institutes in Edmonton, Toronto, and Montréal.
  - $8.6 million over five years, starting in 2021-22, to advance the development and adoption of standards related to artificial intelligence.

Launching a National Quantum Strategy

Quantum technology is at the very leading edge of science and innovation today, with enormous potential for commercialization. This emerging field will transform how we develop and design everything from life-saving drugs to next generation batteries, and Canadian scientists and entrepreneurs are well-positioned to take advantage of these opportunities. But they need investments to be competitive in this fast growing global market.

- Budget 2021 proposes to provide $360 million over seven years, starting in 2021-22, to launch a National Quantum Strategy. The strategy will amplify Canada's significant strength in quantum research; grow our quantum-ready technologies, companies, and talent; and solidify Canada's global leadership in this area. This funding will also establish a secretariat at the Department of Innovation, Science and Economic Development to coordinate this work.

The government will provide further details on the rollout of the strategy in the coming months.

Revitalizing the Canadian Photonics Fabrication Centre

Canada is a world leader in photonics, the technology of generating and harnessing the power of light. This is the science behind fibre optics, advanced semi-conductors, and other cutting-edge technologies, and there is a strong history of Canadian companies bringing this expertise to the world. The National Research Council's Canadian Photonics Fabrication Centre supplies photonics research, testing, prototyping, and pilot-scale manufacturing services to academics and large, small and medium-sized photonics businesses in Canada. But its aging facility puts this critical research and development at risk.

- Budget 2021 proposes to provide $90 million over five years on a cash basis, starting in 2021-22, to the National Research Council to retool and modernize the Canadian Photonics Fabrication Centre. This would allow the centre to continue helping Canadian researchers and companies grow and support highly skilled jobs.

Launching a Pan-Canadian Genomics Strategy

Genomics research is developing cutting-edge therapeutics and is helping Canada track and fight COVID-19. Canada was an early mover in advancing genomics science and is now a global leader in the field. A national approach to support genomics research can lead to breakthroughs that have real world applications. There is an opportunity to improve Canadians' health and well-being while also creating good jobs and economic growth. Leveraging and commercializing this advantage will give Canadian companies, researchers, and workers a competitive edge in this growing field.

- Budget 2021 proposes to provide $400 million over six years, starting in 2021-22, in support of a Pan-Canadian Genomics Strategy. This funding would provide $136.7 million over five years, starting in 2022-23, for mission-driven programming delivered by Genome Canada to kick-start the new Strategy and complement the government's existing genomics research and innovation programming.

Further investments to grow Canada's strengths in genomics under the Strategy will be announced in the future.

Conducting Clinical Trials

Canadian scientists are among the best in the world at conducting high-quality clinical trials. Clinical trials lead to the development of new scientifically proven treatments and cures, and improved health outcomes for Canadians. They also create good jobs in the health research sector, including the pharmaceutical sector, and support the creation of new companies, drugs, medical devices, and other health products.

- Budget 2021 proposes to provide $250 million over three years, starting in 2021-22, to the Canadian Institutes of Health Research to implement a new Clinical Trials Fund.

Supporting the Innovation Superclusters Initiative

Since it was launched in 2017, the Innovation Superclusters Initiative has helped Canada build successful innovation ecosystems in important areas of the economy. Drawing on the strength and breadth of their networks, the superclusters were able to quickly pivot their operations and played an important role in Canada's COVID-19 response. For example, the Digital Technology Supercluster allocated resources to projects that used digital technologies and artificial intelligence to help facilitate faster, more accurate diagnosis, treatment, and care of COVID-19 patients.

To help ensure those superclusters that made emergency investments to support Canada's COVID-19 response and others can continue supporting innovative Canadian projects:

- Budget 2021 proposes to provide $60 million over two years, starting in 2021-22, to the Innovation Superclusters Initiative.

Promoting Canadian Intellectual Property

As the most highly educated country in the OECD, Canada is full of innovative and entrepreneurial people with great ideas. Those ideas are valuable intellectual property that are the seeds of huge growth opportunities. Building on the National Intellectual Property Strategy announced in Budget 2018, the government proposes to further support Canadian innovators, start-ups, and technology-intensive businesses. Budget 2021 proposes:

- $90 million, over two years, starting in 2022-23, to create ElevateIP, a program to help accelerators and incubators provide start-ups with access to expert intellectual property services.
- $75 million over three years, starting in 2021-22, for the National Research Council's Industrial Research Assistance Program to provide high-growth client firms with access to expert intellectual property services.

These direct investments would be complemented by a Strategic Intellectual Property Program Review that will be launched. It is intended as a broad assessment of intellectual property provisions in Canada's innovation and science programming, from basic research to near-commercial projects. This work will make sure Canada and Canadians fully benefit from innovations and intellectual property.

Capitalizing on Space-based Earth Observation

Earth observation satellites support critical services that Canadians rely on. They provide reliable weather forecasts, support military and transport logistics, help us monitor and fight climate change, and support innovation across sectors, including energy and agriculture. They also create high-quality jobs in Canada and the government will continue to explore opportunities to support Canadian capacity, innovation, and jobs in this sector. To maintain Canada's capacity to collect and use important data from these satellites, Budget 2021 proposes to provide:

- $80.2 million over eleven years, starting in 2021-22, with $14.9 million in remaining amortization and $6.2 million per year ongoing, to Natural Resources Canada and Environment and Climate Change Canada to replace and expand critical but aging ground-based infrastructure to receive satellite data.
- $9.9 million over two years, starting in 2021-22, to the Canadian Space Agency to plan for the next generation of Earth observation satellites.

Science and Technology Collaboration with Israeli Firms

Collaborating with global innovation leaders allows Canadian companies to leverage expertise to create new products and services, support good jobs, and reach new export markets.

- Budget 2021 proposes to provide additional funding of $10 million over five years, starting in 2021-2022, and $2 million per year ongoing, to expand opportunities for Canadian SMEs to engage in research and development partnerships with Israeli SMEs as part of the Canadian International Innovation Program. This will be sourced from existing Global Affairs Canada resources. The government also intends to implement an enhanced delivery model for this program, including possible legislation.

4.7 Supporting a Digital Economy

More and more of our lives are happening online—from socializing, to our jobs, to commerce. Recognizing the fundamental shifts underway in our society, the government introduced a new Digital Charter in 2020 that seeks to better protect the privacy, security, and personal data of Canadians, building trust and confidence in the digital economy.

To make sure that Canadian businesses can keep pace with this digital transformation and that they are part of this growth, Budget 2021 includes measures to ensure businesses and workers in every region of the country have access to fast, reliable internet. It also has measures to make sure that the digital economy is fair and well reported on.

A digital economy that serves and protects Canadians and Canadian businesses is vital for long-term growth.

Accelerating Broadband for Everyone

The COVID-19 pandemic has shifted much of our lives online and transformed how we live, work, learn, and do business. This makes it more important than ever that Canadians, including Canadian small businesses in every corner of this country, have access to fast and reliable high-speed internet. Canadians and Canadian businesses in many rural and remote communities who still do not have access to high-speed internet face a barrier to equal participation in the economy. Building on the $6.2 billion the federal government and federal agencies have made available for universal broadband since 2015:

- Budget 2021 proposes to provide an additional $1 billion over six years, starting in 2021-22, to the Universal Broadband Fund to support a more rapid rollout of broadband projects in collaboration with provinces and territories and other partners. This would mean thousands more Canadians and small businesses will have faster, more reliable internet connections.

In total, including proposed Budget 2021 funding, $2.75 billion will be made available through the Universal Broadband Fund to support Canadians in rural and remote communities. Recently, the Universal Broadband Fund provided funding to ensure Quebec could launch Operation High Speed, connecting nearly 150,000 Quebecers to high-speed internet. These continuing investments will help Canada accelerate work to reach its goal of 98 per cent of the country having high-speed broadband by 2026 and 100 per cent by 2030.

Establishing a New Data Commissioner

Digital and data-driven technologies open up new markets for products and services that allow innovative Canadians to create new business opportunities—and high-value jobs. But as the digital and data economy grows, Canadians must be able to trust that their data are protected and being used responsibly.

- Budget 2021 proposes to provide $17.6 million over five years, starting in 2021-22, and $3.4 million per year ongoing, to create a Data Commissioner. The Data Commissioner would inform government and business approaches to data-driven issues to help protect people's personal data and to encourage innovation in the digital marketplace.
- Budget 2021 also proposes to provide $8.4 million over five years, starting in 2021-22, and $2.3 million ongoing, to the Standards Council of Canada to continue its work to advance industry-wide data governance standards.

Enhancing Business Condition Data

The government introduced the Canadian Survey of Business Conditions in April 2020 to provide timely measurement of business and economic indicators and better understand changing business conditions. To further this work with partners and enhance the availability of real-time business indicator data:

- Budget 2021 proposes to provide up to $5 million over two years, starting in 2021-22, to Statistics Canada to work with partners to enhance the availability of business condition data, better ensuring that the government's support measures are responsive to the needs of Canadian businesses and entrepreneurs.

Chapter 5
A Healthy Environment for a Healthy Economy

Climate change is real.

Wildfires, floods, droughts, and powerful storms are becoming more frequent, more costly, and more dangerous.

COVID-19 has shown us how Canadians have what it takes to come together, to mobilize, and to take action in the face of a crisis. The climate crisis is just as great a challenge.

Our human impact on the environment will have lasting consequences if we fail to come together to take bold and ambitious climate action. Action at home, action on our commute to work, and action in industry and the financial sector.

Around the world, countries and investors realize that climate action is the key to building strong, resilient economies. Fighting climate change, including reaching net-zero, will be a cornerstone of this government's plan to rebuild the economy, create middle class jobs, and ensure Canadian industry stays competitive on the world stage.

Climate change is the challenge of our times. And it is also one of our greatest opportunities. Canada's well-educated workforce, energy sector know-how, and trade relationships position us to be a leader in the clean economy of the future. The global recovery from the COVID-19 recession will include seismic investments in a green recovery, and Canada's plan for strategic, targeted investments will take advantage of this pivot and create opportunities for Canadians in every region of the country.

Climate action creates new opportunities for engineers, scientists, farmers, construction workers, tradespeople, resource workers, energy workers, researchers, and more.

A sustainable, long-term recovery demands that we look far into the horizon and consider the legacy we will leave behind. By investing in climate action now, we can create good middle class jobs today, and create a cleaner and safer future for our children and grandchildren.

Since 2015, we have invested roughly $60 billion toward climate action and clean growth. In 2020, we announced an additional investment of $15 billion for Canada's strengthened climate plan, along with nearly $15 billion for public transit in February 2021. Canada also has a strong and rising price on carbon, accelerating further action on climate change and transforming our economy.

Building on recent investments, Budget 2021 proposes to provide $17.6 billion towards a green recovery to create jobs, build a clean economy, and fight and protect against climate change.

> *"When well designed and implemented, green stimulus measures can generate income, create jobs, improve well-being for all and build resilience."*
>
> — OECD, 6 October 2020

5.1 Growing Our Net-zero Economy

Across the world, advanced economies are making investments in a green recovery. Governments and businesses are making bold investments in clean growth.

Canadians and Canadian businesses stand poised to seize the new opportunities for growth and jobs arising as the world builds a greener global economy. Making sure Canada is part of this shift is critical to ensuring good jobs for generations of Canadians.

In the global race for clean solutions, Canada will make bold new investments so that businesses and workers can compete and win.

Accelerating Canada's Net-zero Transformation Through Innovation

The Net Zero Accelerator, launched in the government's strengthened climate plan last December, will help build and secure Canada's clean industrial advantage. By investing in decarbonizing large emitters, transforming key sectors— from steel and aluminium to cement—and accelerating the adoption of clean technology across the economy – for example, the auto and aerospace sectors – the Net Zero Accelerator will spur Canada's shift to innovative net-zero technologies and attract the large-scale investments needed to meet our goal of net-zero by 2050. It will also help Canadian firms grow and create the jobs of our low-carbon future.

- Budget 2021 proposes to provide $5 billion over seven years (cash basis), starting in 2021-22, to the Net Zero Accelerator. Building on the support for the Net Zero Accelerator announced in the strengthened climate plan, this funding would allow the government to provide up to $8 billion of support for projects that will help reduce domestic greenhouse gas emissions across the Canadian economy.

The Net Zero Accelerator works to cut pollution, spur clean technology innovations, attract major investments, create good middle class jobs, and foster development of key supply chains to ensure Canadian industries and workers can use their low-carbon advantage to compete and win. This is an important component of the total investment in the Strategic Innovation Fund proposed in Chapter 4.

Propelling Clean Tech Projects

While the Canadian clean technology sector is a global leader in clean tech innovation (11 companies were named to the Cleantech Group's 2021 Global Cleantech 100 list, more than any other country after the United States), it lags in commercial scale-up, export and industry adoption. Canadian companies frequently report facing challenges in scaling up in Canada's small domestic market and accessing sufficient patient growth capital. Transformative clean technology projects, particularly large ones, often require investment at a scale and time horizon outside of the scope of traditional project financing. To support large-scale clean technology projects:

- Budget 2021 proposes to make up to $1 billion available on a cash basis, over five years, starting in 2021-22, to help draw in private sector investment for these projects.

These resources would fuel the growth of innovative Canadian companies, create jobs for highly skilled workers, and bring important environmental and climate solutions to the world.

Growing Zero-emission Technology Manufacturing

As more countries commit to achieving net-zero emissions by 2050, the demand for zero-emission technology will only grow. With a highly educated and motivated workforce, Canada is well positioned to take advantage of this opportunity. Strengthening our manufacturing sector and creating good, well-paying jobs is key to growing a resilient, competitive middle class.

To create jobs and support the growth of clean technology manufacturing in Canada:

- Budget 2021 proposes to reduce—by 50 per cent—the general corporate and small business income tax rates for businesses that manufacture zero-emission technologies. The reductions would go into effect on January 1, 2022, and would be gradually phased out starting January 1, 2029 and eliminated by January 1, 2032. The Department of Finance Canada will regularly review new technologies that might be eligible, in consultation with Environment and Climate Change Canada, Natural Resources Canada, Sustainable Development Technology Canada, and other key stakeholders across government and industry.

These proposed tax rate reductions will enhance Canada's competitiveness in attracting investment in zero-emission technology manufacturing, while also supporting existing businesses in the sector. This will advance Canada's economic recovery and help create well-paying jobs for Canadians. It is estimated that this measure will reduce federal revenues by $45 million over five years, starting in 2021-22.

In addition, the government will undertake an analysis to ensure that Canada keeps pace with the U.S. and other jurisdictions in providing the appropriate tax structures and incentives to encourage clean economy businesses to invest, grow, and deploy solutions here in Canada.

Zero-Emission Technologies in Canada

Examples of zero-emission technology manufacturing in Canada:

- Manufacturing of wind turbines, solar panels, and equipment used in hydroelectric facilities.
- Manufacturing of geothermal energy systems.
- Manufacturing of electric cars, busses, trucks, and other vehicles.
- Manufacturing of batteries and fuel cells for electric vehicles.
- Production of biofuels from waste materials.
- Production of green hydrogen.
- Manufacturing of electric vehicle charging systems.
- Manufacturing of certain energy storage equipment.

Accelerating Investment in Clean Energy Technologies

In 2018, Canada introduced tax incentives to encourage businesses to invest in clean energy generation and energy efficiency equipment. In particular, this included a time-limited measure allowing businesses to immediately write off the full cost of investments in certain clean energy technologies. To support clean tech jobs, help Canadian companies adopt more clean technologies, and fight climate change:

- Budget 2021 proposes to expand the list of eligible equipment to include equipment used in pumped hydroelectric energy storage, renewable fuel production, hydrogen production by electrolysis of water, and hydrogen refueling. Certain existing restrictions related to investments in water-current, wave and tidal energy, active solar heating, and geothermal energy technologies would also be removed.

To ensure this tax incentive remains consistent with the government's environmental objectives:

- Budget 2021 proposes to update the eligibility criteria such that certain fossil-fuelled and low efficiency waste-fuelled electrical generation equipment will no longer be eligible after 2024.

Reforming eligibility for this tax incentive will help reduce pollution and greenhouse gas emissions in Canada. It is estimated that these measures will reduce federal revenues by $142 million over five years starting in 2021-22.

Enhancing Canada's Supply of Critical Minerals

The electrification of vehicles and use of solar panels is expected to surge in the coming decade. Canada has rich reserves of the critical minerals needed for electric vehicle batteries and solar panels, along with other low-carbon technologies needed to reach net-zero. The resources needed for these technologies create good jobs in regions across the country.

Canada and the U.S. recently agreed to strengthen the Canada-U.S. Joint Action Plan on Critical Minerals Collaboration to target a net-zero industrial transformation, batteries for zero-emissions vehicles, and renewable energy storage. Investing in these resources is essential for our energy security and will ensure Canada is a vital producer in the supply chains of the future.

- Budget 2021 proposes to provide $9.6 million over three years, starting in 2021-22, to create a Critical Battery Minerals Centre of Excellence at Natural Resources Canada. The centre would coordinate federal policy and programs on critical minerals, and work with provincial, territorial, and other partners. The centre would also help implement the Canada-U.S. Joint Action Plan.
- Budget 2021 proposes to provide $36.8 million over three years, starting in 2021-22, with $10.9 million in remaining amortization, to Natural Resources Canada, for federal research and development to advance critical battery mineral processing and refining expertise.

Charging and Fueling Zero-emission Vehicles

Since 2015, there has been a rapid increase in the number of Canadians who own zero-emission vehicles (ZEVs). Since 2016, the government has invested $376.4 million and has initiated work to build nearly 6,000 charging and refueling stations with partners all across the country. While charging ports are now available in more and more places—from shopping centres, to office buildings, to curbside parking—the measurement and pricing of the energy being sold is not always clear to drivers. Just as we know that what is coming out of the pump is a litre of gas, drivers of ZEVs need to have the same level of trust and certainty when they charge up an electric vehicle, or fill up their tank with a next-generation clean fuel, such as hydrogen. To provide consistency and transparency to drivers and help Canadians reduce carbon emissions:

- Budget 2021 proposes to provide $56.1 million over five years, starting in 2021-22, with $16.3 million in remaining amortization and $13 million per year ongoing, to Measurement Canada to develop and implement, in coordination with international partners such as the United States, a set of codes and standards for retail ZEV charging and fueling stations. This would include accreditation and inspection frameworks needed to ensure the standards are adhered to at Canada's vast network of charging and refueling stations.

This measure would provide regulatory certainty to providers of charging services and facilitate the development of the charging network. It would also give more Canadians confidence to purchase and drive ZEVs.

Federal Clean Electricity Fund

Investing in electricity generated from renewable sources can help to reduce greenhouse gas emissions and stimulate growth in clean power infrastructure. The Government of Canada has set a goal of ensuring 100 per cent of electricity generation for all federal buildings is from clean sources by 2022, where available. Purchasing renewable electricity will stimulate investments in new clean technology and support job creation and Indigenous participation.

- To support the Government of Canada's commitment to power federal buildings with 100 per cent clean electricity by 2022, Budget 2021 proposes to provide $14.9 million over 4 years, starting in 2022-23, with $77.9 million in future years, to Public Services and Procurement Canada for a Federal Clean Electricity Fund to purchase renewable energy certificates for all federal government buildings.

Reducing Transportation and Landfill Emissions

Taken together, the transportation and waste sectors account for nearly 30 per cent of Canada's greenhouse gas emissions. Light- and heavy-duty vehicles contribute the largest share of transportation emissions, and emissions from gas-powered household equipment are on the rise. In addition, the Canadian landfills release large amounts of methane—a potent greenhouse gas.

To create a healthier environment and support the transition to cleaner transportation and waste management:

- Budget 2021 proposes to provide $104.6 million over five years, starting in 2021–22, with $2.8 million in remaining amortization, to Environment and Climate Change Canada to strengthen greenhouse gas emissions regulations for light- and heavy-duty vehicles and off-road residential equipment, establish national methane regulations for large landfills, and undertake additional actions to reduce and better use waste at these sites.

Investing in the Forest-based Bio-economy

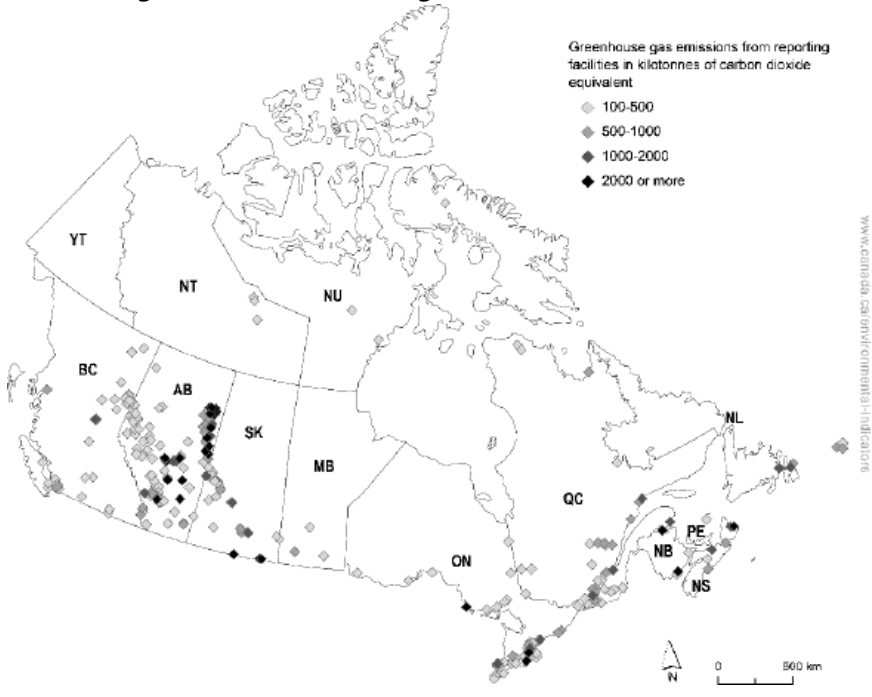
The forest industry plays a vital role in many of Canada's rural communities, and the industry will have an important place in greening our economy. Wood-based innovations are helping drive developments in Canada's low-carbon economy. They can be used in biofuels, bioplastics, building materials, and other products our economy needs, and replace less sustainable products. Developing and marketing these new biomaterials will help protect good jobs in hundreds of Canadian communities. To support the growth of the forest-based bio-economy:

- Budget 2021 proposes to provide $54.8 million over two years, starting in 2021-22, to Natural Resources Canada, to enhance the capacity of the Investments in Forest Industry Transformation program, including working with municipalities and community organizations ready for new forest-based economic opportunities.

First Federal Green Bond

Capital is increasingly in search of green projects that support innovative businesses and good jobs. This is a rapidly growing new market and the presence of AAA borrowers will help create a more mature market for investors who are looking for a green portfolio, but also need to manage their investment risk. To make sure that Canada is competing for these opportunities, now and in the future:

- The government will publish a green bond framework in the coming months in advance of issuing its inaugural federal green bond in 2021-22, with an issuance target of $5 billion, subject to market conditions. This would be the first of many green bond issuances. The framework will provide details on how, through green bonds, investors will have opportunities to finance Canada's work to fight climate change and protect the environment. Possible projects these green bonds could fund include green infrastructure, clean tech innovations, nature conservation, and other efforts to address climate change and protect our environment.



The Department of Finance Canada will co-lead the development of Canada's green bond framework with Environment and Climate Change Canada, in co-development with other departments including Natural Resources Canada; Infrastructure Canada; Innovation, Science and Economic Development Canada; Transport Canada; Agriculture and Agri-Food Canada; Public Safety Canada; as well as related Crown corporations.

5.2 Investing in Our Clean Industry Future

Generations of Canadians have worked hard to build a strong energy sector that supports hundreds of thousands of workers and families across the country, and brings power to the world—a legacy of pride and accomplishment. The development of Canada's energy sector has made significant contributions to clean technologies and materials, across industry, and to our country's prosperity and high quality of life. These technologies and materials have the potential to transform industry, across sectors.

Nearly 30 per cent of greenhouse gas emissions in Canada are generated by a relatively small number of large industrial facilities across Canada. Decarbonizing these facilities is an economic and environmental opportunity that, if realized, will position Canada as a leader in providing cleaner energy, and clean technology solutions, around the world.

Figure 5.1
Greenhouse gas emissions from large facilities in Canada, 2018

Carbon capture, utilization, and storage (CCUS) and low-carbon fuels represent two pathways to reduce these industrial emissions. Investing in these technologies today is a significant step towards achieving Canada's climate targets—and a greener, more resilient future for all Canadians.

Carbon Capture, Utilization, and Storage

Fighting climate change, and reaching net-zero, requires Canadians and Canadian industry to reduce the harmful greenhouse gases in the atmosphere in as many ways as possible. CCUS is an important tool for reducing emissions in high emitting sectors. It uses advanced technologies to capture carbon dioxide emissions from fuel combustion, industrial processes, or directly from the air. The captured carbon can then be stored deep underground, or used to create new and innovative products. CCUS is the only currently available technology with the potential to generate negative emissions.

Canada currently captures 4 megatonnes of carbon every year, but we have the technical and geological capacity to capture and store much more. We have the right building blocks in place, including infrastructure such as the Alberta Carbon Trunk Line, and innovative companies like CarbonCure in Nova Scotia, which developed a technology to inject captured carbon into concrete, making

it stronger and less polluting. Alberta and Saskatchewan have the greatest near-term potential to become global leaders in CCUS by creating new 'hubs' where carbon from high-emitting facilities can be efficiently captured, transported, stored, or used.

Tax Incentive for Carbon Capture, Utilization, and Storage

Canadian innovators and engineers have developed some of the leading global technologies for CCUS technologies that are in demand as more countries take action to fight climate change. The government intends to take significant action to support and accelerate the adoption of these technologies. By providing incentives to adopt CCUS technologies, the proposed measure will be an important element in Canada's plan to achieve net-zero emissions by 2050. This important new element of Canada's tax system is also intended to accelerate the growth of new businesses and jobs related to carbon capture.

- Budget 2021 proposes to introduce an investment tax credit for capital invested in CCUS projects with the goal of reducing emissions by at least 15 megatonnes of CO_2 annually. This measure will come into effect in 2022.

The government will move quickly with a 90-day consultation period with stakeholders on the design of the investment tax credit, after which it will announce more details—including the rate of the incentive. It is not intended that the investment tax credit be available for Enhanced Oil Recovery projects. The government intends to make the credit available for direct air capture projects. The government will be seeking input from all industrial subsectors (e.g. oil sands, refining, cement, fertilizer, power generation, direct air capture, etc.), recognizing that various subsectors face different challenges in adopting CCUS. The tax credit will also support hydrogen production. During the consultation, the government will consider how equivalent tax support could be provided to producers of green hydrogen. The consultation will include key provincial governments, encouraging them to create complementary measures for CCUS projects in their jurisdictions.

Following consultations, the government intends to introduce legislation at the earliest opportunity to implement the investment tax credit.

The government will also analyze how the tax system can be used to further support the commercialization and deployment of breakthrough technologies that may be critical to creating our net-zero future.

Advancing Carbon Capture, Utilization, and Storage Technologies

Canada is a leader in CCUS, with domestic projects that have already captured and stored millions of tonnes of CO_2. Building on this Canadian advantage is integral to achieving our net-zero goals. But investment is needed to support research and development that will help to advance the technology, lower its costs, and make sure Canada stays ahead of the curve in the global market for CCUS.

- Budget 2021 proposes to provide $319 million over seven years, starting in 2021-22, with $1.5 million in remaining amortization, to Natural Resources Canada to support research, development, and demonstrations that would improve the commercial viability of carbon capture, utilization, and storage technologies.

Taken together, these proposed measures related to CCUS will help Canada achieve net-zero emissions by 2050, and position Canada as a leader in supplying cleaner energy and innovative new technologies around the world.

Cleaner Fuels for a Cleaner Environment

Canadians and Canadian businesses use fuel every day—to get from place to place, to produce goods, and to transport those goods to market. Innovators are finding ways to make the fuels we use cleaner and Canada's Clean Fuel Standard is expected to reduce our greenhouse gas emissions by more than 20 megatonnes in 2030 and help put us on the path to net-zero emissions by 2050.

- To implement and administer the Clean Fuel Standard, Budget 2021 proposes to provide $67.2 million over seven years, starting in 2021-22, with $0.05 million in remaining amortization, to Environment and Climate Change Canada. This standard creates new economic opportunities for Canada's biofuel producers, including farmers and foresters, who are part of the diverse supply chain for low-carbon fuels. Making this investment now will secure Canada's future competitiveness in the global transition to a low-carbon economy.

Supporting the Production and Use of Clean Fuels

Clean fuels, including hydrogen and biofuels, can help reduce pollution from everyday activities, from heating our homes to commuting. The production of these fuels offers new opportunities for Canada's energy sector and ensures their hard work and ingenuity are a part of Canada's economic recovery.

As originally announced on December 11, 2020, Budget 2021 proposes to provide $1.5 billion over five years, starting in 2021-22, with $0.9 million in remaining amortization, to Natural Resources Canada to establish a Clean Fuels Fund to support the production and distribution of low-carbon and zero-emission fuels, including hydrogen and biomass, across Canada, and around the world, as first announced in the government's strengthened climate plan. The fund would position Canada as a global hydrogen leader and deliver on the *Hydrogen Strategy for Canada*.

- Budget 2021 also proposes to provide $67.4 million over seven years, starting in 2021-22, with $5.6 million in remaining amortization and $10.7 million ongoing, for Measurement Canada to ensure that commercial transactions of low-carbon fuels are measured accurately just as they are for conventional fuels.

These investments will help make sure Canada's energy sector is a key player in the work to build a clean energy future.

Low-Carbon Fuel Procurement Program

Low-carbon fuels will be necessary as Canada works to achieve net-zero emissions by 2050. The Government of Canada is taking a leadership role to put itself on a 2050 net-zero pathway by committing to buy low-carbon fuels for use in the federal domestic air and marine fleets. By making this commitment now, the government will encourage industry to produce these fuels, creating jobs for Canadians and investing in the clean tech economy.

- To support the long-term development of low-emission marine and aviation fuels, Budget 2021 proposes to provide $227.9 million over eight years, starting in 2023-24, to the Treasury Board Secretariat to implement a Low-Carbon Fuel Procurement Program within the Greening Government Fund.

- The government will also continue to use and expand federal procurement to support the Greening Government Strategy so that public dollars prioritize the use of lower carbon materials, fuels, and processes.

Supporting a Centre for Innovation and Clean Energy in British Columbia

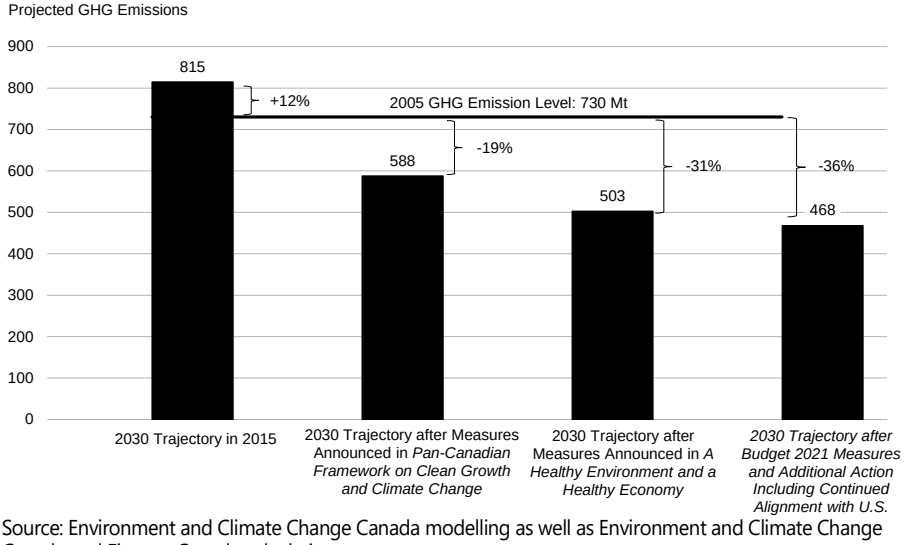
British Columbians have long been leaders in clean energy innovation and building a more sustainable future. In 2018, the Government of British Columbia released CleanBC, a plan to achieve the province's target of reducing greenhouse gas emissions by 40 per cent by 2030, based on 2007 levels. As part of the CleanBC plan, British Columbia recently announced that it will help establish a new Centre for Innovation and Clean Energy to coordinate research, development and demonstration of clean technologies, including carbon capture, utilization, and storage, and clean fuels.

- The government will, in partnership with the Government of British Columbia, provide up to $35 million to help establish the Centre for Innovation and Clean Energy to advance the scale-up and commercialization of clean technologies in B.C. and across Canada.

Investing in Clean Energy in Northern and Indigenous Communities

Canada's North is warming at three times the global rate. Indigenous peoples are experiencing its impact on their way of life, which is closely tied to the land and waters. Many communities in the North rely on diesel or other emissions-intensive sources of energy, which not only contribute to climate change but also pollute the air. To help these communities transition to clean energy and make the air cleaner and healthier:

- Budget 2021 proposes to invest $40.4 million over three years, starting in 2021-22, to support feasibility and planning of hydroelectricity and grid interconnection projects in the North. This funding could advance projects, such as the Atlin Hydro Expansion Project in Yukon and the Kivalliq Hydro-Fibre Link Project in Nunavut. Projects will provide clean power to northern communities and help reduce emissions from mining projects.
- Budget 2021 also proposes to invest $36 million over three years, starting in 2021-22, through the Strategic Partnerships Initiative, to build capacity for local, economically-sustainable clean energy projects in First Nations, Inuit, and Métis communities and support economic development opportunities.



The Strategic Partnerships Initiative is a unique federal program that supports Indigenous communities at the early stages of complex large economic opportunities. To date, the federal government has invested more than $136 million in the Strategic Partnerships Initiative, supporting over 50 large-scale initiatives and fostering the creation of more than 200 successful partnerships in various sectors of the economy such as clean energy, tourism, and fisheries. These efforts have benefitted over 400 Indigenous communities and organizations across the country.

Additional work is happening across the country to further our commitments to clean energy, including the Atlantic Loop.

5.3 Advancing Canada's Climate Plan

In December 2020, the government released its strengthened climate plan, *A Healthy Environment and a Healthy Economy*. Building on the Pan-Canadian Framework on Clean Growth and Climate Change, the plan laid out $15 billion in new investments to ensure Canada will exceed its 2030 greenhouse gas reduction target.

Chart 5.1
Projected Canadian GHG Emissions in 2030

Source: Environment and Climate Change Canada modelling as well as Environment and Climate Change Canada and Finance Canada calculations. ¬

In February, the government announced nearly $15 billion for public transit projects, which will support new subway extensions and help electrify transit fleets with zero-emission vehicles.

Canada has a clear climate plan—including one of the most stringent carbon pollution pricing approaches in the world—and we must do more. Set to announce a new, more ambitious 2030 climate target in the coming days, through Budget 2021 the government proposes $17.6 billion in additional investments towards a green recovery to create well-paying middle class jobs, build a clean economy, and fight and protect against climate change.

The investments made in Budget 2021, along with other action including strengthened alignment with the United States to further cut pollution from transportation and methane emissions, mean that Canada is now positioned to reduce emissions by about 36 per cent below 2005 levels by 2030. The government will continue to work with domestic and international partners and stakeholders to take climate action, building Canadian prosperity on our journey to net-zero emissions by 2050.

Steering Canada's Strengthened Climate Plan

Since 2015, the government has set an ambitious climate agenda. In 2020, it strengthened its climate plan and introduced the *Canadian Net-Zero Emissions Accountability Act* to legislate Canada's goal of net-zero emissions by 2050. To support the government's work to fight climate change and chart a course for a prosperous clean growth future:

- Budget 2021 proposes to provide $94.4 million over five years, starting in 2021-22, to Environment and Climate Change Canada to increase domestic and international capacity and action to address climate change, enhance clean tech policy capacity, including in support of the Clean Growth Hub, and to fund reporting requirements under the *Canadian Net-Zero Emissions Accountability Act*.

Returning the Proceeds from the Price on Pollution

It is no longer free to pollute in Canada. That has been the case since 2019 and it was recently reaffirmed by the Supreme Court of Canada.

Provincial and territorial governments have the option to introduce their own pollution pricing system, if that system meets the federal standard. For jurisdictions that choose not to, a federal backstop system applies—as is currently the case in Alberta, Saskatchewan, Manitoba, and Ontario.

All direct proceeds are returned to Canadians and their communities, with approximately 90 per cent going directly to people through their Climate Action Incentive payment so more money goes back into the pockets of families, while they help reduce pollution and protect our environment. In fact, the majority of families receive more money back through the Climate Action Incentive than they pay into the federal system.

- Budget 2021 proposes to change the delivery of Climate Action Incentive payments from a refundable credit claimed annually on personal income tax returns to quarterly payments made through the benefit system starting in 2022. This will deliver Canadians' Climate Action Incentive payments on a more regular basis. Further details will be announced later in 2021.

The other approximately 10 per cent has been returned back to communities, such as through small businesses, schools, and Indigenous communities in those provinces. The government will continue to return all federal proceeds from the price on pollution back to Canadian families and their communities to help them make cleaner choices and protect the environment for future generations.

Support for Farmers

Recognizing that many farmers use natural gas and propane in their operations:

- Budget 2021 announces the government's intention to return a portion of the proceeds from the price on pollution directly to farmers in backstop jurisdictions (currently Alberta, Saskatchewan, Manitoba, and Ontario), beginning in 2021-22. It is estimated farmers would receive $100 million in the first year. Returns in future years will be based on proceeds from the price on pollution collected in the prior fiscal year, and are expected to increase as the price on pollution rises. Further details will be announced later in 2021 by the Minister of Finance.
- Budget 2021 also proposes to ensure the recently expanded $165.5 million Agricultural Clean Technology program will prioritize $50 million for the purchase of more efficient grain dryers for farmers across Canada.

These initiatives will help farmers transition to lower-carbon, more fuel-efficient ways of farming.

Agricultural Climate Solutions

Farmers are major players in Canada's fight against climate change. The agricultural sector has the potential to scale up climate solutions, many of which are already underway across the country. Building on Canada's climate action programs for farmers—including the $185 million Agricultural Climate Solutions program, and the $165 million Agricultural Clean Technology Program—Budget 2021 proposes to:

- Provide an additional $200 million over two years, starting in 2021-22, to launch immediate, on-farm climate action under the Agricultural Climate Solutions program. This will target projects accelerating emission reductions by improving nitrogen management, increasing adoption of cover cropping, and normalizing rotational grazing.

- Allocate $60 million over the next two years, from the Nature Smart Climate Solutions Fund to target the protection of existing wetlands and trees on farms, including through a reverse auction pilot program.
- Allocate $10 million over the next two years, from the Agricultural Clean Technology Program toward powering farms with clean energy and moving off diesel.

Integrating Climate into Federal Decisions

The government is an important player in Canada's work to reach to net-zero emissions by 2050. Government decisions must consider climate mitigation and adaptation in a rigorous, consistent, and measurable manner.

- Budget 2021 proposes to provide $36.2 million over five years, starting in 2021-22, to Environment and Climate Change Canada to develop and apply a climate lens that ensures climate considerations are integrated throughout federal government decision-making. This includes resources to increase economic and emissions modelling capacity.

Strengthening Public Climate-related Disclosures

In order to ensure a stable and predictable transition to a low-carbon economy, markets, insurers, policy makers, and the public require standardized information about the climate-related risks and opportunities organizations face.

The Task Force on Climate-related Financial Disclosures has helped governments, central banks, public companies, financial institutions, and other organizations with consistent and comparable voluntary international disclosure standards. To give more clarity to the markets as technology advances, regulations evolve, and consumer behaviours change in the face of climate change:

- The government will engage with provinces and territories, with the objective of making climate disclosures, consistent with the Task Force on Climate-related Financial Disclosures, part of regular disclosure practices for a broad spectrum of the Canadian economy.
- Canada's Crown corporations will demonstrate climate leadership by adopting the Task Force on Climate-related Financial Disclosures standards, or according to, more rigorous, acceptable standards as applicable to the public sector at time of disclosure, as an element of their corporate reporting.
    - Canada's large Crown corporations (entities with over $1 billion in assets) will report on their climate-related financial risks for their financial years, starting in calendar year 2022 at the latest.

- Crown corporations with less than $1 billion in assets will be expected to start reporting on their climate-related financial risks for their financial years beginning in calendar year 2024 at the latest, or provide justification as to why climate risks do not have material impact on their operations.

In addition, recognizing the importance of nature, the Government of Canada is joining the Task Force on Nature-related Financial Disclosures. The Task Force is developing a framework for corporations and financial institutions to assess, manage, and report on dependencies and impacts on nature.

Furthermore, in order to make sure that Crown corporations are transparent about the issues that matter to Canadians, Budget 2021 is announcing that Crown corporations will be required to implement gender and diversity reporting, starting in 2022.

Border Carbon Adjustments

Border carbon adjustments make sure that regulations on a price on carbon pollution apply fairly between trading partners. If a different price on pollution is levied at source, the difference is accordingly applied on imports and exports between countries. This levels the playing field, ensures competitiveness, and protects our shared environment. An important part of advancing this work is ensuring a common understanding of border carbon adjustments and hearing views from interested Canadians, as well as working with Canada's international partners.

- The government intends to launch a consultation process on border carbon adjustments in the coming weeks. This consultation process will begin in the summer with targeted discussions, including with provinces and territories, importers, and exporters—especially those who deal in emissions-intensive goods. The broader public will be engaged this fall. Throughout this process, the government intends to continue its international engagement with like-minded partners.

5.4 Building Green Homes and Communities

The energy used to heat and cool buildings accounts for 13 per cent of Canada's emissions. Helping make our homes and other buildings in our communities more energy efficient not only lowers our emissions, it lowers our energy bills, too.

It is important to enhance Canada's supply and production of the materials we need to build and power highly efficient and low-emitting homes and communities.

Investments in upgrading our buildings will also create good, local jobs, including for tradespeople and skilled workers.

Building greener communities can support a clean economy and create new economic opportunities and good middle class jobs across the country.

Lower Home Energy Bills Through Interest-free Loans for Retrofits

Climate action starts at home, and deep home energy retrofits can have a big effect on emissions reduction. Whether people replace drafty windows, improve insulation to keep homes warm in winter and cool in summer, or install heat pumps, deep retrofits will help Canadians make their homes more energy efficient and can also help to better protect their homes from climate risks.

Examples of deep retrofits to make our homes greener

- Replacing oil furnaces or low-efficiency systems with a high efficiency furnace, air source heat pump, or geothermal heat pump.
- Better wall or basement insulation and/or wall or roof panels.
- Installing a high-efficiency water heater or on-site renewable energy like solar panels.
- Replacing drafty windows and doors.

These retrofits also make our homes more comfortable, reduce our energy bills, and create good middle class jobs, especially for skilled workers and tradespeople. Furthermore, it can also help spur clean growth by developing an industry for energy efficient retrofits, including the development of a Canadian supply chain for high-efficiency home renovation products.

The 2020 *Fall Economic Statement* put forward a program to provide Canadians with one million free energy audits and up to 700,000 grants, valued at up to $5,000, to complete energy efficient home improvements. To help homeowners and build on these measures:

- Budget 2021 proposes to provide $4.4 billion on a cash basis ($778.7 million on an accrual basis over five years, starting in 2021-22, with $414.1 million in future years) to the Canada Mortgage and Housing Corporation (CMHC) to help homeowners complete deep home retrofits through interest-free loans worth up to $40,000. Loans would be available to homeowners and landlords who undertake retrofits identified through an authorized EnerGuide energy assessment. In combination with available grants announced in the Fall Economic Statement, this would help eligible participants make deeper, more costly retrofits that have the biggest impact in reducing a home's environmental footprint and energy bills. This program will also include a

dedicated stream of funding to support low-income homeowners and rental properties serving low-income renters including cooperatives and not-for-profit owned housing.

The program would be available by summer 2021. It would be easily accessible through straightforward online tools, and is expected to help build Canadian supply chains for energy efficient products. It is estimated that more than 200,000 households would take advantage of this opportunity.

5.5 Adapting to Climate Change for a More Resilient Future

Climate-related disasters, such as flooding, wildfires, sea-level rise, coastal erosion, and permafrost degradation, are becoming more frequent and severe. These disasters have significant negative impacts on public safety, human health, and the economy. They can also result in costly damage to our communities.

Budget 2021 proposes a number of measures to better understand and prepare for climate-related disasters and to mitigate their impact. These measures would help make our communities safer and more resilient to a changing climate.

Strengthening Climate Resiliency

Climate change's impacts—flooding, coastal erosion, permafrost thaw, and more—put Canada's infrastructure at significant risk. This poses a threat to Canadians' health, wealth, and safety. Climate-related disasters can result in billions of dollars in disruptions, damages, and recovery costs. To ensure Canada's resilience in the face of climate change:

- Budget 2021 proposes to provide $1.4 billion over 12 years, starting in 2021-22, to Infrastructure Canada to top up the Disaster Mitigation and Adaptation Fund, to support projects such as wildfire mitigation activities, rehabilitation of storm water systems, and restoration of wetlands and shorelines.
    - Of this, $670 million would be dedicated to new, small-scale projects between $1 million and $20 million in eligible costs. In addition, 10 per cent of the total funding envelope would be dedicated to Indigenous recipients to benefit each distinctions-based group. Together, this would support projects that help small, rural, remote, northern, and Indigenous communities adapt to climate change impacts.

- In addition, Budget 2021 proposes to invest $11.7 million over five years, starting in 2021-22, through Infrastructure Canada to renew the Standards to Support Resilience in Infrastructure Program, so that the Standards Council of Canada can continue updating standards and guidance in priority areas such as flood mapping and building in the North. This would help communities to plan and build roads, buildings, and other infrastructure that is more durable and resilient to a changing climate.

Keeping Canadians Safer from Floods

Communities across Canada now face once-in-a century floods every few years due to climate change. These devastating deluges are damaging homes, businesses, and infrastructure. In fact, floods are Canada's most costly natural disaster, causing over $1 billion in direct damage annually. To make our communities safer and more resilient:

- Budget 2021 proposes to provide $63.8 million over three years, starting in 2021-22, to Natural Resources Canada, Environment and Climate Change Canada, and Public Safety Canada to work with provinces and territories to complete flood maps for higher-risk areas.

Improving Wildfire Resilience and Preparedness

Climate change is causing wildfires to become more frequent and more severe across Canada, threatening our health, economies, and wildlife. To improve our resilience to wildfires, make our communities safer, and adapt to climate change:

- Budget 2021 proposes to provide $100.6 million over five years, starting in 2021-22, with $4.7 million in remaining amortization, to the Parks Canada Agency to enhance wildfire preparedness in Canada's National Parks.
- Budget 2021 proposes to provide $28.7 million over five years, starting in 2021-22, with $0.6 million in remaining amortization, to Natural Resources Canada to support increased mapping of areas in Northern Canada at risk of wildfires. This funding would also enhance the capacity of the Canadian Interagency Forest Fire Centre, which is jointly funded in partnership with provinces and territories.

Supporting Provincial and Territorial Disaster Response and Recovery

As climate change causes increased and catastrophic flooding, droughts, wildfires, and other natural disasters, public finances at the provincial and territorial level are steadily more strained. In the event of a large scale natural disaster, the federal Disaster Financial Assistance Arrangements provide provinces and territories with the financial assistance they need to deliver the response and recovery services. To ensure provinces and territories have the capacity to keep people safe from the threats climate change poses:

- Budget 2021 proposes to provide $1.9 billion over five years, on a cash basis, starting in 2021–22, to Public Safety Canada to support provincial and territorial disaster response and recovery efforts.

Addressing Climate Change in Yukon

Climate change threatens the safety and resilience of northern infrastructure, ecosystems, and traditional ways of life. To help Yukon adapt to the impacts of climate change:

- Budget 2021 proposes to provide $25 million, in 2021-22, to the Government of Yukon to support its climate change priorities, in collaboration with Crown-Indigenous Relations and Northern Affairs Canada and Environment and Climate Change Canada.

Preserving the *HMS Erebus* and *HMS Terror*

The wrecks of *HMS Erebus* and *HMS Terror*, from the legendary and ill-fated Franklin Expedition of 1845, were discovered near Gjoa Haven, Nunavut, in 2014 and 2016, respectively. Inuit co-manage the wrecks with Parks Canada. They are some of the best-preserved wooden wrecks in the world. They contain clues that can help us unravel one of the world's greatest maritime mysteries. But reduced ice cover and increased sea swells caused by climate change are accelerating the deterioration of the *HMS Erebus*. To conserve and protect these historical treasures:

- Budget 2021 proposes to provide $15 million over three years, starting in 2021-22, to accelerate archeological and conservation work of these artifacts of international importance.

5.6 Protecting Nature

Canada is home to a quarter of the Earth's wetlands and boreal forests, 20 per cent of its fresh water, the longest coastline in the world, and a fifth of the world's remaining wilderness. We steward precious habitats for birds, fish, and animals. But many of the natural spaces and species we love are under threat from human activity and climate change.

Action is needed to conserve nature, address biodiversity loss, and protect our species at risk. Protected nature is also a critical part of Canada's plan to fight climate change. Healthy forests and oceans can absorb and store carbon. We must also take action to address plastic pollution in our water.

Budget 2021 will make sure Canada reaches its goal of conserving 25 per cent of our lands and oceans by 2025, and create good jobs in the green economy along the way.

Historic Investments in Canada's Natural Legacy

From farming, to fishing, to forestry, to tourism, millions of jobs rely on our nature. Investment in conservation is also an economic opportunity.

The Economic Challenges of the Global Biodiversity Crisis

Globally, nature is declining at unprecedented rates in human history—and the rate of species extinctions is accelerating. A 2019 report by the United Nations found that up to one million species are threatened with extinction globally. Furthermore, it found that 75 per cent of land-based environments, and 66 per cent of marine environments, have been altered by human actions.

There is a growing consensus that economies need to be aware of their dependence and impact on nature. The World Economic Forum ranks biodiversity loss as one of the top five risks to the global economy, one that could have "irreversible consequences for the environment, humankind, and economic activity, and a permanent destruction of natural capital, as a result of species extinction and/or reduction."

Sources: UN Report: Nature's Dangerous Decline 'Unprecedented'; Species Extinction Rates 'Accelerating' (2019); World Economic Forum Global Report (2020); Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services Global Assessment Report on Biodiversity and Ecosystem Services (2019).

To address the biodiversity crisis, fight climate change, and protect and create jobs:

- Budget 2021 proposes to provide $2.3 billion over five years, starting in 2021-22, with $100.5 million in remaining amortization, to Environment and Climate Change Canada, Parks Canada, and the Department of Fisheries and Oceans to:
  - Conserve up to 1 million square kilometers more land and inland waters to achieve Canada's 25 per cent protected area by 2025 target, including through national wildlife areas, and Indigenous Protected and Conserved Areas.
  - Create thousands of jobs in nature conservation and management.
  - Accelerate new provincial and territorial protected areas.
  - Support Indigenous Guardians.
  - Take action to prevent priority species at imminent risk of disappearing, including through partnerships with Indigenous peoples.

Taken together with funding provided for the Nature Legacy Initiative announced in Budget 2018, this represents the largest investment in nature conservation in Canada's history.

Natural Infrastructure Fund

When people think of infrastructure, they often think of built infrastructure—bridges, roads, or buildings. But natural infrastructure is also a critical part of making our communities livable. Local parks, green spaces, and waterfronts are our natural infrastructure. Natural infrastructure is the natural spaces and wildlife crossings that support conservation and biodiversity, and provides the wetlands and marshes that help prevent flash floods.

- Budget 2021 proposes to provide $200 million over three years, starting in 2021-22, to Infrastructure Canada to establish a Natural Infrastructure Fund to support natural and hybrid infrastructure projects. This would help to improve well-being, mitigate the impacts of climate change, and prevent costly natural events.

Natural Infrastructure Strategies in Canada

According to a report by the Greenbelt Foundation, investing in natural areas and reducing reliance on built infrastructure can help municipalities save money and mitigate the impacts of climate change. Cities across Canada are taking advantage of this opportunity and are investing in natural infrastructure, see examples below:

- The **City of Toronto's Ravine Strategy** aims to protect, manage, and enhance the ecological services and recreational opportunities provided by an urban ravine network spanning more than 300 kilometres. The strategy focuses on ravine areas with high levels of existing use and where the surrounding neighbourhoods have limited access to public or private greenspace.
- The **City of Vancouver's Rain City Strategy** uses natural solutions, such as absorbent landscaping, tree trenches, and green roofs, to prevent urban flooding and improve water quality. The strategy also aims to manage rainwater runoff from 40 per cent of impervious areas by 2050, and capture and clean 90 per cent of the city's average annual rainfall.
- The **City of Winnipeg's Parks Strategy** aims to connect people with nature, value ecological systems, promote active and outdoor living, and enhance accessibility for persons with disabilities to parks and natural spaces.
- The **City of Saskatoon's Green Strategy** aims to provide a sustainable habitat for people and nature by building up urban forests, improving ecosystem health, enhancing resiliency to natural disasters, connecting people with nature, promoting active and outdoor living, and enhancing accessibility for persons with disabilities to parks and natural spaces.
- The **City of Halifax's Green Network Plan** promotes the sustainable use of ecologically important green space, and enhances the use of land suited for outdoor recreation.
- The **City of Montreal's Vision 2030 Strategic Plan** prioritizes nature in the city, putting biodiversity, green spaces, and the management and development of natural riverside and aquatic heritage at the heart of decision-making. The plan aims to ensure that everyone has access to local parks, and includes planting trees and plants in neighbourhoods and along the riverbanks in order to protect biodiversity.

Conserving Canada's Oceans

Canada's coastline is the longest of any country in the world and the government is committed to protecting 25 per cent of its marine and coastal areas by 2025, working towards 30 per cent by 2030. In addition to being home for whales, fish, and other marine life, oceans play a critical role in capturing carbon in the atmosphere.

Canada's marine and coastal areas also support numerous jobs, livelihoods, and communities. The blue economy in Canada contributed $36.1 billion in gross domestic product in 2018 and accounts for close to 300,000 jobs.

To help meet our conservation targets, protect against loss of marine habitat, and address the challenges of biodiversity loss and climate change:

- Budget 2021 proposes to provide $976.8 million over five years, starting in 2021–22, with $80.0 million in remaining amortization, to help Canada reach its 25 per cent by 2025 target to protect the health of our oceans, commercial fishing stocks, and Canadians' quality of life, especially in coastal communities.

Reducing Ocean Plastics that Threaten Marine Life

"Ghost gear" is commercial fishing gear that has been abandoned, lost, or discarded and is estimated to be up to 70 per cent of the plastic waste, by weight, in our oceans. It is one of the deadliest forms of marine litter around the world, pollutes our waters and coasts, endangers global fishing stocks, and poses navigation hazards. Since 2019, Canada has demonstrated international leadership in efforts to clean up ghost gear. To continue work to reduce plastic waste in our oceans:

- Budget 2021 proposes a $10 million increase, in 2021-22, to the Sustainable Fisheries Solutions and Retrieval Support Program, the "Ghost Gear Fund" at Fisheries and Oceans Canada, to assist projects that retrieve ghost gear, dispose of fishing related plastic waste, test new fishing technology, and support international efforts to decrease ghost gear. The program also contributes to job creation.

Preserving Wild Pacific Salmon

Since the early 1990s, Pacific salmon stocks have declined by up to 93 per cent. Wild Pacific salmon are facing threats from climate change, contaminants, and changes in land and water use. The protection and recovery of wild Pacific salmon stocks is a priority for the federal government. Action is needed to protect and recover this iconic species—for thousands of workers in rural and coastal communities, and hundreds of First Nations communities in British Columbia and Yukon that fish salmon for food, social, and ceremonial reasons. Building on previous investments of $246.3 million to enable salmon passage in the Fraser River following the Big Bar landslide:

- Budget 2021 proposes to provide $647.1 million over five years, starting in 2021-22, with $98.9 million in remaining amortization to Fisheries and Oceans Canada to:
  - Stabilize and conserve wild Pacific salmon populations, including through investment in research, new hatchery facilities, and habitat restoration.
  - Create a Pacific Salmon Secretariat and Restoration Centre of Expertise.
  - Improve management of commercial and recreational fisheries.
  - Double the British Columbia Salmon Restoration and Innovation Fund with an additional $100 million.
  - Further engage with First Nations and fish harvesters.

Sustainable Aquaculture Management

An updated approach to aquaculture is essential to ensure operations are sustainable, and that marine ecosystems and wild fish populations—in particular wild salmon and other species facing risk to recovery—are protected.

To help position Canada as a leader in innovative and sustainable aquaculture while protecting and rebuilding wild fish stocks, and building on the $55.5 million recently provided to the Sustainable Aquaculture Program:

- Budget 2021 proposes to provide $20 million over two years to Fisheries and Oceans Canada to expand engagement with the Province of British Columbia, Indigenous communities, industry, scientists, and other stakeholders. This consultation would inform the development of a responsible plan to transition from open net-pen salmon farming in coastal British Columbia waters by 2025.

- In addition, Budget 2021 also proposes to invest $3 million over two years to pilot area based management approaches to planning, management, and monitoring of aquaculture activities in priority areas on the B.C. coast—leading the way in developing aquaculture practices that are economically, environmentally, and socially sustainable.

Developing the Canada Water Agency

The Prairie Farm Rehabilitation Administration was created in 1935 when farmers were facing a period of long, severe drought. For nearly 75 years it assisted Western Canadian farmers, supporting water conservation and irrigation projects. Its closure in 2009 created a gap as Canada lost an important tool to manage its waters. Since then, water management has become a broader issue connected to climate change, conservation, and the health of Canadians. To fill this gap and begin work towards the launch of a new Canada Water Agency that would keep our water safe, clean, and well managed:

- Budget 2021 proposes to provide $17.4 million over two years, starting in 2021-22, to Environment and Climate Change Canada to support work with the provinces, territories, Indigenous peoples, and key stakeholders on the scope of the agency's mandate, including identifying opportunities to build and support more resilient water and irrigation infrastructure. The agency would be headquartered outside the National Capital Region.

Better Understanding Our Environment

The government is committed to building a robust foundation of data to better understand the impacts of climate change and protect our diverse ecosystems. To increase our knowledge of Canada's environment, ecosystems, and species, and their relationship to local communities, the government plans to undertake Canada's first-ever Census of the Environment.

- Budget 2021 proposes to provide $25.6 million over five years, starting in 2021-22, and $5.8 million per year ongoing to Statistics Canada, and $1.9 million over five years, starting in 2021-22, and $0.3 million per year ongoing to Environment and Climate Change Canada to create a Census of the Environment to help monitor environmental trends and better inform decision-making.

Support for the Polar Continental Shelf Program

For over 50 years, the Polar Continental Shelf Program has enabled research across Canada's Arctic. Scientific interest in this important ecosystem has increased in recent years, as has the cost of basic supplies and logistical infrastructure.

- Budget 2021 proposes to provide $25.4 million over three years, starting in 2021-22, with $5.7 million in remaining amortization, to Natural Resources Canada to support pan-Arctic scientific research through the Polar Continental Shelf Program. These activities would also enhance employment and training opportunities for Indigenous people and northerners.

Continuing Canada's Chemicals Management Regime

The Chemicals Management Plan was created in 2006 to assess chemicals used in Canada and take action on those found to be harmful. To renew the Chemicals Management Plan and continue to protect Canadians and the environment from exposure to chemicals that can be harmful:

- Budget 2021 proposes to provide $476.7 million over five years, starting in 2021-22, with $0.9 million in remaining amortization, to Environment and Climate Change Canada, Health Canada, and the Public Health Agency of Canada.

Chapter 6
Strengthening the Cities and Communities We Call Home

Strong and resilient cities, towns, and communities are the backbone of a strong economy and a growing middle class.

Cities, towns, and communities have been hard-hit by COVID-19. High infection rates have put many under public health restrictions for over a year.

As Canadians begin the work of building back better together, the government has a plan to develop more prosperous, inclusive, healthy, and vibrant communities across Canada. This includes investing in economic development in every corner of the country, supporting sectors like tourism, arts, and culture that have been disproportionately affected by lockdowns and travel restrictions, and working with provincial, territorial, and municipal governments to address longstanding challenges that predate the pandemic, such as affordable housing and aging infrastructure.

6.1 A Place to Call Home

High housing costs, especially in urban centres, continue to place middle class and low-income Canadians under huge financial pressure. For some, high housing costs have become a barrier to pursuing promising opportunities in a new community. Housing unaffordability can even lead to homelessness. As of 2018, more than 1.6 million Canadian households live in core housing need.

Combined with some constraints on housing inventory caused by COVID-19, the low interest rate environment has contributed to a recent surge in housing prices in a number of communities. It is more urgent than ever that the government take action to make housing more affordable.

The government is taking action on several fronts to alleviate this pressure, including proposing a tax on underused housing to support investments in housing affordability (Chapter 10), investments in public transit that will help local governments unlock more housing supply (section 6.4), and historic investments in early learning and child care to make life more affordable for young families (Chapter 3). It is also investing to build greener homes and boost Canadian supply chains (Chapter 5).

In addition, earlier this month, the Superintendent of Financial Institutions restarted consultations on the minimum qualifying rate for uninsured mortgages. This would help to ensure that borrowers are able to make their mortgage payments. Maintaining the health and stability of Canada's housing

market is essential to protecting middle class families and to Canada's broader economic recovery. Stable housing is critical for communities and for a strong middle class.

That's why the government has a plan to invest $2.5 billion, and reallocate $1.3 billion in existing funding to speed up the construction, repair, or support of 35,000 affordable housing units. This will help families, young people, low-income Canadians, people experiencing homelessness, and women and children fleeing violence find a safe and affordable place to call home. And the government will ensure these projects meet the energy efficiency requirements set out under the National Housing Strategy, which will reduce their carbon footprints and reduce families' energy bills.

More Affordable Housing

The COVID-19 recession has widened gaps in Canadians' access to housing. These gaps, if not addressed, could deepen cleavages in our communities and exacerbate social inequalities. By contrast, investments in affordable housing can act fast to create jobs and prosperity.

Furthermore, investments to make housing more affordable for the most vulnerable, coupled with measures to limit foreign speculation in the housing market, will help ensure that our economic recovery is an inclusive one that helps more people join the middle class. Access to affordable homes will give more Canadians opportunities to find better jobs and create better futures.

After years of inaction, the government restored support for the construction of affordable housing in 2017, recognizing that these are vital investments.

To help Canadians find affordable housing, spur job creation and local economic recovery, alleviate cost pressure in the housing market overall, and grow the middle class:

- Budget 2021 proposes to provide an additional $2.5 billion over seven years, starting in 2021-22, to the Canada Mortgage and Housing Corporation, including:
    - An additional $1.5 billion for the Rapid Housing Initiative in 2021-22 to address the urgent housing needs of vulnerable Canadians by providing them with adequate affordable housing in short order. At least 25 per cent of this funding would go towards women-focused housing projects, and units would be constructed within 12 months of when funding is provided to program applicants. Overall, this new funding will add a minimum of 4,500 new affordable units to Canada's housing supply, building on the 4,700 units already funded in the 2020 *Fall Economic Statement* through its $1 billion investment.

- $600 million over seven years, starting in 2021-22, to renew and expand the Affordable Housing Innovation Fund, which encourages new funding models and innovative building techniques in the affordable housing sector. To date, this program has committed funding to support the creation of over 17,600 units, including more than 16,300 affordable housing units and units for persons with accessibility challenges. This new funding will support the creation of up to 12,700 more units, bringing the total to over 30,000 units.
- $315.4 million over seven years, starting in 2021-22, through the Canada Housing Benefit, to increase direct financial assistance for low-income women and children fleeing violence to help with their rent payments.
- $118.2 million over seven years, starting in 2021-22, through the Federal Community Housing Initiative, to support community housing providers that deliver long-term housing to many of our most vulnerable.

In addition to these new investments, Budget 2021 proposes to advance and reallocate $1.3 billion, on a cash basis, of previously announced funding, including:

- $750 million in funding under the National Housing Co-Investment Fund, which is proposed to be advanced to 2021-22 and 2022-23. This will accelerate the creation of 3,400 new units, and the repair of 13,700 units.
- $250 million in funding under the National Housing Co-Investment Fund, which will be allocated to support the construction, repair, and operating costs of an estimated 560 units of transitional housing and shelter spaces for women and children fleeing violence. This targeted funding is being reallocated—including advancing $200 million to 2021-22 and 2022-23—to make sure the government delivers on its commitments, and reinforces the government's efforts to address gender-based violence, including the measures outlined in the forthcoming National Action Plan to End Gender-Based Violence (more details in Chapter 9).
- $300 million in funding in 2021-22 and 2022-23 from the Rental Construction Financing Initiative, which will be allocated to support the conversion of vacant commercial property into housing. As the demand for retail and office space has changed due to COVID, some landlords, particularly in major urban cores, are facing higher vacancies. This is an opportunity for property owners and communities to explore converting excess space into rental housing, enhancing the livability and affordability of urban communities. This funding will explore this new approach to development and target the conversion of excess commercial property space into 800 units of market-based rental housing.

Table 6.1

Units Supported Under Select National Housing Strategy Programs

Select National Housing Strategy Funding Programs	Supported since 2017	Supported through Budget 2021
Rapid Housing Initiative	4,700	4,500
Affordable Housing Innovation Fund	17,600	12,700
National Housing Co-Investment Fund, excluding shelters	12,400 new 65,900 repaired	3,400 new 13,700 repaired
National Housing Co-Investment Fund, shelters	800 new 150 repaired	560
Rental Construction Financing Initiative	24,900	800
Total (new or repaired)	**126,450**	**35,660**

Note: Units supported through Budget 2021 under the National Housing Co-Investment Fund and Rental Construction Financing Initiative are not incremental; they represent a reallocation of existing funding, as described above.

The government also recognizes that access to safe and sustainable housing can be particularly challenging in the North.

- Budget 2021 proposes to provide $25 million, in 2021-22, to the Government of the Northwest Territories to address housing priorities. Funding will support the construction of 30 new public housing units across the Territory.
- Budget 2021 proposes to provide $25 million, in 2021-22, to the Government of Nunavut to support the Territory's short-term housing and infrastructure needs including priority redevelopment and refurbishment projects resulting in approximately 100 new housing units.

National Housing Strategy

In 2017, the federal government announced Canada's first ever National Housing Strategy: a ten-year plan to help improve the affordability, availability, and quality of housing for Canadians.

The strategy prioritizes support for the most vulnerable people in society, including young adults, seniors, Indigenous peoples, those dealing with mental health and addiction issues, and women and children fleeing violence.

At least 25 per cent of National Housing Strategy investments are committed to support projects that specifically target the unique needs of women and their children. The government remains committed to eliminating chronic homelessness.

The Government of Canada is currently on track to deliver over $70 billion by 2027-28 to help more Canadians find a place to call home. This covers a wide range of investments, including:

- Over $15 billion in joint funding with provinces and territories directed towards community housing, households in need through the Canada Housing Benefit, and support for provincial and territorial housing priorities related to repair, construction, and affordability.
- Over $10 billion in support of community and social housing.
- Nearly $3 billion for Reaching Home: Canada's Homelessness Strategy.
- Over $1 billion to improve home ownership options, including through the First-Time Home Buyer Incentive.
- Over $40 billion to support new construction and repair of affordable housing. As of December 2020, over $11.5 billion of this funding had been committed, which will support the creation of over 58,900 new units and the repair of over 68,000 units.

Of the overall $70 billion in National Housing Strategy funding, over $25 billion has been committed as of December 2020.

Ending Homelessness

COVID-19 has exacerbated many of the hardships faced by Canadians experiencing homelessness and housing insecurity. Many have had to choose between the harsh cold of the streets or the risk of an outbreak in shelters.

Since 2019, the government has launched more than 1,200 projects to support Canadians experiencing homelessness. Through the pandemic the government has more than doubled funding for Reaching Home: Canada's Homelessness Strategy. But more work needs to be done if we are to make sure no one in Canada is without a place to call home. Given the progress that has been made, and its commitment to do more, the government is now focused on entirely eliminating chronic homelessness in Canada.

- Budget 2021 proposes to provide an additional $567 million over two years, beginning in 2022-23, to Employment and Social Development Canada for Reaching Home. This would maintain the 2021-22 funding levels announced in the *Fall Economic Statement* in response to the pressures of COVID-19.

Every year, thousands of veterans access emergency shelters. After their service, every veteran deserves a home.

- Budget 2021 proposes to provide $45 million over two years, beginning in 2022-23, for Employment and Social Development Canada to pilot a program aimed at reducing veteran homelessness through the provision of rent supplements and wrap-around services for homeless veterans such as counselling, addiction treatment, and help finding a job.

Figure 6.1
Federal National Housing Strategy Initiatives and Investments Committed Before Budget 2021

6.2 Restoring Tourism, Arts, Culture, and Sport

From the Calgary Stampede, to the Stratford Festival, to the Toronto Caribbean Carnival, to Halifax Pride, to Montréal Just for Laughs—the festivals, local cultural celebrations, concerts, exhibits, and live shows that draw us together, tell our stories, and reinforce our cultural diversity have been severely affected by the pandemic.

Restrictions on gatherings likewise mean that we have not been able to play many of the sports we love, watch the talent of our competitive athletes at live events, or take part in the amateur tournaments that many Canadians and their families work so hard towards.

Cultural experiences and sport are central to our well-being and although Canadians have forgone them out of safety, the many workers and organizations in the sector have faced significant difficulties.

The tourism industry has been especially hard hit by the pandemic recession and for some regions of the country, especially Atlantic Canada, the impacts have been significant. Reductions in flights have compounded the impacts.

As part of its plan to support the air sector, the government is committed to supporting the return of regional routes across the country in a way that continues to prioritize the health, safety, and security of all Canadians.

As the public health situation improves, the government expects to see the return of those routes back to the Atlantic provinces, who have worked hard to protect Atlantic Canadians. When the resumption of travel is safe, tourism in New Brunswick, Prince Edward Island, Nova Scotia, and Newfoundland and Labrador will be particularly important to those economies.

Federal emergency support programs have provided support to businesses and workers across the tourism, arts, and culture sectors. To date, businesses and non-profit organizations in these sectors have received an estimated $15.4 billion in support to pay workers through the Canada Emergency Wage Subsidy, support for rent and mortgages through the Canada Emergency Commercial Rent Assistance, the Canada Emergency Rent Subsidy, and Lockdown Support, as well as support for small businesses through the Canada Emergency Business Account.

The government's plan will support our economic recovery, restoring and creating jobs in these sectors, drawing visitors to towns and cities across the country, and unleashing spending that stimulates local economies.

Revitalizing Tourism

The impact of COVID-19 on workers and businesses in tourism, arts, and culture has been severe.

With the rollout of vaccines underway, businesses in the tourism, arts, and culture sectors are getting ready to welcome Canadians back to experience the great places and activities this country has to offer—when it is safe to do so. Canadians are also eager to return to the local festivals and places they know and love.

To assist the sectors' recovery, the government proposes to make available a further package of supports, totalling $1 billion over three years, starting in 2021-22.

Major Festivals

Canada's major festivals not only showcase the best of Canadian culture and talent—they also create thousands of jobs for vendors, technicians, production crews, and more. To support Canada's world-class arts and cultural festivals that have drawn millions of visitors from all over the world to Canada:

- Budget 2021 proposes to invest $200 million through the regional development agencies to support major festivals. This would ensure they can continue to celebrate our artistic excellence and unique character.

Community Festivals and Events

To support Canada's many local festivals, celebrations, and amateur sport events that draw visitors to our communities:

- Budget 2021 proposes to invest $200 million through Canadian Heritage to support local festivals, community cultural events, outdoor theatre performances, heritage celebrations, local museums, amateur sport events, and more.

Helping Visitors Discover Canada

To ensure that Canada is a destination of choice when domestic and international travel is once again safe:

- Budget 2021 proposes to provide $100 million to Destination Canada for marketing campaigns to help Canadians and other visitors discover and explore the country.

Support for Local Tourism Businesses

Recognizing the impact COVID-19 has had on tourism businesses and that even as economies open, business and international travel will take time to recover:

- Budget 2021 proposes to establish a $500 million Tourism Relief Fund, administered by the regional development agencies. The Fund will support investments by local tourism businesses in adapting their products and services to public health measures and other investments that will help them recover from the pandemic and position themselves for future growth.

These measures would be complemented by other Budget 2021 announcements, such as measures to support safe air travel (see section 1.6 in Chapter 1), and the expansion of the Canada Small Business Financing Program (see section 4.2 in Chapter 4).

Supporting Canada's Active Recovery

Canadians of all ages have sacrificed time on the field, at the park, and on the ice to keep each other safe. Young Canadians, in particular, have missed out on the chance to learn new skills and make memories with their teammates. Sports and physical activity play a critical role in our mental health and in the social and economic revitalization of our communities. To get Canadians moving again when it is safe to do so:

- Budget 2021 proposes to provide $80 million over two years, starting in 2021-22, to Canadian Heritage to remove barriers to participation in sports programming and to help community organizations kick-start local organized sports that are accessible to all.

Supporting Canada's Arts, Culture, Heritage, and Sport Organizations and Workers

Across Canada, the organizations that host artistic, heritage, and sport events and exhibits have been among the hardest hit during the pandemic, and many Canadian artists and cultural workers have struggled to find work.

Before the pandemic began, an estimated 410,000 Canadians worked in the arts, entertainment, and recreation industries in February 2020, but that number fell drastically throughout the following year (Chart 6.1).

Chart 6.1
Employment Change (%), February 2021 Compared to February 2020

Source: Statistics Canada, Labour Force Survey.

With reduced revenues, many heritage, arts, and sport organizations run the risk of not surviving through to the other side of the pandemic without additional support. In the *Fall Economic Statement*, the government committed to provide over $180 million in 2021-22 to support artists and live events. This funding builds on the Emergency Support Fund for Cultural, Heritage and Sport Organizations announced in May 2020, approximately $225 million of which was used to support over 6,000 cultural organizations, arts and heritage institutions, music producers, sport organizations, and artists across Canada in 2020-21.

Supporting the Recovery of Arts, Culture, Heritage and Sport Sectors

To promote recovery from the pandemic for heritage, arts, and sport sectors that contribute so much to the cultural life of Canada:

- Budget 2021 proposes to provide $300 million over two years, starting in 2021-22, to Canadian Heritage to establish a Recovery Fund for Heritage, Arts, Culture, Heritage and Sport Sectors.

Supporting Performing Arts and Community Events

To support the performing arts festivals and community-based cultural events, celebrations, and commemorations that make our communities stronger:

- Budget 2021 proposes to provide $49.6 million over three years, starting in 2021-22, to Canadian Heritage for the Building Communities Through Arts and Heritage Program ($14 million over two years, starting in 2022-23), the Canada Arts Presentation Fund ($16 million over two years, starting in 2022-23), and the Celebration and Commemoration Program ($19.6 million over three years, starting in 2021-22).

Supporting Musicians and Music Venues

To help Canadian musicians, concert venues, producers, and distributors:

- Budget 2021 proposes to provide $70 million over three years, starting in 2021-22, to Canadian Heritage for the Canada Music Fund. This includes up to $50 million in 2021-22 to help the live music sector, including music venues, weather the pandemic.

Making Cultural Spaces Safe During COVID-19

To help arts and heritage institutions upgrade their facilities to meet public health guidelines:

- Budget 2021 proposes to provide $15 million in 2021-22 to Canadian Heritage for the Canada Cultural Spaces Fund.

Supporting the National Arts Centre

The National Arts Centre (NAC) is Canada's home for the performing arts. It is the largest bilingual performing arts centre in Canada and nurtures the next generation of artists and audiences. Due to COVID-19, cancelled performances and events have had a major impact on the NAC, resulting in significant revenue loss. The NAC plays a vital role in the career of many performing artists, singer-songwriters, dancers, playwrights, choreographers, actors, and directors from across the country.

- Budget 2021 proposes to provide $17.2 million in 2021-22 to the National Arts Centre to address financial pressures caused by COVID-19 and to ensure the NAC will continue to support artists and celebrate Canadian culture.
- Budget 2021 also proposes to provide $6 million over two years, starting in 2021-22, to the National Arts Centre to support collaborations with equity deserving groups to help relaunch the performing arts sector.

Supporting Canadian TV and Film Productions through COVID-19

In September 2020, to support Canadian television and film productions interrupted by the pandemic, the government announced a $50 million Short-Term Compensation Fund.

In February 2021, the government extended the fund into 2021-22 and doubled the funding to up to $100 million so that, during the peak spring and summer production period this year, filmmakers and producers have access to this critical backstop that reduces the financial risk productions face amidst ongoing COVID-19 shutdowns.

The fund is administered by Telefilm Canada and will support the resilience of this important $9.3-billion industry and help maintain well over 150,000 jobs for the industry's artists and workers.

Investing in Telefilm Canada

The shift to digital media is changing the landscape for Canadian film and television production and increasing global competition for online streaming content. To make sure Canadian film tells the story of all of Canada's diverse peoples and reaches audiences all over the world:

- Budget 2021 proposes to provide $105 million over three years, starting in 2021-22, for Telefilm Canada to modernize its current suite of programs to provide better access to a diverse range of creators and producers, support green practices, and respond to increasing digitization in the audiovisual industry.

Encouraging Diverse Voices in Canadian TV and Film

To provide opportunities for equity deserving creators to build skills and experience, and to support greater diversity in top-tier productions:

- Budget 2021 proposes to provide $60 million over three years, starting in 2021-22, to the Canada Media Fund to increase support for productions led by people from equity deserving groups working in the Canadian audiovisual industry.

Support for the Canadian Broadcasting Corporation / Radio-Canada

Like many media organizations, during the pandemic the CBC/Radio-Canada has experienced declining advertising revenues that threaten its capacity to continue delivering public television and radio programs. To support Canada's public broadcaster, the CBC/Radio-Canada, and ensure it can continue to report local and national news in both official languages:

- Budget 2021 proposes to provide $21 million in 2021-22 as immediate operational support to the CBC/Radio-Canada. This funding will ensure its stability during the pandemic and enable it to continue providing news and entertainment programming that keeps Canadians informed.

Support for the Canadian Book Industry

Canada has given the world some of the best stories, told by some of the best authors. Novels about an orphan on PEI, Mennonite towns in Manitoba, young Black immigrants in the Arctic, or life on a reserve in Northern B.C. draw the world into uniquely Canadian landscapes and export our diverse perspectives. Biographies, histories, and non-fiction that critique Canadian society make sure that a faithful record of the Canadian experience is kept.

Canadian book publishers and booksellers make sure Canadian stories get told and shared with the world. With the rise of e-commerce giants, investment is needed to help Canadian books find their way into the hands of readers.

- Budget 2021 proposes to provide a total of $39.3 million over two years, starting in 2021-22, to Canadian Heritage to support the Canadian book industry. This includes $32.1 million over two years, starting in 2021-22, to help bookstores increase online sales and $7.2 million in 2021-22 to promote Canada's book industry at the Frankfurt Book Fair, the world's largest trade fair for books.

Protecting Canada's Historic Places

From coast to coast to coast, Canada is home to a rich portfolio of historic places across the country. Canadians expect their governments to protect Canada's historic places so that they can be enjoyed and preserved for future generations. But currently, there is no legal obligation to protect the heritage value of many of the over 300 federally-owned historic places in Canada.

- Budget 2021 proposes to provide $28.7 million over five years, starting in 2021-22, and $5.8 million ongoing, for the Parks Canada Agency to implement new legislation that, if enacted, would provide for a transparent designation framework as well as the sustainable protection of the over 300 federally-owned historic places.

Memorial to the Victims of Communism

Commemorative monuments are built to reflect the values, identity, history, and character of Canada. The Memorial to the Victims of Communism will recognize Canada as a place of refuge for people fleeing injustice and persecution and honour the millions who have suffered under communist regimes. The memorial is currently under construction in Canada's National Capital Region and needs additional funding in order to be completed.

- Budget 2021 proposes to provide $4 million in 2021-22 to Canadian Heritage to support the completion of the Memorial to the Victims of Communism.

6.3 Building Stronger Communities

Canada's charities, non-profits, social enterprises, and other organizations provide vital services to our communities, including to the most vulnerable members of Canadian society. They work constantly to address hunger, improve socioeconomic outcomes for diverse Canadians, and keep communities connected and informed.

These organizations have provided essential services during the COVID-19 pandemic but they have also faced hardship. The Government of Canada is committed to providing them with temporary support. As we navigate our recovery, we must also bolster Canada's thriving social sector so that we can build healthy, resilient, and inclusive communities across the country.

Helping Charities, Non-profits, and Social Purpose Organizations Grow

Communities across Canada face complex social, economic, and environmental challenges—many of which have been deepened by the COVID-19 crisis. Thousands of charities, non-profits, co-operatives, and other social purpose organizations are committed to addressing these challenges directly at the community level. During the pandemic, many have seen demand for their services surge while watching their revenues plummet.

The sector employs over 611,000 people, many of whom are women, Black and racialized Canadians, young people, newcomers, and others who have been disproportionately affected by the pandemic. These organizations have

invaluable on-the-ground knowledge of their communities' needs and provide much-needed community and social support. They are key partners in our work to reopen and rebuild our communities.

Social finance is about mobilizing private capital to bring about public good. To support the growth of social finance in Canada, strengthen our social sector, ensure our most vulnerable can access much-needed services, and help our communities recover more quickly:

- The government is proposing to launch planned disbursements of the $755 million Social Finance Fund and deploy up to $220 million over its first two years. It is estimated that the Social Finance Fund could attract up to $1.5 billion in private sector capital to support the development of the social finance market, create thousands of new jobs, and drive positive social change.

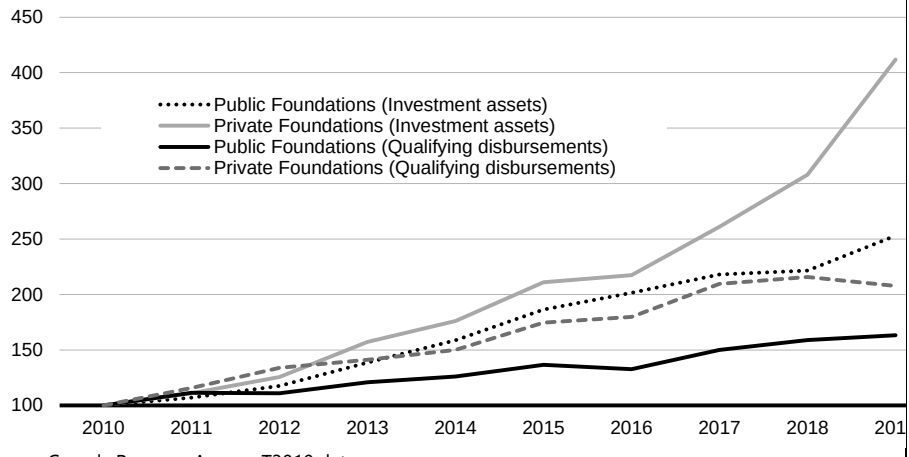
To ensure charities, non-profits, and social purpose organizations have the skills and capacity needed to access social finance opportunities:

- Budget 2021 proposes to renew the Investment Readiness Program for $50 million over two years, starting in 2021-22. This program supports charities, non-profits, and social purpose organizations in capacity-building activities such as business plan development, expanding products and services, skills development, and hiring.

Supporting Community Service Organizations

A majority of the workers in the charity and non-profit sector are women. This sector has been significantly affected by the pandemic, causing further impacts on the she-cession. The effects have been especially significant for small and rural charities, whose ability to raise funds has been severely impacted even as the pressures for their services have grown.

Recent research from Imagine Canada suggests that as of late 2020, the average charity has reported a revenue decline of 16 per cent. Since the pandemic began, community service non-profit and charitable organizations have struggled to provide the fitness, children's programs, seniors programs, and community building projects that Canadians rely on. These organizations have not been able to easily adapt and transition to remote work and online programming, which has made it hard for workers and left a gap in our communities, at a time when demand is higher.



- Budget 2021 proposes to provide $400 million in 2021-22 to Employment and Social Development Canada to create a temporary Community Services Recovery Fund to help charities and non-profits adapt and modernize so they can better support the economic recovery in our communities.

Boosting Charitable Spending in Our Communities

Every year, charities are required to spend a minimum amount on their charitable programs or on gifts to qualified donees. This is known as the "disbursement quota" and it ensures that charitable donations are being invested into our communities.

While most charities meet or exceed their disbursement quotas, a gap of at least $1 billion in charitable expenditures in our communities exists today. Furthermore, growth in the investment assets of foundations has increased significantly in recent years. In 2019, charitable foundations held over $85 billion in long-term investments. But grant-making and other charitable activities have not kept pace.

Chart 6.2
Growth in Investment Assets and Qualifying Disbursements
Index, 2010 = 100

Source: Canada Revenue Agency T3010 data.

- Budget 2021 proposes launching public consultations with charities over the coming months on potentially increasing the disbursement quota and updating the tools at the Canada Revenue Agency's disposal, beginning in 2022. This could potentially increase support for the charitable sector and those that rely on its services by between $1 billion and $2 billion annually.

Consulting on a New Canadian Social Bond

Social bonds are an opportunity to connect socially conscious investors with Government of Canada bonds that support social objectives such as reducing homelessness and improving access to high-quality early learning and child care.

- Budget 2021 proposes to explore the potential for social bonds to complement the government's existing debt program. The government intends to include this topic as part of the Debt Management Strategy consultations this fall.

Improving Food Security

At the height of lockdowns last spring, one in seven Canadians experienced food insecurity. Food Banks Canada reported a significant increase in use of food banks, especially among first-time users. The federal government responded quickly, investing nearly $250 million to support local hunger relief initiatives.

Although things have improved, food bank lineups are still long, community food organizations are working long hours, and more than a third of those who rely on food banks are children. In Canada, no one should need to go hungry. To provide continued support to emergency hunger relief organizations:

- Budget 2021 proposes to provide $140 million in 2021-22 to top up the Emergency Food Security Fund and Local Food Infrastructure Fund, which would prevent hunger, strengthen food security in our communities, and provide nutritious food to more Canadians.

6.4 Jobs and Growth Through Infrastructure Investments

Public transit, bridges, roads, broadband networks, electricity grids, recreational centres, bike paths, and more are central to the daily life of every Canadian. Infrastructure is what keeps people moving and what keeps our economy growing.

The government has accomplished a great deal in building and renewing Canada's major infrastructure since 2016. But more needs to be done to build up our communities and ensure our economy has the 21st century infrastructure we need to be competitive.

Budget 2021 lays out the government's plan to revitalize Canada's infrastructure, to invest in community priorities, and to build projects that contribute to a clean environment and create good middle class jobs.

Permanent Public Transit Fund

Reliable and accessible public transit gives people faster, cheaper, and cleaner ways of getting around. Investing in it today will create good middle class jobs, reduce air pollution, help local economies grow, and improve Canadians' quality of life.

On February 10, 2021, the government announced $14.9 billion over eight years, starting in 2021-22, for public transit projects across Canada. This included new permanent funding of $3 billion per year for communities across Canada, beginning in 2026-27.

This funding will support new subway lines, light-rail transit and streetcars, electric buses, active transportation infrastructure, and improved rural transit, which will create affordable commuting options in communities and reduce Canada's emissions. It will also provide local governments with the predictable transit funding they need to plan ahead so Canada can keep building more sustainable and livable communities.

Public transit drives productivity, reducing congestion that frees up time for commuters and improves the flow of goods and services through our communities.

Figure 6.2
Public Transit Provides Cross-Cutting Benefits for Communities

[1] Toronto Region Board of Trade

Canada Community-Building Fund

Core infrastructure like roads, bridges, community centres, and water and wastewater plants are the backbone of communities. There is a risk that projects could face delays or even cancellations as local governments across Canada confront the realities of revenue declines due to COVID-19.

To help communities keep infrastructure projects on track, the government tabled legislation on March 25, 2021, that proposes a one-time investment of $2.2 billion to address infrastructure priorities in municipalities and First Nations communities. This funding would be delivered through the federal Gas Tax Fund and would double the federal government's regular funding for municipalities and First Nations communities in 2020-21. The legislation also proposes to rename the Gas Tax Fund as the Canada Community-Building Fund.

This support would create good local jobs, support municipalities, and build the infrastructure our communities need to thrive and recover.

National Infrastructure Assessment

Twenty-first century energy systems, public buildings, broadband networks, roadways, public transit, and natural spaces all contribute to our long-term economic productivity and prosperity. But smart, resilient public infrastructure projects also require careful planning. To support Canada's long-term infrastructure planning:

- Budget 2021 proposes to provide $22.6 million over four years, starting in 2021-22, to Infrastructure Canada to conduct Canada's first ever National Infrastructure Assessment. The assessment would help identify needs and priorities for Canada's built environment.

This measure would improve infrastructure planning and help all orders of government make informed decisions about infrastructure projects that ensure we have stronger, cleaner, more resilient communities.

Next Step Towards High Frequency Rail in the Toronto-Quebec City Corridor

High frequency rail has the potential to transform passenger rail service in the Toronto-Quebec City corridor, offering faster, more reliable service, and helping to encourage the shift to rail from more polluting modes of transportation.

In 2019, the Government of Canada established a Joint Project Office to explore VIA Rail Canada's high frequency rail project. This effort is critical to making this project a reality for Canadians.

- To continue this work, Budget 2021 proposes to provide $4.4 million in 2021-22 to Transport Canada and VIA Rail Canada to support their work with the Joint Project Office in order to advance due diligence and to de-risk the project.
- In addition, Budget 2021 proposes to provide $491.2 million over six years, starting in 2021-22, to VIA Rail Canada for infrastructure investments that would support the overall success of the high frequency rail project. These investments will help reduce bottlenecks, improve fluidity and connectivity, and allow VIA to take an important step towards high frequency rail in the corridor.

Assisting Homeowners Affected by Pyrrhotite

Some homes in certain regions of Quebec have had serious and costly structural problems as a result of the presence of the mineral pyrrhotite in their foundations. In response, the Government of Quebec has provided significant financial support to affected homeowners to replace foundations and undertake other necessary repairs.

To help more homeowners dealing with the consequences of pyrrhotite, the Government of Canada provided $30 million over three years in Budget 2016. Quebec recently announced an additional $25.7 million in its 2021 budget. The Government of Canada recognizes that an additional federal contribution might be needed. The Government of Canada will engage with Quebec to determine the appropriate amount. Details will be provided in the Fall Economic Statement.

Bonaventure Expressway

For nearly 20 years, the City of Montréal has envisioned converting the Bonaventure Expressway into an urban boulevard and restoring public access to the St. Lawrence River. A portion of the expressway is owned by the city and the other by Jacques Cartier and Champlain Bridges Incorporated, a federal Crown corporation. Montréal has already upgraded its portion of the Bonaventure Expressway to increase local green space for pedestrians and cyclists.

- Through Budget 2021, the government is announcing its intention to work with the City of Montréal to redevelop the Bonaventure Expressway, including exploring the merits of divesting the federal portion of the Bonaventure Expressway.

Local ownership could provide more flexibility for the city to complete the redevelopment and revitalization of the area.

Canada's National Capital Region

The National Capital Region (NCR) is home to some of the most significant cultural and heritage assets in Canada. To ensure that federal assets and related programs in the NCR continue to be safe and accessible for all Canadians:

- Budget 2021 proposes to provide $35 million over five years, starting in 2021-22, to the National Capital Commission to support the acquisition and upkeep of federal assets, green infrastructure, and spaces in the National Capital Region.

Interprovincial bridge crossings serve as important connections in the nation's capital. Building on the work of the long-term integrated interprovincial crossing plan led by the National Capital Commission, a dedicated project office responsible for addressing the need for an additional NCR crossing will be established at Public Services and Procurement Canada, jointly with the National Capital Commission.

Further recognizing the importance of interprovincial transit, and building on the National Capital Commission's recent feasibility study:

- Budget 2021 proposes to create an interprovincial transit project office within the National Capital Commission. The project office will work to study and plan for potential interprovincial tramway connections between Ottawa and Gatineau, in addition to consulting and collaborating with municipal, provincial, and transportation partners.

6.5 Local and Regional Development

To support recovery and long-term growth, the government is committed to supporting economic development in communities of every size, helping small and medium-sized businesses access financing, and investing in the local infrastructure that helps communities grow.

Supporting Jobs and Growth in All Communities

As Canada builds back better, no community will be left behind. From the outset of the pandemic, regional development agencies have been on the ground across Canada, helping businesses weather the effects of the pandemic. Through the $2 billion Regional Relief and Recovery Fund, they have been providing liquidity to businesses, helping bridge them to the recovery, and preserving more than 125,000 jobs. To ensure businesses in every corner of Canada have the support they need to get through the pandemic and that they are brought along in our economic recovery:

- Budget 2021 proposes to provide $700 million over three years, starting in 2021-22, for the regional development agencies to support business financing. This would position local economies for long-term growth by transitioning to a green economy, fostering an inclusive recovery, enhancing competitiveness, and creating jobs in every corner of the country.
- Furthermore, the federal government will work to make FedNor a standalone regional development agency and strengthen the economic development of Northern Ontario.

On the Ground: Partnering on Regional Priorities—East Montreal

East Montreal has a long history of industrial activity, and work is underway to revitalize the area for the economy of tomorrow. The area has the potential to be an anchor for innovative research and new and growing businesses.

The government remains supportive of new approaches to foster innovation, help businesses grow, and create new jobs, and will explore how it can potentially partner to best support development opportunities for Canadians in all regions, including in East Montreal.

Creating a New Regional Development Agency for British Columbia

In recognition of the unique economic realities in British Columbia and across Western Canada, the government committed, in the 2020 *Fall Economic Statement*, to create a new regional economic development agency for British Columbia with new dedicated funding. This will help businesses and communities in British Columbia continue to grow and create good jobs across the province. It will also ensure Alberta, Saskatchewan, and Manitoba have a dedicated regional development agency that keeps the same level of funding to serve their distinct regional needs, with resources to dedicate to local populations and businesses.

To increase the impact of regional development agencies in Western Canada:

- Budget 2021 proposes to create a new agency for British Columbia and to provide $553.1 million over five years, starting in 2021-22, and $110.6 million ongoing, to support the new agency and ensure businesses in B.C. can grow and create good jobs for British Columbians. Existing core program funding from Western Economic Diversification will remain to support the Prairies, making additional support available for businesses in Alberta, Saskatchewan, and Manitoba.

Canada Community Revitalization Fund

Main streets, farmers' markets, and other gathering places underpin local economies. In many communities, the most vibrant spaces in our communities have laid dormant as Canadians took precautions to stay safe. Recognizing that economic recovery is tightly linked to the vitality of our local communities:

- Budget 2021 proposes to provide $500 million over two years, starting in 2021-22, to the regional development agencies for community infrastructure. These projects will stimulate local economies, create jobs, and improve the quality of life for Canadians from coast to coast to coast.

Investing in Small Craft Harbours

From coast to coast to coast, Fisheries and Oceans Canada owns, operates, and maintains a national system of harbours to provide commercial fish harvesters and other small craft harbour users with safe and accessible facilities. Ninety per cent of Canadian seafood goes through small craft harbours and Canada’s fish harvesters depend on these facilities to support their livelihoods.

Many harbours are in need of repair or replacement, and this work can support good middle class jobs in rural and coastal communities.

- Budget 2021 proposes to provide $300 million, on a cash basis, over the next two years, to Fisheries and Oceans Canada to repair, renew, and replace small craft harbours. This would support Canadians in the fishing, aquaculture, tourism, environmental, recreational, marine engineering, and construction industries, and strengthen the resilience of rural and coastal communities.

6.6 Rural and Northern Communities

Canada's vibrant rural and northern communities face unique challenges to their economic growth and resilience. To support these rural communities, Budget 2021 proposes to expand support for farmers and agricultural producers. Additional support is proposed for the North, which faces unique challenges related to food security, climate change, and access to post-secondary education. It also proposes making investments to continue to increase broadband connectivity, as detailed in Chapter 4. These efforts would strengthen economic foundations and support opportunities for Canadians in rural and northern communities from coast to coast to coast.

Extending the Northern Residents Deduction

The remote nature of many northern communities makes travel, even essential travel for school or medical care, unaffordable for many. The Northern Residents Deduction only provides tax relief to those who already receive travel benefits through work. To reduce travel costs for northerners:

- Budget 2021 proposes to expand access to the travel component of the Northern Residents Deduction.
    - Northerners without employer-provided travel benefits would be allowed to claim up to $1,200 in eligible travel expenses. This measure would take effect starting with the 2021 tax year.
    - The Minister of Northern Affairs will work with the Minister of Innovation, Science and Industry, who is the Minister responsible for the Competition Bureau, to ensure that these savings are for the benefit of citizens in the North rather than transportation providers.

It is estimated that this measure will reduce federal revenues by $125 million over five years starting in 2021-22.

Supporting Post-secondary Education in the North

People in Canada's North face longstanding inequities in education, which puts northern residents at a disadvantage, especially Indigenous peoples. Closing gaps in education improves health and well-being, and spurs economic growth and innovation. Building on investments in Budget 2019 for Yukon College, and to further increase access to quality post-secondary education in Canada's North:

- Budget 2021 proposes to provide $8 million over two years, starting in 2021-22, to the Government of the Northwest Territories to support the transformation of Aurora College to a polytechnic university. This would help create new opportunities in the Northwest Territories and prepare northerners for good jobs.

Ensuring Food Security in the North

In Canada's North, food prices can be significantly higher than what the rest of the country pays. Additional factors such as isolation and socioeconomic challenges make northerners particularly vulnerable to food insecurity—vulnerabilities that have been exacerbated by the COVID-19 pandemic.

- Budget 2021 proposes to provide $163.4 million over three years, starting in 2021-22, to expand the Nutrition North Canada program and enable the Minister of Northern Affairs to work directly with Indigenous partners, including in Inuit Nunangat, to address food insecurity.

Support for Jobs in the Canadian Wine Sector

The growth of the Canadian wine sector over the last 15 years has been a success story of Canada's agri-food sector. It has also provided growth opportunities for grape growers and tourism businesses.

- Budget 2021 proposes to provide $101 million over two years, starting in 2022-23, to Agriculture and Agri-Food Canada, to implement a program for the wine sector that will support wineries in adapting to ongoing and emerging challenges, in line with Canada's trade obligations. The government will continue to be there for Canada's domestic wine industry and the jobs it supports.

Supporting Food Processors Following Ratification of New Trade Agreements

Canada now has trade agreements with two-thirds of the world's economy. And Canada is the only G7 country to have trade agreements with every other G7 country. This means that Canadian businesses are well-positioned to take full advantage of the global recovery.

Since 2016, $2.7 billion has been made available to compensate eligible dairy, poultry, and egg farmers as a result of CETA and CPTPP. A further $100 million has been provided for dairy processors to adapt to CETA. To date, all import rights created in recent trade agreements have been provisionally allocated to the industry free of charge.

- To help processors of all supply-managed agricultural products adapt to CETA and CPTPP, Budget 2021 proposes a further $292.5 million over seven years, starting in 2021-22, for a Processor Investment Fund to support private investment in processing plants.

These investments are in addition to the accelerated compensation announced in the *Fall Economic Statement* for producers of supply-managed products. The Government of Canada is committed to full and fair compensation with respect to the new NAFTA and it will work with representatives of the supply-managed sectors in determining that compensation.

6.7 Strengthening Canada's Immigration System

Diversity is our strength, including as a source of our economic strength. Net immigration contributed to half of Canada's average GDP growth from 2016 to 2019, and nearly three quarters of its growth in 2019.

As our workforce ages, immigration ensures the Canadian economy continues to grow, that we attract more top talent and investment capital, and that we continue to create good jobs. Welcoming immigrants is an important part of Canada's recovery.

A well-functioning immigration plan also enriches our communities, reunites families, and provides protection to asylum seekers and refugees.

Budget 2021 puts forward proposals that would ensure Canada stays competitive with its international partners and is prepared to take advantage of the resumption and growth in global travel, post-pandemic. The federal government also recognizes that Quebec shares responsibility for immigration and that certain initiatives will not apply to applicants seeking to reside in Quebec.

Delivering a Modern Immigration Platform

The digital infrastructure that supports Canada's immigration system must be responsive and sustainable to ensure public confidence and support growing visitor, immigration, and refugee levels. A secure, stable, and flexible enterprise-wide digital platform that protects people's information will improve application processing and help Canada remain a destination of choice.

- Budget 2021 proposes to invest $428.9 million over five years, with $398.5 million in remaining amortization, starting in 2021-22, to develop and deliver an enterprise-wide digital platform that would gradually replace the legacy Global Case Management System. This will enable improved application processing and support for applicants, beginning in 2023.

Enhancing the Temporary Foreign Worker Program

For over 50 years, temporary foreign workers have been coming to Canada to help meet the needs of businesses. Recently, the pandemic has highlighted the critical role that these workers—the vast majority of whom are racialized and precariously employed—play in Canada's economy, particularly at the farms that feed Canada and the world.

To build on recent actions taken in 2020 to support temporary foreign workers affected by COVID-19, the Government of Canada will continue to protect our most vulnerable and isolated workers, ensuring their health, safety, and quality of life are protected while working in Canada. To this end, Budget 2021 proposes to provide:

- $49.5 million over three years, starting in 2021-22, to Employment and Social Development Canada, to support community-based organizations in the provision of migrant worker-centric programs and services, such as on-arrival orientation services and assistance in emergency and at-risk situations, through the new Migrant Worker Support Program.
- $54.9 million over three years, starting in 2021-22, to Employment and Social Development Canada and Immigration, Refugees and Citizenship Canada, to increase inspections of employers and ensure temporary foreign workers have appropriate working conditions and wages.
- $6.3 million over three years, starting in 2021-22, to Immigration, Refugees and Citizenship Canada, to support faster processing and improved service delivery of open work permits for vulnerable workers, which helps migrant workers in situations of abuse find a new job. The government has zero tolerance for any abuse of workers.

Supporting Racialized Newcomer Women

Many newcomer women face multiple barriers to employment, including language, lack of Canadian experience, and in some cases gender- and race-based discrimination. In Budget 2018, the Government of Canada launched a three-year pilot to support employment-related services for racialized newcomer women, such as networking opportunities, employment counselling, and paid work placements.

- Budget 2021 proposes to provide $15 million over two years, starting in 2021-22, to Immigration, Refugees and Citizenship Canada to extend the Racialized Newcomer Women Pilot initiative, which will continue to improve their employment outcomes and career advancement.

Accelerated Pathways to Permanent Residence

Canada's immigration system is critical to supporting the economic recovery. That is why the Government of Canada recently announced the introduction of time-limited pathways to permanent residence for foreign nationals already in Canada. This includes recent international graduates and workers in essential occupations, such as health care or other critical sectors. These pathways would not only help retain the talent of those already in Canada, but would also recognize the significant contribution to Canada—and personal sacrifice—these workers have made during the pandemic. In Quebec, which shares responsibility for immigration, this initiative will not apply.

Streamlining Express Entry

Canada's Express Entry system has been in place since 2015. It has a track record of bringing in highly skilled immigrants who succeed in Canada's economy and society. These newcomers fill needs in our economy that are critical for our growth and create shared prosperity for all. Streamlining Canada's Express Entry system will allow the government to ensure our immigration system responds to Canada's growing economic and labour force needs and help Canada reach its 2021-2023 Immigration Levels Plan.

- The Government of Canada intends to propose amendments to the *Immigration and Refugee Protection Act* to provide the Minister of Immigration, Refugees and Citizenship Canada with authority to use Ministerial Instructions to help select those candidates who best meet Canada's labour market needs from among the growing pool of candidates who wish to become permanent residents through the Express Entry System.

[1] Announced in February 2021.

[2] The Social Finance Fund will continue to operate on a repayable basis, but the funding instrument will be conditionally (rather than unconditionally) repayable contributions. Under accounting rules, conditionally repayable contributions are recognized as they are disbursed, such that the full cash cost is recognized upfront. For the Social Finance Fund, this represents an incremental impact of $559.6 million.

[3] Announced in March 2021.

Part III

A Resilient and Inclusive Recovery

Chapter 7
A More Equal Canada

COVID-19 highlighted and exacerbated the inequities within our society.

Systemic racism and discrimination are a painful reality for too many people, especially for marginalized groups, including Indigenous, Black, and racialized people, those living with disabilities, and members of the LGBTQ2 communities.

Those who live with disabilities still face many barriers to health care, jobs, and services. And many Canadians require additional support for challenging health issues beyond COVID-19—from substance use, to fair access to sexual and reproductive health, to navigating the complexities of end-of-life care.

When we recover from the COVID-19 pandemic, we must continue bridging the gaps that hold Canada back from reaching its potential. We are at our best when we come together to help one another, as we saw Canadians do countless times during the pandemic.

Budget 2021 outlines the government's plan to build a healthier, more inclusive, and more equal Canada.

7.1 Fighting Systemic Racism and Empowering Communities

Systemic racism can have devastating consequences for the well-being of Canadians. Violence, harassment, discrimination, exclusion from opportunities, and myriad expressions of unconscious bias deny Canadians their freedoms and fair treatment. A more equitable and inclusive society demands all Canadians come together to address racism in all its forms and make permanent and transformative changes.

In the 2020 *Fall Economic Statement*, the federal government announced a series of policies and programs to fight against systemic racism and empower racialized communities. These were early steps.

Budget 2021 takes the next steps towards long-term, foundational change. Canada can and will do more to support racialized communities, improve understanding of racial inequities and barriers, build a more diverse and inclusive federal public service, and work with partners to build a more equal and just future.

Strengthening the Canadian Race Relations Foundation and Helping Communities Respond to an Increase in Racism

The COVID-19 pandemic has had an unequal impact on Canadians, with the increase in reports of harassment and attacks against Asian Canadians being an especially disturbing trend.

The work to address systemic racism is ongoing and must be done alongside engaged and knowledgeable partners. Their invaluable on-the-ground knowledge, experiences, learned best practices, and networks are crucial in the work to create foundational change. And their efforts can effectively bring Canadians together in the common purpose of building a fairer, safer, and more equal Canada where all are free from discrimination.

The Canadian Race Relations Foundation is a Crown corporation created in 1996, as part of the Japanese Canadian Redress Agreement. The foundation has a quarter century of history working to eliminate racism, reaffirm the principles of justice and equality for all in Canada, and uphold the principles of the *Canadian Charter of Rights and Freedoms*. Over the past year, the foundation has focused on supporting specific racialized communities impacted by dramatically rising cases of racism. In Vancouver, for example, there has been a 700 per cent increase in reported cases of anti-Asian racism since the pandemic began.

- Budget 2021 proposes to provide $11 million over two years, starting in 2021-22, to expand the impact of the Canadian Race Relations Foundation. This investment would allow the Canadian Race Relations Foundation to scale up efforts to empower racialized Canadians and help community groups combat racism in all its forms. This investment will also enable the foundation to facilitate initiatives like the establishment of a national coalition to support Asian Canadian communities, and create a fund to support all racialized communities directly impacted by increasing acts of racism during the pandemic.

All Canadians should feel safe and be free of discrimination. Sadly, certain people are at risk of racially motivated violence, threatening their personal safety and the security of their communities.

- Budget 2021 proposes to provide $2 million in 2021-22 to Public Safety Canada to enhance its Communities at Risk: Security Infrastructure Program. This program helps protect communities at risk of hate-motivated crimes, by providing not-for-profit organizations such as places of worship, schools, and community cultural centres with funding to enhance their security infrastructure.

Supporting Black Canadian Communities

Events over the last year have shone a light on the complex and unique lived realities of Black Canadians. Data show that Canada's Black population remains one of the most disadvantaged, with a higher prevalence of low-income households, lower employment rates compared to the Canadian average, as well as a much higher likelihood of discriminatory treatment at work.

COVID-19 has only exacerbated these inequities linked to anti-Black racism, and many Black Canadian communities, and the organizations that support them, are increasingly vulnerable to economic hardship.

To continue to support the work of community organizations that empower, advocate for, and lift up Black Canadians:

- Budget 2021 proposes to provide $200 million in 2021-22 to Employment and Social Development Canada to establish a new Black-led Philanthropic Endowment Fund. This fund would be led by Black Canadians and would create a sustainable source of funding, including for Black youth and social purpose organizations, and help combat anti-Black racism and improve social and economic outcomes in Black communities.
- Budget 2021 proposes to provide $100 million in 2021-22 to the Supporting Black Canadian Communities Initiative at Employment and Social Development Canada.

The Supporting Black Canadian Communities Initiative

The Supporting Black Canadian Communities Initiative is administered by Employment and Social Development Canada. The program supports capacity-building of Black-led non-profit organizations so they can better serve Black Canadian communities.

Organizations that recently received funding include:

- Black Wellness Cooperative of Nova Scotia (Bedford, NS): This organization provides expertise, knowledge, and training to promote health, wellness, and fitness among the African Nova Scotian and Mi'kmaq communities.
- Association Francophone de Brooks (Brooks, AB): 90 per cent of the francophone community of Brooks is of African origin. This organization offers activities for young people, community celebrations, and social activities for families in the francophone community of Brooks.
- Youth Stars Foundation (Montréal, QC): This organization supports vulnerable youth populations, including Black youth, by offering a variety of programs and workshops that use the arts, sports, dance, and music to foster life skills, promote self-esteem, and strengthen interpersonal skills.

Mobilizing the reach and expertise of community-based organizations is an important tool for empowering Black communities and confronting systemic economic barriers. It also ensures that federal investments best serve the needs of their communities. New research published by the Network for the Advancement of Black Communities and Carleton University found that Black-led and Black-serving charities receive significantly less grant funding than other charities in Canada.

Better Data for Better Outcomes

For every Canadian to reach their full potential, we need to properly understand the circumstances in which people live and the barriers they face. We cannot improve what we cannot measure.

At present, Canada lacks the detailed statistical data that governments, public institutions, academics, and advocates need in order to take fully informed policy actions and effectively address racial and social inequities. From a detailed understanding of demographic trends to economic and employment data, Statistics Canada has a vital role to play in providing the evidence-based foundation upon which good, effective policies can be built—policies that bring the impacts on marginalized groups into the heart of decision-making.

Journalists and researchers have long worked to tell the stories of where and why disparities in our society exist—whether among racialized groups or the power gap that exists between men and women that leads women's careers to stall. Better disaggregated data will mean that investigative efforts or research projects like this will have more and better data to analyze.

- Budget 2021 proposes to provide $172 million over five years, starting in 2021-22, with $36.3 million ongoing, to Statistics Canada to implement a Disaggregated Data Action Plan that will fill data and knowledge gaps. This funding will support more representative data collection, enhance statistics on diverse populations, and support the government's, and society's, efforts to address systemic racism, gender gaps—including the power gaps between men and women—and bring fairness and inclusion considerations into decision making.

Building on other investments in Budget 2021, this provides a combined $250 million over five years to Statistics Canada, ensuring Canada has the data it needs to make evidence-based decisions across priorities including disaggregated data, health, quality of life, the environment, justice, and business and the economy.

To modernize Canada's justice system, support evidence-based policies, and ensure accountability within the criminal justice system, the government needs to update and fill gaps in its collection and use of data.

- Budget 2021 proposes to provide $6.7 million over five years, starting in 2021-22, and $1.4 million ongoing, to Justice Canada and Statistics Canada to improve the collection and use of disaggregated data. This is part of ongoing efforts to address the overrepresentation of Indigenous peoples and racialized groups in the justice system.

Comprehensive academic research enhances our understanding of the causes of discrimination, the impact of oppression on Canadians and our communities, and strategies to support greater justice, equity, and accountability.

- Budget 2021 proposes to provide $12 million over three years, starting in 2021-22, to the Social Sciences and Humanities Research Council to fund academic research into systemic barriers facing diverse groups. This research will help inform actions to address social disparities related to race, gender, and other forms of diversity.

Making the Public Service More Diverse

Canadians should have confidence that their public sector workforce is representative of the communities it serves. In the 2020 Speech from the Throne, the government committed to implementing an action plan to increase diversity in hiring and appointments within the public service.

- Budget 2021 proposes amendments to the *Public Service Employment Act* to affirm the importance of a diverse and inclusive workforce and avoid biases and barriers in hiring.

7.2 An Economic Recovery that Includes Everyone

As Canada recovers from the COVID-19 pandemic, the Government of Canada is committed to building a more inclusive society that leaves no one behind. This includes providing programs and services that better respond to the unique needs of vulnerable people and improve quality of life for all Canadians.

Increasing Old Age Security for Canadians 75 and Over

During the pandemic, many seniors have faced economic challenges as they took on extra costs to stay safe. Additionally, many seniors are living longer and relying on monthly benefits to afford retirement. After a lifetime of hard work, they deserve a secure and dignified retirement. That is why the government is committed to increasing Old Age Security (OAS) benefits for seniors age 75 and older.

The government plans to implement this commitment in two steps.

- Budget 2021 proposes to meet the immediate needs of this group of seniors by providing a one-time payment of $500 in August 2021 to OAS pensioners who will be 75 or over as of June 2022.
- Budget 2021 then proposes to introduce legislation to increase regular OAS payments for pensioners 75 and over by 10 per cent on an ongoing basis as of July 2022. This would increase the benefits for approximately 3.3 million seniors, providing additional benefits of $766 to full pensioners in the first year, and indexed to inflation going forward. This would give seniors more financial security later in life, particularly at the time when they face increased care expenses and greater risk of running out of savings.

In total, these two measures represent $12 billion over five years in additional financial support, beginning in 2021-22, and at least $3 billion per year ongoing, to be delivered by Employment and Social Development Canada.

Statutory funding authority would be sought to make the one-time payment. Changes to the *Old Age Security Act* would be made to implement the benefit increase as of July 2022, and to exempt the one-time payment from the definition of income for the Guaranteed Income Supplement.

After working hard throughout his career as a barber, **Matthieu** retired about a decade ago and will turn 75 in June 2022. He is in good health and looking forward to many more healthy years in his retirement.

But because of that, Matthieu is also starting to worry that his retirement savings could run out at some point, which he has been drawing on to complement his monthly OAS and Canada Pension Plan payments. With the proposed measure, Matthieu will have an extra $500 to spend this year. The permanent increase to his OAS benefits as of July 2022 will then give him an estimated $766 more in benefits over the following twelve months. This amount will rise over the years, as Old Age Security benefits are increased in line with the Consumer Price Index every quarter. Matthieu will have a greater sense of financial security in his later years as the measure would help ensure that he has support and can reduce reliance on his savings.

Towards a New Disability Benefit

Since 2015, the government has taken steps towards building an inclusive and resilient economy that supports people with disabilities. In addition to enacting groundbreaking legislation to create a barrier-free Canada, the government has also taken concrete steps to help people with disabilities receive enhanced programming and access to benefits, savings plans, and education funding.

The pandemic has exposed many of the long-standing challenges persons with disabilities face, including an increased risk of poverty. The Government of Canada has a number of programs and services in place that provide support to Canadians with disabilities but these are often complex and can be difficult to navigate for users. To ensure all persons with disabilities have the support they need to overcome persistent barriers to full economic and social participation, the government is committed to bringing forward a new disability benefit.

- Budget 2021 proposes to provide $11.9 million over three years, starting in 2021-22, to Employment and Social Development Canada to undertake consultations to reform the eligibility process for federal disability programs and benefits. This will help maximize the reach of these programs and improve the lives of Canadians living with disabilities. This work would feed directly into the design of a new disability benefit.

In preparation for legislation, the government will undertake extensive consultations with stakeholders on the design of the new benefit and engage with provinces and territories, which play a central role in providing support to many Canadians with disabilities. Employment and Social Development Canada will also establish a steering committee to oversee the development of this work, alongside the Canada Revenue Agency, the Department of Finance Canada and Veterans Affairs Canada.

Improving Access to the Disability Tax Credit

In 2017, the Government of Canada reinstated the Canada Revenue Agency's Disability Advisory Committee to ensure tax measures for persons with disabilities are administered in a fair, transparent, and accessible way. Since the release of the committee's first annual report in 2019, the government has introduced many important changes, including improvements to its communications and outreach activities for the Disability Tax Credit and changes to Registered Disability Savings Plans to better protect beneficiaries. As the government considers new recommendations from the committee, released in a second report on April 9, 2021, the government is proposing to take further steps to act on the guidance of the committee by improving the eligibility criteria for mental functions and life-sustaining therapy. To help more families and people living with disabilities access the Disability Tax Credit, and other related support measures like the Registered Disability Savings Plan and the Child Disability Benefit:

- Budget 2021 proposes to update the list of mental functions of everyday life that is used for assessment for the Disability Tax Credit. Using terms that are more clinically relevant would make it easier to be assessed, reduce delays, and improve access to benefits.

- Budget 2021 also proposes to recognize more activities in determining time spent on life-sustaining therapy and to reduce the minimum required frequency of therapy to qualify for the Disability Tax Credit. To ensure these changes enable applicants to have a fair and proper assessment of their eligibility for the Disability Tax Credit, the government will undertake a review of these changes in 2023.

It is estimated that, as a result of these measures, an additional 45,000 people will qualify for the Disability Tax Credit, and related benefit programs linked to its eligibility, each year. This represents $376 million in additional support over five years, starting in 2021-22.

Making Our Communities and Workplaces More Accessible

Every day, hundreds of thousands of Canadians with disabilities face accessibility challenges. Organizations want to become more accessible but costs can be prohibitive, especially for smaller organizations. The Enabling Accessibility Fund provides funding for renovation, construction, and retrofit projects—from building ramps, to support for the hearing impaired, to automatic door openers—that make communities and workplaces more accessible for persons with disabilities. To reduce barriers to employment, activities, and programs for persons with disabilities:

- Budget 2021 proposes to provide additional funding of $100 million over two years, starting in 2021-22, to Employment and Social Development Canada to triple funding for the Enabling Accessibility Fund and support small and mid-sized projects with not-for-profit organizations, women's shelters, child care centres, small municipalities, Indigenous organizations, territorial governments, small businesses, and businesses of all sizes. This would help offset the costs of renovations, retrofits, and accessible technologies in workplaces.

Supporting Greater Equality for LGBTQ2 Communities

Although we have made much progress as a society, LGBTQ2 people in Canada continue to face discrimination, harassment, and prejudice. Canada is committed to protecting LGBTQ2 rights and promoting social, economic, and political equality with respect to sex, sexual orientation, and gender identity or expression. To ensure that Canada's recovery fosters a fairer and more equal society for LGBTQ2 people, where they can participate as full members of Canadian society:

- Budget 2021 proposes to provide $15 million over three years, starting in 2021-22, to Women and Gender Equality Canada for a new LGBTQ2 Projects Fund dedicated to supporting community-informed initiatives to overcome key issues facing LGBTQ2 communities, such as accessing mental health services and employment support.

- Budget 2021 also proposes to provide $7.1 million over three years, starting in 2021-22, to Canadian Heritage to continue to support the work of the LGBTQ2 Secretariat—which coordinates work across government—and enable the continued development of an LGBTQ2 Action Plan.

Supporting Our Veterans

Veterans are three to four times as likely to suffer from depressive or anxiety disorders, and over 15 times more likely to experience post-traumatic stress disorder (PTSD), than the general population. Veterans are entitled to financial support for mental health care through the Treatment Benefit Program but they can wait up to two years to receive mental health care while waiting for their disability benefit application to be confirmed. To ensure veterans receive timely access to high-quality mental health care:

- Budget 2021 proposes to provide $140 million over five years starting in 2021-22, and $6 million ongoing, to Veterans Affairs Canada for a program that would cover the mental health care costs of veterans with PTSD, depressive, or anxiety disorders while their disability benefit application is being processed.

Many veterans have faced unique challenges during the pandemic. To improve the quality of life for veterans and their families during this challenging period:

- Budget 2021 proposes to provide an additional $15 million over three years, starting in 2021-22, to Veterans Affairs Canada to expand and enhance the Veteran and Family Well-Being Fund for projects that will support veterans during the post COVID-19 recovery, including addressing homelessness, employment, retraining, and health challenges.

Recognizing the Contributions of Atomic Workers

In the mid-twentieth century, Chalk River Laboratories was one of the leading global sites for cutting edge atomic science. But, in 1952 and 1958, there were accidents that required Department of National Defence and Atomic Energy of Canada Limited personnel to contain and clean contaminated sites. In 2008, the government recognized former Department of National Defence personnel who participated in the clean-ups through the establishment of the Atomic Veterans Recognition Program. To provide similar recognition to those Atomic Energy of Canada Limited employees who worked to clean-up these dangerous incidents and protect Canadians:

- Budget 2021 proposes to provide $22.3 million over two years, starting in 2021-22, to Natural Resources Canada to establish an Atomic Workers Recognition Program.

7.3 Supporting the Health of Canadians

The government recognizes that, even in a pandemic, Canadians face an array of other complex health concerns. For over half a century, our strong and reliable public health care system has been an anchor of Canada's social and economic security. Investments must be made to ensure health care responds and evolves alongside the people it treats.

Addressing the Opioid Crisis and Problematic Substance Use

Since before the pandemic began, Canada has been facing a worsening opioid epidemic that has devastated lives and communities across Canada, especially in Ontario and Western Canada, with severe impacts in British Columbia and Alberta. The COVID-19 pandemic has compounded the ongoing opioid overdose crisis in Canada. Isolation, stress, toxic supply, and reduced access to services have contributed to the epidemic. Canada suffered a 74 per cent increase in opioid-related deaths over the course of the first six months of the pandemic. The government is taking further action to help people dealing with problematic substance use and tackle this ongoing crisis.

- Budget 2021 proposes to provide an additional $116 million over two years, starting in 2021-22, building on $66 million invested in the 2020 *Fall Economic Statement*, for the Substance Use and Addictions Program to support a range of innovative approaches to harm reduction, treatment, and prevention at the community level.

The government continues to work closely with provinces and territories to ensure our collective response is comprehensive, collaborative, compassionate, and evidence-based. In response to the crisis, the government has made a variety of investments, including a $150 million Emergency Treatment Fund to provinces and territories for 2018-2021, over $100 million in 2019-20 for targeted measures to expand access to harm reduction services and increase access to safer drug supplies, and a fall investment of $66 million over two years, starting in 2020-21, to support community organizations responding to the crisis.

Moving Forward on National Universal Pharmacare

A healthy economy is only possible when its people are healthy. Canadians have access to some of the best doctors, nurses, hospitals, and treatments in the world, and all through our publicly funded health care systems. But some Canadians have difficulty affording the medications they need.

The case for national universal pharmacare is well-established. The government is committed to work with provinces, territories and stakeholders to build on the foundational elements that are already in progress, like the national strategy on high-cost drugs for rare diseases, toward the goal of a universal national program.

To maintain momentum, the government will proceed with its announced plan to provide ongoing funding of $500 million for the program for high-cost drugs for rare diseases. The government will also directly engage with willing partners on national universal pharmacare, alongside other important health priorities, that can be advanced at the provincial and territorial level.

Supporting Access to Sexual and Reproductive Health Care Information and Services

All Canadians should have access to a full suite of sexual and reproductive health resources and services, no matter where they live. Currently, women, youth, LGBTQ2 people, racialized Canadians, and Indigenous populations face the highest sexual and reproductive health risks and the greatest barriers to accessing support, information, and services. Too often, they do not receive the same quality of care, particularly if they are from marginalized communities. Furthermore, examples like Clinic 554—New Brunswick's only private abortion clinic—show us that lack of funding puts access to sexual and reproductive health care at risk. Everyone deserves equal treatment in our health care system.

The Government is committed to collaboration with provinces and territories to strengthen our health care system, ensuring equitable and appropriate access to a full suite of reproductive and sexual health services, in any upcoming Canada Health Transfer funding discussions.

To improve access to sexual and reproductive health care support, information, and services—including protecting access to abortion care:

- Budget 2021 proposes to provide $45 million over three years, starting in 2021-22, to Health Canada to fund community-based organizations that help make sexual and reproductive health care information and services more accessible for vulnerable populations. These organizations support activities such as producing inclusive training materials for sexual and reproductive health care providers, carrying out public awareness activities, and providing travel and logistical support to individuals who have to go long distances to access abortion care**.**

In addition, there are currently no existing resources that collect comprehensive data on a wide range of sexual and reproductive health indicators in Canada, limiting our ability to target supports. To address this:

- Budget 2021 proposes to provide $7.6 million over five years, starting in 2021-22, for Statistics Canada to develop and implement a national survey on sexual and reproductive health that captures data on race, household income, and sexual orientation–information often not captured in existing surveys. Better information will help ensure governments understand the challenges and improve the support they provide.

Establishing a National Institute for Women's Health Research

Sex- and gender-related disparities continue to persist in Canada's health system. Women are more likely to die of preventable illnesses and bear a higher burden of chronic illnesses. To improve health outcomes and eliminate the gaps in the quality of care women receive, we need to strengthen research.

- Budget 2021 proposes to provide $20 million over five years, starting in 2021-22, to the Canadian Institutes of Health Research to support a new National Institute for Women's Health Research. The new institute will advance a coordinated research program that addresses under-researched and high-priority areas of women's health and ensure new evidence improves women's care and health outcomes. It will also ensure an intersectional approach to research and care to tackle persistent gaps for all women, including for racialized women, Black and Indigenous women, women with disabilities, and members of LGBTQ2 communities.

National Autism Strategy

Children and adults with autism spectrum disorder, as well as their families, encounter significant economic and social challenges throughout their lives. Many also confront disparities when it comes to diagnoses and treatments. To improve the health and well-being of Canadians with autism spectrum disorder and their caregivers:

- Budget 2021 proposes to provide $15.4 million over two years, starting in 2021-22, to the Public Health Agency of Canada to work with partners to support the creation of a national autism strategy.

Strategic Research on Pediatric Cancer

Cancer is a leading cause of disease-related death in Canadian children. Pediatric cancers are faster growing and found in different organs than in adults. More targeted research is needed to help save lives and improve the services these brave children and their families receive.

- Budget 2021 proposes to provide $30 million over two years, starting in 2021-22, to the Canadian Institutes of Health Research to fund pediatric cancer research that can lead to better outcomes and healthier lives for these young patients. The funding will support promising research projects with the greatest potential for fighting pediatric cancers.

Establishing a National Framework for Diabetes

This year marks the 100th anniversary of the discovery of insulin, a Nobel Prize-winning accomplishment by Canadian researchers that has helped to save millions of lives. 3.2 million Canadians live with diabetes, a disease which can lead to a variety of complications, such as heart disease and stroke, blindness, and amputation. Type 2 diabetes makes up 90 per cent of all cases of diabetes in Canada and, like other chronic diseases, is largely preventable. Adults with diabetes are also at greater risk of more severe COVID-19 symptoms, including respiratory distress and pneumonia.

- Budget 2021 proposes to provide $25 million over five years, starting in 2021-22, to Health Canada for additional investments for research on diabetes (including in juvenile diabetes), surveillance, and prevention, and to work towards the development of a national framework for diabetes. This framework will be developed in consultation with provinces and territories, Indigenous groups, and stakeholders, and will help to support improved access to prevention and treatment, and better health outcomes for Canadians.

- Budget 2021 proposes to provide $10 million over five years, starting in 2021-22, to the Public Health Agency of Canada for a new Diabetes Challenge Prize. This initiative will help surface novel approaches to diabetes prevention and promote the development and testing of new interventions to reduce the risks associated with Type 2 diabetes.

Taxation of Vaping Products

Young Canadians' use of vaping products, such as e-cigarettes, is on the rise. One Health Canada survey indicates that, since 2018, use has doubled among Canadian high school students. Vaping with nicotine poses risks, especially to young people: nicotine is highly addictive, can affect memory and concentration, and is known to alter brain development in teens. In addition to raising revenues, vaping taxation could become an effective means to help curtail harmful consumption of these products.

- Budget 2021 announces the government's intention to introduce a new taxation framework for the imposition of excise duties on vaping products in 2022.

The Government of Canada will also work with any provinces and territories that may be interested in a federally coordinated approach to taxing these products.

Taxation of Tobacco

Tobacco use continues to be the leading preventable cause of premature death in Canada. Tobacco taxation is an effective way to reduce tobacco consumption and help reach the government's goal of less than 5 per cent of the population using tobacco by 2035.

- Budget 2021 proposes to increase the tobacco excise duty by $4 per carton of 200 cigarettes, along with corresponding increases to the excise duty rates for other tobacco products. This measure would take effect the day after Budget Day.

It is estimated that this measure will increase federal revenues by $2.1 billion over five years starting in 2021-22.

Support for Canadian Blood Services

Many Canadians rely on plasma to treat life-threatening conditions. During the COVID-19 crisis, global demand, prices, and shortages have increased. To secure a domestic supply of plasma:

- Budget 2021 proposes to provide $20 million over three years, beginning in 2021-22, to Health Canada to construct eight plasma collection sites across the country. These sites would be operated by Canadian Blood Services. The government will continue to work with partners like Canadian Blood Services and Héma-Québec to ensure a secure plasma supply across Canada.

Better Palliative Care

To provide Canadians, including those who live in long-term care and their families, with better palliative and end-of-life care, including culturally sensitive care:

- Budget 2021 proposes to provide $29.8 million over six years, starting in 2021-22, to Health Canada to advance the government's palliative care strategy and lay a better foundation for coordinated action on long-term and supportive care needs, improving access to quality palliative care. Initiatives could include: raising awareness of the importance of palliative care; providing public education on grief; improving palliative care skills and supports for health care providers, families, caregivers, and communities; enhancing data collection and research; and improving access to culturally sensitive palliative and end-of-life care.

Ensuring Appropriate Access and Safeguards for Medical Assistance in Dying

Medical assistance in dying (MAID) is a complex and deeply personal issue. MAID became law in Canada five years ago to provide relief, in certain cases, for those with reasonably foreseeable deaths. Recent amendments to the law, with the passage of Bill C-7 to expand access for those suffering intolerably, underscore the need to be responsive to the evolution of Canada's MAID framework.

- Budget 2021 proposes to provide funding of $13.2 million over five years, beginning in 2021-22, with $2.6 million per year ongoing, to Health Canada to ensure that Canada's medical assistance in dying framework is implemented consistently and with all appropriate safeguards. Funding would support training and the development of guidance materials for practitioners, as well as support research to guide the evolution of medical assistance in dying in Canada.

Chapter 8
Strong Indigenous Communities

No relationship is more important to the federal government than the relationship with Indigenous peoples. The federal government continues to work with Indigenous peoples to build a nation-to-nation, Inuit-Crown, government-to-government relationship—one based on respect, partnership, and recognition of rights.

In Budget 2021, the federal government is furthering its plan to address the unique challenges faced by Indigenous communities during the pandemic. This work is essential to make sure our recovery includes everyone and makes all communities more resilient. Since 2015, real progress has been made righting historic wrongs, but more work needs to be done.

Through this budget, the federal government is proposing a historic, new investment of over $18 billion over the next five years, to improve the quality of life and create new opportunities for people living in Indigenous communities. Working with Indigenous partners, these investments will make significant strides in closing gaps between Indigenous and non-Indigenous peoples, support healthy, safe, and prosperous Indigenous communities, and advance meaningful reconciliation with First Nations, Inuit, and the Métis Nation. These investments will support continued action on infrastructure and clean water. They will also take meaningful action on the new approach that is needed to end the national tragedy of missing and murdered Indigenous women and girls, one which addresses the root causes and the scope of the violence.

Chart 8.1
Investments in Indigenous Priorities (Actual and Projected)
Indigenous Investments: 2012-13 to 2021-22

Sources: Public Accounts of Canada; Department of Finance Canada.

8.1 Healthy and Vibrant Communities

COVID-19 has highlighted the health vulnerabilities Indigenous peoples face and the challenges of delivering front-line health services in many Indigenous communities.

The federal government knows that addressing the gap in health outcomes faced by First Nations, Inuit, and Métis peoples, beyond COVID-19, means taking a broader approach to health and well-being. It means recognizing that health care includes preventive care and mental wellness, that good health is only possible when basic needs are met, and that education is key to a healthy future.

Good health also requires a distinctions-based, Indigenous-led approach. This is what the investments in Budget 2021 set out to accomplish.

Supporting Indigenous Communities in the Fight Against COVID-19

Since the start of the pandemic, Indigenous communities have faced extraordinary health challenges and continue to be vulnerable to the virus and its variants. The federal government has supported Indigenous communities every step of the way through the pandemic, and will continue to have their backs.

Vaccination efforts are well underway in Indigenous communities across the country and the federal government continues to work with provinces and territories to make sure Indigenous peoples in cities can get the vaccine too. The federal government recently introduced legislation that, if passed, would provide a one-time payment of up to $1 billion to provinces and territories to support vaccination rollouts across the country, and could be used to engage Indigenous communities to advance vaccine rollout. Indigenous communities have worked hard to combat the virus but the pandemic is not over and Indigenous communities remain at risk.

- Budget 2021 proposes to provide an additional $1.2 billion in 2021-22 to continue supporting the COVID-19 response in Indigenous communities as follows:
  - $478.1 million on a cash basis to continue to support the ongoing public health response to COVID-19 in Indigenous communities, including support to hire nurses, help at-risk people to isolate, and distribute personal protective equipment.

- An additional $760.8 million for the Indigenous Community Support Fund to help First Nations, Inuit, Métis Nation communities, and urban and off-reserve Indigenous organizations serving Indigenous peoples meet the unique needs of their populations during the COVID-19 pandemic. This will provide funding to: prevent the spread of COVID-19; support elders and vulnerable community members; provide mental health assistance and emergency response services; address food insecurity; and support children.

Together, these measures will help to ensure that Indigenous leadership has the tools and resources they need to continue to keep communities safe, respond to outbreaks, and support vaccination rollout.

To keep communities safe, the Government also proposes to introduce legislation that would ensure that the *First Nations Election Cancellation and Postponement Regulations (Prevention of Diseases)* are deemed to have been validly made since April 7, 2020. The Regulations provide a mechanism for First Nation councils to postpone their elections or to extend the terms of the chiefs and councillors, while avoiding a critical governance gap, to prevent, mitigate or control the spread of diseases on reserve, including COVID-19.

Improving Health Outcomes in Indigenous Communities

For far too long, Indigenous peoples have faced poor health care and their communities have experienced reduced health outcomes.

Since 2015, the government has invested over $5.5 billion to improve health outcomes in Indigenous communities. These investments have increased access to timely and culturally appropriate medical care and mental health services for Indigenous people and supported distinctions-based priorities. This includes dedicated funding for First Nations children through the implementation of Jordan's Principle, responding to high rates of tuberculosis in Inuit communities and supporting the Métis Nation in gathering health data and developing a health strategy to address their unique needs.

Building on that, and to ensure Indigenous peoples can access high-quality health care:

- Budget 2021 proposes to invest $1.4 billion over five years, beginning in 2021-22, and $40.6 million ongoing, to maintain essential health care services for First Nations and Inuit, continue work to transform First Nations health systems, and respond to the health impacts of climate change, including:

- $774.6 million over five years, beginning in 2021-22, to ensure continued high-quality care through the Non-Insured Health Benefits Program, which supports First Nations and Inuit people with medically necessary services not otherwise covered, such as mental health services, medical travel, medications, and more.
- $354 million over five years, beginning in 2021-22, to increase the number of nurses and other medical professionals in remote and isolated First Nations communities.
- $107.1 million over three years, beginning in 2021-22, to continue efforts to transform how health care services are designed and delivered by First Nations communities, building on the government's commitment to improve access to high-quality and culturally relevant health care for Indigenous peoples.
- $125.2 million over four years, beginning in 2022-23, to continue to support First Nations communities' reliable access to clean water and help ensure the safe delivery of health and social services on reserve.
- $22.7 million over five years, beginning in 2021-22, to support First Nations and Inuit as they manage the health impacts of climate change, such as access to country food, impacts of extreme weather events, and mental health impacts of climate change on youth.

These investments are in addition to the government's commitment to co-develop distinctions-based Indigenous health legislation with First Nations, Inuit, and the Métis Nation so that Indigenous communities have greater control over the design and delivery of high-quality and culturally relevant care. The government launched the engagement process to co-develop this legislation on January 28, 2021.

Distinctions-Based Mental Wellness Strategy

The government is committed to supporting Indigenous peoples and communities as they seek to heal from historical trauma and the intergenerational impacts of colonization. The pandemic has exacerbated the mental health challenges many Indigenous peoples face. Three in five Indigenous peoples say their mental health has worsened in the pandemic. Providing better access to trauma-informed, culturally appropriate Indigenous-led services is a critical part of improving mental wellness in First Nations, Inuit, and Métis Nation communities.

- Budget 2021 proposes to provide $597.6 million over three years, starting in 2021-22, for a distinctions-based mental health and wellness strategy with First Nations, Inuit, and the Métis Nation. The strategy will renew funding for the Indian Residential Schools Health Supports Program and Crisis Line, which provide healing supports for survivors of childhood trauma and residential schools. It will also stabilize and expand community-based supports and capacity, increase substance use treatment and prevention, and support workforce development.

Supporting Indigenous Children and Families

The government is committed to supporting the well-being of Indigenous children and families. Work continues with Indigenous leadership to reform child and family services so that all Indigenous children have the opportunity to grow up in their communities, immersed in their cultures, and surrounded by loved ones.

- To support this important work, Budget 2021 proposes to provide $1 billion over five years, starting in 2021-22, with $118.7 million ongoing to increase funding under the First Nations Child and Family Services Program. Proposed funding would:
  - Provide increased support to First Nations communities not served by a delegated First Nation agency for prevention activities to help First Nations children and families stay together, within their communities through the Community Well-being and Jurisdiction Initiative;
  - Continue to implement orders from the Canadian Human Rights Tribunal; and
  - Permanently ensure that First Nations youth who reach the age of majority receive the supports that they need, for up to two additional years, to successfully transition to independence.

The government will also continue to support First Nations, Inuit and Métis communities in developing their own child and family services models that reflect their values and traditions under the *Act Respecting First Nations, Inuit and Métis children, youth and families*.

- Budget 2021 proposes to provide $73.6 million over four years, starting in 2021-22, to support the implementation of the Act.

These investments and the implementation of the Act will help realize the shared goals of prioritizing the best interests of children, increasing the number of communities exercising jurisdiction in relation to child and family services, and decreasing the number of children in care.

Providing High-quality Education

A high-quality education is the foundation of success, which every child growing up in Canada deserves no matter where they live. Not only does good elementary and secondary schooling lead to better jobs, studies have shown that better education can lead to better mental heath and improved personal, family, and community well-being. Since 2015, investments the government has made have improved learning experiences for approximately 107,000 students per year and helped build 186 education-related infrastructure projects benefiting 240 First Nations communities. Investing in children's education is an important part of the government's plan to build long-term economic resilience. In 2019, the federal government implemented a new, co-developed policy and funding approach to better support the needs of First Nations students on reserve.

To invest in the future of First Nations children and continue to support this new approach:

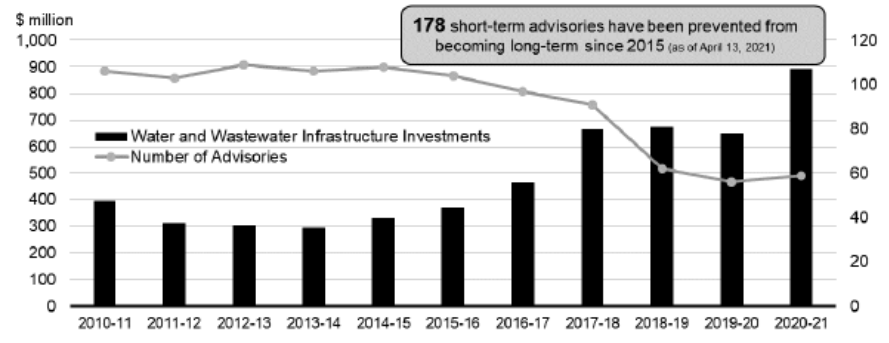
- Budget 2021 proposes to invest $1.2 billion over five years, and $181.8 million ongoing, including:
  - $112 million in 2021-22 to extend COVID-19 support so children on reserve can continue to attend school safely, including PPE for students and staff, laptops to support online learning, and more teachers and other critical staff.
  - $726 million over five years, starting in 2021-22, and $181.8 million ongoing, to enhance funding formulas in critical areas such as student transportation; ensure funding for First Nations schools remains predictable from year to year; and increase First Nations control over First Nations education by concluding more Regional Education Agreements.
  - $350 million over five years, starting in 2021-22, to expand access to adult education by supporting First Nations people on reserve who wish to return to high school in their communities and complete their high school education.

Supporting Indigenous Post-secondary Education During COVID-19

The pandemic continues to affect Indigenous post-secondary students and institutions. To help Indigenous students complete their studies and ensure that Indigenous-led post-secondary institutions can provide online services and continue to implement health and safety measures:

- Budget 2021 proposes to provide $150.6 million over two years, starting in 2021-22, to support Indigenous students through the Post-Secondary Student Support Program and the Inuit and Métis Nation Post-Secondary Education Strategies. Many students are facing financial difficulty during the pandemic, as young people have suffered some of the worst job losses. This support would help offset lost income that many Indigenous students rely on to pay for tuition, books, housing, and other living expenses. The federal government knows that young people need support to get through this crisis so they can complete their education and succeed in their chosen fields.
- Budget 2021 also proposes to provide $26.4 million, in 2021-22, through the Post-Secondary Partnerships Program and the Inuit and Métis Nation Post-Secondary Education Strategies to support Indigenous post-secondary institutions during COVID-19.

On-reserve Income Assistance



The On-reserve Income Assistance program helps eligible individuals and families cover the costs of daily life and provides access to employment supports. The federal government is continuing to engage with First Nations on ways to make the program more responsive to the needs of individuals and families and to develop support that helps people transition from income assistance to employment and education.

- Budget 2021 proposes to invest $618.4 million over two years, while work continues, including:
  - $540 million over two years, starting in 2021-22, to continue to address basic needs and increased program demand, including as a result of COVID-19.
  - $78.4 million over two years, starting in 2021-22, to continue providing case management and support to help people find work.

8.2 Building Infrastructure and Economic Growth

Budget 2021 lays out a plan to help build resilient Indigenous communities through new, distinctions-based investments in infrastructure, including support for clean drinking water, housing, schools, and roads. This builds on the recent announcement by the Canada Infrastructure Bank to commit $1 billion towards the Indigenous Community Infrastructure Initiative to support new partnerships with Indigenous communities on infrastructure projects.

Chart 8.2
Progress on Long-Term Drinking Water Advisories since 2010

Source: Indigenous Services Canada

As of April 13, 2021, 106 long-term drinking water advisories, and 178 short-term drinking water advisories, have been lifted since 2015, while 105 long-term drinking water advisories were in place when this government committed to eliminating long-term drinking water advisories on public systems on reserves. Since 2015, the expansion of the scope of the commitment and short-term advisories becoming long-term have added advisories to the list, but the government's commitment to end all advisories remains firm.

Indigenous community-owned businesses are key drivers of economic growth—they reinvest profits back into their local communities. They are important partners in the work to strengthen communities. This budget makes bold investments to support new opportunities for Indigenous businesses and communities. These targeted investments expand revenue sources and provide businesses and communities with access to the capital they need to grow during the recovery and beyond.

Indigenous Infrastructure

Investments in clean water, housing, and other community infrastructure will create good jobs and build healthier, safer, and more prosperous Indigenous communities in the long-term. The investments in the federal government's plan will accelerate its 10-year commitment to close the infrastructure gaps in Indigenous communities, which could include all-weather roads, northern airstrips, broadband, health care and educational facilities.

- Budget 2021 proposes distinctions-based investments of $6.0 billion over five years, starting in 2021-22, with $388.9 million ongoing, to support infrastructure in Indigenous communities, including:
  - $4.3 billion over four years, starting in 2021-22, for the Indigenous Community Infrastructure Fund, a distinctions-based fund to support immediate demands, as prioritized by Indigenous partners, with shovel-ready infrastructure projects in First Nations, including with modern-treaty and self-governing First Nations, Inuit, and Métis Nation communities.
  - $1.7 billion over five years, starting in 2021-22, with $388.9 million ongoing, to cover the operations and maintenance costs of community infrastructure in First Nations communities on reserve.

Supporting Indigenous Economies

The COVID-19 pandemic has had a significant impact on Indigenous communities and businesses. Public health measures have affected many of the revenue sources, such as community-owned business revenues, property taxes, and revenues from leased properties, which communities use to support service delivery and pay loans which have been taken out to support community, economic development, and jobs. To ensure the long-term resilience of Indigenous economies, Budget 2021 proposes to provide:

- $117 million in 2021-22 to renew the Indigenous Community Business Fund. This will ensure First Nations, Inuit, and Métis Nation communities can continue to provide services and support jobs for their members through collectively owned businesses and microbusinesses affected by the COVID-19 pandemic.
- $33.4 million in 2021-22 to support the First Nations Finance Authority pooled borrowing regime as follows:
  - $32.5 million to establish a First Nations Finance Authority Emergency Fund to provide repayable financial support for borrowing members encountering difficulties due to COVID-19 or future widespread economic shocks.

- $925,000 to support the First Nations Finance Authority launch of the Commercial Paper Program that will lower interest rates for First Nation borrowers so they can secure more manageable funding.

This time-limited spending will help Indigenous communities withstand the pressures of the pandemic and ensure they are well-positioned for a quick recovery.

Support for Indigenous Entrepreneurs

Indigenous communities are often in rural and remote areas and the success of Indigenous-led businesses, including tourism businesses, is critically important to local jobs and economies. In order to ensure Indigenous businesses are part of the recovery and that their economies experience long-term growth, Indigenous-led businesses need access to support.

The Aboriginal Entrepreneurship Program provides additional support for First Nations, Inuit, and Métis Nation entrepreneurs by lowering the cost of business financing, providing equity, and offering business support services. The program helps Indigenous entrepreneurs access affordable loans to start and grow their businesses. To help Indigenous entrepreneurs start and grow businesses, create jobs, and generate prosperity in their communities:

- Budget 2021 proposes to invest $42 million over three years, starting in 2021-22, to expand the Aboriginal Entrepreneurship Program. This will directly support Indigenous-led businesses and help Indigenous communities generate wealth by improving access to capital and business opportunities.
- Budget 2021 also proposes to provide $2.4 million in 2021-22 to the Indigenous Tourism Association of Canada to help the Indigenous tourism industry rebuild and recover from the impacts of COVID-19.

Currently, only 36 per cent of Indigenous-led businesses are owned by women. To address this and make sure women entrepreneurs are empowered in the economic recovery:

- Budget 2021 proposes to invest $22 million over three years, starting in 2021-22, to support the National Aboriginal Capital Corporations Association's (NACCA) Indigenous Women's Entrepreneurship Initiative by providing tools, services, and resources to increase the number of Indigenous women entrepreneurs. This funding would support NACCA in achieving its target of increasing the number of Indigenous women entrepreneurs who access financing through Aboriginal Financial Institutions by 50 per cent.

Launch of the Indigenous Growth Fund

Indigenous businesses play an important role in creating jobs and opportunities across Canada. The national network of Aboriginal Financial Institutions, including Métis Capital Corporations, helps to launch and grow these important businesses.

In order to help ensure that Indigenous businesses have access to financing, the government announced in Budget 2019 the development of an Indigenous Growth Fund.

Through close collaboration between the National Aboriginal Capital Corporation Association and the Business Development Bank of Canada, an innovative, sustainable new $150 million fund has now been created.

As announced on April 14, 2021, the Indigenous Growth Fund is designed to provide capital to Aboriginal Financial Institutions and ultimately Indigenous businesses and entrepreneurs. The unique structure leverages an initial government investment to help recruit other investors, and most importantly, to grow and sustain the fund on an ongoing basis. This will help to provide a long-term source of capital to support continued success for Indigenous businesses.

Securing Capital for Community Investments

The First Nations Finance Authority provides opportunities for First Nations to use their own revenue—often from provincial revenue-sharing agreements or business ventures—to secure long-term financing. This in turn supports First Nations' self-determination, job creation, and social and economic development. To expand opportunities for First Nations to raise capital in support of community priorities:

- Budget 2021 announces the Government of Canada's intention to amend legislation and regulations to expand the types of revenues that First Nations may use to support borrowing from the First Nations Finance Authority, specifically to include revenues from the First Nations Goods and Services Tax and the First Nations Sales Tax.

This measure will apply to First Nations that have opted into the *First Nations Fiscal Management Act* regime and that are collecting First Nations Goods and Services Tax or First Nations Sales Tax revenues within their lands.

Redesigning the Additions to Reserve Policy

Lands are central to First Nations traditions, identity, and prosperity. They are a crucial asset for advancing self-determination, economic development, and well-being.

- Budget 2021 proposes to provide $43 million over three years, starting in 2021-22, to work with Indigenous partners and other stakeholders to redesign the federal Additions to Reserve policy and to accelerate work on existing requests from First Nations across the country.

8.3 Responding to the Tragedy of Missing and Murdered Indigenous Women and Girls

The government is accelerating work on the National Action Plan in response to the National Inquiry into Missing and Murdered Indigenous Women and Girls' Calls for Justice and the implementation of the Truth and Reconciliation Commission's Calls to Action.

Budget 2021 lays out a plan that will build on progress and remain accountable to communities, families, and survivors across Canada.

To end the national tragedy of missing and murdered Indigenous women and girls, a new approach is needed—one that addresses the root causes of violence, that recognizes the scope of the problem, and one that factors in the different experiences of Indigenous peoples from coast-to-coast-to-coast. This work is anchored in four interconnected thematic areas from the national inquiry: culture, health and wellness, human security and safety, and justice.

Actions to address this tragedy must be broad in order to address the socio-economic root causes including loss of culture and languages, poverty and lack of access to housing, and the need for community safety, food security, employment, education, health care, infrastructure, and the many threads that tie the fabric of society together.

Budget 2021 proposes to invest an additional $2.2 billion over five years, beginning in 2021-22, and $160.9 million ongoing, to help build a safer, stronger, and more inclusive society.

Culture

The preservation, restoration, and promotion of culture and language, as well as participation in sport, are powerful tools for healing, reconciliation, and fostering a strong sense of identity. To support this work in Indigenous communities:

- Budget 2021 proposes to provide $275 million over five years, beginning in 2021-22, and $2 million ongoing to Canadian Heritage, to support the efforts of Indigenous peoples in the reclamation, revitalization, and strengthening of Indigenous languages as a foundation for culture, identity, and belonging. This funding will support various initiatives such as languages and culture camps, mentor-apprentice programs and the development of Indigenous languages resources and documentation.
