- Budget 2021 also proposes to provide $14.9 million over four years, beginning in 2021-22, to support the preservation of Indigenous heritage through Library and Archives Canada. This will ensure that Indigenous women, girls, 2SLGBTQQIA+ people, and all people in Canada have meaningful access to their cultures and languages.
- Budget 2021 also proposes to provide $108.8 million over two years, beginning in 2021-22, to reestablish and revitalize Indigenous cultural spaces. Having a dedicated, permanent space to share culture is a key component of building strong Indigenous identities. Establishing cultural spaces that are inclusive of Indigenous women, girls, and 2SLGBTQQIA+ people will help ensure they have a seat at the decision-making table. This proposal responds to the Final Report of the National Inquiry into Missing and Murdered Indigenous Women and Girls, which calls for all Indigenous women, girls, and 2SLGBTQQIA+ people to be provided with safe, no-barrier, permanent, and meaningful access to their cultures and language.
- Budget 2021 also proposes to provide $40.1 million over three years, beginning in 2021-22, to Canadian Heritage to support the Indigenous Screen Office and ensure Indigenous peoples can tell their own stories and see themselves reflected on-screen.
- Budget 2021 also proposes to provide $14.3 million over five years, beginning in 2021-22, and $2.9 million ongoing, to ensure that Indigenous women and girls have access to meaningful sports activities through the Sport for Social Development in Indigenous Communities program.

Health and Wellness

> Joyce Echaquan, a 37-year-old mother of seven children, from the Atikamekw de Manawan, died at the Joliette Hospital after receiving degrading insults from two hospital staff. **Joyce's Principle** aims to guarantee to all Indigenous peoples the right of equitable access, without any discrimination, to all social and health services, as well as the right to enjoy the best possible physical, mental, emotional, and spiritual health.

The tragic death of Joyce Echaquan last summer made clear the devastating consequences of anti-Indigenous racism in our health care systems.

- Budget 2021 proposes to provide $126.7 million over three years, beginning in 2021-22, to take action to foster health systems free from racism and discrimination where Indigenous peoples are respected and safe. This funding will support patient advocates, health system navigators, and cultural safety training for medical professionals.
- Budget 2021 also proposes to provide $12.5 million over five years, beginning in 2021-22, and $2.5 million ongoing, to support the well-being of families and survivors through project-based programming in collaboration with the National Family and Survivors Circle.

This builds on critical investments outlined earlier in this chapter, including $597.6 million over three years, beginning in 2021-22 for distinctions-based mental wellness supports which provide community-based, culturally relevant, and trauma-informed wellness services for families and survivors, as well as broader investments to support the health and well-being of Indigenous peoples.

Human Security and Safety

Indigenous communities, like all communities in Canada, should be places where people and families feel safe and secure. A well-funded, culturally sensitive, and respectful police service is essential for community safety and well-being.

- Budget 2021 proposes to provide $861 million over five years, beginning in 2021-22, and $145 million ongoing, to support culturally responsive policing and community safety services in Indigenous communities. This includes:
  - $43.7 million over five years, beginning in 2021-22, to co-develop a legislative framework for First Nations policing that recognizes First Nations policing as an essential service.

- $540.3 million over five years, beginning in 2021-22, and $126.8 million ongoing, to support Indigenous communities currently served under the First Nations Policing Program and expand the program to new Indigenous communities.
- $108.6 million over five years, beginning in 2021-22, to repair, renovate, and replace policing facilities in First Nation and Inuit communities.
- $64.6 million over five years, beginning in 2021-22, and $18.1 million ongoing, to enhance Indigenous-led crime prevention strategies and community safety services.
- $103.8 million over five years, beginning in 2021-22, for a new Pathways to Safe Indigenous Communities Initiative to support Indigenous communities to develop more holistic community-based safety and wellness models.

This investment seeks to address the Calls for Justice, which are further supported by critical investments outlined in Chapter 9 to advance a new National Action Plan to End Gender-Based Violence, including $55 million over five years, beginning in 2021-22, for the Department for Women and Gender Equality to bolster the capacity of Indigenous women and 2SLGBTQQIA+ organizations to provide gender-based violence prevention programming aimed at addressing the root causes of violence against Indigenous women, girls, and 2SLGBTQQIA+ people.

Justice

Building on recent actions to address the overrepresentation of Indigenous people in the criminal justice system through Bill C-22, to improve Indigenous peoples' access to justice in all areas of the justice system:

- Budget 2021 proposes to provide $74.8 million over three years, beginning in 2021-22, to improve access to justice for Indigenous people and support the development of an Indigenous justice strategy to address systemic discrimination and the overrepresentation of Indigenous people in the justice system. This includes:
  - $27.1 million to Justice Canada to help Indigenous families navigate the family justice system and access community-based family mediation services.
  - $24.2 million to Justice Canada to support engagement with Indigenous communities and organizations on the development of legislation and initiatives that address systemic barriers in the criminal justice system, including collaboration on an Indigenous justice strategy.
  - $23.5 million to the Public Prosecution Service of Canada to support victims of violence by increasing prosecutorial capacity in the territories.

Working with Partners

At present, only three national Indigenous women's organizations and one regional organization receive dedicated federal funding for operations. There are over 30 regional organizations that are either unfunded or receive only time-limited, project-based funding.

- Budget 2021 proposes to provide $36.3 million over five years, beginning in 2021-22, and $8.6 million ongoing to Crown-Indigenous Relations and Northern Affairs Canada, to enhance support for Indigenous women's and 2SLGBTQQIA+ organizations, ensuring that the voices and perspectives of Indigenous women and 2SLGBTQQIA+ people are reflected in all aspects of decision-making that impacts their lives. This proposal responds directly to the MMIWG Call for Justice 1.8, which calls upon governments to provide core and sustainable funding to national, regional, and local Indigenous women's and 2SLGBTQQIA+ organizations.

- Budget 2021 also proposes to provide $20.3 million over five years, beginning in 2021-22, to work with Indigenous partners to ensure that appropriate monitoring mechanisms are in place to measure progress and to keep the government accountable, now and in the future.

The proposed Budget 2021 investments build on investments made as part of the 2020 *Fall Economic Statement*, which announced $781.5 million over five years, beginning in 2021-22 and $106.3 million ongoing. This included:

- $724.1 million to launch a comprehensive Violence Prevention Strategy to expand access to culturally relevant supports for Indigenous women, children, 2SLGBTQQIA+ people facing gender-based violence. This strategy will support new shelters and transition housing for First Nations, Inuit, and Métis peoples across the country, including on reserve, in the North, and in urban areas.
- $49.3 million to support the implementation of Gladue Principles in the mainstream justice system and Indigenous-led responses in order to help reduce the overrepresentation of Indigenous peoples in the criminal justice and correctional systems.
- $8.1 million to develop Administration of Justice Agreements with Indigenous communities to strengthen community-based justice systems and support self-determination.

8.4 Walking the Path to Reconciliation and Self-determination

The Government of Canada is committed to supporting self-determination and self-government as part of its efforts to forge stronger relationships with First Nation, Inuit, and Métis peoples.

The federal government also recognizes that meaningful action is required to address the systemic racism many Indigenous peoples face, including in their interactions with public institutions.

Budget 2021 presents the next steps in the federal government's plan to ensure Indigenous peoples have greater say over the policies and programs that affect their lives.

Implementation of Legislation on the *United Nations Declaration on the Rights of Indigenous Peoples*

The *United Nations Declaration on the Rights of Indigenous Peoples* is the most comprehensive international instrument on the rights of Indigenous peoples. It provides guidance on co-operative relationships with Indigenous peoples based on the principles of equality, partnership, good faith and mutual respect for the survival, dignity and well-being of Indigenous peoples. In December 2020, the Government introduced Bill C-15, *United Nations Declaration on the Rights of Indigenous Peoples Act*, which was developed with Indigenous partners, fulfilling its commitment to introduce legislation to implement the Declaration as government legislation.

- Budget 2021 proposes to provide $31.5 million over two years, starting in 2021-22, to support the co-development of an Action Plan with Indigenous partners to implement this legislation and to achieve the objectives of the Declaration. This process will support Indigenous self-determination and enhance nation-to-nation, Inuit-Crown and government-to-government relationships.

Escalating 10-Year Grant Funding

To help advance a new fiscal relationship with First Nations, a new 10-year grant funding mechanism was implemented in 2019. This initiative aims to provide more long-term stabilized program supports for eligible First Nations who choose to join the grant. It allows them to build capacity, do effective planning, and account for inflation and population increases on reserve. The government has also committed to escalate the 10-year grants to address price and population growth and ensure that funding keeps pace with the needs of First Nations.

- Budget 2021 proposes to provide $2.7 billion over 10 years, starting in 2021-22, to ensure that funding for core programs and services provided through the 10-year grants addresses key cost drivers. Escalation will be based on inflation and the population of each community, but a minimum of 2 per cent annual growth will be provided to ensure that First Nations within the grant receive stable and predictable funding. This will strengthen communities' ability to design and deliver services in a manner that reflects community priorities.

Supporting Indigenous Governance and Capacity

Core governance support is essential for First Nations leaders to effectively serve their communities and advance self-determination.

- Budget 2021 proposes to provide $104.8 million over two years, starting in 2021-22, to support the administrative capacity of First Nations governments and other organizations that deliver critical programs and services.
- Budget 2021 also proposes to invest $151.4 million over five years, starting in 2021-22, to provide wrap-around supports for First Nations with the greatest community development needs.

Advancing Specific Claims Settlements

The specific claims process helps right past wrongs and address First Nations' long-standing grievances through negotiated settlements. Canada is continuing to consult in order to co-develop program reforms. To provide timely payment of negotiated settlements of specific claims, while this work continues, Budget 2021 will replenish the Specific Claims Settlement Fund in 2022-23.

Commemorating the Legacy of Residential Schools

The Residential School System is a shameful, tragic, and defining part of Canada's history. It was born of colonial practices that left negative impacts on generations of Indigenous peoples. As part of our collective duty to remember:

- Budget 2021 proposes to provide $13.4 million over five years, with $2.4 million ongoing, to Canadian Heritage for events to commemorate the history and legacy of residential schools, and to honour survivors, their families and communities, as well as to support celebrations and commemoration events during the proposed National Day for Truth and Reconciliation.

This builds on investments since 2015 to commemorate the legacy of residential schools; support the efforts of Indigenous peoples to reclaim, revitalize, maintain and strengthen Indigenous languages and cultures including the passage and support for the co-developed *Indigenous Languages Act*; and to continue to provide healing supports for residential school survivors and their families. The government has also announced more than $700 million in new funding through a variety of programs and initiatives to help strengthen Indigenous languages and cultures, with additional proposed investments of more than $460 million in this Budget.

Support for Indigenous-led Data Strategies

Access to reliable and culturally relevant data on Indigenous peoples is critical to building a complete portrait of Indigenous lived experiences, unmasking inequalities, and ensuring delivery of effective policies and programs.

Indigenous-led data strategies can further self-determination by providing First Nations, Inuit, and Métis Nation governments and organizations with the data they need to support their communities.

- Budget 2021 proposes to invest $73.5 million over three years, starting in 2021-22, to continue work towards the development and implementation of a First Nations Data Governance Strategy.
- Budget 2021 proposes to invest $8 million over three years, starting in 2021-22, to support Inuit and Métis baseline data capacity and the development of distinctions-based Inuit and Métis Nation data strategies.

Engagement with Indigenous Peoples

The government is committed to renewing the relationship with Indigenous peoples through increased engagement, partnership, and co-development of policy and programs. In Budget 2016, the government announced new investments to support the capacity of Indigenous Representative Organizations to engage with the government. To continue to support this important work:

- Budget 2021 proposes to provide $50 million over five years, starting in 2021-22, and $10 million ongoing, to renew and make permanent dedicated consultation and policy development funding.

Supporting Self-determination Through Tax Agreements

Tax arrangements between the Crown and Indigenous governments support self-determination and social and economic development by creating opportunities for Indigenous governments to raise tax revenues within their reserve or settlement lands in support of community priorities.

The federal government continues to be committed to negotiating agreements with interested Indigenous governments that enable them to implement a First Nations Goods and Services Tax within their reserves or settlement lands and with interested self-governing Indigenous governments to enable them to implement a personal income tax within their lands. The federal government also remains committed to facilitating similar arrangements between interested provincial and territorial governments and Indigenous governments.

- Budget 2021 announces the Government of Canada's intention to engage with interested Indigenous governments and organizations on a framework for the negotiation of agreements that would enable interested Indigenous governments to implement a fuel, alcohol, tobacco, and cannabis sales tax within their reserves or settlement lands.

Supporting First Nations Priorities

Budget 2021 proposes significant investments for First Nations to advance initiatives across a number of priority areas. Here is a summary of those investments:

- $2.5 billion over five years to build on the existing distinctions-based approach to Indigenous Early Learning and Child Care, with a long-term investment in Indigenous-led programming that parallels the government's commitment to provinces and territories. This includes $515 million for before- and after-school care on reserve, plus additional support for First Nations programming and capacity-building.
- $1.4 billion to see Indigenous communities and businesses through the COVID-19 pandemic, including distinctions-based funding under the Indigenous Community Support Fund and the Indigenous Community Business Fund, funding to maintain the public health response in First Nations communities, and support for the First Nations Finance Authority.
- $1 billion to increase funding under the First Nations Child and Family Services Program.
- More than $2.4 billion over five years to improve essential health, education, and social services on reserve, including health services in remote and isolated communities and transforming health systems, elementary and secondary education, and on-reserve income assistance.
- $775 million over five years to maintain medically necessary services provided through the Non-Insured Health Benefits Program.
- $598 million over three years to support a Distinctions-Based Mental Wellness Strategy.
- $177 million over two years to support Indigenous post-secondary students and institutions during COVID-19.
- $1.7 billion over five years to cover operations and maintenance costs of on reserve community infrastructure in First Nations communities. First Nations will also have access to the $4.3 billion distinctions-based Indigenous Community Infrastructure Fund to support immediate demands, as prioritized by Indigenous partners, with shovel-ready projects in their communities.
- $64 million to help Indigenous entrepreneurs, including Indigenous women, access capital and business supports to start and grow their businesses.

- Funding for a range of measures to end the national tragedy of missing and murdered Indigenous women and girls, anchored in the four interconnected thematic areas of culture, health and wellness, human security and safety, and justice.
- $584 million over five years to co-develop a legislative framework for First Nations policing that recognizes it as an essential service, and to stabilize and expand the First Nations Policing Program.
- $109 million over five years to repair, renovate, and replace policing facilities in First Nation and Inuit communities.
- More than $165 million over five years to enhance Indigenous-led crime prevention strategies and community safety services.
- More than $460 million over five years to support language reclamation and revitalization, Indigenous cultural spaces, sport programming for Indigenous women and girls, events to commemorate the legacy of residential schools, and preserve Indigenous heritage.
- $31 million over two years to support the co-development of an Action Plan with Indigenous partners to implement legislation on the United Nations Declaration on the Rights of Indigenous Peoples.
- $2.7 billion over 10 years to escalate the 10-year grants to address key cost drivers such as changes in inflation and population in First Nations communities.
- More than $373 million over five years to support First Nations governance, support Additions to Reserve, and further a First Nations Data Governance Strategy.

First Nations will also benefit from:

- Access to $36 million over three years in investments to help build capacity and create jobs in Indigenous communities through clean energy projects.
- $163 million over three years to support food security in isolated northern communities.
- Access to $138 million for Indigenous recipients through a $1.4 billion top-up to Infrastructure Canada's Disaster Mitigation and Adaptation Fund to help Indigenous communities adapt to climate change.
- $23 million over five years to engage on developing a plan to transition from open net-pen salmon farming in British Columbia's waters by 2025, and collaborate with Indigenous communities to pilot area-based management approaches to managing aquaculture activities in priority areas of British Columbia.

- $647 million over five years to stabilize and conserve wild Pacific salmon populations, including funding to engage with First Nations and fish harvesters.
- $10 million to extend the Sustainable Fisheries Solutions and Retrieval Support Program to support projects from applicants, including Indigenous communities and organizations, that retrieve and dispose of fishing related plastic waste, test new fishing technology and support international efforts to decrease discarded or abandoned gear.
- Extending the Indigenous Business Initiative to June 30, 2021 to support Indigenous businesses during the COVID-19 pandemic by providing interest-free loans and non-repayable contributions for First Nations, Inuit, and Métis Nation businesses.
- $87 million over five years to modernize federal procurement and create opportunities for specific communities by diversifying the federal supplier base. This will in part, support efforts to meet Canada's target of 5 per cent of federal contracts being awarded to businesses managed and led by Indigenous people.

Supporting Inuit Priorities

The Government of Canada and Inuit Tapiriit Kanatami continue to work together to advance shared priorities through the Inuit-Crown Partnership Committee. Budget 2021 proposes to build on this work by advancing initiatives that will make a meaningful difference in Inuit communities, including:

- $2.5 billion over five years to build on the existing distinctions-based approach to Indigenous Early Learning and Child Care, with a long-term investment in Indigenous-led programming that parallels the government's commitment to provinces and territories. This includes support for Inuit programming and capacity-building.
- $1.4 billion to see Indigenous communities and businesses through the COVID-19 pandemic with distinctions-based support through the Indigenous Community Support Fund and Indigenous Community Business Fund and funding for continued public health responses in Indigenous communities, including for Inuit.
- $775 million over five years to maintain medically necessary services provided through the Non-Insured Health Benefits Program.
- $598 million over three years to support a Distinctions-Based Mental Wellness Strategy.
- $177 million over two years to support Indigenous post-secondary students and institutions during COVID-19.
- Access to the $4.3 billion distinctions-based Indigenous Community Infrastructure Fund to support immediate demands, as prioritized by Indigenous partners, with shovel-ready projects in Indigenous communities, including for Inuit.
- $64 million to help Indigenous entrepreneurs, including Indigenous women, access capital and business supports to start and grow their businesses.
- Funding for a range of measures to end the national tragedy of missing and murdered Indigenous women and girls, anchored in the four interconnected thematic areas of culture, health and wellness, human security and safety, and justice.
- $109 million over five years to repair, renovate, and replace policing facilities in First Nation and Inuit communities.
- More than $165 million over five years to enhance Indigenous-led crime prevention strategies and community safety services.
- $31 million over two years to support the co-development of an Action Plan with Indigenous partners to implement legislation on the United Nations Declaration on the Rights of Indigenous Peoples.

- More than $460 million over five years to support language reclamation and revitalization, Indigenous cultural spaces, sport programming for Indigenous women and girls, events to commemorate the legacy of residential schools, and preserve Indigenous heritage.
- $4 million over three years to support the development of an Inuit data strategy.

Inuit will also benefit from:

- $40 million over three years to support feasibility and planning of hydroelectricity and grid interconnection projects in the North.
- Access to $36 million over three years in investments to help build capacity and create jobs in Indigenous communities through clean energy projects.
- Access to $138 million for Indigenous recipients through a $1.4 billion top-up to Infrastructure Canada's Disaster Mitigation and Adaptation Fund to help Indigenous communities adapt to climate change.
- $163 million over three years to support food security in isolated northern communities, including Inuit communities.
- $12 million to renew the Standards to Support Resilience in Infrastructure Program, so that the Standards Council of Canada can continue updating standards and guidance in priority areas such as flood mapping and building in the North.
- $25 million over three years to support pan-Arctic scientific research through the Polar Continental Shelf Program. These activities would also enhance employment and training opportunities for Indigenous people and Northerners.
- $15 million over three years, starting in 2021-22, to accelerate archeological and conservation work on artifacts of international importance from the wrecks of HMS Erebus and HMS Terror.
- $8 million to support the transformation of Aurora College into a polytechnic university
- $87 million over five years to modernize federal procurement and create opportunities for specific communities by diversifying the federal supplier base. This will in part, support efforts to meet Canada's target of 5 per cent of federal contracts being awarded to businesses managed and led by Indigenous people.
- Extending the Indigenous Business Initiative to June 30, 2021 to support Indigenous businesses during the COVID-19 pandemic by providing interest-free loans and non-repayable contributions for First Nations, Inuit, and Métis Nation businesses.

Supporting Métis Nation Priorities

The signing of the Canada-Métis Nation Accord in April 2017 effectively reset the relationship between Canada and the Métis Nation. Budget 2021 continues progress by proposing investments in key Métis Nation priorities, including:

- $2.5 billion over five years to build on the existing distinctions-based approach to Indigenous Early Learning and Child Care, with a long-term investment in Indigenous-led programming that parallels the government's commitment to provinces and territories. This includes support for Métis Nation programming and capacity-building.
- $1.4 billion to see Indigenous communities and businesses through the COVID-19 pandemic with distinctions-based support through the Indigenous Community Support Fund and Indigenous Community Business Fund and funding for continued public health responses in Indigenous communities, including for the Métis Nation.
- $598 million over three years to support a Distinctions-Based Mental Wellness Strategy.
- $177 million over two years to support Indigenous post-secondary students and institutions during COVID-19.
- Access to the $4.3 billion distinctions-based Indigenous Community Infrastructure Fund to support immediate demands, as prioritized by Indigenous partners, with shovel-ready projects in Indigenous communities, including the Métis Nation.
- $64 million to help Indigenous entrepreneurs, including Indigenous women, access capital and business supports to start and grow their businesses.
- Funding for a range of measures to end the national tragedy of missing and murdered Indigenous women and girls, anchored in the four interconnected thematic areas of culture, health and wellness, human security and safety, and justice.
- More than $165 million over five years to enhance Indigenous-led crime prevention strategies and community safety services.
- More than $460 million over five years to support language reclamation and revitalization, Indigenous cultural spaces, sport programming for Indigenous women and girls, events to commemorate the legacy of residential schools, and preserve Indigenous heritage.
- $31 million over two years to support the co-development of an Action Plan with Indigenous partners to implement legislation on the United Nations Declaration on the Rights of Indigenous Peoples.

- $4 million over three years to support the development of a Métis Nation data strategy.

Métis Nation communities will also benefit from:

- Access to $36 million over three years in investments to help build capacity and create jobs in Indigenous communities through clean energy projects.
- Access to $138 million for Indigenous recipients through a $1.4 billion top-up to Infrastructure Canada's Disaster Mitigation and Adaptation Fund to help Indigenous communities adapt to climate change.
- Extending the Indigenous Business Initiative to June 30, 2021 to support Indigenous businesses during the COVID-19 pandemic by providing interest-free loans and non-repayable contributions for First Nations, Inuit and Métis Nation businesses.
- $87 million over five years to modernize federal procurement and create opportunities for specific communities by diversifying the federal supplier base. This will in part, support efforts to meet Canada's target of 5 per cent of federal contracts being awarded to businesses managed and led by Indigenous people.

Chapter 9
Protecting Our Shared Values

Canadians are rightly proud of our global reputation as a diverse, fair, safe, and open society.

The government will stand up for Canadians' shared values, including: the rule of law; protection of the environment; freedom from persecution as a result of one's race, religion, sexuality, ethnicity, national origin, gender identity or expression, age, or ability; the preservation of language and culture; the protection of the world's most vulnerable; and the promotion of peace, security, and human rights, including the rights of women and girls.

The government is protecting communities through a firearms ban, protecting Canadians through investments in defence, and protecting and upholding our values through amendments to our justice system and public safety that make them more responsive to the needs of Canadians.

Amid the global pandemic, our global interconnectedness has never been more evident. We are all in this together.

9.1 Promoting Our Two Official Languages

For more than 50 years, the *Official Languages Act* has upheld the equal status of English and French. Our two official languages and our linguistic duality are part of who we are as Canadians.

The government also recognizes that Canada's French language situation is unique and that the federal government has the responsibility to actively protect and promote the language. The government has been consulting with Canadians about how to better protect the use of the French language, support the vitality of official language minority communities—including the institutions and rights of Francophones outside of Quebec—and improve bilingualism in our public institutions. To meet the needs of Canadians for the next 50 years, the government is committed to introducing amendments to the *Official Languages Act*.

The government also remains committed to the work already underway to revitalize, strengthen, and maintain Indigenous languages in Canada. More details can be found in Chapter 8.

Promoting Official Languages

The federal government is committed to promoting the vitality of Canada's official language minority communities and fostering bilingualism in Canada—now and for generations to come. In the recently released paper entitled *English and French: Towards a Substantive Equality of Official Languages in Canada*, the government proposed fundamental changes to establish a new linguistic balance and pave the way for official languages for the next 50 years. This new funding commitment will support these reforms, bolster the vitality of official language minority communities, and celebrate the voices they bring to our country's landscape.

- Budget 2021 proposes to provide $180.4 million over three years, starting in 2021-22, to Canadian Heritage to support students across the country in achieving greater levels of bilingualism. Being bilingual is a competitive advantage to Canadians. Every time a child cannot go to French immersion school, we lose a future bilingual citizen. This funding will be used to enhance French immersion and French second-language programs in schools and post-secondary institutions; help provinces and territories meet the strong demand from students and parents for spaces in French immersion and French second-language programs; boost the existing strategy for teacher recruitment and retention; as well as support learning French from early childhood.
- Budget 2021 proposes to provide $121.3 million over three years, starting in 2021-22, to Canadian Heritage to make high-quality post-secondary minority-language education available across Canada.
- Budget 2021 proposes to provide $81.8 million over two years, starting in 2021-22, to Canadian Heritage to support the construction, renovation, and expansion of the educational and community spaces that serve official language minority communities.
- Budget 2021 proposes to provide $6.4 million to Canadian Heritage and $2.3 million to the Treasury Board Secretariat, over two years, starting in 2021-22, to move forward with modernizing the *Official Languages Act*.

9.2 Keeping Canadians Safe and Improving Access to Justice

Every Canadian should feel safe in their community and everyone should receive equitable treatment under the law.

To keep Canadians safe and protect the integrity of our public institutions, the government is proposing measures that strengthen our democratic process, reduce violent crime, and make the justice system more responsive to the needs of all Canadians.

Gun Control

Firearms were used in more than 40 per cent of homicides in Canada in 2019. There were over 107,000 victims of police-reported intimate-partner violence in Canada in 2019. For 660 of them, a firearm was present. Women accounted for almost 8 in 10 victims of all incidents and they were even more likely to be the victim in the 660 incidents where a firearm was present.
According to the *Canadian Medical Association Journal*, in a study of 6,400 firearm-related incidents in Ontario, young men in cities and predominantly lower-income were more likely to be involved in assaults. But two-thirds of the cases involved self-harm by men over the age of 45, across all income levels, and living mainly in more remote parts of the province; of those cases, 92 per cent were fatal.

Communities across Canada have seen too many tragedies as a result of firearms.

On February 16, 2021, the government introduced legislation to amend the *Criminal Code* and *Firearms Act* to strengthen gun control in Canada, support handgun bans in our cities, and eliminate all legal use of prohibited military-assault style firearms among other measures. To continue this critical work and protect Canadians from gun violence:

- Budget 2021 proposes to provide $312 million over five years, starting in 2021-22, and $41.4 million ongoing, to implement legislation to help protect Canadians from gun violence and to fight gun smuggling and trafficking. Funding will support the Royal Canadian Mounted Police, the Canada Border Services Agency, and Public Safety Canada, and builds on investments made in the 2020 *Fall Economic Statement*. These measures will fight gun crime in our communities and keep Canadians safe.

Advancing a National Action Plan to End Gender-Based Violence

The Government of Canada is committed to building a country free of gender-based violence.

Gender-based violence costs women and gender-diverse people their lives. It has profound effects on children. And according to estimates, Canadians collectively spend billions annually to deal with the aftermath.

Every 2.5 days a woman or girl is killed in Canada. In the last year alone there were over 160 women violently killed. Sexual assault is a gendered crime that is far more likely to target women, especially young women. Sadly, the rate of sexual assault is not declining, according to Statistics Canada, with police-reported sexual assaults increasing every year from 2015 to 2019.

Those at highest risk of violence are those living in rural and remote areas, Indigenous women, Black women, women with disabilities, women of colour, gender non-binary and LGBTQ2 people.

During the pandemic, job losses, financial stresses, and self-isolation have created conditions for a rise in gender-based violence—82 per cent of those who work on the front lines report an increase in the frequency and severity of violence experienced by survivors. Since March 2020, the federal government has announced up to $100 million for organizations providing emergency support and services to survivors of gender-based violence.

In 2017, the Government of Canada launched the Gender-Based Violence Strategy. Nearly $200 million starting in 2017-18 until 2022-23, and over $40 million per year ongoing, has been committed through the strategy to prevent gender-based violence, support survivors and their families, and promote responsive legal and justice systems. The government has also launched a $100 million Feminist Response and Recovery Fund, creating building blocks for long-term, lasting change to advance women's equality.

The government—in consultation with provinces, territories, municipalities, Indigenous peoples, gender-based violence experts, stakeholders and, most importantly, survivors of gender-based violence—is moving forward on developing a National Action Plan to End Gender-Based Violence, focusing on ensuring that anyone facing gender-based violence has reliable and timely access to protection and services, no matter where they live.

Budget 2021 proposes to invest $601.3 million over five years, starting in 2021-22, to advance towards a new National Action Plan to End Gender-Based Violence, as outlined below.

Gender-Based Violence Organizations

To enhance the capacity and responsiveness of organizations such as sexual assault centres, women's shelters, and other organizations that provide critical and often life-saving services and supports for women, girls, LGBTQ2, and gender non-binary people experiencing violence:

- Budget 2021 proposes to invest $200 million over two years, starting in 2021-22, for the Department for Women and Gender Equality to support gender-based violence organizations.

Gender-Based Violence Program

To make our communities more resilient to the threats of gender-based violence, including initiatives that support at-risk populations and survivors—almost half of whom are between the ages of 18 and 24, with nearly three in ten survivors under the age of 18—and that educate men and boys, so that all people recognize the role they play in ending gender-based violence:

- Budget 2021 proposes to invest $105 million over five years, starting in 2021-22, for the Department for Women and Gender Equality to enhance its Gender-Based Violence Program. Funding will go to initiatives that engage men and boys. It will increase funding for initiatives to stop human trafficking, including support for at-risk populations and survivors. It will also provide support for testing and implementing best practices to address gender-based violence, with a focus on projects that could be scaled at the national level.

National Action Plan to End Gender-Based Violence Secretariat

To establish a dedicated secretariat to coordinate the ongoing work towards the development and implementation of the National Action Plan to End Gender-Based Violence, and to continue engagement with provinces, territories, municipalities, Indigenous peoples, gender-based violence experts, stakeholders and, most importantly, survivors of gender-based violence:

- Budget 2021 proposes to provide $14 million over five years, starting in 2021-22, for the Department for Women and Gender Equality.

Increased Data Collection

To build a better foundation of data around gender-based violence upon which government can build stronger policies and take stronger action:

- Budget 2021 proposes to provide $11 million over five years, starting in 2021-22, for the Department for Women and Gender Equality for gender-based violence research and knowledge mobilization, with funding supporting community research models, working with Statistics Canada to develop a national femicide database, and enhancing the sample size of national gender-based violence surveys.

Indigenous Peoples

In recognition that Indigenous women, girls and 2SLGBTQQIA+ people are much more likely to experience violence than non-Indigenous women, and that the homicide rate for this community was seven times higher than for non-Indigenous women:

- Budget 2021 proposes to provide $55 million over five years, starting in 2021-22, for the Department for Women and Gender Equality to bolster the capacity of Indigenous women and 2SLGBTQQIA+ organizations to provide gender-based violence prevention programming aimed at addressing the root causes of violence against Indigenous women, girls, and 2SLGBTQQIA+ people. These investments are in addition to those outlined in Chapter 8 to address the national tragedy of missing and murdered Indigenous women and girls.

Safer Relationships

To pilot interventions that promote healthy relationships and prevent violence in the home:

- Budget 2021 proposes to provide $50 million over five years, starting in 2021-22, for the Public Health Agency of Canada to design and deliver interventions that promote safe relationships and prevent family violence, including intimate partner violence, child maltreatment, and elder abuse.

Crisis Hotlines

To support crisis hotlines that are experiencing a rise in call volumes during the pandemic:

- Budget 2021 proposes to provide $30 million over five years, starting in 2021-22, for the Department for Women and Gender Equality so that crisis hotlines can serve the urgent needs of more Canadians and offer more robust services, resources, and supports to prevent the escalation of gender-based violence.

Free Legal Advice

To help ensure access to free legal advice and legal representation for survivors of sexual assault and intimate partner violence, no matter where they live:

- Budget 2021 proposes to provide $85.3 million over five years, starting in 2021-22, for Justice Canada. Funding will support a national program for independent legal advice and independent legal representation for victims of sexual assault, as well as to support pilot projects for victims of intimate partner violence.

Protections for Women and Children during Divorce or Separation

Women are six times more likely to be killed by a former spouse than a spouse with whom they are living. When co-parenting during a divorce or separation, having supervised options can protect women's safety and protect children from experiencing violence in their homes. To support supervision services for parenting time in cases of separation and divorce:

- Budget 2021 proposes to provide $28.4 million over five years, starting in 2021-22, for Justice Canada. This will protect the safety and well-being of children and families.

Child Exploitation

The online exploitation of children is disturbing and alarming. The government supports innovative tools to fight child sexual exploitation including the Canadian Centre for Child Protection's Project Arachnid, which is a world-leading tool to detect and remove exploitative content from the internet. But more must be done to ensure children are protected and to stop perpetrators:

- Budget 2021 proposes to provide $20.7 million over five years, starting in 2021-22, for the Royal Canadian Mounted Police to enhance its ability to pursue online child sexual exploitation investigations, identify victims and remove them from abusive situations, and bring offenders to justice—including those who offend abroad.

Support for Newcomers

To support newcomers and refugees who experience gender-based violence:

- Budget 2021 proposes to provide $2 million over five years, starting in 2021-22, for Immigration, Refugees and Citizenship Canada to increase access to information and support for new Canadians facing family and gender-based violence, including enhancing the availability

of anti-violence resources. This will help ensure that newcomers' lives in Canada get off to a safe and successful start.

In addition, as outlined in Chapter 6, the government is proposing to reallocate $250 million in funding which will be used for transitional housing and shelter spaces for women and children fleeing violence, as well as provide additional rental assistance through the Canada Housing Benefit for low-income women and children fleeing violence.

Additional details on the government's National Action Plan to End Gender-Based Violence will be announced in the coming months.

Preventing Radicalization to Violence

In recent years, Canada and the world have witnessed an increase in radicalization that leads to violence. This poses a significant threat to public safety. To prevent violent extremism:

- Budget 2021 proposes to provide $8.2 million over three years, starting in 2021-22, for the Canada Centre for Community Engagement and Prevention of Violence to increase support and research for frontline initiatives and programming that prevent and counter radicalization to violence, including violent misogyny. This work will support the forthcoming National Action Plan to End Gender-Based Violence.

Better Job Protections for Parents of Young Victims of Crime

The death or disappearance of a child is devastating and can leave parents unable to work. In September 2018, the Government of Canada introduced a more inclusive and flexible Canadian Benefit for Parents of Young Victims of Crime, to ensure victims' families continue to get the help they need.

This benefit provides up to 104 weeks of income support to eligible applicants, who have suffered a loss of income because they took time away from work to cope with the death or disappearance of a child or children, as a result of a probable Criminal Code offence.

- The Government of Canada is announcing its intention to amend the *Canada Labour Code* to ensure that employees in the federally regulated private sector have job protection when they avail themselves of this new benefit.

Diverting Youth Away from the Justice System

At present, certain groups of young people are significantly overrepresented in the youth criminal justice system. In 2018-19, 43 per cent of youth admitted to correctional services were Indigenous — over four times higher than their share of the population.

The government is committed to addressing systemic inequities in the criminal justice system. That includes at early stages, when, instead of going into custody, young people can be redirected to community-based programming that encourages rehabilitation and reduces criminal behaviour over the long-term. To address overrepresentation of certain groups and reduce youth crime and youth incarceration rates:

- Budget 2021 proposes to provide $216.4 million over five years, starting in 2021-22, and $43.3 million ongoing for the Youth Justice Services Funding Program to increase funding to the provinces and territories in support of diversion programming and to help reduce the overrepresentation of Indigenous peoples, Black Canadians, and other racialized groups in the youth justice system. By diverting youth to the right services at the right time and addressing the root causes of crime, this measure would help reduce the crime rate and promote better outcomes for young people and their communities.

Expanding Access to Drug Treatment Courts

The pandemic has exacerbated the crisis of problematic substance use in Canada. The government takes a public-health centered approach to addiction. With Bill C-22, the government has proposed legislative amendments that require police and prosecutors to consider alternatives, such as diversion to addiction treatment programs, instead of laying charges or prosecuting people for simple drug possession. Drug treatment courts can break the cycle of drug addiction and criminal behaviour by helping non-violent offenders get the treatment they need. Since 2015, the federal government has provided over $25 million to support 13 drug treatment courts, which treat an average of 200 clients per day. To make our communities safer and support families struggling with addiction:

- Budget 2021 proposes to provide $40.4 million over five years, beginning in 2021-22, and $10 million ongoing, to support up to 25 additional drug treatment courts. This funding will provide eligible participants with access to a comprehensive program that includes substance use treatment and social services support.

Enhancing Legal Support for Vulnerable Communities

The government is committed to building a strong justice system and ensuring fair outcomes for all involved. That is why the government is making investments to support access to legal information and advice for racialized Canadians and asylum seekers.

- Budget 2021 proposes to provide $21.5 million over five years, starting in 2021-22, for a Racialized Communities Legal Support Initiative. This would support organizations that provide free public legal education and information as well as organizations that provide legal services and advice to racialized communities.
- Budget 2021 also proposes to provide an additional $26.8 million, in 2021-22, to enable participating provinces to maintain immigration and refugee legal aid support for asylum seekers, while protecting the efficiency and integrity of the asylum system.

Supporting Work to Address Systemic Racism in Public Safety Institutions

All people in Canada should be treated fairly by our public safety agencies. Yet, systemic racism exists in Canada and racialized communities and Indigenous peoples continue to be overrepresented in the justice system and far too many Canadians do not have confidence that public safety agencies are there to protect them. This must change.

- Budget 2021 proposes to provide $75 million over five years, starting in 2021-22, and $13.5 million ongoing, to the Royal Canadian Mounted Police to take action, with steps to combat systemic racism through: reforming recruitment and training processes; the collection, analysis, and reporting of race-based data; more rapidly evaluating the impact of policing activities on certain communities; and improving community engagement and consultation with Black, Indigenous, and racialized communities.

Reforming Canada's Pardons Process

For a Canadian with a criminal record, the obstacles they face (long after serving out their sentence) can impede their ability to fully reintegrate and contribute to their community. A pardon increases access to jobs, education, stable housing, and makes communities safer by helping to end the cycle of crime. However, fees and difficult-to-navigate processes pose unnecessary barriers to pardons, particularly among marginalized groups.

- Budget 2021 proposes to provide $88.2 million over five years, starting in 2021-22, with $13 million ongoing, to the Parole Board of Canada, the Royal Canadian Mounted Police, and Public Safety Canada. This funding would reduce application fees, create an online application portal, and support community organizations that help people navigate the pardon application process.
- To help ensure that the pardons program works fairly and effectively to keep Canadians safe, the government is announcing its intention to amend the *Criminal Records Act* to make pardons more accessible to people who have served their sentences and are living law-abiding lives.

Reforming the Judicial Conduct Review Process

Canada's judicial system is built on a foundation of trust, impartiality, and respect. The judges that preside over Canada's federal, provincial, and territorial superior courtrooms should uphold these values, so it is important that when allegations of misconduct arise, investigations are conducted in an efficient, transparent, and accountable manner. To reform the judicial conduct process, while fully respecting judicial independence:

- The government proposes to amend the *Judges Act* to reform the judicial conduct process by increasing public participation, streamlining appeals, and giving the Canadian Judicial Council new tools to address misconduct, at an estimated cost of $10 million over five years and $2 million ongoing.
- Budget 2021 proposes to provide $8.5 million over five years, starting in 2021-22, and $0.5 million ongoing, to the Canadian Judicial Council and the Office of the Commissioner for Federal Judicial Affairs to continue investigations and inquiries during upcoming reforms as well as the proposed new process.
- Budget 2021 proposes to amend the *Judges Act* to freeze a judge's pension entitlements, as of the date the Canadian Judicial Council recommends a judge's removal from office.

Enhancing the Capacity of Superior Courts

An accessible justice system requires efficient court processes that help Canadians obtain timely resolutions to their legal disputes. That is why the government has committed to creating new judicial positions. To help reduce court delays and enhance access to justice across Canada's superior courts:

- Budget 2021 proposes to amend the *Judges Act*, the *Federal Courts Act*, and the *Tax Court of Canada Act* to add 13 new superior court positions, including an Associate Chief Justice position for the Supreme Court of Newfoundland and Labrador. Budget 2021 also proposes to provide $49.3 million over five years, starting in 2021-22, and $10.4 million ongoing, for these 13 additional superior court judicial positions.

Maintaining Federal Court Services During COVID-19

To ensure the continued safe operation of Canada's federal courts during the COVID-19 pandemic, the Courts Administration Service has adapted and implemented necessary public health measures.

- Budget 2021 proposes to provide $5.4 million, in 2021-22, on a cash basis, to maintain safe court services for Canadians during the pandemic.

Re-establishing the Law Commission of Canada

A Law Reform Commission of Canada was first introduced in 1971 to provide independent legal advice to the Government of Canada. After being shuttered in 1992, it was re-established as the Law Commission of Canada, in 1997. Despite a track record of providing guidance on key legal questions (for example, on the matter of same-sex marriage), the commission was closed again in 2006. Independent expertise is critical if Canada's legal system is to be responsive to the complex challenges of the day such as systemic racism in the justice system, legal issues around climate change, establishing a new relationship with Indigenous peoples, and rapid technological shifts in the world.

- Budget 2021 proposes to provide $18 million over five years, starting in 2021-22, and $4 million ongoing, to Justice Canada to revive the Law Commission of Canada.

Preventing the Spread of COVID-19 in Correctional Institutions

The Government of Canada has a responsibility to keep all Canadians safe from COVID-19 infection, including the inmates at federal correctional institutions, who are disproportionately Indigenous and Black, and staff. Since the start of the COVID-19 pandemic, the Correctional Service of Canada has worked to limit the spread of the virus within its institutions.

- Budget 2021 proposes to provide $154.6 million, in 2021-22, to the Correctional Service of Canada to limit the spread of COVID-19 and keep staff and inmates safe, while enabling safe access to rehabilitative services. This includes the procurement of personal protective equipment, enhanced cleaning protocols, and support for increased use of IT for remote work, as necessary, during the pandemic.

Enhancing Data Collection on Cyber Security Threats

As our society becomes increasingly digital, the government must continually assess emerging cyber security threats and ensure that the government can respond and protect Canadians and Canadian businesses.

- Budget 2021 proposes to provide $4.1 million over five years, starting in 2021-22, and $1.0 million ongoing, for Public Safety Canada to continue the cyber security and cybercrime survey program.

Improving How Access to Information Works for Canadians

Since 2015, the Government of Canada has invested approximately $35 million in incremental funds to improve Canadians' access to information. To continually raise the bar on openness, effectiveness, and transparency in government and to provide requestors with the timely responses they deserve:

- Budget 2021 proposes to provide an additional $12.8 million over five years, starting in 2021-22, to the Treasury Board of Canada Secretariat, to support further improvements to the online Access to Information and Personal Information Request Service, to accelerate the proactive release of information to Canadians, and to support completion of the *Access to Information Act* review. This will help address delays in response time that the government is committed to fixing.

9.3. Defending Canada and Canadian Values

Canada's 2017 defence policy, *Strong, Secure, Engaged*, set out a vision for a long-term, fully-funded plan to renew and re-equip the Canadian military, built around people. Providing the women and men of the Canadian Armed Forces with the training, equipment, and care they deserve is the most important objective of this policy. This investment is also central to defending Canada and promoting Canada's values around the world.

Budget 2021 reaffirms Canada's commitments to its allies.

The government also understands that for Canada's military to truly renew, its culture must be one in which all members of the armed forces are safe and where sexual misconduct and abuse of power are not tolerated.

Addressing Sexual Misconduct and Gender-based Violence in the Military

The federal government has no tolerance for sexual misconduct or gender-based violence in the Canadian Armed Forces. Recently reported stories about misconduct are shining a light on the scope of the problem. The members of Canada's military make enormous sacrifices to protect Canadians and, regardless of rank or gender, have an inalienable right to serve in safety, in a respectful and dignified work environment. Since the 2015 External Review into Sexual Misconduct and Sexual Harassment in the Canadian Armed Forces, important progress has been made, but there remains much work to do. The government is committed to taking further action to strengthen accountability mechanisms, promote culture change in the military, and provide a safe space for survivors to report misconduct and access the services they need. In addition to the Budget 2021 measures below, the federal government will have more to announce in the coming weeks on next steps.

- Budget 2021 proposes to provide $236.2 million over five years, starting in 2021-22, and $33.5 million per year ongoing to the Department of National Defence and Veterans Affairs Canada, including $158.5 million over 5 years and $29.9 million per year ongoing funded from existing resources to expand their work to eliminate sexual misconduct and gender-based violence in the military and support survivors. Specifically:
  - Enhance internal support services to victims, including access to free, independent legal advice and enabling military members to access services without making a formal complaint.
  - Expand an existing contribution program to support community-based

sexual assault service providers outside major urban military centres, and increase the reach of the Sexual Misconduct Response Centre that serves the Canadian Armed Forces to additional locations across Canada.

- Pilot online and in-person peer support groups for Canadian Armed Forces members and veterans who experienced sexual misconduct during their service. These will be tailored to military experience.
- Conduct research to inform targeted training and response frameworks, and engage external experts to support education and training to prevent sexual violence.
- Implement new external oversight mechanisms to bring greater independence to the processes of reporting and adjudicating sexual misconduct within the military.
- Undertake other initiatives to enhance institutional capacity to address harassment and violence, including enhancing the military justice system to better respond to allegations of misconduct and support survivors.

These investments will be part of the government's broader National Action Plan to End Gender-Based Violence.

Supporting NORAD Modernization

Canada takes seriously its responsibility to defend against threats to North America, including as a member of the North American Aerospace Defence Command (NORAD). Since NORAD was established in 1958, the threats facing the continent have evolved significantly — including as climate change drives a changing strategic context in the Arctic. Building on commitments in Canada's defence policy, *Strong, Secure, Engaged,* the Prime Minister and the President of the United States recently agreed to modernize NORAD and expand cooperation on continental defence and in the Arctic to keep people in both our countries safe.

- Budget 2021 proposes to provide $163.4 million over five years, starting in 2021-22, with $111.1 million in remaining amortization, to support NORAD modernization. This investment would lay the groundwork for NORAD's future, including through research and development of cutting-edge technologies that can detect and defend against threats to the continent.
- Budget 2021 also proposes to provide $88.8 million over five years, starting in 2021-22, with $48.7 million in remaining amortization and $0.6 million per year ongoing, to sustain existing continental and Arctic defence capability.

These early measures will position Canada to move forward hand-in-hand with the United States on modernizing NORAD and to maintain continental defence

and deterrence capabilities. It will also support jobs and businesses in Canada's North.

Increasing Canada's Contributions to NATO

Since its creation in 1949, the North Atlantic Treaty Organization (NATO) has been a cornerstone of Canadian defence policy. In 2019, Canada committed to increase its contribution to the NATO Readiness Initiative, an agreement to enhance the pool of high-readiness forces and capabilities available for collective defence and crisis response. To follow through on this commitment and invest in a ready and capable collective defence force to help keep Canadians safe:

- Budget 2021 proposes to provide $541.2 million over five years, starting in 2021-22, to the Department of National Defence to maintain an additional six fighter aircraft and a frigate as part of the NATO Readiness Initiative.
- Budget 2021 also proposes to provide up to $305.9 million over five years, starting in 2020-21, to the Department of National Defence to cover higher Canadian contributions to NATO's common budget and military activities.

This funding demonstrates Canada's unwavering commitment to NATO and will strengthen this country's capacity to respond to evolving global security challenges.

Advancing the Safer Skies Initiative

Canada launched the Safer Skies Initiative after Ukraine International Airlines Flight 752 was shot down by Iran on January 8, 2020, killing all 176 people on board, including 138 people with ties to Canada. Since then, Canada has been at the forefront of global efforts to uncover the full truth of what happened, including by highlighting the major shortcomings of the Iranian investigation, and demanding that Iran provide answers to Canadians who lost loved ones.

While we cannot bring back the lives lost, we can do our utmost to prevent similar tragedies in the future. The goal of the Safer Skies Initiative is to prevent civil aviation tragedies like Flight 752 from ever happening again. To achieve this, the initiative will bring together like-minded countries, international associations, industry, and the International Civil Aviation Organization to develop a warning system that can keep civilian aircraft out of dangerous conflict zones when the countries responsible for those conflict zones fail to act responsibly to close their dangerous airspace. Safe and secure air travel will be more important than ever when the world emerges from the global pandemic.

To help protect Canadians and reduce civil aviation safety risks:

- Budget 2021 proposes to provide $9.1 million over five years, starting in 2021-22, to Transport Canada for the continued development and implementation of the Safer Skies Initiative, which includes supporting the operations of the Conflict Zone Information Office.

To pay tribute to the students, teachers, and all those victims of Flight 752 who had ties to schools across Canada, the government will establish scholarships in memory of the victims of Flight 752.

On March 10, 2019, Ethiopian Airlines Flight 302 crashed near Addis Ababa, Ethiopia, claiming the lives of 157 people, including 18 Canadians and many others with ties to Canada. To honour the memory of those who died on Ethiopian Airlines Flight 302:

- Budget 2021 also proposes to provide $5.6 million over five years, starting in 2021-22, to Transport Canada for commemoration initiatives, which could include scholarships.

To honour all victims of air tragedies, the government has designated January 8th of every year as a National Day of Remembrance for Victims of Air Disasters.

Sustaining Health Services for the Canadian Armed Forces

To continue protecting the health and safety of the women and men who serve in the Canadian Armed Forces, especially during COVID-19:

- Budget 2021 proposes to provide $134.3 million over five years, starting in 2021-22, and $28.2 million per year ongoing, to ensure that Canadian Armed Forces members receive timely access to health care.

Better Equipping Our Coast Guard and Military

Public Services and Procurement Canada manages the procurement of equipment and ships for the Canadian Armed Forces and the Canadian Coast Guard. Procurement and project management volumes are increasing as Canada implements its defence policy, *Strong, Secure, Engaged*.

- Budget 2021 proposes to provide $70.8 million over 10 years, starting in 2021-22, to ensure the timely delivery of defence and marine procurement projects.
- Budget 2021 also proposes to provide $1.1 million in 2021-22 to augment the Cost and Profit Assurance Program, which saves millions annually through the audit and oversight of defence contracts.

This funding will increase defence procurement efficiency, help Canada negotiate better contracts, improve oversight, and lower costs in the long run. Ultimately, it will help ensure our women and men in uniform receive the equipment they need.

Ensuring Procurement Partners Respect Canada's Economic Interests

In December 2017, the government announced that the evaluation of bids for the competition to replace Canada's fighter aircraft would include an assessment of bidders' impact on Canada's economic interests, and that any bidder that had harmed Canada's economic interests would be disadvantaged.

- Budget 2021 confirms the government will apply this policy to major military and Coast Guard procurements going forward. Companies found to have prejudiced Canada's economic interests through trade challenges will have points deducted from their procurement bid score at a level proportional to the severity of the economic impact, to a maximum penalty.

This policy will protect Canada's economic interests and make sure the government does business with trusted partners who value doing business with Canada.

9.4 Building a Safer, Resilient, and Equitable World

The government understands that to protect people, save lives, and defeat COVID-19, global collaboration is essential and that Canada has a responsibility to take action on shared challenges. In Budget 2021, the government is making investments to support Canada's international COVID-19 response, with a focus on addressing the health needs in developing countries (Chapter 1).

Furthermore, it is important that our global economic recovery be fair and not leave the most vulnerable countries behind. This is the surest path to a more stable, peaceful, and prosperous world. That is why Budget 2021 commits an additional $1.4B over five years in international assistance to support developing countries and vulnerable populations respond to this crisis and to meet growing humanitarian needs around the world.

The government also recognizes that climate change and biodiversity loss do not respect borders. Not only do they represent existential threats in their own right, but they are also catalysts for instability, conflict, starvation, and pandemics. That is why Canada intends to build on its ambitious plan to reduce greenhouse gas emissions in Canada with an ambitious commitment to combat climate change and biodiversity loss around the world in the coming months leading up to the international COP conferences. These commitments will

particularly help those already being affected by climate change to adapt, with a focus on those in low and middle income countries. This is part of Canada's contribution to ensure 2021 is a transformative year for ambitious global climate action and COP26 is a success.

Increasing International Humanitarian Assistance

The COVID-19 pandemic has driven the number of people in need of humanitarian assistance to new highs. The United Nations estimates that 235 million people worldwide will require humanitarian assistance and protection in 2021.

- Budget 2021 proposes to allocate an additional $165 million in 2021-22 to Global Affairs Canada to provide international humanitarian assistance to save lives and alleviate suffering resulting from conflicts, food insecurity, and other crises in developing countries.

This support would be used by trusted humanitarian partners to provide needs-based and gender-responsive assistance in vulnerable countries affected by protracted crises.

This funding is in addition to the $1 billion increase to Canada's loan commitment to the International Monetary Fund's Poverty Reduction and Growth Trust, which provides interest-free loans to low-income countries. Additionally since May 2020, Canada has provided more than $70 million in temporary debt service relief for the poorest countries through the G20 and Paris Club agreed Debt Service Suspension Initiative (DSSI). For the final DSSI extension to the end of 2021, announced by the G20 on April 7th, Canada could provide up to an additional $33 million in relief. Canada also strongly supports the G20 Common Framework for Debt Treatments which will enable more comprehensive debt relief for the poorest countries.

Responding to the Rohingya Crisis

Three years after Canada became the first country in the world to recognize the attacks perpetrated against the Rohingya minority as constituting a genocide, over 860,000 refugees are living in the world's largest refugee camp, in Bangladesh. To continue to respond to this humanitarian crisis, encourage positive political developments, ensure accountability for the crimes committed, and enhance international cooperation:

- Budget 2021 proposes to allocate $288.3 million over three years, starting in 2021-22, to Global Affairs Canada to respond to the Rohingya crisis.

This investment is part of Canada's ongoing efforts to address the crisis in Myanmar. Canada condemns the recent actions of the Myanmar military and State Administrative Council and stands with the people of Myanmar in their quest for democracy and human rights.

Response to the Venezuelan Migrant and Refugee Crisis

The political and economic situation in Venezuela has led to more than five million Venezuelans to flee their homes—and it is currently one of the world's largest displacement crises. Canada is a key player in international efforts to find solutions to this crisis.

- Budget 2021 proposes to provide $80.3 million over two years, starting in 2021-22, to Global Affairs Canada and Immigration, Refugees and Citizenship Canada to respond to the Venezuelan migrant and refugee crisis. This investment would enable Canada to help reduce human suffering, irregular migration, and security threats in the region, while improving the integration of migrants and refugees into host communities.

Extending Canada's Middle East Strategy

Since 2016, Canada has been a major contributor to the international response to the crisis in Iraq, Syria, and neighbouring countries. Canada has worked with its allies to reduce instability in the region and counter terrorism by groups like Daesh through the NATO Mission in Iraq and Operation IMPACT.

While there has been progress, the situation remains fragile.

To continue providing development, humanitarian, and military support and advance peace and stability in the region:

- Budget 2021 proposes to provide $527 million in 2021-22, on a cash basis, to Global Affairs Canada, the Department of National Defence, the Communications Security Establishment, and the Canadian Security Intelligence Service to extend Canada's Middle East Strategy for another year.

Recapitalization of FinDev Canada

Private sector finance is critical to helping developing countries reduce poverty, economically empower women, and mitigate and adapt to climate change. FinDev Canada advances these objectives by supporting inclusive private sector growth and sustainability in developing countries.

- Budget 2021 proposes to provide a $300 million recapitalization over three years, starting in 2023-24, to FinDev Canada, from the retained earnings of Export Development Canada, to allow FinDev Canada to build a portfolio totaling $1.4 billion.

Supporting Developing Economies Through the International Finance Corporation

The International Finance Corporation (IFC) supports private-sector development in developing economies. In April 2020, the World Bank Group Board of Governors, which includes Canada, provided final approval for a US$5.5 billion capital increase for the IFC.

- Budget 2021 proposes to provide US$175.9 million (an estimated $224.4 million) to the Department of Finance Canada through the International Assistance Envelope, to fully purchase the IFC shares allocated to Canada in 2021-22. Fully purchasing the shares allocated to Canada in 2021-22 would enable the IFC to rapidly expand its support in response to the COVID-19 crisis.

Supporting the African Development Bank

The financial capacity of the African Development Bank (AfDB) has been eroded by the COVID-19 crisis. This bank is a core development partner of Canada that plays a critical role in economic growth and development in Africa. In May 2020, Canada committed to provide US$253.4 million over eight years, starting in 2020-21, to purchase shares in the latest general capital increase of the AfDB.

- Budget 2021 proposes to accelerate and complete Canada's purchase of shares of the African Development Bank in 2022-23, rather than in 2027-28, to help alleviate the financial strain during the COVID-19 crisis and enable it to maintain support to its client countries through the recovery. Funding for Canada's purchase of shares is allocated to Global Affairs Canada from the International Assistance Envelope.

Canadian Ombudsperson for Responsible Enterprise

A robust and responsible global trading system generates prosperity and jobs at home and abroad. The Canadian Ombudsperson for Responsible Enterprise (CORE) reflects the government's commitment to advance the responsible conduct by Canadian companies when doing business abroad.

- Budget 2021 proposes to provide an additional $16.0 million over five years, starting in 2021-22, and $3.3 million per year ongoing, to Global Affairs Canada to support the CORE. This would enable the CORE to fulfil its mandate of ensuring ethically, socially, and environmentally responsible practices of Canadian corporations when doing business abroad. To this end, the CORE will conduct reviews of human rights abuse allegations involving Canadian companies in the resource mining, oil and gas, and apparel sectors overseas.

Part IV

Fair and Responsible Government

Chapter 10
Responsible Government

The government is focused on building the middle class and building an economy that works for everyone. To do that, Canadians need a tax system that is fair.

The COVID-19 pandemic has shed new light on the importance of delivering services to Canadians in a timely and efficient manner. Providing these services requires a continued commitment to ensuring that everyone pays their fair share of tax, so that essential supports can be available to those in need—especially in times of crisis.

In Canada, we have a progressive tax system. Those who make more pay more to support the services that all Canadians rely on. That is why the first thing the government did in 2015 was to raise taxes on the wealthiest to pay for a middle class tax cut. At the same time, the government is also committed to maintaining a strong financial sector that Canadians can count on to safeguard their savings and investments.

10.1 A Tax System that Promotes Fairness

Taxes help pay for the government programs and services that benefit Canadians. They provide a social safety net on which all Canadians can rely in times of crisis. And they make sure that Canada can invest in people and in helping our economy grow and recover.

A tax system in which everyone pays their fair share requires action on multiple fronts: addressing aggressive tax planning schemes; aligning our rules with evolving international norms; ensuring that digital service providers pay their fair share of taxes; and strengthening the government's ability to crack down on tax evasion, money laundering, and terrorist financing.

The actions proposed in Budget 2021 will help Canada continue to have the resources needed to support the middle class and people working hard to join it, invest in Canadians, and keep our economy strong.

Digital Services Tax

The government is committed to ensuring that corporations in all sectors, including digital corporations, pay their fair share of tax on the money they earn by doing business in Canada. Increasingly, many digital companies earn revenues from the active collection and use of Canadians' data. In the 2020 *Fall Economic Statement*, the government announced that it would be moving ahead to implement a tax on corporations providing digital services. This builds on the changes announced at that time to ensure that the Goods and Services Tax/Harmonized Sales Tax applies in a fair and effective manner to the growing digital economy.

Canada has a strong preference for a multilateral approach to this issue. Work is underway to reach a multilateral agreement on cross-border digital taxation by mid-2021, and Canada is optimistic about the progress made this year. However, multilateral discussions have been going on since 2013. That is why, while Canada's hope and preference is for a multilateral solution this summer, whether or not a deal is reached, Canada intends to take action.

- Budget 2021 proposes to implement a Digital Services Tax at a rate of 3 percent on revenue from digital services that rely on data and content contributions from Canadian users. The tax would apply to large businesses with gross revenue of 750 million euros or more. It would apply as of January 1, 2022, until an acceptable multilateral approach comes into effect. This would help ensure that Canada's tax rules capture new ways in which businesses carry out value-creating activities.

It is estimated that this measure will raise $3.4 billion in revenue over five years beginning in 2021-22.

Luxury Tax

Even as Canadians have sacrificed to keep our economy going through the pandemic, some of the wealthiest have done well. Those who can afford to buy luxury goods can afford to pay a bit more. To that end, the government is following through on its commitment to introduce a tax on select luxury goods.

- Budget 2021 proposes to introduce a tax on the sales, for personal use, of luxury cars and personal aircraft with a retail sales price over $100,000, and boats, for personal use, over $250,000. The tax would be calculated at the lesser of 20 per cent of the value above the threshold ($100,000 for cars and personal aircraft, $250,000 for boats) or 10 per cent of the full value of the luxury car, boat, or personal aircraft. This measure would come into force on January 1, 2022.

It is estimated that this measure will increase federal revenues by $604 million over five years, starting in 2021-22.

Tax on Unproductive Use of Canadian Housing by Foreign Non-resident Owners

Across the country, young Canadians who are starting to build their future are running up against sky-high housing prices.

In the 2020 *Fall Economic Statement*, the government announced that it would take steps over the coming year to implement a national, tax-based measure targeting the unproductive use of domestic housing that is owned by non-resident, non-Canadians. This will help to ensure that foreign, non-resident owners, who simply use Canada as a place to passively store their wealth in housing, pay their fair share.

- Budget 2021 announces the government's intention to implement a national, annual 1 per cent tax on the value of non-resident, non-Canadian owned residential real estate that is considered to be vacant or underused, effective January 1, 2022. The tax will require all owners, other than Canadian citizens or permanent residents of Canada, to file a declaration as to the current use of the property, with significant penalties for failure to file.

Homes are to live in. This measure is one tool among several to ensure that Canada's housing market is a place to grow for Canadians starting their families and building their future.

In the coming months, the government will release a consultation paper to provide stakeholders with an opportunity to comment on the parameters of the proposed tax, including on whether special rules should be established for small tourism and resort communities. Moving forward, the government intends to work closely with provinces, territories, and municipalities.

It is estimated this measure will increase federal revenues by $700 million over four years, starting in 2022-23. These revenues will help to support the government's significant investments to make housing more affordable for all Canadians.

Limitations on Excessive Interest Deductions

Many firms borrow in order to fund their operations. Generally, the interest charges on those borrowings are considered a cost of doing business and, therefore, are deductible from income for tax purposes. However, some large companies, typically multinationals, use excessive deductions of interest to reduce the taxes they pay in Canada.

All G7 countries—except Canada—have taken action, as a result of the Base Erosion and Profit Shifting (BEPS) Project, to limit excessive interest deductions by large companies.

- Budget 2021 proposes that, starting in 2023, the amount of interest that certain businesses can deduct be limited to 40 per cent of their earnings in the first year of the measure and 30 per cent thereafter. Relief will be provided for small businesses and for other situations that do not represent significant tax base erosion risks. The government expects to release draft legislation this summer and will seek stakeholder input on the new rules.

This strengthening of the rules on interest deductibility will ensure that large companies pay their fair share and bring Canada in line with other jurisdictions, including all our G7 peers. It is estimated that this measure will increase federal revenues by $5.3 billion over five years, starting in 2021-22.

Preventing Cross-border Tax Schemes

Hybrid mismatch arrangements are cross-border tax schemes, used primarily by multinational enterprises, that exploit differences between Canadian and foreign income tax laws to avoid paying their fair share of tax. Under the current rules, a multinational company can exploit the different treatment of certain business entities and financial instruments in Canada and another country to earn income that is not taxed in any country. These schemes not only erode the tax base that supports programs and services for Canadians, but they also give an unfair advantage to multinational enterprises over Canadian businesses, particularly our small and medium-sized businesses.

- Budget 2021 proposes to amend the *Income Tax Act* to eliminate the tax benefits of hybrid mismatch arrangements. These proposals would be implemented in stages starting July 1, 2022.

These proposals will level the playing field and help ensure everyone pays their fair share. It is estimated that this measure will increase federal revenues by $775 million over four years starting in 2022-23.

Mandatory Disclosure Rules

It is important that the Canada Revenue Agency be able to obtain timely information on arrangements that involve aggressive tax planning. Canada has been an active participant in the Base Erosion and Profit Shifting (BEPS) Project—an initiative of the G20 and the Organisation for Economic Co-operation and Development. The BEPS Project is primarily devoted to tackling the problem of certain corporations and wealthy individuals inappropriately shifting profits offshore and using other international tax avoidance schemes. This project has shown that stronger rules are needed to strengthen the Canada Revenue Agency's ability to curtail tax evasion and aggressive tax avoidance in both the domestic and international context.

- Budget 2021 launches public consultations on proposals to enhance Canada's income tax mandatory disclosure rules, building on the advice of the BEPS Project. This consultation will address changes to the *Income Tax Act*'s reportable transaction rules, a new requirement to report notifiable transactions, and a new requirement for specified corporations to report uncertain tax treatments.

Tackling Tax Avoidance and Evasion

The government has made significant investments since 2015 to strengthen the Canada Revenue Agency's (CRA's) ability to crack down on complex tax schemes, increase collaboration with international partners, and ultimately bring offenders to justice. These investments have yielded positive results.

Budget 2021 builds on these previous investments with new measures to combat tax evasion and aggressive tax avoidance. Having the means to avoid paying one's fair share should not mean that one can.

- Budget 2021 proposes an additional $304.1 million over five years, starting in 2021–22, to allow the CRA to fund new initiatives and extend existing programs, including:
    - Increasing GST/HST audits of large businesses where risk assessment models have found the greatest risk of non-compliance.
    - Modernizing the CRA's risk assessment process to prevent unwarranted and fraudulent GST/HST refund and rebate claims at the outset, and improve the ability to issue refunds for compliant businesses as quickly as possible.
    - Enhancing capacity to identify tax evasion involving trusts and provide better service to executors and trustees.

Budget 2021 estimates that these measures to combat tax evasion and aggressive tax avoidance will recover $810 million in revenues over five years. Additional gains will be realized by provinces and territories, whose tax revenues will also increase as a result of these initiatives.

Strengthening the CRA

The success of the CRA's work in combatting aggressive tax planning, the underground economy, and tax evasion depends on the CRA's ability to collect outstanding taxes in a timely way.

- Budget 2021 proposes to provide $230 million over five years, starting in 2021-22, for the CRA to improve its ability to collect outstanding taxes. It is anticipated that this proposal will lead to the collection of an additional $5 billion in outstanding taxes over five years.

Protecting the Fairness and Integrity of Our Tax System

The Federal Court of Appeal decision in *Her Majesty The Queen v Cameco Corporation* has highlighted concerns with the application of Canada's domestic transfer pricing rules. Taking into account the court's reasoning, the government believes that, without reform, shortcomings in the current transfer pricing rules can encourage the inappropriate shifting of corporate income out of Canada, artificially reducing corporations' taxes owed in Canada. If not addressed, this poses a risk to the integrity of Canada's corporate income tax system. Furthermore, Canada must ensure that there is not a separate set of rules that large corporations can play by.

- Budget 2021 announces the government's intention to consult on Canada's transfer pricing rules with a view to protecting the integrity of the tax system while preserving Canada's attractiveness as a destination for new investment and business activity.

In the coming months, the Department of Finance will release a consultation paper to provide stakeholders with an opportunity to comment on possible measures to improve Canada's transfer pricing rules. The government will also take next steps to strengthen and modernize Canada's general anti-avoidance rule, as announced in the 2020 *Fall Economic Statement*.

Action Against Money Laundering and Terrorist Financing

Money laundering and terrorist financing are a threat to the security of the financial system. An effective regime to combat these threats is essential to protecting Canadians and the integrity of the financial sector.

- Budget 2021 proposes to provide $4.6 million over four years, starting in 2022-23, and $0.6 million per year ongoing, to enable the Financial Transactions and Reports Analysis Centre of Canada (FINTRAC) to: build its expertise related to virtual currency; supervise the armoured car sector; and develop and administer a cost recovery scheme for its compliance activities.

The Canada Revenue Agency plays an important role in the fight against terrorist financing and money laundering in Canada. In support of this role, amendments to the *Income Tax Act* are needed to address legislative gaps and streamline the revocation process to prevent abuse of charitable status.

- Budget 2021 proposes to amend the *Income Tax Act* to allow for the immediate revocation of charitable status for organizations listed as a terrorist entity.
- Budget 2021 also proposes to prevent individuals with a known history of supporting terrorism from becoming a director, trustee, or similar official of a registered charity.
- Budget 2021 further proposes to allow for the revocation of charitable status when a charity provides false statements for the purpose of maintaining their registration.

By preventing the abuse of charities, these proposed measures will strengthen Canada's Anti-Money Laundering and Anti-Terrorist Financing Regime.

Beneficial Ownership Transparency

To catch those who attempt to launder money, evade taxes, or commit other complex financial crimes, law enforcement, tax, and other authorities need access to accurate and up-to-date data on the individuals who own and control corporations. Building on public consultations in 2020:

- Budget 2021 proposes to provide $2.1 million over two years to Innovation, Science and Economic Development Canada to support the implementation of a publicly accessible corporate beneficial ownership registry by 2025.

Combatting Abusive Tax Collection Avoidance Schemes

A small number of high-net-worth taxpayers are engaging in complex transactions intended to avoid the collection of their tax debts. This is done by transferring their assets to a non-arm's length person—such as a corporation owned by the same person—in a manner that leaves them without the assets necessary to pay their tax debts while circumventing an existing tax rule that is intended to prevent this type of scheme.

- Budget 2021 proposes to introduce a number of amendments to the *Income Tax Act* to address this type of planning, as well as a penalty for those who devise and promote such schemes.

Improving Duty and Tax Collection on Imported Goods

The efficient and fair collection of duties and taxes on imported goods protects the competitiveness of Canadian businesses.

- Budget 2021 proposes changes to the *Customs Act* to improve duty and tax collection. These changes would ensure that goods are valued in a fair and consistent manner by all importers. This would level the playing field between domestic and foreign businesses and generate an estimated $150 million in additional annual duty revenues. The changes would also modernize and digitize the duty and tax payment process for commercial importers, so as to minimize administrative burden.

10.2 A Stable and Robust Financial Sector

Canadians expect the financial system to safeguard their savings and investments and deliver the financial services they need, especially in times of uncertainty. The financial sector and its governing framework has performed well during the COVID-19 pandemic, supported by strong supervisory oversight and responses of financial sector agencies.

Budget 2021 proposes measures to further strengthen Canada's financial sector framework, including: modernizing corporate governance; strengthening Canada's anti-money laundering and anti-terrorist financing framework; targeted legislative initiatives that will support consumers, promote innovation, and enhance the stability, security, and integrity of the financial system in advance of the next legislative review, in 2025 (see Annex 3); and a new retail payments oversight framework.

Retail Payments Oversight Framework

The current COVID-19 crisis has accelerated the adoption of digital payments and highlighted the need to have safe and reliable digital payments.

- The government will work with provincial partners to introduce legislation to implement a new retail payments oversight framework that would promote growth, innovation, and competition in digital payment services while making these payments services safer and more secure for consumers and businesses. In doing so, the government will work with provincial partners in recognition of complementary objectives and powers in this area.

Budget 2021 proposes a public consultation on measures that would expand federally regulated financial institutions' use of electronic communications with their owners, including the delivery and provision of governance documents, as well as virtual meetings.

10.3 Better Services for Canadians

The government is continuously modernizing and improving the way it delivers programs and services to Canadians. As we have seen over the last year, fast and efficient government services and programs are critical to helping Canadians and businesses through challenging times.

Budget 2021 moves forward with a plan to ensure Canadians have reliable and secure digital access to more government services.

E-payroll to Help Businesses

The COVID-19 pandemic highlighted the need to accelerate the government's commitment to implementing a real-time e-payroll solution that will reduce red tape, and increase the delivery, speed, and accuracy of services and benefits. E-payroll is a "tell-us-once" approach that will streamline employer reporting by collecting electronic payroll, employment, and demographic data directly from businesses in real-time. E-payroll will save time for Canadian businesses, especially small businesses.

In response to the pandemic, countries with some form of a real-time payroll data reporting system had greater accuracy with targeting support and benefits, and were able to deploy benefits rapidly. The government is committed to a modernized benefits delivery platform that can target support when Canadians need it most and will ensure all Canadians are receiving all the benefits they are entitled to.

- Budget 2021 proposes to provide $43.9 million over three years, starting in 2021-22, for the Canada Revenue Agency (CRA) to accelerate the ongoing work with Digital Government and Employment and Social Development Canada (ESDC), and to develop the first phase of an e-payroll solution through the testing of prototype options for the implementation of a real-time e-payroll solution for the Government of Canada.
- A Central Agency Steering Committee co-chaired by the Privy Council Office and the Office of the Chief Information Officer (Treasury Board Secretariat) will work with the CRA and ESDC to oversee the implementation plan.

Protecting Taxpayer Information

Cyber security is more important than ever and the government is committed to securing taxpayer information against any and all who would attempt to breach Canadians' private information. Millions of Canadians rely on the CRA's digital services to access financial lifelines like the CERB, wage subsidy, or rent subsidy. Since February 2020, registration for the CRA's secure digital services has increased by 36 per cent and logins have increased by 170 per cent. To further safeguard the electronic data stored by the CRA and protect Canadians' personal information from falling into the wrong hands:

- Budget 2021 proposes to provide $330.6 million over five years, starting in 2021-22, with $1.6 million in remaining amortization, and $51.2 million ongoing, to the Canada Revenue Agency to invest in new technologies and tools that match the growing sophistication of cyber threats, and to ensure the CRA's workforce has the specialized skills to proactively monitor threats and better safeguard Canadian data.

Modernizing CRA Services

To modernize CRA services and help people quickly and easily access the tax credits and benefits they are entitled to:

- Budget 2021 proposes to provide $41.7 million over three years, starting in 2021-22, to the CRA to reduce processing time for T1 adjustments (i.e. corrections to people's general income tax return) by making online self-service more user-friendly and improving automated processing of T1 adjustments. Faster processing of T1 adjustments will provide Canadians with more timely access to their credits and benefits.
- The CRA has created a simplified credit and benefit return and Canada Child Benefit form for First Nations individuals, and will be expanding this project to make these forms more widely available to more Indigenous people. The improved forms take into account Indigenous experience—such as community care and nurturing of children—and remove information that is not applicable to Indigenous peoples.

Canadian Digital Service

The Canadian Digital Service was established in 2017 to design and deliver digital government services. During the pandemic, its services and expertise were more vital than ever. It launched the COVID Alert App, used by more than 6 million people in Canada and providing over 26,000 exposure notifications, helping to prevent tens of thousands of possible outbreaks in our communities. It also accelerated the development of GC Notify, a platform to provide vital email and text messaging services for an array of COVID-19 services, showcasing how effective design and delivery can serve Canadians. To make sure that the Canadian Digital Service can meet the growing needs of Canadians and Canadian businesses:

- Budget 2021 proposes to provide $88 million over four years, starting in 2022-23, and $25.8 million ongoing, to the Treasury Board of Canada Secretariat to renew and expand the capacity of the Canadian Digital Service and further improve how the government delivers digital services to Canadians.

10.4 Reinforcing Government of Canada Operations

To provide Canadians with the programs and services they deserve and expect, the government must continue to invest in core, mission-critical government operations, while continuously identifying opportunities to use resources more efficiently. The government is committed to improved productivity across federal organizations and cost-effective and efficient government services.

Measuring What Matters

There is a growing recognition internationally that economic growth is only one dimension of what makes for a good quality of life. Currently, Canada collects less detailed information about non-economic indicators than economic indicators. Better federal data sets are needed to better incorporate quality of life measurements into decision-making and budgeting, similar to international approaches such as in New Zealand and Scotland.

- Budget 2021 proposes to provide $7.7 million over five years, and $1.6 million ongoing, to enable Statistics Canada to improve quality of life measures and address key data gaps.
- Budget 2021 further proposes to provide $6.1 million over five years, and $0.6 million ongoing, to enable Statistics Canada to bring together key economic, social, and environmental datasets and develop a user interface to better support decision-making and budgeting.

These are in addition to more than $285 million over five years, and more than $40 million ongoing, in proposed Budget 2021 investments across government to collect better, disaggregated data that will enable the government, researchers, and others to better understand the experiences of people in Canada and environmental changes.

Reducing Government Travel

COVID-19 has significantly affected the way the federal government operates, with a greater reliance on digital and virtual interaction, reducing the need for travel.

- Budget 2021 proposes to reduce the operating budgets of the departments and agencies with the highest historical travel costs, resulting in combined savings of $1.1 billion over five years, starting in 2021-22, and $222.5 million per year ongoing.

These savings will be in the interests of Canadian taxpayers and offset increased costs and requirements related to the pandemic, particularly upgrades to Government of Canada IT systems.

Improving and Defending Our Cyber Networks

Threats to cyber security are growing globally. The protection of Canadians' personal information is a priority for the government. Maintaining secure, up-to-date cyber security and defence capabilities on reliable networks is essential as more Canadians access government services digitally. To ensure the security of Canadians' information:

- Budget 2021 proposes to provide $456.3 million over five years, starting in 2021-22, with $60.7 million in remaining amortization and $62.2 million ongoing, to Shared Services Canada and the Communications Security Establishment.

Modernizing Critical IT Infrastructure

Canada's IT infrastructure is aging faster than the pace of repairs or replacements. By investing in IT infrastructure, the government will ensure that key services like Old Age Security and Employment Insurance benefits or immigration and border case management will continue to be delivered and can be modernized in a timely manner. To perform critical upgrades and a modernization of Canada's IT infrastructure and improve the way benefits and services are delivered to Canadians over the coming decade:

- Budget 2021 proposes to provide a total of $648 million on a cash basis to Employment and Social Development Canada and the Treasury Board Secretariat over the next seven years, starting in 2021-22, to continue implementing Benefit Delivery Modernization, invest in Service Canada's IT systems and related activities, and support service delivery to Canadians going forward.
- Budget 2021 also proposes to provide $300 million on a cash basis to Shared Services Canada over the next three years, starting in 2021-22, to continue work to repair and replace critical IT infrastructure.

Eliminating the Backlog of Pay Problems	0	23	23	0	0	0	*47*
Funding proposed for Public Services and Procurement Canada to support the workforce dedicated to processing pay transactions. This will help the department achieve its target of eliminating the backlog of Phoenix pay system transactions by December 2022.							
Stabilizing Human Resources, Pay, and Pensions	0	23	23	0	0	0	*45*
Funding proposed for the Treasury Board of Canada Secretariat to ensure that the Office of the Chief Human Resources Officer has the capacity necessary to address human resources, pay, and pension policy matters on behalf of the Government.							
Advancing Public Service Job Classification	0	5	5	0	0	0	*10*
Funding proposed for the Treasury Board of Canada Secretariat to support the Classification Program, which ensures that the relative value of work is recognized and compensated appropriately across the core public administration.							
Modernizing Leave Without Pay Provisions	0	8	11	11	11	11	*52*
Proposed changes to the Public Service Superannuation Regulations to align provisions concerning pensionable service status for periods of absence without pay with enabling legislation.							
Justice Canada Employee Benefit Plan Rate Change	0	0	39	39	39	39	*157*
Less: Costs to be Recovered	*0*	*0*	*-39*	*-39*	*-39*	*-39*	*-157*
Funding proposed for Justice Canada to account for the implementation of comprehensive Employee Benefit Plan rate changes charged to client departments for legal services. This measure is a technical adjustment and there is no fiscal impact.							

	2020-2021	2021–2022	2022-2023	2023-2024	2024-2025	2025-2026	*Total*
Improving Federal Asset Management	0	2	2	1	0	0	*5*
Funding proposed for the Treasury Board of Canada Secretariat to implement recommendations from its Fixed Asset Review (announced in Budget 2017) and to help departments respond to real property use changes resulting from the COVID-19 pandemic. This will help ensure the Government's real property portfolio is modern, agile, and right-sized, as well as financially and environmentally sustainable.							
Supporting Government Translation and Interpretation Services	0	9	9	0	0	0	*18*
Funding proposed for the Translation Bureau to respond to a higher volume of translation and interpretation requests while continuing to support a remote working environment. This will ensure that Parliamentarians and Canadians receive timely translation and interpretation services in both of our official languages as well as Indigenous languages, sign languages, and other languages spoken across Canada.							
Procurement Workforce	0	7	9	9	9	9	*43*
Funding proposed for Public Services and Procurement Canada to continue to deliver procurement services to client departments and agencies, negotiate increasingly complex high value contracts, and develop and implement a vendor performance management framework.							
Supporting the Office of the Chief Information Officer	0	6	7	7	7	7	*34*
Funding proposed for the Treasury Board of Canada Secretariat to ensure that the Office of the Chief Information Officer has the necessary resources to provide strategic direction and leadership in the areas of information management, information technology, security, privacy, and access to information across the Government of Canada.							
Supporting Efficient, Stable Digital Applications	0	58	98	20	20	20	*215*
Funding proposed for Shared Services Canada to continue to help government departments and agencies assess digital applications and data, then decommission or move them to modern computing facilities. This will reduce service interruptions, loss of data, and security risks for government operations and digital services.							
Public Services and Procurement Canada Program Integrity	0	30	0	0	0	0	*30*
Funding proposed to Public Services and Procurement Canada to continue service delivery to federal departments and agencies, maintain federal employee salaries, and to support employee safety during the pandemic.							
Employment and Social Development Canada Rent Price Adjustment	0	1	1	1	1	1	*4*
Less: Funds From CPP Account	*0*	*0*	*0*	*0*	*0*	*0*	*-1*
Funding proposed for Employment and Social Development Canada to cover rent increases related to its national network of service centres and offices.							
Supporting the Public Service Occupational Health Program	0	4	8	8	0	0	*19*
The Public Service Occupational Health Program is the occupational health service provider of the federal public service, providing specialized occupational health evaluations and technical advice to help departments meet their Canada Labour Code obligations. Proposed funding would allow the program to continue to play this function for departments by addressing program integrity pressures.							

	2020-2021	2021–2022	2022-2023	2023-2024	2024-2025	2025-2026	*Total*
Renewing funding for the Office of Public Service Accessibility	0	3	3	3	0	0	*10*
Funding proposed for the Treasury Board Secretariat to continue its work to improve accessibility in the federal government, including strengthening capacity for implementing an Accessibility Strategy for the Public Service and supporting departments in fulfilling legislative obligations under the Accessible Canada Act.							
Addressing Financial Impacts on Atomic Energy of Canada Limited	0	38	0	0	0	0	*38*
Funding proposed for Atomic Energy of Canada Limited to mitigate the financial impacts of the COVID-19 pandemic, including budget pressures due to supply chain disruptions, delays in the construction schedules of key projects, lost revenues, and additional costs related to increased health and safety protocols.							
Strengthening Capital Markets Stability and Enforcement	0	12	0	0	0	0	*12*
Funding proposed for the Canadian Securities Transition Office to continue supporting federal efforts to advance the Cooperative Capital Markets Regulatory System and to strengthen capital markets stability and enforcement in Canada.							
CRA Administrative Funding for Certain Budget 2019 Measures	0	10	9	8	7	6	*41*
Funding proposed for the Canada Revenue Agency for the administration of certain tax measures announced in Budget 2019. This includes funding associated with the Canadian Journalism Labour Tax Credit, the designation process for Qualifying Canadian Journalism Organizations, the Canada Training Credit, and the permitting of advanced life deferred annuities and variable payment life annuities under certain registered plans.							
Supporting the Ongoing Delivery of Benefits to Canadians	0	77	4	0	0	0	*81*
Less: Funds From CPP Account	*0*	*-9*	*0*	*0*	*0*	*0*	*-9*
Less: Projected Revenues	*0*	*0*	*0*	*0*	*0*	*-6*	*-6*
Funding proposed for Employment and Social Development Canada to continue to support both remote and in-person delivery of services and benefits to Canadians. This will support delivery of Old Age Security, the Canada Pension Plan and Employment Insurance.							
Chapter 10 - Net Fiscal Impact	***5***	***206***	***-692***	***-1,768***	***-2,368***	***-2,453***	***-7,070***

Note: Numbers may not add due to rounding.

[1] An important proportion of the overall projected revenue impact (75%) relates to the expectation that the measure will help in preventing the shifting of debt into Canada.

Annex 1
Details of Economic and Fiscal Projections

Economic Projections

The average of private sector forecasts has been used as the basis for economic and fiscal planning since 1994. This helps ensure objectivity and transparency, and introduces an element of independence into the government's economic and fiscal forecast. The economic forecast presented in this section is based on a survey conducted in March 2021.

The March survey includes the views of 13 private sector economists:

1. BMO Capital Markets,
2. Caisse de dépôt et placement du Québec,
3. CIBC World Markets,
4. The Conference Board of Canada,
5. Desjardins,
6. IHS Markit,
7. Industrial Alliance Insurance and Financial Services Inc.,
8. Laurentian Bank Securities,
9. National Bank Financial Markets,
10. Royal Bank of Canada,
11. Scotiabank,
12. TD Bank Financial Group, and
13. The University of Toronto (Policy and Economic Analysis Program).

Private sector economists expect real gross domestic product (GDP) to rebound from a contraction of 5.4 per cent in 2020 to growth of 5.8 per cent in 2021 and 4 per cent in 2022, a faster recovery than the growth rates of, respectively, 4.8 per cent and 3.2 per cent projected in the November 2020 Fall Economic Statement (FES 2020). This improved outlook reflects stronger-than-expected results in the last quarter of 2020, and higher projected growth starting in the second quarter of this year due to a faster anticipated rollout of vaccines (Table A1.1 below). Real GDP growth is expected to moderate to about 2 per cent on average per year over the remaining years of the forecast horizon, reflecting a return to trend long-run growth rates.

Along with the faster recovery in economic activity, the unemployment rate is expected to decline from its peak of 9.6 per cent in 2020 to 8 per cent in 2021 and 6.5 per cent in 2022, a faster projected decline than in FES 2020. The unemployment rate is expected to reach 5.9 per cent by 2025.

The outlook for GDP inflation (the broadest measure of economy-wide price inflation) in the March 2021 survey has also been revised up for 2021 compared to FES 2020 forecast (from 2.2 per cent to 3.3 per cent) reflecting better-than-expected results in the second half of 2020 and upward forecast revisions in the first quarter of 2021, in part attributable to higher oil prices. Going forward, GDP inflation is expected to stand at about 2 per cent per year.

As a result of these developments, the level of nominal GDP (the broadest measure of the tax base) is projected at $2,408 billion for 2021, $68 billion higher than projected in FES 2020 (but still $75 billion lower than projected in the Economic and Fiscal Update 2019). The nominal GDP level difference with FES 2020 is expected to average about $70 billion per year over the 2020-2025 period.

While the outlook for the short-term interest rate is broadly similar to FES 2020 projection, forecasts for the long-term interest rate have been revised up in the March 2021 survey by about 40 basis points over the 2020-2025 period compared to FES 2020 forecast.

(3) Net actuarial losses	0.0	3.4	3.3	2.9	2.1	1.5
(4) Public debt charges	-0.1	-1.8	-3.3	-4.8	-4.9	-5.0
(5) Total economic and fiscal developments	**35.2**	**15.8**	**19.3**	**16.0**	**12.8**	**10.3**

[1] A negative number implies a deterioration in the budgetary balance (lower revenues or higher expenses). A positive number implies an improvement in the budgetary balance (higher revenues or lower expenses).

Budgetary revenues, particularly income tax revenues, have been revised up relative to FES 2020. In the near-term, this is driven by the faster-than-expected economic recovery in the second half of 2020. Over the longer-term, an improvement in the outlook for the labour market, personal income and corporate profitability drive revisions to personal and corporate income tax revenues.

- Because more people will be working, and earning more, income tax revenues are projected to be $11.8 billion higher in 2020-21 due to strong year-to-date results, and up on average by more than $12 billion per year over the forecast horizon.
- Excise taxes and import duty revenues have been revised upwards in large part due to an upward revision to Goods and Services Tax (GST) revenues, reflecting a stronger outlook for consumption.
- Proceeds from the federal pollution pricing framework that arise from the provinces and territories that are a part of the federal backstop are projected to be marginally higher reflecting an improved economic outlook. These proceeds will continue to be fully returned: primarily through Climate Action Incentive payments to eligible individuals and families in Alberta, Manitoba, Ontario and Saskatchewan and through a transfer to the governments of Yukon and Nunavut.
- Employment Insurance (EI) premium revenues have been revised up due to better-than-expected labour force participation and an improved outlook for economy-wide wage growth.
- Other revenues, such as those resulting from sales of goods and services, investments and loans, interest and penalties, and Crown corporations' net profits, are projected to be much higher in 2020-21 than expected at the time of FES 2020. This improvement is primarily due to better-than-expected financial performance by enterprise Crown corporations, and lower-than-expected premiums paid by the Bank of Canada in the course of its secondary market purchases of Government of Canada securities to support liquidity in financial markets. Upward revisions in future years largely reflect an improved outlook for enterprise Crown corporations profits, including income on increased asset balances held by the Bank of Canada.

Program expenses, particularly major transfers to persons and direct program expenses, are projected to be significantly lower in 2020-21 relative to FES 2020, largely reflecting the revised timing and re-estimation of the cost of COVID-response programs, such as the Canada Emergency Response Benefit.

- Over the remainder of the forecast horizon, adjustments to major transfers to persons reflect the impact of higher expected inflation, to which children's and elderly benefits rates are indexed.

- Major transfers to other levels of government are higher in 2021-22, reflecting a revised preliminary estimate of potential Fiscal Stabilization payments. In the outer years of the forecast, expenses have been revised upwards, as a result of the stronger economic outlook as the Canada Health Transfer and Equalization payments are indexed to growth in nominal GDP.
- Direct program expenses, which include pollution pricing proceeds returned, other transfer payments administered by departments, and departmental operating expenses, have been adjusted downward in 2020-21 and upward in 2021-22, largely due to the revised timing of COVID program expenses. Over the horizon, direct program expenses are revised downward, driven by lower anticipated pension and benefits current service costs, and slightly lower departmental spending projections.

Net actuarial losses, which represent changes in the measurement of the government's obligations for pensions and other employee future benefits accrued in previous fiscal years, are expected to be lower relative to FES 2020, reflecting upward revisions to projected long term interest rates used to value the obligations.

Public debt charges have increased to reflect higher expected interest costs on interest-bearing debt due to higher interest rates, and a revised financial requirement. Despite these developments, public debt charges remain on a sustainable long-term path and are $1.6 billion lower in 2022-23 than was forecast in the 2019 Economic and Fiscal Update (forecast of $27.3 billion at that time), before the onset of COVID. This is in spite of the substantial increase in federal debt as a result of the pandemic.

Note: Totals may not add due to rounding.

[1] This represents those charges applied through the federal backstop, excluding the Output Based Pricing System. All these proceeds will be returned to their province/territory of origin through Climate Action Incentive payments and other climate supports.

Table A1.5 sets out the government's projection for budgetary revenues.

Personal income tax (PIT) revenues – the largest component of budgetary revenues – are projected to increase to $168.2 billion in 2020-21, or 0.4 per cent. This limited growth reflects the negative impact of the COVID-19 crisis on household incomes, partly compensated by measures put in place by the government to support income. PIT revenues are expected to rebound to $180.4 billion in 2021-22 as employment levels recover. For the remainder of the forecast, PIT revenue growth is expected to return to an average of 4.3 per cent, in line with projected nominal GDP growth.

Corporate income tax (CIT) revenues are projected to decrease by 7.6 per cent, to $46.2 billion in 2020-21. The decline is driven by lower corporate profitability and general economic weakness due to the impact of COVID-19. Starting 2021-22, CIT is expected to rebound and grow at an average rate of 7.6 per cent per year through to the end of the forecast horizon, reflecting the outlook for corporate profitability.

Non-resident income tax revenues are income taxes paid by non-residents on Canadian-sourced income, notably dividends and interest payments. These revenues are expected to decrease to $8.5 billion in 2020-21, or 10.7 per cent, as corporate profits and investment income were hit by the economic impacts of the crisis, before rebounding to $9.9 billion in 2021-22. From 2022-23 on, growth is expected to return to an average of 4.3 per cent.

GST revenues are forecast to fall to $29.8 billion in 2020-21, or 20.3 per cent, reflecting the temporary shutdown of large portions of the retail sector and the introduction of the one-time enhanced GST credit payment, before increasing to $41 billion in 2021-22, or 37.4 per cent. Over the remainder of the projection period, GST revenues are forecast to grow by 4.1 per cent per year, on average, reflecting the outlook for taxable consumption.

Customs import duties are projected to fall from $4.9 billion in 2019-20 to $3.7 billion in 2020-21, or 22.8 per cent, due to lower imports and the government's waiver of customs duties on medical goods in order to better combat the spread of COVID-19, before rebounding to $4.5 billion in 2021-22, or 19.8 per cent. Over the remainder of the horizon, customs import duties are projected to grow at an average annual rate of 6.4 per cent due to expected growth in imports.

Other excise taxes and duties (OETD) are projected to decline to $10.5 billion in 2020-21, or 10.2 per cent, primarily reflecting lower air travel security surcharge and excise tax revenue from motive fuels as a result of decreased demand since the onset of the pandemic. OETD revenues are expected to increase to $11.7 billion in 2021-22, or 11.4 per cent, as demand recovers, and over the remainder of the projection period, are expected to grow at an average annual rate of 2.7 per cent, reflecting projected underlying consumption growth.

The new digital services tax (DST) is expected to be in effect as of January 1, 2022. DST revenues are projected to be $0.2 billion in 2021-22, and rise to $0.9 billion by 2025-26.

In 2020-21, EI premium revenues are projected to remain unchanged at $22.2 billion. Over the remainder of the projection horizon, premium revenues are anticipated to grow at an average annual rate of 7.1 per cent, largely due to the current outlook for the labour market, the end of the currently planned two-year freeze in premium rates as of 2023, and the return to a premium rate structure under current legislation that balances accumulated spending in the account over seven years. The current forecast anticipates a gradual increase in premium rates, beginning in 2023, from $1.58 to $1.83 per $100 insurable earnings by the end of the horizon. This would result in a premium rate that is still lower than the peak level of rates at $1.88 following the 2008-09 recession. The government will continue to review premium rates following the results of its consultations on future EI reforms over the course of the next year and where the labour market stands further on in the recovery.

Other revenues consist of three broad components: net income from enterprise Crown corporations; other program revenues from returns on investments, proceeds from the sales of goods and services, and other miscellaneous revenues; and revenues in the Exchange Fund Account.

Enterprise Crown corporation revenues are projected to decrease by $18.9 billion in 2020-21 and increase by $21 billion in 2021-22, before growing thereafter at an average annual rate of 15.2 per cent. These projections reflect the outlooks presented in corporate plans of respective enterprise Crown corporations, including the impact of COVID-19 on profits, and the impact of Bank of Canada programs introduced during COVID-19, including purchases of Government of Canada securities on the secondary market to support liquidity in financial markets.

Other program revenues are affected by consolidated Crown corporation revenues, interest rates, inflation and exchange rate movements (which affect the Canadian-dollar value of foreign-denominated assets). These revenues are projected to decline by 31.5 per cent or $6.6 billion in 2020-21, primarily due to a decline in interest and penalty revenue of $2.7 billion and return on investments of $1.3 billion as a result of lower interest rates and interest and penalty waivers provided as part of the government's COVID-19 response, along with a $1.6 billion projected decline in revenue from sales of goods and services. Over the remainder of the forecast horizon, these revenues are projected to grow at an average annual rate of 10.4 per cent, largely as a result of growth in revenue from return on investments and interest and penalty revenue.

Net foreign exchange revenues, which consist mainly of returns on investments held in the Exchange Fund Account, are volatile and sensitive to fluctuations in foreign exchange rates and foreign interest rates. These revenues are projected to decrease in 2020-21 due mainly to lower interest rates.

Employment Insurance Operating Account

Employment Insurance Operating Account Projections

	2019-2020	2020-2021	2021-2022	2022-2023	2023-2024	2024-2025	2025-2026		
EI premium revenues	22.2	22.2	23.7	25.4	27.3	29.2	31.2		
EI benefits[1]	21.8	33.5	41.2	28.1	24.5	24.9	25.6		
EI administration and other expenses[2]	2.0	2.1	2.1	2.2	2.0	1.9	1.9		
	2019[3]	**2020**	**2021**	**2022**	**2023**	**2024**	**2025**	**(...)**	**2028**
EI Operating Account annual balance	2.1	-6.3	-21.9	-6.1	-0.7	2.2	3.8		6.5
EI Operating Account cumulative balance	5.9	-0.3	-22.2	-28.3	-29.0	-26.8	-22.9		-4.4[4]
Projected premium rate (per $100 of insurable earnings)	1.62	1.58	1.58	1.58	1.63	1.68	1.73		1.83

1 EI benefits include regular EI benefits, sickness, maternity, parental, compassionate care, fishing and work sharing benefits, and employment benefits and support measures. EI benefits exclude EI-Emergency Response Benefit costs as these will not be recovered via EI premiums in line with the Government's commitment to credit the EI Operating Account.

2 The remaining EI costs relate mainly to administration and are included in direct program expenses.

3 Values for 2019 are actual data. Values for 2020 and future years are a projection.

4 The EI Operating Account cumulative balance does not reach exactly zero at the end of the seven-year period as projected EI rates are rounded to the nearest whole cent per $100 of insurable earnings, in accordance with the *Employment Insurance Act*. In addition, the positive deficit amount in 2028 reflects the cost of new support measures that are not fully recovered due to the 5-cent limit on premium rate increases.

The Employment Insurance Operating Account operates within the Consolidated Revenue Fund. As such, EI-related revenues and expenses that are credited and charged to the Account, respectively, in accordance with the Employment Insurance Act, are consolidated with those of the government, and impact the budgetary balance. For consistency with the EI premium rate, which is set on a calendar-year basis with the objective of having the Account break even over time, the annual and cumulative balances of the Account are also presented on a calendar-year basis.

The EI Operating Account is expected to record annual deficits from 2020 to 2023 as a result of the increase in EI benefits (excluding the Emergency Response Benefit) and the temporary freeze on EI premiums through 2022. The Account is then projected to record annual surpluses starting in 2024 due to projected increases in the premium rate until reaching $1.83. The increases reflect the practice of the rate-setting mechanism that started with the setting of the 2017 premium rate.

		Projection					
	2019–2020	2020–2021	2021–2022	2022–2023	2023–2024	2024–2025	2025–2026
Total program expenses	14.6	27.9	19.7	15.8	15.4	15.0	14.9

Note: Totals may not add due to rounding.

[1] EI benefits include regular EI benefits, sickness, maternity, parental, compassionate care, fishing and work-sharing benefits, and employment benefits and support measures. Remaining EI costs relate mainly to administration and are part of operating expenses. As in FES 2020, this includes the portion of payments for the Emergency Response Benefit charged to the EI Operating Account, totalling $1.8 billion in 2019-20, and an estimated $26.3 billion in 2020-21. These costs are not projected to be recovered with higher EI premiums given the government's commitment to credit the EI Operating account for the costs associated with the Emergency Response Benefit program.

[2] Includes the Children's disability benefits and residual payments for the Universal Child Care Benefit (UCCB), now replaced by the Canada Child Benefit.

[3] Other fiscal arrangements includes the Quebec Abatement (Youth Allowances Recovery and Alternative Payments for Standing Programs); payments under the Canada-Nova Scotia Arrangement on Offshore Revenues; Fiscal Stabilization payments; and established terms for repayable floor loans. In 2020-21 this also includes COVID-19 response measures.

[4] This includes the return of charges applied through the federal backstop, excluding those through the Output Based Pricing System, which are returned to their province/territory of origin through Climate Action Incentive payments and other climate supports.

[5] Amounts exclude funding for Indigenous Early learning and Child Care which are included in the other transfer payments line.

[6] This includes capital amortization expenses.

[7] Actuarial gains and losses were previously reported as "Losses (gains) from employee future benefit plans" and as a part of Direct program expenses, but are now presented in a new line item titled Net actuarial losses since FES 2020.

Table A1.6 provides an overview of the projection for program expenses by major component. Program expenses consist of three main categories: major transfers to persons, major transfers to other levels of government, and direct program expenses.

Major transfers to persons consist of elderly, Employment Insurance (EI) and children's benefits, as well as the Canada Emergency Response Benefit and Recovery Benefits.

Elderly benefits are projected to reach $58.8 billion in 2020-21, up 4.6 per cent, due to an increase in the population of seniors. Over the remainder of the horizon, elderly benefits are forecast to grow by $4.4 billion per year, on average, reflecting the ongoing demographic change, and projected consumer price inflation, to which benefits are fully indexed, as well as the planned 10 per cent increase to regular Old Age Security payments for pensioners 75 and over on an ongoing basis as of July 2022 announced in this budget.

EI benefits are projected to increase to $59.8 billion in 2020-21, largely reflecting the cost of Emergency Response Benefits ($26.3 billion) and higher unemployment resulting from the crisis. The government has committed to crediting the EI Operating Account for costs resulting from the Emergency Response Benefit, which means that they will not result in higher future EI

premiums. EI benefits are expected to fall to $24.5 billion by 2023-24 as a result of the projected improvement in the labour market. After which, EI benefits are forecast to grow at an average of 2.3 per cent annually, as the unemployment rate is projected to stabilize at around 6 per cent after 2023.

The Canada Emergency Response Benefit (CERB) was introduced as part of Canada's COVID-19 Economic Response Plan to provide immediate assistance to Canadians not eligible for EI benefits. The government is committed to continuing to support all Canadians and has introduced the Canada Recovery Benefit (CRB), the Canada Recovery Sickness Benefit (CRSB) and the Canada Recovery Caregiving Benefit (CRCB). The CERB and the Canada Recovery Benefits (CRB, CRSB and CRCB) are expected to cost $57.3 billion in 2020-21, decreasing to $13.9 billion in 2021-22 as the economy recovers and temporary programs end.

Canada Child Benefit (CCB) payments are projected to increase 13.3 per cent to $27.6 billion in 2020-21, largely reflecting temporary top up transfers. These benefits will stay close to this level for 2021-22, mainly due to the temporary support for families with young children introduced in the 2020 Fall Economic Statement, before decreasing to $26.3 billion in 2022-23 as temporary supports expire. For the period 2022-23 to 2025-26, CCB payments are expected to grow at an average annual rate of 2 per cent, reflecting forecasted consumer price inflation to which the benefits are indexed.

Major transfers to other levels of government, which include the Canada Health Transfer (CHT), the Canada Social Transfer (CST), Equalization, Territorial Formula Financing and the Canada Community-Building Fund (formerly known as the Gas Tax Fund), among others, are expected to increase by 34.8 per cent to $106.7 billion in 2020-21, reflecting the unprecedented level of support provided to provinces and territories during the pandemic. The increase in 2020-21 is driven by previously announced COVID-19 response measures, including $4 billion for a one-time increase to the Canada Health Transfer, the $2.2 billion top-up to the Canada Community-Building Fund, and $1 billion that is being provided to assist provinces and territories with immunization campaigns.

As a result of the one-time, $4 billion increase to the CHT in 2020-21, total CHT support is $5 billion higher than in 2019-20. Beginning in 2021-22, the CHT is projected to grow from $43.1 billion to $51.7 billion in 2025-26, as it grows in line with a three-year moving average of nominal GDP growth, with funding guaranteed to increase by at least 3 per cent per year. The CST is legislated to grow at 3 per cent per year. Canada Community-Building Fund payments are indexed at 2 per cent per year, with increases applied in $100 million increments. Home care and mental health transfers are projected to be $1.3 billion in 2020-21, stabilizing at $1.2 billion starting in 2022-23.

Direct program expenses, which include proceeds from the pollution pricing framework returned, the Canada Emergency Wage Subsidy, the Canada-Wide Early Learning and Child Care plan, other transfer payments administered by departments, and operating expenses, are expected to increase about 100 per cent to $304.3 billion in 2020-21. The projected increase in direct program expenses is largely driven by COVID-19 response measures, including the wage subsidy, with an estimated cost of $84.6 billion in 2020-21. Direct program expenses are projected to fall to $193 billion in 2024-25. This fall is partially offset in the outer years by the new Canada-Wide Early Learning and Child Care System, which is expected to cost $3 billion in 2021-22 growing to $7.7 billion by 2025-26.

Other transfer payments administered by departments are projected to increase about 90 per cent to $103.3 billion in 2020-21, reflecting investments made to help Canadian families and businesses through the crisis. This includes the expected cost of the loan repayment incentive for the Canada Emergency Business Account $12.6 billion, and $3 billion for the Canada Emergency Student Benefit. Also contributing to the increased costs are supports for seniors through a one-time payment ($2.5 billion) provided in July 2020, and to small businesses through the Canada Emergency Commercial Rent Assistance ($1.9 billion), and through the Canada Emergency Rent Subsidy ($4.1 billion). Other transfer payments are projected to fall to $76.1 billion by 2022-23, as the economy recovers and support measures are lifted, after which they are projected to stabilize around $71.5 billion per year, on average.

Operating expenses reflect the broad range of day-to-day costs of government operations for more than 100 government departments, agencies and Crown corporations. Operating expenses are projected to increase to $111.6 billion in 2020-21, and to $122.5 billion in 2021-22. This includes spending related to the procurement of vaccines and personal protective equipment in response to the crisis. Operating expenses are projected to decrease to $107.7 billion by 2022-23, after which they are projected to grow at an average of 0.7 per cent, annually.

Net actuarial losses, which represent changes in the measurement of the government's obligations for pensions and other employee future benefits accrued in previous fiscal years, are expected to increase to $15.4 billion in 2020-21. This increase reflects losses stemming from the 2019-20 actuarial valuations of the government's pension and benefit plans, which are amortized to expense starting in 2020-21. These 2019-20 losses were due mainly to lower long-term interest rates used to value the obligations, as well as increased costs associated with the utilization of disability and other future benefits provided to veterans. Over the horizon, net actuarial losses are forecasted to decline reflecting the increase in projected long-term interest rates.

Financial Source/Requirement

The budgetary balance is presented on a full accrual basis of accounting, recording government revenues and expenses when they are earned or incurred, regardless of when the cash is received or paid. In contrast, the financial/source requirement measures the difference between cash coming in to the government and cash going out. This measure is affected not only by the budgetary balance, but also by the government's non-budgetary transactions. These include changes in federal employee pension liabilities; changes in non-financial assets; investing activities through loans, investments and advances; and changes in other financial assets and liabilities, including foreign exchange activities.

Table A1.7

The Budgetary Balance, Non-Budgetary Transactions and Financial Source/Requirement

billions of dollars

		Projection

Total	1.8	34.8	-33.1	-8.2	-7.5	-6.9	-5.9
Total	**-7.8**	**13.5**	**-36.0**	**8.6**	**-11.3**	**-14.4**	**-8.1**
Financial source/requirement	**-47.2**	**-340.6**	**-190.7**	**-51.1**	**-62.4**	**-50.2**	**-38.8**

As shown in Table A1.7, a financial requirement is projected in each year over the forecast horizon, largely reflecting financial requirements associated with the projected budgetary balance.

A financial source is projected for pensions and other accounts for 2020-21 to 2025-26. Pensions and other accounts include the activities of the Government of Canada's employee pension plans and those of federally appointed judges and Members of Parliament, as well as a variety of other employee future benefit plans, such as health care and dental plans, and disability and other benefits for veterans and others. The financial source for pensions and other accounts largely reflects adjustments for pension and benefit expenses not funded in the period.

Financial requirements for non-financial assets mainly reflect the difference between cash outlays for the acquisition of new tangible capital assets and the amortization of capital assets included in the budgetary balance. They also include disposals of tangible capital assets and changes in inventories and prepaid expenses. A net cash requirement of $2.9 billion is projected for 2021-22.

Loans, investments and advances include the government's investments in enterprise Crown corporations, including Canada Mortgage and Housing Corporation, Export Development Canada, the Business Development Bank of Canada, and Farm Credit Canada. They also include loans, investments and advances to national and provincial governments and international organizations, and under government programs, including the Canada Emergency Business Account (CEBA). The projected financial requirements for 2020-21 and 2021-22 mainly reflect the disbursement of loans under CEBA and loans advanced to enterprise Crown corporations under the consolidated borrowing framework. A financial source is projected for 2022-23, largely reflecting the expected repayment of CEBA loans. Financial requirements are projected from 2023-24 to 2025-26, reflecting retained earnings of enterprise Crown corporations, as well loans provided to Crown corporations and third-parties.

In general, loans, investments and advances are expected to generate additional revenues for the government in the form of interest or additional net profits of enterprise Crown corporations, which partly offset debt charges associated with these borrowing requirements. These revenues are reflected in projections of the budgetary balance.

Other transactions include the payment of tax refunds and other accounts payable, the collection of taxes and other accounts receivable, the conversion of other accrual adjustments included in the budgetary balance into cash, as well as foreign exchange activities. A financial source is projected for 2020-21, primarily reflecting adjustments for accrued expenses not paid in the period and non-cash exchange rate impacts. Projected cash requirements over the remainder of the forecast horizon mainly reflect the payment of accounts payable, forecast increases in the government's official international reserves held in the Exchange Fund Account, as well as projected growth in accounts receivable, in line with historical trends.

Alternative Economic Scenarios

There is still a large amount of uncertainty regarding the ultimate path of the recovery and the eventual return to normal economic activity. The outlook continues to be shaped by the path of the virus and its variants as well as by the vaccination rollout.

At the same time, Canada's performance through the second wave over the winter was stronger than projected in the *Fall Economic Statement*. Indeed, the Canadian economy was more resilient during the second wave than the initial wave, suggesting that Canadian households and businesses have adapted to operating under public health restrictions.

To illustrate the consequences of different health outcomes and the associated responses of households and businesses, the Department of Finance has considered two alternative scenarios to the projections of the private sector economists which reflect downside and upside risks to the outlook.

Scenario: Slower Recovery

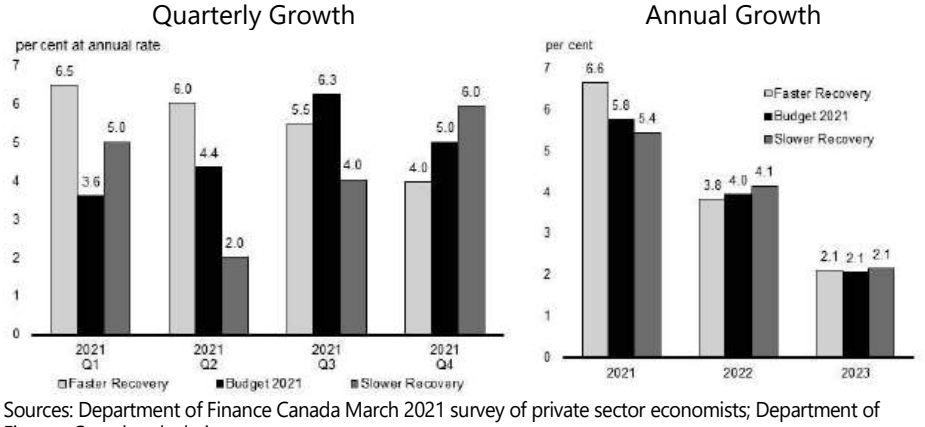
In this scenario, new and more contagious variants of the virus broaden their circulation in Canada, leading to tighter restrictions on businesses vulnerable to social distancing and a delay in the reopening of borders (e.g. restaurants, shopping malls, hairdressers and other personal care) until progress on vaccination can help bring down cases more sustainably. While these restrictions would be less severe than those assumed in previous downside scenarios, activity restrictions induce Canadians to consume less and add further to their accumulated savings.

Further, this scenario assumes that vaccine supply disruptions delays the projected roll out, and assumes vaccines have less efficacy against new variants. In this scenario, getting a critical mass of Canadians vaccinated would take until the end of the year either due to the rise of new variants or some delay in getting the second dose for the two-dose vaccines, resulting in delays of the return to normality.

Overall, the downside risks scenario suggests a reduced pace of growth over the second and third quarters compared to the March survey outlook, with the recovery accelerating in the final quarter of 2021. This reduces the rebound in real GDP to around 5.4 per cent in 2021 but slightly increases the growth outlook for 2022 to around 4.1 per cent, compared to growth rates of, respectively, 5.8 per cent and 4 per cent expected in the March 2021 survey (Chart A1.1 and Table A1.8, below). This is still faster than the baseline forecast for 2021 of the Fall Economic Statement, which expected growth of 4.8 per cent of GDP.

Scenario: Faster Recovery

In this scenario, Canada's diversified portfolio of vaccines allows vaccination rollout to progress faster than expected and most Canadians are vaccinated by the summer. Most importantly, COVID-19 related deaths and hospitalizations plummet rapidly as vulnerable populations are vaccinated. With hospital capacity restored, provinces are able to quickly lift the most stringent public health and border restrictions (e.g. restaurant and retail closures). Public fears of the virus



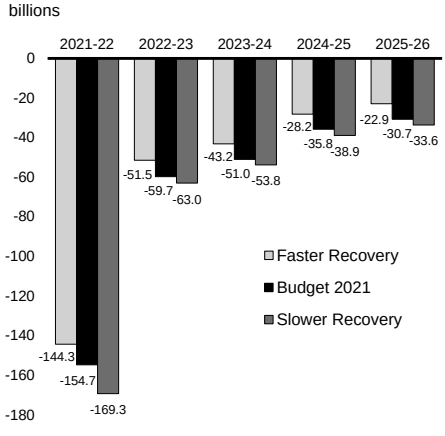
start to recede by the spring and a more robust rebound occurs in the hospitality sector, quickly lifting employment and economic activity.

Further, the prospect of significant fiscal stimulus and a faster vaccination rollout in the U.S. drives demand for Canadian exports and provides upward support to global commodity prices, helping to close the remaining gaps in activity in manufacturing, mining, and energy.

Overall, the upside risks scenario suggests much faster growth in the first half of this year compared to the March survey forecast, with growth slowing thereafter, resulting in a rebound of about 6.6 per cent in 2021 followed by slightly slower growth of around 3.8 per cent in 2022.

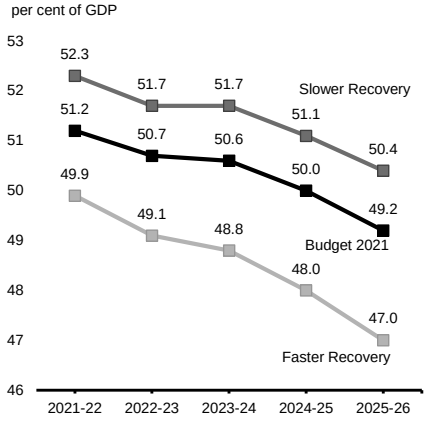
Chart A1.1

Real GDP Growth Outlook



Sources: Department of Finance Canada March 2021 survey of private sector economists; Department of Finance Canada calculations.

The potential impact of these alternative scenarios on the projected federal deficit and debt-to-GDP ratio is shown in Chart A1.2 below. The relative change in economic activity under both scenarios would be expected to affect tax revenues, and expenses such as Employment Insurance benefits and the government's COVID emergency response programs including the Canada Recovery Benefit, and Canada Emergency Wage Subsidy, and, in the downside scenario, may require the government to delay the scaling down of those programs. Notably, in a slower growth scenario, the federal government's business and income supports would need to be extended further.



In total, the downside scenario could be expected to add about $15 billion to the deficit in 2021-22, and 1.2 percentage points to the federal debt-to-GDP ratio by the end of the forecast horizon. In the upside scenario, the deficit would be reduced by approximately $10 billion in 2021-22 and the federal debt-to-GDP ratio would fall to 47 per cent by 2025-26. Under this scenario, inflation is expected to reach a peak of 2.3 per cent in 2023, within the Bank of Canada's inflation-control target range of 1 to 3 per cent, inducing a faster normalization in policy rates.

Chart A1.2

Deficit under alternative economic scenarios

Federal Debt-to-GDP under alternative economic scenarios

Source: Department of Finance Canada calculations.

Notably, in all cases, the debt-to-GDP ratio forecasted here is lower across the planning horizon than the upper limits projected in the Fall Economic Statement, including the impact of planned stimulus. This reflects a generally better economic environment against which the recovery may unfold faster or slower.

Supplementary Information

Sensitivity of Fiscal Projections to Economic Shocks

Changes in economic assumptions affect the projections for revenues and expenses. The following tables illustrate the sensitivity of the budgetary balance to a number of economic shocks:

- A one-year, 1-percentage-point decrease in real GDP growth driven equally by lower productivity and employment growth.
- A decrease in nominal GDP growth resulting solely from a one-year, 1-percentage-point decrease in the rate of GDP inflation (assuming that the Consumer Price Index (CPI) moves in line with GDP inflation).
- A sustained 100-basis-point increase in all interest rates.

These sensitivities are generalized rules of thumb that assume any decrease in economic activity is proportional across income and expenditure components, and are meant to provide a broad illustration of the impact of economic shocks on the outlook for the budgetary balance. The sensitivity analysis conducted in this section has been presented routinely in budgets since 1994, and is separate from the scenarios for a faster or slower recovery presented earlier in this Annex. Actual economic shocks may have different fiscal impacts. For example, they may be concentrated in specific sectors of the economy or cause different responses in key economic variables (e.g. GDP inflation and CPI inflation may have different responses to a given shock).

Table A1.9

Estimated Impact of a One-Year, 1-Percentage-Point Decrease in Real GDP Growth on Federal Revenues, Expenses and Budgetary Balance

billions of dollars

	Year 1	Year 2	Year 5
Federal revenues			
Tax revenues			
Personal income tax	-2.9	-3.0	-3.4
Corporate income tax	-0.5	-0.5	-0.6
Goods and services tax	-0.4	-0.4	-0.4
Other	-0.1	-0.1	-0.2
Total tax revenues	-3.9	-4.0	-4.6
Employment Insurance premiums	-0.1	-0.1	0.8
Other revenues	-0.1	-0.1	-0.1
Total budgetary revenues	-4.1	-4.2	-3.9
Federal expenses			
Major transfers to persons			
Elderly benefits	0.0	0.0	0.0
Employment Insurance benefits	1.3	0.9	1.1
Canada Child Benefit	0.0	0.0	0.0
Total major transfers to persons	1.3	0.9	1.1
Other program expenses	-0.2	-0.3	-0.5
Public debt charges	0.0	0.1	0.5
Total expenses	1.1	0.8	1.0
Budgetary balance	-5.2	-5.0	-4.9

A 1-percentage-point decrease in real GDP growth proportional across income and expenditure components reduces the budgetary balance by $5.2 billion in the first year, $5 billion in the second year and $4.9 billion in the fifth year (Table A1.9).

- Tax revenues from all sources fall by a total of $3.9 billion in the first year. Personal income tax revenues decrease as employment and the underlying tax base fall. Corporate income tax revenues fall as output and profits decrease. GST revenues decrease as a result of lower consumer spending associated with the fall in employment and personal income.

- EI premium revenues are relatively unchanged in the first two years due to the 2021 premium rate already being in effect, and the 2022 rate being frozen. EI revenues increase in the fifth year as the EI premium rate increases, which, under the seven-year break-even mechanism, adjusts to offset the increase in benefits such that the EI Operating Account balances over time.
- Expenses rise, mainly reflecting higher EI benefits (due to an increase in the number of unemployed) and higher public debt charges (reflecting a higher stock of debt due to the lower budgetary balance). This rise is partially offset by lower other program expenses (as certain programs are linked to growth in nominal GDP).

Table A1.10
Estimated Impact of a One-Year, 1-Percentage-Point Decrease in GDP Inflation on Federal Revenues, Expenses and Budgetary Balance
billions of dollars

	Year 1	Year 2	Year 5
Federal revenues			
Tax revenues			
Personal income tax	-2.9	-2.5	-2.5
Corporate income tax	-0.5	-0.6	-0.7
Goods and services tax	-0.4	-0.4	-0.4
Other	-0.1	-0.1	-0.2
Total tax revenues	-3.9	-3.6	-3.7
Employment Insurance premiums	0.0	-0.1	-0.2
Other revenues	-0.1	-0.1	-0.1
Total budgetary revenues	-4.0	-3.8	-4.0
Federal expenses			
Major transfers to persons			
Elderly benefits	-0.4	-0.7	-0.8
Employment Insurance benefits	0.1	0.1	0.2
Canada Child Benefit	0.0	-0.1	-0.3
Total major transfers to persons	-0.3	-0.7	-0.8
Other program expenses	-0.6	-0.6	-1.4
Public debt charges	-0.6	0.1	0.3
Total expenses	-1.5	-1.2	-2.0
Budgetary balance	-2.4	-2.6	-2.1

A 1-percentage-point decrease in nominal GDP growth proportional across income and expenditure components resulting solely from lower GDP inflation (assuming that the CPI moves in line with GDP inflation) lowers the budgetary balance by $2.4 billion in the first year, $2.6 billion in the second year and $2.1 billion in the fifth year (Table A1.10).

- Lower prices result in lower nominal income and, as a result, personal income tax revenues decrease. As the parameters of the personal income tax system are indexed to inflation, the fiscal impact is smaller than under the real shock. For the other sources of tax revenue, the negative impacts are similar under the real and nominal GDP shocks.
- EI premium revenues decrease in response to lower earnings.
- Other revenues decline slightly as lower prices lead to lower revenues from the sales of goods and services.
- Partly offsetting lower revenues are the declines in the cost of statutory programs that are indexed to inflation, such as elderly benefit payments, which puts downward pressure on federal program expenses. In addition, other program expenses are also lower as certain programs are linked directly to growth in wages and nominal GDP.
- Public debt charges decline in the first year due to lower costs associated with Real Return Bonds, then rise due to the higher stock of debt.

Table A1.11
Estimated Impact of a Sustained 100-Basis-Point Increase in All Interest Rates on Federal Revenues, Expenses and Budgetary Balance
billions of dollars

	Year 1	Year 2	Year 5
Federal revenues	2.1	2.7	3.6
Federal expenses	-3.1	-5.3	-8.2
Of which: public debt charges	-3.1	-5.3	-8.2
Budgetary balance	-1.0	-2.5	-4.6

A one per cent increase in interest rates decreases the budgetary balance by $1 billion in the first year, $2.5 billion in the second year and $4.6 billion in the fifth year (Table A1.11). Higher interest rates directly impact estimated public debt charges on marketable debt in two ways. First, interest costs increase as existing debt matures and is refinanced at higher rates. Second, rising rates increase the expected cost of future borrowing needs. Public debt charges are estimated based on the current expectations for future changes in interest rates, which are subject to change based on economic conditions.

It is important to note that interest rates also directly affect other government revenue and expenses and that they typically do not change in isolation. That is, with higher interest rates, the government would realize some offsetting benefits, including:

- Higher revenues from the government's interest-bearing assets, which are recorded as part of other revenues;
- Corresponding downward adjustments that reduce public sector pensions and employee benefits obligations, which are not incorporated in the table above; and,
- Higher government tax revenues if interest rate increases were due to stronger economic growth (also not included in the table above).

Short-term Economic Impacts of Government Support and Investment

There are two primary channels through which government spending can affect short-term output and employment. First, governments can invest in infrastructure or purchase goods and services, which translates into an immediate, dollar-for-dollar increase in final domestic expenditure. Second, governments can induce spending increases by households and businesses through tax measures or transfers. The extent to which these measures boost domestic expenditure and production will be determined by changes in saving and imports.

To estimate the economic impacts of fiscal measures, the Department of Finance allocates spending into expenditure categories, which correspond to those used in the Department's macroeconomic and fiscal model: infrastructure investment, personal income tax and transfer measures, measures for modest- and low-income households, government spending measures (such as government support for research, training, and innovation), and corporate income tax measures. Each of these categories has a different fiscal multiplier, a summary measure that takes into account the channels by which spending affects economic activity, including direct, indirect and induced impacts, and leakages to saving and imports.

Table A1.12 shows the total value of support and investments included in the economic impact assessment. It is expected that support and investments will raise the level of real GDP by 2 per cent by the second year (Table A1.13). This is expected to translate into an increase in employment of more than 330 thousand jobs created or maintained by 2022-2023.

Table A1.12

***A Healthy Environment and a Healthy Economy* Climate Plan Measures – Announced December 11, 2020[2]**						
Creating the Strategic Innovation Fund Net Zero Accelerator	0	267	398	780	785	404
Funding for Innovation, Science and Economic Development Canada of $3 billion (cash basis) over five years to create a Net Zero Accelerator within the Strategic Innovation Fund. The Net Zero Accelerator will help Canada meet its climate change goals by supporting projects that will rapidly expedite decarbonization projects, scale-up clean technology and accelerate Canada's industrial transformation.						
Integrating Climate Considerations in Government Decision-Making	0	2	0	0	0	0
Funding for Environment and Climate Change Canada to develop an analytical lens to integrate climate mitigation and adaptation considerations into federal decisions on policies, programs and proposals.						
Green and Inclusive Community Buildings	0	400	600	500	0	0
Year-over-year reallocation of funding[3]	0	0	-150	0	75	75
Funding for Infrastructure Canada to support retrofits, repairs or upgrades of existing public buildings and the construction of new public buildings that serve communities across Canada.						
Net-Zero Challenge for Large Industrial Emitters	0	1	1	1	1	1
Funding for Environment and Climate Change Canada to launch a Net-Zero Challenge for large industrial emitters to encourage companies to develop and implement plans to transition their facilities to net-zero greenhouse gas emissions by 2050.						
Returning Carbon Pricing Proceeds	0	37	74	73	74	74
Less: Funds Sourced From Existing Departmental Resources	0	-2	0	0	0	0
Less: Fuel Charge Proceeds Booked in the Fiscal Framework	0	-5	0	0	0	0

Less: Estimates of OBPS Proceeds Not Yet Booked in the Fiscal Framework	0	-108	-159	0	0	0
Funding for Environment and Climate Change Canada to continue to administer the Low Carbon Economy funds and return federal carbon pricing proceeds to provinces that do not meet federal carbon pricing benchmark stringency requirements as well as funding for the Canada Revenue Agency to return a portion of carbon fuel charge proceeds collected in New Brunswick directly to the Government of New Brunswick.						
Advancing Smart Renewable Energy and Grid Modernization	0	85	293	293	293	0
Funding to Natural Resources Canada to support renewable power generation projects such as wind and solar, and the deployment of grid modernization technologies such as power storage. This will support emissions reduction and the electrification of the economy.						
Supporting the Net Zero Advisory Body	1	6	4	1	1	1
Funding for Environment and Climate Change Canada to support the Net-Zero Advisory Body, which is an independent expert group that will provide advice to the Government of Canada on the best pathways to achieve net-zero greenhouse gas emissions by 2050.						
Promoting the Demonstration of Clean Technologies	0	60	130	160	175	225
Funding to Sustainable Development Technology Canada to support start-ups and to scale-up companies to enable pre commercial clean technologies to successfully demonstrate feasibility as well as to support early commercialization efforts.						
Transitioning Diesel-Reliant Indigenous Communities onto Clean Energy	0	0	60	60	60	60
Funding to advance the Government's commitment to ensure that rural, remote and Indigenous communities that currently rely on diesel have access to clean and reliable energy by 2030.						
Supporting the Adoption of Clean Technologies in the Agriculture Sector	0	16	34	34	34	34
Funding to support the agriculture industry in developing transformative clean technologies and help farmers adopt commercially available clean technology.

The net fiscal impact of measures that are not announced is presented at the aggregate level, and would include provisions for anticipated Cabinet decisions not yet made (including the use of such provisions from previous budgets or updates) and funding decisions related to national security, commercial sensitivity, contract negotiations and litigation issues.						
Net Fiscal Impact – Total Policy Actions Taken Since the 2020 Fall Economic Statement	**-160**	**-268**	**-939**	**1,138**	**659**	**295**

Note: Totals may not add due to rounding.

1. Timing of estimated costs is notional and would depend on timing of federal election.

2. Supporting the Production and Use of Clean Fuels was also announced as part of the Climate Plan on December 11, 2020 and is included in Chapter 5.

3. Recent year-over-year reallocation shown for information. Not included in totals.

COVID-19 Economic Response Plan

Since March 2020, the government has committed over $345 billion – 15.7 per cent of 2020 GDP – to support Canadians through the pandemic, with major investments in health care, procuring vaccines and personal protective equipment, in income support and responding to businesses' urgent needs. Altogether, these investments by the federal government represent more than 8 out of every 10 dollars spent in Canada to fight COVID-19 and support Canadians.

Table A1.15 below updates the overview of Canada's COVID-19 Response Plan detailed in Chapters 1 and 2 of the *Fall Economic Statement 2020*, with new COVID response measures included in this Budget.

Table A1.15

[1]The impact value reflects projected cash expenditures and liquidity support primarily in 2020-21 (some measures also include projected expenditures in 2019-20, and 2021-22). The fiscal (budgetary) impact on an accrual basis is lower, owing to cash-accrual accounting differences and the fact that some of these measures relate to loans and tax deferrals, for which only provisions for potential losses, and forgone interest and penalties would affect the budgetary balance, respectively.

[2]2022-2023 to 2025-2026.

[3]Announced in March 2021.

[4]Includes the cost of extensions and changes announced in February 2021.

[5]Net fiscal impact, after amounts provisioned in the 2020 Economic and Fiscal Snapshot for Anticipated Decisions.

Annex 2
Debt Management Strategy

Introduction

The 2021-22 *Debt Management Strategy* sets out the Government of Canada's objectives, strategy, and borrowing plans for its domestic debt program and the management of its official reserves.

The *Financial Administration Act* (FAA) requires that the Minister of Finance table, in each House of Parliament, a report on the anticipated borrowing to be undertaken in the fiscal year ahead, including the purposes for which the money will be borrowed and the management of the public debt, no later than 30 sitting days after the beginning of the fiscal year. The 2021-22 *Debt Management Strategy* fulfills this requirement.

This year's Debt Management Strategy takes an important step forward in continuing to implement the government's approach, first outlined last summer in the 2020 *Economic and Fiscal Snapshot*, by issuing long-term debt to finance the emergency support to Canadians and Canadian businesses through the pandemic. As a result of these actions, and the path forward outlined in this year's strategy, the government has a plan to more than double, compared to 2019, the share of its annual bond issuance dedicated to long-term debt. Over the next several years, these actions will result in the government's average term to maturity for its domestic market debt to reach a level not seen in over 40 years. Despite the significant increase in total debt the government has taken on as a result of COVID-19, total public debt charges are projected to be lower both in 2021-22 and 2022-23, than was forecast in December 2019 in the 2019 *Economic and Fiscal Update*.

Objectives

The fundamental objectives of debt management are to raise stable and low-cost funding to meet the financial requirements of the Government of Canada and to maintain a well-functioning market for Government of Canada securities.

For 2021-22, the government will seek to maximize the financing of COVID-19-related debt through long-term issuance. This is a fiscally prudent approach that provides security by lowering debt rollover and providing more predictability in the cost of servicing debt. It involves maintaining a shift towards long-term debt issuance, which began in 2020-21, re-opening the ultra-long 50-year bond in 2021-22, and continuing to issue in this sector in coming years. The government will closely monitor financial markets and may issue more long-term debt if

market conditions are favourable. Having access to a well-functioning government securities market contributes to lower costs and less volatile pricing for the government, ensuring that funds can be raised efficiently over time to meet the government's financial requirements. Moreover, to support a liquid and well-functioning market for Government of Canada securities, the government strives to promote transparency and consistency.

The government plans to update financial markets on the debt program in the fall.

Outlook for Government of Canada Debt

Canada entered the pandemic in a position of fiscal strength which enabled the government to provide extraordinary support to Canadians and Canadian businesses to weather the impact of the pandemic, and better position the economy for recovery. The cost of inaction in the face of this pandemic would have been much higher than that of not doing enough.

Prudent fiscal management means Canada continues to have an enviable fiscal position relative to international peers, with the lowest net debt-to-GDP ratio in the G7. Furthermore, the government has already issued an unprecedented level of long-term bonds, at historically low interest rates, to ensure Canada's debt is sustainable and will not weigh on future generations.

Rating agencies have indicated that Canada's effective, stable, and predictable policymaking and political institutions, economic resilience and diversity, well-regulated financial markets, and its monetary and fiscal flexibility contribute to Canada's strong current credit ratings: Moody's (Aaa), S&P (AAA), DBRS (AAA), and Fitch (AA+).

Planned Borrowing Activities for 2021-22

The projected sources and uses of borrowings for 2021-22 are presented in Table A2.1. Actual sources and uses of borrowings compared with the projections will be reported in the *Debt Management Report for 2021-22*. This document will be released soon after the *Public Accounts of Canada 2022*, which provides detailed accounting information on the government's interest-bearing debt.

Sources of Borrowings

The aggregate principal amount of money to be borrowed by the government in 2021-22 is projected to be $523 billion.

This is consistent with the borrowing limits previously proposed by the government in December 2020, with the tabling of Bill C-14, the *Economic Statement Implementation Act, 2020*.

Uses of Borrowings

The government's borrowing needs are driven by the refinancing of debt and projected incremental financial requirements. The size of the program reflects both requirements to refinance debt of $332 billion, including the large maturing stock of short-term debt issued in 2020-21 in response to the COVID-19 pandemic, as well as the projected financial requirement of $191 billion to support the recovery in 2021-22. All borrowings will be sourced from domestic and foreign wholesale markets (Table A2.1). The long-term outlook of the government's cash balances is not expected to change since new borrowings are expected to meet all financing requirements.

Despite record borrowings to support Canadians and the economy during the COVID-19 pandemic, public debt charges are projected to remain sustainable at $22.1 billion for 2021-22, representing 0.9 per cent of GDP. Even though interest rates are forecasted to increase throughout the forecast horizon, public debt charges are projected to only rise to 1.4 per cent of GDP by 2025-26 to a level of $39.3 billion. This is still substantially lower than the average cost of financing debt over the last two decades, even with a significantly higher public debt load because of COVID-19.

Public debt charges remain on a sustainable long-term path and are still projected to be $1.6 billion lower in 2022-23 than forecast in the December 2019 *Economic and Fiscal Update* (forecast of $27.3 billion at that time), before the onset of COVID. This is in spite of a substantial increase in federal debt as a result of the pandemic.

Throughout 2021-22, the government will closely monitor conditions and issue more long-term debt if market conditions are favourable. In addition, actual borrowings for the year may differ due to uncertainty associated with economic and fiscal projections, the timing of cash transactions, and other factors such as changes in foreign reserve needs and Crown corporation borrowings. To adjust for these unexpected changes in financial requirements, debt issuance can be altered during the year, typically through changes in the issuance of treasury bills.

Table A2.1

Planned/Actual Sources and Uses of Borrowings for Fiscal Year 2021-22

Source: Department of Finance Canada calculations.

Notes: Numbers may not add due to rounding. In the uses of borrowings section, a negative sign denotes a financial source.

1 Treasury bills are rolled over, or refinanced, a number of times during the year. This results in a larger number of new issues per year than the stock of outstanding at the end of the fiscal year, which is presented in the table.

2 Other transactions primarily comprise the conversion of accrual transactions to cash inflows and outflows for taxes and other accounts receivable, provincial and territorial tax collection agreements, amounts payable to taxpayers and other liabilities, and foreign exchange accounts.

3 Includes cross-currency swap revaluation, unamortized discounts on debt issues, obligations related to capital leases and other unmatured debt, where this refers to in the table.

2021-22 Borrowing Program

As Canada moves towards economic recovery, the shift towards long-term debt issuance, which began in 2020-21, will continue. Funding more COVID-19-related debt through long-term issuance will help provide security and stability to the government balance sheet by lowering debt rollover while remaining fiscally prudent. Issuances with a maturity of 10 years or greater will be higher in 2021-22 than 2020-21 in both relative and absolute terms (Table A2.2). As part of this move towards longer-term issuance, the government will re-open issuance of the ultra-long 50-year bond for 2021-22.

Before the pandemic, 15 per cent of the bonds issued by the government were issued at maturities of 10 years or greater. Over the course of 2020, federal government allocations of long bonds rose to about 29 per cent. The government is now proposing to increase that proportion to 42 per cent. This will result in the longest average term to maturity in four decades, and will protect Canada from rollover risks.

Table A2.2
Gross Bond Issuances by Maturity
$ Billions, end of fiscal year

	2020-21 Previous Year		2021-22 Planned	
	Issuance	**Share of Bond Issuance**	**Issuance**	**Share of Bond Issuance**

Gross Bond Issuance	**374**	**100%**	**286**	**100%**

Note: Numbers may not add due to rounding.
[1]Target issuance, subject to market conditions.

The government also plans to issue its first ever green bond in 2021-22 to support the environment and climate change plan. The inaugural green bond issuance will target $5 billion, subject to market conditions, and will be the first of many issuances. More details are provided in Chapter 5 of this budget.

In addition, the government proposes to explore, through Debt Management Strategy consultations this fall, the potential for the issuance of social bonds. More details are provided in Chapter 6. Social bonds can support investments in a variety of areas that promote greater social inclusion and broad-based economic prosperity, such as the historic investments in early learning and child care proposed in Budget 2021.

Composition of Market Debt

The total stock of market debt is projected to reach $1,305 billion by the end of 2021-22 (Table A2.3)

Table A2.3

Change in Composition of Market Debt

$ Billions, end of fiscal year

Note: Numbers may not add due to rounding.

[1] Includes additional debt that accrues during the fiscal year as a result of the inflation adjustments to Real Return Bonds.

Over the next three years, the average term to maturity for outstanding domestic marketable bonds and treasury bills is expected to increase to nearly 8 years, a level that is significantly higher than the historical average of 5.9 years seen in the period from 1981-82 to 2019-20.

Gross debt issuance will fall in 2021-22 compared to 2020-21, reflecting lower financial requirements. However, as illustrated in Table A2.4, the total level of issuance of bonds with a term to maturity of 10 years or more is planned to be higher than in 2020-21.

[1]Target issuance, subject to market conditions

Treasury Bill Program

Bi-weekly issuance of 3-, 6-, and 12-month maturities are planned for 2021-22, with auction sizes planned to be largely within the $12 billion to $32 billion range. As financial requirements in 2021-22 and following years are expected to be lower than 2020-21, the government will target a year-end stock of treasury bills of $226 billion for 2021-22. This approach is intended to support a liquid and well-functioning market for Canadian federal government treasury bills, which helps investors, as a whole, who need access to short-term, interest-bearing securities in lieu of cash. This approach is also informed by consultations with market participants held in September and October 2020. Market participants indicated that treasury bills were currently in high demand due to excess cash in the financial markets, both from domestic and international investors. Further highlights from these consultations are outlined in the 2020 *Fall Economic Statement*.

Cash management bills (i.e., short-dated treasury bills) help manage government cash requirements in an efficient manner. These instruments will also be used in 2021-22 when needed.

2021-22 Bond Program

Annual gross bond issuance is planned to be about $286 billion in 2021-22, $88 billion lower than the $374 billion issued for 2020-21 (Table A2.4), and the total stock of bonds is projected to be $1,062 billion by the end of 2021-22. The reduction in annual bond issuance reflects the decrease in expected financial requirements over the next few years as the economy recovers from the COVID-19 pandemic. The approach balances liquidity requirements in both the treasury bill and core benchmark bond sectors, while also satisfying the government's objective of placing COVID-19-related debt in long-term sectors.

Throughout 2021-22, the government will closely monitor financial markets and, subject to favourable market conditions, will seek opportunities to issue more long-term debt. Along with treasury bills, issuance in the 3-year sector may be adjusted to address potential larger issuance in long-term issuances or unexpected changes in financial requirements. Given the Bank of Canada's purchases of Government of Canada bonds in the secondary market, regular, switch, and cash management bond buyback operations are not planned for 2021-22.

Maturity Date Cycles and Benchmark Bond Target Range Sizes

For 2021-22, benchmarks in core sectors will be lower in many sectors relative to 2020-21, reflecting the decreased overall issuance in bonds (A2.5).

Table A2.5
Maturity Date Patterns and Benchmark Size Ranges[1]

Note: These amounts do not include coupon payments.

1 Actual annual issuance may differ.

2 The 30-year nominal bond and Real Return Bond do not mature each year or in the same year as each other.

3 Benchmark size range includes estimate for inflation adjustment, while planned annual issuance does not.

4 There is currently no benchmark size set for the 50-year ultra-long bond, which matures on December 1, 2064.

Bond Auction Schedule

In 2021-22 there will be quarterly auctions of 2-, 3-, 5-, 10-, 30-, and 50-year bonds. Some of these bonds may be issued multiple times per quarter. The number of planned auctions in 2021-22 for each sector is shown in Table A2.6. The actual number of auctions for 2021-22 may be different from the planned number due to unexpected changes in borrowing requirements. In addition, the government may increase the number of long-term bond auctions if market conditions are favourable for more long-term issuance.

Table A2.6
Number of Planned Auctions for 2021-22
$ Billions

Sector	Planned Bond Auctions

Note: These amounts do not include coupon payments.

[1] Issuances for ultra-long bonds will take the format of a modified auction.

The dates of each auction will continue to be announced through the *Quarterly Bond Schedule*, which is published on the Bank of Canada's website prior to the start of each quarter (www.bankofcanada.ca/stats/cars/results/bd_auction_schedule.html).

Management of Canada's Official International Reserves

The Exchange Fund Account (EFA), which is held in the name of the Minister of Finance, represents the largest component of Canada's official international reserves. It is a portfolio of Canada's liquid foreign exchange reserves and special drawing rights (SDRs)[1] used to aid in the control and protection of the external value of the Canadian dollar and provide a source of liquidity to the government. In addition to the EFA, Canada's official international reserves include Canada's reserve position held at the International Monetary Fund.

[1] SDRs are international reserve assets created by the International Monetary Fund whose value is based on a basket of international currencies.

The government borrows to invest in liquid reserves, which are maintained at a level at or above three per cent of nominal GDP. Net funding requirements for 2021-22 are estimated to be around US$15 billion, but may vary as a result of movements in foreign interest rates and exchange rates.

Foreign debt is used exclusively to provide funding for Canada's official international reserves. The anticipated rise in foreign funding in fiscal year 2021-22 is due to swap and bond maturities that need to be financed.

The mix of funding sources used to finance the liquid reserves in 2021-22 will depend on a number of considerations, including relative cost, market conditions, and the objective of maintaining a prudent foreign-currency-denominated debt maturity structure. Potential funding sources include a short-term US-dollar paper program (Canada bills), medium-term notes, cross-currency swaps involving the exchange of Canadian dollars for foreign currency to acquire liquid reserves, and the issuance of global bonds.

Further information on foreign currency funding and the foreign reserve assets is available in the *Report on the Management of Canada's Official International Reserves* (https://www.canada.ca/en/department-finance/services/publications/official-international-reserves.html) and in *The Fiscal Monitor* (https://www.canada.ca/en/department-finance/services/publications/fiscal-monitor.html).

Cash Management

The core objective of cash management is to ensure that the government has sufficient cash available at all times to meet its operating requirements.

Cash consists of money on deposit with the Bank of Canada, chartered banks, and other financial institutions. Cash with the Bank of Canada includes operational balances and balances held for prudential liquidity. Periodic updates on the liquidity position are available in *The Fiscal Monitor* (https://www.canada.ca/en/department-finance/services/publications/fiscal-monitor.html).

Prudential Liquidity

The government holds liquid financial assets in the form of domestic cash deposits and foreign exchange reserves to safeguard its ability to meet payment obligations in situations where normal access to funding markets may be disrupted or delayed. The government's overall liquidity levels are managed to normally cover at least one month of net projected cash flows, including coupon payments and debt refinancing needs.

Owing to the government's ample fiscal capacity and continued access to funding markets, the government did not need to access liquidity from its Prudential Liquidity Plan.

Annex 3
Legislative Measures

This annex includes a number of measures (other than tax-related measures) that would be implemented through legislation.

Subject of the Measure	Proposed Legislative Action
Strengthening Canada's Anti-Money Laundering and Anti-Terrorist Financing Regime	In Budget 2021 the government proposes to strengthen Canada's Anti-Money Laundering and Anti-Terrorist Financing (AML/ATF) Regime by introducing amendments to the *Proceeds of Crime (Money Laundering) and Terrorist Financing Act* to enable the Financial Transactions and Reports Analysis Centre of Canada to recover its compliance costs, clarify its ability to obtain information from reporting entities and expand the information that it can disclose; strengthen criminal penalties and the registration framework for money services businesses; regulate armoured car services for AML/ATF purposes; amend certain disclosure recipients and definitions; and make other technical amendments to the Act. The government also proposes to introduce amendments to reduce the administrative burden for financial institutions filing reports under the *Justice for Victims of Corrupt Foreign Officials Act (Sergei Magnitsky Law)*.
Financial Stability Measures	In Budget 2021 the government proposes to introduce amendments to the *Canada Deposit Insurance Corporation Act* to: (i) clarify the scope of, and support, the cross-border enforceability of the stay provisions applicable to eligible financial contracts; and (ii) clarify how investors, creditors and other participants may be compensated as a result of actions taken by financial sector authorities to sell, wind-down or restore to viability a failing bank. The government also proposes to introduce amendments to the *Payment Clearing and Settlement Act* to clarify how investors, creditors and other participants may be compensated as a result of actions taken by financial sector authorities to sell, wind-down or restore to viability a failing financial market infrastructure.

Subject of the Measure	Proposed Legislative Action
Payment System Measures	In Budget 2021 the government proposes to clarify the Bank of Canada's authority to oversee payment exchanges under the *Payment Clearing and Settlement Act*.
Unclaimed Assets Regime	In Budget 2021 the government proposes to modernize the federal unclaimed assets regime, by increasing the information available and use of electronic communication to match Canadians with their unclaimed assets, and expand the scope of the regime to include unclaimed balances from terminated federally regulated pension plans and foreign denominated bank accounts by proposing amendments the *Bank of Canada Act*, the *Bank Act*, the *Trust and Loans Companies Act*, and *the Pension Benefits Standards Act*, *1985*.
Clarifying the Consumer Protection Framework	In Budget 2021 the government proposes to introduce legislative amendments to clarify that application of the statutory right to cancel a contract with a bank under the *Bank Act* only applies to retail consumers, which are individuals and small and medium-sized businesses, and excludes large businesses.
Financial Institution Restructuring Powers (FIRP) Extension	In Budget 2021 the government proposes to amend the *Canada Deposit Insurance Corporation Act* to provide the Canada Deposit Insurance Corporation with greater flexibility to facilitate a transaction in circumstances where it takes control of a failed member institution.
Strengthening the Canadian Deposit Insurance Framework	In Budget 2021 the government proposes to introduce technical legislative amendments to the *Canada Deposit Insurance Corporation Act* to provide the Canada Deposit Insurance Corporation with a targeted expansion of its authorities to improve the timeliness and efficiency of the deposit insurance payout process.
2023 Sunset Date of Financial Institutions Statutes	In Budget 2021 the government proposes legislative amendments to the *Bank Act*, the *Insurance Companies Act*, and the *Trust and Loans Companies Act* to extend the sunset dates by two years to 2025. Extending the sunset dates will enable full consideration of the impacts of the pandemic on the financial sector as part of the next legislative review.

Subject of the Measure	Proposed Legislative Action
Revised Framework for Negotiated Contribution Pension Plans	In Budget 2021 the government proposes to introduce amendments to the *Pension Benefits Standards Act, 1985* to establish a revised framework for multi-employer negotiated contribution pension plans that strengthens plan governance, transparency, and sustainability of benefits.
Retail Payments Oversight Framework	To continue to promote growth and innovation in digital payment services, such as digital wallets, while ensuring that these payments services are safer and more secure, the government proposes to introduce legislation to implement a new retail payments oversight framework.
Strengthening Capital Markets Stability and Enforcement	Increase the statutory limit in the *Canadian Securities Regulation Regime Transition Office Act* to ensure additional funding for the Canadian Securities Transition Office to continue supporting federal efforts to advance the Cooperative Capital Markets Regulatory System and to strengthen capital markets stability and enforcement in Canada.
Credit Cards Acceptance Fees	The government will engage with key stakeholders to work towards three objectives: • Lower the average overall cost of interchange fees for merchants • Ensure that small businesses benefit from pricing that is similar to large businesses • Protect existing rewards points of consumers Following consultations with stakeholders, detailed next steps will be outlined as part of the 2021 *Fall Economic Statement*, including legislative amendments to the *Payment Card Networks Act* that would provide authority to regulate interchange fees, if necessary.
Better Supports for Exporters	Budget 2021 announces the government's intention to work with Export Development Canada to enhance supports to small and medium-sized exporters and to strengthen human rights considerations in export supports. To do so, the government may propose amendments to the *Export Development Act*.
Science and Technology	Budget 2021 proposes to provide additional funding of $10 million over five years, starting in 2021-2022, and

Subject of the Measure	Proposed Legislative Action
Collaboration with Israeli Firms	$2 million per year ongoing, to expand opportunities for Canadian small and medium-sized enterprises (SMEs) to engage in research and development partnerships with Israeli SMEs. This will be sourced from existing Global Affairs Canada resources. The government also intends to implement an enhanced delivery model for this program, including possible legislation.
Improving Duty and Tax Collection on Imported Goods	Budget 2021 proposes changes to the *Customs Act* that would improve duty and tax collection. • These changes would ensure that goods are valued in a fair and consistent manner by all importers. • In support of ongoing efforts to digitize payment of duty and tax, the changes would also modernize the payment process for commercial importers, to minimize administrative burden.
Strengthening Canada's Trade Remedy System	Budget 2021 announces the government's intention to launch public consultations on measures to strengthen Canada's trade remedy system and to improve access for workers and small and medium-sized enterprises. Following these consultations, the government may propose amendments to the *Special Import Measures Act* and the *Canadian International Trade Tribunal Act*. Budget 2021 also proposes to amend the *Canada-United States-Mexico Agreement Implementation Act* to clarify processes for the selection of trade remedy dispute settlement panels and committees under the agreement.
Canada Community-Building Fund	On March 25, 2021, the government tabled a bill that proposes to provide $2.2 billion for a one-time top-up to the federal Gas Tax Fund, which would double the government's commitment to municipalities and First Nations communities in 2020-21. The bill also proposes to rename the fund as the Canada Community-Building Fund. The government intends to proceed with this proposal.
Canada Small Business Financing Program	Budget 2021 proposes to amend the *Canada Small Business Financing Act*, including broader eligibility and increased loan limits to help facilitate greater access to financing through the Canada Small Business Financing Program.

Subject of the Measure	Proposed Legislative Action
Public Service Employment Act	The public sector workforce should be representative of the communities it serves. In the 2020 Speech from the Throne, the government committed to implementing an action plan to increase representation in hiring and appointments within the Public Service. The government is committed to diversity and inclusion and will review key aspects of the staffing process in hopes of removing conscious and unconscious bias and systemic barriers, with the goal of increasing representation in hiring and appointments within the Public Service. To this end, the government will propose amendments to the *Public Service Employment Act* to reaffirm the importance of a diverse and inclusive workforce and to strengthen provisions to address potential bias and barriers in the staffing processes.
Amendments to the *Canada Elections Act*	Budget 2021 proposes to introduce amendments to the *Canada Elections Act* to specify that making or publishing a false statement in relation to a candidate, prospective candidate, or party leader would be an offence only if the person or entity knows that the statement is false.
Modernizing the Fiscal Stabilization Program	As indicated in the *Fall Economic Statement 2020*, the government intends to introduce legislative amendments to reform the Fiscal Stabilization Program to provide a more effective backstop to provinces that face an extraordinary drop in revenues. The modernization of the program would index the maximum payment of $60 per capita, which was set in 1987, to total Canadian economic growth per person since that time, nearly tripling it to $170 per person in 2019-20 and 2020-21. The higher cap would apply to 2019-20 Stabilization claims and onward. In addition, technical changes would modernize and simplify the program, effective for 2021-22 Stabilization claims and onward.
Enhancing the Capacity of Superior Courts	Budget 2021 proposes to amend the *Judges Act*, the *Federal Courts Act*, and the *Tax Court of Canada Act* to add 13 new superior court positions, which includes 1 Associate Chief Justice position.
Establishing a Canada-wide Early Learning and Child Care System	Budget 2021 proposes to include in legislation a financial authority for the transfer of funding to provinces and territories in support of new bilateral

Subject of the Measure	Proposed Legislative Action
	agreements, including an asymmetrical agreement with Québec, towards a Canada-wide Early Learning and Child Care system, for the year 2021-22.
Extending Temporary Support for Seasonal Workers Who Continue to be Affected by the Pandemic	Budget 2021 proposes legislative changes to ensure that all self-employed fishers who submit an Employment Insurance (EI) claim for the winter 2021 fishing benefit period are treated equally, by extending temporary eligibility changes for the entire benefit period. Budget 2021 proposes legislative changes to extend the rules of an existing EI seasonal pilot project for an additional year, until October 2022.
Reforming Student Financial Assistance	The government proposes to introduce legislation that would extend the waiver of interest accrual on Canada Student Loans and Canada Apprentice Loans until March 31, 2023.
Support to the Government of Quebec to align the Quebec Parental Insurance Plan with Temporary EI Changes	Budget 2021 proposes funding through a statutory appropriation to support the Government of Quebec in ensuring that benefits offered under the Quebec Parental Insurance Plan reflect the temporary changes in place between September 2020 and September 2021 that have made Employment Insurance maternity and parental benefits more generous for some claimants.
Establishing a $15 Federal Minimum Wage	The Government of Canada is committed to help Canadians in low-wage jobs by announcing its intention to introduce amendments to the *Canada Labour Code* that will establish a federal minimum wage of $15 per hour, rising with inflation, with provisions to ensure that where provincial or territorial minimum wages are higher, that wage will prevail.
Legislative Authority for the Hibernia Dividend Backed Annuity Agreement	The government is proposing to introduce legislation to satisfy Canada's obligations under the Hibernia Dividend Backed Annuity Agreement with the Government of Newfoundland and Labrador.
Amendment of the *Government Annuities Improvement Act*	The government is proposing amendments to the *Government Annuities Improvement Act* to reduce duplicative audit requirements. Canadians and annuitants would continue to have access to information on the program through the Public Accounts and the actuarial reports published by the Office of the Chief Actuary.

Subject of the Measure	Proposed Legislative Action
Social Security Tribunal Reforms	The government is proposing amendments to the *Department of Employment and Social Development Act* to improve the recourse process for Income Security programs, which include the Canada Pension Plan and Old Age Security.
Extending Temporary Provisions Related to the Employment Insurance (EI) Emergency Response Benefit (ERB)	To ensure that workers who accessed the Canada Emergency Response Benefit through Service Canada continue to have access to training and skills development programs and to allow integrity activities over a longer time frame, the government announces its intention to introduce amendments to the *Employment Insurance Act* to extend the application of certain provisions related to the Canada Emergency Response Benefit.
Annual Regulatory Modernization Bill (ARMB)	The government intends to introduce a second annual cleanup legislation to concurrently amend multiple acts to improve regulations and remove outdated or duplicative regulatory requirements that will strengthen Canada's economic competitiveness.
Enhancing Protections for Contract Workers in the Air Transportation Sector	To better protect these employees, the government is announcing its intention to introduce amendments to the *Canada Labour Code* that will extend equal remuneration protection to more employees in the air transportation sector. This would ensure that, when a service contract changes hands, affected employees are not paid less if they are laid off and rehired to do the same work.
Parents of Young Victims of Crime	The Government of Canda is announcing its intention to amend the *Canada Labour Code* to ensure that employees in the federally regulated private sector have job protection when they avail themselves of this new benefit.
Labour Program Authority to use the Social Insurance Number	The Government of Canda is announcing its intention to amend the *Department of Employment and Social Development Canada Act* to provide the Minister of Labour with the authority to collect, use and retain the Social Insurance Number, for program administration.
Freezing Judicial Pension Entitlements	Budget 2021 proposes to amend the *Judges Act* to freeze a judge's pension entitlements, as of the date the Canadian Judicial Council recommends a judge's removal from office.

Subject of the Measure	Proposed Legislative Action
Streamlining Express Entry	The Government of Canada intends to propose amendments to the *Immigration and Refugee Protection Act* to provide the Minister of Immigration, Refugees and Citizenship Canada with authority to use Ministerial Instructions to help select those candidates who best meet Canada's labour market needs from among the growing pool of candidates who wish to become permanent residents through the Express Entry System.
Assignment of revenues from the Crown for the purposes of pooled borrowing	The Government of Canada proposes to amend the *First Nations Fiscal Management Act* (FNFMA) to allow First Nations who are borrowing members of the First Nations Finance Authority to assign their rights to certain revenues payable by Her Majesty in right of Canada, for the purpose of securing financing under the FNFMA pooled borrowing regime.
First Nations Election Cancellation and Postponement Regulations	The government proposes to introduce legislation that would ensure that the *First Nations Election Cancellation and Postponement Regulations (Prevention of Diseases)* are deemed to have been validly made since April 7, 2020.
Amendments to the *Telecommunications Act* to Facilitate Broadband Delivery	The government proposes to amend the *Telecommunications Act* to allow the Canadian Radio-television and Telecommunications Commission (CRTC) to share more information with federal, provincial, and territorial broadband partners and to take steps to avoid unnecessary delays in respect of CRTC decisions to allocate funding to recipients to expand access to telecommunications services in underserved areas.
Helping Health Care Systems Recover	On March 25, 2021, the government tabled a bill that proposes to amend the *Federal-Provincial Fiscal Arrangements Act* to provide $4 billlion to help provinces and territories through the Canada Health Transfer to support clearing health care system backlogs caused by the pandemic. The government intends to proceed with this proposal.
Enabling National Research Council Canada Medical Production and Partnership-Building	The government proposes to introduce amendments to enable the National Research Council to manufacture and produce medical products such as vaccines on a large scale to respond to public health needs and to establish and take interests in corporations to facilitate new partnership operating models.

Subject of the Measure	Proposed Legislative Action
Clarifying the Suspension of Interest on Student Loans Announced in the *Fall Economic Statement*	The government is announcing its intention to introduce legislation that will clarify the changes made to the *Canada Student Loans Act, Canada Student Financial Assistance Act* and *Apprentice Loans Act* as part of Bill C-14 in order to ensure they reflect what was announced in the *Fall Economic Statement*.
Additional Fiscal Equalization Offset Payments to Nova Scotia	On February 3, 2021, the government tabled a bill to amend the *Nova Scotia and Newfoundland and Labrador Additional Fiscal Equalization Offset Payments Act* to authorize the Minister of Finance to make an additional fiscal equalization offset payment to Nova Scotia for 2020-21 and to extend the Arrangement on Offshore Revenues with Nova Scotia to 2022-23. The government intends to proceed with this proposal.
Providing Additional Weeks of Recovery Benefits	The government proposes to provide up to 12 additional weeks of income support for claimants who will start exhausting their 38 weeks of Canada Recovery Benefit (CRB) on June 19, 2021. The first four of these additional 12 weeks will be paid at $500 per week and the remaining 8 weeks will be paid at a lower amount of $300 per week. All new Canada Recovery Benefit claimants after July 17, 2021 would also receive the lower rate of $300 per week. The government also proposes to provide an additional 4 weeks, up to a maximum of 42 weeks, for the Canada Recovery Caregiver Benefit. The government will also seek legislative authorities to make further extensions, as necessary, past September 25, 2021 and until no later than November 20, 2021, to both the Canada Recovery Benefit suite of supports, including caregiving and sickness benefits, as well as Employment Insurance regular benefits. Corresponding amendments to the Canada Labour Code are also proposed.
Canada's COVID-19 Immunization Plan	Provinces and territories will face significant financial pressures as immunization campaigns accelerate. On March 25, 2021, the government tabled a bill that proposes to establish an appropriation authority of up to $1 billion to provinces and territories, in support of Canada's COVID-19 immunization plan. Payments would be allocated to provinces and territories on a per-capita basis, and could be used for a variety of vaccine-related

Subject of the Measure	Proposed Legislative Action
	costs. The government intends to proceed with this proposal.
Increasing Old Age Security for Canadians 75 and Over	Budget 2021 proposes to provide a taxable grant payment of $500 to Old Age Security pensioners who will be age 75 or older as of June 2022 through statutory appropriations and to amend the *Old Age Security Act* to exempt this payment from the definition of income for the Guaranteed Income Supplement. Budget 2021 also proposes to amend the *Old Age Security Act* to increase by 10 per cent the maximum benefits payable to Old Age Security pensioners age 75 or older effective July 1, 2022.
Labour protection for gig workers in the federally regulated sector	Budget 2021 reiterates the government's commitment to making legislative changes to improve labour protection for gig workers in the federally regulated sector, including those who work through digital platforms. These legislative changes will be informed by the outcomes of online consultations recently launched by the Minister of Labour.
Protecting Canada's Historic Places	In Budget 2021 the government proposes to introduce legislation to establish a framework for the transparent designation and sustainable protection of federally-owned historic places.
Maintaining Flexible Access to Employment Insurance Benefits	Budget 2021 proposes amendments to the *Employment Insurance Act* to maintain common entrance requirements, and to simplify eligibility rules around contentious reasons for separation and the allocation of monies on separation for a period of one year, from September 2021 to September 2022.
Extending Employment Insurance Sickness Benefits to Better Support Canadians Suffering From Illness or Injury	Budget 2021 proposes amendments to the *Employment Insurance Act* to extend the maximum duration of Employment Insurance sickness benefits from 15 weeks to 26 weeks. In addition, Budget 2021 proposes to make corresponding changes to medical leave under the *Canada Labour Code*.

Annex 4
Gender, Diversity, and Quality of Life Statement

Gender equality and diversity are fundamental to creating a thriving and successful country that reflects Canadian values and achieves its potential. When every Canadian has the opportunity to succeed, all Canadians benefit.

Gender Equality and Diversity as Means to a Stronger Society

The past half century has seen major advancements in gender equality and diversity in Canada, but the COVID-19 pandemic has put that progress at risk. Canada's challenge now is to ensure an inclusive, intersectional recovery that builds a truly equitable society.

> *"Now is the time to make sure that every voice is heard. Now is the time to teach our children so that human rights, and gender equality become part of who they are and how they will live. Our lives are better thanks to the efforts of the women who came before us. If we are to honour their legacy and our daughters' futures, we must continue the fight for gender equality in our communities, our workplaces, our schools and our homes."*
>
> —Marie-Claude Landry, Ad.E., Chief Commissioner, Canadian Human Rights Commission

Progress over the last half century has been real. Women have broken barriers in positions of leadership, taking on roles as entrepreneurs, scientists, educators, and CEOs. LGBTQ2, Indigenous, and minority rights have also been greatly expanded, enshrined in the *Canadian Charter of Rights and Freedoms* and the *Canadian Human Rights Act*. But there remains a range of gaps and barriers that threatened equality even before the pandemic.

The government's recovery plan is feminist and intersectional, and makes targeted investments to support those most affected by the pandemic and address long-standing inequities. In laying out its plan, the government remains committed to Canada's broad gender equality goals and to a decision-making process that considers the impacts of policy proposals on Canadians from all angles, as enshrined in the *Gender Budgeting Act*. The Task Force on Women in the Economy has been established to advise the government on priorities for gender equality.

Two important gender budgeting tools have also helped to guide the preparation of Budget 2021: the Gender Results Framework (GRF), which helps to identify policy gaps and priorities, and the process of factoring gender and diversity considerations into decision making (gender-based analysis plus, or GBA Plus, which encompasses numerous identity factors such as ethnicity, region of residence, age, biological sex, income level, gender, educational attainment, sexual orientation, race, immigrant status, and mental or physical ability).

Figure A4.1
Gender Equality Goals for Canada

The Gender Results Framework is aligned with the Government of Canada's policy of GBA Plus, ensuring that gender is considered in relation to other intersecting identity factors. Wherever possible, and with a view to collecting better data, intersecting identity factors will be considered in the above indicators.

Canada's Gender Results Framework (GRF) was introduced in Budget 2018 as a whole-of-government articulation of gender equality priorities and goals with matching indicators to track developments toward these goals. This statement includes a summary of where Canada stands on these priorities.

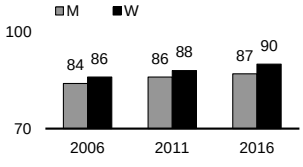
Reflecting that gender is only one aspect of identity, and that systemic discrimination, racism, ableism, and ageism, among other many factors, compound the impacts of gender issues, this section also presents statistics on additional identity characteristics to enable a deeper understanding of the experiences of diverse groups of people, such as Indigenous peoples, people with disabilities, racialized peoples, and members of LGBTQ2 communities. By reporting on indicators in the GRF, Canadians and the government can see where Canada was, where it is now, and where it can be in relation to gender equality and diversity.

As in previous years, this statement also highlights some of the key actions the government is taking in this budget to improve fairness and inclusion within each priority area, and provides a summary of the aggregate gender and diversity impacts of all new and renewed measures in this budget.

Budget 2021's Impacts Report, which follows this Statement, includes an assessment of the impact of every budget measure included in Budget 2021. To support the government's efforts to address existing inequalities and make more inclusive decisions, this budget makes significant investments in Statistics Canada to improve the availability of data.

Note on Terminology

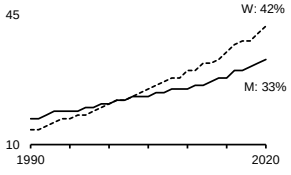
In this section, the term "visible minorities" is occasionally used because it is the official demographic category defined by the *Employment Equity Act* and used by Statistics Canada in their surveys. With the commitment to support a task force on modernizing the *Employment Equity Act*, the question of appropriate terminology will be taken up by the members.



Gender Results Framework

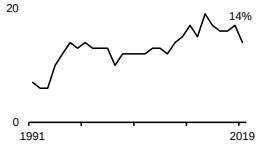
Education and Skills Development

Equal opportunities and diversified paths in education and skills development



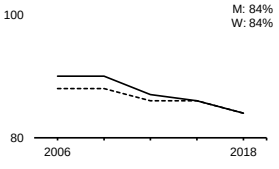
Education and skills development are critical for participation in the job market, and a key source of opportunities for Canadians to pursue a better life. Educational paths should be chosen based on interests and aptitudes, free from gendered expectations and stereotypes.

Educational attainment



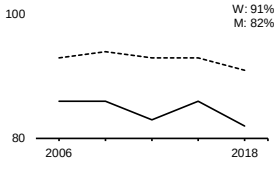
Share aged 25-64 with a certificate, diploma or degree.

University degree



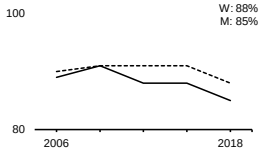
Share aged 25-54 with a university degree.

Tradeswomen



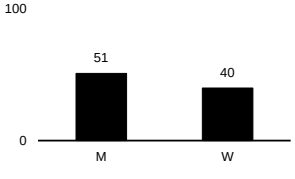
Share of newly certified tradespeople who are women.

High school math



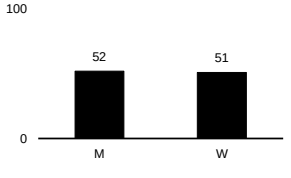
Share aged 15 at proficiency level 2 or above in mathematics.

High school reading



Share aged 15 at proficiency level 2 or above in reading.

High school science



Share aged 15 at proficiency level 2 or above in science.

Adult numeracy

Share aged 16-65 at proficiency level 3 or above in 2012.

Adult literacy

Share aged 16-65 at proficiency level 3 or above in 2012.

Field of study

Education	76
Health	76
Math and comp. science	27
Arch. and engineering	25

Share enrolled in a Bachelor's in 2018-19 who were women.

Sources: 2016 Census, Labour Force Survey, Registered Apprenticeship Information System, 2018 Programme for International Student Assessment, 2012 Programme for International Assessment of Adult Competencies, and Post-Secondary Student Information System, 2018-19.

Prior to the COVID-19 pandemic, many significant gender gaps in education and skills development had narrowed. Women exceeded men in terms of high school graduation and university education, and many fields of study that were once male-dominated in the past had become far more equal. For example, women represented around one in 20 students in law and medicine in 1950, but now represent over one-half of students in these fields. Despite marked improvements, women were still significantly under-represented in some fields of study, like engineering, math, and computer science, and were much less likely to pursue high-paying jobs in the trades. For example, only about 1 in 4 engineering students and about 1 in 7 newly certified registered apprentices are women. There were also a number of important education and skills development gaps from a diversity perspective, such as lower rates of educational attainment among people with disabilities, and lower literacy and numeracy skills among Indigenous peoples.

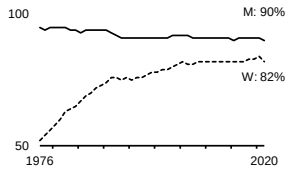
Diversity Focus	
Indigenous identity	• 26 per cent of Indigenous people had no educational credentials in 2016 compared to 11 per cent of non-Indigenous people. Inuit men were the most likely to report none. • Off-reserve Indigenous peoples had lower literacy and numeracy skills than non-Indigenous people in 2012.
Visible minority status	• University attainment varied substantially among racialized people in 2016. Canadians of Korean descent were the most likely to be university educated (57 per cent), while Southeast Asian Canadians were the least likely to have obtained a university degree (24 per cent). Gender gaps were the largest for Canadians of Filipino descent, where 47 per cent of women had completed a university degree, compared to 38 per cent of men.
LGBTQ2 member	• Between 2015 and 2018, gay men and lesbian women were more likely to have a post-secondary qualification than heterosexual men and women, while bisexual men and women were less likely to have a post-secondary qualification.
Disability status	• Persons with disabilities, especially those with severe disabilities and men, were less likely to have obtained an educational credential in 2017 than those without disabilities.
Income	• High school students' socio-economic status was a weaker predictor of academic performance in Canada in 2018 than in other OECD countries, and disadvantaged students in Canada were more likely to be academically resilient.

Given that many postsecondary degrees or diplomas require at least one year or more to complete, the impact of COVID-19 and related public health restrictions on lifelong educational attainment is hard to measure in the short term. But it is clear that the pandemic has had large negative impacts on racialized women and youth, with both students and non-students seeing significant job losses, particularly young women, and many young people returning to school or staying in school longer in light of weaker job prospects. There is strong evidence that the effects of a recession on young people are long lasting and that the scarring effects of unemployment can reduce earnings for years after the economy has recovered. When young people experience periods of unemployment, or are forced to work at jobs for which they are overqualified, they miss out on opportunities to acquire valuable skills that help them advance, and decrease their connection to the labour market during formative years. All these challenges will be compounded for more vulnerable youth.

There is no silver bullet to address these challenges. Governments provide extensive supports aimed at helping youth achieve their full potential. Major federal investments in recent years have focused on making postsecondary education more affordable, including enhancements to the Canada Student Loans and Canada Student Grants programs, and improving skills development and job opportunities, including funding to assist provincial and territorial training and employment supports such as work-integrated learning placements. Countries whose youth perform better in the school-to-work transitions, such as Germany, tend to have a strong apprenticeship culture. In recent years, the government has made many investments in these areas — such as through Canada Apprentice Loans, Apprenticeship Incentive and Completion Grants.

The Task Force on Women in the Economy members have emphasized the opportunities for women to enter high paying fields in the trades and other well-paying jobs in the innovation sector. They also emphasized the importance of providing opportunities for up-skilling for mid-career women and training and employment opportunities to groups who systemically face fewer opportunities. The 2020 *Fall Economic Statement* provided funding to bolster training supports for those most affected by the pandemic, including marginalized women, Indigenous peoples, youth, persons with disabilities, and recent newcomers to Canada.

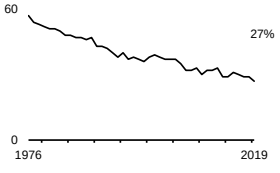
In an effort to build on that momentum and tackle long-standing gaps in education and skills development, and encourage lifelong learning and retraining among all groups of Canadians, the government has introduced a number of Budget 2021 measures, including:



- Additional funding and a pilot expansion of the **Supports for Student Learning Program**.
- Strengthening **elementary and secondary education on reserve,** including helping adults finish high school.
- Additional funding for **Aboriginal Head Start programs**.
- Enhancements to **federal skills and employment training programs**, including to strengthen foundational skills through Skills for Success.
- Providing **enhanced student financial assistance** and **expanded student debt relief**.
- Supporting **Indigenous post-secondary students and institutions** during COVID-19.
- Opportunities for businesses and young workers through **Mitacs** to expand work-integrated learning opportunities for post-secondary students.

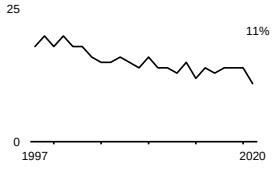
  Helping youth and students build job skills and connect with employers through additional funding towards the Youth Employment and Skills Strategy, the Student Work Placement Program, and the Canada Summer Jobs program.

For the details of the impacts of these and more Budget 2021 measures which advance the Education and Skills Development Pillar, please see the Impacts Report.



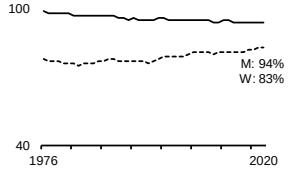
Ensuring that every person has the opportunity and the support to participate fully in the economy will raise the incomes of Canadian families and benefit the country as a whole.

Labour force



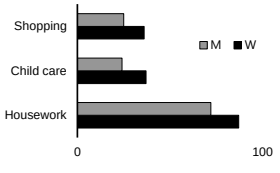
Share aged 25-54 in the labour force.

Gender earnings gap



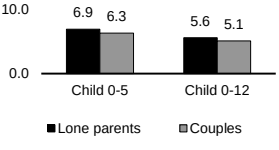
Gender gap in median employment income for those aged 25-54.

Gender wage gap



Median hourly full-time wage gap for those aged 25-54 years.

Full-time workers

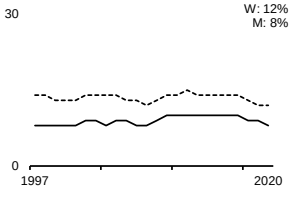


Share of employed aged 25-54 working full-time.

Unpaid work

Share aged 25-54 engaging in unpaid work activities in 2015.

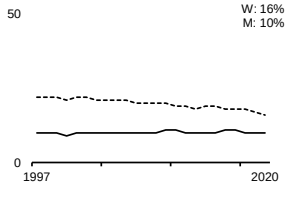
Child care costs



Average proportion of after-tax income spent on child care in 2019.

Career choice

Nursing	89
Office support	87
Front-line public protection services	20
Industrial, electrical and construction trades	5



Share of employed who are women by occupation in 2020.

Temporary or involuntary part-time work

Share of employed aged 25-54 in temporary or involuntary PT work.

Low-wage jobs

Share aged 25-54 with hourly pay less than two-thirds of the median.

Sources: Labour Force Survey, Survey of Consumer Finances, Survey of Labour and Income Dynamics, Canadian Income Survey, 2015 General Social Survey, and 2017 General Social Survey.

Fifty years ago, only half of Canadian women participated in the labour market and women's annual income was almost 60 per cent lower than men's. Today, over 8 in 10 women participate in the labour market and the gender gap in annual employment income has fallen to 27 per cent. These changes represent major progress toward gender equality in the labour market. However, persistent social norms mean that women continue to spend more time on caregiving and

household responsibilities, and this unpaid work is not valued in traditional economic terms and cuts into the number of hours that women can spend in the paid workforce. Balancing work and family responsibilities may also lead some women to trade off more secure, high-paying jobs, for lower-paying, but more flexible positions. In addition, occupational segregation continues to limit career choices for women, making women more likely to work in low-wage jobs. Women from underrepresented groups, including Indigenous, Black, racialized and newcomer women, often face even greater barriers to equal and full participation in the labour market. Where women do succeed in predominantly male fields, there remain diparities between their compensation relative to their male counterparts.

Diversity Focus	
Indigenous identity	• Indigenous women earned 44 per cent less than white men in 2015. Even after adjusting for differences in demographic and job characteristics, a large gap of over 30 per cent remained. • Indigenous men and women had higher unemployment rates than non-Indigenous men and women in 2019.
Visible minority status	• In 2015, visible minority women earned 17 per cent less than white men. Demographic and job characteristics, like industry, occupation, age, and education, did not explain this gap. • Unemployment rates were higher among racialized Canadians, but the rates varied significantly across groups. For example, in May 2016, about 1 in 7 Arab Canadian women were looking for work, compared to 1 in 25 Filipino Canadian women. Black Canadian men and women, Arab Canadian men, West Asian Canadian women and South Asian Canadian women, also had particularly high rates.
Immigrant status	• In 2019, immigrant women, especially recent immigrant women (i.e. those who landed in Canada 5 or less years earlier), were less likely to work than women born in Canada. Compared to recent immigrant men, newcomer women from Africa and Asia experienced the largest gender gaps in employment. • Visible minority newcomer women earned $26,600 in 2015, compared to $30,100 for non-visible minority newcomer women, $35,600 for visible minority newcomer men, and $42,600 for non-visible minority newcomer men.

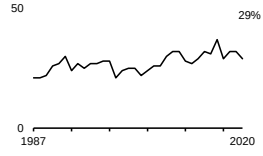
Diversity Focus	
LGBTQ2 member	• Between 2015 and 2018, lesbian women were more likely to work than heterosexual women, while gay men were slightly less likely to work than heterosexual men. Bisexual men and women had the lowest employment rates.
Disability status	• Persons with disabilities were less likely to work than those without disabilities. Severity negatively impacts employment, with only 31 per cent of people with severe disabilities working in 2016.

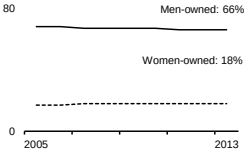
In part reflecting these pre-existing inequalities, the COVID-19 pandemic and related public health measures have disproportionately affected women, especially women from underrepresented groups. As outlined in the *Overview of Economic and Social Foundations*, women's jobs were affected earlier and more severely, and continue to recover more slowly, with especially notable negative employment impacts for Black and racialized women, newcomer women, low-wage women and young women. Even when women were not at risk of losing their jobs, the essential nature of the services they provide – e.g. nursing, child care – put them at a greater risk of transmission of COVID-19. Although the overrepresentation of women in low-wage work has been a long-standing contributor to gender inequity in Canada, COVID-19 has highlighted the essential nature of many of these jobs, especially front-line care work. For women who are mothers, the closure of schools and child care centres exacerbated work-life balance challenges and increased barriers to labour market entry.

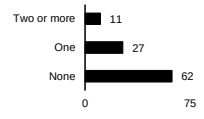
The Task Force on Women in the Economy has been clear in advising the government that this pandemic requires a stimulus and recovery response tailored to the unique nature of this crisis on women. Members placed a high priority on investments in the care economy to address the burden of unpaid work on women, to facilitate women's participation in the paid labour force, and to create good jobs in sectors of the economy where women work. This includes investments in early learning and child care, and in supportive care, where the pandemic exposed inadequacies in the quality of care being provided to seniors and in the wages and working conditions of care workers.

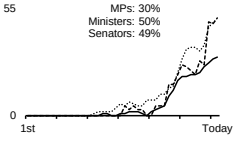
> *"Any job can be a great job. The social infrastructure on which we all depend will be a growing driver of GDP for decades, the result of population aging and the needs of a shrinking but increasingly valuable working-age cohort. The caring economy could power a better life, not just a bigger economy, if we address issues revealed by the pandemic. Just as manufacturing generated Canada's middle class from the 1950s to the 1970s, the care sector could be the source of our next middle class."*
>
> –Armine Yalnizyan, Economist, Atkinson Fellow on the Future of Workers and Task Force on Women in the Economy Member

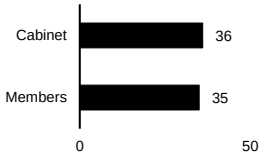
In recognition of these challenges, Budget 2021 is investing in a feminist and inclusive recovery and working toward tackling gender inequities and systemic discrimination in the labour market in a number of ways, some of which include:

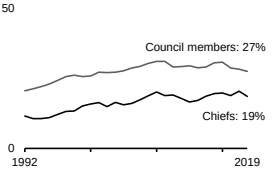


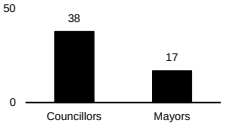


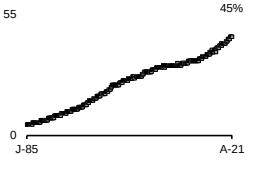


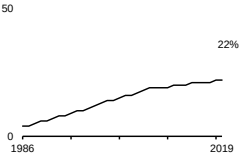












- Establishing a Canada-wide **Early Learning and Child Care** system.
- Supporting **Black Canadian communities** through additional investments for Black-led non-profit organizations and establishing a Black-led Philanthropic Endowment Fund.
- Strengthening **long-term and supportive care** across Canada by investing to support the implementation of standards for long-term care, improved access to quality palliative care and improved data infrastructure to lay a better foundation for coordinated action across the sector.
- Also see actions listed under Poverty Reduction, Health and Well-Being to raise the federal minimum wage and enhance the Canada Workers Benefit.
- Investing in distinctions-based, **culturally appropriate child care for Indigenous children**.
- Deploying the **Social Finance Fund** to mobilize private capital and grow the social finance market in order to create thousands of new jobs in this women-dominated sector, provide much-needed services for vulnerable Canadians, and drive positive social change.
- Renewing the **Investment Readiness Program** to continue helping charities, non-profits, and other social purpose organizations to develop the necessary skills and capacity to access social finance opportunities.
- Funding to **my65+** by the Service Employees International Union Healthcare to provide incentives for worker participation.

For the details of the impacts of these and more Budget 2021 measures which advance the Economic Participation and Prosperity Pillar, please see the Impacts Report.

Leadership and Democratic Participation

Gender equality in leadership roles and at all levels of decision-making

Gender equality and diversity in leadership positions in economic, political and judicial spheres is essential to a fair and democratic society.

Senior management	Business ownership	Board members
		
Share of senior management positions filled by women.	Share of private enterprises by majority-ownership.	Share of boards by number of women directors in 2018.
Federal	**Provincial and territorial**	**First Nations Bands**
		
MPs, Ministers and Senators who are women by Parliament.	Share in PT governments who are women as of Feb. 16, 2021.	Share in First Nations Band Councils who are women.
Municipal	**Federal judges**	**Police officers**
		
Share of city councillors who are women as of Feb. 16, 2021.	Federal judges who are women by month and year, Jan. 85 to Apr. 21.	Share of full-time equivalent police officers who are women.

Sources: Labour Force Survey, Canadian Employer-Employee Dynamics Database, Corporation Returns Act, Parliament of Canada, Indigenous Services Canada, municipal, provincial and territorial websites, Office of the Commissioner of Federal Judicial Affairs, and Police Administration Survey.

Since most women won the right to run as candidates in the federal elections in 1920, there have been gradual improvements in gender representation in Canadian politics. For example, the number of women elected to Parliament has increased to 100 out of 338, and in 2015, Canada saw its first ever gender balanced Cabinet.

At the same time, there have been significant improvements in the judicial sphere, in part due to recent reforms to the superior courts' judicial appointment process that emphasize transparency, merit, and the diversity of the Canadian population, while continuing to ensure the appointment of jurists who meet the highest standards of excellence and integrity. This process has helped to increased the share of federally appointed judges who are women from 34 per cent in 2015 to 45 per cent in 2020. It has also resulted in the appointment of 16 judges identifying as LGBTQ2 and 30 judges identifying as belonging to a visible minority group since October 2016.

However, the power gap persists. Business continues to be heavily male dominated, with only 1 out of every 3 senior management positions filled by a woman, and diversity is severely lacking in many leadership and decision-making roles. For example, Black, racialized people, Indigenous peoples and people with disabilities are much less likely to be business owners and serve on corporate boards. Racialized Canadians are also less likely to serve in law enforcement.

Diversity Focus	
Indigenous identity	• Few small- and medium-sized enterprises (SMEs) were majority-owned by Indigenous people in 2017 (1 per cent). • There are currently 5 First Nations, 2 Inuit, and 4 Métis Members of Parliament (MPs), representing 3 per cent of the House, compared to 5 per cent of the population. Of the 11 Indigenous MPs, 4 are women. Concurrently, the Senate has 5 First Nations, 1 Inuit, and 4 Métis Senators (10 per cent). Of these Indigenous Senators, 6 were female. • Overall, 4 per cent of police officers and 3 per cent of recruits identified as Indigenous in May 2019. Within First Nation police services, 63 per cent of officers identified as Indigenous. • Among the 403 distributing corporations that disclosed diversity information in 2020 to meet the new *Canada Business Corporations Act* (CBCA) regulations, only 0.3 per cent of 2,411 board directors were Indigenous and only 0.2 per cent of 2,158 individuals in senior management positions were Indigenous.
Visible minority status	• While over 1 in 5 people reported belonging to a visible minority group in Canada in 2016, only about 1 in 8 SMEs were majority-owned by visible minorities in 2017. • In mid-May 2019, visible minorities were underrepresented as police officers (8 per cent) and recruits (11 per cent). • Members of visible minorities held 4 per cent of board seats and 9 per cent of senior management positions among the 403 distributing corporations that disclosed diversity data in 2020.

Diversity Focus	
LGBTQ2 member	• According to the Annual Report Card 2018, published by the Canadian Board Diversity Council, only 1 per cent of board directors self-identified as LGBTQ2.
Disability status	• Although over 1 in 5 people reported a disability in 2016, SMEs were rarely majority-owned by persons with a disability (1 per cent) in 2017. • Only 0.3 per cent of board seats and 0.6 per cent of senior management positions among the 403 distributing corporations that disclosed data in 2020 were held by persons with disabilities.

COVID-19 has had a disproportionate impact on women, especially racialized women. Beyond all the direct impacts, their underrepresentation in politics, business, and justice has meant that their voices are muted in many political and economic discussions. This has created additional challenges in securing the change needed to help women and diverse groups overcome systemic barriers and discrimination.

Women, however, have taken a leading role in the charitable and non-profit sector. According to a recent report by the YWCA, organizations in this sector employ over 2.4 million people in Canada, 70 per cent of whom are women. Of that, Canada's human and community service organizations employ approximately 315,000 people.

Governments play a key role in facilitating and encouraging improved gender equality in politics, business, and justice. To support and build toward gender equality and diversity in Canada's public institutions, the federal government introduced a commitment to selecting Governor in Council appointees that are reflective of Canada's diversity in terms of linguistic, regional, and employment equity groups in open, transparent and merit-based processes in February 2016. And, more recently, to support gender equality and diversity in business, the federal government launched the 50-30 Challenge, an initiative that asks that organizations aspire to gender parity on their boards and in senior management and to significant representation of other underrepresented groups. As of April 13, 2021, there were 1,172 participating organizations. For similar reasons, the federal government also recently introduced new disclosure requirements for gender and diversity concerning director and senior manager positions and diversity policies in corporations governed by the *Canada Business Corporations Act*.

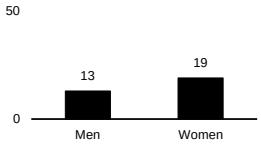
Since women's entrepreneurship reflects broader industrial gender segregation patterns in the economy, business owners who are women have also been particularly negatively affected by the pandemic, as have business owners who are racialized Canadians. Structural barriers for many women entrepreneurs amplified the greater impacts of the pandemic.

Reflecting that the needs of women entrepreneurs are unique, the Women Entrepreneurship Strategy was introduced to increase women-owned businesses' access to the financing, talent, networks and expertise they need to start up, scale up and access new markets. The Task Force on Women and the Economy and other stakeholders have emphasized that the support networks and financing needs of women entrepreneurs are often different from those of men, with women valuing wraparound supports and smaller amounts of funding.

Recognizing that there continue to be challenges for women and diverse groups in attaining and maintaining positions of leadership, the government has introduced a number of Budget 2021 measures, including:

- Accelerating the **Women's Entrepreneurship Strategy**.
- Providing additional funding to support the **Black Entrepreneurship Program.**
- Consultations on **corporate governance diversity** in federally regulated financial institutions.
- Supporting small and medium-sized businesses including non-profit and charitable social enterprises through enhancements to the Canada **Small Businesses Financing Program**.
- Legislative amendments to the **Public Service Employment Act** to address potential bias and barriers in staffing processes
- Investing in companies led by Canadians from typically underrepresented groups through a new **Inclusive Growth Stream** of the Venture Capital Catalyst Initiative..
- Additional **Indigenous Business Supports** to increase opportunities for Indigenous entrepreneurs to start and grow their businesses, and increase the proportion of Indigenous businesses owned and operated by Indigenous women.
- Strengthening Indigenous voices in federal decision-making by supporting their capacity to engage in federal consulations and engagements.
- Supporting **Indigenous Governance and Capacity** for First Nations communities with the most acute needs, resulting in better administration and access to services and programs.
- Supporting entrepreneurs, including underrepresented entrepreneurs through the **Small Business and Entrepreneurship Development Program**.

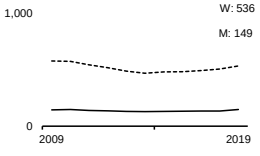
For the details of the impacts of these and more Budget 2021 measures that advance the Leadership and Democratic Participation Pillar, please see the Impacts Report.



Gender Results Framework

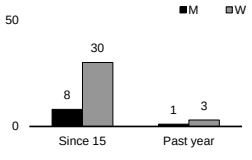
Gender-Based Violence and Access to Justice

Eliminating gender-based violence and harassment, and promoting security of the person and access to justice



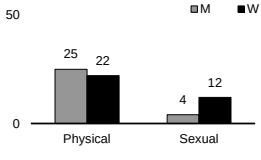
Gender-based violence has long-lasting, negative health, social, and economic effects that span generations, often leading to cycles of violence within families and potentially whole communities. All Canadians should be safe and free from physical, emotional or sexual violence, discrimination, and harassment, regardless of where they live.

Workplace harassment



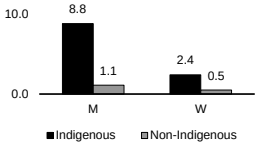
Share self-reporting harassment in the workplace in past year in 2016.

Intimate partner violence



Police-reported intimate partner violence, rate per 100K population.

Sexual assault

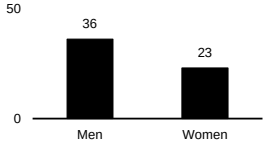


Share self-reporting sexual assault in 2018.

Childhood abuse

Share aged 15+ self-reporting childhood abuse in 2018.

Homicide rate



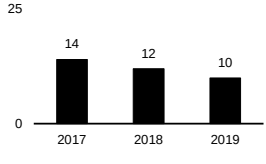
Homicide rates per 100K population in 2019.

Homicide relationship

	M	W
Intimate partner	6	47
Other family member	15	26
Other relationship	52	13
Stranger or unknown	26	13

Share of homicides by relationship to perpetrator in 2019.

Violent victimization



Share of violent victimization reported to police in 2014.

Indigenous women

	Sexual	Physical
First Nations	48	45
Métis	40	44
Inuit	25	26
Non-Indigenous	26	30

Share self-reporting assault since age 15 years in 2018.

Unfounded sexual assault

Per cent of incidents of sexual assault deemed to be unfounded.

Sources: 2016 General Social Survey, Uniform Crime Reporting Survey, 2018 Survey of Safety in Public and Private Spaces, Homicide Survey, 2014 General Social Survey.

Gender-based violence is defined as violence that is committed against someone based on their gender identity, gender expression, or perceived gender and includes a range of behaviours from unwanted sexual attention, harassment, and neglect, to physical and sexual assault, and homicide. Experiences of gender-based violence are quite common in Canada, with women reporting about 536 incidents of police-reported intimate partner violence per 100,000 population in 2019 and about 1 in 3 women reporting in 2018 that they had experienced at least one incident sexual assault since the age of 15 years.

Some groups of women and girls are disproportionately affected by gender-based violence, including Indigenous women and girls, Black women, and LGBTQ2 community members. For example, in 2018, 43 per cent of Indigenous women reported experiencing sexual assault since the age of 15 years, compared to 26 per cent of non-Indigenous women. Those living in northern, rural, and remote communities and people with disabilities are also at an elevated risk of experiencing gender-based violence.

Diversity Focus	
Indigenous identity	• In 2016, Indigenous women were more likely to report workplace sexual harassment in the past 12 months (10 per cent) than non-Indigenous women (4 per cent). • In a 2018 survey, more First Nations and Métis adults reported experiences of childhood abuse than Inuit and non-Indigenous people. • Compared to non-Indigenous women, Indigenous women were more than three times as likely to self-report an experience of spousal violence between 2009 and 2014. Indigenous victims of spousal violence were also more likely to report the most severe forms of spousal violence.
Visible minority status	• When surveyed in 2018, visible minority men and women were slightly less likely to report experiences of childhood abuse. In this same survey, they were much less likely to report adult experiences of physical or sexual assault. • In 2014, recent experiences of spousal violence were reported slightly less often by people belonging to a visible minority group than by those that did not.
Immigrant status	• Immigrants reported adult experiences of physical or sexual assault since age 15 years less often than non-immigrants when asked in 2018, but were only marginally less likely to report experiences of childhood abuse.

Diversity Focus	
LGBTQ2 member	• In a 2016 survey, lesbian and bisexual women reported elevated rates of sexual harassment at work compared to heterosexual women. • Transgender individuals reported inappropriate workplace behaviour (69 per cent) in a 2018 survey at three times the rate of cisgender individuals (23 per cent). • Gay, lesbian, and bisexual people reported higher rates of childhood abuse than heterosexual people when surveyed in 2018. They were also more like to report experiences of physical or sexual assault since age 15 years. • In this same 2018 survey, transgender people were significantly more likely to report having had experiences of physical or sexual assault since age 15 years (59 per cent) than cisgender people (37 per cent).
Disability status	• When asked in 2018, persons with disabilities were more likely to report having experienced physical or sexual assault as adults than persons without disabilities, with women with disabilities reporting sexual assault since age 15 years at three times the rate of men with disabilities. People with disabilities were also more likely to report experiencing childhood abuse.

COVID-19 and the resulting financial stresses and self-isolation has created conditions that led to a rise in intimate partner and family violence. Increased call volume at violence help lines and a rise in the number of calls for police services related to domestic disturbances and disputes indicate that gender-based violence was exacerbated by the public health crisis. Recognizing that many Canadians' safety was at risk during the pandemic, the Government of Canada acted quickly to ensure that front-line organizations that support women and families facing violence had the resources they needed to keep their doors open and continue providing their vital services, with dedicated funding for those organizations serving Indigenous women both on and off reserve.

Like many of the other structural challenges faced by women, eliminating gender-based violence will take sustained efforts over the long-term, as it is firmly grounded in gender and social norms around femininity and masculinity, including patriarchal views of the family, sexism, and gendered expectations regarding behaviour.

Knowing that many women and girls continue to face violence, the government has made significant investments towards eliminating gender-based violence and supporting victims and survivors, including through the It's Time: Canada's Strategy to Prevent and Address Gender-Based Violence. Federal government actions have

also included introducing a National Framework to Prevent Gender-Based Violence on Campus, changes to the treatment of unfounded sexual assault cases, and legislation to ensure that federally regulated workers are protected from workplace harassment. In 2019, the federal government also introduced its National Strategy to Combat Human Trafficking.

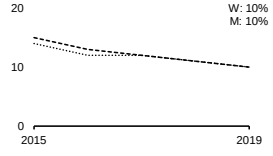
Improving access to and confidence in the justice system is also key to supporting survivors of gender-based violence and other acts of physical, sexual, or psychological harm or suffering, such as race-based hate crimes. And it is vital to a safe and secure Canada.

Recent federal government actions and investments to improve access to justice and build confidence in the justice system have included boosting legal aid to support victims of sexual harassment in the workplace, amending legislation to increase access to family justice in the official language of one's choice, investing in an assessment of the impact of race and culture on sentencing, and supporting the growing demand for Public Legal Education and Information Services.

To continue to address the ongoing challenges related to gender-based violence in Canada, and the structural and systemic barriers that limit access to justice for many disadvantaged groups, the government has introduced a range of Budget 2021 measures, some of which include:

- Expanding the work of the Department of National Defence and Veterans Affairs Canada to **eliminate sexual misconduct and gender-based violence in the military and support survivors**.
- Increasing funding for provinces and territories to **divert youth away from the justice system**.
- Supporting Indigenous policing and community safety.
- Improving access to justice for Indigenous peoples.
- Addressing systemic racism in institutions.
- Supporting a range of measures to **end the national tragedy of missing and murdered Indigenous women and girls**.
- Supporting community-based organizations and the LGBTQ2 Secretariat to advance **greater equality for LGBTQ2 communities**.
- Enhancing **access to legal support for racialized communities**.
- **Advancing a National Action Plan to End Gender-Based Violence** to support at-risk populations and survivors and ensure that victims have reliable and timely access to protection and services.

For the details of the impacts of these and more Budget 2021 measures which advance the Gender-Based Violence and Access to Justice Pillar, please see the Impacts Report.



Gender Results Framework

Poverty Reduction, Health and Well-Being

Reduced poverty and improved health outcomes

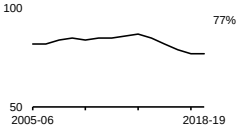
All Canadians should have their basic needs met, access to good quality health care, and know that action is being taken to reduce poverty and create new opportunities for a better quality of life.

Poverty

Share below the Official Poverty Line.

Food insecurity

	M	W
Living alone	12	12
Lone parent	16	25
All households	9	
Couple, no kids	3	
Couple, with kids	7	



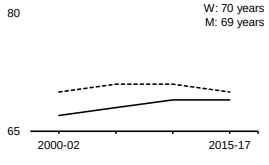
Share of households in moderate or severe food insecurity in 2017-18.

Core housing need

	M	W
All Canadians	9	10
Living alone	19	19
Lone parent family	17	30
Seniors	8	11

Share living in core housing need by family type in 2018.

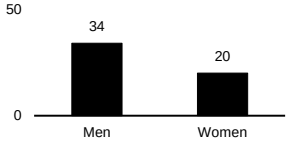
Support orders



Spousal and child support order payment collection rate.

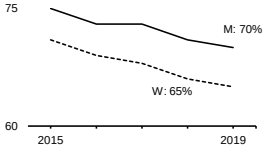
Causes of death

	M	W
Cancer	1	1
Heart diseases	2	2
Accidents	3	5
Chronic lower respiratory	4	4
Cerebrovascular	5	3



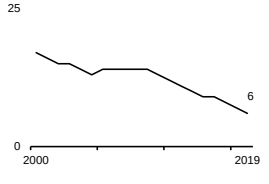
Rank of five leading causes of death by gender in 2019.

Life expectancy



Health-adjusted life expectancy at birth.

Sports participation



Share aged 15+ participating in sports regularly in past year in 2016.

Psychological well-being

Share aged 12+ reporting very good or excellent mental health.

Adolescent birth rates

Number of live births per 1,000 females aged 15-19 years.

Sources: Canadian Income Survey, Canadian Community Health Survey, Survey of Maintenance and Enforcement Programs, Vital Statistics Death and Birth Databases, 2016 General Social Survey.

Poverty, especially long-term poverty, has deep and wide-ranging impacts. Individuals living with low income have a lower life expectancy, higher rates of suicide, as well as higher rates of heart disease, chronic conditions, and mental health issues. Poor mental and physical health – whether as a result of poverty or not – may affect an individual's well-being and earnings potential, and result in economic losses for individuals, families, and society.

In Canada, poverty and poor health are challenges faced by many, but some subgroups are at greater risk than others. For example, poverty is more prevalent among recent immigrants and racialized people, while poor mental health is more prevalent among Indigenous peoples and LGBTQ2 Canadians.

The prevalence of low wage, low quality jobs in certain sectors of the economy can also contribute to the incidence of poverty, and these low wage, low quality jobs are themselves the result of a number of factors, including the absence of bargaining power among workers, as evidenced by the decline of private sector unions, low or limited growth in real minimum wages, a rising return to investments in education and skills, and increased automation and globalization. Since women are more likely than men to be employed in low wage, part time, and precarious jobs, women are more at risk of being among the working poor.

Diversity Focus

Indigenous identity	• Indigenous people faced higher poverty rates (20 per cent) than non-Indigenous people (10 per cent) in 2018. • Off-reserve Indigenous people reported lower levels of mental health in 2017-18 than non-Indigenous people. • In 2016, Indigenous men reported regularly participating in sports less often than non-Indigenous men, but there were no notable differences for women.
Visible minority status	• In 2017-18, people belonging to a visible minority group reported similar levels of positive (very good or excellent) mental health as those not belonging to a visible minority group. • Poverty rates were higher among the visible minority population in 2016. West Asian Canadians had the highest poverty rates, but rates were also elevated among Arab, Korean, Black, and Chinese Canadians. • Visible minority women regularly participated in sports less often than their counterparts in 2016, while visible minority men participated slightly more.
Immigrant status	• Recent immigrants faced higher poverty rates (20 per cent) than non-recent immigrants in 2018. • Immigrants and those born in Canada were nearly equally likely to report very good or excellent mental health in 2017-18. • Compared to people born in Canada, immigrant individuals were less likely to regularly participate in sports in 2016.

Diversity Focus	
LGBTQ2 member	• Bisexual women had the lowest rates of positive mental health in 2017-18, followed by bisexual men. Gay men and lesbian women had higher rates than bisexual men and women, but lower rates than heterosexual women, who themselves had lower rates than heterosexual men. • In 2016, gay men and bisexual women reported regularly participating in sports less often than heterosexual men and heterosexual women. • Transgender individuals had higher rates of negative mental health in 2018 and were significantly more likely to report having seriously contemplated suicide (45 per cent) than cisgender individuals (16 per cent).
Disability status	• Persons with a disability had elevated poverty rates in 2017 (17 per cent), especially if they simultaneously belonged to another at-risk group.
Income	• Babies born into the lowest income quintile in 2015-17 could expect to live about eight years less than those born into the highest income quintile. • Mental health was worse among low-income people in 2017-18.
Education	• People with less than a high school diploma had worse mental health in 2017-18 than those with a Bachelor's degree or higher.

The economic and health crisis brought on by COVID-19 and related public health measures has had devastating impacts on the physical and mental health and financial well-being of huge numbers of Canadians. As public health restrictions reduced social contacts, mental health declined and many Canadians increased their use of substances. Even for those Canadians fortunate enough to avoid COVID-19, physical health has still been negatively impacted as sports were cancelled and gyms were closed. And, although Canadians have been supported by strong and responsive income programs, like the Canada Response Benefit, which helped offset the income and employment effects of the pandemic, many Canadians continue to suffer from unemployment or face challenges meeting their essential needs.

While the Government has supported a comprehensive response to the pandemic, it has long been committed to policies aimed at reducing poverty, providing access to affordable housing and making investments in healthy communities. For example, recent investments in the Canada Child Benefit helped lift more than 400,000 children out of poverty, while an expansion of the Rental Construction Financing Initiative helped to increase the supply of affordable rental housing, and a redesigned federal homelessness program, called Reaching Home, helped to support people without access to safe and secure housing. Federal government actions also included supporting a Pan-Canadian Suicide Prevention Service with bilingual, 24/7 crisis support from trained responders and enhancing the response to the opioid crisis.

To support Canadians at risk of or facing poverty, food insecurity and core housing need as a result of the pandemic, the federal government has introduced a Canada Child Benefit and special GST Credit top-up payment, enhanced funding for the Reaching Home initiative, and supported food banks and other organizations providing hunger relief to affected individuals. Other actions have included additional investments for Distress Centres and the introduction of the Wellness Together Canada Portal to support Canadians struggling with mental health or a substance use disorder.

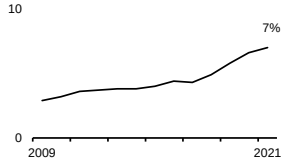
In the context of future actions to support a pandemic recovery, members of the Task Force on Women in the Economy have emphasized the issue of precarious work and the importance of policies to support better wages and working conditions, such as changes to minimum wage laws and paid sick leave. They also stressed the need over the long term for modernization of Canada's income support programs, such as Employment Insurance, the Canada Workers Benefit, and disability supports.

> *"The economic, health and social impacts of COVID-19 have been devastating for the communities we work with. From the loss of steady jobs to child care shortages to addressing discrimination, hate and violence in all its forms, we are seeing we can't go back to the old ways of doing things. We need a fresh approach that thinks about the economy and gender equity together."*
>
> —Maya Roy, CEO of YWCA Canada and Task Force on Women in the Economy Member

To respond to immediate and ongoing challenges related to poverty, health and well-being, the government has introduced a number of Budget 2021 measures, including:

- Establishing a **$15 federal minimum wage**.
- Maintaining flexible access to **Employment Insurance** benefits as the labour market begins to improve.
- Emergency funding for **homelessness programs** to protect vulnerable Canadians experiencing – or at risk of – homelessness.
- Continued funding to emergency hunger relief organizations supporting **food security** for vulnerable Canadians.
- Supporting community organizations to improve access to sexual and reproductive health care information and services.
- **Addressing the opioid crisis and problematic substance use** by supporting a range of innovative approaches to harm reduction, treatment, and prevention.
- Extending the **Racialized Newcomer Women Pilot**.
- Enhancing the **Canada Workers Benefit**, which could provide about $1,000 more a year to low-wage, full-time workers and lift close to 100,000 Canadians out of poverty.
- Increasing funding for **public health** measures and the **Indigenous Community Support Fund** to respond to the immediate needs of Indigenous communities.
- Supporting communities in providing services for Indigenous peoples dealing with mental health issues through a **distinctions-based mental wellness strategy**.
- **Investments in mental health** to support populations disproportionately impacted by COVID-19 and to develop national mental health standards.
- Establishing a **National Institute for Women's Health Research.**
- **Extending Employment Insurance Sickness Benefits** to better support Canadians suffering from illness or injury

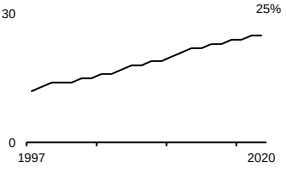
For the details of the impacts of these and more Budget 2021 measures which advance the Poverty Reduction, Health and Well-Being Pillar, please see the Impacts Report.



Gender Results Framework

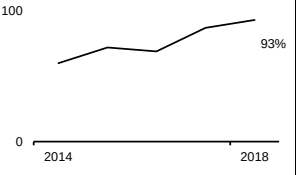
Gender Equality Around the World

Promoting gender equality to build a more peaceful, inclusive, rules-based and prosperous world



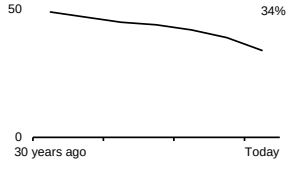
Full and equal access to resources, opportunities and security for women and girls around the world can lead to greater prosperity, improved quality of life, and peace and security for everyone. Women and girls are powerful agents of change and can improve their own lives and the lives of their families, communities and countries.

Peace and security



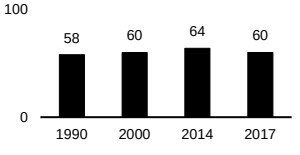
Share of UN peacekeeping personnel who are women.

Leadership



Share of seats held by women in national parliaments globally.

Women's rights



Screened bilateral allocable aid targeted toward gender equality.

Sexual health

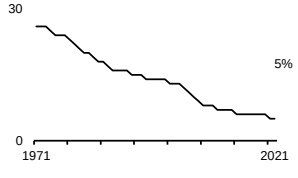
Share of girls in 31 countries who experienced genital mutilation.

Reproductive health

Share of women aged 15-49 years using contraceptives.

Gender in trade agreements

Canada-United States-Mexico Agreement



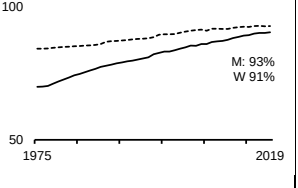
Comprehensive and Progressive Agreement for Trans-Pacific Partnership

Canada-EU Comprehensive Economic and Trade Agreement

Canada-Chile FTA

Canada-Israel FTA

Resource equity



Countries without equal spousal administrative authority over assets.

Gender-based violence

Low- and middle-income countries	
Americas	30
Africa	37
Europe	25
Eastern Mediterranean	37
South-East Asia	38
Western Pacific	25
High-income countries	23

Share of women with experiences of intimate partner violence in 2010.

Education and skills

Literacy rate of youth aged 15-24 years.

Sources: United Nations, Inter-Parliamentary Union, OECD, UNICEF, World Bank, WHO.

Gender equality around the world has continued to improve as international organizations and governments recognize the importance of the empowerment of women and girls. Not only is gender equality a fundamental human right but there is significant evidence that unlocking the potential of all women and girls is the most effective way to reduce poverty and create a world that is more inclusive, more peaceful and more prosperous.

Although significant progress has been made in many countries around the world over the last two decades, there are still millions of women and girls who continue to be held back from achieving their full potential due to unequal access to resources, opportunities, and security. These inequalities start at birth and follow women throughout their lives. For example, in many countries, boys receive access to health care, nutrition, and education to the detriment of girls. All combined, the impact of a preference for boys and men over girls and women has led to an estimated 100 million women missing due to excessive mortality. In addition, in 41 countries, inheritance laws do not treat daughters and sons equally; in 38 countries, there are no laws prohibiting the dismissal of pregnant workers; and in 32 countries, there is no legislation specifically addressing domestic violence.

Gender-based violence and sexual exploitation also continue to act as significant barriers to women and girls around the world. For example, 12 million girls are married before reaching adulthood each year, almost one in three women has experienced intimate partner violence, and over 200 million women and girls in 31 countries have experienced female genital mutilation.

To help in the fight for global gender equality and women's rights, the federal government undertook a number of important actions, including supporting the implementation of Canada's Feminist International Assistance Policy through the International Assistance Envelope, welcoming an extra 1,000 vulnerable women and girls from various conflict zones around the world as government-assisted refugees, launching Her Voice, Her Choice, to enable the fight against sexual and gender-based violence, and helping women's organizations and networks in over 30 developing countries through the Women's Voice and Leadership Program. Canada also took to the world stage as a leader in advancing gender equality by creating the G7's first Gender Equality Advisory Council and leading G7 partners in committing to meaningful action to help improve the lives of women and girls around the world, co-hosting the first formal Women Foreign Ministers' Meeting, and leading trade missions supporting women-owned businesses through the Business Women in International Trade program, as well as launching a new Partnership for Gender Equality, bringing together the Government of Canada, the philanthropic community, the private sector and civil society.

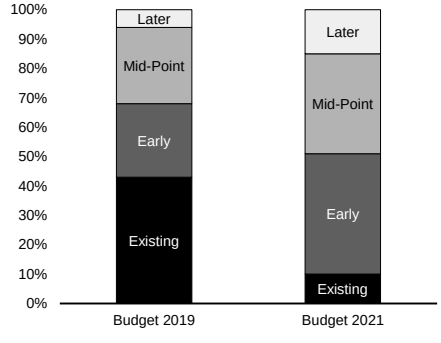
During the COVID-19 pandemic, the challenges that women around the world were already facing have been amplified. Unpaid care work – predominantly carried out by women – increased as schools and child care services closed, more meals needed to be cooked at home, and public health authorities recommended more cleaning and disinfecting. Access to modern contraceptives and family planning diminished due in part to the diversion of resources away from sexual and reproductive health services and in part due to public health restrictions that limited access to or temporarily cancelled certain services, leading to a rise in unintended pregnancies and maternal mortality. Job losses and economic hardships have been felt across the globe but are particularly affecting women as

40 per cent of all working women, globally, are in the sectors that have been most impacted by the pandemic. And, crucially, job loss impacts have the potential to be particularly traumatizing for women, who traditionally earn less, save less, and have less financial independence than men. Poor working conditions in many women-dominated health-care related jobs, such as nursing, have also put many women at greater risk of transmission. Finally, shortfalls in humanitarian aid funding amid the COVID-19 pandemic may have placed millions of women and children fleeing violence at risk of starvation. Recognizing the uneven impact of COVID-19 on women, the government has committed to ensuring that international efforts to fight the pandemic are invested in line with the Feminist International Assistance Policy.

As long as gender equality around the world remains elusive, Canada will have a role to play in eliminating barriers to equality and helping to create better opportunities for women and girls. Recognizing this, Budget 2021 proposes the following measures:

- **Extending the Middle East Strategy** for another year.
- Addressing growing **international humanitarian assistance** needs around the world.
- Additional funding for the **Canadian Ombudsperson for Responsible Enterprise (CORE)**.
- Further enhancing Canada's contribution to the **International COVID-19 Response.**
- Supporting Canada's response to the **Rohingya crisis and the situation in Myanmar**.
- Sustaining Canada's effort on the **Venezuelan migrant and refugee crisis.**

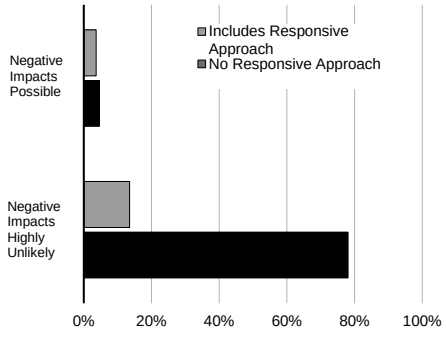
For the details of the impacts of these Budget 2021 measures, please see the Impacts Report.



Summary of Budget 2021 Gender and Diversity Impacts

This year's budget is about securing the recovery and building a strong, more inclusive and more resilient economy. This government is committed to evidence-based decision making and taking into account impacts on people from a variety of perspectives. This approach has guided all decisions taken on the COVID-19 Economic Response Plan as well as all investments made in this budget.

Following the approach introduced in Budget 2019, the remainder of this chapter provides a summary of the impacts of the budget as a whole. This analysis is complemented by the comprehensive analysis of the impacts of individual budget measures in terms of gender, diversity and other factors as found in the *Budget 2021 Impacts Report*.



Timing of GBA+ and Responsive Approaches

Chart A4.1 When GBA+ was First Performed

Budget 2021 saw a greater proportion of GBA+ being performed in earlier stages, which is indicative of the continuous efforts the government is making to integrate gender and diversity considerations in policy development. There remains room for further improvement, however, considering the number of measures that are still reporting this analysis being performed at the later stages.

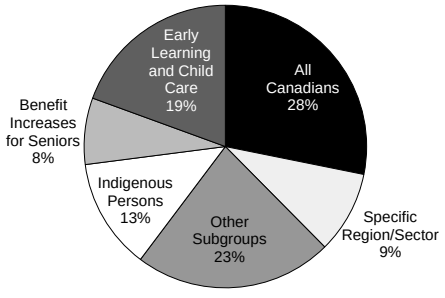


Chart A4.2 Responsive Approaches

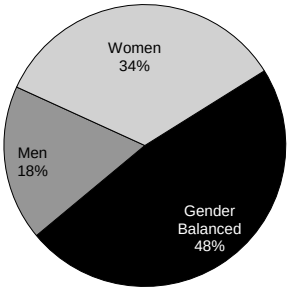
A key purpose of conducting a GBA+ is to identify barriers to access or unintended negative impacts for specific groups so that mitigation strategies or responsive approaches can be developed to respond to these. Just under 10 per cent of measures identified a possible negative impact on some groups. For roughly half of these measures, a responsive approach was developed. Where negative impacts were identified as unlikely, over 15 per cent of measures incorporated a proactive approach to reduce potential barriers to access, up from 8 per cent in Budget 2019. Other measures were explicitly targeted at vulnerable groups.

Target Population

Chart A4.3 Share of Budget 2021 Investments ($ value of measures*)

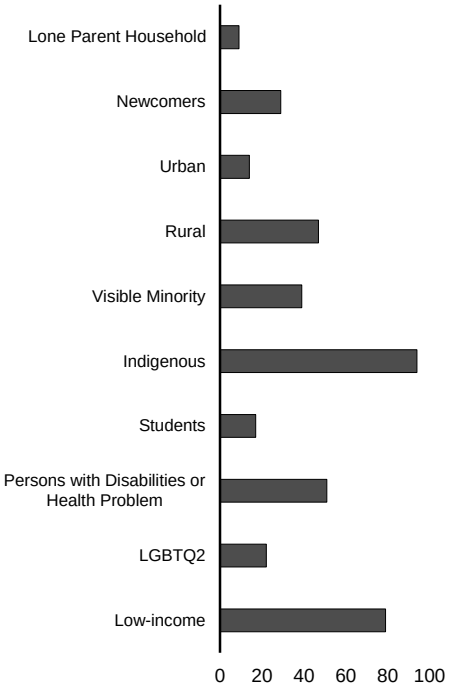


*Excluding Tax Fairness and Savings Measures.

While many measures in the budget are aimed at all Canadians (28 per cent of the budget), some measures target support to a specific group of the population or region/ sector (9 per cent). Targeted support is aimed at challenges or opportunities unique to subgroups of Canadians. For example, this year's budget includes significant support for Indigenous communities and businesses (13 per cent of the budget) and beneficiaries of two specific measures: early learning and child care i.e. women and families with young children (19 per cent) and benefit increases for seniors i.e. seniors age 75+ (8 per cent).

Expected Benefits: Gender

Chart A4.4 Share of Budget 2021 Investments ($ value of measures*)



*Excluding Tax Fairness and Savings Measures.

A large percentage of Budget 2021 directly benefits women and men in equal proportions (48 per cent), while others carry benefits that are likely to disproportionately benefit women or men. A significant proportion (34 per cent) of this year's budget is expected to directly benefit women. In particular this reflects up to $30 billion in investments to *Establish a Canada-Wide Early Learning and Child Care System* which will directly create jobs for women and will support women's labour market participation and their responsibilities as caregivers. Other measures in Budget 2021 will address challenges faced more by men, for example *Ending Homelessness* (men represent 72 per cent of shelter users).

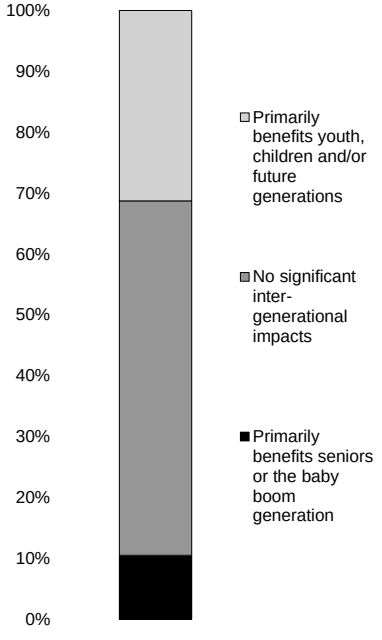
Expected Benefits: Additional Characteristics

Chart A4.5 Expected Benefits by Subgroup, Number of Measures

Budget measures were assessed in terms of expected direct and indirect benefits by various subgroups of Canadians. A number of measures in this budget are identified as helping Indigenous peoples, rural Canadians, and visible minorities. For example, *Indigenous Early Learning and Child Care* is expected to benefit Indigenous women, children and families while efforts to strengthen the *Canadian Race Relations Foundation* are expected to benefit racialized communities. Budget measures can also carry benefits for more than one group – for instance, improving *Food Security of Vulnerable Canadians* is expected to benefit Black, Indigenous and northern communities as well as low-income Canadians and lone-parent families.

Expected Benefits: Intergenerational and Income Distribution Impacts

Chart A4.6 Expected Intergenerational Impacts, Share of Budget 2021 Investments ($ value of measures*)



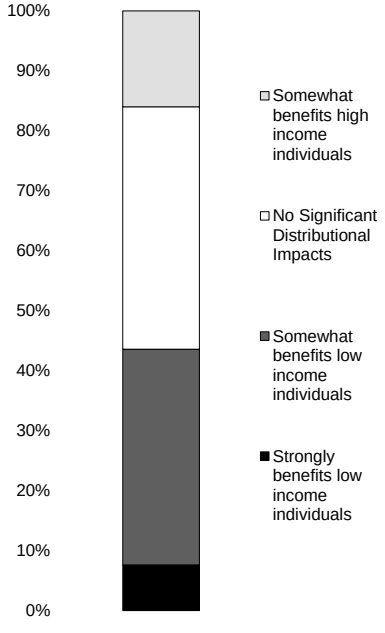


Chart A4.7 Expected Income Distribution Impacts, Share of Budget 2021 Investments ($ value of measures*)

*Excluding Tax Fairness and Savings Measures.

Budget 2021 measures were also evaluated with respect to how they affected Canadians at different generational and income levels. More than half of Budget 2021 investments are expected to benefit Canadians broadly equally across generations. A significant share (30 per cent) are expected to particularly benefit youth or future generations. For example, *Supporting Internships and Growing Businesses through Mitacs* directly benefits youth entering the labour market by expanding access to work-integrated learning opportunities for post-secondary students. This category in part also reflects many of the environmental budget measures, such as *Historic Investments in Canada's Natural Legacy* which are designed to benefit all Canadians, but assessed as particularly benefitting youth and future generations given that the ultimate impacts of climate change and loss of biodiversity will not be felt for several years.

A large proportion of the budget benefits lower-income Canadians. For example, enhancements to the *Canada's Workers Benefit* will benefit three million low-and modest-income workers through direct income support and by promoting longer term attachment to the labour force. A smaller portion of the budget is expected to benefit higher income Canadians. For example, *Growing Zero-emission Technology Manufacturing* will benefit all Canadians in the long term but immediate benefits will accrue to higher income technology manufacturers as these groups receive disproportionately large amounts of investment income.

Measuring What Matters: Quality of Life

The Government of Canada is working to better incorporate quality of life measurements into decision-making and budgeting based on international best practice, expert engagement, evidence on what shapes well-being, and public opinion research on what matters to Canadians.

The Government of Canada has made important progress over the years in understanding how societal trends and budget investments affect people differently. A logical next step is to focus more on the *nature* of these impacts. This means assessing progress on multiple fronts so decisions about priorities and investments are based on evidence of what will most improve Canadians' quality of life.

The COVID-19 pandemic has affected many dimensions of Canadians' quality of life, from health impacts and job losses to mental health and social isolation. Inequalities in our society and gaps in our social safety net have been revealed, and many Canadians are reflecting on what they value most. Governments are also assessing how best to promote recovery and build back better.

The experience of the pandemic in Canada and around the world has highlighted the importance of thinking "beyond GDP." It has long been understood that standard measures of economic progress like GDP do not capture the full range of the factors that, evidence shows, determine a good quality of life. GDP tells us how overall economic activity is growing, but little about how growth is distributed across our society. It fails to account for non-market economic activity, like care responsibilities, and environmental harms.

Recognizing the importance of factors beyond GDP does not imply a reduced focus on investing in a strong economy or prudent fiscal management; in fact these are critical to achieving and sustaining quality of life. Increasing Canada's GDP through productivity growth, labour market participation, and investment is crucial for raising Canada's national standard of living now and into the future.

> *"One in two Canadians (53%) feel that stronger growth in Canada's GDP is important to their day-to-day life. However, far more (82%) feel that measures beyond economic growth such as health and safety, access to education, access to clean water, time for extracurricular and leisure activities, life satisfaction, social connections, and equality of access to public services are important to their day-to-day life. In fact, nearly three quarters (71%) of respondents feel it is important that the government move past solely considering traditional economic measurements like levels of economic growth, and also consider other factors like health, safety, and the environment when it makes decisions."*
>
> Public Opinion Research by Earnscliffe
> Commissioned by the Department of Finance Canada, August 2020

Figure A4.2
Objectives of the Quality of Life Framework for Canada

While economic growth is important, there is now growing international interest in adopting broader measures of progress for decision-making. Building on the OECD's ''Better Life Initiative," more than half of its member countries now have "quality of life" or "well-being" policy initiatives. These differ in design and application, but share a common ethos: 1) a well-functioning society should focus on the well-being of its citizens, 2) the distribution of outcomes across society matters, and 3) governments should aim to achieve sustainable outcomes over time.

Governments have generally developed frameworks that track a set of indicators to monitor how the country is faring from a quality of life standpoint, using this evidence inform better policy and funding decisions based on the greatest opportunities for cost-effective interventions.

With renewed attention on what Canadians value most, the pandemic offers an opportunity to "build back better" toward a society that is more prosperous, inclusive, and sustainable. Canada has been working towards these objectives prior to the pandemic, making important investments in long-term economic growth, poverty reduction and housing, and taking action on the climate crisis.

The **OECD**'s **Better Life Initiative** develops statistics that capture aspects of life that matter to people and that help shape the quality of their lives

In 2019, **New Zealand** released the world's first **Well-being Budget** based on the NZ Treasury's Living Standards Framework, setting well-being priorities at the outset of the annual budget cycle.

Scotland's National Performance Framework articulates outcomes related to quality of life and sustainability, aligning the efforts of the public, private and not-for-profit sectors to achieve them.

In 2020, **France** announced its **green budgeting initiative**, evaluating its national budget against its Paris Agreement objectives.

A quality of life framework can bring together these and other objectives, such as social cohesion and resilience. This integrated approach can serve as a north star for policy development and budgeting; articulating priorities based on what matters most for Canadians' quality of life. Work to do this is well underway. In December 2019, the Minister of Middle Class Prosperity and Associate Minister of Finance was tasked with better integrating quality of life measurements into decision-making and budgeting. Guided by conversations with experts, nations that are advanced in their thinking about well-being, provinces and territories, Indigenous partners, and feedback from Canadians themselves, officials across the government have teamed up to create a draft "made-in-Canada" approach.

Figure A4.3
Architecture of the Quality of Life Framework for Canada

The Quality of Life Framework is based on evidence about the factors that matter most to Canadians: prosperity, health, environment, social cohesion, and good governance. It uses disaggregated data to look at the distribution of these outcomes through a "Fairness and Inclusion" lens, and considers long-term dynamics through a "Sustainability and Resilience" lens. You can learn more about the proposed framework in this discussion paper on the Department of Finance Canada website. Dialogue will continue on the framework and its evergreen set of indicators.

This framework is already beginning to inform decisions. Consideration of how each budget proposal affects the various dimensions and indicators of this framework helped achieve the right mix of measures with an appropriate focus on building a strong, inclusive and sustainable recovery. Moving forward, the framework will continue to underpin how we monitor progress in "building back better" to improve Canadians' quality of life now and into the future.

> *"Last but not least, hard-wiring well-being into policymaking could make an important contribution to "building back better". Our forthcoming Economic Survey looks at how measures of well-being can be used in policymaking. Canada's commitment to developing a well-being framework can help to ensure that the slogan of "building back better" is translated into an actionable set of outcomes and concrete measures."*

> – Angel Gurría, Secretary-General, OECD,
> Address to the Empire Club of Canada, February 2021

Annex 5
Budget 2021 Impacts Report

This section considers how each Budget 2021 measure affects Canadians—both *who* is most affected and the *nature* of the impacts at a high level.

The *Canadian Gender Budgeting Act* was passed by Parliament in December 2018, enshrining the government's commitment to decision-making that takes into account the impacts of policies on all types of Canadians. The Act legislated the government's commitment to publish information on the gender and diversity impacts of all new budget measures. Starting in Budget 2019, the government's budget documents have included analysis of the impacts of individual budget measures, providing transparency into the analysis that is performed as part of the policy development and budgeting processes. This analysis continues to be a work in progress, and is often limited by the availability of data, especially for certain identity factors such as race, gender identity, and disability. But under the leadership of the Minister for Women and Gender Equality and Rural Economic Development, the Minister of Diversity and Inclusion and Youth, the Minister of Employment, Workforce Development and Disability Inclusion, and the Minister of Middle Class Prosperity and Associate Minister of Finance, departments continue to work at modernizing and improving the quality of this analysis, with particular attention to the intersectional analysis of race, Indigeneity, disability, and gender identity. These insights were instrumental in informing the development and evolution of the COVID-19 Economic Response Plan. Going forward, new Budget 2021 investments in Statistics Canada should help improve Canadians' access to disaggregated data.

Reflecting the feedback of experts who have been advising the Department of Finance Canada on its gender budgeting practices on a periodic basis, this report devotes more space to measures that are more relevant from a gender and diversity standpoint, while ensuring a basic level of coverage for all budget measures. Budget 2021 measures which are expected to advance the Gender Results Framework are placed at the beginning of this report.

This report is also expanded this year to contain additional information on the *nature* of the impacts expected from each budget measure, reflecting the government's commitment to better incorporate quality of life measurements into decision-making and budgeting. As outlined in *Measuring what Matters*, the government is beginning to track progress on a range of fronts to ensure that priorities and decision-making are based on evidence of what will most improve current and future Canadians' quality of life. As an illustration of initial steps in that direction, this report includes information on how individual budget measures advance various dimensions and indicators of the draft quality of life framework.

Notes on Terms and Fields

Title and Context: Each title is linked with its corresponding entry in the budget text. Click the title of a GBA+ to view the description of the measure.

Text section: contains information on the key impacts of the measures from a gender and diversity and quality of life perspective, including direct and indirect impacts, both positive and negative, where applicable. Key facts and data sources are included in this section.

GBA+ Timing: GBA+ can be conducted at various stages throughout the development of a government policy, program, or initiative. High-quality GBA+ requires early attention to develop effective options and strategies for delivering programs and services to Canadians. For GBA+ to be most valuable, it is ideally built directly into the early stages of the policy development process. This section identifies when the GBA+ was conducted.

■□□	Early in the idea development phase (when proposals are being developed)
□■□	Mid-point (as proposals are being finalized)
□□■	Later stage (after proposals are finalized, prior to submission of proposal)
■ *Existing*	GBA+ was previously performed on the existing program (in cases where an existing program is seeking a renewal of funding). If the proposal is for an existing program, it was either modified to reflect the changes to the program or was confirmed to reflect that the program hasn't changed since the GBA+ was last conducted.

Quality of Life Impacts: Describes the primary domains of the framework each budget measure is expected to advance and lists relevant indicators. Primary domains for each measure are indicated through a darker "active" icon.

Prosperity – the economic domain, encompassing income and growth, employment and skills and learning and economic security.

Health – physical and mental health, and care systems that enable people to thrive through all stages of life.

Environment – natural and built environments that meet human needs such as clean air and water, as well as ecological integrity and stewardship dimensions such as greenhouse gas emissions.

Society – includes culture and identity, inclusion, social cohesion and connection, and time use.

Good Governance – includes democracy and institutions, safety and security and justice and human rights.

Target Population: Describes the group whom the measure is intended to benefit. This section is not intended to describe the expected impacts, but rather the motivation and policy intent behind the measure.

Expected Benefits

Gender: This section collects information on the expected gender characteristics of the benefitting group. The scale is explained as follows:

Predominantly men (e.g. 80 per cent or more men)

60 per cent - 79 per cent men

Broadly gender-balanced

60 per cent - 79 per cent women

Predominantly women (e.g. 80 per cent or more women)

Income Distribution: This indicator describes expected impacts of the measure from an income distributional perspective. The scale is explained as follows:

Strongly benefits low income individuals (Strongly progressive)

Somewhat benefits low income individuals (Somewhat progressive)

No significant distributional impacts

Somewhat benefits high income individuals (Somewhat regressive)

Strongly benefits high income individuals (Strongly regressive)

Inter-generational: Inter-generational impacts identify the age cohort receiving the benefits or which is likely to disproportionately benefit.

Primarily benefits youth, children and/or future generations

No significant inter-generational impacts or impacts generation between youth and seniors

Primarily benefits seniors or the baby boom generation

Additional Characteristics: Highlights other notable characteristics of beneficiaries (i.e. race, region, ability, Indigeneity, region, sector, etc.).

Gender Results Framework (if applicable): For measures that advance a goal or objective of Canada's Gender Results Framework (GRF), an icon and associated GRF pillar is listed. Although only gender is included in the title of the Framework, it is aligned with the Government of Canada's policy of GBA+, ensuring that gender is considered in relation to other intersecting identity factors.

Additionally, a measure may advance more than one goal under one or more pillars; however, in this report, only the primary pillar is listed. More information on these goal statements, objectives, and indicators can be found on Women and Gender Equality Canada's website: https://women-gender-equality.canada.ca/en/gender-results-framework.html.

GBA+ Responsive Approach (if applicable): Includes any effort in place to minimize possible negative impacts of a measure on certain individuals or groups, or any plans to proactively reduce barriers to participation.

Education and Skills Development

The following Budget 2021 measures are expected to advance the Education and Skills Development Pillar under the Gender Results Framework.

Helping Youth and Students Build Job Skills and Connect with Employers

Investments in youth employment and job skills training will directly benefit youth (ages 15-30), including vulnerable youth facing multiple barriers to employment and groups under-represented in the labour market such as racialized and Indigenous youth, women in certain skilled trades, as well as some newcomers to Canada. It is also expected that young women will see slightly more benefit than men, as young women have been disproportionately economically affected by the pandemic compared to other demographics, including experiencing higher rates of job loss.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment; Child, student and adult skills; Youth not in employment, education or training*

Target Population:	Youth
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Vulnerable and Under-represented Youth, Young Women
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Education and Skills Development

Opportunities for Businesses and Young Workers Through Mitacs

This program directly benefits youth since it will expand the number of work-integrated learning opportunities for post-secondary students. It will also directly benefit businesses that get access to highly-qualified individuals. As Mitacs' internships tend to focus on science, technology, engineering and mathematics (STEM) subjects, in which men are overrepresented, it is likely that men would benefit more than women from these opportunities. Relative to their share of the labour force, visible minorities are also more likely to work in STEM fields. Women make up only 34 per cent of STEM bachelor degree holders and men account for 53 per cent of college enrolments in STEM programs. Men are also more highly-represented among Canadian business owners.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment; Future outlook; Productivity*

Target Population:	Students, Businesses
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*

Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Students, Businesses
GBA+ Timing:	*Early* ■□□ *Later* ■ *Existing*
Gender Results Framework	Economic Participation and Prosperity

GBA+ Responsive Approach

Mitacs is committed to improving diversity as an organization and among program participants. It has a strategy in place to improve equity and diversity, particularly among four underrepresented groups: women, visible minorities, people with disabilities, and Indigenous peoples.

Supporting Vulnerable Children and Youth during the Recovery

This program directly benefits youth as it specifically targets students who are at risk of dropping out of school. Since students at the greatest risk of dropping out are those who face systemic and individual barriers in their daily lives, the program's main beneficiaries will be students from low-income households, marginalized and racialized communities, and those living in rural and remote regions.

Data Sources: *Internal Administrative Data, Statistics Canada*

Quality of Life Impacts

Prosperity – *Post-secondary attainment; Child, student and adult skills; Youth not in employment, education or training*
Society – *Sense of belonging to local community*

Target Population:	Vulnerable Youth
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Students, Marginalized and Racialized Communities, Rural and Remote Regions
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Education and Skills Development

Creating New Opportunities for Skilled Tradespeople

This program will disproportionately benefit young men as they are overrepresented in most Red Seal trades. 53 per cent of apprentices are under 25 years of age, 86 per cent are men, 91 per cent are Canadian-born, and 56 per cent had a high school diploma as their highest level of education when starting an apprenticeship. Women comprised about 14 per cent of apprentices overall, and fewer women than men apprentices were registered in a Red Seal trade (59 per cent versus 81 per cent). Across the top 10 Red Seal trades, women were more likely than men to be hairstylists or cook apprentices. However, the number of women entering an apprenticeship program in a male-dominated trade (e.g. carpentry, electrical) has more than doubled in the last decade. Indigenous apprentices comprised about six per cent of apprentices overall, while immigrants comprised about nine per cent apprentices overall.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment; Student and adult skills; Post-secondary attainment*

Target Population:	Apprentices and Employers who Hire Them
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*

Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Students
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*
Gender Results Framework	Education and Skills Development

GBA+ Responsive Approach

An additional $5,000 per apprentice position ($10,000 in total) will be provided to incent employers to hire and train apprentices from underrepresented groups, including women, Black and racialized Canadians.

Helping Employers Train and Recruit Workers

This program is expected to benefit men and women relatively equally, with benefits accruing differently depending on the specific projects and sectors supported. Projects in the health sector are likely to disproportionately benefit women, as they currently hold 80 per cent of jobs in the sector. Projects in the energy sector are likely to benefit men disproportionately, as women make up 22 per cent of the energy production workforce, 55 per cent of which are in business administration or accounting.

Gender Results Framework	Education and Skills Development

GBA+ Responsive Approach

The program will integrate criteria into its project proposal assessment process to ensure that at least 40 per cent of program participants are from underrepresented groups such as women and persons with disabilities.

Supporting Skills for Success

While supports will be available to all Canadians, including those with higher education and in high skilled jobs, this program will disproportionately benefit adults with low skills, with gender impacts expected to be roughly even. Men display higher numeracy proficiencies than women while, in general, women and men display similar proficiencies in literacy. In addition, newcomers show lower proficiency in literacy and numeracy than the Canadian-born population, while 35 per cent of off-reserve First Nations people and 50 per cent of Métis had literacy skills required to compete in a knowledge-based economy, compared with 57 per cent for non-Indigenous adults.

Gender Results Framework	Education and Skills Development

GBA+ Responsive Approach

To maximize participation of vulnerable groups, significant and targeted outreach will be conducted with stakeholder groups that have expertise and experience serving these populations prior to launching calls for proposals. Additionally, data collection and analysis will occur for each project to assess participation.

Ensuring Communities Recover Through Skills Training and Workforce Planning

Benefits of this program are expected to be gender balanced, accruing differently depending on specific projects supported. Groups traditionally underrepresented in the labour market such as youth, persons with disabilities, newcomers, Black Canadians and other racialized individuals, Indigenous peoples and older workers may benefit more given that 75 per cent of funding will be dedicated to addressing the labour market needs of these populations. In addition, the program will ensure that the needs of diverse communities including urban, rural and remote are considered.

Gender Results Framework	Education and Skills Development

Extending Federal Supports for Adults Who Return to School Full-Time

This program directly targets low and middle-income adults who have been out of high school for at least ten years and choose to return to post-secondary education on a full-time basis. Adult students face significant financial pressures related to housing costs, dependants (47 per cent reported caring for a dependant in 2018), education savings for children, pre-existing debts and saving for retirement. Women account for approximately 64 per cent of the recipients of the adult learner top-up grant to-date. Overall, an estimated 60 per cent of top-up grant recipients say the grant was an important factor in their decision to return to school.

Gender Results Framework	Education and Skills Development

Doubling the Canada Student Grants for Two Additional Years

This program directly targets students from low and middle-income families. Women make up a majority of students in post-secondary education, and represented 60 per cent of student financial aid recipients in 2018-19. Additionally, more than two thirds of student financial aid recipients are under the age of 25 (72 per cent in 2018-19).

This program will provide additional financial aid to students with disabilities and students with parents who have above-average levels of total financial need compared to their peers.

Providing Relief from Student Debt

As of March 2020, women represented 61 per cent of all borrowers with outstanding federal student loan debt. Women are also more likely to require assistance repaying student loan debts, representing 66 per cent of participants in the Repayment Assistance Plan.

Approximately half of all Repayment Assistance Plan recipients in 2018-19 were below the age of 30, and 85 per cent had incomes low enough that they did not have to make payments on their loans. Approximately three quarters of all repayment assistance recipients have been out of their studies for less than five years.

Expanding Access to Supports for Students and Borrowers with Disabilities

This program directly targets an estimated 40,000 current and former students per year with persistent and prolonged disabilities. Women currently represent 61 per cent of recipients of the Canada Student Grant for Persons with Disabilities and 65 per cent of recipients under the Repayment Assistance Plan for Persons with Disabilities, which provides loan deferrals and forgiveness exclusively to low-income borrowers who experience difficulty making student loan payments. Among the broader population, 15 per cent of women and 10 per cent of men report having a disability, and students with disabilities generally have the highest levels of need not covered by student financial assistance programs.

Gender Results Framework	Education and Skills Development

Providing High-quality Education for First Nations

These investments will benefit individuals of all genders, however the greatest gains may be for First Nations boys and men who are less likely to complete their secondary education. Students, teachers and communities will benefit from measures to keep schools safe during COVID-19. In 2016, 44 per cent of the First Nations population on reserve ages 18 to 24 had completed high school, compared to 88 per cent of the non-Indigenous population. Investments in adult education will allow First Nations to offer programs that respond to the unique, often gendered circumstances that prevent people from completing their high school education.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Child, student and adult skills; Youth not in employment, education or training; Future outlook*
Health – *COVID-19 incidence*
Society – *Indigenous languages; Sense of belonging to local community*

Target Population: First Nations Children and Adults Living on Reserve

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	First Nations
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*
Gender Results Framework	Education and Skills Development

Promoting Official Languages

Funding for official languages is expected to directly benefit students and youth from official language minority communities who will have greater access to opportunities to study in their language of choice and benefit from additional community spaces and educational infrastructure. In Canada, more than a million Francophones live outside Quebec and more than 1.1 million Anglophones live in Quebec. Knowledge of official languages and an increase in training and bilingualism will improve employment opportunities for young Canadians, especially for those living in remote or rural communities. Post-secondary institutions train the bilingual workforce required for the vitality of official language minority communities and the promotion of bilingualism, such as French-language teachers and early childhood educators. As women make up 70 per cent of education services, they are expected to indirectly benefit. Investments will also support jobs in construction, with these indirect benefits accruing disproportionately to men.

Data Sources: *Statistics Canada, Provincial Government Reports*

Quality of Life Impacts

Prosperity – *Child, student and adult skills; Future outlook*
Society – *Knowledge of official languages; Sense of pride/belonging to Canada; Sense of belonging to local community*
Good Governance – *Confidence in public institutions*

Target Population:	Students in Official Language Minority Communities
Expected Benefits:	
Gender:	Men ○—○—●—○—○ Women
Income Distribution:	Low ○—○—●—○—○ High Income
Inter-generational:	Youth ●—○—○ Senior
Additional Characteristics:	Official Language Minority Communities, Teachers, Construction Sector
GBA+ Timing:	Early ■□□ Later □ Existing
Gender Results Framework	Education and Skills Development

Supporting Post-secondary Education in the North

The measure is expected to benefit residents of the Northwest Territories, with an emphasis on youth. Indigenous peoples represent over 50 per cent of the population in the Territories. The transformation of the college to a polytechnic university will also benefit lower-income individuals and families, through increased access to degree programs along with applied training in order to obtain skills needed in the workforce.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Post-secondary attainment; Future outlook*

Additional Characteristics:	Residents of the Northwest Territories, Indigenous peoples
GBA+ Timing:	Early □□■ Later □ Existing
Gender Results Framework	Education and Skills Development

Supporting Indigenous Post-Secondary Education during COVID-19

These investments will benefit Indigenous students, the majority of whom are young women. Women have historically made up approximately 69 per cent of students funded through the Post-Secondary Student Support Program. Post-secondary education attainment rates of Indigenous people are approximately 18 per cent lower than those of their non-Indigenous counterparts, and COVID-19 interruptions risk accelerating these inequalities. Obtaining a post-secondary qualification can have a significant positive impact. In 2016, the employment rate for the First Nations population living on reserve with no certificate, diploma or degree was 33 per cent. This increased to 49 per cent for those with a high school diploma or equivalent, and again to 65 per cent for those who had attained a post-secondary certificate, diploma or degree. Indigenous-led post-secondary institutions also preserve and strengthen Indigenous languages and cultures.

Additional Characteristics:	First Nations, Inuit and Métis Nation Students
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*
Gender Results Framework	Education and Skills Development

Teaching Kids to Code

CanCode has a focus on reaching girls, Indigenous youth, youth with disabilities, and youth living in rural, remote, and northern communities to increase their representation in science, technology, engineering, and mathematics training.

About seven per cent of Canadians under the age of 24 are Indigenous and, in CanCode's first three years, between 6 and 9 per cent of participants have been Indigenous youth. Between 45 and 49 per cent of CanCode participants were girls, consistent with their 48.6 per cent share of the school-aged population.

About 19 per cent of Canadians live in rural areas, and between 16 and 20 per cent of CanCode participants were youth living in rural areas. About 4 per cent of the population aged 15 to 24 report having a disability, compared with between one and 2.5 per cent of CanCode recipients.

Data Sources: *Internal program data, Statistics Canada*

Quality of Life Impacts

Prosperity – *Child, student and adult skills; Future outlook*

Target Population: Youth, Teachers

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*

Gender Results Framework

Education and Skills Development

GBA+ Responsive Approach

By ensuring that all its programs are free to participants, CanCode helps to reduce income-based barriers to participation. CanCode also targets gender-balanced cohorts in its programming.

Economic Participation and Prosperity

The following Budget 2021 measures are expected to advance the Economic Participation and Prosperity Pillar under the Gender Results Framework.

Establishing a Canada-Wide Early Learning and Child Care System

This measure primarily targets parents with young children, particularly mothers who often retain primary caregiving responsibilities. It will also be of particular benefit to early childhood educators, 96 per cent of whom are women.

Women, particularly those with young children, have lower labour market participation rates than men. In 2019, only 83 per cent of women between the ages of 25 and 44 participated in the labour force, whereas men in the same age range participated at a rate of 91 per cent. Young women with children are at higher risk of not being in education, employment or training. Access to affordable early learning and child care will increase women's labour market participation and shrink the gender participation gap as more mothers enter the workforce.

Families of all income ranges will see reduction in fees. Funding for a Canada-wide early learning and child care system will also support efforts to attract and retain high-quality early childhood educators, who are predominantly women and face challenges such as low wages, poor working conditions, and a lack of career advancement opportunities.

There is significant research that shows high-quality child care supports positive child development outcomes such as improved cognition and social skills, particularly among children from disadvantaged families.

Data Sources: *Statistics Canada, internal administrative data*

Quality of Life Impacts

Prosperity – *Access to early learning and child care; Employment; GDP per capita; Youth not in education, employment or training*
Health – *Children vulnerable in early development*
Society – *Time use*

Target Population: Families with Young Children

Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Parents currently in, wanting to remain in, or looking to join the labour force, Early Childhood Educators

GBA+ Timing: *Early* ☐■☐ *Later* ☐ *Existing*

Gender Results Framework

Economic Participation and Prosperity

GBA+ Responsive Approach

The federal government will work with provincial and territorial partners to prioritize the provision of high-quality child care through support for a robust and growing not-for-profit sector, and ensure inclusion and equality of opportunity for children of all socio-economic backgrounds, including Black and other racialized children, Indigenous children in urban and northern communities, children from Official Language minority communities and children with disabilities.

Indigenous Early Learning and Child Care

This investment will benefit Indigenous women, children, and families by increasing opportunities for labour force participation and reducing unpaid caregiving time use pressures, contributing to healthy child development, and benefiting workers in the sector. The labour market impacts of COVID-19 have had a deeper and longer-lasting impact on Indigenous people. Employment among Indigenous women, in particular, remains below pre-pandemic levels.

Access to flexible, high quality child care has been shown to increase participation in work, education or training by parents—particularly mothers—and could play a role in addressing these disparities.

First Nations, Inuit, and Métis children are more likely to live in poverty compared to the overall Canadian average. Access to high quality, culturally relevant programming will help improve school readiness, long-term development, and life outcomes, and empower young children with a strong sense of identity.

These investments will also benefit Indigenous early childhood educators, who are overwhelmingly women, by allowing child care providers to raise wages, provide upskilling opportunities, and create training programs and jobs for new entrants.

Data Sources: *Statistics Canada, ESDC*

Quality of Life Impacts

Prosperity – *Access to early learning and child care; Employment; GDP per capita; Future outlook, Youth not in education, employment or training*

GBA+ Timing: *Early* ☐■☐ *Later* ☐ *Existing*

Gender Results Framework

Economic Participation and Prosperity

Strengthening Long-Term Care and Supportive Care

The pandemic has disproportionately affected the long-term and supportive care sectors in Canada. Over 2,500 care homes experienced an outbreak between March 1, 2020, and February 15, 2021, resulting in the deaths of over 14,000 residents and close to 30 staff. This represents more than two-thirds of Canada's overall COVID-19 deaths. About 80,000 residents and staff of LTC and retirement homes have been infected, representing 10 per cent of all COVID-19 cases in Canada.

This funding directly benefits seniors and persons with disabilities who require long-term care and supportive care. Women are expected to particularly benefit as 65 per cent of patients in residential continuing care facilities are women.

Health care providers, particularly personal support workers, and informal caregivers are also expected to benefit from the additional work and improved working conditions created through this funding. The vast majority of care providers in supportive care are women, with a significant portion of these individuals being newcomers or immigrants, especially among personal support workers.

Of the 245,500 people employed as nurse aides, orderlies and patient service associates in Canada in 2016, more than a third (87,925) were immigrants. Women accounted for the majority of these workers among both immigrants (86 per cent) and non-immigrants (87 per cent).

Data Sources: *CIHI, Statistics Canada*

Gender Results Framework	 Economic Participation and Prosperity

Helping Workers Transition to New Jobs

This initiative will help underemployed, lower income, mid-career Canadians in disrupted industries transition to higher-paying jobs in newer industries.

Additionally, by including processes to mitigate hiring biases for racialized Canadians, women, and older workers, this initiative will specifically help women and other underrepresented workers transition into new industries. This measure will also benefit companies that are able to hire from new pools of workers to help their businesses grow. However, benefits to companies will likely be unevenly distributed as 63.5 per cent of small and medium-sized enterprises are majority-owned by men.

Quality of Life Impacts

Posterity – *Firm growth; Household incomes; Student and adult skills; Future outlook*

Additional Characteristics:	Workers Facing Transition, Firms Seeking Skilled Workers
GBA+ Timing:	Early ■□□ Later □ Existing
Gender Results Framework	 Economic Participation and Prosperity

GBA+ Responsive Approach

This initiative is designed to proactively mitigate risks and hiring biases that disadvantage certain groups, particularly racialized minorities, women, and older workers, while also encouraging their participation in growing sectors of the economy.

Reforming Canada's Pardon Process

Approximately 10 per cent of Canadians have a criminal record. This initiative is expected to facilitate their reintegration into society. This measure will primarily benefit men, who in 2018-19, represented 87 per cent of those admitted to correctional facilities. Groups that are overrepresented in the criminal justice system are also expected to directly benefit, including Indigenous peoples, who account for 30 per cent of admissions to federal custody, while only accounting for five per cent of the Canadian population, as well as Black Canadians, who account for 7.2 per cent of federal inmates despite representing 3.5 per cent of Canadians.

In addition, the reduction of the application fee and funding for community support services will increase accessibility to pardons, particularly for lower-income and marginalized applicants. More broadly, this measure will benefit not only applicants, but society in general. For example, Canadians who obtain a pardon are more likely to gain employment and suitable housing.

Helping Charities, Non-profits, and Social Purpose Organizations Grow via the Social Finance Fund

The Social Finance Fund was designed through a lens of equity and inclusion to support social purpose organizations (e.g. charities, non-profits, mission-focused for-profits, social enterprises). This initiative is expected to have significant positive impacts for underrepresented and marginalized groups served by these organizations, including women, Indigenous communities, low-income individuals, Black and racialized people, recent immigrants and refugees, members of the LGBTQ2 community, and persons with disabilities. Moreover, a social equity investment lens will help ensure diversity analysis is incorporated into investment decision-making processes. This lens will be applied to wholesaler selection, disaggregated data collection, reporting requirements, and other elements of the Social Finance Fund's design. The majority of workers in social purpose organizations are women.

Gender Results Framework	Economic Participation and Prosperity

GBA+ Responsive Approach

Social investment managers will develop plans to monitor and ensure that funds reach a diversity of social purpose organizations and beneficiary populations. In addition, the change in funding instrument to conditionally repayable contributions is likely to promote greater investments into currently underserved segments of the social purpose sector.

Helping Charities, Non-profits, and Social Purpose Organizations Grow via the Investment Readiness Program

The renewed program will fund social purpose organizations (e.g. charities, non-profits, social enterprises) to advance a broad range of socio-economic objectives for diverse populations. The program is committed to providing equitable access to all Canadian social purpose organizations, and it will build on partnerships with organizations such the Canadian Women's Foundation and National Aboriginal Capital Corporations Association to support social purpose organizations facing barriers in accessing social financing, such as those led by or serving women, Indigenous people, and more. The renewed program will strengthen employment opportunities for women, Indigenous people, persons with disabilities, Black Canadians, LGBTQ2, and other marginalized groups to support a more inclusive and diverse workforce.

Support for Personal Support Workers

Personal support workers are often captured under the occupational categories of nurse aides, orderlies and patient service associates. The 2016 Census indicates that 86 per cent of these front-line care providers were women and more than one-third were immigrants (compared to one-quarter of all other occupations). This sub-group was also more likely to identify as a visible minority (34 per cent) than workers in other occupations (21 per cent), with Black and Filipino women especially overrepresented. While the initiative is preliminarily assessed as mainly benefiting women, my65+ is open to both Service Employees International Union's members and their families, and may have broader benefits once the eligibility criteria for receipt of funding are finalized.

Investing in Telefilm Canada and Encouraging Diverse Voices in Canadian TV and Film

Funding will allow Telefilm Canada to continue to support audiovisual production excellence in Canada by modernizing its current suite of programs in response to increasing digitization in the audiovisual sector and global demand for content. In addition, targeted funding for Telefilm Canada and the Canada Media Fund will be used to directly benefit underrepresented professionals in the industry, including women, people with disabilities, LGBTQ2, people of colour, Black, and Indigenous creators. Women, especially women of colour and Indigenous women, continue to be underrepresented across most jobs in film and television production in Canada. Women of colour represent less than one per cent of TV writing roles and five per cent of directing roles. While women make up more than half of arts and culture workers generally in Canada, they continue to earn a lower average hourly rate than men who work in the sector.

Gender Results Framework

Economic Participation and Prosperity

Revitalizing Tourism

The impact of COVID-19 on the tourism sector has been most acute among underrepresented groups, as the sector employs a large number of women, youth, Indigenous peoples, immigrants, and LGBTQ2 Canadians. For example, women occupy 51.4 per cent of total jobs in the tourism sector, compared to 48.2 per cent across all industries, while youth make up 30.7 per cent compared to 12.7 per cent, and Indigenous persons occupy 4.1 per cent of jobs in the sector compared to 3.7 per cent of all employment. Tourism businesses are more likely to be owned by underrepresented groups than those in other sectors. For example, 30 per cent of businesses in the tourism sector are fully owned by women, versus 16 per cent of businesses in the broader economy.

The announced tourism measures are designed to benefit the most affected groups in the sector and rural communities dependent on tourism. The economic stimulus impacts of this spending will benefit all Canadians.

Leadership and Democratic Participation

The following Budget 2021 measures are expected to advance the Leadership and Democratic Participation Pillar under the Gender Results Framework.

Supporting Women Entrepreneurs

The target group of this proposal is women entrepreneurs. Only 16 per cent of all small and medium-size enterprises (SMEs) are majority owned by women, compared to 63.5 per cent majority owned by men. Women entrepreneurs are not a homogenous group. Women with different, and sometimes intersecting, demographic characteristics pursue entrepreneurship.

Women entrepreneurs are strongly represented among Indigenous and to a lesser extent, visible minority SME owners. For example, approximately 19 per cent of visible minority entrepreneurs are women, and 36 per cent of Indigenous-owned SMEs are partially or wholly owned by women.

Data Sources: *Statistics Canada, OECD, Diversity Institute*

Quality of Life Impacts

Prosperity – *Firm growth; Employment*
Good Governance – *Representation in senior leadership positions*

Target Population:	Women Entrepreneurs
Expected Benefits:	
Gender:	*Men* ○—○—○—○—● *Women*

Gender Results Framework	 Leadership and Democratic Participation

GBA+ Responsive Approach

Support will be targeted to entrepreneurs from diverse backgrounds, including Indigenous, Black, immigrant, and LGBTQ2 women.

Supporting Entrepreneurs, Including Equity Deserving Entrepreneurs

The new Small Business and Entrepreneurship Development Program will support diverse entrepreneurs and small business owners. The direct benefits will go to underrepresented groups including youth, Indigenous people, persons with disabilities, LGBTQ2, Black and other racialized peoples, women, and other diverse entrepreneurs. Employees of small businesses may receive indirect benefits of this measure.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm dynamism; Household incomes*
Society – *Sense of belonging to local community*
Good Governance – *Discrimination and unfair treatment*

Target Population:	Underrepresented Entrepreneurs
Expected Benefits:	
Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*

Gender Results Framework	 Leadership and Democratic Participation

GBA+ Responsive Approach

Performance metrics, including aggregated demographic data, will be collected and analyzed as the program is implemented to better understand specific needs of various entrepreneurs and to inform ongoing service and program design.

Supporting Black Entrepreneurs

The direct benefits of this proposal will accrue predominantly to Black Canadian entrepreneurs.

Black Canadians are statistically more likely to live in low-income environments. Approximately 1 in 5 Black Canadians, versus just over 1 in 10 of their counterparts in the rest of the population, live in low-income environments.

This program is also expected to disproportionately benefit men as 63.5 per cent of small and medium-sized enterprises are majority-owned by men.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm growth; Employment; Household incomes*

Target Population:	Black Entrepreneurs
Expected Benefits:

GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Leadership and Democratic Participation

GBA+ Responsive Approach

Program elements have been designed to support gender-diverse accessibility and promote diverse participation. Performance metrics, including aggregated demographic data, will be collected and analyzed as the program is implemented to better understand specific needs of various entrepreneurs and to inform ongoing service and program design.

Support for Indigenous Entrepreneurs

This investment will directly benefit Indigenous entrepreneurs, including targeted supports for the Indigenous tourism industry. It also includes targeted supports to address gender-specific barriers for Indigenous women entrepreneurs. Only 29 per cent of businesses supported by the network of Aboriginal Financial Institutions are owned-by Indigenous women. Survey results have shown that the top three challenges for Indigenous women entrepreneurs are accessing financing (47 per cent), balancing family and business (40 per cent), and a lack of business training (32 per cent). Support for an Indigenous Women's Entrepreneurship Initiative will help increase the number of Indigenous women entrepreneurs accessing financing from Aboriginal Financial Institutions.

Data Sources: *National Aboriginal Capital Corporations Association*

Quality of Life Impacts

Prosperity – *Firm growth; Employment; Household incomes*

Target Population:	Indigenous peoples, Indigenous Women
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Indigenous Entrepreneurs and Business Owners
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Leadership and Democratic Participation

GBA+ Responsive Approach

Targeted supports to increase the number of Indigenous women entrepreneurs include providing them with the tools, services and resources required to start and grow their businesses.

Supporting Indigenous Governance and Capacity

Funding directly benefits all members of recipient First Nations, as communities have greater capacity for financial and human resources management, planning and risk management, and community engagement. Additional support for community readiness will directly benefit First Nations with the most acute needs, and result in better administration and access to social services and programs, to help close the gap with other First Nations and non-Indigenous communities. All community members are expected to benefit from greater capacity for local representation, as well as strengthened capacity for First Nations communities with the greatest community development needs to benefit from proposal-based investments.

Quality of Life Impacts

Society – *Vibrant communities; Social participation*
Good Governance – *Confidence in public institutions; Indigenous self-determination*

Target Population: First Nations

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	First Nations Communities with greatest community development needs
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Gender Results Framework

Leadership and Democratic Participation

Engagement with Indigenous Peoples

These investments will support Indigenous Representative Organizations and foster inclusive engagement processes so that diverse Indigenous voices, including women, youth, elders and other community sub-groups such as single-parents, people with disabilities, 2SLGBTQQIA, and off-reserve members are heard, leading to more inclusive federal policy and program development.

Strong representation by Indigenous peoples in democratic processes to advance reconciliation and close socio-economic gaps benefits all Canadians, as Indigenous leadership and cultural revitalization make important contributions to Canada's character and identity.

Quality of Life Impacts

Society – *Positive perceptions of diversity; Sense of pride/belonging to Canada*
Good Governance – *Confidence in public institutions; Indigenous self-determination*

Target Population: Indigenous peoples

Expected Benefits:

Enhancing the Canada Small Business Financing Program

Current data from Statistics Canada indicates that 63.5 per cent of small and medium enterprises are owned by men. This measure is expected to have a direct positive impact on women and indirect positive impacts on diverse and disadvantaged groups. These positive impacts are largely as a result of changes to eligibility to extend lending to non-profit and charitable social enterprises. Women account for more than 75 per cent of employment in the non-profit sector. Youth are also expected to benefit as 41 per cent of Canada Small Business Financing program borrowers are under 40 years old, compared to 16 per cent of small and medium sized businesses at large.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm growth; Productivity; Access to capital*

Making the Public Service More Diverse

Legislative amendments to the *Public Service Employment Act* are aimed at ensuring a process to identify and reduce potential barriers in the public service staffing process for employment equity and equity-seeking groups including women, Indigenous peoples, persons with disabilities, and racialized Canadians. For example, Indigenous applicants may have trouble meeting education requirements due to systemic barriers and limited access to higher education, particularly in remote geographical locations. Similarly, new arrivals to Canada, who are more likely to be members of a visible minority, may have trouble meeting certification requirements due to the time and challenges associated with having foreign credentials recognized.

Gender Results Framework:  Leadership and Democratic Participation

Enhancing the Capacity of Superior Courts

All Canadians are expected to benefit from the creation of new superior court judicial positions, which will ultimately increase access to justice.

Women made up 45 per cent of the federally-appointed judiciary as of March 2021. Recent efforts have focused on increasing the diversity of the judiciary. Between October 2019 and October 2020, women comprised 65 per cent of new appointments, while visible minorities represented 17 per cent and Indigenous peoples accounted for three per cent.

Data Source: *Office of the Commissioner for Federal Judicial Affairs*

Quality of Life Impacts

Good Governance – *Confidence in public institutions; Access to fair and equal justice; Resolution of serious legal problems*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Gender Results Framework:  Leadership and Democratic Participation

Gender-Based Violence and Access to Justice

The following Budget 2021 measures are expected to advance the Gender-Based Violence and Access to Justice Pillar under the Gender Results Framework.

Advancing a National Action Plan to End Gender-Based Violence

These investments will directly benefit women and girls, in particular women and girls with disabilities, Black, Indigenous and racialized women and girls, and LGBTQ2 people, groups that are at a significantly higher risk of experiencing gender-based violence. These groups also face increased barriers in accessing supports and services due to systemic inequalities, such as sexism, homophobia, transphobia, racism and poverty. COVID-19 has further amplified inequalities and gender-based violence, disproportionately affecting women with lower incomes.

Almost half of all female homicide victims are killed by an intimate partner, compared to six per cent for male victims. Sexual assault is a gendered crime that is far more likely to target women, especially young women. In 2017, the rate of police-reported violent crimes in Canada was higher for girls and young women aged 24 and younger compared to their male counterparts (1,394 versus 1,030 incidents per 100,000 population). According to Statistics Canada, the rate of sexual assault is not declining, with police-reported sexual assaults increasing every year from 2015 to 2019.

Indigenous women are more likely to be affected by all types of violent victimization with the homicide rate for Indigenous women and girls nearly seven times higher than amongst non-Indigenous women and girls in 2019. When taking into account all risk factors, LGBTQ2 Canadians are twice as likely to experience violent victimization as non-LGBTQ2 Canadians.

Data Sources: *Statistics Canada, GBV Knowledge Centre, United Nations*

Quality of Life Impacts

Health - *Health adjusted life expectancy; Self-rated mental health; Children vulnerable in early development*
Society – *Satisfaction with personal relationships*
Good Governance - *Victimization rate; Childhood maltreatment; Access to fair and equal justice*

Target Population: Women, Indigenous Women and Girls, LGBTQ2

Expected Benefits:

Gender:	*Men* ○—○—○—○—● *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Indigenous, Newcomers, Rural and Remote Regions, Disabilities, LGBTQ2

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Gender Results Framework

Gender-Based Violence and Access to Justice

Addressing Sexual Misconduct and Gender-based Violence in the Military

These measures will directly benefit people who have experienced sexual misconduct and gender-based violence in the military by enhancing support services to victims, increasing the availability of resources for recovery, and enhancing external oversight of the Canadian Armed Forces.

Primarily, these measures will directly benefit women, as women in the Canadian Armed Forces are 2.5 times to 3 times more likely to experience sexual misconduct than men. Additional or specialized support will also be provided for LGBTQ2 members that have experienced sexual misconduct and gender-based violence in the military.

In addition, men will benefit from the proposed institutional reforms, as well as an improved culture. Men will also directly benefit from the research to inform targeted training and response frameworks, and external expertise on training on the issue of gender-based violence.

These measures will reinforce the systemic efforts to change the culture and working conditions in the Canadian Armed Forces in relation to sexual misconduct and gender-based violence with the ultimate goal of reducing and eliminating sexual misconduct and gender-based violence among members of the Canadian Armed Forces, particularly women members. Ultimately, this will support the objective of increasing representation of women in the Forces from 15 to 25 per cent by 2026 which, if achieved, will further positively reinforce culture change.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Health – *Self-rated mental health; Unmet needs for mental health care*
Society – *Trust in others*
Good Governance – *Victimization rate; Discrimination and unfair treatment; Access to fair and equal justice; Confidence in public institutions*

Target Population: People who have Experienced Sexual Misconduct and Gender-based Violence in the Military

Expected Benefits:

Additional Characteristics: LGBTQ2

GBA+ Timing: *Early* □■□ *Later* ■ *Existing*

Gender Results Framework

Gender-Based Violence and Access to Justice

Responding to the Tragedy of Missing and Murdered Indigenous Women and Girls

Indigenous women and girls are 12 times more likely to be murdered or missing than any other women in Canada. In 2019, the rate of homicide for Indigenous women was seven times that of non-Indigenous women.

While comprising roughly five per cent of the population of Canada, Indigenous people accounted for nearly 26 per cent of homicide victims in 2019 and represent over 30 per cent of the incarcerated population. The overrepresentation is even more pronounced for Indigenous women and youth, who account for 42 per cent and 43 per cent of the women and youth inmate population in Canada.

This investment will primarily benefit First Nation, Inuit and Métis women, girls and two-spirit, lesbian, gay, bisexual, transgender, queer, questioning, intersex and asexual (2SLGBTQQIA+) people, as well as survivors of violence and families of victims of violence.

This investment will also contribute to improved, culturally responsive policing and community safety services, and will benefit all Indigenous community members, including women, girls and 2SLGBTQQIA+ people, who are disproportionately affected by violence, and are overrepresented in the justice and correctional systems.

Lastly, it will support Indigenous-led justice and culture initiatives, and help ensure the languages, voices, and perspectives of Indigenous women and 2SLGBTQQIA+ people are heard.

Gender Results Framework	Gender-Based Violence and Access to Justice

GBA+ Responsive Approach

This investment will enhance support for Indigenous women's and 2SLGBTQQIA+ organizations, ensuring that the voices and perspectives of Indigenous women and 2SLGBTQQIA+ people are reflected in all aspects of decision-making that affects their lives.

Strengthening the Canadian Race Relations Foundation and Helping Communities Respond to an Increase in Racism: Race Relations Foundation

While funding will benefit all Canadians by reducing discrimination and violence, members of Canada's racialized communities—Asian, Black and Indigenous Canadians, cultural and religious minorities, and newcomers to Canada—are expected to benefit most directly. In 2016, 25 per cent of discrimination complaints received by the Canadian Human Rights Commission related to race, religion, colour, national or ethnic origin. In Canada in 2017, 43 per cent of hate crimes were motivated by hatred of a race or ethnicity. In Canada, women, especially racialized women, face a 20 per cent higher victimization rate than men.

Recent reports indicate rising rates of COVID-driven, anti-Asian racism. A project led by the Chinese Canadian National Council found that between March 10, 2020, to February 28, 2021, there were 1,150 cases of racist attacks from across Canada reported, with children and adolescents under 18 years of age more likely to report being physically assaulted. Those in low-income jobs or those who do not speak English are also more likely to report feeling vulnerable to racist attacks.

Data Sources: *Statistics Canada, CRRF Survey of Stakeholders, Canadian Human Rights Commission, Chinese Canadian National Council*

Strengthening the Canadian Race Relations Foundation and Helping Communities Respond to an Increase in Racism: Protecting Against Hate-motivated Crimes

This initiative will benefit groups that are at risk of hate-motivated crimes, including racialized Canadians, religious individuals, and members of LGBTQ2 communities. In 2019, race and ethnicity were the most common motivation for police-reported hate crimes, making up about 46 per cent of cases. This was followed by crimes motivated by religion at 32 per cent, and sexual orientation at 14 per cent. In particular, in the context of the COVID-19 pandemic, there have been indications of heightened levels of discrimination targeting Asian communities. A project led by the Chinese Canadian National Council found that, between March 10, 2020 and February 28, 2021, there were 1,150 cases of race-driven attacks from across Canada reported, with children and adolescents under 18 years of age more likely to report being physically assaulted. Those in low-income jobs or those who do not speak English are also more likely to report feeling vulnerable to racist attacks.

Data Sources: *Statistics Canada, Chinese Canadian National Council*

Quality of Life Impacts

Society – *Sense of belonging to local community; Trust in others; Positive perceptions of diversity*
Good Governance – *Discrimination and unfair treatment; Crime Severity Index*

Target Population: Potential Victims of Hate Crimes

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Racialized Canadians, Religious Minorities, LGBTQ2

GBA+ Timing:	*Early* □■□ *Later* □ *Existing*
Gender Results Framework	Gender-Based Violence and Access to Justice

Supporting Greater Equality for LGBTQ2 Communities

Funding will directly benefit LGBTQ2 individuals and communities. LGBTQ2 Canadians and newcomers continue to face inequalities in health, safety, housing, homelessness, financial security, and employment when compared to non-LGBTQ2 Canadians. These initiatives are expected to raise awareness about LGBTQ2 communities and the issues facing them, decrease stigma, increase LGBTQ2 inclusion, and strengthen overall social cohesion. The ultimate benefit is to help bridge health and socio-economic inequalities between LGBTQ2 and non-LGBTQ2 people in Canada and to improve the quality of life for LGBTQ2 communities.

Data Sources: *Statistics Canada, OECD*

Gender Results Framework	Gender-Based Violence and Access to Justice

Enhancing Legal Support for Vulnerable Communities: Support for Asylum Seekers

This measure is expected to benefit economically disadvantaged asylum seekers, most of whom live in poverty and would not be able to afford legal support.

Additionally, asylum seekers are likely to be members of visible, ethnic or religious minorities, non-official language speakers, and LGBTQ2 individuals. In 2018, ten countries accounted for 57 per cent of all in-Canada asylum claims. Nine of the ten countries are in Asia, Latin America, the Caribbean, and Africa, and seven have neither English nor French as an official language. Asylum seekers also tend to be younger. In 2017, over 26 per cent of asylum claimants were aged 0 to 14 compared with 16 per cent of the Canadian population.

GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*
Gender Results Framework	Gender-Based Violence and Access to Justice

Enhancing Legal Support for Vulnerable Communities: Support for Racialized Communities

This initiative will directly benefit Black, racialized, and Indigenous communities, who are overrepresented in the criminal justice system and face systemic barriers that prevent them from accessing justice. For example, Black Canadians account for 7.2 per cent of federal inmates, but only 3.5 per cent of the Canadian population. Similarly, Indigenous peoples account for 30 per cent of admissions to federal custody, despite only representing approximately five per cent of the population. Racialized Canadians will have greater access to culturally appropriate legal advice and information, to better understand how to exercise their rights in the justice system.

This initiative is expected to be of particular benefit to low-income racialized individuals who cannot afford to consult a lawyer.

Data Sources: *Statistics Canada, Office of the Correctional Investigator*

Quality of Life Impacts

Re-establishing the Law Commission of Canada

All Canadians are expected to benefit from a revived Law Commission, and some groups may be more directly affected given the Law Commission's focus on the most pressing issues facing Canada's legal system. Indigenous peoples and racialized Canadians may benefit from the Law Commission's examination of issues of systemic racism and establishing a new relationship with Indigenous peoples. More broadly, groups who face barriers may benefit from the Law Commission's efforts to make the justice system accessible for all, including women, lower-income Canadians, persons with disabilities, and racialized people.

Better Data for Better Outcomes: Collection and Use of Justice System Data

Improving data collection to support accountability and evidence-based policy will benefit groups who are more likely to encounter the justice system.

A critical objective of this measure is to better understand and address drivers of the overrepresentation of Indigenous peoples in the criminal justice system. Black Canadians account for 7.2 per cent of federal inmates, but only 3.5 per cent of the Canadian population, and Indigenous peoples account for 30 per cent of federal inmates, despite representing approximately five per cent of the population. Similarly, Canadians with mental health challenges report coming into contact with the police twice as much as those without a disorder.

GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Gender-Based Violence and Access to Justice

Diverting Youth Away from the Justice System

This measure targets youth aged 12 to 17 who come into contact with the youth criminal justice system, and particularly overrepresented groups like young men, Indigenous youth, and Black youth.

In 2018-19, young men accounted for 77 per cent of admissions into correctional services, while Indigenous youth were 43 per cent of the youth admitted to correctional services, despite accounting for only nine per cent of the youth population. Evidence also suggests that Black youth are overrepresented in the justice system. In 2016, Black youth were 15.3 per cent of admissions to pre-trial detention in Ontario, despite representing 7.1 per cent of youth.

This initiative will enhance programming for overrepresented groups, including tailored responses that take into account diverse ethnic and cultural backgrounds.

Gender Results Framework	Gender-Based Violence and Access to Justice

Supporting the Resolution of Indigenous Childhood Claims

This measure seeks to address the negative consequences experienced by Indigenous people who suffered historic harms as children as a result of past government policies and programs through the effective management and resolution of childhood claims. This includes claims from First Nations, Inuit, Métis and Non-Status individuals located across Canada, living both on and off reserve. Research suggests that women and two-spirit, lesbian, gay, bisexual, transgender, queer, questioning, intersex and asexual (2SLGBTQQIA) people experienced disproportionate harms from attending residential schools. Additionally, Indigenous people have lower average income than non-Indigenous Canadians.

Preventing Radicalization to Violence

All Canadians will benefit from this program, which is aimed at reducing the threat of violence in our society. This investment will help professionals working to prevent violent extremism, and the individuals and populations they work with, including outreach to youth and their communities. Radicalization to violence is a phenomenon that can affect individuals of any background, culture, religion, or socio-economic circumstance.

Some of the funding specifically addresses violent misogyny, which will benefit women and girls and support the National Action Plan on Gender-Based Violence.

Gender Results Framework	Gender-Based Violence and Access to Justice

Poverty Reduction, Health and Well-Being

The following Budget 2021 measures are expected to advance the Poverty Reduction, Health and Well-Being Pillar under the Gender Results Framework.

Enhancing the Canada Workers Benefit

Enhancing the Canada Workers Benefit (CWB) will benefit 3 million low- and modest-income workers, including about 1 million new recipients through direct income support and by promoting longer-term attachment to the labour force. Women account for just over half of those benefiting from the enhancement and half of new recipients.

The enhancements will especially benefit single workers without children, 52 per cent of whom will be men. These workers often have few other supports available to them, and 54 per cent of new funding will benefit this group.

Groups that are more likely to be in receipt of the CWB include recent immigrants, those aged 19-34, and those without a post-secondary qualification.

By lifting almost 100,000 individuals out of poverty, an enhanced CWB will also have a direct, positive impact on economic security. Reducing poverty contributes to improved food security, better physical and mental health, and supports dignity and resilience.

Data Sources: *Statistics Canada, Tax Data*

Quality of Life Impacts

Prosperity – *Poverty; Labour market participation; Employment; Financial well-being*
Health – *Self-rated mental health*

Target Population:	Low- and Modest-Income Workers
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Immigrants, People with Lower Levels of Education
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Gender Results Framework:

Poverty Reduction, Health and Well-Being

GBA+ Responsive Approach

Raising the income threshold where the CWB is reduced will help reward full-time work for single workers and primary earners. However, the family-based design of the CWB means that when a secondary earner enters the workforce, this may cause a decline in their family's entitlement, especially if their partner's income is already at or above that threshold.

The secondary earner exemption will allow secondary earners benefitting from the CWB, about 75 per cent of whom will be women, to exclude a portion of their earnings from the benefit's income test, mitigating or preventing this decline. This new feature will help ensure that everyone is able to participate in the workforce.

Expanding Access to Drug Treatment Courts

Drug Treatment Courts are targeted to non-violent offenders and are focused on facilitating treatment as an alternative to incarceration for drug offences. The vast majority of participants in Drug Treatment Courts are vulnerable and marginalized with multiple issues, such as problematic substance use, mental health concerns, inadequate housing, reliance on income assistance, and low employment or education opportunities.

According to the Association of Drug Treatment Court Professionals, as many as 90 per cent of participants have a history of prior convictions, and up to 70 per cent suffer from depression or anxiety disorders. In some Drug Treatment Courts, as many as 95 per cent of participants are unemployed upon entering the program, with 22 per cent reporting criminal activity as their sole source of income. Drug Treatment Courts offer supports to participants to help reduce substance use, increase employment and education opportunities, and decrease likelihood of re-offending.

Between 2009 and 2014, 68 per cent of Drug Treatment Courts participants were men, and close to a third were between 30 to 40 years of age. Indigenous peoples, who are at greater risk of experiencing mental health and substance use issues, represented 28 per cent of participants, despite only representing five per cent of the population. Some Drug Treatment Courts offer specialized programming to address the unique needs of participants, including Indigenous peoples and women.

Data Sources: *Statistics Canada, Department of Justice, Canadian Association of Drug Treatment Court Professionals*

Quality of Life Impacts

Health – *Health-adjusted life expectancy; Self-rated mental health*
Good Governance – *Access to fair and equal justice; Representation in corrections custodial population*

Target Population:	Non-violent Drug Offenders
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Drug Offenders, People with Mental Health Issues, Indigenous peoples
GBA+ Timing:	*Early* □ ■ □ *Later* ■ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Ending Homelessness

Government investments in homelessness will directly benefit Canadians experiencing or at risk of homelessness. Economic downturns, such as the one caused by COVID-19, increase the risk of homelessness.

Homelessness affects a diverse population, though certain groups are overrepresented. In 2017:

- Indigenous people represented 24 per cent of shelter users despite accounting for five per cent of the population.
- Men represented 72 per cent of shelter users. (Women may be underestimated due to lack of data from domestic violence shelters, and differences in terms of how women experience homelessness).
- People aged 25 to 49 made up 53 per cent of shelter users, well above their population share (33 per cent).

Veterans are more likely than average to experience chronic homelessness.

As many as 85 per cent of people experiencing homelessness report a chronic health condition. By helping vulnerable people find housing, this measure will improve physical and mental health outcomes.

Data Sources: *Internal administrative data (emergency shelter data), Statistics Canada, Veterans Affairs Canada*

Quality of Life Impacts

Prosperity – *Homelessness; Acceptable housing; Poverty*
Health – *Functional health status; Self-rated mental health*
Society – *Sense of belonging to local community; Trust in others*

Target Population:	Canadians Experiencing Homelessness or at Risk of Homelessness
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Urban Populations, Indigenous peoples
GBA+ Timing:	*Early* ■□□ *Later* ■ *Existing*
Gender Results Framework	 Poverty Reduction, Health and Well-Being

Establishing a $15 Federal Minimum Wage

This legislative amendment directly benefits more than 26,000 workers in the federally regulated private sector, who are in low-wage jobs that earn less than $15 per hour.

As 59 per cent of workers earning minimum wage in the federally regulated private sector are men, more men will benefit from this change.

Many of these workers were not born in Canada. Of the more than 26,000 workers in total who will benefit, 36 per cent are newcomers and recent immigrants to Canada.

Quality of Life Impacts

Prosperity – *Financial well-being; Wages*

Target Population:	Workers in the federally regulated private sector
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Newcomers, Low-paid Workers
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

More Affordable Housing

Investments will directly benefit Canadians in core housing need and women and children fleeing violence. Relative to the incidence of core housing need across all households (13 per cent), women-led households (28 per cent), Indigenous populations (18 per cent), immigrant-led households (18 per cent), refugee-led households (27 per cent), and people living in northern communities (24 per cent) – particularly Inuit living in Nunavut (54 per cent) – are at higher risk of core housing need.

Furthermore, consistent with the objectives of the National Housing Strategy, these measures will prioritize support to vulnerable populations, including seniors, young adults, and Indigenous peoples. At least 25 per cent of investments will support projects that specifically target the unique needs of women and their children. To date, nearly 40 per cent of all units supported under the Rapid Housing Initiative have been targeted to Indigenous peoples.

Data Sources: *Statistics Canada, CMHC*

Quality of Life Impacts

Prosperity – *Acceptable housing; Homelessness; Poverty*
Good Governance – *Victimization rate; Childhood maltreatment*

Target Population:	Those in Core Housing Need
Expected Benefits:	
Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Women and Children fleeing Violence, Indigenous peoples, Immigrant Households
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Establishing a National Institute for Women's Health Research

Women are more likely to die prematurely from largely preventable illnesses, be diagnosed with mood and anxiety disorders, bear a higher burden of chronic illness, and experience higher levels of disability than men; particularly in old age. Immigrants and Indigenous women are also at a higher risk of some diseases, like cervical cancer, due to access and other barriers. This measure is expected to have a positive impact on women's health by addressing under-researched and high priority areas including ovarian cancer, menopause, and sexual and reproductive health.

Beneficiaries would also include researchers who receive research grants. Based on internal Canadian Institutes of Health Research data, approximately 67 per cent of researchers working in the field of women's health self-identify as women.

Data Sources: *Internal program data, Statistics Canada*

Quality of Life Impacts

Health – *Health-adjusted life expectancy; Self-rated mental health*
Society – *Positive perceptions of diversity*

Target Population:	Women with Health Issues
Expected Benefits:	
Gender:	*Men* ○—○—○—○—● *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Health Research Sector
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

GBA+ Responsive Approach

The institute would support research that takes into consideration how identity characteristics intersect with sex and gender to create unique health challenges.

Supporting Access to Sexual and Reproductive Health Care Information and Services

The funding for activities at the community level will directly support populations who face the highest sexual health risks and the largest barriers to accessing sexual and reproductive health care services and information, including women, youth, LGBTQ2, racialized Canadians, and Indigenous populations.

The national survey will have a positive impact on these vulnerable groups, as the survey will create a national baseline for data on key factors that influence the determinants of sexual and reproductive health, such as race, household income, and sexual orientation. The results of the survey will inform initiatives that will target the unmet sexual and reproductive health care needs of all Canadians.

Quality of Life Impacts

Health – *Unmet health care needs; Self-reported health*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*

GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	*Poverty Reduction, Health and Well-Being*

Better Data for Better Outcomes: Promote an Inclusive Society through Race, Gender and Diversity Research

Canada's population is increasingly diverse. In 2016, people identifying as a member of a visible minority group accounted for 22.4 per cent of the population, compared to 13.4 per cent in 2001. The proposed research initiative would build evidence to inform policies that lead to positive outcomes for diverse populations of women, seniors, Indigenous populations, racialized people, and LGBTQ2 people. Beneficiaries would also include researchers who receive research grants. Recent analysis of Social Sciences and Humanities Research Council programs found that slightly more than 50 per cent of funded applicants identified as women. There is also academic evidence that suggests research on issues of societal inequalities is more often undertaken by researchers from marginalized groups. For example, research applications from Black scientists are significantly more likely to involve human subjects than White applicants (49.8 per cent versus 31.8 per cent) and to include fields of study that are relevant to equality research, such as population and behavioural sciences.

Gender Results Framework	Poverty Reduction, Health and Well-Being

National Mental Health Standards and Virtual Services

Although mental health issues can affect any Canadian, certain groups are more vulnerable to experiencing mental illness in their lifetime. Youth, LGBTQ2 and Indigenous people are particularly vulnerable. Men are at a higher risk of dying by suicide. Men are also more likely to suffer from substance misuse. Women are more likely to be diagnosed with mood and anxiety disorders.

The COVID-19 pandemic has exacerbated the many challenges and inequalities faced by these groups by increasing isolation and limiting Canadians' ability to access traditional mental health services (e.g., in-person counselling).

Data Sources: *Statistics Canada*

Quality of Life Impacts

Health – *Self-rated mental health; Unmet needs for mental health care*

Target Population:	People with Mental Health Issues
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*

Gender Results Framework	Poverty Reduction, Health and Well-Being

Supporting our Veterans: Mental Health Program for Veterans

Veterans are three to four times as likely to suffer from depressive or anxiety disorders, and more than 15 times more likely to have post-traumatic stress disorder (PTSD), than Canadians of comparable age and sex. Female veterans are more likely than male veterans to experience depression (35 per cent vs. 24 per cent) and anxiety (25 per cent vs. 21 per cent), but slightly less likely than males to report having PTSD (22 per cent vs. 24 per cent). In Canada, the estimated veteran population is 629,300, of which about 119,000 are clients of Veterans Affairs Canada (VAC). Approximately 12 per cent of VAC clients are women. Since members of the Canadian Armed Forces are predominantly men, more men are expected to benefit from this initiative.

Data Sources: *VAC, Statistics Canada, Life After Service Survey*

Quality of Life Impacts	
Health – *Self-rated mental health*	
Target Population:	Veterans

Income Distribution:	*Low* ○ ○ ● ○ ○ *High Income*
Inter-generational:	*Youth* ○ ● ○ *Senior*
Additional Characteristics:	Veterans with Mental Health Conditions
GBA+ Timing:	*Early* ■ □ □ *Later* □ *Existing*
Gender Results Framework	 Poverty Reduction, Health and Well-Being

Supporting our Veterans: Support for Veterans' Well-being

This initiative targets veterans and their immediate families. Since members of the Canadian Armed Forces are predominantly men, more men are expected to benefit from this initiative. However, this measure supports projects tailored to improve the well-being of all veterans and their families, including veterans who are women, LGBTQ2, Indigenous, or experience homelessness. There are currently around 3,000 homeless veterans in Canada. Veterans are more likely than the Canadian general population to experience activity limitations and suffer from a range of health issues. Many veterans also face challenges transitioning from military to civilian life. Employment rates amongst veterans is lower than for Canadians of similar age and sex (60 per cent vs 73 per cent). Amongst veterans, women and recently released veterans are less likely to be employed.

Additional Characteristics:	Veterans and their Families
GBA+ Timing:	*Early* □ ■ □ *Later* ■ *Existing*
Gender Results Framework	 Poverty Reduction, Health and Well-Being

VAC Service Capacity

Direct beneficiaries of this initiative are veterans with mental or physical health issues. Veterans are more likely than the Canadian general population to experience activity limitations and suffer from a range of health issues. Hearing loss and tinnitus are the two most common conditions for which veterans receive disability benefits, followed by post-traumatic stress disorder. Since men account for the majority of veterans, more men are expected to benefit from this initiative. However, this enabling investment will allow Veterans Affairs Canada (VAC) to continue its efforts to reduce wait times for disability benefits applications for all veterans.

Gender Results Framework	*Poverty Reduction, Health and Well-Being*

Making Our Communities and Workplaces More Accessible

This program directly benefits persons with disabilities by making Canadian communities and workplaces more accessible.

For example, almost 2.7 million people or 1 in 10 Canadians aged 15 and older have a mobility disability, making it one of the most common disability types. Women (11.2 per cent) are more likely than men (7.9 per cent) to have a disability related to mobility. In 2017, over half (57.4 per cent) of employed Canadians with mobility disabilities aged 25 to 64 said that they required one or more workplace accommodations to be able to work.

By increasing accessibility in workplaces or communities, including community spaces such as parks and public buildings, the program also benefits seniors without disabilities and families with young children.

Data Sources: *Statistics Canada, 2017 Canadian Survey on Disability*

Quality of Life Impacts

Prosperity – *Employment; Labour market participation; Future outlook*
Health – *Self-rated mental health; Self-rated health*
Society – *Accessible environments*

Target Population:	Persons with Disabilities

Gender:	*Men* ○ ○ ● ○ ○ *Women*
Income Distribution:	*Low* ○ ● ○ ○ ○ *High Income*
Inter-generational:	*Youth* ○ ● ○ *Senior*
Additional Characteristics:	Persons with Disabilities, Families with Young Children
GBA+ Timing:	*Early* □ ■ □ *Later* ■ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Towards a New Disability Benefit

The consultations regarding a new disability benefit are not expected to carry significant direct impacts, but may lead to a new benefit that supports persons with disabilities, primarily those with low income and those of working age.

Disability is slightly more prevalent among women (24 per cent) than men (20 per cent), including when it comes to severity. According to the 2017 Aboriginal Peoples Survey, 32 per cent of First Nations people living off reserve, 30 per cent of Métis and 19 per cent of Inuit reported having one or more disabilities. Among Indigenous populations, Indigenous women (36 per cent) have a higher prevalence of disability than men (26 per cent) and the disability rate among Indigenous youth (aged 15-34) is much higher at 23 per cent than 13 per cent in the general population.

Data Sources: *Statistics Canada, 2017 Canadian Survey on Disability, 2017 Aboriginal Peoples Survey*

Quality of Life Impacts

Good Governance – *Confidence in public institutions*
A future benefit would be expected to carry prosperity, health and social benefits.

Target Population:	Working-age Persons with Disabilities
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Persons with Disabilities who are Living Alone, Single Parents, Indigenous peoples
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Helping Seniors Age Well at Home

This initiative directly benefits low-income seniors, including those with disabilities or with physical or mental health issues. The initiative is also expected to have a slight positive impact on senior women, who account for 55 per cent of Canadians over 65 years old. The initiative will include projects that focus on meeting the specific needs of marginalized seniors, such as Indigenous seniors, racialized seniors, LGBTQ2 seniors or seniors with disabilities.

By improving seniors' access to practical supports, the initiative will also indirectly benefit seniors' unpaid caregivers, of which 54 per cent are women and many are seniors themselves, reducing time pressures. Almost one-quarter of seniors aged 65 and older provided care or help to family members or friends with a long-term condition, a physical or mental disability, or problems related to aging.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Health – *Home care needs met*
Society – *Sense of belonging to local community; Satisfaction with time use*

Target Population:	Seniors

Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—○—● *Senior*
Additional Characteristics:	Seniors with Disability, Physical or Mental Issues and their families
GBA+ Timing:	*Early* ■□□ *Later* ■ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Common Employment Insurance Entrance Requirements

This measure will have direct benefits for workers in part-time and temporary employment, particularly in low-unemployment regions, who are less likely than full-time permanent workers to have enough hours of work to meet the Employment Insurance (EI) entrance requirement. As of 2019, 94.2 per cent of full-time workers were eligible for EI regular benefits, compared to 64.7 per cent of part-time workers. Special benefit eligibility rates for part-time workers are also consistently lower than for full-time workers.

Women will benefit more from this measure as they are twice as likely to work part-time compared to men.

Data Sources: *Employment and Social Development Canada*

Quality of Life Impacts

Prosperity – *Protection from income shocks; Financial well-being*

Target Population:	Workers
Expected Benefits:	
Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*

Additional Characteristics:	Workers in Low-Unemployment Regions
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Simplifying eligibility rules for multiple job holders

This measure will benefit multiple job holders and part-time workers in particular by only considering a worker's most recent reason for separation when determining Employment Insurance (EI) eligibility. Women, who are twice as likely as men to work part time, are overrepresented in these work arrangements and are therefore more likely to directly benefit from the measure.

This measure will also contribute to accelerating claims processing and benefit payments for all EI beneficiaries.

Data Sources: *Employment and Social Development Canada*

Quality of Life Impacts

Prosperity – *Protection from income shocks; Financial well-being*

Target Population:	EI-eligible Multiple Job Holders
Expected Benefits:	
Gender:	*Men* ○—○—○—●—○ *Women*

Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Multiple Job Holders, Part-time Workers
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Ensuring that Severance and other Separation Monies do not Delay Employment Insurance Benefits

There is currently limited data and information to provide a full picture of workers affected by this policy simplification. However, available statistics indicate that women who received Employment Insurance (EI) regular benefits in 2018 were slightly more likely (23.7 per cent) than men (17.4 per cent) to receive severance or vacation pay.

Generally, severance pay is reserved for employees who do not have an end-date in their employment contract and increases with employment tenure. As a result, workers laid off from jobs that are long-tenured and permanent, and therefore likely higher-paying, are expected to benefit most from this measure. However, part-time workers who receive vacation pay on separation would also benefit.

Data Sources: *Employment and Social Development Canada*

Quality of Life Impacts

Prosperity – *Protection from income shocks; Financial well-being*

Target Population:	EI Claimants
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*

GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Extending Employment Insurance Sickness Benefits to Better Support Canadians Suffering From Illness or Injury

It is expected that women and older workers would benefit more from an extension of Employment Insurance (EI) sickness benefits. In 2018-19, the majority of sickness claims were made by women (56 per cent). Additionally, women were slightly more likely to exhaust their sickness benefits (36 per cent vs. 33 per cent from men). Take-up of sickness claims, their duration, and exhaustion rates increase with age. Claimants aged 55 years and older register the longest average duration of EI sickness claims (10.2 weeks in 2018-19) and exhaustion rate (39 per cent in 2018-19).

Data Sources: *Employment and Social Development Canada*

Additional Characteristics:	Persons Suffering from Illness or Injury
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Supporting Indigenous Communities in the Fight against COVID-19

These investments directly benefit Indigenous peoples and are gender-balanced. Indigenous communities are more at risk during pandemics, given challenges in accessing health care, higher incidence of pre-existing health conditions and suitability of housing. Investments are therefore likely to be of particular benefit to more remote communities. Additionally these investments will particularly benefit seniors and individuals with pre-existing medical conditions.

Quality of Life Impacts

Health – *Health-adjusted life expectancy; COVID-19 incidence; Unmet health and mental health care needs*
Good Governance – *Household emergency preparedness*

Target Population:	Indigenous peoples
Expected Benefits:	
Gender:	*Men* ○–○–●–○–○ *Women*
Income Distribution:	*Low* ○–●–○–○–○ *High Income*

GBA+ Timing:	*Early* □■□ *Later* □ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Ensuring Food Security in the North

This measure will benefit northerners and Indigenous peoples living in isolated and semi-isolated communities. Food prices in the North can be significantly higher than those in the south. For example, across 11 key essential items, in 2018, Nunavummiut generally paid around 2.2 times more for the same items than the rest of Canada. In 2017/2018, compared to the national average of 13 per cent, household food insecurity in Yukon and Northwest Territories was 17 per cent and 22 per cent respectively. Food insecurity was highest in Nunavut (whose poverty rate is more than double the national average), with 57 per cent of households living with food insecurity and 78 per cent of Nunavummiut children living in food-insecure households.

Data Source: *Nunavut Bureau of Statistics; Library of Parliament*

Quality of Life Impacts

Prosperity – *Food security*
Health – *COVID-19 incidence; Fruit and vegetable consumption/healthy eating environments*
Society – *Participation in cultural practices*

Target Population:	Northern Communities
Expected Benefits:	
Gender:	*Men* ○–○–○–●–○ *Women*
Income Distribution:	*Low* ○–●–○–○–○ *High Income*
Inter-generational:	*Youth* ○–●–○ *Senior*
Additional Characteristics:	Northern Communities, Indigenous peoples
GBA+ Timing:	*Early* ■□□ *Later* ■ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Improving the Food Security of Vulnerable Canadians

This measure benefits both Canadians who are most vulnerable to food insecurity pre-COVID and those facing increased food insecurity risk due to COVID-19.

During COVID-19, the number of individuals facing food insecurity increased to 1 in 7, with the impacts disproportionately felt by individuals in Black, Indigenous, and northern communities. Low-income Canadians and those facing job losses due to COVID-19 are at increased risk of food insecurity. Children and lone-parent families headed by women also tend to be overrepresented among food bank users, according to available data.

Data Sources: *Statistics Canada, Food Banks Canada*

Quality of Life Impacts

Prosperity – *Food security*
Health – *Fruit and vegetable consumption*

Target Population:	Individuals facing food insecurity
Expected Benefits:	
Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Indigenous Black and Northern Populations, Lone-parent Households
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*
Gender Results Framework	 Poverty Reduction, Health and Well-Being

Indigenous Infrastructure

This measure will benefit First Nations, Inuit and Métis communities by improving the state of infrastructure in communities. Women, children and Elders in particular will benefit from increased access to safe and suitable infrastructure, which could help to improve access to clean water, ease crowded housing conditions, and improve health and education facilities. Improved infrastructure will also contribute to the mental, physical, spiritual, and emotional well-being of all members in communities.

Indirect benefits resulting from employment opportunities are expected to disproportionately benefit men in the short term. However, in the longer-term, this investment is also expected to create employment opportunities for women, who are more likely to be employed in positions created with improved health, education and other types of community infrastructure. These investments will support local economies, in rural and remote parts of the country.

Quality of Life Impacts

Prosperity – *Employment; Acceptable housing; Child, student and adult skills; Future outlook*
Health – *Functional health stats; Self-rated mental health; Children vulnerable in early development*
Environment – *Clean drinking water*
Society – *Sense of belonging to local community*

Investing in Clean Energy in Northern and Indigenous Communities: Hydroelectricity and Grid Interconnection Projects in the North

This measure will benefit northern and Indigenous communities by advancing work to reduce their reliance on diesel for electricity and heating and reduce energy costs. This will result in lower energy costs. In 2016, households in Northwest Territories and Nunavut were paying more than 30 cents per kilowatt hour, more than double the Canadian average of 12.9 cents per kilowatt hour.

In the longer-term, providing cleaner energy will yield positive health and environmental outcomes for all members of northern and Indigenous communities, particularly for the most vulnerable members, including children and the elderly.

Data Sources: *Canada Energy Regulator*

Quality of Life Impacts

Prosperity – *Affording everyday needs*
Environment – *Clean energy*

Target Population: Indigenous and Northern communities

Expected Benefits:

Gender:	Men ○—○—●—○—○ Women
Income Distribution:	Low ○—○—●—○—○ High Income
Inter-generational:	Youth ○—●—○ Senior
Additional Characteristics:	Indigenous and Northern communities
GBA+ Timing:	Early ■□□ Later □ Existing

Gender Results Framework

Poverty Reduction, Health and Well-Being

Investing in Clean Energy in Northern and Indigenous Communities: Strategic Partnerships Initiative

This measure will benefit Indigenous communities by advancing new economic opportunities and job creation, including in the clean energy sector. Notably, Indigenous populations face higher rates of unemployment (14.2 per cent) than non-Indigenous populations (9.4 per cent).

Women worldwide are approximately 20 to 25 per cent of the workforce in the energy industry in advanced industrialized nations. As such, in the short term, benefits are likely to disproportionally accrue to men through improved employment opportunities associated with this measure.

In the long-term, however, providing cleaner energy will yield positive health and environmental outcomes for all community members.

Data Sources: *Statistics Canada; Electricity Human Resources Canada*

Quality of Life Impacts

Prosperity – *Employment; Labour market participation; Adult skills; Future outlook*
Environment – *Clean energy; Natural capital*

Target Population: First Nations, Inuit and Métis Communities

Expected Benefits:

Gender:	Men ○—●—○—○—○ Women
Income Distribution:	Low ○—○—●—○—○ High Income
Inter-generational:	Youth ○—●—○ Senior
Additional Characteristics:	Indigenous peoples
GBA+ Timing:	Early □■□ Later □ Existing

Gender Results Framework:

Poverty Reduction, Health and Well-Being

Distinctions-Based Mental Wellness Strategy

This measure will directly benefit Indigenous people that face complex mental health and substance use issues. 12 per cent of First Nations, 13 per cent of Métis and eight per cent of Inuit report being diagnosed with a mood disorder. For First Nations and Métis, this is nearly twice as much as non-Indigenous Canadians (seven per cent). Suicide rates for Indigenous populations are significantly higher than non-Indigenous populations. First Nations are three times higher, Métis are two times higher, and Inuit are nine times higher.

This initiative will directly support communities in the provision of mental health services for Indigenous peoples, including low-income families who might be less likely to afford private care and treatment.

Data Sources: *Statistics Canada; First Nations Information Governance Centre Regional Health Survey*

Quality of Life Impacts

Health – *Self-rated mental health; Unmet needs for mental health care*
Society – *Vibrant communities*

Target Population: Indigenous peoples

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ●—○—○—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Indigenous peoples with Disabilities, Physical or Mental Health Issues

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

Gender Results Framework

Poverty Reduction, Health and Well-Being

On-reserve Income Assistance

This investment will primarily benefit low-income First Nations people on reserve. Impacts are expected to be gender balanced, in line with current program participation. First Nations people with disabilities may also benefit, as they are less likely to be employed and more likely to be reliant on income supports. Case management and pre-employment supports are expected to improve educational, skills, and employment outcomes.

Quality of Life Impacts

Prosperity – *Protection from income shocks; Poverty; Student and adult skills; Labour market participation*

Target Population: Low-income Indigenous People

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ●—○—○—○—○ *High Income*

GBA+ Timing: *Early* ■□□ *Later* ■ *Existing*

Gender Results Framework

Poverty Reduction, Health and Well-Being

Improving Health Outcomes in Indigenous Communities

Measures are designed to improve health outcomes for First Nations and Inuit who face a lower life expectancy and a higher disease burden than non-Indigenous people in Canada, including higher rates of chronic and infectious diseases. These measures will improve access to health care services and will directly benefit individuals in remote and isolated communities, especially individuals living on reserve. Investments will also support the transformation of the health system, and ensure that Indigenous perspectives and knowledge inform the development and delivery of health supports for Indigenous people. Women, who make up the majority of nurses in First Nations communities, will also indirectly benefit from these investments.

Data Sources: *Indigenous Services Canada, Statistics Canada, First Nations Information Governance Centre*

Quality of Life Impacts

Health – *Health-adjusted life expectancy; Self-rated health; Timely access to primary health care provider; Unmet health care needs*

Target Population:	Indigenous peoples, Persons with Disabilities or Health Issues
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	First Nations and Inuit, Rural and Remote Populations
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Supporting Indigenous Children and Families

Indigenous children are significantly overrepresented in the child welfare system. In 2016, Indigenous children represented 7.7 per cent of all children ages 1-14, but they represented 52.2 per cent of children in foster care.

These measures are gender balanced and will benefit Indigenous children from low income families and single parent households, who are more likely than other children to enter the child welfare system. These investments will support the implementation of the *Act respecting First Nations, Inuit and Métis children, youth and families* and will also support First Nations to adopt preventative measures, under the First Nations Child and Family Services Program.

Data Sources: *Indigenous Services Canada, Statistics Canada*

Quality of Life Impacts

Health – *Children vulnerable in early development*
Society – *Someone to count on; Satisfaction with personal relationships (family and friends)*
Good Governance – *Confidence in public institutions; Indigenous self-determination; Access to fair and equal justice*

Target Population:	Indigenous Children and Families
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Indigenous Children and Families
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Renewing the Territorial Health Investment Fund

This measure benefits all residents of the territories by supporting territorial efforts to innovate and transform their health system to improve access to health services for northerners. The measure will positively affect Indigenous peoples, as they are the demographic majority in Nunavut (86 per cent) and the Northwest Territories (51 per cent), and form a significant part of the population in Yukon (23 per cent).

Data Sources: *Statistics Canada*

Quality of Life Impacts

Health – *Unmet health care needs; Functional health status*
Good Governance – *Confidence in public institutions (modernizing operations)*

Target Population:	Northern Communities
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Northern Communities, Indigenous peoples
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Addressing the Opioid Crisis and Problematic Substance Use

Measures will primarily benefit people living with or, at risk of, problematic substance use. A reduction of the societal harms and costs associated with problematic substance use would benefit all Canadians.

Compared to other age groups, youth have the highest rate of substance use and are more likely to experience substance-related harms. This is especially true of LGBTQ2 youth, who face stigma and marginalization; and First Nations, Métis and Inuit youth, who often face major social and economic challenges in addition to historical and intergenerational trauma.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Health – *Health-adjusted life expectancy; Self-rated mental health; Unmet health care needs*

Target Population:	People living with Problematic Substance Use
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Persons with Mental Health Issues
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Strategic Research on Pediatric Cancer

The proposed activities are expected to provide evidence to improve health services and treatments available for Canadian children and youth with cancer as well as their families and caregivers. It is anticipated that the benefits of the proposed funding would be broadly gender balanced, as about 55 per cent of pediatric cancer patients are male.

Beneficiaries of this measure would also include independent researchers who will receive research grants. Recent analysis of Canadian Institute of Health Research programs found that slightly more than 50 per cent of funded applicants identified as women.

Data Sources: *Internal program data, Statistics Canada, Cancer in Young People in Canada (CYP-C) Program*

Quality of Life Impacts

Health – *Health-adjusted life expectancy; Unmet health care needs; Children vulnerable in early development*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Pediatric Cancer Patients and their Families, Health Researchers
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework:	Poverty Reduction, Health and Well-Being

Supporting Canada's Active Recovery

Funding will benefit all Canadians by providing more opportunities to participate in community-level sport programming. In addition, funding will be used to reach populations that have the lowest rates of participation in organized sport, including women and girls, LGBTQ2, low-income Canadians, Indigenous peoples, and racialized people. Additionally, participation rates tend to decline as people age, so adults and older Canadians may indirectly benefit. Women and girls in particular quit sport earlier and more often, are subject to abuse and discrimination in sport, and have fewer opportunities to participate. For example, one in three girls will drop out of sport during adolescence, whereas only one in ten boys will drop out of sport during the same phase of life. Low-income Canadians will also benefit from this proposal, as household income heavily influences participation rates.

Data Sources: *Canadian Women & Sport*

Quality of Life Impacts

Health – *Physical activity; Self-rated mental health; Self-rated health*

Society – *Participation in sport; Sense of belonging to local community*

Target Population:	All Canadians, Underrepresented Groups
Expected Benefits:	
Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	LGBTQ2, Indigenous peoples, Racialized People
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Supporting Racialized Newcomer Women

Investments will directly benefit racialized newcomer women. These women tend to have limited knowledge of English or French, have higher unemployment rates than Canadian-born women, and work in essential front-line occupations, such as health care and food and accommodation services. In addition, recent newcomer women are more likely to be employed in precarious work. They are overrepresented in involuntary part-time work and temporary work compared to established immigrant women and Canadian-born women. Finally, newcomer women have been disproportionately impacted by the pandemic. About 20 per cent of recent immigrant women employed in March 2020 lost their job by April, compared to only 13 per cent among Canadian-born women.

Data Sources: *Statistics Canada; Internal Administrative Data*

Quality of Life Impacts

Prosperity – *Employment; Labour market participation; Child, student and adult skills; Future outlook*
Society – *Sense of belonging to local community*

Target Population:	Racialized Newcomer Women
Expected Benefits:

Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Racialized Newcomer Women
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Increasing Old Age Security for Canadians 75 and Over

In 2020, 57 per cent of Old Age Security (OAS) beneficiaries age 75 and over were women, compared to 52 per cent among those age 65 to 74.

According to the Canadian Disability Survey, in 2017, 47 per cent of seniors age 75 and over had a disability, compared to 32 per cent of those aged 65 to 74.

The overall income distributional impact is somewhat progressive. In 2020, 39 per cent of seniors aged 75 and over received the Guaranteed Income Supplement (GIS), compared to 29 per cent of those aged 65 to 74.

Data Sources: *Old Age Security administrative data, Statistics Canada*

Quality of Life Impacts

Prosperity – *Household incomes*

Target Population:	Seniors 75 and over
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—○—● *Senior*
Additional Characteristics:	Persons with Disabilities
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*
Gender Results Framework	Poverty Reduction, Health and Well-Being

Providing Additional Weeks of Recovery Benefits

This measure directly benefits workers who have been affected by the pandemic. It particularly benefits lower-income workers and youth, as both groups were hardest hit by job losses and employment has been slow to recover for these groups.

This measure is also expected to benefit women, who are overrepresented in lower-paying jobs, more vulnerable to work stoppages, more likely to work in part-time or temporary jobs and more likely to receive parental benefits.

Data Sources: *Canada Revenue Agency*

Quality of Life Impacts

Prosperity – *Protection from income shocks; Financial well-being*
Health – *Self-reported health*

Target Population:	Workers who have lost employment
Expected Benefits:	
Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:

Gender Results Framework	Poverty Reduction, Health and Well-Being

Gender Equality around the World

The following Budget 2021 measures are expected to advance the Gender Equality around the World Pillar under the Gender Results Framework.

Response to Venezuelan Migrant and Refugee Crisis

According to estimates from the United Nations, women represent about 40 per cent of the Venezuelan migrant and refugee population. Vulnerable migrant and refugee populations, such as women and children, face gender-based violence, forced prostitution, and difficulty in accessing sexual and reproductive health services. This is why Canada's response to the Venezuelan crisis will identify specific actions to reduce barriers and will contribute, through its programming in the different sectors, to the production of sex-disaggregated data. The data will contribute to identifying the gaps related to the impact of this crisis on girls, boys, women, and men. Finally, as a majority of Venezuelan migrants and refugees have seen their source of income disrupted, intervention in economic integration and access to services will mostly benefit low-income individuals in the region.

Data Sources: *Internal administrative data, international organizations including the United Nations and the World Bank, and other external data sources.*

Quality of Life Impacts

Good Governance – *Canada's place in the world*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Individuals in Other Countries, Refugees
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*
Gender Results Framework	Gender Equality Around the World

GBA+ Responsive Approach

A strong intersectionality approach will be included in the response to identify and tackle specific and distinctive situations of vulnerability for women Venezuelan migrants and refugees.

Responding to the Rohingya Crisis

Canada's strategy to respond to the Rohingya crisis will target poor and vulnerable populations, including Rohingya communities in refugee camps and host communities in Cox's Bazar district. It is expected that this crisis will have disproportionate effects on women and girls given elevated risks of sexual and gender-based violence. This programming will have a specific focus on strengthening comprehensive sexual and reproductive health and rights and will be delivered under Canada's Feminist International Assistance Policy, which places gender equality and the empowerment of women and girls at the centre of its efforts.

Data Sources: *Internal administrative data, international organizations, other external data sources.*

Quality of Life Impacts

Good Governance – *Canada's place in the world*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Individuals in Other Countries
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*
Gender Results Framework	Gender Equality Around the World

GBA+ Responsive Approach

Gender equality considerations will be integrated into the planning and design processes of the initiative, accounting for the unique gendered vulnerabilities of women and children amongst the Rohingya community in Myanmar, and in the host communities in Bangladesh.

Extending Canada's Middle East Strategy

Canadian efforts are expected to alleviate some of the adverse impacts of conflicts and displacements in the Middle East, which have severely affected the population, particularly women and girls.

The strategy will seek to address barriers to gender equality by integrating the needs and rights of women and girls through the promotion of increased participation in governance and conflict resolution. The strategy will continue to build on the achievements to date. Previous funding has helped improve the quality of education for over 1.9 million children, including Syrian refugees in Jordan and Lebanon.

The military capacity-building efforts will also support the meaningful participation of women in peace and security efforts, by promoting the recruitment and integration of women in local security forces, and funding the construction of separate accommodations for women.

Data Sources: *United Nations*

Quality of Life Impacts

Good Governance – *Canada's place in the world*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Girls, Individuals in Other Countries
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*
Gender Results Framework	Gender Equality Around the World

GBA+ Responsive Approach

The strategy will also engage boys and men as agents of change, so that they become participants in the process to advance gender equality in the target countries.

Increasing International Humanitarian Assistance

By providing additional international humanitarian assistance resources, this measure will directly benefit vulnerable people affected by humanitarian crises in low-income countries. These groups will benefit from this program which is aiming at reducing suffering, increasing and maintaining human dignity, and saving lives. This program is also guided by Canada's Feminist International Assistance Policy, which supports well-designed programming that responds to the specific needs of women and girls. This approach will help ensure effective targeting and efficiency of programming in order for humanitarian assistance to reach those who need it the most.

Data Sources: *International Organizations, Other external data sources.*

Quality of Life Impacts

Good Governance – *Canada's place in the world*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Individuals in Other Countries
GBA+ Timing:	*Early* ■□□ *Later* ■ *Existing*
Gender Results Framework	Gender Equality Around the World

GBA+ Responsive Approach

Canada's humanitarian assistance programming is guided by a feminist and human rights-based approach, which ensures that it appropriately meets the specific needs of people affected by a crisis. Canada will support implementing partners that integrate beneficiary participation into all stages of programming.

Canadian Ombudsperson for Responsible Enterprise

Women, children and youth, and Indigenous peoples in foreign countries will benefit most from the opportunity to raise human rights abuse complaints related to the operations of Canadian mining, oil and gas, and garment companies operating abroad with the Canadian Ombudsperson for Responsible Enterprise (CORE) and seek redress. These groups are at relatively greater risk of human rights violations, including human trafficking, child labour, forced labour, and other abuses with negative implications for health and safety. The CORE's work will take into account the gender and cultural needs of potential victims in all phases of the review process, with the aim of improving working conditions in the covered sectors.

Gender Results Framework	Gender Equality Around the World

Supporting the African Development Bank

The African Development Bank's overarching objective is to foster sustainable economic growth, support social progress, and contribute to poverty reduction in its African member countries. The Bank's gender priorities focus on 1) empowering women through access to finance and markets; 2) accelerating employability and job creation through skills enhancement; and, 3) increasing women's access to social services through gender-responsive quality infrastructure. Accelerating Canada's share payments will help the Bank support the continent's post-COVID inclusive recovery.

Gender Results Framework:	Gender Equality Around the World

International COVID-19 Response

By committing to delivering COVID-19-related international assistance under Canada's Feminist International Assistance Policy, Canada is supporting efforts that have the highest potential to reach groups that face vulnerability and marginalization. To date, among its international assistance efforts, Canada has been a key contributor to the Access to COVID-19 Tools Accelerator (ACT-A), which facilitates the procurement and delivery of vaccines, diagnostics and therapeutics to developing countries. This benefits women and other vulnerable groups, as ACT-A's goal of 20 per cent global vaccination coverage by the end of 2021 prioritizes health care workers (comprising 70 per cent women, worldwide) and vulnerable groups such as those with pre-existing conditions. Canada's additional contributions to respond to international COVID-19 needs will further strengthen these efforts.

Gender Results Framework	Gender Equality Around the World

Supporting Developing Economies through the International Finance Corporation

The International Finance Corporation (IFC) made a number of specific commitments related to gender, as part of the capital increases agreement. Specifically, the IFC has committed to quadruple the amount of its annual financing dedicated to women and women-led small and medium enterprises to reach US$1.4 billion by 2030, and increase the amount of annual commitments to financial intermediaries specifically targeting women to $2.6 billion by 2030 from the US$1 billion expected in FY2018. The IFC has a strong track record of providing economic benefits for women in developing countries. Fully purchasing the shares allocated to Canada will enable the IFC to expand these benefits.

Gender Results Framework:	 Gender Equality Around the World

Chapter 1: Keeping Canadians Healthy and Safe

This section includes gender and diversity impact analyses for remaining Budget 2021 measures in Chapter 1.

Strengthening Canada's Bio-manufacturing and Life Sciences Sector

Improving Canada's capacity to develop and produce new vaccines and treatments will ultimately benefit all Canadians. In the case of improved pandemic preparedness, vulnerable populations, including those with pre-existing health conditions and older Canadians, likely stand to benefit the most, based on the impacts of COVID-19.

Beneficiaries of this measure will also include researchers who receive grants to undertake research or to improve their bio-innovation infrastructure, as well as workers and owners of businesses that receive support to grow their companies. Recent analysis of Canadian Institutes of Health Research programs found that slightly more than 50 per cent of funded applicants identified as women. However, women only comprise 36 per cent of the Canadian bio-economy workforce. This underrepresentation is most significant in small-sized firms. Support to the Vaccine and Infectious Disease Organization in Saskatoon has additional benefits for that region, including students who study at the University of Saskatchewan.

Data Sources: *Internal program data, Statistics Canada, BioTalent Canada*

Quality of Life Impacts

Prosperity – *Investment in R&D; Future outlook; Firm growth*
Health – *Health-adjusted life expectancy; Functional health status; COVID-19 incidence*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Vulnerable populations, Bio-manufacturing and Life Sciences Sector, Health Researchers and Universities

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

Action to Address Antimicrobial Resistance

This initiative will directly benefit all Canadians, as actions to combat antimicrobial resistance will contribute to improved health outcomes for the general population. However, children under the age of 18 and people over the age of 60 may benefit more than other demographic groups, as these groups are among the highest users of antimicrobials in Canada and are more susceptible to infections caused by resistant bacteria.

Data Sources: *Council of Canadian Academies; World Health Organization*

Quality of Life Impacts

Health – *Unmet health care needs; Health-adjusted life expectancy; Children vulnerable in early development*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Canadians under the age of 18 and over the age of 60
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Supporting Safe Air Travel

These measures benefit all Canadians by reducing the risk of transmission of COVID-19 and facilitating the safe restart of air travel. Air travellers and workers in the air transport sector benefit more than other Canadians.

While people with higher incomes have a greater propensity for air travel, the air transport sector employs Canadians from a wide range of income groups. However, the majority of air transport workers are men.

Data Source: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment*
Health – *COVID-19 incidence*
Good Governance – *Personal safety; Domestic security*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Air travellers, Air Sector
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

GBA+ Responsive Approach

In advancing the Known Traveller Digital Identity pilot project, Transport Canada will take steps to ensure that advanced technologies used for identity verification, such as facial recognition, do not introduce negative impacts based on disability, ethnicity, age or gender.

Continuing to Protect Air Travellers

This measure will benefit air travellers, as well as workers at airports and on airplanes. Based on Statistics Canada's Survey of Household Spending (2019), personal travellers represent 70 per cent of all air travellers. The propensity to fly for personal travel is highly correlated to income, and is roughly comparable by gender. Measures to prevent the spread of COVID-19 through air travel, such as temperature checks, will benefit all Canadians.

Maintaining the operations of the Canadian Air Transport Security Authority will indirectly benefit those employed as screeners at Canadian airports. This workforce is gender balanced.

Data Sources: Statistics Canada

Quality of Life Impacts

Health – *COVID-19 incidence*
Good Governance – *Personal safety; Domestic security*

Target Population: Air Travellers

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Air Sector
GBA+ Timing:	*Early* □□■ *L* □ *Existing*

Supporting Temporary Foreign Workers while they Quarantine

The program directly benefits men since they make up the majority of agricultural producers, fish harvesters and food processors who employ temporary foreign workers. For example, in 2016, 71 per cent of farm operators in Canada were men. The men are often older, and earn on average more than the median income in their province or territories.

The program will also indirectly benefit temporary foreign workers by enabling employers to provide adequate isolation supports for these workers upon their arrival in Canada.

Overall, the majority of temporary foreign workers in Canada are male, representing 82 per cent of temporary foreign workers across all skill levels in 2019.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Household wealth*
Health – *COVID-19 incidence*

Target Population: Agriculture Sector

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*

GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

Maintaining Federal COVID-19 Digital Tools to Inform Canadians

This measure will benefit all Canadians by maintaining digital tools they can use to stay informed about COVID-19. The Canada COVID-19 App is currently used approximately 13,000 times per day, while the COVID-19 Self-Assessment Tool is used approximately 11,000 times per day.

Quality of Life Impacts

Health – *COVID-19 incidence*
Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics:

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Chapter 2: Seeing Canadians and Businesses Through to Recovery

This section includes gender and diversity impact analyses for remaining Budget 2021 measures in Chapter 2.

Extending the Canada Emergency Wage Subsidy

The wage subsidy directly benefits employers, including businesses and their shareholders, non-profit organizations, and registered charities. By industry, current applicant data show that the largest number of employers receiving support are in accommodation and food services, followed by construction. Additionally, Indigenous government-owned businesses are expected to benefit from the wage subsidy. The wage subsidy also indirectly benefits employees. Current applicant data show that the largest numbers of employees covered were in manufacturing (15 per cent of total), followed by accommodation and food services (15 per cent). Given the gender breakdown of these industries (71 per cent of employees are men in manufacturing, compared to 45 per cent in accommodation and food services), men may be slightly more likely to be covered by the subsidy than women.

Data Sources: *Canada Revenue Agency, Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm income; Employment; Labour force attachment; Wages; GDP per capita*

Target Population: Workers and Employers Affected by COVID-19

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—○—●—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Employees of Eligible Organizations, Business Owners and Other Employers

GBA+ Timing: *Early* ☐■☐ *Later* ☐ *Existing*

Extending the Canada Emergency Rent Subsidy

The rent subsidy directly benefits organizations and their shareholders, including businesses, non-profit organizations, and registered charities. By industry, current applicant data show that the largest number of properties receiving support to date are in accommodation and food services (22 per cent of total), followed by other services except public administration (14 per cent). Additionally, Indigenous government-owned businesses are expected to benefit from the rent subsidy. The rent subsidy also indirectly benefits employees. Based on current applicant data, women may be more likely to work for organizations receiving the rent subsidy.

Data Sources: *Canada Revenue Agency, Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm growth; Employment; Labour force attachment; Wages; GDP per capita*

Target Population: Businesses and other Organizations affected by COVID-19 and their Employees

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Tenants, Business Owners, Charities, Non-profits

GBA+ Timing: *Early* ☐■☐ *Later* ☐ *Existing*

Bridging Businesses to the Recovery

Regional Relief and Recovery Fund uptake has been high among underrepresented groups with 32.2 per cent of recipient businesses women-owned, 3.1 per cent Indigenous-owned, and 59.8 per cent in rural areas.

Approximately 85 per cent of Indigenous Business Initiative lending has supported companies in Western Canada. Through this measure, 29 per cent of businesses supported have been women-owned.

Extending application deadlines for these programs will continue to extend financing to firms owned by underrepresented groups.

Quality of Life Impacts

Prosperity – *Firm growth; GDP per capita*

Target Population: Small and medium-sized businesses

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Small and medium-sized businesses in certain regions

GBA+ Timing: *Early* ☐☐■ *Later* ■ *Existing*

Extending temporary work-sharing program enhancements

The temporary work-sharing program enhancements would remain available to employers in all sectors and industries. Historically, employers in the manufacturing sector and other good-producing industries have represented the majority of work-sharing agreements. However, there has been an increase in take-up across non-traditional industries over the last year (e.g., professional, scientific and technical services sector). Men have traditionally been more likely to benefit from work sharing. In 2018-19, men accounted for 71 per cent of new work-sharing claims and 74 per cent of total benefits paid.

Data Sources: *Employment and Social Development Canada*

Quality of Life Impacts

Prosperity – *Employment; Protection from income shocks*

Target Population:	Employers and their EI-eligible Employees
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Manufacturing Sector
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Extending Temporary Support for Seasonal Workers Who Continue to be affected by the crisis

In 2018-19, men accounted for close to two-thirds of seasonal Employment Insurance (EI) regular claims, including in the 13 regions targeted by the measure. As a result, moderately more men will benefit from the temporary extension of the additional EI support for seasonal workers.

Similarly, men accounted for 80 per cent of EI fishing claims in 2018-19. They are thus more likely to benefit from the extension of the temporary eligibility changes to EI fishing benefits. Historically, Atlantic Canada accounts for the largest share of EI fishing claims (82 per cent), with coastal regions in Quebec and British Columbia also accounting for a significant number of claims given their geographic locations.

Data Sources: *Employment and Social Development Canada*

Quality of Life Impacts

Prosperity – *Financial well-being; Protection from income shocks*

Target Population:	Seasonal Workers and Self-Employed Fishers
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	EI Claimants in Atlantic Canada and Eastern Quebec
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Support to the Government of Quebec to Align the Quebec Parental Insurance Plan with Temporary EI Changes

It is anticipated that the temporary changes to the Quebec Parental Insurance Plan (QPIP)–supported by the financial compensation from the Government of Canada–will benefit approximately 45 per cent of all QPIP claimants between September 2020 and September 2021. Low-income mothers aged 25 to 34 years old–which account for the majority of QPIP beneficiaries–are expected to benefit the most.

Quality of Life Impacts

Prosperity – *Financial well-being*

Target Population: New Parents Residing in Quebec

Expected Benefits:

Gender: *Men* ○—○—○—○—● *Women*

Income Distribution: *Low* ○—●—○—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics:

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

Chapter 3: New Opportunities for Canadians

This section includes gender and diversity impact analyses for remaining Budget 2021 measures in Chapter 3.

Better Labour Protection for Gig Workers

The Labour Force Survey (2019) shows that men (71 per cent) and individuals over the age of 45 (73 per cent) are overrepresented amongst workers in federally regulated private sectors who, similar to gig workers, work as unincorporated self-employed workers without employees. Of this group, 65 per cent were not born in Canada.

Final amendments to the *Canada Labour Code* will take into account the findings of consultations, and will be informed by further GBA+ analysis.

Data Sources: *Employment and Social Development Canada, Statistics Canada*

Quality of Life Impacts

Prosperity – *Precarious or gig work*
Good Governance – *Confidence in public institutions*

Target Population: Gig workers in the federally regulated private sector

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*
Income Distribution: *Low* ○—●—○—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics:

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Enhancing Protections for Contract Workers in the Air Transportation Sector

This legislative amendment directly benefits air transportation workers in the federally regulated private sector. The majority of those who will benefit are men (61 per cent). This aligns with the overall demographics of the federally regulated private sector, where women account for 38 per cent of all workers, compared to 62 per cent for men.

In general, those who will benefit are likely to be male, low- and middle-income earners, many of whom were not born in Canada.

Quality of Life Impacts

Prosperity – *Employment; Wages; Financial well-being*

Target Population: Federally regulated contract workers in the air transportation sector

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*
Income Distribution: *Low* ○—●—○—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics: Newcomers, Low- and middle-income Workers

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Simplifying Wage Earner Protection Program Payments

Simplifying payments through the Wage Earner Protection Program (WEPP) will directly benefit Canadian workers who have lost their job and are owed wages by an employer who has filed for bankruptcy or is subject to receivership.

Since its creation in 2008, the WEPP has paid more than $411 million in eligible wages to more than 146,000 Canadians. Any worker employed in Canada can qualify for a WEPP payment. Benefits of this measure are expected to be broadly gender balanced and not disproportionate to any particular group.

Quality of Life Impacts

Prosperity – *Protection from income shocks; Financial well-being*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Workers of firms filing for bankruptcy
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Taking Action to Address Predatory Lending

This consultation has the potential to benefit all Canadians and enhance consumer protection, particularly for lower and modest income Canadians, who may rely on high-interest short-term credit to meet everyday living expenses, or unanticipated emergencies. In 2019, the Financial Consumer Agency of Canada found that two per cent of Canadians used payday loans in the previous 12 months. That percentage increases for certain vulnerable sub-groups, for example, four per cent of low-income households, eight per cent of Indigenous peoples, and eight per cent of single-parent households used payday lenders.

Data Source: *Financial Consumer Agency of Canada*

Quality of Life Impacts

Prosperity – *Financial well-being; Household debt service ratio; Future outlook*
Good Governance – *Confidence in public/private institutions*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Inco*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Vulnerable groups
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Chapter 4: Helping Canadian Businesses Grow and Succeed

This section includes gender and diversity impacts analyses for remaining Budget 2021 measures in Chapter 4.

Helping Hard-hit Businesses Hire More Workers

The proposed new Canada Recovery Hiring Program is expected to benefit employers, including businesses and their shareholders, non-profit organizations, and registered charities. Additionally, Indigenous government-owned businesses are expected to benefit.

The hiring incentive is also expected to benefit employees by increasing the number of new jobs available. As employment recovers, more women than men may rejoin the labour force, as well as younger and lower-income individuals. As such, it is possible that the measure could provide more benefits to women than men, as well as younger and lower-income individuals, although it is still expected to remain broadly gender-balanced (i.e., women may comprise 50 to 60 per cent of beneficiaries).

The measure may benefit proportionally more individuals in provinces where unemployment is above the national average. In February 2021, these were Newfoundland and Labrador, Alberta, Prince Edward Island, Ontario and New Brunswick.

Data Sources: *Internal Administrative Data, Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment; Wages*

Target Population:	Businesses and Other Organizations Affected by COVID-19
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Unemployed Individuals, Employees of Eligible Organizations, Business Owners and Other Employers
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Helping Small and Medium-sized Businesses Move into the Digital Age

This measure targets owners of small and medium-sized enterprises (SMEs). This new program will directly benefit young people through up to 28,000 job placements. Benefits for small and medium-sized enterprises are expected to lean more towards men who are 63.5 per cent of majority-owners of SMEs.

Broad benefits are expected for Canadians, both as employees and clients of small and medium-sized enterprises, and from economic growth that could result from more efficient and competitive small and medium-sized enterprises. There is expected to be positive benefits from increased digital adoption, including among rural and remote SMEs.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Business investment; Productivity; Firm growth*

Target Population: Owners of Small and Medium-sized Enterprises

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Employees and Clients of Small and Medium-sized Enterprises, Young Workers

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

GBA+ Responsive Approach

This measure would seek to encourage diverse business owners to apply by including specific targets for underrepresented groups. Targets would also ensure a diverse group of young people, including those from underrepresented groups, are recruited and hired.

Helping Businesses Seize New Technological Opportunities

This measure is likely to benefit owners of small and medium-sized enterprises (SMEs) as well as students and researchers in scientific disciplines at colleges, CEGEPs, and polytechnics. Higher-educated white men tend to be overrepresented within these groups.

In 2017, 63.5 per cent of SMEs were majority owned by men, and men accounted for 53 per cent of college enrolments in science, technology, engineering, mathematics and computer sciences programs and about 50 per cent of college faculty. Visible minorities and Indigenous people also remain underrepresented among entrepreneurs and college faculty. Many of Canada's network of colleges, CEGEPs and polytechnics are located in smaller urban and rural areas and those surrounding communities also stand to benefit.

Data Sources: *Internal program data, Statistics Canada*

Quality of Life Impacts

Prosperity – *Investment in R&D; Firm growth; Productivity*

Target Population: Small and Medium-sized Businesses, Students and researchers

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—○—○—●—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Small and Medium-sized Businesses, Small and Rural Communities

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

GBA+ Responsive Approach

Part of the funding will be targeted towards ensuring businesses owned by women, Indigenous people, visible minorities, persons with a disability, and other underrepresented communities have greater access to support from the National Research Council.

Supporting Business Investments

This measure is aimed at benefiting all Canadians by enabling an increase in economic activity and contributing to productivity growth. The immediate expensing for investment in eligible property will benefit Canadian-Controlled Private Corporations (CCPCs). Based on tax data on past CCPC investments, this measure may particularly benefit businesses in the following sectors: the finance and insurance sector; the professional, scientific and technical services sector; and the agriculture, forestry, fishing and hunting sector. It is expected that the benefits would accrue to shareholders and owners of businesses benefiting from the measure, which are more likely to be high-income individuals and men. Indirectly, benefits could also be passed on to employees, as well as their customers. Employees in the sectors expected to benefit most are relatively gender balanced, with the exception of the agriculture, forestry, fishing and hunting sector (29 per cent women).

Data Sources: *Internal Administrative Data, Statistics Canada*

Quality of Life Impacts

Prosperity – *Business investment; GDP per capita; Firm growth; Productivity*

Target Population:	Canadian-Controlled Private Corporations, All Canadians
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Business Employees, Owners and Shareholders
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Preparing Canada's Aerospace Sector for Recovery

Programming targets small and medium-sized firms in the aerospace sector. Women are underrepresented in Canada's aerospace sector, comprising 21 per cent of the manufacturing workforce and 24 per cent of the maintenance, repair and overhaul workforce. Higher paying engineering and assembly jobs are largely held by men (90 per cent). As aerospace wages are considerably higher than the economy-wide average, increasing women's employment in the sector could contribute to higher income jobs for women.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm growth; Productivity; Access to capital*

Target Population:	Aerospace Sector
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Small and Medium-sized Firms in Aerospace Sector
GBA+ Timing:	*Early* ■□□ *Later* ■ *Existing*

GBA+ Responsive Approach

The Aerospace Regional Recovery Initiative would prioritize support for inclusive businesses that are operated by and employ underrepresented groups, including women, Indigenous people, Black and other racialized people and youth.

Leveraging Procurement Opportunities

Diversity in procurement initiatives will seek to increase the number of underrepresented groups, such as women, racialized people and persons with disabilities, participating in federal procurement. This will include further opportunities aimed at increasing the participation of Black entrepreneurs in federal public procurement.

Indigenous businesses are expected to benefit from increased opportunities to access the federal government market, and in particular from a new target to have at least five per cent of federal contracts awarded to businesses managed and led by Indigenous peoples.

Quality of Life Impacts

Prosperity – *Firm growth; Labour utilization*
Good Governance – *Confidence in public institutions; Discrimination and unfair treatment*

Target Population: Women, Indigenous, Black Entrepreneurs

Expected Benefits:

Gender: *Men* ○—○—○—●—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics: Indigenous, Black Entrepreneurs
GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Expanding the Industrial Research Assistance Program

This program will most directly benefit owners of technology-intensive small and medium-sized enterprises, a majority of whom are well paid and highly educated.

Many of the jobs in these firms are related to science, technology, engineering and mathematics, and women only represented 23 per cent of that workforce in 2016. Clean tech and health innovation firms are eligible for Industrial Research Assistance Program support, which can increase the likelihood of these products or services reaching market, with indirect positive environmental and health care impacts for all Canadians.

Indirect benefits will accrue to all Canadians through stronger job creation and overall economic growth over time.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment; Firm growth; Investment in R&D*

Target Population: Owners and workers of innovative small and medium-sized Canadian businesses

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*
Income Distribution: *Low* ○—○—○—●—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics: SMEs in Technology Sectors
GBA+ Timing: *Early* □■□ *Later* □ *Existing*

GBA+ Responsive Approach

The program will implement a new preferential scoring system that prioritizes applicant firms that have met equity, diversity, and inclusion targets or are actively working towards meeting them. The program will also build on its work to provide support to women and Indigenous-led firms through agreements with not-for-profit organizations.

Investing in Canadian Innovators through a Renewed Venture Capital Catalyst Initiative

The primary target groups for this initiative are entrepreneurs, businesses, and investors, with an additional focus on those in the life science technologies sector. Men are expected to benefit more than women as they are overrepresented as venture capital fund managers and entrepreneurs receiving investments from these fund managers, including amongst the more gender balanced life science technologies sector. Indirect benefits are expected to accrue more broadly to workers employed by entrepreneurs receiving investments.

This initiative may also tend to benefit those with middle to higher incomes, including investors as well as employees of high-growth potential companies that receive investment. Investments through the new Inclusive Growth stream are expected to have positive impacts on enhancing diversity and gender balance in the Canadian venture capital industry.

Quality of Life Impacts

Prosperity – *Firm growth; Investment in R&D; Productivity*

Target Population: Entrepreneurs and Investors

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Entrepreneurs and Investors in Life Sciences Sector
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

GBA+ Responsive Approach

Consistent with previous streams of the Venture Capital Catalyst Initiative, participants will be required to submit gender balance and diversity strategies and recipients will be required to report on statistics related to the number of women and Indigenous, Black and other racialized fund managers and entrepreneurs supported.

Boosting Canada's Clean Technology Exports

This program will primarily benefit Canadian firms looking to export in the clean technology sector. These companies are predominately led by owners that are male, non-Indigenous, younger in age and located in urban areas. However, the resulting environmental gains from the success of these technologies will benefit all Canadians, including future generations, in terms of combatting climate change and supporting other outcomes such as cleaner air and water.

Ontario, Quebec and British Columbia are expected to benefit more from the program, due to the relative sizes of their clean technology sectors.

Data Sources: *Global Affairs Canada, Statistics Canada, Natural Resources Canada, Canadian Electricity Association, Treasury Board.*

Quality of Life Impacts

Prosperity – *Firm growth; Household incomes*
Environment – *Clean tech; Air quality; Clean drinking water*

Target Population: Canadian Clean Technology Firms

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Clean Technology Firms in Ontario, Quebec and British Columbia
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

GBA+ Responsive Approach

The program will continue to include measures to specifically support underrepresented groups in the clean technology sector, such as firms led by women, youth, Indigenous persons and immigrants and newcomers to Canada.

Removing Barriers to Internal Trade

The removal of internal trade barriers has the potential to increase productivity and reduce costs of goods and services, benefiting Canadians broadly. Lower-income Canadians will benefit disproportionately as a result of reduced costs of living as this group spends more as a percentage of their income on consumption of goods. With lower internal trade barriers, Canadian business owners could also benefit from increased sales and productivity. Only 15.7 per cent of small and medium-sized businesses in the broader economy are wholly owned by women. Evidence suggests that smaller regional economies tend to be more reliant on imports and have more to gain from trade liberalization. This could help improve the quality of life for Canadians living and working in these regions.

Data Sources: *Statistics Canada, the Privy Council Office research data.*

Quality of Life Impacts

Prosperity – *Productivity; Firm growth; Household incomes*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—●—○—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Consumers, Small and Medium-sized Enterprises, Smaller Regional Economies

GBA+ Timing: *Early* □■□ *Later* ■ *Existing*

Lowering the Cost of Doing Business by Reducing Credit Card Transaction Fees

Reducing credit card transaction fees will benefit all Canadian businesses that accept credit card payments, although reductions will be designed to provide greater assistance to small- and medium-sized businesses. The majority of businesses in Canada are owned by men.

Quality of Life Impacts

Prosperity – *Household incomes; Firm growth*

Target Population: Businesses in Canada

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Businesses in Canada

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

A Fair and Competitive Marketplace

More robust competition law enforcement would directly benefit all Canadians by helping the economy work more efficiently and providing consumers with competitive prices, product choices and information to make informed decisions. Competition law enforcement can also have particular impacts for diverse groups of Canadians who are disproportionately harmed by fraud or unfair market practices. Enhanced enforcement capacity would help ensure more competitive markets and fairer pricing, which could disproportionately benefit lower income individuals. Overall, this measure would indirectly benefit women, persons with disabilities, seniors and lower-educated individuals.

Data Sources: *World Bank, OECD*

Quality of Life Impacts

Prosperity – *Productivity; Firm growth; Financial well-being*
Good Governance – *Confidence in public institutions; Victimization rate*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Consumers
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Maintaining Momentum on Regulatory Modernization

While regulatory modernization initiatives are designed to benefit all Canadians through a stronger and more competitive economy, small businesses tend to benefit the most. The government's experience engaging with businesses has revealed that men are more likely to participate in regulatory consultations.

Quality of Life Impacts

Prosperity – *Firm growth; Productivity; GDP per capita*
Good Governance – *Confidence in public institutions*

Target Population:	Small and Medium Businesses, All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	SMEs
GBA+ Timing:	*Early* □□■ *Later* ■ *Existing*

GBA+ Responsive Approach

Consultation processes have been designed to better ensure that a diverse set of voices from across Canada inform regulatory modernization. For example, the External Advisory Committee on Regulatory Competitiveness has been comprised to promote gender balance with five of eight spots currently held by women.

Renewing our National Trade Corridors

This program directly benefits all Canadians by improving Canada's overall trade competitiveness. Additional funding for the program will also provide short-term economic stimulus.

The program is expected to benefit workers in certain sectors, including the transportation and construction sectors, in which men make up the majority of the workforce (76 per cent and 87 per cent, respectively).

Data Sources: *Statistics Canada, Infrastructure Canada*

Quality of Life Impacts

Prosperity – *Employment; Household incomes; GDP per capita*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Transportation and Construction Sectors, Exporters
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

Modernizing Travel and Trade at Our Borders

Overall, these measures will benefit travellers, as well as those involved in the supply chain including importers, couriers, shippers, and other service providers. Additionally, the Canada Border Services Agency (CBSA) proposes to utilize new technologies, such as facial recognition and fingerprint verification, and will develop strategies to ensure the equitable application of these technologies across differences in gender, age, mobility, and race, to promote the security of all travellers.

Data Sources: *Canadian Border Services Agency, Conference Board of Canada*

Quality of Life Impacts

Good Governance – *Domestic security; Confidence in public institutions*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Travellers, Importers, Shippers, and Couriers
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

GBA+ Responsive Approach

The Canada Border Services Agency will actively monitor, assess and calibrate new technologies in order to mitigate demographic impacts and risks.

Strengthening Canada's Trade Remedy System

Strengthening of the trade remedy system is expected to benefit all Canadians by promoting economic growth and serving all sectors of the economy. A public consultation will be conducted before implementing resulting measures and any unanticipated impacts on particular groups of Canadians raised in the consultations will be taken into consideration in design and implementation.

Quality of Life Impacts

Good Governance – *Canada's place in the world*

Target Population:	Canadian Businesses and Workers
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Canadian Businesses and Workers
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Administration of Trade Controls

This program will primarily benefit the dairy, poultry, egg, steel, aluminum, aerospace and other arms technology sectors, which are generally male-dominated and some of which are concentrated in rural communities. Aspects of the program related to cross-border movement of arms will also benefit vulnerable populations in Canada and overseas through enhanced safety and security.

Data Sources: *Statistics Canada, U.S. Department of Labour, ISED Canadian Industry Statistics*

Quality of Life Impacts

Prosperity – *Household incomes; Productivity*
Good Governance – *Crime Severity Index; Victimization rate; Canada's place in the world*

Target Population:	Dairy, Poultry, Steel, Aluminum and Arms Technology Sectors
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Above sectors, Rural or Remote Populations
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Better Supports for Exporters

All Canadians will benefit indirectly from the economic benefits conferred by broad-based improvement in export performance. The proposed increased focus on small and medium-sized enterprises (SMEs) will predominantly support men and Caucasian people as 63.5 per cent of Canadian SMEs are owned by men and only 12.2 per cent are owned by visible minorities.

Data Sources: *Global Affairs Canada, Export Development Canada, Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment; Firm growth*
Good Governance – *Canada's place in the world*

Target Population:	All Canadians, SMEs
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	SMEs, Caucasian
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

Supporting Innovation and Industrial Transformation

Funding through the Strategic Innovation Fund (SIF) is open to all sectors of the economy and all regions of Canada. Investments in SIF are ultimately intended to promote innovation and productivity growth, strengthening the Canadian economy, and benefitting all Canadians.

More generally, SIF projects may result in a higher proportion of direct benefits accruing to workers in highly innovative sectors or in STEM (Science, Technology , Engineering and Mathematics) fields. While the SIF is sector agnostic, this could include sectors like bio-manufacturing and life sciences, or aerospace and automotive manufacturing. This could result in slightly greater benefits for men and higher income individuals given the demographics of these sectors. Depending on the projects ultimately selected it is possible that certain regions in Canada could see greater benefits from SIF projects than others.

Data Sources: *Internal program data, Statistics Canada*

Quality of Life Impacts

Prosperity – *Investment in R&D; Firm Growth; Productivity*

Target Population: Innovative Companies

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Innovative Sectors
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

GBA+ Responsive Approach

In addition to a project's economic and innovation value, the SIF's assessment framework also considers any public benefits that may accrue, including the degree to which a project proposal includes gender sensitive initiatives, has considered Indigenous impacts and opportunities, and has inclusive plans to encourage diversity in the work place.

Renewing the Pan-Canadian Artificial Intelligence Strategy

This measure is primarily expected to benefit individuals working in the information and communications technology (ICT) sector and STEM (science, technology, engineering and mathematics and computer sciences) fields. The demographics of this group tend to be highly-educated, higher income men from urban regions. 55 per cent of people employed in the ICT sector hold advanced degrees and the annual average salary in the sector was 53.7 per cent higher than the Canadian average in 2019. Within the artificial intelligence commercial sector, only 26.5 per cent of individuals employed in ICT are women. Individuals located in artificial intelligence hubs in Alberta, British Columbia, Ontario and Quebec may benefit more from some measures in the strategy.

Data Sources: *Statistics Canada, The Information and Communications Technology Council*

Quality of Life Impacts

Prosperity – *Investment in R&D; Firm growth; Productivity*

Target Population: Artificial Intelligence Sector; All Canadians

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Workers and Researchers in the Artificial Intelligence Sector
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

GBA+ Responsive Approach

A portion of the funding to support commercialization activities will be directed towards small and medium-sized enterprises led by women and visible minorities.

Launching a National Quantum Strategy

A national quantum strategy will directly benefit individuals working in higher education and research, information and communications technology (ICT), and science, technology, engineering and mathematics (STEM) focused sectors who are predominantly highly-educated, higher income men from urban regions. Relative to their share of the labour force, visible minorities are also more likely to work in STEM fields.

For example, 55 per cent of people employed in the ICT sector hold advanced degrees and the annual average salary in the sector was 53.7 per cent higher than the Canadian average in 2019. Benefiting individuals will likely be primarily located in the four main quantum hubs in Alberta, British Columbia, Ontario and Quebec. Quantum science holds immense promise in areas such as improving drug development and battery technology, which could have a transformative benefit for all Canadians.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Investment in R&D; Firm growth; Productivity*

Target Population: Quantum Science and Technology Sector, All Canadians

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—○—○—●—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Workers and Researchers in the Quantum Science and Technology Sector

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

GBA+ Responsive Approach

Equity, diversity and inclusion will be considered as the strategy is further developed and implemented.

Revitalizing the Canadian Photonics Fabrication Centre

This initiative will benefit the photonics sector and quantum photonics subsector, specifically photonics researchers and owners of firms, a majority of whom are highly educated and men. Men comprise 62 per cent of science, technology, engineering and mathematics researchers. The average salary of workers in the information and communications technology sector is also 53 per cent higher than the Canadian average.

Data Sources: *Statistics Canada, Innovation, Science and Economic Development Canada*

Quality of Life Impacts

Prosperity – *Firm growth; Investment in R&D*

Target Population: Photonics Sector

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—○—○—●—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Researchers and Workers in the Photonics Sector, including Quantum Photonics

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

Launching a Pan-Canadian Genomics Strategy

Over the shorter term, this program is likely to benefit higher-educated and higher-paid individuals working in postsecondary education and science, technology, engineering and mathematics (STEM) across high-value sectors of the Canadian economy. Women make up only 34 per cent of STEM bachelor degree holders and men account for 53 per cent of university enrolments in STEM programs, which carries through to genomics research, where a majority of project leads are also men.

Over the longer term, participation is expected to become more balanced as the strategy unfolds and more women and underrepresented groups enter the genomics talent pipeline. All Canadians will benefit from the transformative changes that genomics promises, which should create new economic opportunities and jobs across many industrial sectors, improve quality of life and health solutions, and support efforts to reduce carbon emissions.

Data Sources: *Statistics Canada, Genome Canada*

Quality of Life Impacts

Prosperity – *Investment in R&D; Employment*
Health – *Functional health status*
Environment – *Natural capital*

Target Population: Genomics Sector, All Canadians

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—○—○—●—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Researchers in Genomics Sector

GBA+ Timing: *Early* ☐■☐ *Later* ☐ *Existing*

Conducting Clinical Trials

Advancing the development of new drugs, therapies and health interventions through clinical trials would ultimately benefit all Canadians. Historically, there has been an issue of bias in clinical research, marked by the underrepresentation of certain demographic groups, such as women, children, seniors, Black and other racialized persons and low-income populations in research experiments and clinical trials. By focusing on ensuring sex, gender and other diversity factors are considered in research design and implementation, this proposal would contribute towards addressing health inequities experienced by minority groups unrepresented in clinical trials. Beneficiaries of this measure will also include independent researchers who will receive research grants. The Canadian Institute of Health Research programs found that slightly more than 50 per cent of funded applicants identified as women.

Data Sources: *Internal program data, Statistics Canada*

Quality of Life Impacts

Prosperity – *Investment in R&D*
Health – *Health-adjusted life expectancy; Unmet health care needs*

Target Population: Health Researchers, All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Health Researchers

GBA+ Timing: *Early* ■☐☐ *Later* ☐ *Existing*

GBA+ Responsive Approach

The Canadian Institutes of Health Research monitors the extent to which the research it funds addresses sex and gender equity considerations; the proportion of funding that goes to Indigenous health research; provides an annual report on the gender equity of its programs; and would monitor the diversity of funded researchers to inform program improvements.

Supporting the Innovation Superclusters Initiative

This measure is expected to benefit both men and women. However, the impacts are expected to vary depending on the final projects that are supported given the unique demographic characteristics of the sectors in which the Superclusters operate.

As the program supports innovative and often technology intensive projects, it is expected that many of the direct beneficiaries will be highly-educated individuals with middle-to-high incomes. In 2016 the median employment income of individuals with post-secondary certificates, diplomas or degrees was $11,014 higher than that of workers without one. However, it is hoped that the higher levels of economic growth and other benefits ultimately realized through these investments will benefit all Canadians. For example, several supercluster clean tech projects are currently underway with the potential to lead to environmental benefits for all Canadians.

Data Sources: *Internal program data, Statistics Canada*

Quality of Life Impacts

Prosperity – *Investment in R&D; Firm growth; Productivity*

Target Population: Innovative Companies; All Canadians

Expected Benefits:

Gender:	Men ○—○—●—○—○ Women
Income Distribution:	Low ○—○—○—●—○ High Income
Inter-generational:	Youth ○—●—○ Senior
Additional Characteristics:	Highly educated workers, various sectors
GBA+ Timing:	Early ■□□ Later □ Existing

GBA+ Responsive Approach

Each of the Superclusters is undertaking ecosystem building activities that support economic inclusion of under-represented groups. These activities can include supporting projects that are led by women entrepreneurs or that create work-integrated learning opportunities for Indigenous people.

Promoting Canadian Intellectual Property

This program directly benefits innovative small and medium sized enterprises (SMEs) with the potential to own intellectual property. These businesses tend to operate in sectors with strong representation from the science, technology, engineering and math (STEM) fields. Higher-educated men tend to be overrepresented within these groups and could see greater benefits from the proposed support. Women make up only 34 per cent of STEM bachelor degree holders. While the number of women inventors named on patent applications originating in Canada is growing, men still account for the vast majority.

Data Sources: *Canadian Intellectual Property Office, Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm growth; Investment in R&D; Productivity*
Good Government – *Confidence in public institutions*

Target Population: Innovative Small and Medium-sized Businesses

Expected Benefits:

Gender:	Men ○—●—○—○—○ Women
Income Distribution:	Low ○—○—○—●—○ High Income
Inter-generational:	Youth ○—●—○ Senior
Additional Characteristics:	SMEs
GBA+ Timing:	Early ■□□ Later □ Existing

Capitalizing on Space-based Earth Observation

The capacity to use information about Earth collected from space is generally expected to benefit Canadians from all regions and demographics, given the positive impacts for public safety, public health, agriculture, climate change adaption, disaster risk reduction, and responsible resource development. Some activities will benefit particular groups of Canadians. For example, services can provide monitoring of sea ice and weather.

Indirect employment benefits to the space sector can be expected to disproportionately benefit men, who comprised 74 per cent of new hires by Canadian space firms in 2019.

The construction and repair of the receiver stations will indirectly benefit the construction trades and engineering, which tend to have workforces that are predominantly men.

Data Sources: *Canadian Space Agency, Statistics Canada*

Quality of Life Impacts

Environment – *Coastal and marine protection; Natural disasters and emergencies; Natural capital*
Good Governance – *Public safety*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Space Sector
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Science and Technology Collaboration with Israeli Firms

This program will primarily benefit Canadian small and medium enterprises (SME) in innovative industry sectors. Broadly speaking, the ownership of SMEs in these sectors tends to be less diverse than that of SMEs overall, with their owners less likely to be from under-represented demographics, such as women, Indigenous persons or visible minorities. These SME owners are likely to have higher levels of education. The potential new technologies resulting from this program are expected to benefit all Canadians, by providing innovative solutions to environmental, social and public health challenges.

Data Sources: *Global Affairs Canada, Statistics Canada, and the Organization for Economic Co-operation and Development.*

Quality of Life Impacts

Prosperity – *Investment in R&D; Firm growth; Productivity*

Target Population: Canadian Innovation-focused SMEs

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Highly-educated Individuals
GBA+ Timing:	*Early* □□■ *Later* ■ *Existing*

GBA+ Responsive Approach

Global Affairs Canada will conduct outreach to innovative women, indigenous, and other minority-owned SMEs to encourage their participation in the program.

Accelerating Broadband For Everyone

High-speed internet will provide benefits to Canadians living in rural and remote communities, where costs of services are often higher. Only 41 per cent of households in rural areas have access to internet speeds of 50/10 megabits per second compared to nearly 100 per cent of households in large urban areas. Faster broadband projects support diversity by enabling people to fully participate in online spaces, for people of different background to share resources, and build connections. High-speed internet can create new economic opportunities that benefit rural households and improve accesses to services, such as remote health and distance learning. Average weekly earnings of residents in large urban areas is estimated to be 15-25 per cent higher than average weekly earnings of residents in rural areas.

Similarly, Indigenous communities located in remote areas can expect to benefit from faster speeds and improved access to online services related to health and public safety.

Data Sources: *Canadian Radio-television and Telecommunications Commission, Statistics Canada*

Quality of Life Impacts

Prosperity – *Access to broadband; Employment; Household incomes*

Society – *Social participation; Sense of belonging to local community; Time use*

Target Population: Rural and Remote Communities

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Rural and Remote Communities, Indigenous communities

GBA+ Timing: *Early* □□■ *Later* ■ *Existing*

Establishing a new Data Commissioner

A well-functioning online marketplace and thriving data-driven technology sector benefit all Canadians by ensuring a proper balance with privacy protections and other social considerations.

There can be biases in the data used by artificial intelligence systems that inform real life decisions that affect people's lives, particularly historically disadvantaged demographic groups. For example, an algorithm used by U.S. hospitals to predict which patients would likely need extra care heavily favoured white patients over Black patients, despite race not being a variable. Healthcare cost history was, however, used in assessing a person's healthcare needs, but it happened to correlate with race.

Collecting bias-free data will help prevent historical harms from being propagated in automated decisions. Efforts by the Data Commissioner to promote positive uses and outcomes associated with data, while identifying and mitigating harmful and negative consequences, are expected to particularly benefit historically disadvantaged groups.

Data Sources: *American Association for the Advancement of Science*

Quality of Life Impacts

Prosperity – *Firm growth; Productivity; Investment in R&D*
Society – *Trust in others*
Good Governance – *Confidence in public/private institutions (data integrity)*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Disadvantaged Groups
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Enhancing Business Condition Data

This measure will benefit all Canadians through increased real-time data regarding business conditions of Canadian enterprises. This measure will also benefit researchers who will have better access to relevant data. Canadian businesses will indirectly benefit through better policies and programs informed by improved data.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm growth*
Good Governance – *Confidence in public/private institutions*

Target Population:	All Canadians, Business Sector
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Researchers, Business Sector
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

Continuing Motor Vehicle Safety Oversight

This measure benefits all Canadians by reducing motor vehicle collisions through monitoring and enforcing compliance with the *Motor Vehicle Safety Act* and its regulations, and developing new regulations to modernize safety oversight.

This measure will indirectly benefit certain sectors, such as the automotive sector and science, technology, engineering and math (STEM) fields, by supporting the introduction of new vehicle technologies. Men make up the majority of the workforce in these sectors.

Data source: *Statistics Canada*

Quality of Life Impacts

Health – *Health-adjusted life expectancy; Functional health status*
Good Governance – *Personal safety*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Automotive Sector, STEM fields
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

Revitalizing the Canadian Commercial Corporation

This initiative will support Canadian firms and workers operating in North American defence supply chains. The Canadian Commercial Corporation (CCC) is most active in sectors where jobs are predominantly held by men, including defence, manufacturing, and aerospace, where men hold 75 per cent, 72 per cent, and 70 per cent of jobs, respectively. Men are also expected to indirectly benefit from this initiative as they are generally overrepresented among the workforces of the supply chain partners who work with the exporters directly served by CCC.

Data Sources: *ISED, Canadian Manufacturers and Exporters, Statistics Canada, Canadian Council for Aviation & Aerospace*

Quality of Life Impacts

Prosperity – *Household incomes; Employment*

Target Population:	Exporters and their Supply Chain Partners
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Exporters and their Supply Chain Partners
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

GBA+ Responsive Approach

CCC intends to implement a series of reporting and analysis measures to give the government a better understanding of the composition of the workforce linked to CCC contracts.

Chapter 5: A Healthy Environment for a Healthy Economy

This section includes gender and diversity impact analyses for remaining Budget 2021 measures in Chapter 5.

Propelling Clean Tech Projects

This new financing facility is expected to directly benefit clean technology businesses and their employees. Men are expected to benefit disproportionately as they are overrepresented as clean technology founders, senior management, and employers. In 2019, men made up approximately 64 per cent of the environmental and clean technology workforce.

The indirect and long-term benefits are expected to be more gender balanced. Climate change directly and indirectly affects the health and wellbeing of individuals and communities. Funding clean technology projects is expected to provide long-term benefits to the environment within Canada (e.g. greenhouse gas emissions reductions, clean air and water), which will be beneficial to all Canadians, in particular younger and future generations.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Access to capital; Firm growth*
Environment – *Greenhouse gas emissions; Waste management*

Target Population: Clean Tech Sector

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Clean technology businesses and employees

GBA+ Timing: *Early* ☐■☐ *Later* ☐ *Existing*

GBA+ Responsive Approach

Supported businesses will be required to have a gender and diversity strategy in place to improve gender equality and diversity in their company and during the project. Project evaluation will take into consideration a company's record of gender equality and diversity, including board composition and hiring.

Growing Zero-emission Technology Manufacturing

The measure would directly benefit profitable zero-emission technology manufacturers by reducing their tax rates.

To the extent that the measure increases returns to shareholders, men and higher-income individuals are more likely to benefit from the measure than other groups are, as these groups receive disproportionately large amounts of investment income.

Reducing corporate tax rates can benefit workers by increasing their wages through a higher demand for labour. Employees in manufacturing are mostly men (72 per cent); therefore, male workers would primarily realize the share of the benefit of the measure that falls on labour. Reduced business costs may also be passed on to consumers through lower prices. To the extent that reduced business costs are passed on to consumers, some technologies (e.g. zero-emission vehicles) are disproportionately consumed by higher-income individuals. To the extent the measure leads to a net reduction in greenhouse gas emissions, this would benefit all Canadians in the long term.

Data Sources: *Internal Administrative Data and Data from Statistics Canada*

Quality of Life Impacts

Prosperity – *Business investment; Employment; Wages*
Environment – *Greenhouse gas emissions; Air quality*

Target Population: Zero-emission Technology Manufacturers

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*
Income Distribution: *Low* ○—○—○—●—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Employees, Owners and Shareholders of Zero-emission Technology Manufacturers

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

Accelerating Investment in Clean Energy Technologies

This tax incentive will directly benefit businesses that generate clean energy by, for example, using pumped hydroelectric energy storage to generate electricity, or by producing renewable fuels or hydrogen. Businesses that use certain fossil-fuelled and certain waste-fuelled electrical generation equipment may realize a loss of tax benefits. To the extent the proposal leads to a reduction in greenhouse gas emissions, this would benefit all Canadians in the long term.

Some of the benefits may be passed on to shareholders and owners of benefitting businesses. While no information is known on these shareholders and business owners specifically, tax data suggests that generally shareholders are disproportionately male and high income. Corporate tax incentives can also benefit workers by increasing their wages through a higher demand for labour. Benefitting businesses operate primarily in the utilities and manufacturing sectors where workers are disproportionately male: 73 and 72 per cent, respectively.

Businesses that may realize a loss of tax benefits operate primarily in the utilities, oil and gas extraction, and wood and paper product manufacturing sectors, where workers are also disproportionately male: 73, 74, and 83 per cent, respectively.

Data Sources: *Internal Administrative Data, and Data from Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm growth; Business investment*
Environment – *Greenhouse gas emissions; Air quality; Clean tech*

Target Population: Clean Energy Sector, All Canadians

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Utilities Sector, Renewable Fuels and Hydrogen Producers

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

Enhancing Canada's Supply of Critical Minerals

Groups that will benefit directly from this proposal include scientists and researchers who develop critical mineral refining and processing technology. Science and research fields in Canada are dominated by men, as women account for less than 30 per cent of those employed in science and research occupations.

Enhancing Canada's supply of critical minerals will indirectly support workers in the mining sector, which is centered in rural and remote areas. The mining workforce in Canada is predominantly men, with women accounting for only 14 per cent of the sector's workers.

While mining and processing these critical minerals will generate negative near-term environmental impacts, significant positive long-term environmental impacts are expected as critical minerals are utilized to increase the availability of batteries and other clean technologies that reduce emissions. In addition, these activities will offer long-term benefits by securing the domestic supply of minerals that will be increasingly important to the green economy.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment; Household incomes; Investment in R&D*
Environment – *Clean tech*
Good Governance – *Domestic security*

Target Population:	Scientists and Researchers
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Scientists and Researchers, Workers in the Mining Sector
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

Charging and Fueling Zero-emission Vehicles

This measure is expected to benefit current and future zero-emission vehicle (ZEV) owners. Research conducted by Simon Fraser University indicates that early adopters of ZEVs in Canada are more likely to be men, middle-aged, well-educated, high-income, and to live in urban areas. This trend is expected to continue in the short term.

This measure will eventually benefit all Canadians through the improved air quality and greenhouse gas emission reductions associated with large-scale ZEV adoption.

Quality of Life Impacts

Environment - *Air quality; Greenhouse gas emissions*

Target Population:	Current and Future ZEV Owners
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Driving Age Population, Urban Regions
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Reducing Transportation and Landfill Emissions

The measures will improve environmental outcomes for all Canadians by reducing greenhouse gas emissions from the transportation and waste sectors. The resulting improved air quality and associated health outcomes would benefit those with a sensitivity to pollution, including the elderly, children, and those with pre-existing medical conditions. Reducing greenhouse gas emissions will benefit future generations by alleviating the negative impacts of climate change.

Data Sources: *United Nations, California Air Resources Board, Environment and Climate Change Canada*

Quality of Life Impacts

Environment – *Greenhouse gas emissions; Waste management; Air quality*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Clean Technology Sector
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

GBA+ Responsive Approach

Environment and Climate Change Canada intends to undertake a socio-economic impact assessment for each regulation during the first year of development, which will include consideration of GBA+ factors.

Investing in the Forest-based Bioeconomy

This measure will predominantly benefit men, who represent 83 per cent of the workers in the forest sector, which is centered in rural and remote areas. First Nations and Métis men are also overrepresented in the sector compared to the general population. The program will require participating firms to develop a diversity work plan to track and promote inclusive hiring practices and environments.

Supporting biomaterials that offset fuel and plastic use, new technologies and other upgrades at forest facilities will also support the maintenance and creation of well-paying jobs, and benefit the rural and Indigenous communities located near, and reliant on, the forest sector, especially in British Columbia, Ontario, Quebec and New Brunswick.

Data Sources: *Natural Resources Canada, Statistics Canada*

Quality of Life Impacts

Prosperity – *Investment in R&D; Productivity; Employment*
Environment – *Greenhouse gas emissions; Natural capital; Waste management*

Target Population: Workers in the Forest Sector

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Forest Sector, Rural and Indigenous communities
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

GBA+ Responsive Approach

Program application and contribution agreement materials will both collect data on existing participation levels of different groups and promote greater diversity and involvement of underrepresented populations.

First Federal Green Bond

Green bonds support investments that pursue environmental objectives benefitting all Canadians, which could include projects that support climate mitigation adaptation, biodiversity and conservation, and pollution prevention and control.

Quality of Life Impacts

Environment – *Greenhouse gas emissions; Adaptation; Conservation*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Advancing Carbon Capture, Utilization, and Storage Technologies

Over the near and medium term, men and individuals with higher education are expected to benefit from increased science and research activities focused on the energy and industrial sectors. Men are overrepresented in the science and research fields, and the energy and manufacturing sectors, with women accounting for less than 30 per cent of the workforce in the energy and manufacturing sectors. Supporting the advancement of carbon capture, utilization, and storage technologies is expected to benefit all Canadians through reduced greenhouse gas emissions in the long term.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Investment in R&D; Household incomes*

Environment – *Greenhouse gas emissions, Clean tech*

Target Population: Clean Tech Companies and Researchers; all Canadians

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Energy Sector, Heavy Industry, Certain Regions

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Cleaner Fuels for a Cleaner Environment

The implementation of the Clean Fuel Standard liquid fuels regulation is expected to benefit all Canadians, including future generations, by reducing Canada's greenhouse gas emissions. The regulation will ensure the production of cleaner and less polluting fuels, resulting in improved air quality that will benefit those with air pollution sensitivities (e.g., seniors, children, and those with pre-existing medical conditions). The regulation is also expected to benefit lower-carbon fuel providers, such as biofuel producers and feedstock providers (e.g., farmers and foresters), and promote the uptake of advanced vehicle technologies (e.g., electric and hydrogen fuel cell vehicles). Compliance strategies under the regulation will also benefit providers of carbon capture, utilization, and storage, and hydrogen production technologies.

Data Sources: *United Nations, Canada Energy Regulator, Sustainable Prosperity, Ecofiscal Commission*

Quality of Life Impacts

Health – *Self-rated health*
Environment – *Greenhouse gas emissions; Air quality*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Clean Energy Sector
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Supporting the Production and Use of Clean Fuels

The near-term benefits of this measure will be focused mainly on companies involved in the production or distribution of low-carbon fuels, which are part of the broader energy sector. Men are the predominant demographic group in the energy sector.

Over time, increased production and use of low-carbon fuels is expected to support the long-term resilience of the energy sector, assist energy-intensive sectors like oil and gas, steel, and cement in reducing their emissions, and offer new job opportunities for Canadians. In the long-term, low-carbon fuels can reduce greenhouse gas emissions, which will benefit all Canadians.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm growth*
Environment – *Air quality; Greenhouse gas emissions; Natural capital*

Target Population: Clean Energy Sector

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Heavy Industry, Clean Technology Sector
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

GBA+ Responsive Approach

This measure will give priority to supporting firms that commit to workforce diversity.

Low-Carbon Fuel Procurement Program

Procurement of low-carbon fuels is aimed at reducing the pollution from fossil fuels, and reducing greenhouse gas emissions of government operations. This will reduce the impacts of climate change and environmental degradation to the benefit of all Canadians. The program is likely to directly benefit the working age (18-64) population in the clean energy sector. Over the longer term, the program will indirectly support the transition of the air and marine transportation sectors to more sustainable operations which will have a slight positive impact on employment in those industries.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Environment – *Greenhouse gas emissions*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Clean Energy Sector

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

Supporting a Centre for Innovation and Clean Energy in British Columbia

Clean technology firms and the energy sector are expected to benefit directly from this support. These fields in Canada are predominantly occupied by men.

Women continue to be significantly underrepresented across the energy sector, comprising approximately 20 to 25 per cent of the workforce. In addition, small and medium-sized clean tech enterprises tend to be majority owned by men, with only 19 per cent being majority owned by women in 2017.

Supporting the advancement of clean technologies will benefit all Canadians through improved environmental outcomes and reduced greenhouse gas emissions in the long term.

Quality of Life Impacts

Prosperity – *Firm growth; Investment in R&D*

Environment – *Clean tech; Greenhouse gas emissions*

Target Population: Clean tech companies

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Energy Sector

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Federal Clean Electricity Fund

This measure will reduce greenhouse gas (GHG) emissions and support Indigenous participation in clean electricity investments. All Canadians are expected to benefit from reduced GHG emissions from government operations, while at least five per cent of program benefits will accrue to Indigenous businesses.

Due to the current availability of clean electricity, incremental benefits are expected to accrue largely to clean electricity producers in Alberta. Since women represent about 20 to 25 per cent of the workforce in the energy sector, resulting employment opportunities are expected to favour men.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm growth*
Environment – *Greening operations; Greenhouse gas emissions*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Clean Energy Sector
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Steering Canada's Strengthened Climate Plan

Increasing federal policy development capacity for clean tech and addressing domestic and international climate change is expected to benefit all Canadians by supporting decision making that contributes to reducing greenhouse gas emissions. As women and young people are more affected by climate change, they are likely to benefit from deeper action on climate change. The additional federal clean tech capacity would also promote the deployment and export of these technologies. As men represent nearly three-quarters of the labour force in the clean tech sector, they are likely to benefit from growth in this sector.

Data Sources: *United Nations, Statistics Canada.*

Quality of Life Impacts

Environment – *Greenhouse gas emissions*
Good Governance – *Canada's place in the world*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Clean Technology Sector
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Support for Farmers and Agricultural Climate Solutions

The direct beneficiaries of these measures are older men since 71 per cent of operators in the agriculture sector are men and the average age of all farm operators is 55. The farm population also has a median household income 17 per cent higher than the total population. Communities where producers operate will indirectly benefit from these measures as support could translate into job creation for clean solutions to farm emissions or economic co-benefits. Climate action will have long term benefits for future generations. Proposed support to farmers through fuel charge proceeds only benefits producers and communities in backstop jurisdictions, which currently include Alberta, Manitoba, Saskatchewan and Ontario. ***Data Sources:*** *Statistics Canada*

Quality of Life Impacts

Prosperity – *Household incomes; Food security*
Environment – *Clean tech*

Target Population: Agricultural Operators, Specific Regions

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—○—● *Senior*
Additional Characteristics:	Agriculture Sector
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

Integrating Climate into Federal Decisions

Applying a climate lens is expected to benefit all Canadians by ensuring that all federal government decision-making considers climate change mitigation, adaptation. and resilience in a rigorous and consistent way. Strengthened decision-making is anticipated to have indirect positive medium and long-term environmental impacts.

Data Sources: *Statistics Canada, Organisation for Economic Co-operation and Development, Treasury Board Secretariat, Environment and Climate Change Canada*

Quality of Life Impacts

Environment – *Greening operations; Adaptation; Greenhouse gas emissions*
Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Public sector
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Stronger Climate-Related Disclosures

Climate-related financial disclosure is designed to focus organizations and investors (in this case the Crown) on sustainable financial choices, taking into account and disclosing the financial risks associated with climate change, which will result in positive impacts on income growth and the environment that benefit all Canadians.

Crown corporations will also be required to implement gender and diversity reporting, starting in 2022.

Quality of Life Impacts

Prosperity – *Firm growth*
Environment - *Greening operations; Greenhouse gas emissions*
Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Clean Technology Sector
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Lower Home Energy Bills Through Interest-free Loans for Retrofits

This program will directly benefit homeowners and landlords, including low-income Canadians. Homeownership rates increase with income and age, and are also higher for couples and families when compared to single-individual households. Improving the energy efficiency of homes will lower energy bills, and help to combat energy poverty. Home energy retrofits can also improve the climate resiliency of homes and reduce greenhouse gas emissions, which will benefit all Canadians, especially low-income Canadians who are more vulnerable the consequences of climate change.

The program would indirectly benefit the energy efficiency sector. A 2019 Environmental Careers Organization of Canada report noted that women represent 13 per cent of energy efficiency construction jobs, which is significantly higher than the national average in construction overall of approximately four per cent. The report also noted that the energy efficiency workforce had a higher proportion of younger workers between ages 18 and 34 (42 per cent) than the overall construction workforce.

Data Sources: *Statistics Canada, Environmental Careers Organization of Canada*

Quality of Life Impacts

Prosperity – *Employment; Household incomes*
Environment – *Greenhouse gas emissions, Energy efficiency; Air quality*

Target Population:	Homeowners and Landlords; All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Couples and Family Households, Energy Efficiency Sector
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

Strengthening Climate Resiliency

These measures will benefit all Canadians by improving resilience to climate change. However, certain groups are particularly vulnerable to climate change and will benefit more than other Canadians. These include coastal, remote, northern, and Indigenous communities, as well as minority groups, low-income communities, women, and elderly people. The creation of a small-scale project stream under the Disaster Mitigation and Adaptation Fund will specifically benefit small, rural, remote, northern, and Indigenous communities, while the renewal of the Standards to Support Resilience in Infrastructure Program will benefit northern communities by addressing their unique needs.

Both measures will indirectly benefit certain industries, such as construction, trades, and engineering, which tend to have workforces that predominantly employ men. As recorded in the 2016 Census, those employed by the construction sector identified as:

- 87 per cent men;
- 18 per cent immigrants; and
- 11 per cent visible minorities, including two per cent Black Canadians.

Data Sources: *Statistics Canada, BuildForce Canada*

Quality of Life Impacts

Prosperity – *Firm growth; Household incomes*
Health – *Self-rated health*
Environment – *Natural disasters and emergencies; Adaptation*
Good Governance – *Household emergency preparedness*

Target Population: All Canadians; Coastal, Small, Rural, Remote, Northern, and Indigenous Communities

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Construction, Trades and Engineering Sectors

GBA+ Timing: *Early* □■□ *Later* ■ *Existing*

GBA+ Responsive Approach

The Community Employment Benefits Reporting Framework under the Disaster Mitigation and Adaptation Fund encourages all proponents to address inequality and build inclusiveness, thereby increasing employment opportunities for apprentices, Indigenous people, women, persons with disabilities, veterans, youth, and new Canadians.

Keeping Canadians Safer from Floods

Canadians living in flood-prone areas will primarily benefit. Based on preliminary analysis, this group represents a gender-balanced subset of the Canadian population, which is not substantially skewed by income. This finding is supported by a recent Statistics Canada report on five major flood events from 2019.

Homeowners and renters, particularly in coastal and floodplain regions, will benefit from a more accurate understanding of flood risk for insurance purposes. Areas of higher flood risk exist in both rural and urban areas due to construction in floodplains over time.

Indigenous peoples are more at risk of flooding due to both pre-existing socio-economic vulnerabilities and the legacy of colonialism. Furthermore, Indigenous communities are more likely to be located in flood prone areas.

Data Sources: *Statistics Canada, Natural Sciences and Engineering Research Council*

Quality of Life Impacts

Prosperity – *Protection from income shocks*
Environment – *Natural disasters and emergencies; Adaptation*
Good Governance – *Household emergency preparedness*

Target Population: Specific Regions (Coastal and Floodplain)

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Homeowners, Indigenous peoples in Specific Regions

GBA+ Timing: *Early* ☐■☐ *Later* ☐ *Existing*

GBA+ Responsive Approach

Where applicable, this program will adhere to Indigenous Ownership Control Access and Possession principles to disseminate flood hazard information in Indigenous communities and conduct Indigenous engagement to ensure openness and transparency in its data collection and publication practices.

Improving Wildfire Resilience and Preparedness

These measures will primarily benefit Canadians who are the most affected by wildfire. Rural and remote communities are particularly vulnerable to wildfire disasters, especially Indigenous communities, with 70 per cent of Indigenous people living in or near forested areas. People with pre-existing medical conditions (e.g. asthma) can be disproportionately affected by wildfire smoke, while individuals with mental health issues can also be disproportionately affected by stress and trauma resulting from evacuations. Food and water shortages resulting from a wildfire event also significantly affect people with either physical or mental health issues. These initiatives may create employment opportunities in the forest sector, with non-immigrants, men, and people over 45 years of age being the most likely to benefit as they respectively represent 88, 83 and 53 per cent of forestry workers.

Data Sources: *Statistics Canada, International Union for Conservation of Nature, Parks Canada Agency, Canadian Parks Council, International Journal of Wildland Fire, Association for Fire Ecology*

Quality of Life Impacts

Health – *Functional health status; Self-rated mental health*
Environment – *Natural disasters and emergencies; Air quality; Adaptation*
Good Governance – *Household emergency preparedness*

Target Population: Rural and Remote Regions exposed to Wildfire Risk

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—●—○—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Rural and Remote Regions particularly affected by wildfire, Indigenous Communities

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

GBA+ Responsive Approach

The Parks Canada Agency and Natural Resources Canada have committed to work with partners to address gender and diversity challenges including improving the representation of women in fire management.

Supporting Provincial and Territorial Disaster Response and Recovery

Supporting the Disaster Financial Assistance Arrangements (DFAA) program will ensure that the federal government is able to provide financial assistance to provinces and territories affected by large natural disasters such as floods and storms, which is increasingly necessary for adapting to climate change. This program benefits all individuals in areas affected by natural disasters. In recent years, the DFAA funds have benefited Canadians all across the country, including in British Columbia (wildfires), Alberta (Calgary flood and Fort McMurray wildfire), Manitoba (spring floods), Quebec (spring floods) and New Brunswick (spring floods).

Quality of Life Impacts

Environment – *Natural disasters and emergencies; Adaptation*
Good Governance – *Emergency preparedness*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Specific Regions
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

Addressing Climate Change in Yukon

Working in collaboration with Crown-Indigenous Relations and Northern Affairs Canada and Environment and Climate Change Canada, this measure directly benefits all residents and communities in the Yukon. Climate change has a disproportional impact on Indigenous peoples, women, and children. The measure positively impacts the Indigenous population living in Yukon, who make up 23 per cent of the population in the Territory. Children and youth will also disproportionately benefit from this measure, given that the benefits of taking action to address climate change today will be realized over the medium to longer-term.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Environment – *Adaptation; Greenhouse gas emissions*

Target Population:	Northerners, Residents of the Yukon Territory
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Residents of the Yukon Territory, Indigenous peoples
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Preserving the HMS Erebus and HMS Terror – Franklin Expedition

This measure is expected to benefit all Canadians, including future generations, by protecting the high cultural value of these artifacts and meeting Canada's previous commitment to the United Kingdom to manage and protect them. Indigenous peoples, specifically Inuit, are expected to benefit directly from the initiative, as will rural and remote populations near the wrecks. The initiative additionally provides indirect benefits to the communities of Cambridge Bay and Gjoa Haven, due to employment opportunities for community members and increased spending in the area. The wrecks and the Franklin story are expected to attract an increased number of cruise ship visits to Gjoa Haven, providing income to the municipality, community members, and artists.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment*
Environment – *Conservation areas*
Society – *Cultural and historical preservation*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○ ○ ● ○ ○ *Women*
Income Distribution:	*Low* ○ ○ ● ○ ○ *High Income*
Inter-generational:	*Youth* ○ ● ○ *Senior*
Additional Characteristics:	Inuit peoples and/or other populations in the area
GBA+ Timing:	*Early* ■ □ □ *Later* □ *Existing*

Historic Investments in Canada's Natural Legacy

Conserving more land and inland waters in Canada, and protecting species at immediate risk of disappearing from the wild in Canada, are expected to benefit all Canadians by protecting biodiversity, helping to adapt to climate impacts, and maintaining natural carbon sinks.

These measures are expected to have pronounced benefits for Indigenous peoples and Canadians employed in the conservation field, and long-term benefits for youth and future generations. Expanding Indigenous Guardians programming will have a positive impact on the Indigenous communities implicated in those activities.

Data Sources: *Statistics Canada, United Nations*

Quality of Life Impacts

Environment – *Conservation areas; Climate change adaptation; Canadian Species Index; Natural capital*
Society – *Sense of belonging to community; Participation in cultural practices; Connection to land*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○ ○ ● ○ ○ *Women*
Income Distribution:	*Low* ○ ○ ● ○ ○ *High Income*
Inter-generational:	*Youth* ● ○ ○ *Senior*
Additional Characteristics:	Indigenous peoples, Conservation Workers
GBA+ Timing:	*Early* ■ □ □ *Later* ■ *Existing*

Conserving Canada's Oceans

Marine conservation will directly and indirectly benefit all Canadians through broad long-term health and climate change mitigation impacts. It may directly and indirectly positively impact the socio-economic outcomes for some working-age men in Arctic and coastal communities, including Inuit and other Indigenous peoples, through economic development activities associated with sustaining natural ecosystems.

Further protection of marine areas may directly negatively impact the fishing and oil and gas industries, which predominately employ working-age men, in areas where certain conservation measures are established.

Data Sources: *Parks Canada, Statistics Canada*

Quality of Life Impacts

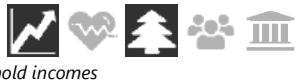
Prosperity – *Employment; Labour market participation; Future outlook*
Environment – *Conservation areas; Coastal and marine protection; Climate change mitigation*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Indigenous peoples, Arctic and Coastal Communities, Tourism, Conservation Industry
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

GBA+ Responsive Approach



Implementing strategies to promote inclusion and ensure any disproportionate impacts on Indigenous and coastal communities are mitigated through participation as well as site management and monitoring opportunities.

Reducing Ocean Plastics that Threaten Marine Life

The ghost gear program is expected to generate benefits for Canadians in coastal communities through improved outcomes for aquatic species, more sustainable fisheries, and cleaner coastlines and waterways for recreational and tourism activities. The majority of ghost gear retrieval operations are carried out by those with experience working in the fisheries sector. As a result, the program's indirect benefits are primarily realized by men as they make up 70 to 80 per cent of fish harvesters. Coastal Indigenous organizations and communities, which have lower average incomes compared to Canada as a whole, also benefit from the program as their expertise and knowledge has supported successful projects in the first call for proposal process. Overall, future generations will benefit from reduced pollution and healthier oceans.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Household incomes*
Environment– *Waste management; Coastal and marine protection*

Target Population: Coastal Communities

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Commercial Fishing Sector
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

Preserving Wild Pacific Salmon

Stabilizing and recovering wild Pacific salmon stocks directly benefits men as they represent the majority of participants in the recreational and commercial fishing sector. This will further benefit rural and remote communities by ensuring economic activities derived from Pacific salmon can continue into the future. First Nations communities in the Pacific region benefit from these actions as approximately 42 per cent of commercial salmon licenses are Indigenous commercial communal licenses, and Pacific salmon are an important species harvested for food, social and ceremonial purposes.

Habitat and biodiversity conservation measures are expected to generate ultimate benefits for all Canadians through improved outcomes for aquatic species and cleaner waterways and forests that support our food and freshwater systems, and provide recreation and tourism opportunities.

Data Sources: *Fisheries and Oceans Canada*

Quality of Life Impacts

Prosperity – *Household incomes; Food security*
Environment – *Conservation areas; Coastal and marine protection; Water quality in Canadian rivers*
Society – *Participation in cultural practices*

Target Population:	Pacific Region fishers, Pacific region coastal communities
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	First Nations, Commercial and Recreational Pacific region Fishers
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Sustainable Aquaculture Management

Sustainable aquaculture will benefit Indigenous and non-Indigenous coastal and rural communities through an improved environment, economic activity and additional job opportunities.

All Canadians will indirectly benefit from strengthened environmental regulations that support a cleaner marine ecosystem and protections for wild fish stock.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Environment – *Coastal and marine protection*
Good Governance – *Confidence in public institutions*

Target Population:	Coastal Communities
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Coastal Communities, Aquaculture Sector
GBA+ Timing:	*Early* □□■ *Later* ■ *Existing*

Developing the Canada Water Agency

All Canadians will benefit from safe, clean, and well-managed water and water systems across Canada, with particular benefits for farmers and the agricultural sector. This initiative is expected to produce direct benefits for Indigenous peoples, including First Nations, Inuit, and Métis, through expanded engagement with regional Indigenous governing bodies and organizations on the mandate and structure of the Canada Water Agency. It is expected to benefit Indigenous women, Indigenous elders, and Indigenous youth, through the long-term protection of freshwater resources for generations to come.

Data Sources: *Statistics Canada, Lake Simcoe Region Conservation Authority, Canada's Changing Climate Report (2019), Lake Simcoe Diagnostique*

Quality of Life Impacts

Environment – *Clean drinking water; Water quality in Canadian rivers*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Indigenous Communities
GBA+ Timing:	*Early* ■□□ *Later* ■ *Existing*

GBA+ Responsive Approach

Funding for this initiative will be used to ensure that Indigenous governments and representative bodies have adequate resources to meaningfully contribute to the discussion.

Better Understanding our Environment

Direct benefits will accrue to members of the Canadian public and organizations wishing to analyze the links between ecosystems, society, and the economy. In the longer-term, as comprehensive and up-to-date data on Canada's ecosystems helps promote better decision-making and environmental management, all Canadians, including future generations, would directly benefit. This measure could also strengthen our understanding and available data linking the changing environment to marginalized and vulnerable communities.

Data Sources: *Statistics Canada, Canadian Institute for Climate Choices, Environment and Climate Change Canada*

Quality of Life Impacts

Environment – *Natural capital*

Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Researchers
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Support for the Polar Continental Shelf Program

This measure will predominantly benefit men, who represent 78 per cent of workers in STEM fields and a similar proportion of program funding recipients. Funding directed at engaging with local northern communities and facilitating access to training for Inuit youth is expected to create new economic and employment opportunities for young northerners regardless of gender. The program will also continue to work to promote greater inclusion of under-represented groups in scientific research.

Improved information about Arctic ecosystems will also support communities and others in making informed decisions when faced with land planning and other questions into the future.

Data Sources: *Natural Resources Canada, Statistics Canada, Natural Sciences and Engineering Research Council of Canada*

Quality of Life Impacts

Prosperity – *Child, student, and adult skills; Employment*
Environment – *Satisfaction with local environment; Coastal and marine protection*

Target Population:	Researchers Working in the North
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Northern and Inuit Communities, Researchers
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

GBA+ Responsive Approach

Selection criteria have recently been updated to promote the greater inclusion of women and diverse groups in research, support Indigenous peoples as partners, and foster the next generation of scientists in projects supported by the program.

Continuing Canada's Chemicals Management Regime

Renewing the Chemicals Management Plan is expected to continue to benefit all Canadians by reducing risks to human health and the environment created by chemicals, including those in foods, consumer products, cosmetics, pesticides, and drugs. Communities and social groups who are exposed to higher pollution levels (including women, Indigenous peoples, visible minorities, and lower-income groups) are expected to benefit from action in this area, as well as those most vulnerable to chemicals (e.g. children and elderly people).

Data Sources: *Statistics Canada, Auditor General of Canada, United Nations, Canadian Institute for Health Information*

Quality of Life Impacts

Health – *Health-adjusted life expectancy; Self-rated health*
Environment – *Air quality; Water quality in Canadian rivers; Waste management*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Vulnerable Populations
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

Replacing Lost Revenue at Parks Canada due to COVID-19

This measure will support Parks Canada's workforce, 48.8 per cent of whom are women and 7.7 per cent of whom are Indigenous people. This measure also ensures Parks Canada can continue to deliver its outdoor recreational services, directly benefitting all Canadians and their well-being. Middle-income Canadians are more likely to use Parks Canada spaces compared to higher and lower income Canadians. Physical distancing measures have increased Canadians' use of green spaces, and Canada's National Parks contribute to national culture and identity. The continued operation of Parks Canada sites benefits the communities and local businesses, often in rural and remote areas, that rely on Parks as the main source of visitor traffic.

Data Sources: *Parks Canada 2019-2020 Employment Equity Annual Report*

Quality of Life Impacts

Prosperity – *Employment; Protection from income shocks*
Health – *Physical activity*
Environment – *Satisfaction with local environment*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Rural and Remote Communities
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Continuing to Protect Canada's Oceans

Extended funding for the Canadian Coast Guard Auxiliary Chapter in the Arctic and the Indigenous Community Boat Volunteer Pilot Program will directly benefit Indigenous coastal communities in Canada's Arctic.

Communities involved in the program will benefit from increased capacity and resources to respond to marine safety incidents and training opportunities related to preventing and responding to arctic marine emergencies.

Indirectly all northerners will benefit from safer oceans and waterways.

Quality of Life Impacts

Environment – *Coastal and marine protection*
Good-Governance – *Personal safety*

Target Population: Arctic Coastal Communities

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Arctic Coastal Communities, Indigenous peoples
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

Accelerating Canada's Net-zero Transformation Through Innovation

The Strategic Innovation Fund's Net Zero Accelerator will focus on projects intended to reduce greenhouse gas emissions and support industrial transformation, those that support decarbonisation of large industrial emitters and those that lead to meaningful domestic emission reductions.

As men tend to be the predominant demographic group in the sectors these firms operate in (i.e. the energy sector, heavy industry), they may accrue a greater proportion of direct benefits. Net Zero Accelerator projects may also result in a higher proportion of direct benefits accruing to workers in STEM fields who contribute to technological solutions and are more likely to be higher-income men.

A greater proportion of benefits from this measure may also be felt in regions with existing concentrations of high emitters and heavy industry.

Data Sources: *Internal program data, Statistics Canada*

Quality of Life Impacts

Prosperity – *Investment in R&D; Firm growth; Productivity*
Environment – *Greenhouse gas emission; Clean tech*

Target Population:	Innovative Companies
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	High Emitting Sectors
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

GBA+ Responsive Approach

In addition to a project's economic and innovation value, the SIF's assessment framework also considers any public benefits that may accrue, including the degree to which a project proposal includes gender sensitive initiatives, has considered Indigenous impacts and opportunities, and has inclusive plans to encourage diversity in the work place.

Lake of the Woods

This measure will primarily benefit communities established in the Lake of the Woods Basin in Manitoba and Ontario, including Indigenous communities. Reducing phosphorus levels that create toxic algae and undertaking research will help improve water quality, health and economic activities, such as tourism and fishing around the lake.

Quality of Life Impacts

Environment – *Water quality in Canadian lakes and rivers*

Target Population:	People living in Lake of the Woods Basin
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Indigenous Communities
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Renewing the Clean Growth Hub and Clean Technology Data Strategy

The continuation of the Clean Growth Hub and Clean Technology Data Strategy will primarily benefit clean technology companies, particularly small and medium-sized enterprises (SMEs). These enterprises tend to be owned by men and are less diverse in ownership than SMEs in Canada overall. Metrics collected under the data strategy (including gender, age, education, race, etc.) will provide the federal government with a greater understanding on how to support inclusivity and address the gender and pay disparity in the sector.

Quality of Life Impacts

Prosperity – *Employment*
Environment – *Clean tech*

Target Population:	Clean Technology Sector
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Clean Technology SMEs
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

Interim Capital Asset Program Capacity for Parks Canada

This measure would primarily support Parks Canada's workforce, of which currently 48.8 per cent are women and 7.7 per cent are Indigenous people.

More broadly, ensuring sufficient internal capacity for Parks Canada's workforce provides an indirect benefit to the communities where Parks Canada national parks and sites are located, many of which are rural and remote.

Data Sources: *Parks Canada Agency*

Quality of Life Impacts

Prosperity – *Employment*
Environment – *Satisfaction with local environment*

Target Population:	Parks Canada
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Rural and Remote Communities
GBA+ Timing:	*Early* □□■ *Later* ■ *Existing*

Learning to Camp

The Learn to Camp program is expected to benefit all Canadians by allowing more Canadians to experience the outdoors and learn about the Canadian environment and heritage. The renewed funding is expected to engage up to 40,000 children annually, bringing the total amount of youth engaged through the Learn to Camp program to 100,000. This measure is not expected to affect individuals differently on the basis of gender, but will target urban children and their families, visible minorities, Canadians with disabilities, and Indigenous people. Urban Canadians and Indigenous communities generally have higher numbers of low-income individuals.

Quality of Life Impacts

Health – *Physical activity*
Environment – *Satisfaction with local environment; Connection to lands*
Society – *Sense of pride/belonging to Canada*

Target Population:	All Canadians
Expected Benefits:

GBA+ Timing:	*Early* ■□□ *Later* ■ *Existing*

Continuing Ballast Water Management

This measure directly benefits coastal and shoreline communities by protecting marine ecosystems and infrastructure from the establishment and spread of invasive aquatic species.

Protecting marine environments from invasive species also benefits a wide variety of groups that rely on a healthy marine ecosystem, including Indigenous communities, fishers, and recreational boaters.

Quality of Life Impacts

Environment – *Coastal and marine protection*

Target Population:	Coastal Communities
Expected Benefits:	
Gender:	*Men* ○ ○ ● ○ ○ *Women*
Income Distribution:	*Low* ○ ○ ● ○ ○ *High Inco*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Indigenous Communities, Fishers, Recreational Boaters
GBA+ Timing:	*Early* □ □ ■ *Later* ■ *Existing*

Continuing Tanker Safety Inspections

This measure directly benefits coastal and shoreline communities by reducing the risk of hazardous material leaks and spills from marine vessels.

Hazardous material leaks or spills can have broad and diverse impacts on marine environments. The reduced risk of leaks or spills benefits a variety of groups that rely on a healthy marine ecosystem, including Indigenous communities, fishers, and recreational boaters.

Quality of Life Impacts

Environment – *Coastal and marine protection*

Target Population:	Coastal Communities

Chapter 6: Strengthening the Cities and Communities We Call Home

This section includes gender and diversity impact analyses for remaining Budget 2021 measures in Chapter 6.

Supporting the National Arts Centre

Employees of the National Arts Centre directly benefit from this initiative, as funding helps the National Arts Centre to avoid deficit-reduction activities, such as laying off employees. The workforce of the National Arts Centre is gender-balanced.

This initiative also directly supports the performing arts sector, which is gender-balanced and characterized by high levels of education, precarious employment, and low median incomes.

Data Sources: *Government of Canada, Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment*
Society– *Sense of pride/belonging to Canada; Cultural and historical preservation*

Target Population: National Arts Centre Employees

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Artists, performers, composers, choreographers, writers, and other performing arts workers
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Supporting the Recovery of Arts, Culture, Heritage and Sport Sectors”

These measures will primarily benefit those working in cultural sectors, including arts, live events, heritage, sport, and music. These sectors are roughly gender-balanced and characterized by high levels of education, precarious employment, and low incomes, particularly the arts sector. Ongoing support for performing arts festivals and community-based cultural events, celebrations, and commemorations is also expected to benefit all Canadians who participate in such events, as well as specific groups who use events to celebrate their shared culture, such as LGBTQ2 pride festivals and Indigenous pow wows.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment; Household incomes*
Society – *Sense of pride/belonging to Canada; Sense of belonging to local community; Participation in cultural events*

Target Population: Heritage, Arts, and Sport Sectors

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Local Community Groups (e.g., Indigenous, LGBTQ2, Racialized Canadians), Artists and Cultural Workers
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Supporting Canadian TV and Film Productions through COVID-19

This measure primarily benefits the Canadian television and film production sector, particularly smaller producers and productions companies that rely on interim financing. As a result, workers in this sector may benefit from increased support to their employers. While women are generally underrepresented in creative roles on film and television productions, they are overrepresented in other production roles, including costume designers, hair and makeup specialists, script supervisors, accountants, and communications specialists.

Data Sources: *Women in View, Canadian Unions for Equality on Screen*

Quality of Life Impacts

Prosperity – *Employment; Firm growth*
Society – *Sense of pride/belonging to Canada*

Target Population: TV and Film Production Firms and Workers

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	TV and Film Production Workers
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Support for the Canadian Broadcasting Corporation / Radio-Canada

This measure would directly benefit CBC/Radio-Canada and its employees, as well as indirectly benefit all Canadians through the continued broadcasting of CBC/Radio-Canada television and radio news and entertainment programming.

CBC/Radio-Canada employs over 7,500 individuals, approximately 49 per cent of whom are women, 14 per cent visible minorities, eight per cent LGBTQ2, three per cent persons with disabilities, and two per cent Indigenous peoples.

Data Sources: *CBC/Radio-Canada internal data*

Quality of Life Impacts

Prosperity – *Employment*
Society – *Sense of pride/belonging to Canada; Sense of belonging to local community*
Good Governance – *Trust in media*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	CBC/Radio-Canada Employees
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

GBA+ Responsive Approach

To work towards its goal of a workforce and on-air content that is fully representative of the Canadian population, CBC/Radio-Canada has been implementing a Diversity and Inclusion Plan (2018-2021).

Support for the Canadian Book Industry

This measure would directly benefit the Canadian book industry, specifically bookstores and book publishers.

Support for increasing online sales would support many bookstores in all regions of the country, including bookstores in Francophone minority communities, which have been particularly affected by the pandemic. As women make up approximately 70 per cent of the workforce in the English-language book publishing industry, they may particularly benefit from increased support for online sales of Canadian-authored books.

Data Sources: *Nordicity (2018)*

Quality of Life Impacts

Prosperity – *Employment; Protection from income shocks*

Target Population:	Canadian Book Industry and Workers
Expected Benefits:	
Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Francophone Minority Bookstores
GBA+ Timing:	*Early* ☐☐■ *Later* ☐ *Existing*

Memorial to the Victims of Communism

This initiative directly benefits all Canadians by providing a space to commemorate the victims of totalitarian communism. The memorial indirectly benefits communities who have come to Canada to seek refuge, especially those who came to Canada to escape totalitarian communism and their descendants. By offering a space to hold ceremonies and facilitating collective recognition of specific victim groups, the memorial offers indirect benefits to these communities.

Quality of Life Impacts

Society – *Sense of pride/belonging to Canada; Cultural and historical preservation*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Immigrants and Refugees
GBA+ Timing:	*Early* ☐☐■ *Later* ☐ *Existing*

Boosting Charitable Spending in Our Communities

The government will be consulting during the coming months on increasing the disbursement quota. Increasing the disbursement quota would increase overall levels of expenditures by registered charities on their programs and activities in Canada. This would directly benefit the public, including beneficiaries of charitable programs in Canada and abroad.

Indirectly, an increase in annual disbursements could benefit persons employed in the charitable sector. It is estimated that approximately 75 per cent of individuals employed in the non-profit and charitable sector are women.

Data Sources: *Statistics Canada, theonn.ca*

Quality of Life Impacts

Society – *Charitable giving*

Target Population:	Charitable Sector, All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Charitable Sector
GBA+ Timing:	*Early* ☐■☐ *Later* ☐ *Existing*

Canada Community-Building Fund

This measure will benefit all Canadians through the construction and maintenance of public infrastructure across Canada, including roads, bridges, public transit, community buildings, and water and wastewater projects. Canadians who use this infrastructure will directly benefit from safe and reliable transportation networks, revitalized and greener community spaces, and clean air and drinking water. These projects will also contribute to economic growth and prosperity.

This initiative will indirectly benefit certain industries, such as construction trades and engineering, which tend to predominantly employ men. As recorded in the 2016 Census, those employed by the construction sector identified as:

- 87 per cent men;
- 18 per cent immigrants; and
- 11 per cent visible minorities, including two per cent Black Canadians.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *GDP per capita; Productivity; Employment*
Environment – *Clean drinking water; Water quality in Canadian rivers; Waste management*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Construction Trades and Engineering Sectors
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

National Infrastructure Assessment

This measure will benefit all Canadians by strengthening long-term infrastructure planning, including in the context of transitioning to a net zero economy. It will help all orders of governments to assess infrastructure needs and to prioritize investments that will have the greatest benefits for all communities, urban and rural alike. Ultimately, stronger planning and better decision-making today will result in better infrastructure tomorrow, which will benefit younger and future generations, promote jobs and growth, foster inclusivity and social equality, and reduce greenhouse gas emissions.

Quality of Life Impacts

Good Governance – *Confidence in public institutions*
Additional future quality of life impacts (e.g., prosperity, environment, society)

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Next Step Towards High Frequency Rail in the Toronto-Quebec City Corridor

The infrastructure investments will reduce bottlenecks and improve fluidity and connectivity. Together, this will improve the quality of life of Canadians living in nearby areas and those using VIA Rail services in the Quebec City-Toronto corridor.

The construction of these projects will indirectly benefit certain industries, such as construction trades and engineering, which tend to have workforces that predominantly are men.

Work to further explore the high frequency rail project will support a final investment decision on the project, which could result in direct benefits to people in the Quebec City- Toronto Corridor in the form of faster, more reliable rail service. In the long term, all Canadians could also benefit from lower greenhouse gas emissions as more travellers choose to travel by rail.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment; Productivity*
Environment – *Greenhouse gas emissions; Air quality*
Society – *Time use*

Target Population: Travelers in the Quebec City to Toronto corridor

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Construction Trades and Engineering

GBA+ Timing: *Early* ■□□ *Later* ■ *Existing*

Canada's National Capital Region

This initiative benefits those living in and visiting the National Capital Region, who access the assets and park lands owned and maintained by the National Capital Commission, such as the Rideau Canal Skateway. Improved transit integration could improve mobility for transit users who are generally lower-income. Indirectly, funding will support men more than women through employment of both skilled and non-skilled labourers in engineering, construction work and landscaping. In the National Capital Region, 11 per cent of workers in the construction industry and 39 per cent of workers in professional, scientific and technical fields are women.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Environment - *Satisfaction with local environment; Conservation areas*
Society – *Accessible environments; Sense of pride/belonging to Canada*

Target Population: National Capital Region

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Construction Sector

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Jobs and Growth in all Communities and the Canada Community Revitalization Fund

The pandemic has profoundly affected businesses in every region of Canada, accelerating structural changes and exposing vulnerable workers and communities.

Underrepresented Canadians disproportionately depend on employment in sectors most impacted by the pandemic, including retail, tourism and accommodations.

These measures will broadly benefit businesses, including those in rural and remote areas.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment; Household incomes; Firm growth*
Society – *Vibrant communities*

Target Population:	Small Businesses and Regional Economies
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	SMEs in Rural and Remote Communities
GBA+ Timing:	*Early* □□■ *Later* ■ *Existing*

GBA+ Responsive Approach

Regional development agencies will help foster inclusive recovery by prioritizing projects that support businesses operated by, and employing, underrepresented groups, including: women, Black Canadians, racialized communities, Indigenous people, youth, LGBTQ2, new Canadians, official language minority communities, and people with disabilities.

Creating a New Regional Development Agency for British Columbia

Creating a new regional development agency for British Columbia will have regional impacts as there will be greater support for businesses and communities in B.C., including in rural areas. The new regional development agency will result in a limited change in expected gender and diversity impact. More generally, funding through regional development agencies largely benefits SME owners, who are predominantly men as 63.5 per cent of SMEs are majority owned by men, 15.6 per cent of SMEs are majority owned by women, while 20.9 per cent of SMEs are equally owned by men and women. Additionally, SME owners are 12.2 per cent visible minorities, 1.4 per cent Indigenous persons, and 0.5 per cent persons with a disability.

Data Sources: *ISED, Statistics Canada*

Quality of Life Impacts

Prosperity – *Firm growth*
Society – *Sense of belonging to local community*

Target Population:	SMEs in British Columbia
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	SMEs in British Columbia
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

GBA+ Responsive Approach

Western Economic Diversification has an employment equity strategy and will work to reduce barriers in the hiring process in order to better serve clients This strategy includes targets to promote recruitment and development of employees from marginalized communities, including women, Indigenous people, Black and other racialized

Investing in Small Craft Harbours

The primary users and expected beneficiaries of these investments reflect the small coastal, rural, and water-side communities where harbours are located, which will benefit from revitalized harbour facilities and community economic development.

The replacement and construction of new small craft harbours directly benefit individual users, primarily those involved in commercial fisheries. This mostly benefits men with relatively lower incomes, as they represent 79 per cent of commercial fish harvesters.

Those who work in the engineering and construction industries are also expected to benefit from this measure. This workforce is predominantly working age men, as they make up 87 per cent of construction workers.

Data Sources: *Internal Data, Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment; Firm growth*
Environment – *Natural disasters and emergencies; Coastal and marine protection*

Target Population: Communities in Coastal Areas

Expected Benefits:

Gender:	*Men* ● ○ ○ ○ ○ *Women*
Income Distribution:	*Low* ○ ● ○ ○ ○ *High Income*
Inter-generational:	*Youth* ○ ● ○ *Senior*
Additional Characteristics:	Commercial Fisheries, Marine Industry, Rural Communities
GBA+ Timing:	*Early* □ □ ■ *Later* □ *Existing*

Extending the Northern Residents Deduction

This measure will benefit people living in the prescribed Northern and Intermediate Zones. Sixty-two per cent of new travel claimants are expected to be men. New claimants are also likely to be high-income, of working age, and less likely to hold a university degree.

Spouses of new claimants may benefit indirectly from an improvement in family finances. Assuming that the higher-income spouse claims the deduction on behalf of their family, up to 80 per cent of spouses benefitting indirectly from this measure would be women.

Data Sources: *Statistics Canada, tax data*

Quality of Life Impacts

Prosperity – *Household incomes*

Target Population: Residents of the Territories and the Northern Regions of most Provinces

Expected Benefits:

Gender:	*Men* ○ ● ○ ○ ○ *Women*
Income Distribution:	*Low* ○ ○ ○ ● ○ *High Income*
Inter-generational:	*Youth* ○ ● ○ *Senior*
Additional Characteristics:	Northern Residents
GBA+ Timing:	*Early* □ ■ □ *Later* ■ *Existing*

GBA+ Responsive Approach

To mitigate possible negative impacts of the rule limiting claims to spouses or common-law partners and children, this measure includes an exception for adult dependants who are wholly dependent on the taxpayer and who are, except in the case of a parent or grandparent, so dependent by reason of physical or mental infirmity.

Supporting the Canadian Wine Industry

There is limited gender disaggregated data on direct beneficiaries of this measure. In 2019 however, women represented roughly 35 per cent of the beverage manufacturing sector. At the same time, the majority in the industry were between the age of 25 and 44 years old. Wineries tend to be small businesses, centered in rural areas with the majority employing between 1 and 19 people. In 2016, 57 per cent of grape growers, who stand to indirectly benefit, were 55 years old and over and were mostly men. Seventy per cent of all grape growers operated small farms with gross revenues between $25,000 and $100,000. Indirect benefits are also expected for communities where wine production and wine tourism occur. In 2019, women held just over half (56.3 per cent) of the jobs in the food and accommodation industry. Younger Canadians also held 40.6 per cent of jobs in the industry.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *GDP per capita; Domestic market share*

Target Population: Wineries

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Agriculture Sector
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Supporting Food Processors Following Ratification of New Trade Agreements

Funding to subsidize capital investments for dairy, poultry, and egg processing industries will primarily benefit the owners of the recipient firms.

Canadian dairy and poultry processing is concentrated among a few large firms. Three and five firms, respectively, control a majority of dairy and poultry processing. These include firms privately owned by individuals, publicly listed multinational companies, and farmer-owned co-ops. Overall benefits are expected to be skewed toward men of higher-income.

Farmers have already received and will continue to receive compensation for trade-related impacts.

Quality of Life Impacts

Prosperity – *Household wealth; Business investment*

Target Population: Dairy, Poultry and Egg Processors

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Large dairy, Poultry and Egg Processing Firms
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

GBA+ Responsive Approach

The program will provide advantageous terms to small and medium enterprises relative to large firms to mitigate, but not eliminate, the risk of primarily supporting already dominant firms.

Delivering a Modern Immigration Platform

This investment will benefit newcomers by reducing application processing times and making client service and enhanced supports more accessible. This will help mitigate cost barriers for low-income newcomers, who might require professional assistance to navigate the current paper based process. All Canadians, including firms requiring skilled labour, will benefit from more efficient processing of immigrant applications.

Canada's immigration targets are gender neutral, however men have tended to be over-represented due to a focus on economic immigration. However, in 2019 women represented 50.7 per cent of admissions to Canada.

Quality of Life Impacts

Good Governance – *Confidence in public institutions (modernizing operations)*

Target Population: Newcomers

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Newcomers, International Students

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Enhancing the Temporary Foreign Worker Program

Investments are more likely to directly benefit men since they comprised 82 per cent of all work permit holders in 2019 under the Temporary Foreign Worker Program. These workers also tend to be racialized, have limited knowledge of English or French, have lower wages, and reside in rural or remote areas while working in Canada. In addition, more than half, 57 per cent in 2019, of all workers are in the agriculture sector, such as general farm workers, nursery and greenhouse workers and harvesting labourers. Some workers return year after year, or go on to become permanent residents or citizens.

Data Sources: *Internal Administrative Data*

Quality of Life Impacts

Prosperity – *Employment*

Good Governance – *Discrimination and unfair treatment*

Target Population: Temporary Foreign Workers

Expected Benefits:

Gender:	*Men* ●—○—○—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Agriculture Sector

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Streamlining Express Entry

This legislative amendment directly benefits newcomers looking to make Canada their home. From a gender perspective, the impact of this amendment will depend on the criteria used to qualify applicants for the Express Entry process. For example, men have historically accounted for a larger proportion of Express Entry candidates (59 per cent) than women (41 per cent). However, if gender is chosen as a selection criteria, it could result in a more gender balanced selection of applicants.

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population:	Newcomers
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Newcomers
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

Enhancing Client Service and Support

While there are no gender specific impacts associated with this investment, it will permit Immigration, Refugees and Citizenship Canada to maintain enhanced support to its diverse client base.

Canadian citizens, permanent residents, visitors (tourists, international students, foreign workers) and prospective permanent residents will benefit from better service via the Client Support Centre improving call answer rates and email response times.

Quality of Life Impacts

Good Governance – *Confidence in public institutions (service delivery)*

Target Population:	Newcomers and their Families
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Newcomers, International Students
GBA+ Timing:	*Early* □□■ *Later* ■ *Existing*

Support for National Museums and the National Battlefields Commission

By enabling the National Museums and National Battlefields Commission to maintain operations and retain jobs in the wake of financial pressures, this initiative is expected to directly benefit employees of these organizations. The majority of workers employed by these organizations reside in the National Capital Region, but employees also live in Winnipeg, Québec City, and Halifax. The workforce of the National Battlefields Commission is gender-balanced, while the National Museums disproportionately employ women over men. This initiative will ultimately benefit those who utilize the services of the National Museums and National Battlefields Commission, such as educators, researchers, students, and museum visitors. Data show that men, people with higher levels of educational attainment, those with higher household incomes, and people living in urban centres are more likely to visit museums.

Data Source: *Government of Canada, Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment*

Society – *Sense of pride/belonging to Canada; Cultural and historical preservation*

Target Population: Employees of the National Museums and the National Battlefields Commission

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: *Employees of the National Museums, Students, Researchers, Educators, Museum Visitors*

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Enhancing Digital Access to our Heritage

COVID-19 has had a substantial impact on non-national museums and heritage institutions. This measure would benefit these organizations and their workers. Women account for approximately 66 per cent of all paid employees in the heritage sector. The information technology sector is expected to indirectly benefit. This sector is comprised predominantly of men (70 per cent). All Canadians would benefit from the digitization of information and collections and the creation of original content such as educational materials or virtual activities. Data show that youth and those aged 25-49 are most likely to view heritage collections virtually.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Employment*

Society – *Historical and cultural preservation*

Target Population: Employees of Non-national Museums and Heritage Institutions, All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Incon*

Inter-generational: *Youth* ●—○—○ *Senior*

Additional Characteristics: Employees of Museums and Heritage Institutions, Information Technology Sector

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Continuing Support for Critical Food Inspection

All Canadians benefit from greater food safety surveillance and inspection. Agriculture and agri-food businesses that are regulated by the Canadian Food Inspection Agency directly benefit from this measure. These businesses are typically operated by older men in rural areas, as 84 per cent of the farm population live in a rural area, with 71 per cent of agricultural operators being men, and the average age of all farm operators being 55. Similar demographics exist for food processing, as 60 per cent of employees in food processing are men with 46 per cent being 45 or older.

Quality of Life Impacts

Prosperity – *Household incomes*
Health – *Food safety*
Good Governance – *Confidence in public/private institutions*

Target Population:	All Canadians, Agriculture and Agri-Food Sector
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—○—● *Senior*
Additional Characteristics:	Rural Communities
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Extending Emergency Towing Leases

The presence of emergency towing vessels in Pacific waters benefits those in the marine industry, in and around British Columbia, which primarily employs men. Indirectly, emergency towing capacity benefits those living in Indigenous and coastal communities in British Columbia, by preventing marine incidents, negative environmental impacts, and coastal pollution.

Quality of Life Impacts

Environment – *Natural disasters and emergencies; Coastal and marine protection*
Good Governance – *Personal safety; Emergency preparedness*

Target Population:	Marine Sector in British Columbia
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Coastal British Columbia Communities
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

Supporting Clean Technology Adoption in Fisheries and Aquaculture

This measure benefits individuals and small to medium-sized companies involved in fisheries and aquaculture enterprises. These operations tend to be located in small coastal and Indigenous communities across Canada, with about 70 to 80 per cent of their workforces being men. Clean technology suppliers in Canada and internationally will also benefit through increased demand.

Quality of Life Impacts

Environment – *Clean tech; Coastal and marine protection*

Target Population:	Commercial Fisheries, Aquaculture Sector
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Coastal and Remote Populations, Clean Tech Suppliers
GBA+ Timing:	*Early* ■□□ *Later* ■ *Existing*

Continuing the Remote Passenger Rail Program

This measure benefits Indigenous and remote communities in Manitoba, Quebec and Labrador, many of which are only accessible by rail. Residents of these communities are more likely to be low-income, and to rely on rail services in order to access economic opportunities and essential goods and services, including health care.

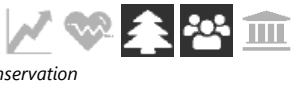
Quality of Life Impacts

Prosperity – *Household incomes*
Society – *Social cohesion and connections*
Health – *Unmet needs for health and mental health care*

Target Population: Remote Communities

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ●—○—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Indigenous and Remote Communities in Manitoba, Quebec, and Labrador
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*



Protecting Canada's Historic Places

Having an approach and legal framework to protect and present nationally significant examples of Canada's cultural heritage should benefit all Canadians. The initiative will directly benefit Indigenous peoples, including First Nations, Inuit, and Métis, through the addition of distinction-based representation on the Historic Sites and Monuments Board of Canada, as well as greater opportunities to protect and present the contributions of Indigenous peoples to Canada's natural and cultural heritage.

By renewing visitor experiences at historic places across Canada, this measure will also benefit middle- and higher-income individuals, highly educated individuals, and individuals over the age of 60, who are the primary clientele of culture and heritage tourism. Tourism businesses in communities that are home to historic places may also benefit from these investments.

Data Sources: *Statistics Canada; Canada Association of University Teachers; Commonwealth of Australia; The College of Estate Management:*

Quality of Life Impacts

Environment - *Conservation*
Society – *Sense of pride/belonging to Canada; Historical and cultural preservation; Social participation*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*

GBA+ Timing:	*Early* ■□□ □ *Existing*

GBA+ Responsive Approach

Parks Canada's Framework for History and Commemoration includes the history of Indigenous peoples and diversity among its priorities. Parks Canada will identify priority designations for review based on Indigenous perspectives and other GBA+ lenses, including women and racialized Canadians, with the goal of acknowledging missing layers of history and removing controversial historical content.

Maintaining Temporary Resident Processing Capacity

Investments will benefit temporary residents in Canada, who have diverse characteristics and are broadly gender-balanced. In 2019, there were over 3.4 million temporary residents in Canada. While visitors and international students were gender-balanced – 52 per cent and 47 per cent were women, respectively – temporary foreign workers were more likely to be men, comprising 63 per cent of all work permit holders.

Data Sources: *Immigration, Refugees and Citizenship Canada*

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population: Temporary Residents

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Visitors, International Students, and Temporary Foreign Workers and their Employers
GBA+ Timing:	*Early* □□■ *Later* ■ *Existing*

Granville Island Emergency Relief Fund Extension

Emergency funding will benefit small businesses on Granville Island, which are predominately in the arts and culture, tourism, and food service industries. This will positively impact the employees of these businesses, many of whom are artists and cultural workers or work in the food service industry, and who earn on average less than the overall workforce. It indirectly benefits metro Vancouver by allowing Granville Island to remain an important tourist and cultural hub in Canada.

Quality of Life Impacts

Prosperity – *Income; Employment; Firm growth*
Society – *Vibrant communities*

Target Population: Small Businesses on Granville Island

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Vancouver Region, Businesses and Employees on Granville Island
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Chapter 7: A More Equal Canada

This section includes gender and diversity impact analyses for remaining Budget 2021 measures in Chapter 7.

Better Data for Better Outcomes: Understanding the Causes of Inequity through Disaggregated Data

This measure will benefit all Canadians, but particularly racialized sub-populations, Indigenous peoples, and other marginalized groups, including LGBTQ2 individuals and persons with a disability, in Canada through better policies and programs informed by improved data about social and economic inequalities.

This measure will also benefit Canadian researchers who will have better access to relevant data.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Society – *Positive perceptions of diversity*
Good Governance – *Confidence in public institutions; Discrimination and unfair treatment*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Racialized Canadians, LGBTQ2 and Other Marginalized groups
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Improving Access to the Disability Tax Credit

These changes will directly benefit persons with disabilities by increasing the number of individuals that have access to tax relief and other federal supports. This group is expected to include persons with diabetes, inherited metabolic conditions, and impaired mental functions since the changes relate to disability impacts they experience. Within these groups, lower-income Canadians are expected to benefit the most, since they make up a larger portion of persons with disabilities, and a larger portion of beneficiaries of the measures affected by the changes (i.e. those with eligibility linked to the Disability Tax Credit), several of which are designed to provide additional benefits to low-income Canadians. Parents and other family caregivers will also benefit directly, through access to measures such as the Child Disability Benefit, or the ability to claim a transferred Disability Tax Credit.

Data Sources: *Canadian Survey on Disability, Canada Revenue Agency*

Quality of Life Impacts

Prosperity – *Household incomes; Affording everyday needs*
Health – *Unmet health and mental health care needs; Self-rated health and mental health*
Society – *Accessible environments*

Target Population:	Persons with Disabilities and their Caregivers
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Persons with Disabilities and their Caregivers
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Recognizing the Contributions of Atomic Workers

Over 99 per cent of the former Atomic Energy of Canada Limited employees who participated in the clean-ups of the two accidents that occurred at Chalk River Laboratories in the 1950s are men and as such the beneficiaries are senior citizen men. If the former employee has passed away, close kin will be eligible to receive the recognition. The families of the former employees will also indirectly benefit from the recognition of their family member.

Data Sources: *Atomic Energy of Canada Limited*

Quality of Life Impacts

Prosperity – *Household incomes*
Society – *Sense of meaning and purpose*
Good Government – *Confidence in public institutions*

Target Population:	Former Atomic Energy of Canada Limited Employees
Expected Benefits:	
Gender:	*Men* ● ○ ○ ○ ○ *Women*
Income Distribution:	*Low* ○ ● ○ ○ ○ *High Income*
Inter-generational:	*Youth* ○ ○ ● *Senior*
Additional Characteristics:	Families of Former Atomic Energy of Canada Limited Employees
GBA+ Timing:	*Early* ☐ ☐ ■ *Later* ☐ *Existing*

National Autism Strategy

A national autism strategy would target all Canadians living with autism spectrum disorder and their families. Autism spectrum disorder is usually diagnosed in childhood so this proposal will include consideration of children and youth. In addition, males are four to five times more likely to be diagnosed with autism spectrum disorder than females.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Health – *Children vulnerable in early development; Functional health status; Unmet health care needs; Unmet needs for mental health care*
Society – *Satisfaction with time use; Sense of belonging to local community; Accessible environments*

Target Population:	People with Autism Spectrum Disorder
Expected Benefits:	
Gender:	*Men* ○ ● ○ ○ ○ *Women*
Income Distribution:	*Low* ○ ○ ● ○ ○ *High Income*
Inter-generational:	*Youth* ● ○ ○ *Senior*
Additional Characteristics:	People with Autism Spectrum Disorder, Caregivers
GBA+ Timing:	*Early* ☐ ■ ☐ *Later* ☐ *Existing*

Establishing a National Framework for Diabetes

Approximately 3.2 million Canadians are living with diabetes and 200,000 new cases are diagnosed each year. People living with pre-existing chronic health conditions, such as obesity, are at increased risk for developing type 2 diabetes, which make up 90 per cent of cases. The rate of diabetes is approximately 16 per cent higher among men and more than twice as high among South Asian and Black adults as compared to Caucasian adults. Further, First Nations adults living on reserve and in northern communities have a significantly higher rate of diabetes. Supporting further research into the causes, treatment, and development of a potential cure for diabetes is also expected to benefit children with juvenile diabetes. Although diabetes is generally more common in men, inequalities in the rates of diabetes by income, education level, and employment are greater among women. For example, women with no high school diploma are 2.2 times more likely to be obese than female university graduates.

Data Sources: *Statistics Canada, Pan-Canadian Health Inequalities Reporting Initiative, Canadian Institute of Health Information, Public Health Agency of Canada*

Quality of Life Impacts

Health – *Physical activity; Fruit and vegetable consumption; Self-rated health*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	South Asian, Black, and First Nations Communities, Canadians with Lower Education levels, Health Researchers
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Taxation of Vaping Products

This measure has both direct benefits and negative impacts that will primarily accrue to youth and to men, since these groups consume vaping products at a higher rate than other demographic groups.

Data Sources: *Health Canada*

Quality of Life Impacts

Prosperity – *Federal Debt-to-GDP ratio*
Health – *Health-adjusted life expectancy*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Students
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Taxation of Tobacco

There is higher than average consumption of tobacco products among a range of demographic groups. To the extent these users are unable to reduce their tobacco consumption, this measure will carry somewhat regressive impacts as lower income smokers spend more on tobacco products as a share of their income than smokers with higher income. These impacts are not expected to be large, it is estimated that the average daily smoker spent about $3,150 on cigarettes in 2020. The measure would increase the amount of excise duty embedded in the price of cigarettes by about $100 annually. This may have the effect of disincenting tobacco consumption, which may benefit smokers who are able to reduce consumption.

Data Sources: *Statistics Canada, Public Health Agency of Canada*

Quality of Life Impacts

Prosperity – *Federal Debt-to-GDP ratio*
Health – *Health-adjusted life expectancy*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Smokers who are able to reduce consumption
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Support for Canadian Blood Services

This initiative directly benefits Canadians with medical conditions who rely on plasma-derived products (PDPs) as a life-saving treatment. The conditions for which PDPs are prescribed do not affect one specific demographic group over another, but rather span across all dimensions of sex, age, gender, and diversity.

This initiative indirectly benefits workers in the construction sector in the short-term and workers in the health care sector in the long-term. Indirect benefits are gender-balanced, as 87 per cent of workers in the construction industry are men and 82 per cent of workers in the health care and social assistance sector are women.

Data Sources: *Statistics Canada, Canadian Immunodeficiencies Patient Organization*

Quality of Life Impacts

Prosperity – *Employment*
Health – *Health-adjusted life expectancy; Functional health status*

Target Population: Canadians with Specific Medical Conditions

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Construction and Health Care Sectors
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Ensuring Appropriate Access and Safeguards for Medical Assistance in Dying in Canada

This funding will benefit all Canadians by ensuring that as Canada's MAID framework evolves over time it is implemented in a way that ensures appropriate attention to access, protections, and consistency across all of Canada. This will help ensure that Canadians have equitable access to MAID, regardless of their jurisdiction or medical care provider.

Data Sources: *Health Canada (e.g., Monitoring System for Medical Assistance in Dying in Canada), Canadian Institute for Health Information*

Quality of Life Impacts

Health – *End of life care (access, quality, cultural suitability)*
Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Chapter 8: Strong Indigenous Communities

This section includes gender and diversity impact analyses for remaining Budget 2021 measures in Chapter 8.

First Nations Election Cancellation and Postponement Regulations (Prevention of Diseases)

The amendments to the regulations directly benefit all members of First Nations communities where elections are delayed due to public health concerns until they are safe to be held. This reduces the potential for community spread of COVID-19 by avoiding gatherings of people, while ensuring that communities are not faced with a governance gap in the midst of the pandemic.

Quality of Life Impacts

Health – *COVID-19 incidence*
Good Governance – *Confidence in public institutions*

Target Population: First Nations

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics:

GBA+ Timing: *Early* ■□□ *Later* ■ *Existing*

Supporting Indigenous Economies

93 per cent of Indigenous businesses located within Indigenous communities reported that COVID-19 has had a negative economic impact. Negative impacts identified by survey respondents included a decrease in revenues, shutdown of offices and facilities, and, in some cases, temporary or permanent shutdown of their business. These investments will directly benefit Indigenous communities and businesses, helping them to maintain jobs and essential services through the pandemic. It will also support local Indigenous micro-businesses which directly benefit the well-being of individual families and are majority owned by Indigenous women.

Investments to support the resilience of the First Nation Finance Authority will directly support First Nations, benefiting the community as a whole (men, women, youth, and elders).

Data Sources: *Canadian Council for Aboriginal Businesses*

Quality of Life Impacts

Prosperity – *Household incomes; Firm growth; Protection from income shocks*
Society – *Vibrant communities*

Target Population: Indigenous peoples

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—●—○—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Indigenous peoples, First Nation Communities

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Securitization of First Nations Goods and Services Tax and First Nations Sales Tax Revenues under the First Nations Fiscal Management Act (FNFMA)

This initiative benefits the members of First Nations with First Nations Goods and Services Tax or First Nations Sales Tax revenues seeking long-term financing from the First Nations Finance Authority. The extent to which it will benefit different genders or demographic groups will depend on how First Nations use the funds raised. This initiative is not expected to have negative impacts for any gender or demographic group.

Quality of Life Impacts

Good Governance – *Indigenous self-determination*

Target Population: First Nations

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Indigenous peoples

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Redesigning the Additions to Reserve Policy

This program directly benefits all members of participating First Nations communities by increasing capacity to make additions to reserve lands and ultimately improving the pace of land acquisition. Access to land can result in improved economic opportunities, capacity to develop community infrastructure and housing, and improved sense of belonging to local culture and community. Further, this will support a policy redesign process that will advance self-determination for all community members, while incorporating a wide range of perspectives, with particular attention to the rights and special needs of elders, women, youth, and persons with disabilities, as well as members living off-reserve.

Quality of Life Impacts

Prosperity – *Financial well-being; Acceptable housing*

Society – *Sense of belonging to local community*

Good Governance – *Indigenous self-determination*

Target Population: First Nations

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: First Nations

GBA+ Timing: *Early* ■□□ *Later* ■ *Existing*

Advancing Specific Claims Settlements

Replenishment of the Specific Claims Settlement Fund will ensure resources are available to pay out settlements. Canada does not influence or track how First Nations choose to use settlement funds; however, some communities have previously decided to make investments in social services, infrastructure, and education.

Quality of Life Impacts

Good Governance – *Confidence in public institutions; Indigenous self-determination*

Target Population:	Indigenous peoples, First Nations
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Indigenous peoples, First Nations
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Commemorating the Legacy of Residential Schools

This measure is gender balanced and will benefit all Canadians that want to participate in events held throughout the country on the proposed National Day for Truth and Reconciliation. Events may target and encourage participation of certain groups such as Indigenous peoples and young Canadians.

By providing ongoing support for events to commemorate and raise awareness of the history and legacy of residential schools, this measure will also support reconciliation with Indigenous peoples.

Quality of Life Impacts

Society – *Sense of belonging to Canada; Sense of belonging to local community; Social participation*

Target Population:	All Canadians, Indigenous peoples
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ●—○—○ *Senior*
Additional Characteristics:	Indigenous peoples
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Escalating 10-Year Grant Funding

This investment benefits First Nations bands who receive funding through the 10-Year Grants and their community members. Escalating program funding to respond to price and population growth ensures First Nations communities can continue to provide services that reflect their needs and priorities. It is likely that a range of social and quality of life benefits will result from such investments; however, recipient bands choose how to allocate these funds.

Quality of Life Impacts

Good Governance – *Confidence in public institutions; Indigenous self-determination*
Additional quality of life impacts (e.g. prosperity, health, society) based on First Nations community investments

Target Population:	First Nations
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	First Nations
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

Support for Indigenous-led Data Strategies

Indigenous peoples generally experience poorer socio-economic outcomes than Canada's non-Indigenous peoples do, including in the areas of health and well-being, income, and education. This proposal will benefit Indigenous peoples by helping to ensure that Indigenous governments, organizations, and communities have the data they need to implement evidence based governance and service delivery that is founded on culturally relevant visions of well-being. This will help improve outcomes for Indigenous peoples as measured by Indigenous-led and co-developed indicators of health and well-being.

Quality of Life Impacts

Society – *Vibrant communities; Cultural and historical preservation*
Good Governance – *Indigenous self-determination; Confidence in public institutions*

Target Population: Indigenous peoples

Expected Benefits:

Gender:	Men ○ ○ ● ○ ○ Women
Income Distribution:	Low ○ ● ○ ○ ○ High Income
Inter-generational:	Youth ○ ● ○ Senior
Additional Characteristics:	Indigenous peoples

GBA+ Timing: Early ■□□ Later □ Existing

Parks Canada Capacity for Indigenous Engagement

This program directly benefits Indigenous peoples by expanding Parks Canada's capacity to negotiate rights-based agreements, thereby increasing the likelihood of reaching agreements sooner and with a greater number of Indigenous groups. The program is expected to foster reconnection between Indigenous peoples and their traditional territories and restore the historic responsibility of Indigenous peoples to manage their traditional lands and resources, resulting in nation-building and stronger socio-economic outcomes, accruing to women, men and non-binary Indigenous peoples.

Quality of Life Impacts

Environment – *Satisfaction with local environment; Natural capital*
Society – *Sense of belonging to local community*
Good Governance – *Confidence in public institutions; Indigenous self-determination*

Target Population: Indigenous peoples

Expected Benefits:

Gender:	Men ○ ○ ● ○ ○ Women
Income Distribution:	Low ○ ● ○ ○ ○ High Income
Inter-generational:	Youth ● ○ ○ Senior
Additional Characteristics:	Indigenous peoples

Supporting Indigenous Partners for Meaningful Crown Consultation and Engagement

This program benefits Indigenous peoples. The expected outcomes are gender-balanced and will increase opportunities for all community members to participate in consultation and engagement activities.

Quality of Life Impacts

Good Governance – *Confidence in public institutions; Indigenous self-determination*

Target Population: Indigenous peoples

Expected Benefits:

Gender:	Men ○ ○ ● ○ ○ Women
Income Distribution:	Low ○ ○ ● ○ ○ High Income
Inter-generational:	Youth ○ ● ○ Senior
Additional Characteristics:	Indigenous peoples

GBA+ Timing: Early □■□ Later □ Existing

Chapter 9: Protecting Our Shared Values

This section includes gender and diversity impact analyses for remaining Budget 2021 measures in Chapter 9.

Gun Control

These measures will directly benefit all Canadians, but may disproportionately affect men and women in different ways. Men represented the vast majority of those with a firearms licence who owned restricted or prohibited firearms in 2020, and 90 per cent of those who committed a firearms-related violent crime in 2016. Women are much more likely to be victims of intimate partner violence, representing 86 per cent of victims in police-reported incidents involving a firearm in 2018.

These measures may also have disproportionate impacts on Indigenous communities, which have higher rates of violent firearms offences and intimate partner violence than non-Indigenous communities.

Data Sources: *Statistics Canada; RCMP*

Quality of Life Impacts

Good Governance –*Victimization rate; Crime Severity Index; Personal safety*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Indigenous people
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

GBA+ Responsive Approach

Public awareness and education campaigns to promote responsible and safe use of firearms will make efforts to target men.

Better Job Protections for Parents of Young Victims of Crime

This legislative amendment directly benefits workers in the federally regulated private sector. As there have been fewer than 100 applications since 2013, detailed and reliable gender and demographic data is not available. However, while men account for 62 per cent of the federally regulated work force, administrative data shows that a majority of applicants were women.

Quality of Life Impacts

Prosperity – *Protection from income shocks*

Target Population: Workers in the Federally Regulated Private Sector

Expected Benefits:

Gender:	*Men* ○—○—○—●—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

Reforming the Judicial Conduct Review Process

All Canadians will benefit from a reformed review process that will reduce delays, enhance accountability, and ultimately increase public confidence in the courts and justice system. In particular, this measure will benefit those with matters before federally-appointed judges by ensuring any complaints of misconduct are addressed efficiently and transparently.

Women made up 45 per cent of the federally-appointed judiciary as of March 2021. Recent efforts have focused on increasing the diversity of the judiciary. Between October 2019 and October 2020, women comprised 65 per cent of new appointments, while visible minorities represented 17 per cent and Indigenous peoples accounted for three per cent.

Data Sources: *Office of the Commissioner for Federal Judicial Affairs*

Quality of Life Impacts

Good Governance – *Access to fair and equal justice; Resolution of serious legal problems*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Federally-appointed Judiciary

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Freezing Pension Accrual for Judges Recommended for Removal

This initiative will help protect public confidence in the integrity of Canada's federally-appointed judiciary. The proposed legislative amendment will apply to federally-appointed judges regardless of any personal characteristics.

Women made up 45 per cent of the federally-appointed judiciary as of March 2021. Recent efforts have focused on increasing the diversity of the judiciary. Between October 2019 and October 2020, women comprised 65 per cent of new appointments, while visible minorities represented 17 per cent and Indigenous peoples accounted for three per cent.

Data Source: *Office of the Commissioner for Federal Judicial Affairs*

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population: Federally-appointed judges

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics:

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Maintaining Federal Court Services during COVID-19

This initiative will benefit all Canadians by enabling access to justice during the COVID-19 pandemic. Canadians who bring matters before the federal courts represent a spectrum of Canada's diverse society, with cases from individuals, businesses and organizations, and government agencies.

Additionally, public health measures will directly benefit individuals who work in federal courts, such as court members, legal professionals, administrative staff, and human resources.

Quality of Life Impacts

Good Governance – *Access to fair and equal justice; Resolution of serious legal problems*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○ ○ ● ○ ○ *Women*
Income Distribution:	*Low* ○ ○ ● ○ ○ *High Income*
Inter-generational:	*Youth* ○ ● ○ *Senior*
Additional Characteristics:	Individuals who Work in Federal Courts
GBA+ Timing:	*Early* □ □ ■ *Later* □ *Existing*

Preventing the Spread of COVID-19 in Correctional Institutions

This funding will disproportionately benefit Correctional Service of Canada staff and groups that are disproportionately incarcerated, notably Black and Indigenous communities, as well as men and people with disabilities and health problems.

For example, Black Canadians account for 7.2 per cent of federal inmates, but only 3.5 per cent of the Canadian population. Similarly, Indigenous peoples account for 30 per cent of those in federal custody, despite only representing approximately five per cent of the population. Among women inmates, 42 per cent are Indigenous. Over 95 per cent of inmates at federal institutions are men.

Data Sources: *Statistics Canada, Correctional Service of Canada, Office of the Correctional Investigator*

Quality of Life Impacts

Health – *Health-adjusted life expectancy; COVID-19 incidence*

Target Population:	Correctional Service of Canada Inmates and Staff
Expected Benefits:	
Gender:	*Men* ● ○ ○ ○ ○ *Women*
Income Distribution:	*Low* ○ ○ ● ○ ○ *High Income*
Inter-generational:	*Youth* ○ ● ○ *Senior*
Additional Characteristics:	Black, Indigenous, Inmates
GBA+ Timing:	*Early* ■ □ □ *Later* □ *Existing*

Enhancing Data Collection on Cyber Security Threats

This initiative is to continue the Cyber Security and Cybercrime Survey program, which allows the government to monitor trends, collect data, and better respond to cyber security threats that could affect people and businesses across the country.

In 2019, 21 per cent of Canadian businesses reported being impacted by cyber security incidents. The industrial sectors most commonly impacted were the information and cultural industries sector, the wholesale trade sector, and the professional, scientific and technical services sector. Better monitoring and information collection of cyber threats to the private sector is expected to benefit all Canadians

Quality of Life Impacts

Good Governance – *Domestic security (cyber); Misinformation/trust in media; Victimization rate*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Canadian Businesses

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

Improving How Access to Information Works for Canadians

The review of the *Access to Information Act* and improvements to the Access to Information Program will benefit all Canadians through strengthened transparency and accountability of Canada's federal institutions. Those in the top user groups for access to information services are expected to benefit in particular. These include the media, scholars, librarians, and statisticians. Additionally, Indigenous organizations are expected to benefit as they are significant users of access to information, particularly when seeking information related to land and other claims.

Data Sources: *Treasury Board of Canada Secretariat*

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Media, Scholars, Librarians, Statisticians, Indigenous Organizations

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Supporting NORAD Modernization

These measures will directly benefit all Canadians by improving Canada's national defence capabilities.

The economic activity generated by these measures is expected to benefit Indigenous communities in the North. This measure will also indirectly benefit certain industries, such as construction trades, engineering, and aerospace, which tend to have workforces that predominantly are men.

***Data Sources**: Innovation, Science and Economic Development Canada, and Statistics Canada*

Quality of Life Impacts

Prosperity – *Investment in R&D*
Good Governance – *Domestic security; Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Northern Communities, Construction Trades and Engineering
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

GBA+ Responsive Approach

To minimize the potential for negative impacts on marginalized and underrepresented groups, the Department of National Defence will consult with local Indigenous groups and apply a GBA+ screen for research and development agreements with academia and the private sector.

Increasing Canada's Contributions to NATO

All Canadians will benefit from an increase in their defence and security, and the promotion of peace.

The increased contribution to the NATO Readiness Initiative will lead to increased expenditures on the maintenance of defence equipment. This will indirectly benefit Canada's defence industries, whose employees are predominantly men. For example, 81 per cent of employees in aerospace and 87 per cent of employees in shipbuilding are men.

***Data Sources:** Statistics Canada, NATO*

Advancing the Safer Skies Initiative

This measure will benefit all Canadians by reducing civil aviation safety risk. As people with higher incomes have a greater propensity for air travel, they are expected to benefit more from this measure than other Canadians. Canadian travellers who fly more frequently near conflict zones due to family ties or work obligations will benefit relatively more than other Canadian travellers.

Sustaining Health Services for the Canadian Armed Forces

This measure benefits all Canadians by ensuring that members of the Canadian Armed Forces receive quality health care so that they are able to deploy when needed.

It will also directly benefit members of the Canadian Armed Forces, who are predominantly men (84 per cent). Indirectly, this measure will benefit health care professionals, who are more highly educated and earn higher incomes than the Canadian population. While Canadian Armed Forces health care personnel are predominantly men, employees in the Canadian health care sector are predominantly women (78.7 per cent).

Data Sources: *Statistics Canada*

Quality of Life Impacts

Health – *Unmet health care needs*
Good Governance – *Domestic security*

Target Population:	Canadian Armed Forces members

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Procurement specialists

GBA+ Timing: *Early* □□■ *Later* ■ *Existing*

Ensuring Procurement Partners Respect Canada's Economic Interests

This measure could incentivize bidders on defence procurements not to harm Canada's economic interests, potentially benefiting Canadian jobs. However, there is a risk that bidders may decide to withdraw work from Canada as a result of a negative assessment, or due to perceptions that the policy will reduce their opportunities in Canada.

Any impacts would likely directly affect Canada's defence industries, whose employees are predominantly men. For example, 81 per cent of employees in aerospace and 87 per cent of employees in shipbuilding are men.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *GDP per capita; Household incomes*

GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Supporting Parole Board of Canada Operations

This funding will support the Parole Board of Canada staff, and offenders in Canada seeking parole. Groups that are disproportionately incarcerated and therefore seeking parole will benefit, notably Black and Indigenous communities, as well as men and people with disabilities and health problems. For example, Black Canadians account for 7.2 per cent of federal inmates, but only 3.5 per cent of the Canadian population. Similarly, Indigenous peoples account for 30 per cent of those in federal custody, despite only representing approximately five per cent of the population. Among women inmates, 42 per cent are Indigenous. Over 95 per cent of inmates at federal institutions are men.

Data Sources: *Statistics Canada, Correctional Service of Canada, Office of the Correctional Investigator*

Quality of Life Impacts

Good Governance – *Access to fair and equal justice; Representation in corrections custodial population*

Target Population: Parole Board of Canada Staff and Offenders Seeking Parole

Expected Benefits:

Gender:	*Men* ●—○—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Black, Indigenous, and Offenders Seeking Parole
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

Enhancing IM/IT Systems to Support Transparent Lobbying

Effective systems to support transparent lobbying in Canada benefit all Canadians.

Indirect benefits of hiring and spending related to IM/IT systems are expected to accrue unequally to men, due to the over-representation of men in IM/IT fields.

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	IM/IT sector
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Leaders' Debates Commission

Enhanced independence and structure around the organization of leaders' debates during federal elections will benefit all Canadians. Groups generally disadvantaged when it comes to broadcasting accessibility, such as minority language communities and Canadians with disabilities, would particularly benefit as part of the Commission's mandate is to ensure accessibility.

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics	Disability, Minority language communities
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Modernizing the Department of National Defence's Information Systems

These measures will enhance the operational efficiency and readiness of the Canadian Armed Forces, which will benefit all Canadians. These measures will also directly benefit members of the Canadian Armed Forces and employees of the Department of National Defence, who benefit from these information systems to manage the equipment they need to do their jobs, and to ensure the accuracy of civilian pay. These groups are predominantly men (84 per cent and 59 per cent, respectively). These measures will indirectly benefit workers in the computer science and engineering professions, who will benefit from the associated employment opportunities. This occupational group is approximately 80 per cent men, and of higher education and income than the Canadian population.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Good Governance – *Domestic security; Confidence in public institutions (modernizing operations)*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*

GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Chapter 10: Responsible Government

This section includes gender and diversity impact analyses for remaining Budget 2021 measures in Chapter 10.

Digital Services Tax

The measure would have a direct impact on large corporations earning revenue from specified digital services. It would benefit all Canadians by ensuring that corporations pay a fair share of tax in respect of their activity in Canada. In terms of indirect impacts, to the extent that Canadian individuals are shareholders of large corporations that pay higher taxes as a result of the measure, and higher taxes result in lower dividend distributions, men and higher-income individuals are more likely to be negatively affected. To the extent that any of the tax is passed on directly or indirectly to Canadian consumers, the impact is likely to be greater on men.

Data Sources: *Canada Revenue Agency, Statistics Canada*

Quality of Life Impacts

Prosperity – *Federal Debt-to-GDP ratio*
Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender:	Men ○—○—●—○—○ Women
Income Distribution:	Low ○—○—●—○—○ High Income
Inter-generational:	Youth ○—●—○ Senior
Additional Characteristics:	

GBA+ Timing: Early ☐■☐ Later ☐ Existing

Luxury Tax

This measure will likely have negative impacts on higher-income Canadians, as they are more likely to purchase luxury cars, personal aircraft, and boats. The automobile, aviation and boating sectors may also be affected.

Based on vehicle retail sales data and assumptions regarding vehicle sale prices, high income individuals (more likely male) between 30-60 years old in Ontario, Alberta, Quebec, and British Columbia would be the most affected by the tax.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Federal Debt-to-GDP ratio*

Target Population: All Canadians

Expected Benefits:

Gender:	Men ○—○—●—○—○ Women
Income Distribution:	Low ○—○—●—○—○ High Income
Inter-generational:	Youth ○—●—○ Senior
Additional Characteristics:	

GBA+ Timing: Early ☐■☐ Later ☐ Existing

Tax on Unproductive Use of Canadian Housing by Foreign Non-resident Owners

This measure benefits all Canadians by discouraging the underutilization of Canadian housing by foreign, non-resident owners. The measure predominantly benefits low- and middle-income individuals and households living in urban areas by improving housing affordability through increasing the supply of rental housing and homes available for sale for owner occupancy.

Quality of Life Impacts

Prosperity – *Acceptable housing*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Specific Regions, Individuals of Particular Socio-economic Status
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Tackling Tax Avoidance and Evasion and Strengthening the CRA

The Canadian Revenue Agency (CRA) will further increase targeted audits with a focus on large businesses and better collection of outstanding tax debt. When considering Canadian individuals that are shareholders of large enterprises, tax data show that men, older Canadians and those with higher incomes receive a larger share of taxable dividends compared to other groups.

This will benefit all Canadians via a fair and equitable tax system, increased federal revenues and, lower debt charges.

Tax evasion and aggressive tax planning can be found among all segments of the population but mostly among the wealthiest groups. CRA data also indicate that men are more likely to be non-compliant.

Data Sources: *Canada Revenue Agency, Organisation for Economic Co-operation and Development*

Quality of Life Impacts

Prosperity – *Federal Debt-to-GDP ratio*
Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

GBA+ Responsive Approach

The CRA will establish a monitoring approach that will identify and track certain diversity factors of Canadian taxpayers that are selected for compliance actions and/or educational outreach.

Limitations on Excessive Interest Deductions

This measure aims at protecting the tax base and therefore benefits all Canadians. The primary group targeted by the measure is larger enterprises, and the proposal would affect this group negatively by placing a limit on the amounts of interest they may deduct. To the extent that Canadian individuals are shareholders of these enterprises, it may be assumed that men, older Canadians and those with higher incomes would be more likely to be adversely affected than others. Tax data show that: men received 65 per cent of the value of taxable dividends in 2018; taxpayers in the top income bracket received about 43 per cent of dividends, even though they only comprised one per cent of all tax filers; and seniors and other adults over 30 received 98 per cent of the value of dividends.

Data Sources: *Internal administrative data*

Quality of Life Impacts

Prosperity – *Debt-to-GDP ratio*
Good Governance – *Confidence in public/private institutions*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	

GBA+ Timing: *Early* ☐☐■ *Later* ☐ *Existing*

Hybrid Mismatch Arrangements

This measure aims at protecting the tax base and therefore benefits all Canadians. The primary group targeted for enforcement is large multinational enterprises that use hybrid mismatch arrangements in structuring their cross-border investments. By eliminating the Canadian tax benefit arising from these arrangements, the proposal would affect this group negatively. To the extent that Canadian individuals are shareholders of these enterprises, it may be assumed that men and higher-income individuals would be more likely to be adversely affected. Tax data indicate that corporate distributions are generally received disproportionately by men (who received 63.1 per cent of total dividends paid by corporations to Canadian individuals in 2015) and higher-income individuals.

Data Sources: *Canada Revenue Agency*

Quality of Life Impacts

Prosperity – *Federal Debt-to-GDP ratio*
Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	

GBA+ Timing: *Early* ☐☐■ *Later* ☐ *Existing*

Consultation on Mandatory Disclosure Rules

These measures are aimed at combatting aggressive tax avoidance and evasion. If these measures are enacted, it is expected that the government will be able to collect more tax revenues which will benefit all Canadians.

Quality of Life Impacts

Prosperity – *Federal Debt-to-GDP ratio*
Good Governance - *Confidence in public/private institutions*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics:

GBA+ Timing: *Early* ☐■☐ *Later* ☐ *Existing*

Action Against Money Laundering and Terrorist Financing

These initiatives will help reduce potential threats to the security and stability of Canada's financial system stemming from money laundering and terrorist financing. Strengthening Canada's Anti-Money Laundering and Anti-Terrorist Financing Regime may benefit people victimized by money laundering, terrorist financing, and offences linked to these crimes. Victimized groups are more likely to include women, children, the elderly, persons with disabilities, persons suffering from addiction, and newcomers to Canada.

Quality of Life Impacts

Prosperity – *Financial stability*
Good Governance – *Domestic security*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—○—●—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics: Victimized groups

GBA+ Timing: *Early* ■☐☐ *Later* ☐ *Existing*

Action Against Money Laundering and Terrorist Financing-Tax Measures

These initiatives will strengthen the ability of the Canada Revenue Agency to protect the charitable registration system from being abused for terrorist financing purposes.

This specific proposal is targeted at registered charities but is expected to benefit all Canadians, particularly vulnerable and marginalized persons in communities that are likely to be targeted by those supporting terrorism or seeking to radicalize individuals towards violence. Young men are more likely to be susceptible to radicalization efforts.

Quality of Life Impacts

Good Governance – *Confidence in public institutions; Domestic security*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—●—○—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics: Charitable and Non-profit Sector

GBA+ Timing: *Early* ■☐☐ *Later* ☐ *Existing*

Beneficial Ownership Transparency

Advancing a beneficial ownership registry will help Canada counter a broad array of crimes, for which the gender, ethnicity, age, and socio-economic status of the victims vary greatly. All Canadians are expected to benefit.

Quality of Life Impacts

Good Governance – *Confidence in public/private institutions; Victimization rate*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Combatting Abusive Tax Collection Avoidance Schemes

This is a tax integrity measure that targets aggressive tax planning and the avoidance of the collection of tax debt by a small number of tax planners that are marketing these schemes to wealthy and corporate taxpayers. This measure protects the tax base on behalf of all Canadians to benefit the Canadian population in general.

Data Sources: *Canada Revenue Agency*

Quality of Life Impacts

Prosperity – *Federal Debt-to-GDP ratio*
Good Governance – *Confidence in public/private institutions*

Target Population:	All Canadians
Expected Benefits:

Improving Duty and Tax Collection on Imported Goods

This initiative is a customs duty compliance measure designed to ensure that all importers value their imported goods on the same basis. This initiative promotes fairness by ensuring that all importers are treated equally. Similarly, the payment process modernizations apply to all importers.

This initiative will result in increased duty revenues to the government, benefiting all Canadians.

Quality of Life Impacts

Prosperity – *Federal Debt-to-GDP ratio*

Target Population:	All Importers, All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Importers
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Retail Payment Oversight Framework

The retail payment oversight framework will ensure safer and more secure payment services for Canadian businesses and consumers, which broadly represent the Canadian population. While the framework is expected to benefit all Canadians, those with lower levels of financial literacy are expected to greatly benefit from stronger regulatory oversight.

Quality of Life Impacts

Prosperity – *Financial stability*
Good Governance – *Confidence in public private institutions*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics:

GBA+ Timing: *Early* □■□ *Later* ■ *Existing*

E-Payroll to Help Businesses

The Canada Revenue Agency will lead consultations and government-wide efforts to analyse and develop potential options to implement an e-payroll solution for the Government of Canada.

A fully operational e-payroll system has the potential to deliver a range of benefits to Canadians. In particular, it could enhance and streamline the delivery of services and benefit payments, which would primarily benefit lower-income Canadians such as single parents and the working poor, through more timely access to income-tested benefits. E-payroll could also lower costs and facilitate compliance for employers. The reduction of administrative burden will support all employers in Canada. As of December 2019, 97.9 per cent of businesses in Canada were small businesses.

Data Sources: *Canada Revenue Agency; Organisation for Economic Co-operation and Development; Innovation, Science and Economic Development Canada*

Quality of Life Impacts

Good Governance – *Confidence in public institutions (modernizing operations)*

Target Population: All Canadians, Employers

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—●—○—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics: Lower-income Canadians, Employers

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Protecting Taxpayer Information

These investments are designed to protect taxpayers' and benefit recipients' data from unauthorized access and loss, which will directly benefit all Canadians. The Canada Revenue Agency notes that the increased protection of data could be seen as an indirect benefit for groups most often targeted by identity theft – seniors, individuals with an income larger than $75,000, and individuals between 25 and 34 years of age. However, these indirect benefits are difficult to quantify.

Data Sources: *Canada Revenue Agency*

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Additional Characteristics: Seniors

GBA+ Timing: *Early* □□■ *Later* ■ *Existing*

Modernizing CRA Services

The Canada Revenue Agency (CRA) processes over 2 million adjustments to personal income tax returns requested by taxpayers each year. Timely resolution of these adjustments will improve service to all Canadians by ensuring that credits and benefits to which they are entitled are calculated accurately and received in a timely manner. Benefits are expected to accrue for all Canadians that adjust their tax returns. Timeliness of provision of income-tested benefits and government transfers will be positive for diverse groups of vulnerable Canadians, particularly lower-income individuals. In addition, the simplified credit and benefit return and Canada Child Benefit form for Indigenous individuals will further enable quick and easy access to benefits and credits for this group.

Data Sources: *Canada Revenue Agency*

Quality of Life Impacts

Prosperity – *Household incomes; Poverty; Financial well-being*
Good Governance – *Confidence in public institutions (modernizing operations)*

Target Population: All Canadians, Indigenous peoples

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—●—○—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics: Low-income Canadians
GBA+ Timing: *Early* □■□ *Later* ■ *Existing*

Canadian Digital Service

The Canadian Digital Service (CDS) directly benefits Canadians and all other users of government on-line services. The CDS focuses on services that achieve high standards of accessibility and on meeting the needs of diverse populations, such as veterans, businesses seeking to respond to government tenders, and those applying for COVID-19 economic relief measures. In particular, the CDS focuses on those who might be otherwise underserved or marginalized. Recent work of the CDS has included development of the COVID Alert App, and GC Notify, a platform to provide vital email and text messaging services for an array of COVID-19 services.

Measuring What Matters

Improving Statistics Canada's capacity for quality of life measurement is expected to benefit all Canadians. In particular, addressing data gaps will help shed light on how non-economic, societal, and environmental factors are contributing to Canadians' quality of life. Better data will also help to identify and close gaps in socio-economic outcomes for different demographic groups such as women, persons at risk of poverty, black and racialized communities, Indigenous communities, and seniors. Greater emphasis on long-term implications of decision-making benefits younger generations.

Data Sources: *Statistics Canada*

Government Information Technology Operations

Measures to support Improving and Defending our Cyber Networks, Modernizing Critical IT Infrastructure by Shared Services Canada, Supporting Efficient, Stable Digital Applications, and the Office of the Chief Information Officer of the Government of Canada are expected to benefit all Canadians through more secure and reliable digital government services and internal operations. Persons with disabilities, over the age of 60, or living in rural or remote areas may benefit most from investments in networking and digital applications if they have difficulty accessing government services in person. Indirectly, men may benefit disproportionately as new IT staff and procurements come from the science, technology, engineering, and math (STEM) field, which has predominantly male workers.

Quality of Life Impacts

Good Governance – *Confidence in public institutions (modernizing operations)*

Target Population:	All Canadians, Federal Public Service Employees
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Technology Workers
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

Modernizing Critical IT Infrastructure: Service Canada

This initiative is intended to improve the efficiency of government operations and improve service to beneficiaries. About 55 per cent of the 6.7 million Old Age Security (OAS) beneficiaries are women, while about 54 per cent of roughly 1.8 million new Employment Insurance (EI) claimants annually in recent pre-pandemic years were men. The initiative will also lead to more work for those in the information management / information technology (IMIT) field, which is male dominated.

The intergenerational impact is balanced, as beneficiaries include EI claimants, OAS/GIS recipients and IMIT sector workers.

The overall distributional impact is neutral: the improved service for EI recipients and about 2.2 million lower income seniors who receive the Guaranteed Income Supplement (GIS) under the OAS program is balanced by the positive effects on the higher incomes of IMIT workers.

Data Sources: *EI Monitoring and Assessment Report; Old Age Security and Canada Pension Plan Statistical Bulletin*

Quality of Life Impacts

Good Governance – *Confidence in public institutions (modernizing operations)*

GBA+ Timing: *Early* □□□ *Later* ■ *Existing*

Modernizing Leave Without Pay Provisions

Amendments to the Public Service Superannuation Regulations will directly benefit federal employees covered by the *Public Service Superannuation Act*, in particular caregivers, who are disproportionally women. Reducing the gendered financial impact of taking caregiving leave can reduce financial pressures on caregivers who opt to take leave without pay.

Data Sources: *Public Services and Procurement Canada, Treasury Board of Canada Secretariat*

Quality of Life Impacts

Prosperity – *Household incomes*
Society – *Someone to count on; Time use*

Target Population: Public Service Employees Covered by the *Public Service Superannuation Act*

Expected Benefits:

Gender: *Men* ○—○—○—●—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*

Improving Federal Asset Management

This measure is expected to benefit all Canadians through improved management of federal assets and greener operations of government by helping to integrate greenhouse gas reduction into real property planning. The real property industry is expected to benefit as consultants are engaged from that sector. Men are slightly more common than women in the federal real property field, representing 59 per cent of the workforce, but women are slightly more represented in the overall public service at around 55 per cent.

Data Sources: *Treasury Board of Canada Secretariat*

Quality of Life Impacts

Environment – *Greening operations*

Society – *Historical and cultural preservation; Accessible environments*

Good Governance – *Confidence in public institution*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Federal Real Property Sector

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Supporting Government Translation and Interpretation Services

This support benefits all Canadians by promoting both official languages and facilitating greater engagement for unilingual speakers. According to the 2016 Census, approximately 90 per cent of people in Canada self-report English-only or French-only as their official language of choice. Translation and interpretation services also improve accessibility for those requiring sign-language interpretation.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Society – *Knowledge of official languages*

Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics:

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

Procurement Workforce

All Canadians are expected to benefit from an efficient and effective public service. Additionally, current and future public servants of Public Services and Procurement Canada will benefit from an increase in the procurement workforce, and the support for complex contracts. Indirectly, Canadian federal suppliers will benefit from the greater resources available to procurement officers. As of March 31, 2019, Public Services and Procurement's workforce identified as 59.6 per cent women; 3.5 per cent Indigenous peoples; 5.1 per cent persons with disabilities; and, 15.5 per cent members of a visible minority group.

Quality of Life Impacts

Prosperity – *Employment; Productivity*
Environment – *Greening operations*
Good Governance – *Confidence in public institutions*

Target Population: Federal Public Service Employees

Expected Benefits:

Gender: *Men* ○—○—○—●—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics:

GBA+ Timing: *Early* ☐■☐ *Later* ☐ *Existing*

Public Services and Procurement Canada Program Integrity

All Canadians will ultimately benefit from the measure, which will allow Public Services and Procurement Canada (PSPC) to continue providing procurement support to other departments, including the Public Health Agency of Canada, for personal protective equipment, vaccines, and other necessary services in the fight against COVID-19. Public servants of PSPC will directly benefit from the measure. As of March 31, 2019, PSPC's workforce identified as: 59.6 per cent women, 3.5 per cent Indigenous peoples, 5.1 per cent persons with disabilities, and 15.5 per cent members of a visible minority group.

Quality of Life Impacts

Prosperity – *Employment; Productivity*
Health – *Health-adjusted life expectancy; COVID-19 incidence*
Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—○—●—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: Federal Public Service Employees

GBA+ Timing: *Early* ☐■☐ *Later* ☐ *Existing*

Supporting the Public Service Occupational Health Program

This program directly benefits federal public service employees. In particular, employees in high-risk and scientific positions from the program's five major client departments (Canada Border Services Agency, Department of Fisheries and Oceans, Global Affairs Canada, Department of National Defence, and Correctional Services Canada) benefit from increased support for the program. Workforces for most of these departments are gender-balanced, with the exception of the Department of Fisheries and Oceans and the Department of National Defence. These departments disproportionately employ men, at 64 per cent and 60 per cent, respectively. The average age of employees across all departments is 43 years old, and the majority of employees speak English as their first language.

Data Source: *Government of Canada*

Quality of Life Impacts

Health – *Self-rated health; Functional health status*

Target Population:	Federal Public Service Employees
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Employees in High-risk and Scientific Positions
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Renewing funding for the Office of Public Service Accessibility

This initiative directly benefits persons with disabilities in the Public Service by addressing barriers and improving representation, accessibility and inclusion. Currently, the representation of persons with disabilities is 5.3 per cent while the latest workforce availability number for persons with disabilities is nine per cent.

Data Sources: *Statistics Canada, 2017 Canadian Survey on Disability, Public Service Employee Survey and Employment Equity Data*

Quality of Life Impacts

Society – *Accessible environments*
Good Governance – *Confidence in public institutions; Discrimination and unfair treatment*

Target Population:	Persons with Disabilities
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*

Addressing Financial Impacts on Atomic Energy of Canada Limited

Construction and trade workers undertaking capital projects at Chalk River Laboratories, who are mostly men, will benefit from the government addressing COVID-19's financial impacts on Atomic Energy of Canada Limited's operations. Scientific staff undertaking research projects, who are predominantly older men, will also directly benefit.

This proposal will provide an indirect stimulus effect on the communities surrounding Chalk River Laboratories in Renfrew County, Ontario.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Prosperity – *Household incomes*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Nuclear Sector, Chalk River Community
GBA+ Timing:	*Early* □□■ *Later* □ *Existing*

Strengthening Capital Markets Stability and Enforcement

The funding to the Canadian Securities Transition Office will support advice to the Government of Canada on strengthening capital markets systemic risk management and enhancing criminal enforcement. All Canadians benefit from this support.

Quality of Life Impacts

Prosperity – *Financial stability*
Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	
GBA+ Timing:	*Early* □■□ *Later* ■ *Existing*

CRA Administrative Funding for Certain Budget 2019 Measures

This measure provides funding to the Canada Revenue Agency (CRA) for previously announced measures including the administration of the Qualifying Canadian Journalism Organizations designation process, Canadian Journalism Labour Tax Credit, Canada Training Credit, and permitting new types of annuities under registered plans.

This funding is expected to benefit recipients of these credits and other CRA support who would be able to better access these tax measures and avail themselves of additional or enhanced services provided by the CRA. It will also provide new jobs within the federal public service. This measure is expected to be gender balanced. According to statistics from the Treasury Board Secretariat, approximately 55 per cent of employees in the core federal public service were women, and the public service is representative of the broader Canadian population.

Data Sources: *Treasury Board Secretariat: 2018-2019 Annual report to Parliament on Employment Equity in the Public Service of Canada.*

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Recipients of these credits
GBA+ Timing:	*Early* ■□□ *Later* □ *Existing*

Supporting the Ongoing Delivery of Benefits to Canadians

This measure will benefit all Canadians by ensuring in-person services continue to be safely delivered and benefits continue to be delivered on time. This measure indirectly benefits economically vulnerable Canadians who access programs delivered by Service Canada such as Employment Insurance, Old Age Security and the Canada Pension Plan. Investments that support in-person access in Service Canada Centres are likely to benefit Canadians living in rural areas, individuals that are not familiar with digital technologies, and Indigenous people, as data show they are more likely to access in-person services.

Data Sources: *Service Canada*

Quality of Life Impacts

Prosperity – *Protection from income shocks*
Good Governance – *Confidence in public institutions*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Rural Communities, Indigenous peoples
GBA+ Timing:	*Early* □□□ *Later* ■ *Existing*

Budget 2021 Annex Measures

Amendment of the Government Annuities Improvement Act

This initiative has no distributional impact, as it simply eliminates duplicative audit requirements for Government Annuities. Annuitants will continue to have access to the same information through the Public Accounts or the actuarial reports published by the Chief Actuary.

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics:

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

Extending Temporary Provisions Related to the Employment Insurance Emergency Response Benefit

Extending these provisions should benefit women and men relatively equally, as EI ERB claims were largely gender-balanced. Men and women accounted for 51.4 per cent and 48.5 per cent of all claims, respectively.

Individuals ages 25 and 54 accounted for the majority of claimants. About 3.7 million unique clients received this benefit between March and October 2020.

***Data Sources**: Employment and Social Development Canada.*

Quality of Life Impacts

Prosperity – *Protection from income shocks; Financial well-being*

Target Population: Former EI ERB claimants

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—●—○—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics: EI ERB claimants

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Labour Program Authority to use the Social Insurance Number

This legislative amendment directly benefits all workers in the federally regulated private sector who need to access program supports (e.g., occupational health and safety) through the Labour Program at Employment and Social Development Canada.

Providing the Labour Program with authority to use the Social Insurance Number is expected to benefit more men than women, as men make up 61 per cent of workers in the federally regulated private sector.

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population: Workers in the federally regulated private sector

Expected Benefits:

Gender: *Men* ○—●—○—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics:

GBA+ Timing: *Early* □□■ *Later* □ *Existing*

Social Security Tribunal Reforms

This initiative will have a direct positive impact on a gender-balanced population of individuals above the age of 50, and, in particular, for those with disabilities. Canada Pension Plan disability applicants represented 79 per cent of all appeals in the Income Security stream in 2018-19. The average age of Canada Pension Plan disability beneficiaries is around 55 years.

Data Sources: *Administrative data*

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population:	Persons with Disabilities, Individuals Above Age 50
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—○—● *Senior*
Additional Characteristics:	Persons with Disabilities

Modernizing the Fiscal Stabilization Program

All provincial governments are eligible for Fiscal Stabilization payments if eligibility criteria are met. The provincial governments have the flexibility to direct Fiscal Stabilization payments according to their priorities and the needs of their residents. The federal government does not place restrictions on, or require reporting on, provincial use of Fiscal Stabilization payments.

Quality of Life Impacts

Prosperity – *Provincial fiscal capacity; Protection from income shocks*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Provinces
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Additional Fiscal Equalization Offset Payments to Nova Scotia

This proposal will exclusively benefit residents of the province of Nova Scotia. The government of Nova Scotia will have the flexibility to direct the payments according to its priorities and the needs of its residents. The federal government does not place restrictions on, or require reporting on, provincial use of additional fiscal equalization offset payments.

Quality of Life Impacts

Prosperity – *Provincial fiscal capacity; Protection from income shocks*

Target Population:	All Canadians Living in Nova Scotia
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Financial Sector Legislative Measures

The measures seek to improve the governance and functioning of Canada's financial sector and institutions, changes which are expected to benefit all Canadians through a strong economy and strong public institutions such as strengthening the Canada Deposit Insurance Corporation, enhancing consumer protection, and ensuring the integrity of Canada's financial system through strong anti-money laundering and anti-terrorist financing policies. Combatting money laundering and terrorist financing will benefit people who are victimized by these and other related crimes, particularly vulnerable groups, such as women and children, who are more likely to be victimized.

Quality of Life Impacts

Prosperity – *Financial well-being*
Good Governance – *Confidence in public institutions*

Target Population: All Canadians
Expected Benefits:
Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics: Vulnerable Groups
GBA+ Timing: *Early* ■□□ *Later* ■ *Existing*

Financial Institution Restructuring Powers (FIRP) Extension

These are technical measures that would improve the resolution framework. These powers apply when CDIC takes control of a failing bank and are intended to mitigate contagion and loss of value – they do not affect deposits and payouts.
A sound resolution framework is a foundational element of financial stability in Canada, which will benefit all Canadians, even those who do not rely on the financial security of deposits at CDIC member institutions.

Quality of Life Impacts

Prosperity – *Protection from economic shocks*

Target Population: All Canadians
Expected Benefits:
Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics:
GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Strengthening the Canadian Deposit Insurance Framework

These are technical measures that would improve the deposit insurance framework which is a foundational element of financial stability in Canada. Improved financial stability will benefit all Canadians, even those who do not rely on the financial security of deposits at CDIC member institutions.

Canadians are a highly banked population. 99 per cent of Canadians have a bank account.

Quality of Life Impacts

Prosperity – *Protection from economic shocks*

Target Population: All Canadians
Expected Benefits:
Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics:
GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

2023 Sunset Date of Financial Institutions Statutes

This measure benefits all Canadians by ensuring federally regulated financial institutions, on which many Canadians rely, can continue to operate beyond 2023.

Quality of Life Impacts

Prosperity – *Financial stability; Firm growth; Protection from income shocks*
Good Governance – *Confidence in public/private institutions*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Revised Framework for Negotiated Contribution Pension Plans

The revised framework will benefit all active workers of federally regulated negotiated contribution pension plans, as well as retirees, and other beneficiaries such as surviving spouses, regardless of identity characteristics. Employees participating in federally regulated pension plans are broadly gender-balanced, with women accounting for approximately 45 per cent of active workers participating in federally regulated private pension plans.

Quality of Life Impacts

Prosperity – *Financial well-being*

Target Population:	Beneficiaries of Private Sector Federally Regulated Negotiated Contribution Pension Plans
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Beneficiaries of federally regulated pension plans
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Audit Authorities

This measure will benefit all Canadians by enhancing the ability of the Canada Revenue Agency to administer the Income Tax Act and other federal statutes.

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	
GBA+ Timing:	*Early* □■□ *Later* □ *Existing*

Optimizing Digital in a COVID-19 Environment

These measures encourage the take up of digital services and remove outdated requirements for paper interactions between the Canada Revenue Agency and taxpayers. The measures would allow the Canada Revenue Agency to more efficiently administer the tax system and result in faster, more convenient and accurate service, while also enhancing security.

While some Canadians may have limited access to electronic services, such as internet usage, certain aspects of the measures are intended to mitigate this negative impact.

Quality of Life Impacts

Society – *Time use*
Good Governance – *Confidence in public/private institutions*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics:

GBA+ Timing: *Early* □□■ *Later* □ *Existing*

Postdoctoral Fellowship Income

This measure directly benefits postdoctoral fellows who contribute to RRSPs. Men represent approximately 58 per cent of postdoctoral fellows and approximately 53 per cent of RRSP contributors.

Data Sources: *Internal administrative data; Canadian Association of Postdoctoral Scholars*

Quality of Life Impacts

Prosperity – *Financial well-being*

Target Population: Postdoctoral Fellows

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—○—●—○—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics:

GBA+ Timing: *Early* ■□□ *Later* □ *Existing*

Taxes Applicable to Registered Investments

The measure directly benefits mutual funds that are registered investments, indirectly providing tax relief to taxpayers who invest by means other than their registered retirement savings. It will likely have a small distributional effect in favour of higher-income investors.

Data Sources: *Canada Revenue Agency*

Quality of Life Impacts

Prosperity – *Household wealth*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*
Income Distribution: *Low* ○—○—○—●—○ *High Income*
Inter-generational: *Youth* ○—●—○ *Senior*
Additional Characteristics: High-income Individuals

GBA+ Timing: *Early* □□■ *Later* ■ *Existing*

Fixing Contribution Errors in Defined Contribution Pension Plans

This measure provides an efficient process for employers to correct errors in contributions to registered pension plans in prior taxation years. It has a marginal impact on the growth of individuals' retirement savings.

Data Sources: *Canada Revenue Agency*

Quality of Life Impacts

Prosperity – *Financial well-being*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics:

GBA+ Timing: *Early* □■□ *Later* ■ *Existing*

Input Tax Credit Information Requirements

This measure will amend certain information requirements for businesses that claim input tax credits to recover the Goods and Services Tax/Harmonized Sales Tax that they pay in respect of goods and services used as inputs in their commercial activities. It is expected that the amendments will not have measurable benefits or negative consequences for individuals in Canada on the basis of their gender, age, ethnicity, or other demographic characteristics.

Quality of Life Impacts

Prosperity – *Reducing compliance burden*

Target Population: All Canadians

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—○—●—○—○ *High Inco*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics:

GBA+ Timing: *Early* □■□ *Later* □ *Existing*

GST New Housing Rebate Conditions

This measure benefits individuals buying a new home that may require a co-signor or guarantor in order to secure the necessary financing. These individuals tend to be lower- or middle-income individuals with a particular income or credit profile.

Quality of Life Impacts

Prosperity – *Acceptable housing*

Target Population: New Homeowners

Expected Benefits:

Gender: *Men* ○—○—●—○—○ *Women*

Income Distribution: *Low* ○—●—○—○—○ *High Income*

Inter-generational: *Youth* ○—●—○ *Senior*

Additional Characteristics:

GBA+ Timing: *Early* □■□ *Later* ■ *Existing*

Extending Timelines for the Film or Video Production Tax Credits

This measure directly benefits shareholders of film and video production companies. While shareholders are predominantly male and higher income, no data is available on shareholders in this specific sector. This measure is also expected to indirectly benefit employees in the film or video sector. Statistics Canada data from 2020 for the information, culture and recreation sector indicates that roughly 44 per cent of employees are women.

Data Sources: *Statistics Canada*

Quality of Life Impacts

Society – *Sense of pride/belonging to Canada*

Target Population:	Companies Involved in Film and Video
Expected Benefits:	
Gender:	*Men* ○—●—○—○—○ *Women*
Income Distribution:	*Low* ○—○—○—●—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Shareholders and workers involved in film and video productions
GBA+ Timing:	*Early* ☐■☐ *Later* ☐ *Existing*

Clarifying the Provincial-Use Rebate under the Excise Tax Act

The measure is a technical amendment providing additional clarification on the provincial-use rebate for the excise tax on products such as gasoline and diesel. The measure is not expected to affect individuals differently on the basis of gender, income, age, or other demographic characteristics.

Quality of Life Impacts

Good Governance – *Confidence in public institutions*

Target Population:	All Canadians
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—○—●—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	
GBA+ Timing:	*Early* ■☐☐ *Later* ☐ *Existing*

Tax Treatment of Emergency Benefit Amounts

This measure is expected to disproportionately benefit lower-income individuals. Lower-income individuals are more likely to have experienced unusually high income due to emergency benefit receipt, and could thus benefit from a deduction available in the year of benefit receipt as opposed to the year of repayment.

Quality of Life Impacts

Prosperity – *Protection from income shocks*

Target Population:	Recipients of COVID-19 Benefits
Expected Benefits:	
Gender:	*Men* ○—○—●—○—○ *Women*
Income Distribution:	*Low* ○—●—○—○—○ *High Income*
Inter-generational:	*Youth* ○—●—○ *Senior*
Additional Characteristics:	Recipients of COVID-19 Benefits
GBA+ Timing:	*Early* ☐■☐ *Later* ☐ *Existing*

[1] A "–" indicates a nil amount, a small amount (less than $500,000) or an amount that cannot be determined in respect of a measure that is intended to protect the tax base.

[2] Totals may not add due to rounding.

[3] An important proportion of the overall projected revenue impact (75%) relates to the expectation that the measure will help in preventing the shifting of debt into Canada.

[4] The projected revenues from the GST/HST e-commerce proposals are set out in the 2020 Fall Economic Statement and have already been provisioned in the fiscal framework. This budget describes revisions to those proposals and the associated draft legislation in the attached Notice of Ways and Means Motion, following consultations with stakeholders.

[5] Details of these proposed tax measures are presented in Annex 7.

Personal Income Tax Measures

Disability Tax Credit

The Disability Tax Credit (DTC) is a non-refundable tax credit that is intended to recognize the impact of non-itemizable disability-related costs on the ability to pay tax. For 2021, the value of the credit is $1,299.

To be eligible for the DTC, an individual must have a certificate confirming that they have a severe and prolonged impairment in physical or mental functions. The effects of the impairment must be such that, even with appropriate devices, medication and therapy, the individual is blind or is:

- markedly restricted in their ability to perform a basic activity of daily living, or would be so restricted were it not for certain therapy (commonly referred to as "extensive life-sustaining therapy"); or
- significantly restricted in their ability to perform more than one basic activity of daily living where the cumulative effect of those restrictions is comparable to being markedly restricted in a basic activity of daily living.

For these purposes, the *Income Tax Act* recognizes the following basic activities of daily living: walking; feeding or dressing oneself; mental functions necessary for everyday life; speaking; hearing; eliminating bodily waste; and, for the purposes of the "significantly restricted" test noted above, includes seeing.

A valid DTC certificate is also a requirement for accessing certain other tax-related measures, including Registered Disability Savings Plans, the Child Disability Benefit and the disability supplement to the Canada Workers Benefit.

Mental Functions Necessary for Everyday Life

Under current rules, mental functions necessary for everyday life include:

- memory;
- problem-solving, goal-setting and judgement (taken together); and
- adaptive functioning.

To ensure that the eligibility criteria for the DTC better articulate the range of mental functions necessary for everyday life, Budget 2021 proposes that, for the purposes of the DTC, mental functions necessary for everyday life include:

- attention;
- concentration;
- memory;
- judgement;
- perception of reality;

- problem-solving;
- goal-setting;
- regulation of behaviour and emotions;
- verbal and non-verbal comprehension; and
- adaptive functioning.

Life-Sustaining Therapy

Under current rules, extensive life-sustaining therapy is therapy that:

- is essential to sustain a vital function;
- is required to be administered at least three times each week for a total duration averaging not less than 14 hours a week; and
- cannot reasonably be expected to be of significant benefit to an individual who does not have a severe and prolonged impairment in physical or mental functions.

These requirements are intended to allow individuals to qualify for the DTC where they are undergoing therapies that have a significant impact on everyday living, comparable to the impact of being directly restricted in basic activities of daily living.

Under the current rules, time spent on the following activities may be included in determining time spent receiving therapy:

- activities that require the individual to take time away from normal, everyday activities in order to receive the therapy;
- where the therapy requires a regular dosage of medication that needs to be adjusted on a daily basis, activities directly involved in determining the appropriate dosage; and
- in the case of a child who is unable to perform the activities related to the therapy as a result of their age, the time spent by the child's primary caregivers to perform and supervise these activities for the child.

Time spent on the following activities cannot be included in determining time spent receiving therapy: activities related to dietary or exercise restrictions or regimes (even if those restrictions or regimes are a factor in determining the daily dosage of medication), travel time, medical appointments, shopping for medication and recuperation after therapy.

These rules can result in important components of therapy being excluded from the calculation of therapy time. For example, the determination of the appropriate dosage of medicine for treating diabetes in individuals who are insulin-dependent may require precise recording of dietary intake. In a similar fashion, therapy that involves the consumption of medical food or medical formula (such as for treating certain inherited metabolic conditions) may require, as part of the treatment, the precise recording of the dietary intake of particular compounds.

To better recognize these aspects of therapy for the purposes of calculating time spent on therapy, while ensuring that everyday activities (such as normal management of a healthy diet) and discretionary activities are not taken into account for that purpose, Budget 2021 proposes to:

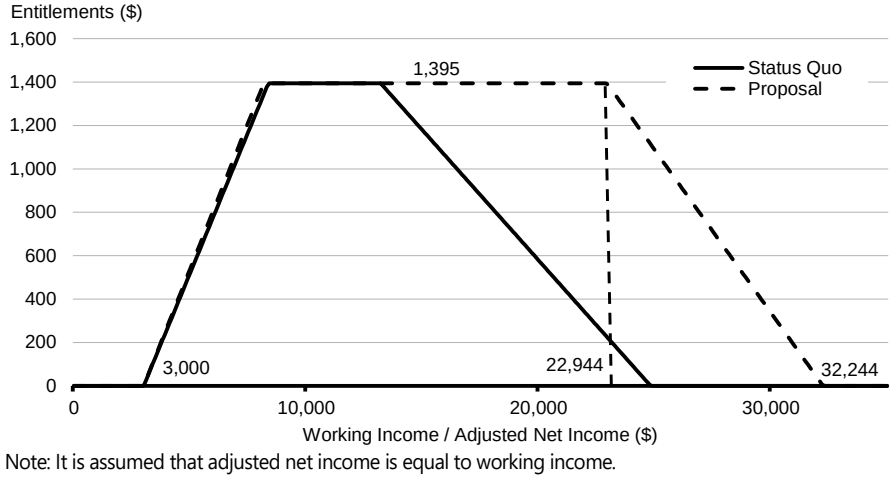
- allow reasonable time spent determining dietary intake and/or physical exertion to be considered part of the therapy, where this information is essential to, and is undertaken for the purpose of, determining the dosage of medication that must be adjusted on a daily basis;
- clarify that the exclusion of time for medical appointments does not apply to appointments to receive therapy or to determine the daily dosage of medication;
- provide that the exclusion of time for recuperation after therapy does not apply to medically required recuperation; and
- in the case of therapy that requires the daily consumption of a medical food or medical formula to limit intake of a particular compound to levels required for the proper development or functioning of the body, allow reasonable time spent on activities that are directly related to the determination of the amount of the compound that can be safely consumed to be considered part of the therapy.

Budget 2021 also proposes that, where an individual is incapable of performing their therapy on their own due to the impacts of their disability, the time reasonably required by another person to assist the individual in performing and supervising the therapy would be allowed to be counted.

Budget 2021 further proposes that the requirement that therapy be administered at least three times each week be reduced to two times each week. The requirement that therapy be of a duration averaging not less than 14 hours a week would remain unchanged.

These proposed changes would apply to the 2021 and subsequent taxation years, in respect of DTC certificates filed with the Minister of National Revenue on or after Royal Assent.

Canada Workers Benefit



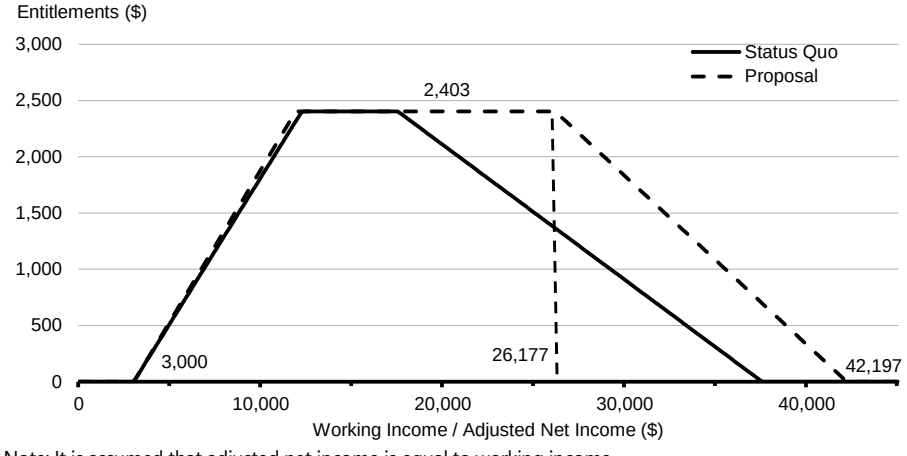
The Canada Workers Benefit (CWB) is a non-taxable refundable tax credit that supplements the earnings of low- and modest-income workers and improves their work incentives. Under current law, in 2021, the CWB grows by 26 cents for every dollar of "working income" (generally employment and business income) in excess of $3,000, up to a maximum entitlement of $1,395 for single individuals without dependants, or $2,403 for families (couples and single parents). The benefit is then reduced by 12 per cent of adjusted net income in excess of $13,194 for single individuals without dependants, or $17,522 for families.

Budget 2021 proposes to enhance the CWB starting in 2021. This enhancement would increase:

- the phase-in rate from 26 per cent to 27 per cent for single individuals without dependants as well as families;
- the phase-out thresholds from $13,194 to $22,944 for single individuals without dependants and from $17,522 to $26,177 for families; and
- the phase-out rate from 12 per cent to 15 per cent.

Chart 1 shows the proposed enhancement of the CWB in 2021 for a single individual without dependants and Chart 2 shows the same for families.

Chart 1
Enhanced Canada Workers Benefit—2021
(Single Individuals without Dependants)



Note: It is assumed that adjusted net income is equal to working income.

Chart 2

Enhanced Canada Workers Benefit—2021

(Single Parents and Couples)

Note: It is assumed that adjusted net income is equal to working income.

The CWB also features a supplement that is available to individuals who are eligible for the Disability Tax Credit. Corresponding changes would be made to the disability supplement's phase-in and reduction rates as well as the reduction threshold. Specifically, the supplement would phase out at a rate of 7.5 per cent for each individual in a couple where both individuals are in receipt of the supplement, and at a rate of 15 per cent otherwise. The reduction threshold would be increased to align with the point at which the base benefit is phased out completely (i.e., from $24,815 under current rules to $32,244, for single individuals without children, and from $37,548 under current rules to $42,197, for families).

To improve work incentives for secondary earners in a couple, Budget 2021 also proposes to introduce a "secondary earner exemption" to the CWB, a special rule for individuals with an eligible spouse. This would allow the spouse or common-law partner with the lower working income to exclude up to $14,000 of their working income in the computation of their adjusted net income, for the purpose of the CWB phase-out.

For example, in the absence of the secondary earner exemption, a dual-earner couple with adjusted family net income of $50,000 would receive no CWB in 2021. Suppose the secondary earner in this couple earned $20,000 of working income. With the introduction of the secondary earner exemption, the secondary earner's adjusted net income would be reduced by the lesser of their working income ($20,000) and $14,000. The resulting adjusted family net income of $36,000 would entitle the couple to a benefit of $930.

The government recognizes the efforts that provinces and territories have taken

to improve work incentives for low- and modest-income individuals and families. To ensure that benefits are harmonized and that the CWB builds on these efforts, the government will continue to allow for province- or territory-specific changes to the design of the benefit through reconfiguration agreements, guided by the following principles:

- they build on actions taken by the province or territory to improve work incentives;
- they are cost-neutral to the federal government;
- they provide for a minimum benefit for all recipients of the benefit; and
- they preserve harmonization of the benefit with existing federal programs.

These measures would apply to the 2021 and subsequent taxation years. Indexation of amounts relating to the CWB would continue to apply after the 2021 taxation year, including the secondary earner exemption.

Northern Residents Deductions

Individuals who live in prescribed northern areas of Canada for at least six consecutive months beginning or ending in a taxation year may claim the Northern Residents Deductions in computing their taxable income for that year. These include both a residency component and a travel component.

The travel component allows a taxpayer receiving employer-provided travel benefits to deduct, in respect of a trip taken by the taxpayer or a member of the taxpayer's household, up to the least of:

- the amount of the employer-provided travel benefit received in respect of the trip;
- the total travel expenses paid for the trip; and
- the cost of the lowest return airfare to the nearest city designated in the *Income Tax Regulations*.

A taxpayer may deduct amounts in respect of travel for any number of trips made to obtain medical services not available locally and up to two trips per person per year for non-medical personal reasons. Residents of the prescribed Northern Zone may claim 100 per cent of the amounts described above, while residents of the prescribed Intermediate Zone may claim 50 per cent.

Budget 2021 proposes to expand access to the travel component of the Northern Residents Deductions. Under the new approach, subject to the other restrictions noted above, a taxpayer would have the option to claim, in respect of each of the taxpayer and each "eligible family member", up to:

- the amount of employer-provided travel benefits the taxpayer received in respect of travel by that individual; or

- a $1,200 standard amount that may be allocated across eligible trips taken by that individual.

After application of the 50-per-cent factor for residents of the Intermediate Zone, the second limit effectively becomes a $600 standard amount.

For these purposes, an eligible family member would be an individual living in the taxpayer's household who is:

- the spouse or common-law partner of the taxpayer;
- a child of the taxpayer (including a child of the taxpayer's spouse or common-law partner) under the age of 18; or
- another individual who is related to the taxpayer and who is wholly dependent on the taxpayer (and/or on the taxpayer's spouse or common-law partner) for support, and who is, except in the case of a parent or grandparent of the taxpayer, so dependent by reason of mental or physical infirmity.

If any taxpayer claims a deduction in respect of an employer-provided benefit for travel by the taxpayer or an eligible family member of the taxpayer in a year, no other taxpayer would be allowed to also claim all or part of the $1,200 standard amount in respect of travel by that first mentioned taxpayer or that eligible family member in that year. If any taxpayer claims all or part of the $1,200 standard amount in respect of travel by an individual, the maximum total amount that could be claimed in respect of that individual by all taxpayers would be $1,200.

Budget 2021 proposes that across all taxpayers in a given individual's household, a maximum of two trips taken by that individual would be allowed to be claimed in total for non-medical personal travel in a year. A taxpayer would continue to be able to claim any number of trips for medical purposes.

In light of the proposed changes described above, claims for a given trip would be limited to the least of:

- the amount of the employer-provided travel benefit received in respect of the trip or the amount allocated to that particular trip by the taxpayer out of the $1,200 standard amount;
- the total travel expenses paid for that trip; and
- the cost of the lowest return airfare to the nearest designated city.

Example:

- Kim and her husband Ryan live in Whitehorse and have a 10-year-old child. Kim has higher income than her husband and claims all travel expenses for the household.
- Kim receives a travel benefit of $1,500 from her employer in respect of each of two non-medical trips she took herself. She also receives a benefit of $1,000 in respect of a non-medical trip that Ryan took. Kim, Ryan, and their child also take one non-medical trip together, but do not receive any travel benefit for this trip.
- Kim may claim up to two trips for non-medical reasons. She decides to claim the two trips for which she received a travel benefit, as the amount of her travel benefit is greater than the $1,200 standard amount. Kim is eligible to claim up to the amount of her travel benefit of $1,500, subject to a limit of her actual expenses and the lowest return airfare, in respect of each trip.
- Kim decides not to claim the amount of the travel benefit she received for Ryan's travel, as the amount she received is less than the $1,200 standard amount. Instead, she allocates the $1,200 standard amount across the two trips that Ryan took, and is eligible to deduct the amount allocated to each trip, subject to the actual expenses and the lowest return airfare for each trip.
- Kim allocates the full $1,200 standard amount to the one trip her child took, and is eligible to deduct up to $1,200 for her child's travel, subject to the actual expenses and the lowest return airfare in respect of that trip.

This measure would apply to the 2021 and subsequent taxation years.

Strategic Environmental Assessment Statement

The proposal would effectively expand access to a rebate on the cost of travel, including carbon-intensive air travel. This may encourage additional travel among northern residents and result in associated greenhouse gas emissions. However, the rules of the deduction allow only two trips to be claimed in respect of any individual for non-medical personal reasons, and further limit the amount that may be claimed in respect of any trip. These rules constrain the circumstances in which an individual may receive a rebate in respect of additional travel taken in response to the proposal. Accordingly, any negative environmental impacts are expected to be negligible.

Postdoctoral Fellowship Income

For income tax purposes, postdoctoral fellows are generally not considered to be students. Thus, postdoctoral fellowship income generally does not qualify for the scholarship exemption from income tax. Although fully included in taxable income, and similar in nature to employment income, postdoctoral fellowship income does not currently qualify as "earned income" for the purpose of determining an individual's contribution limit for a registered retirement savings plan (RRSP).

Budget 2021 proposes to include postdoctoral fellowship income in "earned income" for RRSP purposes. This would provide postdoctoral fellows with additional RRSP room in order to make deductible RRSP contributions.

This measure would apply in respect of postdoctoral fellowship income received in the 2021 and subsequent taxation years. This measure would also apply in respect of postdoctoral fellowship income received in the 2011 to 2020 taxation years, where the taxpayer submits a request in writing to the Canada Revenue Agency for an adjustment to their RRSP room for the relevant years.

Tax Treatment of COVID-19 Benefit Amounts

A range of taxable benefits have been made available to qualified individuals in response to the COVID-19 pandemic. Generally, if a benefit amount is repaid (for example, where an individual determines that they were not eligible for the benefit in question), this amount can only be deducted for income tax purposes in the year the repayment takes place. Therefore, if the repayment does not occur in the same year as the year of receipt of the benefit, an individual may owe tax in respect of the benefit for the year of receipt, while obtaining a deduction for the repayment amount in a future tax year.

Budget 2021 proposes to amend the *Income Tax Act* to allow individuals the option to claim a deduction in respect of the repayment of a COVID-19 benefit amount in computing their income for the year in which the benefit amount was received rather than the year in which the repayment was made. This option would be available for benefit amounts repaid at any time before 2023.

For these purposes, COVID-19 benefits would include:

- Canada Emergency Response Benefits/Employment Insurance Emergency Response Benefits;
- Canada Emergency Student Benefits;
- Canada Recovery Benefits;
- Canada Recovery Sickness Benefits; and
- Canada Recovery Caregiving Benefits.

Individuals may only deduct benefit amounts once they have been repaid. An individual who makes a repayment, but who has already filed their income tax return for the year in which the benefit was received, would be able to request an adjustment to the return for that year.

Budget 2021 also proposes to amend the *Income Tax Act* to ensure that the COVID-19 benefit amounts noted above, and similar provincial or territorial benefit amounts, are included in the taxable income of those individuals who reside in Canada but are considered non-resident persons for income tax purposes. As a result, COVID-19 benefits received by these non-resident persons would be taxable in Canada in a manner generally similar to employment and business income earned in Canada.

Fixing Contribution Errors in Defined Contribution Pension Plans

The rules in the *Income Tax Act* do not currently permit pension plan administrators to accept retroactive contributions to employee accounts under a defined contribution pension plan in order to correct under-contribution errors in respect of prior years. Although in some circumstances over-contribution errors may be corrected by refunding the excess to the contributor, these rules have been found to be cumbersome.

Budget 2021 proposes to provide more flexibility to plan administrators of defined contribution pension plans to correct for both under-contributions and over-contributions. The proposals would permit certain types of errors to be corrected via additional contributions to an employee's account under a defined contribution pension plan to compensate for an under-contribution error made in any of the preceding five years, subject to a dollar limit. The proposals would also permit plan administrators to correct for pension over-contribution errors in

respect of an employee for any of the five years prior to the year in which the excess amount is refunded to the employee or employer, as the case may be, who made the contribution.

To simplify reporting requirements, the proposed rules would require the plan administrator to file a prescribed form in respect of each affected employee, rather than to amend T4 slips for prior years. Additional contributions to correct for under-contributions would reduce the employee's registered retirement savings plan (RRSP) contribution room for the taxation year following the year in which the retroactive contribution is made. To the extent this results in negative RRSP room, it would only impact the employee's contributions in future years. Refunds of over-contributions would generally restore the employee's RRSP contribution room for the taxation year in which the refund is made.

This measure would apply in respect of additional contributions made, and amounts of over-contributions refunded, in the 2021 and subsequent taxation years.

Taxes Applicable to Registered Investments

A trust or corporation that satisfies certain requirements can apply to the Canada Revenue Agency to be a registered investment for registered retirement savings plans (RRSPs), registered retirement income funds or deferred profit sharing plans. The units of a trust, or shares of a corporation, that is a registered investment are qualified investments for the types of plans for which it is registered.

Certain categories of registered investments (e.g., mutual fund trusts and mutual fund corporations) must have a minimum number of investors. A trust or corporation that is a registered investment and is not sufficiently widely held (e.g., a trust that does not have the 150 unit holders required to qualify as a mutual fund trust) is limited to holding investments that would be qualified investments for the types of registered plans for which it is registered. For example, if a trust or corporation is a registered investment for RRSPs, it can hold only investments that are qualified investments for an RRSP.

If a registered investment that is subject to this investment restriction holds property that is not a qualified investment for the type of registered plans for which it is registered, the registered investment is liable to pay a tax under Part X.2 of the *Income Tax Act*. This tax is equal to one per cent of the property's fair market value, at the time it was acquired, for each month that the registered investment holds the property. However, in some cases the effect of the tax can be disproportionate because the tax applies without regard to the proportion of the shares or units of the registered investment that are held by investors that are themselves subject to the qualified investment rules.

Budget 2021 proposes that the tax imposed under Part X.2 of the *Income Tax Act* be pro-rated based on the proportion of shares or units of the registered investment that are held by investors that are themselves subject to the qualified investment rules. For example, if a registered investment is registered for RRSPs and 20 per cent of its units are held by RRSPs while 80 per cent of its units are held by individuals via their non-registered accounts, the monthly tax imposed under Part X.2 would now be 20 per cent of 1 per cent of the fair market value of a non-qualified investment at the time it was acquired.

This measure would apply to taxes imposed under Part X.2 of the *Income Tax Act* in respect of months after 2020. However, the measure would also apply to taxpayers whose tax liability under Part X.2 in respect of months before 2021 has not been finally determined by the Canada Revenue Agency as of Budget Day.

Registration and Revocation Rules Applicable to Charities

In order to further strengthen Canada's Anti-Money Laundering and Anti-Terrorist Financing Regime, Budget 2021 proposes a number of amendments to the *Income Tax Act* in order to limit opportunities for the abuse of charitable registration status for terrorist financing purposes. Budget 2021 also proposes changes to the rules applicable to all registered charities in respect of certain false statements.

Listed Terrorist Entities

Currently, under the *Income Tax Act,* the registration of a charity or other qualified donee may be revoked for non-compliance with the rules, but the Canada Revenue Agency must follow a series of steps in order to do so. In certain cases, a registered charity or other qualified donee may be listed as a terrorist entity under the *Criminal Code* by the Minister of Public Safety and Emergency Preparedness causing it to no longer qualify for registration. There is an administrative process that must be followed for an entity to be listed as a terrorist entity, with appeal rights to the courts.

Budget 2021 proposes to allow the Minister of National Revenue to immediately revoke the registration of a charity or other qualified donee upon its listing as a terrorist entity under the *Criminal Code*.

Ineligible Individuals

Where a charity or Canadian amateur athletic association has an "ineligible individual" as a director, trustee, officer or like official, or where such an individual controls or manages the charity or association, the *Income Tax Act* provides the Minister of National Revenue with the discretion to refuse or revoke its registration, or to suspend its authority to issue official donation receipts. Under current rules, an ineligible individual includes, in general terms:

- an individual who has been convicted of a criminal offence involving financial dishonesty; and
- an individual who – during a period in which a registered charity engaged in conduct that constituted a serious breach of the requirements for its registration and for which its registration was revoked within the previous five years – was a director, trustee, officer or like official of the charity, or controlled or managed the charity.

Budget 2021 proposes to amend the "ineligible individual" definition so that it includes an individual who:

- is, or is a member of, a listed terrorist entity; or
- in respect of a listed terrorist entity, was, during a period in which the entity supported or engaged in terrorist activities,
  - a director, trustee, officer or like official of the entity; or
  - an individual that controlled or managed, directly or indirectly, in any manner whatever, the entity.

The existing rule that requires the Canada Revenue Agency to only consider circumstances occurring within the preceding five-year period would not apply in relation to this measure.

False Statements

The *Income Tax Act* currently allows for the revocation of the registration of a charity where a false statement amounting to culpable conduct is made for the purpose of obtaining registration.

Budget 2021 proposes to allow the Minister of National Revenue to suspend the authority of a registered charity to issue official donation receipts for one year or to revoke its registration where a false statement amounting to culpable conduct was made for the purpose of maintaining its registration.

All of these amendments would apply on Royal Assent.

Electronic Filing and Certification of Tax and Information Returns

To improve the administration of, and compliance with, the tax system, Budget 2021 proposes various amendments to the *Income Tax Act*, *Income Tax Regulations*, *Excise Tax Act*, *Excise Act, 2001*, *Tax Rebate Discounting Act*, *Air Travellers Security Charge Act*, Part 1 of the *Greenhouse Gas Pollution Pricing Act*, and *Electronic Filing and Provision of Information (GST/HST) Regulations*. These proposed measures would improve the Canada Revenue Agency's (CRA) ability to operate digitally, resulting in faster, more convenient and accurate service, while also enhancing security.

Default Method of Correspondence

Notices of Assessment

Budget 2021 proposes to amend the *Income Tax Act* to provide the CRA with the ability to send certain notices of assessment electronically without the taxpayer having to authorize the CRA to do so. This proposal would apply in respect of individuals who file their income tax return electronically and those who employ the services of a tax preparer that files their income tax return electronically. Taxpayers who continue to file their income tax returns with the CRA in paper format would continue to receive a paper notice of assessment from the CRA.

This measure would come into force on Royal Assent of the enacting legislation.

Correspondence with Businesses

Budget 2021 proposes to change the default method of correspondence for businesses that use the CRA's My Business Account portal to electronic only. However, businesses could still choose to also receive paper correspondence. This measure would apply in respect of the *Income Tax Act, Excise Tax Act, Excise Act, 2001, Air Travellers Security Charge Act* and Part 1 of the *Greenhouse Gas Pollution Pricing Act*.

This measure would come into force on Royal Assent of the enacting legislation.

Information Returns

Budget 2021 proposes to amend the *Income Tax Regulations* to allow issuers of T4A (Statement of Pension, Retirement, Annuity and Other Income) and T5 (Statement of Investment Income) information returns to provide them electronically without having to also issue a paper copy and without the taxpayer having to authorize the issuer to do so.

This measure would apply in respect of information returns sent after 2021.

Electronic Filing Thresholds

Tax Preparers

Budget 2021 proposes to amend the rule in the *Income Tax Act* that requires, subject to the exception below, professional preparers of income tax returns to file electronically where they prepare more than 10 income tax returns of corporations or 10 income tax returns of individuals (other than trusts) to apply instead where they file more than 5 of either type of return for a calendar year. Furthermore, the exception for trusts would be removed.

Budget 2021 also proposes to amend the exception in the *Income Tax Act* whereby a tax preparer is allowed to a file a maximum of 10 paper income tax returns of corporations and 10 paper income tax returns of individuals per calendar year to instead allow only a maximum of 5 paper returns of each type per calendar year.

These measures would apply in respect of calendar years after 2021.

Filer of Information Returns

Budget 2021 proposes that the threshold for mandatory electronic filing of income tax information returns for a calendar year under the *Income Tax Act* be lowered from 50 to 5 returns, in respect of a particular type of information return. As such, persons or partnerships that file more than 5 information returns of a particular type for a calendar year would be required to file them electronically.

This measure would apply in respect of calendar years after 2021.

Corporations and GST/HST Registrants

Budget 2021 proposes to eliminate the mandatory electronic filing thresholds for returns of corporations under the *Income Tax Act*, and of Goods and Services Tax/Harmonized Sales Tax (GST/HST) registrants (other than for charities or Selected Listed Financial Institutions) under the *Excise Tax Act*. As such, returns of most corporations and GST/HST registrants under these acts would be required to be filed electronically.

This measure would apply in respect of taxation years that begin after 2021 for the *Income Tax Act* amendments and in respect of reporting periods that begin after 2021 for the *Excise Tax Act*.

Electronic Payments

Budget 2021 proposes to clarify that payments required to be made at a financial institution under the *Income Tax Act*, the GST/HST portion of the *Excise Tax Act*, the *Excise Act, 2001*, the *Air Travellers Security Charge Act* and Part 1 of the

Greenhouse Gas Pollution Pricing Act, include online payments made through such an institution. Budget 2021 also proposes that electronic payments be required for remittances over $10,000 under the *Income Tax Act* and that the threshold for mandatory remittances to be made at a financial institution under the GST/HST portion of the *Excise Tax Act, the Excise Act,* 2001, the *Air Travellers Security Charge Act* and Part 1 of the *Greenhouse Gas Pollution Pricing Act* be lowered from $50,000 to $10,000.

This measure would apply to payments made on or after January 1, 2022.

Handwritten Signatures

Budget 2021 proposes to eliminate the requirement that signatures be in writing on certain prescribed forms, as follows:

- Forms prescribed under the *Income Tax Act*:
  - T183, Information Return for Electronic Filing of an Individual's Income Tax and Benefit Return;
  - T183CORP, Information Return for Corporations Filing Electronically; and
  - T2200, Declaration of Conditions of Employment.
- Forms prescribed under the *Tax Rebate Discounting Act*:
  - RC71, Statement of Discounting Transaction; and
  - RC72, Notice of the Actual Amount of the Refund of Tax.

This measure would come into force on Royal Assent of the enacting legislation.

Business Income Tax Measures

Emergency Business Supports

The government has introduced a number of support measures to help businesses and other organizations affected by the COVID-19 pandemic, including the Canada Emergency Wage Subsidy, the Canada Emergency Rent Subsidy and the Lockdown Support.

Program details in respect of these three measures have been announced through June 5, 2021 and the application of these measures cannot be extended by regulation beyond June 2021.

Budget 2021 proposes to extend the Canada Emergency Wage Subsidy, the Canada Emergency Rent Subsidy and the Lockdown Support until September 2021. The subsidy rates would gradually decline over the July-to-September period. The proposed details of these programs from June 6, 2021 to September 25, 2021 are described below.

Budget 2021 also proposes to provide the government with the legislative authority to add additional qualifying periods for the wage subsidy, the rent subsidy and the Lockdown Support until November 20, 2021, should the economic and public health situation warrant it.

Canada Emergency Wage Subsidy

The government introduced the Canada Emergency Wage Subsidy to prevent further job losses and encourage employers to quickly rehire workers previously laid off as a result of COVID-19. The measure provides eligible employers that have experienced a decline in revenues with a wage subsidy for eligible remuneration paid to their employees.

Support for Active Employees

The wage subsidy for active employees includes a base subsidy for employers that have experienced a decline in revenues as well as a top-up wage subsidy that is available to employers that have experienced a decline in revenues of at least 50 per cent. The maximum combined base subsidy and top-up wage subsidy rate is set at 75 per cent through the qualifying period ending on June 5, 2021.

Budget 2021 proposes the wage subsidy rate structures set out in Table 2 for June 6, 2021 to September 25, 2021. As illustrated in the table, the subsidy rates would be gradually phased out starting on July 4, 2021. Furthermore, only employers with a decline in revenues of more than 10 per cent would be eligible for the wage subsidy as of that date.

Table 2

Canada Emergency Wage Subsidy Base and Top-up Rate Structure, Periods 17 to 20

(June 6, 2021 to September 25, 2021)

	Period 17 June 6 – July 3	**Period 18 July 4 – July 31**	**Period 19 August 1 – August 28**	**Period 20 August 29 – September 25**
Maximum weekly benefit per employee*	$847	$677	$452	$226
Revenue decline:				
70% and over	75% (i.e., Base: 40% + Top-up: 35%)	60% (i.e., Base: 35% + Top-up: 25%)	40% (i.e., Base: 25% + Top-up: 15%)	20% (i.e., Base: 10% + Top-up: 10%)
50-69%	Base: 40% + Top-up: (revenue decline - 50%) x 1.75 (e.g., 40% + (60% revenue decline - 50%) x 1.75 = 57.5% subsidy rate)	Base: 35% + Top-up: (revenue decline - 50%) x 1.25 (e.g., 35% + (60% revenue decline - 50%) x 1.25 = 47.5% subsidy rate)	Base: 25% + Top-up: (revenue decline - 50%) x 0.75 (e.g., 25% + (60% revenue decline - 50%) x 0.75 = 32.5% subsidy rate)	Base: 10% + Top-up: (revenue decline - 50%) x 0.5 (e.g., 10% + (60% revenue decline - 50%) x 0.5 = 15% subsidy rate)
>10-50%	Base: revenue decline x 0.8 (e.g., 30% revenue decline x 0.8 = 24% subsidy rate)	Base: (revenue decline - 10%) x 0.875 (e.g., (30% revenue decline - 10%) x 0.875 = 17.5% subsidy rate)	Base: (revenue decline - 10%) x 0.625 (e.g., (30% revenue decline - 10%) x 0.625 = 12.5% subsidy rate)	Base: (revenue decline - 10%) x 0.25 (e.g., (30% revenue decline - 10%) x 0.25 = 5% subsidy rate)
0-10%	Base: revenue decline x 0.8 (e.g., 5% revenue decline x 0.8 = 4% subsidy rate)	0%	0%	0%

* The maximum weekly benefit per employee is equal to the maximum combined base subsidy and top-up wage subsidy for the qualifying period applied to the amount of eligible remuneration paid to the employee for the qualifying period, on remuneration of up to $1,129 per week.

Requirement to Repay Wage Subsidy

Budget 2021 proposes to require a publicly listed corporation to repay wage subsidy amounts received for a qualifying period that begins after June 5, 2021 in the event that its aggregate compensation for specified executives during the 2021 calendar year exceeds its aggregate compensation for specified executives during the 2019 calendar year.

For the purpose of this proposed rule, a publicly listed corporation's specified executives will be its Named Executive Officers whose compensation is required to be disclosed under Canadian securities laws in its annual information circular provided to shareholders, or similar executives in the case of a corporation listed in another jurisdiction. This generally includes its chief executive officer, chief financial officer, and three other most highly compensated executives. A corporation's executive compensation for a calendar year will be calculated by prorating the aggregate compensation of its specified executives for each of its taxation years that overlap with the calendar year.

The amount of the wage subsidy required to be repaid would be equal to the lesser of:

- the total of all wage subsidy amounts received in respect of active employees for qualifying periods that begin after June 5, 2021; and
- the amount by which the corporation's aggregate specified executives' compensation for 2021 exceeds its aggregate specified executives' compensation for 2019.

This requirement to repay would be applied at the group level and would apply to wage subsidy amounts paid to any entity in the group.

Support for Furloughed Employees

A separate wage subsidy rate structure applies for furloughed employees. The wage subsidy for furloughed employees is aligned with the benefits provided through Employment Insurance (EI) through June 5, 2021 to ensure equitable treatment of such employees between the two programs.

To ensure that the wage subsidy for furloughed employees remains aligned with benefits available under EI, Budget 2021 proposes that the weekly wage subsidy for a furloughed employee from June 6, 2021 to August 28, 2021 be the lesser of:

- the amount of eligible remuneration paid in respect of the week; and
- the greater of:
  - $500; and
  - 55 per cent of pre-crisis remuneration for the employee, up to a maximum subsidy amount of $595.

The wage subsidy for furloughed employees would continue to be available to eligible employers that qualify for the wage subsidy for active employees for the relevant period until August 28, 2021. Employers will also continue to be entitled to claim under the wage subsidy their portion of contributions in respect of the Canada Pension Plan, EI, the Quebec Pension Plan and the Quebec Parental Insurance Plan in respect of furloughed employees.

Reference Periods

For the purposes of the wage subsidy, an employer's decline in revenues is generally determined by comparing the employer's revenues in a current calendar month with its revenues in the same calendar month, pre-pandemic. An employer may also elect to use an alternative approach, which compares the employer's monthly revenues relative to the average of its January 2020 and February 2020 revenues. A deeming rule provides that an employer's decline in revenues for any particular qualifying period is the greater of its decline in revenues for the particular qualifying period and the immediately preceding qualifying period.

Budget 2021 proposes the reference periods set out in Table 3 for determining an eligible employer's decline in revenues for the qualifying periods from June 6, 2021 to September 25, 2021.

Table 3
Canada Emergency Wage Subsidy Reference Periods, Periods 17 to 20
(June 6, 2021 to September 25, 2021)

Timing	**Period 17 June 6 – July 3**	**Period 18 July 4 – July 31**	**Period 19 August 1 – August 28**	**Period 20 August 29 – September 25**
General approach	June 2021 over June 2019 **or** May 2021 over May 2019	July 2021 over July 2019 **or** June 2021 over June 2019	August 2021 over August 2019 **or** July 2021 over July 2019	September 2021 over September 2019 **or** August 2021 over August 2019
Alternative approach	June 2021 **or** May 2021 over average of January and February 2020	July 2021 **or** June 2021 over average of January and February 2020	August 2021 **or** July 2021 over average of January and February 2020	September 2021 **or** August 2021 over average of January and February 2020

Employers that had chosen to use the general approach for prior periods would be required to continue to use that approach. Similarly, employers that had chosen to use the alternative approach would be required to continue to use the alternative approach.

Baseline Remuneration

Under the general rules, an eligible employer's entitlement to the wage subsidy for a furloughed employee, as well as an active employee in certain circumstances, is determined through a calculation that takes into account both the employee's current and baseline (pre-crisis) remuneration.

Baseline remuneration means the average weekly eligible remuneration paid to an eligible employee by an eligible employer during the period beginning January 1, 2020 and ending March 15, 2020. Any period of seven or more consecutive days for which the employee was not remunerated is excluded from the calculation. However, the eligible employer may elect, for each qualifying period in respect of an employee, an alternative baseline period for calculating the average weekly eligible remuneration.

To ensure that the alternative baseline remuneration periods for a particular qualifying period continue to generally reflect the corresponding calendar months covered by the qualifying period, Budget 2021 proposes to allow an eligible employer to elect to use the following alternative baseline remuneration periods:

- March 1 to June 30, 2019 or July 1 to December 31, 2019, for the qualifying period between June 6, 2021 and July 3, 2021; and
- July 1 to December 31, 2019, for qualifying periods beginning after July 3, 2021.

Canada Emergency Rent Subsidy

The government introduced the Canada Emergency Rent Subsidy to provide direct relief to organizations that continue to be economically impacted by the COVID-19 pandemic. Under the rent subsidy, qualifying organizations that have experienced a decline in revenues are eligible for a subsidy on qualifying expenses.

Rate Structure

The maximum base rent subsidy rate is set at 65 per cent through the qualifying period ending on June 5, 2021.

Budget 2021 proposes the base rent subsidy rate structures set out in Table 4 for June 6, 2021 to September 25, 2021. As illustrated in the table, the subsidy rates would be gradually phased out starting on July 4, 2021. Furthermore, only organizations with a decline in revenues of more than 10 per cent would be eligible for the base rent subsidy and, as discussed below, the Lockdown Support.

Table 4

Canada Emergency Rent Subsidy Base Rate Structure*, Periods 17 to 20**

(June 6, 2021 to September 25, 2021)

	Period 17 June 6 – July 3	**Period 18 July 4 – July 31**	**Period 19 August 1 – August 28**	**Period 20 August 29 – September 25**
Revenue decline:				
70% and over	65%	60%	40%	20%
50-69%	40% + (revenue decline - 50%) x 1.25 (e.g., 40% + (60% revenue decline - 50%) x 1.25 = 52.5% subsidy rate)	35% + (revenue decline - 50%) x 1.25 (e.g., 35% + (60% revenue decline - 50%) x 1.25 = 47.5% subsidy rate)	25% + (revenue decline - 50%) x 0.75 (e.g., 25% + (60% revenue decline - 50%) x 0.75 = 32.5% subsidy rate)	10% + (revenue decline - 50%) x 0.5 (e.g., 10% + (60% revenue decline - 50%) x 0.5 = 15% subsidy rate)
>10-50%	Revenue decline x 0.8 (e.g., 30% revenue decline x 0.8 = 24% subsidy rate)	(Revenue decline - 10%) x 0.875 (e.g., (30% revenue decline - 10%) x 0.875 = 17.5% subsidy rate)	(Revenue decline - 10%) x 0.625 (e.g., (30% revenue decline - 10%) x 0.625 = 12.5% subsidy rate)	(Revenue decline - 10%) x 0.25 (e.g., (30% revenue decline - 10%) x 0.25 = 5% subsidy rate)
0-10%	Revenue decline x 0.8 (e.g., 5% revenue decline x 0.8 = 4% subsidy rate)	0%	0%	0%

* Expenses for each qualifying period are capped at $75,000 per location and are subject to an overall cap of $300,000 that is shared among affiliated entities.

** Period 17 of the Canada Emergency Wage Subsidy would be the tenth period of the Canada Emergency Rent Subsidy. Period identifiers have been aligned for ease of reference.

Revenue-Decline Calculation

Both the rent subsidy and the wage subsidy use the same calculation to determine an organization's revenue decline. As a result, the same reference periods are used to calculate an organization's decline in revenues for the wage subsidy and the rent subsidy. Likewise, if an organization elects to use an alternative method for computing its revenue decline under the wage subsidy, it must use that alternative method for the rent subsidy.

Purchase of Business Assets

In order to qualify for the wage subsidy, an applicant must have had a payroll account with the Canada Revenue Agency (or engaged a qualifying payroll

service provider). For the purpose of the rent subsidy, an applicant is required to have a business number with the CRA.

If certain conditions are met, the wage subsidy rules provide that an eligible entity that purchases the assets of a seller will be deemed to meet the payroll account requirement if the seller met the requirement.

Budget 2021 proposes to introduce a similar deeming rule that would apply in the context of the rent subsidy, where the seller met the business number requirement. This measure would apply as of the start of the rent subsidy.

Lockdown Support

For locations that must cease operations or significantly limit their activities under a public health order issued under the laws of Canada, a province or territory, the government introduced the Lockdown Support through the Canada Emergency Rent Subsidy program to provide additional help. In order to qualify for the Lockdown Support, an applicant must qualify for the base rent subsidy.

Budget 2021 proposes to extend, for the qualifying periods from June 6, 2021 to September 25, 2021, the current 25-per-cent rate for the Lockdown Support.

Canada Recovery Hiring Program

Budget 2021 proposes to introduce the new Canada Recovery Hiring Program to provide eligible employers with a subsidy of up to 50 per cent on the incremental remuneration paid to eligible employees between June 6, 2021 and November 20, 2021.

An eligible employer would be permitted to claim either the hiring subsidy or the Canada Emergency Wage Subsidy for a particular qualifying period, but not both.

The proposed details of the hiring subsidy are described below.

Eligible Employers

Employers eligible for the Canada Emergency Wage Subsidy would generally be eligible for the hiring subsidy. However, a for-profit corporation would be eligible for the hiring subsidy only if it is a Canadian-controlled private corporation (including a cooperative corporation that is eligible for the small business deduction). Other eligible employers would include individuals, non-profit organizations, registered charities, and certain partnerships.

Corporations and trusts that are ineligible for the Canada Emergency Wage Subsidy because they are public institutions would not be eligible for the hiring subsidy. Public institutions generally include municipalities and local governments, Crown corporations, wholly owned municipal corporations, public universities, colleges, schools and hospitals.

Eligible employers (or their payroll service provider) would be required to have had a payroll account open with the Canada Revenue Agency on March 15, 2020.

Eligible Employees

An eligible employee must be employed primarily in Canada by an eligible employer throughout a qualifying period (or the portion of the qualifying period throughout which the individual was employed by the eligible employer).

The hiring subsidy would not be available for furloughed employees. A furloughed employee is an employee who is on leave with pay, meaning they are remunerated by the eligible employer but do not perform any work for the employer. An employee would not be considered to be on leave with pay for the purposes of the hiring subsidy if they are on a period of paid absence, such as vacation leave, sick leave, or a sabbatical.

Eligible Remuneration and Incremental Remuneration

The types of remuneration eligible for the Canada Emergency Wage Subsidy would also be eligible for the hiring subsidy. Eligible remuneration generally includes salary, wages, and other remuneration for which employers are required to withhold or deduct amounts on account of the employee's income tax obligations. However, it does not include severance pay, or items such as stock option benefits or the personal use of a corporate vehicle. The amount of remuneration for employees would be based solely on remuneration paid in respect of the qualifying period.

Incremental remuneration for a qualifying period means the difference between an employer's total eligible remuneration paid to eligible employees for the qualifying period and its total eligible remuneration paid to eligible employees for the baseline period. In both the qualifying period and the baseline period, eligible remuneration for each eligible employee would be subject to a maximum of $1,129 per week.

As is currently the case for the Canada Emergency Wage Subsidy, the eligible remuneration for a non-arm's length employee for a week could not exceed their baseline remuneration determined for that week. More information on baseline remuneration is available in the supplementary information on Emergency Business Supports.

The applicable dates for the calculation of the incremental remuneration are shown in Table 5.

Table 5

Canada Recovery Hiring Program Dates Used to Calculate Incremental Remuneration, Periods 17* to 22

(June 6, 2021 to November 20, 2021)

Qualifying period	Period 17	Period 18	Period 19	Period 20	Period 21	Period 22
Qualifying period dates	June 6 to July 3, 2021	July 4 to July 31, 2021	August 1 to August 28, 2021	August 29 to September 25, 2021	September 26 to October 23, 2021	October 24 to November 20, 2021
Baseline period	March 14 to April 10, 2021					
*Period 17 of the Canada Emergency Wage Subsidy would be the first period of the Canada Recovery Hiring Program. Period identifiers have been aligned for ease of reference.						

Subsidy Amount

Provided that an eligible employer's decline in revenues exceeds the revenue-decline threshold for a qualifying period (see *Revenue-Decline Threshold* below), its subsidy in that qualifying period would be equal to its incremental remuneration multiplied by the applicable hiring subsidy rate for that qualifying period. These hiring subsidy rates are shown in Table 6.

Table 6

Canada Recovery Hiring Program Rates, Periods 17* to 22

(June 6, 2021 to November 20, 2021)

	Period 17 June 6 – July 3	Period 18 July 4 – July 31	Period 19 August 1 – August 28	Period 20 August 29 – September 25	Period 21 September 26 – October 23	Period 22 October 24 – November 20
Hiring subsidy rate	50%	50%	50%	40%	30%	20%
*Period 17 of the Canada Emergency Wage Subsidy would be the first period of the Canada Recovery Hiring Program. Period identifiers have been aligned for ease of reference.						

Revenue-Decline Threshold

To qualify for a hiring subsidy in a qualifying period, an eligible employer would have to have experienced a decline in revenues sufficient to qualify for the Canada Emergency Wage Subsidy in that qualifying period. For qualifying periods where the Canada Emergency Wage Subsidy is no longer in effect, an eligible employer would have to have experienced a decline in revenues of more than 10 per cent. As such, an eligible employer's decline in revenues would have to be more than:

- 0 per cent, for the qualifying period between June 6, 2021 and July 3, 2021; and

- 10 per cent, for qualifying periods between July 4, 2021 and November 20, 2021.

An employer's decline in revenues would be determined in the same manner as under the Canada Emergency Wage Subsidy. This method compares the employer's revenues in a current calendar month with its revenues in the same calendar month, pre-pandemic. An employer can also elect to use an alternative approach, which compares the employer's monthly revenues relative to the average of its January 2020 and February 2020 revenues. A deeming rule provides that an employer's decline in revenues for any particular qualifying period is the greater of its decline in revenues for the particular qualifying period and the immediately preceding qualifying period.

Employers that had chosen to use the general approach for prior periods of the Canada Emergency Wage Subsidy would be required to continue to use that approach for the hiring subsidy. Similarly, employers that had chosen to use the alternative approach would be required to continue to use the alternative approach.

The reference periods set out in Table 7 would be used to determine an eligible employer's decline in revenues for the qualifying periods from June 6, 2021 to November 20, 2021.

Table 7
Canada Recovery Hiring Program Reference Periods, Periods 17* to 22
(June 6, 2021 to November 20, 2021)

Timing	**Period 17** **June 6 – July 3**	**Period 18** **July 4 – July 31**	**Period 19** **August 1 – August 28**	**Period 20** **August 29 – September 25**	**Period 21** **September 26 – October 23**	**Period 22** **October 24 – November 20**
General approach	June 2021 over June 2019 **or** May 2021 over May 2019	July 2021 over July 2019 **or** June 2021 over June 2019	August 2021 over August 2019 **or** July 2021 over July 2019	September 2021 over September 2019 **or** August 2021 over August 2019	October 2021 over October 2019 **or** September 2021 over September 2019	November 2021 over November 2019 **or** October 2021 over October 2019
Alternative approach	June 2021 **or** May 2021 over average of January and February 2020	July 2021 **or** June 2021 over average of January and February 2020	August 2021 **or** July 2021 over average of January and February 2020	September 2021 **or** August 2021 over average of January and February 2020	October 2021 **or** September 2021 over average of January and February 2020	November 2021 **or** October 2021 over average of January and February 2020
*Period 17 of the Canada Emergency Wage Subsidy would be the first period of the Canada Recovery Hiring Program. Period identifiers have been aligned for ease of reference.						

An application for the hiring subsidy for a qualifying period would be required to be made no later than 180 days after the end of the qualifying period.

Immediate Expensing

The capital cost allowance (CCA) system determines the deductions that a business may claim each year for income tax purposes in respect of the capital cost of its depreciable property. With some exceptions, depreciable property is divided into CCA classes and a CCA rate for each class of property is prescribed in the *Income Tax Regulations*.

Prior to November 21, 2018, the CCA allowed in the first year that a property was available for use was generally limited to half the amount that would otherwise be available (the "half-year" rule). On November 21, 2018, the government announced a temporary enhanced first-year allowance, referred to as the Accelerated Investment Incentive, equal to up to three times the previously applicable first-year allowance. In addition, the government announced immediate expensing for investments in machinery and equipment used in manufacturing or processing, as well as for specified clean energy generation equipment.

Budget 2021 proposes to provide temporary immediate expensing in respect of certain property acquired by a Canadian-Controlled Private Corporation (CCPC). This immediate expensing would be available for "eligible property" acquired by a CCPC on or after Budget Day and that becomes available for use before January 1, 2024, up to a maximum amount of $1.5 million per taxation year. The immediate expensing would only be available for the year in which the property becomes available for use. The $1.5 million limit would be shared among associated members of a group of CCPCs. The limit would be prorated for taxation years that are shorter than 365 days. The half-year rule would be suspended for property for which this measure is used. For those CCPCs with less than $1.5 million of eligible capital costs, no carry-forward of excess capacity would be allowed.

Eligible Property

Eligible property under this new measure would be capital property that is subject to the CCA rules, other than property included in CCA classes 1 to 6, 14.1, 17, 47, 49 and 51, which are generally long lived assets.

Interactions of the Immediate Expensing with Other Provisions

CCPCs with capital costs of eligible property in a taxation year that exceed $1.5 million would be allowed to decide to which CCA class the immediate expensing would be attributed and any excess capital cost would be subject to the normal CCA rules. The availability of other enhanced deductions under existing rules – such as the full expensing for manufacturing and processing machinery and equipment and for clean energy equipment, introduced in the 2018 Fall Economic Statement – would not reduce the maximum amount available under this new measure. In other words, a CCPC may expense up to $1.5 million in addition to all other CCA claims under existing provisions of the *Income Tax Act*, provided the total CCA deduction does not exceed the capital cost of the property.

Immediate expensing under this new rule would not change the total amount that can be deducted over the life of a property – the larger deduction taken in the first year in respect of a property would eventually be offset by a smaller deduction, if any, in respect of the property in future years.

Example of Benefits of Immediate Expensing of $1.5 million

A CCPC invests $2,000,000 in equal amounts for two properties, one falling under CCA Class 7, and the other under Class 10. Under this scenario, the CCPC would be allowed a total first-year deduction of up to $1,725,000 versus $675,000 under the existing rules, as illustrated in the table below. This would represent an additional deduction of $1,050,000 in the first year.

CCA Class (rate)	Cost of Acquisitions	Immediate Expensing	1st Year Allowance on Remainder of Class*	Total 1st Year Allowance	Current 1st Year Allowance*
Class 7 (15%)	1,000,000	1,000,000	0	1,000,000	225,000
Class 10 (30%)	1,000,000	500,000	225,000	725,000	450,000
Total	2,000,000	1,500,000	225,000	1,725,00	675,000

*Assuming eligible for the triple first-year allowance under the Accelerated Investment Incentive

Restrictions

The *Income Tax Act* and the *Income Tax Regulations* include a series of rules designed to protect the integrity of the CCA regime and the tax system more broadly. These include rules related to limited partners, specified leasing properties,

specified energy properties and rental properties. In certain circumstances, these rules can restrict a CCA deduction, or a loss in respect of such a deduction, that would otherwise be available. These integrity rules would continue to apply.

Certain additional restrictions would be placed on property eligible for this new measure. Property that has been used, or acquired for use, for any purpose before it was acquired by the taxpayer would be eligible for the immediate expensing only if both of the following conditions are met:

- neither the taxpayer nor a non-arm's length person previously owned the property; and
- the property has not been transferred to the taxpayer on a tax-deferred "rollover" basis.

Coming Into Force

This measure would apply for eligible property that is acquired on or after Budget Day and that becomes available for use before 2024.

Strategic Environmental Assessment Statement

This temporary measure is expected to encourage capital investments across all sectors of the economy and in a variety of assets. It is unclear whether it would result in net positive or negative environmental effects.

The consumption, transportation and fabrication of capital assets can lead to various negative environmental effects. These effects would be unequal across sectors and types of investments. For example, investment in certain capital intensive industries is associated with higher greenhouse gas and air pollutant emissions, water and soil pollution, and faster depletion of natural resources. These activities are subject to applicable federal and provincial environmental regulations. There may be positive offsetting environmental impacts if the measure causes businesses to upgrade to the latest technology, as newer technologies are generally more efficient and greener than older technologies.

Overall, the measure could have both positive and negative impacts on the achievement of some of the Federal Sustainable Development Strategy goals, in particular those of Effective Action on Climate Change, Clean Growth, Pristine Lakes and Rivers, Sustainably Managed Lands and Forests, and Safe and Healthy Communities. Based on available data, it is not possible to assess whether the net environmental impact would be positive or negative in the short run. In the long run, the net environmental impact is not expected to be significant, given that the measure would be temporary.

Rate Reduction for Zero-Emission Technology Manufacturers

Budget 2021 proposes a temporary measure to reduce corporate income tax rates for qualifying zero-emission technology manufacturers. Specifically, taxpayers would be able to apply reduced tax rates on eligible zero-emission technology manufacturing and processing income of:

- 7.5 per cent, where that income would otherwise be taxed at the 15 per cent general corporate tax rate; and
- 4.5 per cent, where that income would otherwise be taxed at the 9 per cent small business tax rate.

Eligible Zero-Emission Technology Manufacturing or Processing Activities

This measure would apply in respect of income from the following zero-emission technology manufacturing or processing activities:

- manufacturing of solar energy conversion equipment, such as solar thermal collectors, photovoltaic solar arrays and bespoke supporting structures or frames, but excluding passive solar heating equipment (e.g., a masonry wall installed to absorb solar energy);
- manufacturing of wind energy conversion equipment, such as wind turbine towers, nacelles and rotor blades;
- manufacturing of water energy conversion equipment, such as hydroelectric, water current, tidal and wave energy conversion equipment;
- manufacturing of geothermal energy equipment;
- manufacturing of equipment for a ground source heat pump system;
- manufacturing of electrical energy storage equipment used for storage of renewable energy or for providing grid-scale storage or other ancillary services (e.g., voltage regulation), including battery, compressed air and flywheel storage systems;
- manufacturing of zero-emission vehicles (i.e., plug-in hybrid vehicles with a battery capacity of at least seven kilowatt-hours, electric vehicles and hydrogen-powered vehicles) and the conversion of vehicles into zero-emission vehicles;
- manufacturing of batteries and fuel cells for zero-emission vehicles;
- manufacturing of electric vehicle charging systems and hydrogen refuelling stations for vehicles;
- manufacturing of equipment used for the production of hydrogen by electrolysis of water;

- production of hydrogen by electrolysis of water; and
- production of solid, liquid or gaseous fuel (e.g., wood pellets, renewable diesel and biogas) from either carbon dioxide or specified waste material (i.e., wood waste, municipal waste, sludge from an eligible sewage treatment facility, plant residue, spent pulping liquor, food and animal waste, manure, pulp and paper by-product and separated organics), but excluding the production of by-products which is a standard part of another industrial or manufacturing process (e.g., the production of wood chips, black liquor or hog fuel as part of another wood transformation process).

For each of the manufacturing activities described above, eligible activities would include the manufacturing of components or sub-assemblies only if such equipment is purpose-built or designed exclusively to form an integral part of the relevant system. For example, manufacturing of wind turbine rotor blades may be an eligible activity, but manufacturing of general use tires, fasteners, wiring, transformers, paint, piping or concrete would not.

Eligible activities would exclude all activities that do not qualify as manufacturing or processing for the purposes of the capital cost allowance rules.

Calculation of Eligible Income

It is proposed that a taxpayer's eligible income generally be equal to its "adjusted business income" multiplied by the proportion of its total labour and capital costs that are used in eligible activities. The definition of "adjusted business income" as well as the method used to determine labour and capital costs would be substantially based on those used in calculating manufacturing and processing profits under current tax rules.

All of a taxpayer's labour and capital costs would be deemed to be labour and capital costs that are used in eligible activities if all or substantially all of its labour and capital costs are related to eligible activities.

The government welcomes feedback from stakeholders on the proposed allocation method for these purposes. Interested parties are invited to send written representations by June 18, 2021 to the Department of Finance Canada, Tax Policy Branch at: ZETM-FTZE@canada.ca.

Minimum Proportion of Eligible Activities

A taxpayer would qualify for the reduced tax rates on its eligible income only if at least 10 per cent of its gross revenue from all active businesses carried on in Canada is derived from eligible activities.

Reduced Rate for Small Businesses

Certain small businesses currently benefit from a reduced federal corporate income tax rate of 9 per cent – a preference relative to the general corporate income tax rate of 15 per cent. This rate reduction is provided through the "small business deduction" and applies on up to $500,000 per year of qualifying active business income (i.e., up to the business limit) of a Canadian-controlled private corporation (CCPC).

For taxpayers with income subject to both the general and the small business corporate tax rates, taxpayers would be able to choose to have their eligible income taxed at either the reduced rate of 4.5 per cent for small businesses or the general reduced rate of 7.5 per cent. The amount of income taxed at the 4.5 per cent rate plus the amount of income taxed at the small business rate of 9 per cent would not be allowed to exceed the business limit.

Treatment of Dividends

The tax system has two dividend tax credit (DTC) rates and gross-up factors to recognize the two different corporate income tax rates that generally apply to corporations. The enhanced DTC and gross-up are applied to dividends distributed to an individual from corporate income taxed at the general corporate tax rate ("eligible dividends"). The ordinary DTC and gross-up are applied to dividends distributed to an individual from corporate income not taxed at the general corporate tax rate ("non-eligible dividends"). At the federal level, the enhanced and ordinary dividend tax credit correspond to 15 per cent and 9 per cent of the grossed-up amount of the dividend, respectively.

Given the targeted application, temporary nature, and gradual phase-out of the proposed measure, no changes to the DTC rates or the allocation of corporate income for the purpose of dividend distributions are proposed. That is, income subject to the general reduced rate would continue to give rise to eligible dividends and the enhanced dividend tax credit, while income subject to the reduced rate for small businesses would continue to give rise to non-eligible dividends and the ordinary dividend tax credit.

Application and Phase-Out

The reduced tax rates would apply to taxation years that begin after 2021. The reduced rates would be gradually phased out starting in taxation years that begin in 2029 and fully phased out for taxation years that begin after 2031 (as shown in Table 8).

Table 8
Schedule of Reduced Tax Rates

Taxation years that begin in:	2022 to 2028	2029	2030	2031	2032 or later
Reduced Tax Rate on Income Eligible for the Small Business Deduction	4.5%	5.625%	6.75%	7.875%	9%
Reduced Tax Rate on Other Eligible Income	7.5%	9.375%	11.25%	13.125%	15%

Strategic Environmental Assessment Statement

Overall, the measure is expected to have positive environmental impacts by lowering emissions of greenhouse gases and air particulates.

The measure could indirectly lower the price of zero-emission technology equipment, which could lead to a greater adoption of zero-emission technology in Canada, helping to reduce emissions of greenhouse gases and air particulates. This would contribute to achieving the Federal Sustainable Development Strategy targets relating to increasing the percentage of Canadians living in areas where air quality standards are achieved to 85 per cent by 2030, and having 90 per cent of electricity generated from renewable and non-emitting sources by 2030. In addition, the proposal would help advance the government's commitment to exceed Canada's target of reducing total greenhouse gas emissions by 30 per cent relative to 2005 levels by 2030, and the government's commitment of net-zero greenhouse gas emissions by 2050.

However, increased manufacturing activities in Canada could directly increase emissions of greenhouse gases and air particulates, as well as increase production of industrial waste. This could partially offset some of the positive environmental impacts of the measure.

Capital Cost Allowance for Clean Energy Equipment

Under the *Income Tax Act* taxpayers are entitled to deduct a portion of the capital cost of a depreciable property, as capital cost allowance (CCA), in computing their income for each taxation year. With some exceptions, CCA deductions are claimed by class of property and are calculated on a declining-balance basis.

Under the CCA regime, Classes 43.1 and 43.2 of Schedule II to the *Income Tax Regulations* provide accelerated CCA rates (30 per cent and 50 per cent, respectively) for investments in specified clean energy generation and energy conservation equipment. Class 43.2 generally includes property that would otherwise be included in Class 43.1, except that in certain cases Class 43.2 imposes stricter eligibility criteria. In addition, property in these classes that is

acquired after November 20, 2018 and that becomes available for use before 2024 is eligible for immediate expensing while property that becomes available for use after 2023 and before 2028 is subject to a phase-out from these immediate expensing rules.

Providing accelerated CCA is an exception to the general practice of setting CCA rates based on the useful life of assets. Accelerated CCA provides a financial benefit by deferring taxation.

In addition, if the majority of the tangible property in a project is eligible for inclusion in Class 43.1 or 43.2, certain intangible project start-up expenses (e.g., engineering and design work, and feasibility studies) are treated as Canadian Renewable and Conservation Expenses. These expenses can be deducted in full in the year incurred, carried forward indefinitely for use in future years, or transferred to investors using flow-through shares.

To support investment in clean technologies, Budget 2021 proposes to expand Classes 43.1 and 43.2 to include the following:

- pumped hydroelectric storage equipment;
- electricity generation equipment that uses physical barriers or dam-like structures to harness the kinetic energy of flowing water or wave or tidal energy;
- active solar heating systems, ground source heat pump systems, and geothermal energy systems that are used to heat water for a swimming pool;
- equipment used to produce solid and liquid fuels (e.g., wood pellets and renewable diesel) from specified waste material or carbon dioxide;
- a broader range of equipment used for the production of hydrogen by electrolysis of water; and
- equipment used to dispense hydrogen for use in hydrogen-powered automotive equipment and vehicles.

Accelerated CCA would be available in respect of these types of property only if, at the time the property becomes available for use, the requirements of all Canadian environmental laws, by-laws and regulations applicable in respect of the property have been met.

Classes 43.1 and 43.2 currently include certain systems that burn fossil fuels and/or waste fuels to produce either electricity or heat, or both. The eligibility criteria for these systems have not been modified since they were first set approximately 25 and 15 years ago, for Classes 43.1 and 43.2 respectively. Additionally, Classes 43.1 and 43.2 include certain systems that derive up to one half of their fuel energy input from fossil fuels.

To ensure the incentive provided by Classes 43.1 and 43.2 is consistent with the

government's current environmental objectives, Budget 2021 proposes changes in the eligibility criteria for the following types of equipment:

- fossil-fuelled cogeneration systems;
- fossil-fuelled enhanced combined cycle systems;
- specified waste-fuelled electrical generation systems with an electrical capacity greater than 3 megawatts;
- specified waste-fuelled heat production equipment for which more than one quarter of the total fuel energy input is from fossil fuels; and
- producer gas generating equipment for which more than one quarter of the total fuel energy input is from fossil fuels.

Each of these measures is discussed in more detail below.

Pumped Hydroelectric Energy Storage Equipment

Pumped hydroelectric storage is one type of electrical energy storage system that uses electricity to pump water uphill into a reservoir, where it can be held until needed and released for the generation of electricity. This form of storage can provide environmental benefits by displacing fossil-fuelled power generation when demand is highest and by facilitating the integration of electricity generated from intermittent renewable energy sources. A range of electrical energy storage equipment, other than pumped hydroelectric storage, is currently eligible under Classes 43.1 and 43.2.

Budget 2021 proposes to expand Class 43.1 and 43.2 eligibility for electrical energy storage property by removing the exclusion for pumped hydroelectric storage. Eligible pumped hydroelectric storage property would include reversing turbines, transmission equipment, dams, reservoirs and related structures, but not buildings or property used solely for backup electrical energy.

Water Current, Wave or Tidal Energy Technologies Using Physical Barriers

The current rules generally include in Class 43.1 and 43.2 equipment that generates electricity using kinetic energy of flowing water or wave or tidal energy. Equipment that generates electricity by diverting or impeding the natural flow of water, or by using physical barriers or dam-like structures, is currently ineligible.

Budget 2021 proposes to expand Class 43.1 and 43.2 eligibility by removing these restrictions.

Active Solar Heating, Ground Source Heat Pump and Geothermal Energy Systems Used to Heat a Swimming Pool

Ground source heat pump, active solar heating and geothermal energy systems can provide renewable energy for various residential, commercial and industrial applications, such as water or space heating. Active solar heating systems use a solar collector to heat an actively circulated liquid or gas medium. Ground source heat pump systems exchange heat with the earth at depths of tens of metres while geothermal energy systems extract steam or hot water directly from the earth through wells drilled to depths of up to several thousand metres. Most active solar heating, ground source heat pump and geothermal energy systems are eligible under Classes 43.1 and 43.2, other than systems used to heat water for use in a swimming pool.

Budget 2021 proposes to expand Class 43.1 and 43.2 eligibility by removing the exclusion of active solar heating and ground-source heat pump systems used to heat swimming pools. Similarly, it is proposed to remove the exclusion for geothermal energy systems used to heat swimming pools, except where geothermal water is used directly in a pool or spa.

Equipment Used to Produce Fuel from Specified Waste Material or Carbon Dioxide

Solid, liquid and gaseous renewable fuels may be derived from organic material through a broad range of mechanical, bio-chemical and thermo-chemical processes. It is also possible to produce liquid synthetic fuels from carbon dioxide. Depending on the type of fuels, different applications are possible, for example: direct combustion to generate electricity or heat; injection into natural gas distribution networks; and fuelling vehicles. Equipment used for the production of gaseous renewable fuels (e.g., biogas and producer gas) from certain waste material (e.g., wood, food and animal waste) is generally eligible under Class 43.1 and 43.2. Certain equipment used to produce liquid renewable fuels is eligible under Class 43.1 and 43.2 if it is used to convert wood waste or plant residue into bio-oil that is used primarily for the purpose of generating heat used directly in an industrial process or a greenhouse, generating electricity, or generating electricity and heat.

Budget 2021 proposes to expand eligibility under Class 43.1 and 43.2 to equipment used to convert specified waste material into bio-coal or pellets (including torrefied pellets), but excluding standard equipment used to make wood chips, hog fuel and black liquor. Eligible property would include equipment where all or substantially all of the use of the equipment is in a system that produces bio-coal or pellets (including torrefied pellets) from specified waste material, including storage equipment, materials handling equipment and ash-

handling equipment. However, eligible property would not include the following:

- equipment used for shredding, drying or cutting organic material (other than equipment all or substantially all of the use of which is to produce fuel for sale);
- vehicles; and
- buildings or other structures.

Budget 2021 also proposes to expand eligibility under Class 43.1 and 43.2 to a broader range of equipment used to produce liquid biofuels (e.g., ethanol, biodiesel and renewable diesel) from specified waste material or carbon dioxide. Eligible property would include equipment where all or substantially all of the use of the equipment is to produce liquid fuels from specified waste material, including related piping, storage equipment, materials handling equipment, ash-handling equipment and equipment used to remove non-combustibles and contaminants from the fuels produced. However, eligible property would not include the following:

- equipment used to produce spent pulping liquor;
- vehicles; and
- buildings or other structures.

For all of these proposed changes, "specified waste material" would include wood waste, municipal waste, sludge from an eligible sewage treatment facility, plant residue, spent pulping liquor, food and animal waste, manure, pulp and paper by-product, and separated organics.

Hydrogen Production by Electrolysis of Water

Hydrogen can provide a clean source of energy with which to generate electricity or heat, or to fuel zero-emission vehicles, and it can also be used in a variety of industrial processes. Currently, hydrogen is mainly produced by steam methane reformation, but it can also be produced by electrolysis of water. When powered by renewable energy, hydrogen produced by electrolysis of water maximizes the environmental benefits of using hydrogen as an energy supply by minimizing its lifecycle carbon intensity. Equipment used to produce hydrogen by electrolysis of water is eligible under Classes 43.1 and 43.2 when it is ancillary to a fixed-location fuel cell and all or substantially all of the electricity used to power the production process is generated using specified renewable energy sources. These renewable energy sources include: the kinetic energy of flowing water; wave or tidal energy; geothermal, photovoltaic or wind energy conversion; and hydroelectric equipment.

Budget 2021 proposes to expand eligibility under Classes 43.1 and 43.2 to include a broader range of equipment used to produce hydrogen by electrolysis of water. Eligible property would include: equipment where all or substantially all of the use of the equipment is to produce hydrogen by electrolysis of water, including electrolysers, rectifiers and other ancillary electrical equipment; water

treatment and conditioning equipment; and equipment used for hydrogen compression and storage. Eligible property would not include:

- hydrogen transmission or distribution equipment;
- electrical transmission or distribution equipment;
- vehicles or auxiliary electrical generating equipment; and
- buildings or other structures.

For greater certainty, eligible property would not be required to be powered by renewable energy sources eligible for inclusion in Class 43.1 or 43.2.

Hydrogen Refuelling Equipment

Hydrogen fuel cell electric vehicles are a nascent zero-emission mode of transportation in Canada that require specific refuelling infrastructure. In Budget 2016, the government announced support for business investments in electric vehicle charging infrastructure by expanding Class 43.1 to include electric vehicle charging stations capable of supplying more than 10 kilowatts of continuous power, and by expanding Class 43.2 to include such stations that are capable of supplying at least 90 kilowatts of continuous power.

To support greater use of hydrogen-powered vehicles, Budget 2021 proposes to expand eligibility under Classes 43.1 and 43.2 to include hydrogen refuelling equipment. Eligible property would include equipment used to dispense hydrogen for use in hydrogen-powered automotive equipment and vehicles, including vaporization, compression, storage and cooling equipment. Eligible property would not include:

- hydrogen production equipment;
- hydrogen transmission equipment;
- electrical transmission and distribution equipment;
- vehicles or auxiliary electrical generating equipment; and
- buildings or other structures.

Fossil-Fuelled Cogeneration Systems

Fossil-fuelled cogeneration systems generate both electricity and useful heat using fossil fuels as the energy source (typically natural gas). Due to the use of heat that would otherwise be wasted, these systems offer an efficient use of fossil fuels. However, they still produce greenhouse gas emissions and, as such, cannot achieve net-zero emissions on a lifecycle basis.

Budget 2021 proposes to remove these systems from Classes 43.1 and 43.2.

Fossil-Fuelled Enhanced Combined Cycle Systems

A combined cycle system uses two different heat engines simultaneously to

produce electricity. It is usually composed of a gas turbine and a steam turbine, where the residual heat from the gas turbine is used to generate steam to drive the steam turbine, resulting in higher efficiency than using the gas turbine alone. An "enhanced combined cycle system" is a type of combined cycle system in which thermal waste from one or more natural gas compressor systems is recovered and used to contribute at least 20 per cent of the energy input of a combined cycle process in order to enhance the generation of electricity.

These systems burn natural gas as a fuel and must be located where there is no other viable host for the waste heat. Similar to fossil-fuelled cogeneration systems, enhanced combined cycle systems offer an efficient use of fossil fuels but cannot achieve net-zero emissions on a lifecycle basis.

Budget 2021 proposes to remove these systems from Classes 43.1 and 43.2.

Specified Waste-Fuelled Electrical Generation Systems

Specified waste-fuelled electrical generation systems generate electricity (and, in the case of cogeneration systems, electricity and useful heat) using certain specified waste fuels, or a mix of specified waste fuels and fossil fuels (co-fired systems). These specified waste fuels include "eligible waste fuel" (biogas, bio-oil, digester gas, landfill gas, municipal waste, plant residue, pulp and paper waste, and wood waste), producer gas and spent pulping liquor. The co-firing of specified waste fuels with fossil fuels may be done for technical, economic, or fuel availability reasons.

Budget 2021 proposes to remove from Classes 43.1 and 43.2 specified waste-fuelled electrical generation systems for which more than one quarter of their total fuel energy input is from fossil fuels, determined on an annualized basis.

Classes 43.1 and 43.2 apply energy efficiency requirements for specified waste-fuelled electrical generation systems that co-fire with fossil fuels. These energy efficiency requirements are expressed in the form of maximum heat rate thresholds, which are defined as the ratio of the fuel energy input over the electrical and heat energy output. In contrast, there are no heat rate thresholds for systems that burn only specified waste fuels.

To promote the efficient use of waste fuels, Budget 2021 proposes that eligibility for Classes 43.1 and 43.2 for all specified waste-fuelled electrical generation systems be subject to a heat rate threshold. Systems with an electrical output capacity of three megawatts or less will be exempt from this requirement.

Eligible specified waste-fuelled electrical generation systems would be those that do not exceed a heat rate threshold of 11,000 BTU per kilowatt-hour. The heat rate would be calculated as shown below:

$$Heat\ Rate = \frac{(2 \times F_{fossil}) + F_{waste}}{E + (H \div 3412)}$$

where:

- F_{fossil} is the energy content of the fossil fuel consumed by the system in a year in BTU (excluding solution gas), calculated based on the fuel's higher heating value;
- F_{waste} is the energy content of the specified waste fuel consumed by the system in a year in BTU, calculated based on the fuel's higher heating value;
- E is the gross electrical energy produced by the system in a year in kilowatt-hours; and
- H is the net useful energy in the form of heat exported from the system to a thermal host in a year in BTU.

Specified Waste-Fuelled Heat Production Equipment

Specified waste-fuelled heat production equipment produces heat primarily from eligible waste fuel or producer gas, meaning that more than half of the total fuel energy input must be eligible waste fuel or producer gas. The remaining fuel energy input may be from fossil fuels.

To align with the changes proposed to the eligibility requirements for specified waste-fuelled electrical generation systems, Budget 2021 proposes to remove from Classes 43.1 and 43.2 specified waste-fuelled heat production equipment for which more than one quarter of the total fuel energy input is from fossil fuels, determined on an annualized basis.

Producer Gas Generating Equipment

Producer gas generating equipment generates producer gas from eligible waste fuel using a thermo-chemical conversion process (generally referred to as "gasification"). More than half of the total fuel energy input must be eligible waste fuel, while the remaining fuel energy input may be from fossil fuels.

To align with the changes proposed to the eligibility requirements for specified waste-fuelled electrical generation systems and specified waste-fuelled heat production equipment, Budget 2021 proposes to exclude from Classes 43.1 and 43.2 producer gas generating equipment for which more than one quarter of the total fuel energy input is from fossil fuels, determined on an annualized basis.

Similarly, there is currently a requirement for producer gas to be generated primarily from eligible waste fuel for it to be an eligible fuel for specified waste-fuelled electrical generation systems and for specified waste-fuelled heat production equipment.

For specified waste-fuelled electrical generation systems and specified waste-fuelled heat production equipment, Budget 2021 proposes to remove from the eligible fuels producer gas generated from more than one-quarter fossil fuel energy input.

Timing of Changes

The expansion of Classes 43.1 and 43.2 would apply in respect of property that is acquired and that becomes available for use on or after Budget Day, where it has not been used or acquired for use for any purpose before Budget Day.

The removal of certain property from eligibility for Classes 43.1 and 43.2, as well as the application of the new heat rate threshold for specified waste-fuelled electrical generation systems, would apply in respect of property that becomes available for use after 2024.

Strategic Environmental Assessment Statement

These measures are expected to have a positive environmental impact by encouraging investment in technologies that would reduce emissions of greenhouse gases and air pollutants. This would help advance the government's commitments to exceed Canada's target of reducing total greenhouse gas emissions by 30 per cent relative to 2005 levels by 2030, and to achieve net-zero greenhouse gas emissions by 2050. These measures would also contribute to the Federal Sustainable Development Strategy goals of growing the clean technology industry in Canada, and ensuring all Canadians have access to affordable, reliable and sustainable energy.

Film or Video Production Tax Credits

In recognition of the disruptions caused by the COVID-19 pandemic on film and video productions, Budget 2021 proposes to temporarily extend certain timelines for the Canadian Film or Video Production Tax Credit (CPTC) and the Film or Video Production Services Tax Credit (PSTC).

The CPTC provides a 25-per-cent refundable tax credit on qualified labour expenditures and is available to productions certified to be Canadian film or video productions. The PSTC provides a 16-per-cent refundable credit on qualified Canadian labour expenditures and is available to foreign films and videos produced in Canada.

Extending Timelines for the CPTC

Budget 2021 proposes to extend by 12 months the following timelines with respect to the CPTC:

- The 24-month period to incur qualifying expenditures before the date that principal photography begins.
- The timeline to submit a certificate of completion to the Canadian Audiovisual Certification Office within 24 months of the end of the tax year in which principal photography began. This new 12-month extension would apply in addition to the existing 18-month extension that is available in this respect.
- The requirement that there be a written agreement with a Canadian distributor or with a broadcaster licensed by the Canadian Radio-television and Telecommunications Commission to show the production in Canada within 24 months of its completion.

Extending Timelines for the PSTC

Budget 2021 also proposes to extend by 12 months the 24-month timelines in respect of when aggregate expenditure thresholds must be met for film or video productions for the purposes of the PSTC.

In respect of both the CPTC and the PSTC, taxpayers would be required to file a waiver with the Canada Revenue Agency and the Canadian Audiovisual Certification Office in order to extend the assessment limitation period in respect of the relevant years to take into account this 12-month extension.

These measures would be available in respect of productions for which eligible expenditures were incurred by taxpayers in their taxation years ending in 2020 or 2021.

Mandatory Disclosure Rules

The lack of timely, comprehensive and relevant information on aggressive tax planning strategies is one of the main challenges faced by tax authorities worldwide. Early access to such information provides the opportunity to respond quickly to tax risks through informed risk assessments, audits and changes to legislation.

The *Income Tax Act* contains rules requiring that certain transactions be reported to the Canada Revenue Agency (CRA). However, the CRA's experience with these rules since their introduction indicates that they are not sufficiently robust to address these concerns.

The *Base Erosion and Profit Shifting Project*, *Action 12: Final Report* (BEPS Action 12 Report) of the Organisation for Economic Co-operation and Development and the Group of 20 makes a number of recommendations relating to the enactment of mandatory disclosure rules. Many of the measures recommended in the BEPS Action 12 Report have been implemented in countries with comparable tax systems. In addition to measures recommended by the BEPS Action 12 Report, the United States and Australia both have reporting requirements for specified taxpayers that reflect uncertainty in relation to tax in their audited financial statements. The experience in these countries provides a useful model for developing similar rules in Canada.

The government is consulting on proposals to enhance Canada's mandatory disclosure rules. This consultation will address:

- changes to the *Income Tax Act*'s reportable transaction rules;
- a new requirement to report notifiable transactions;
- a new requirement for specified corporations to report uncertain tax treatments; and
- related rules providing for, in certain circumstances, the extension of the applicable reassessment period and the introduction of penalties.

It is proposed that, to the extent the proposed measure applies to taxation years, amendments made as a result of this consultation would apply to taxation years that begin after 2021. To the extent the proposed measure applies to transactions, the amendments would apply to transactions entered into on or after January 1, 2022. However, the penalties would not apply to transactions that occur before the date on which the enacting legislation receives Royal Assent.

Stakeholders are invited to provide comments on the proposals set out below, as well as on draft legislation and sample notifiable transactions which are expected to be released in the coming weeks as part of the consultation. Comments should be directed to the Department of Finance by September 3, 2021. Please send your comments to fin.taxdisclosure-divulgationfiscale.fin@canada.ca.

Reportable Transactions

The *Income Tax Act* contains rules that require that certain transactions entered into by, or for the benefit of, a taxpayer be reported to the CRA. In order for a transaction to be reportable under those rules, it must be an "avoidance transaction", as that term is defined for the purposes of the general anti-avoidance rule in the *Income Tax Act*. As well, the transaction must bear at least two of the following three generic hallmarks:

- A promoter or tax advisor in respect of the transaction is entitled to fees, often referred to as "contingent fees", that are to any extent:
  - attributable to the amount of the tax benefit from the transaction;

  - contingent upon the obtaining of a tax benefit from the transaction; or
  - attributable to the number of taxpayers who participate in the transaction or who have been provided access to advice given by the promoter or advisor regarding the tax consequences of the transaction.
- A promoter or tax advisor requires "confidential protection" with respect to the transaction.
- The taxpayer, or the person who entered into the transaction for the benefit of the taxpayer, obtains "contractual protection" in respect of the transaction (otherwise than as a result of a fee described in the first hallmark). For these purposes, contractual protection includes:
  - any form of insurance (other than standard professional liability insurance) or other protection (including an indemnity, compensation or a guarantee) that, either immediately or in the future and either absolutely or contingently:
    - protects a person against a failure to achieve any tax benefit from the transaction; or
    - pays for or reimburses any expense, fee, tax, interest, penalty or similar amount that may be incurred by a person in the course of a dispute in respect of a tax benefit from the transaction; and
  - any form of undertaking provided by a promoter, or by any person who does not deal at arm's length with the promoter, that provides, either immediately or in the future and either absolutely or contingently, assistance, directly or indirectly in any manner whatever, to a person in the course of a dispute in respect of a tax benefit from the transaction.

A reportable transaction includes all the transactions in a series of transactions if at least one of the transactions in the series is an avoidance transaction. If more than one party is required to report the transaction, a report by any of the parties can satisfy the requirement. A reportable transaction must be reported to the CRA on or before June 30 of the calendar year following the calendar year in which the transaction first became a reportable transaction.

While the current rules are intended to provide the CRA with the information it needs, they currently result in only limited reporting by taxpayers.

The BEPS Action 12 Report recommends that countries introducing mandatory disclosure regimes include a mixture of generic and specific hallmarks, with the existence of each of them resulting in a requirement for disclosure. Generic hallmarks target features that are common to promoted schemes, such as the requirement for confidentiality or the payment of a contingent fee. Specific hallmarks target particular areas of concern, such as trading in losses.

The BEPS Action 12 Report notes that the purpose of a mandatory disclosure regime is to provide the relevant tax administration with information on a wider range of tax policy and revenue risks than those raised by transactions that would be classified as avoidance under a general anti-avoidance rule. A "reportable scheme" for disclosure purposes should generally be broader than the definition of tax avoidance schemes covered by a general anti-avoidance rule and should also cover transactions that are perceived to be aggressive or high-risk from a tax planning perspective.

The BEPS Action 12 Report also notes that Canada's current June 30 reporting deadline renders it less able than other countries to react quickly to tax avoidance planning. It also concludes that the advantage of requiring both promoters and taxpayers to report is that this may have a stronger deterrent effect on both the supply (promoter) and demand (taxpayer) side of avoidance schemes. A dual reporting approach can also reduce the risk of inadequate disclosure because, for example, a taxpayer's disclosure can be checked against the promoter's disclosure to assess whether the information provided is accurate and complete.

To improve the effectiveness of Canada's mandatory disclosure rules and to bring them in line with international best practices, amendments to the reportable transaction rules are proposed. In particular, it is proposed that only one generic hallmark need be present in order for a transaction to be reportable. It is also proposed that the definition of "avoidance transaction" for these purposes be amended so that a transaction be considered an avoidance transaction if it can reasonably be concluded that one of the main purposes of entering into the transaction is to obtain a tax benefit.

It is proposed that a taxpayer who enters into a reportable transaction, or another person who enters into such a transaction in order to procure a tax benefit for the taxpayer, would be required to report the transaction to the CRA within 45 days of the earlier of:

- the day the taxpayer becomes contractually obligated to enter into the transaction or a person who entered into the transaction for the benefit of the taxpayer becomes contractually obligated to enter into the transaction; and
- the day the taxpayer enters into the transaction or a person who entered into the transaction for the benefit of the taxpayer enters into the transaction.

It is further proposed that reporting (as a reportable transaction) of a scheme that, if implemented, would be a reportable transaction be required to be made by a promoter or advisor (as well as by persons who do not deal at arm's length with the promoter or advisor and who are entitled to receive a fee with respect to the transaction) within the same time limits. In addition, it is proposed that an exception to the reporting requirement be available for advisors to the extent that solicitor-client privilege applies.

Notifiable Transactions

As noted above, the BEPS Action 12 Report recommends that an effective mandatory disclosure regime include a mixture of specific and generic hallmarks. Specific hallmarks target particular areas of concern. The report recommends the timely disclosure of specific tax schemes to allow governments to quickly develop targeted and appropriate responses to them.

The United States has mandatory disclosure regimes relating to "listed transactions" and "transactions of interest", which are noted in the BEPS Action 12 Report. A U.S. listed transaction is a transaction that is the same as, or substantially similar to, one that the Internal Revenue Service (IRS) has determined to be a tax avoidance transaction and has identified by notice or other form of published guidance. A U.S. transaction of interest is a transaction that the IRS and the U.S. Treasury Department consider to be a transaction that has the potential for tax avoidance or evasion, but for which they lack sufficient information to make that determination.

Similar rules are also in force in the United Kingdom (disclosure of tax avoidance schemes or DOTAS), Australia (disclosed in the reportable tax position schedule, under category C), and the European Union. Quebec has also enacted a measure that requires taxpayers who have carried out certain transactions to file an information return with Revenu Québec.

To provide the CRA with pertinent information relating to tax avoidance transactions (including series of transactions) and other transactions of interest on a timely basis, it is proposed to introduce a category of specific hallmarks known as "notifiable transactions". Under this approach, the Minister of National Revenue would have the authority to designate, with the concurrence of the Minister of Finance, a transaction as a notifiable transaction.

Similar to the approach taken by the United States, notifiable transactions would include both transactions that the CRA has found to be abusive and transactions identified as transactions of interest. The description of a notifiable transaction would set out the fact patterns or outcomes that constitute that transaction in sufficient detail to enable taxpayers to comply with the disclosure rule. It would also include examples in appropriate circumstances. Sample descriptions of notifiable transactions will be issued as part of the consultation.

A taxpayer who enters into a notifiable transaction, or a transaction or series of transactions that is substantially similar to a notifiable transaction – or another person who enters into such a transaction or series in order to procure a tax benefit for the taxpayer – would be required to report the transaction or series in prescribed form to the CRA within 45 days of the earlier of:

- the day the taxpayer becomes contractually obligated to enter into the

transaction or series or a person who entered into the transaction or series for the benefit of the taxpayer becomes contractually obligated to enter into the transaction or series; and

- the day the taxpayer enters into the transaction or series or a person who entered into the transaction or series for the benefit of the taxpayer enters into the transaction or series.

A promoter or advisor who offers a scheme that, if implemented, would be a notifiable transaction, or a transaction or series of transactions that is substantially similar to a notifiable transaction – as well as a person who does not deal at arm's length with the promoter or advisor and who is entitled to receive a fee in respect of the transaction – would be required to report within the same time limits. In addition, it is proposed that an exception to the reporting requirement be available for advisors to the extent that solicitor-client privilege applies.

These proposed amendments are intended to provide information to the CRA and would not change the tax treatment of a transaction.

For example, in a recent decision of the Tax Court of Canada (*Paletta* v. *The Queen*) involving a taxpayer who entered into an aggressive series of transactions referred to as straddle planning, which was designed to defer indefinitely tax payable under the *Income Tax Act*, the CRA tried unsuccessfully to reassess the taxpayer for relevant taxation years outside the normal reassessment period. This series of transactions resulted in an immediate loss realization and an indefinite gain deferral for the taxpayer. Since the burden associated with the reassessment of a taxation year made after the normal reassessment period in a case such as *Paletta* requires the CRA to prove that the taxpayer made a misrepresentation on their tax return that was attributable to neglect, carelessness or wilful default, such a reassessment is challenging and time consuming for the CRA. If the transactions associated with this aggressive straddle planning had been designated as a notifiable transaction, the CRA would have been notified in time to be able to assess the taxpayer within the normal reassessment period. The proposed notifiable transaction regime would allow the CRA to challenge planning like this in a timely manner, based on their merits.

Uncertain Tax Treatments

An uncertain tax treatment is a tax treatment used, or planned to be used, in an entity's income tax filings for which there is uncertainty over whether the tax treatment will be accepted as being in accordance with tax law. At present, there is no requirement in Canada to disclose uncertain tax treatments. However, both the United States and Australia have reporting requirements related to uncertain tax treatments. In addition, the United Kingdom recently conducted a public consultation with respect to the introduction of uncertain tax treatment reporting requirements and has announced its intention to enact the required legislation. In

this regard, it was noted that large corporations are already familiar with the Australian and the U.S. reporting regimes, and that this would facilitate transitioning taxpayers into a similar regime in the United Kingdom. The same can be said for the introduction of a similar regime in Canada.

Under the U.S. uncertain tax positions rule, a corporation meeting an asset threshold, and certain other conditions, must report (under Schedule UTP) when it has taken a tax position on a U.S. income tax return and either the corporation or a related party has recorded a reserve with respect to that tax position in its audited financial statements. Similarly, under the Australian rules, a corporation meeting a revenue threshold, and certain other conditions, must report (under category B: Tax uncertainty in financial statements) when it has taken a tax position on an Australian income tax return for a year and either the corporation or a related party has recognized or disclosed uncertainty with respect to that tax position in its audited financial statements.

It is proposed that a similar reporting regime be implemented in Canada. As such, specified corporate taxpayers would be required to report particular uncertain tax treatments to the CRA.

Introducing such requirement in Canada would:

- allow the CRA to more efficiently identify issues and allocate its resources for compliance activities; and
- ensure the CRA is able to conduct its audit activities with respect to transactions at issue in a timely manner.

Accounting Rules Regarding Uncertain Tax Treatments

If a corporation's financial statements, or those of its corporate parent, are prepared in accordance with Canadian generally accepted accounting principles (GAAP) and there is uncertainty regarding a tax position taken, or planned to be taken, in its tax return, the effect of that uncertainty might need to be reflected in those financial statements. Canadian GAAP provides that International Financial Reporting Standards (IFRS) are to be used by public corporations, and may be adopted by private corporations if they choose to do so. IFRS provide that an entity shall consider whether it is probable that a taxation authority will accept an uncertain tax treatment. "Taxation authority" in this context refers to the body or bodies that decide whether tax treatments are acceptable under tax law, and in the Canadian context ultimately means the courts. If an entity concludes it is probable that the taxation authority will accept an uncertain tax treatment, IFRS provide that the entity shall determine the taxable profit (tax loss), tax bases, unused tax losses, unused tax credits or tax rates consistently with the tax treatment used, or planned to be used, in its income tax filings.

However, if an entity concludes it is not probable that the taxation authority will accept a particular uncertain tax treatment (and thus, as described by the IFRS Interpretations Committee, it is probable that the entity will receive or pay amounts relating to the uncertain tax treatment), the entity shall reflect the effect of that uncertainty in determining the related taxable profit (tax loss), tax bases, unused tax losses, unused tax credits or tax rates by using either the most likely amount or the expected value, depending on which method the entity expects to better predict the resolution of the uncertainty.

As such, Canadian public corporations, and those Canadian private corporations that choose to use IFRS, have an existing requirement to identify uncertain tax treatments for financial statement purposes. When such a corporation determines that it is not probable that the taxation authority will accept an uncertain tax treatment (including an uncertain tax treatment relating to an entity controlled by the corporation), the effect of that uncertainty is reflected in the corporation's financial statements (which would be presented on a consolidated basis with those entities it controls).

Requirement to Report Uncertain Tax Treatments

It is proposed that specified corporate taxpayers be required to report particular uncertain tax treatments to the CRA. A reporting corporation would generally be required to report an uncertain tax treatment in respect of a taxation year where the following conditions are met:

- The corporation is required to file a Canadian return of income for the taxation year. That is, the corporation is a resident of Canada or is a non-resident corporation with a taxable presence in Canada.
- The corporation has at least $50 million in assets at the end of the financial year that coincides with the taxation year (or the last financial year that ends before the end of the taxation year). This threshold would apply to each individual corporation.
- The corporation, or a related corporation, has audited financial statements prepared in accordance with IFRS or other country-specific GAAP relevant for domestic public companies (e.g., U.S. GAAP).
- Uncertainty in respect of the corporation's Canadian income tax for the taxation year is reflected in those audited financial statements (i.e., the entity concluded it is not probable that the taxation authority will accept an uncertain tax treatment and thus, as described by the IFRS Interpretations Committee, it is probable that the entity will receive or pay amounts relating to the uncertain tax treatment).

The determination of whether a corporation has $50 million in assets would be made using the carrying value of the assets on the corporation's balance sheet at the end of the financial year. If the corporation did not prepare a balance sheet,

or did not prepare a balance sheet in accordance with Canadian GAAP (or other country-specific GAAP relevant for domestic public companies), the amounts used would be those that would have been reflected in a balance sheet prepared in accordance with GAAP. Banks and insurance corporations that are regulated by the Superintendent of Financial Institutions, or a similar provincial authority, would use the amounts in the statements accepted by that authority for regulatory purposes.

As noted above, Canadian GAAP require that the audited financial statements of public corporations be prepared in accordance with IFRS. As a result, the requirement to report particular uncertain tax treatments would apply to Canadian public corporations, subject to the asset threshold. Since IFRS require that a public corporation's financial statements be prepared on a consolidated basis with those corporations that it controls, the requirement to report particular uncertain tax treatments would also apply, subject to the asset threshold, to those corporations that are controlled by a Canadian public corporation.

The requirement to report particular uncertain tax treatments would apply to a private corporation that meets the asset threshold if it, or a related corporation, has audited financial statements prepared in accordance with IFRS. While normally a private corporation would not have audited financial statements prepared in accordance with IFRS, where it does, those statements would be presented on a consolidated basis with those corporations it controls and would, when appropriate, reflect uncertainty pertaining to uncertain tax treatments relating to those corporations.

The requirement to report particular uncertain tax treatments would also apply to a corporation if it meets the asset threshold and it, or a related corporation, has audited financial statements prepared in accordance with another country-specific GAAP relevant for domestic public corporations (e.g., U.S. GAAP). For example, the requirement to report would apply, subject to the asset threshold, if a U.S.-resident corporation had taken a tax position on its Canadian income tax return for a year and recorded a reserve with respect to that tax position in its audited financial statements prepared in accordance with U.S. GAAP. This part of the proposal is meant to ensure that the requirement to report particular uncertain tax treatments would apply appropriately where a corporation is a Canadian corporation controlled by a non-resident corporation or is a non-resident corporation with a taxable presence in Canada (e.g., carrying on business in Canada through a permanent establishment).

For each reportable uncertain tax treatment of a corporation, the corporation would be required to provide prescribed information, such as the quantum of taxes at issue, a concise description of the relevant facts, the tax treatment taken (including the relevant sections of the *Income Tax Act*) and whether the uncertainty relates to a permanent or temporary difference in tax. It is expected

that there would be a limited administrative burden for reporting corporations as the information to be reported would not be extensive and would be readily available given the need to analyze uncertain tax treatments as part of the preparation of financial statements.

It is proposed that uncertain tax treatments be required to be reported at the same time that the reporting corporation's Canadian income tax return is due. The introduction of a requirement to report particular uncertain tax treatments is intended to provide information to the CRA to allow it to more efficiently administer and enforce the *Income Tax Act*. It would not directly impact the income tax liabilities of corporate taxpayers.

Reassessment Period

When a taxpayer files an income tax return for a taxation year, the CRA is required to perform an initial examination of the return and to assess tax payable, if any, with all due dispatch. The CRA then normally has a fixed period, referred to as the "normal reassessment period", after its initial examination beyond which it is precluded from reassessing the taxpayer (i.e., reassessment of the taxation year becomes statute-barred). The normal reassessment period is generally three or four years, depending on the type of taxpayer.

In support of the new mandatory disclosure rules, it is proposed that, where a taxpayer has a reporting requirement in respect of a transaction relevant to the taxpayer's income tax return for a taxation year, the normal reassessment period would not commence in respect of the transaction until the taxpayer has complied with the reporting requirement. As a result, if a taxpayer does not comply with a mandatory disclosure reporting requirement for a taxation year in respect of a transaction, a reassessment of the year in respect of the transaction would not become statute-barred.

Penalties

The BEPS Action 12 Report recommends that countries introduce financial penalties that apply when disclosure rules are not complied with and that consideration be given to percentage-based penalties based upon transaction size or the extent of any tax savings.

Taxpayer Penalty

To support the proposed reporting requirements, it is proposed that, with respect to persons who enter into reportable or notifiable transactions, or for whom a tax benefit results from a reportable or notifiable transaction, a penalty of $500 per week apply for each failure to report a reportable transaction or a notifiable transaction,

- up to the greater of $25,000 and 25 per cent of the tax benefit; or
- for corporations that have assets that have a total carrying value of $50 million or more, a penalty of $2,000 per week, up to the greater of $100,000 and 25 per cent of the tax benefit.

Promoter Penalty

It is also proposed that, with respect to advisors and promoters of reportable or notifiable transactions, as well as with respect to persons who do not deal at arm's length with them and who are entitled to a fee with respect to the transactions, a penalty be imposed for each failure to report equal to the total of:

- 100 per cent of the fees charged by that person to a person for whom a tax benefit results;
- $10,000; and
- $1,000 for each day during which the failure to report continues, up to a maximum of $100,000.

In order to avoid imposing two sets of penalties upon a person who both 1) enters into a reportable or notifiable transaction for the benefit of another person, and 2) is a person who does not deal at arm's length with an advisor or promoter in respect of the reportable or notifiable transaction and is entitled to a fee, it is proposed that such a person be subject only to the greater of the penalties discussed above.

Uncertain Tax Treatment Penalty

For corporations subject to the requirement to report uncertain tax treatments, it is proposed that the penalty for failure to report each particular uncertain tax treatment be $2,000 per week, up to a maximum of $100,000.

Avoidance of Tax Debts

The *Income Tax Act* has an anti-avoidance rule (the "tax debt avoidance rule") that is intended to prevent taxpayers from avoiding their tax liabilities by transferring their assets to non-arm's length persons for insufficient consideration. In these circumstances, the rule causes the transferee to be jointly and severally liable with the transferor for tax debts of the transferor for the current or any prior taxation year, to the extent that the value of the property transferred exceeds the amount of consideration given for the property.

Some taxpayers are engaging in complex transactions that attempt to circumvent the tax debt avoidance rule. This planning seeks to avoid the technical application of the rule by:

- arranging for a tax debt to crystallize after the end of the taxation year in which the property transfer occurs;

- arranging for the transferor to be dealing at arm's length with the transferee at the time of the property transfer; or
- stripping out net asset value of the transferor using a series of transactions that does not breach the point-in-time valuation test for the property transferred and consideration given therefor.

This planning is often packaged with highly aggressive tax plans that attempt to eliminate the underlying tax liability of the transferor so that, if the latter planning fails, the Canada Revenue Agency would be unable to collect the tax debt because the indebted taxpayer has been stripped of their assets.

Budget 2021 proposes a number of measures to address this planning, as well as a penalty for those who devise and promote such schemes. The specific proposals are outlined below.

Deferral of Tax Debts

An anti-avoidance rule would be introduced that would provide that, for the purposes of the tax debt avoidance rule, a tax debt would be deemed to have arisen before the end of the taxation year in which a transfer of property occurs if it is reasonable to conclude that:

- the transferor (or a person that does not deal at arm's length with the transferor) had knowledge (or would have knowledge if they had made reasonable inquiries) that there would be a tax amount owing by the transferor (or there would be a tax amount owing if not for additional tax planning done as part of the series of transactions that includes the transfer) that would arise after the end of the taxation year; and
- one of the purposes for the transfer of property was to avoid the payment of the future tax debt.

Avoidance of Non-Arm's Length Status

Budget 2021 proposes an anti-avoidance rule that would provide that, for the purposes of the tax debt avoidance rule, a transferor and transferee that, at the time of a transfer of property, would otherwise be considered to be dealing with each other at arm's length, would be deemed to have not been dealing with each other at arm's length at that time if:

- at any time within a series of transactions or events that includes the transfer, the transferor and transferee do not deal at arm's length; and
- it is reasonable to conclude that one of the purposes of a transaction or event (or a series of transactions or events) within that series was to cause the transferor and transferee to deal at arm's length at the time of transfer.

Valuations

A rule would be introduced such that, for transfers of property that are part of a series of transactions or events, the overall result of the series would be considered in determining the values of the property transferred and the consideration given for the property, rather than simply using those values at the time of the transfer.

Penalty

A penalty would also be introduced for planners and promoters of tax debt avoidance schemes. The penalty would be equal to the lesser of:

- 50 per cent of the tax that is attempted to be avoided; and
- $100,000 plus the promoter's or planner's compensation for the scheme.

This penalty would mirror an existing penalty in the so-called "third-party civil penalty" rules in the *Income Tax Act* in respect of certain false statements, including the standard for its application.

Application

The rules would apply in respect of transfers of property that occur on or after Budget Day.

Other Statutes

Similar amendments would be made to comparable provisions in other federal statutes (e.g., section 325 of the *Excise Tax Act*, section 297 of the *Excise Act, 2001* and section 161 of the *Greenhouse Gas Pollution Pricing Act*).

Audit Authorities

The *Income Tax Act* provides the Canada Revenue Agency (CRA) with the authority to audit taxpayers and otherwise ensure compliance with the *Income Tax Act*. The scope of this authority was the subject of a recent court decision which called into question the extent to which CRA officials can require persons to answer all proper questions and to provide all reasonable assistance relating to the administration or enforcement of the *Income Tax Act*. The decision also called into question the extent to which CRA officials can require that questions be answered orally.

To ensure that the CRA has the authority it needs to conduct audits and undertake other compliance activities, Budget 2021 proposes amendments to the *Income Tax Act*, the *Excise Tax Act*, the *Excise Act, 2001*, the *Air Travellers Security Charge Act* and Part 1 of the *Greenhouse Gas Pollution Pricing Act*. These amendments would confirm that CRA officials have the authority to require

persons to answer all proper questions, and to provide all reasonable assistance, for any purpose related to the administration or enforcement of the relevant statute. They would also provide that CRA officials have the authority to require persons to respond to questions orally or in writing, including in any form specified by the relevant CRA official. These amendments would allow the CRA to undertake audit and other compliance activities in the same manner as it did prior to the decision.

These measures would come into force on Royal Assent.

International Tax Measures

Base Erosion and Profit Shifting

The government is committed to safeguarding Canada's tax system and to that end continues to be an active participant in multilateral efforts to address base erosion and profit shifting (BEPS). BEPS primarily refers to international tax planning arrangements used by multinational enterprises to reduce their taxes by exploiting the interaction between domestic and international tax rules – for example, through shifting profits earned in Canada to other jurisdictions. (Some BEPS issues also have implications for domestic tax avoidance arrangements, and need not focus exclusively upon planning arrangements used by multinational enterprises.) The government has already implemented the measures agreed to as minimum standards under the action plan developed by the Organisation for Economic Co-operation and Development (OECD) and the Group of 20 (G20) to address BEPS (the BEPS Action Plan). These minimum standards address:

- the exchange of information on confidential tax rulings to counter harmful tax practices;
- the adoption of treaty rules to address treaty shopping and other forms of abuse of Canada's tax treaties;
- the exchange of country-by-country reports on the global distribution of income, taxes and business activities of multinational enterprises; and
- making dispute resolution mechanisms in tax treaties more effective.

Canada has followed through on other BEPS recommendations by accepting the new transfer pricing guidance developed under the BEPS project, continuing to strengthen its robust foreign affiliate regime, and ratifying the *Multilateral Convention to Implement Tax Treaty Related Measures to Prevent Base Erosion and Profit Shifting* (which allows countries to modify the application of their existing tax treaties to put in place anti-BEPS measures without having to individually renegotiate those treaties).

Budget 2021 builds on this work by proposing to implement the best practices recommended by the BEPS Action Plan on interest deductibility and hybrid mismatch arrangements. More details on the interest deductibility and hybrid mismatch arrangements measures are set out below. In addition, the government is proposing consultations on enhancements to Canada's transfer pricing and mandatory disclosure rules. The transfer pricing and mandatory disclosure measures are discussed elsewhere in these budget documents.

Interest Deductibility Limits

In general, businesses obtain external funding for their operations through either debt or equity. In Canada, as in most jurisdictions, interest expenses in respect of such debt are generally deductible against the income of the borrower. However, the deductibility of interest raises the potential that excessive debt or interest expense can be placed in Canadian businesses in a way that erodes the tax base, for example, through:

- interest payments to related non-residents in low-tax jurisdictions;
- the use of debt to finance investments that earn non-taxable income; or
- having Canadian businesses bear a disproportionate burden of a multinational group's third-party borrowings.

A number of rules provide some measure of protection of the Canadian tax base from erosion due to excessive debt and interest expense. These include the thin capitalization rules, which limit the deductibility of interest expense where the amount of debt owing to specified non-residents exceeds a 1.5-to-1 debt-to-equity ratio. However, the scope of these rules is limited.

A number of countries – notably other members of the G7 and the European Union member states – have introduced, or are in the process of introducing, limitations on interest deductibility that are consistent with the recommendations in the Action 4 Report of the BEPS Action Plan. The recommended approach described in that report limits the amount of net interest expense (i.e., interest expense, including payments economically equivalent to interest, as well as other financing-related expenses, less interest and financing-related income) that may be deducted to a fixed share of earnings. This "earnings-stripping" approach to limiting interest deductibility provides broad protection against base erosion, while still allowing businesses to deduct reasonable amounts of interest.

Budget 2021 proposes to introduce an earnings-stripping rule consistent with the recommendations in the Action 4 Report. The new rule would limit the amount of net interest expense that a corporation may deduct in computing its taxable income to no more than a fixed ratio of "tax EBITDA", which is that corporation's taxable income before taking into account interest expense, interest income and income tax, and deductions for depreciation and amortization, where each of these items is as determined for tax purposes. For these purposes:

- As it is based on a corporation's taxable income, tax EBITDA would exclude, among other things, dividends to the extent they qualify for the inter-corporate dividend deduction or the deduction for certain dividends received from foreign affiliates.
- Interest expense and interest income would include not only amounts that are legally interest, but also certain payments that are economically equivalent to interest, and other financing-related expenses and income.
- The measure of interest expense would exclude interest that is not deductible under existing income tax rules, including the thin capitalization rules, which would continue to apply.
- Interest expense and interest income related to debts owing between Canadian members of a corporate group would generally be excluded. This is intended to ensure, among other things, that the new rule does not impact on corporate transactions that are undertaken within Canadian corporate groups to allow the losses of one group member to be offset against the income of another group member. In addition, a mechanism would be included to ensure that the new rule does not impact on certain variants of these transactions that involve the generation of a loss in a group entity through the payment of interest on intra-group debt and the subsequent absorption of this entity by another group entity in order to claim a carryforward of the loss.

The new earnings-stripping rule would also apply to trusts, partnerships and Canadian branches of non-resident taxpayers.

Exemptions from the new rule would be available for:

- Canadian-controlled private corporations that, together with any associated corporations, have taxable capital employed in Canada of less than $15 million (i.e., the top end of the phase-out range for the small business deduction); and
- groups of corporations and trusts whose aggregate net interest expense among their Canadian members is $250,000 or less.

Interest denied under the earnings-stripping rule would be able to be carried forward for up to twenty years or back for up to three years. Denied interest would be allowed to be carried back to taxation years that begin prior to the effective date of the rule, to the extent that the taxpayer would have had the capacity to absorb these denied expenses, had the proposed rule been in effect for those years. In determining whether the taxpayer would have had the capacity to absorb the denied expenses in those years, any such capacity would be reduced by overall net interest expense, in aggregate for all those years, of Canadian members of the taxpayer's group that exceeded the fixed ratio (or the group ratio, discussed below, if higher).

Canadian members of a group that have a ratio of net interest to tax EBITDA below the fixed ratio would generally be able to transfer the resultant unused capacity to deduct interest to other Canadian members of the group whose net interest expense deductions, including denied deductions carried over from another year, would otherwise be limited by the rule. The definition of a group for this purpose will be included in the draft legislative proposals.

The proposed measure also includes a "group ratio" rule that would allow a taxpayer to deduct interest in excess of the fixed ratio of tax EBITDA where the taxpayer is able to demonstrate that the ratio of net third party interest to book EBITDA of its consolidated group implies that a higher deduction limit would be appropriate. The determination of the amount of unused capacity to deduct interest, which can be transferred between the Canadian members of a group, would take into consideration the higher group ratio.

The consolidated group, for purposes of the group ratio rule, would comprise the parent company and all of its subsidiaries that are fully consolidated in the parent's audited consolidated financial statements. Measures of net third party interest expense and book EBITDA under this rule would be based on the group's audited consolidated financial statements with appropriate adjustments, including an exclusion for certain interest payments to creditors that are outside the consolidated group but are related to, or are significant shareholders of, Canadian group entities. As set out in the Action 4 report, adjustments would also be necessary to address the impact of entities with negative book EBITDA. These adjustments would ensure that, where a group has negative book EBITDA, such that it is not possible to calculate a meaningful group ratio, the group can nonetheless benefit from the group ratio rule. Adjustments would also be made to ensure that, where the group as a whole has positive book EBITDA but includes one or more entities with negative book EBITDA, the group does not benefit from an inappropriately high group ratio.

Consistent with the rationale of the group ratio rule, it is expected that standalone Canadian corporations and Canadian corporations that are members of a group none of whose members is a non-resident would, in most cases, not have their interest expense deductions limited under the proposed rule. Measures to reduce the compliance burden on these entities and groups will be explored.

While there are base erosion risks associated with interest deductions by financial institutions, there are challenges in applying an earnings-stripping rule to certain types of financial institutions, and there is no clear way to address these challenges. One reason is that many financial institutions earn substantial amounts of interest income as part of their regular business activity and these amounts may frequently exceed their interest expense. As the proposal is based on a concept of net interest expense, this could result in the proposed earnings-stripping rule having no impact on these financial institutions, and could provide

significant capacity to shelter the interest expense of other members of the financial institution's group. It is therefore proposed to not allow banks and life insurance companies to transfer unused capacity to deduct interest to other members of their corporate groups that are not also regulated banking or insurance entities. Further consideration will be given to whether there are targeted measures that could address base erosion concerns associated with excessive interest deductions by regulated banks and life insurance companies, and comments are invited from stakeholders in this regard.

In order to facilitate transition to the new rule and in particular having regard to the impact of the pandemic on corporate earnings, it would be phased in, with a fixed ratio of 40 per cent for taxation years beginning on or after January 1, 2023 but before January 1, 2024 (the transition year), and 30 per cent for taxation years beginning on or after January 1, 2024. In addition, taxpayers that have interest deductions denied for the transition year would be able to carry back the denied interest and deduct it in any of the three preceding years, as discussed above, using the 40-per-cent fixed ratio (or the group ratio for that earlier year, if higher) to determine their capacity to absorb carried-back interest in those preceding years. Where interest deductions are denied for a year following the transition year, carrybacks of denied interest to the transition year or an earlier year would be allowed using the 30-per-cent fixed ratio (or the group ratio for the transition year or that earlier year, as the case may be, if higher) to determine their capacity to absorb carried-back interest in those preceding years. Carrybacks to the transition year would also be subject to the constraint, similar to the provision described above in relation to pre-transition years, that the taxpayer's capacity in the transition year to absorb carried-back denied interest would be reduced by the overall deductible net interest expense of Canadian members of the taxpayer's group that exceeded the 30-per-cent ratio (or the group ratio, if higher) in the transition year. For example, the unused capacity in the transition year of an entity with a tax-EBITDA ratio of 25 per cent (and ignoring the group ratio for purposes of this example) would be reduced to the extent another Canadian group entity incurred net interest expense in the transition year in excess of 30 per cent of its tax EBITDA and the deduction of this excess interest expense was not denied in the transition year by virtue of the 40-per-cent fixed ratio in that year.

This measure would apply to taxation years that begin on or after January 1, 2023 (with an anti-avoidance rule to prevent taxpayers from deferring the application of the measure, or of the 30-per-cent fixed ratio) and would apply with respect to existing as well as new borrowings. Draft legislative proposals are expected to be released for comment in the summer.

Hybrid Mismatch Arrangements

Hybrid mismatch arrangements are cross-border tax avoidance structures that exploit differences in the income tax treatment of business entities or financial instruments under the laws of two or more countries to produce mismatches in tax results.

The Action 2 report of the BEPS Action Plan recommends detailed rules for countries to adopt in their domestic legislation to ensure that multinational enterprises cannot derive tax benefits from the use of hybrid mismatch arrangements. The two main forms of hybrid mismatch addressed by the Action 2 recommendations are:

- **Deduction/non-inclusion mismatches:** These arise where a country allows a deduction in respect of a cross-border payment, the receipt of which is not included within a reasonable period of time in ordinary income in the other country. For these purposes, "ordinary income" generally means income that is subject to income tax at the recipient's full tax rate and does not benefit from any exemption, exclusion, deduction, credit or comparable tax relief.
- **Double deduction mismatches:** These arise where a tax deduction is available in two or more countries in respect of a single economic expense.

The Action 2 recommendations also address a form of hybrid mismatch known as imported mismatches. These generally arise where a payment is deductible by an entity resident in one country and included in the ordinary income of a recipient entity resident in a second country, but that ordinary income is set off against a deduction under a hybrid mismatch arrangement between the second entity and an entity resident in a third country.

A supplement to the Action 2 report recommends additional rules to address branch mismatch arrangements, which generally produce mismatches similar to hybrid mismatch arrangements. These mismatches occur where the residence country of a taxpayer takes a different view from that of the country where the taxpayer's branch is located as to the allocation of income and expenditures between the two countries.

The Action 2 recommendations reflect a broad international consensus that hybrid mismatch and branch mismatch arrangements (collectively, hybrid arrangements) significantly erode the tax bases of affected countries. Hybrid arrangements may also have other adverse effects, such as distorting investment decisions and providing an unfair competitive advantage to multinational enterprises over domestic businesses.

The Action 2 report recognizes that coordinated international action is required in order to address the negative impacts of hybrid arrangements, without giving rise to double taxation or other unintended consequences. Accordingly, the Action 2 recommendations outline a common approach that is intended to ensure countries have consistent rules that operate in a coordinated manner. A number of countries (including the United States, the United Kingdom, Australia and the European Union member states) have already implemented, or committed to implement, rules consistent with the Action 2 recommendations.

There are existing Canadian income tax rules that the government can use to challenge certain hybrid arrangements. However, further specific legislative measures would provide certainty and, as noted above, there are significant advantages to adopting the common approach in the Action 2 report.

Budget 2021 proposes to implement rules consistent with the Action 2 recommendations, with appropriate adaptations to the Canadian income tax context.

In general terms, under the main proposed rules, payments made by Canadian residents under hybrid mismatch arrangements would not be deductible for Canadian income tax purposes to the extent that they give rise to a further deduction in another country or are not included in the ordinary income of a non-resident recipient. Conversely, to the extent that a payment made under such an arrangement by an entity that is not resident in Canada is deductible for foreign income tax purposes, no deduction in respect of the payment would be permitted against the income of a Canadian resident. Any amount of the payment received by a Canadian resident would also be included in income, and, if the payment is a dividend, it would not be eligible for the deduction otherwise available for certain dividends received from foreign affiliates. In effect, these rules would neutralize a mismatch by aligning the Canadian income tax treatment with the income tax treatment in the foreign country.

Rules implementing other Action 2 recommendations – such as those on branch mismatch arrangements, imported mismatch arrangements and reverse hybrids (i.e., entities that are fiscally transparent under the laws of the country where they are formed, but are treated as a separate entity under the laws of an investor's country) – would be introduced to the extent relevant and appropriate in the Canadian context.

Consistent with the Action 2 recommendations:

- The proposed rules would be mechanical in nature and would not be conditioned on a purpose test.
- With limited exceptions, the proposed rules would apply in respect of payments between related parties and payments under certain arrangements between unrelated parties that are designed to produce a mismatch.

- The ordering rules recommended by the report would also apply to ensure that the proposed rules are coordinated with similar rules in other countries.

The proposed rules to address hybrid arrangements would be implemented in two separate legislative packages. The first package would comprise rules implementing (with any modifications required for the Canadian income tax context) the recommendations in Chapters 1 and 2 of the Action 2 report. These would generally be intended to neutralize a deduction/non-inclusion mismatch arising from a payment in respect of a financial instrument.

The first legislative package would be released for stakeholder comment later in 2021, and those rules would apply as of July 1, 2022.

The second legislative package would be released for stakeholder comment after 2021, and those rules would apply no earlier than 2023. This package would comprise rules consistent with the Action 2 recommendations that were not addressed in the first package.

Sales and Excise Tax Measures

Application of the GST/HST to E-commerce

In the Fall Economic Statement 2020, the Government of Canada proposed a number of changes to the Goods and Services Tax/Harmonized Sales Tax (GST/HST) system to ensure that the GST/HST applies in a fair and effective manner to the growing digital economy:

- The government proposed that non-resident vendors supplying digital products or services (including traditional services) to consumers in Canada be required to register for the GST/HST and to collect and remit the tax on their taxable supplies to Canadian consumers. Distribution platform operators would also be required to register for the GST/HST and to collect and remit the tax on the supplies to Canadian consumers that they facilitate. To support compliance with these requirements, a simplified GST/HST registration and remittance framework would be available to non-resident vendors and non-resident distribution platform operators that are not carrying on business in Canada (e.g., have no permanent establishment in Canada).
- The government proposed that distribution platform operators be required to register under the normal GST/HST rules and to collect and remit GST/HST in respect of sales of goods shipped from a fulfillment warehouse or another place in Canada, when those sales are made by non-registered vendors through distribution platforms. Non-resident vendors that make sales on their own (i.e., not made through a distribution platform) would also be required to register under the normal GST/HST rules and to collect and remit GST/HST in respect of sales of goods shipped from a fulfillment warehouse or another place in Canada.

- The government proposed to apply the GST/HST on all supplies of short-term accommodation in Canada facilitated through a digital accommodation platform. Under the proposal, the GST/HST would be required to be collected and remitted on short-term accommodations supplied in Canada through an accommodation platform by either the property owner or the accommodation platform operator. A simplified GST/HST registration and remittance framework would be available to non-resident accommodation platform operators that are not carrying on business in Canada.

These measures would come into force on July 1, 2021.

The government also released draft legislative proposals in relation to the measures and invited interested parties to submit comments on these proposals and the associated draft legislation.

Budget 2021 proposes amendments to these proposals and the associated draft legislation, which take into consideration comments received from stakeholders. These amendments are intended to ensure that the proposals and draft legislation operate effectively and to clarify the application of certain provisions. The substantive proposed amendments are set out below.

Proposed Amendments

Safe Harbour Rules

Under the proposals, platform operators would be required to collect and remit the GST/HST on the supplies they facilitate by third parties that are not registered under the existing GST/HST framework. In many cases, platform operators may rely on information provided by third parties on the transactions they make for determining whether the platform operator is required to collect and remit tax.

Budget 2021 proposes additional rules that would:

- impose joint and several, or solidary, liability on a platform operator and a third-party supplier for the collection and remittance of tax, if the third-party supplier provides false information to the platform operator; and
- limit the liability of a platform operator for failure to collect and remit tax, if the platform operator reasonably relied on the information provided by a third-party supplier.

These proposed rules would ensure that a platform operator is not held liable for failing to collect and remit tax as a result of having relied in good faith on information provided by a third-party supplier. Under the proposed rules, the platform operator would be relieved from liability to the extent that it did not collect and remit tax (i.e., where it partially collected tax, it would remain liable for those amounts) and the third-party supplier that provided false information would be liable for any amounts not collected.

Eligible Deductions

Budget 2021 proposes an amendment to clarify that suppliers registered for the GST/HST under the simplified framework are eligible to deduct amounts for bad debts and certain provincial HST point-of-sale rebates to purchasers (e.g., in respect of audio books) from the tax that they are required to remit, and that public libraries and similar institutions are eligible to claim a rebate for the GST paid on audio books acquired from those suppliers. For instance, a supplier that writes off a bad debt in respect of an amount of GST/HST that they had remitted but for which they are subsequently unable to collect from a purchaser, would be able to deduct the uncollectable bad debt amount from the GST/HST that they are required to remit for a reporting period.

Threshold Amount Determination

Under the proposal for cross-border digital products and services, a non-resident vendor or distribution platform operator with sales to consumers in Canada that exceed, or are expected to exceed, $30,000 over a 12-month period is required to register for the GST/HST under the simplified framework and charge the GST/HST on their sales. Budget 2021 proposes an amendment to the proposals to clarify that supplies of digital products or services that are GST/HST-free (i.e., zero-rated) are not included in the calculation of the threshold amount for determining if a person is required to be registered for the GST/HST under the simplified framework.

Platform Operator Information Return

Under the proposals, platform operators would be required to file an annual information return if they facilitate a supply of short-term accommodation situated in Canada or a sale by a non-registered vendor of goods that are located in a fulfillment warehouse in Canada. Budget 2021 proposes an amendment to clarify that the requirement to file an annual information return applies only to platform operators that are registered or are required to be registered for the GST/HST.

Authority for the Minister of National Revenue to Register a Person

The proposals describe the non-resident vendors and platform operators that are required to register under the simplified framework and obligations for these entities. Budget 2021 proposes an amendment to provide the Minister of National Revenue the authority to register a person that the Minister believes should be registered under the simplified framework. This authority already exists in respect of the existing GST/HST framework and in the rules of other jurisdictions that have adopted similar e-commerce measures.

Administration and Compliance Approach

The government expects that affected businesses and platform operators will comply with their obligations to register, collect and remit the GST/HST as set out under the new rules and legislative provisions to ensure that the GST/HST applies effectively and fairly to e-commerce transactions.

In line with the best practices of other jurisdictions that have adopted similar measures, the Canada Revenue Agency (CRA) will work closely with affected businesses and platform operators to assist them in meeting their obligations. Where the affected businesses and platform operators show that they have taken reasonable measures but are unable to meet their new obligations for operational reasons, the CRA will take a practical approach to compliance and exercise discretion in administering these measures during a 12-month transition period, starting from the July 1, 2021 coming into force date.

Additional Technical Information and Contact Information

Persons seeking additional technical information regarding the proposed measures may contact the CRA at 1-833-585-1463 (for calls from Canada and the United States – toll-free) or 1-613-221-3154 (for calls from elsewhere – collect calls accepted). Persons may also request a written technical explanation from the CRA. https://www.canada.ca/en/revenue-agency/services/forms-publications/publications/1-4/excise-gst-hst-rulings-interpretations-service.html

Input Tax Credit Information Requirements

Under the GST/HST, businesses can claim input tax credits (ITCs) to recover the GST/HST that they pay for goods and services used as inputs in their commercial activities. Allowing businesses to recover the GST/HST in this manner helps ensure that the tax that they pay on their inputs does not become embedded in the final price of goods and services, and thereby makes Canadian businesses more competitive.

Information Requirements to Support ITC Claims

Businesses must obtain and retain certain information in order to support their ITC claims. The required information is contained in documents provided by their suppliers, such as invoices or receipts.

The information requirements for these documents are graduated, with progressively more information required when the amount paid or payable in respect of a supply equals or exceeds thresholds of $30 or $150.

In addition, under the ITC information rules, either the supplier or an intermediary (i.e., a person that causes or facilitates the making of a supply on behalf of the

supplier) must provide its business name and, depending on the amount paid or payable in respect of the supply, its GST/HST registration number, on the supporting documents. However, for the purposes of these rules, an intermediary currently does not include a billing agent (i.e., an agent that collects consideration and tax on behalf of an underlying vendor but does not otherwise cause or facilitate a supply). Billing agents therefore currently cannot provide their GST/HST registration number and/or business name as part of the required ITC information. Instead, the recipient of the supply must obtain the business name and registration number of the underlying vendor.

To simplify tax compliance for businesses, Budget 2021 proposes to increase the current ITC information thresholds to $100 (from $30) and $500 (from $150), and to allow billing agents to be treated as intermediaries for purposes of the ITC information rules.

These measures would come into force on the day after Budget Day.

GST New Housing Rebate Conditions

The GST New Housing Rebate entitles homebuyers to recover 36 per cent of the GST (or the federal component of the HST) paid on the purchase of a new home priced up to $350,000. The maximum rebate is $6,300. The GST New Housing Rebate is phased out for new homes priced between $350,000 and $450,000. There is no GST New Housing Rebate for new homes priced at $450,000 or more.

In addition to the above price thresholds, several other conditions must be met in order for a purchaser to qualify for the GST New Housing Rebate. In particular, the purchaser must be acquiring the new home for use as their primary place of residence or as the primary place of residence of a relation (i.e., an individual related by blood, marriage, common-law partnership or adoption, or a former spouse or former common-law partner). Under the current rules, if two or more individuals who are not considered relations for GST New Housing Rebate purposes buy a new home together, all of those individuals must meet this condition – otherwise none of them will be eligible for the GST New Housing Rebate.

Budget 2021 proposes to remove the condition that where two or more individuals buy a new home together, each of them must be acquiring the home for use as their primary place of residence or the primary place of residence of a relation. Instead, the GST New Housing Rebate would be available as long as the new home is acquired for use as the primary place of residence of any one of the purchasers or a relation of any one of the purchasers.

In addition to new homes purchased from a builder, the GST New Housing Rebate is available in respect of owner-built homes, co-op housing shares and homes constructed on leased land. The proposed change to the rebate

conditions would also be applicable in these circumstances. The proposed change would also apply to new housing rebates in respect of the provincial component of the HST.

This measure would apply to a supply made under an agreement of purchase and sale entered into after Budget Day. However, in the case of a rebate for owner-built homes, the measure would apply where construction or substantial renovation of the residential complex is substantially completed after Budget Day.

Rebate of Excise Tax for Goods Purchased by Provinces

Under the *Excise Tax Act*, provinces are provided relief from the federal excise tax embedded in the price of motive fuels, air conditioners in automobiles, and fuel inefficient vehicles (i.e., the "green levy"), which they purchase or import for the province's own use. In particular, when these goods are sold to a province, for the province's own use, either the province or the vendor is entitled to a rebate equal to the amount of the embedded tax (the "provincial-use rebate").

The provincial-use rebate applies only in a province that does not have an agreement with the federal government under which, in general terms, the province and the federal government mutually agree to pay each other's taxes. Where a province that does not have such an agreement with the federal government purchases these goods from a vendor, the provincial-use rebate can either be claimed by the province itself (in which case the province would be expected to have paid the embedded tax) or by the vendor (in which case the province would be expected not to have paid the embedded tax). Only one party (either the vendor or the province) is entitled to the rebate.

To clarify which party is eligible to claim the provincial-use rebate, Budget 2021 proposes to create a joint election mechanism to specify that the vendor alone would be eligible to apply for the rebate only if it jointly elects with the province to be the eligible party. If no joint election were made, then only the province would be eligible to apply for the rebate.

This measure would apply in relation to these goods purchased or imported by a province on or after January 1, 2022.

Excise Duty on Tobacco

Budget 2021 proposes to increase the tobacco excise duty rate by $4 per carton of 200 cigarettes, along with corresponding increases to the excise duty rates for other tobacco products outlined in Table 9.

Inventories of cigarettes held by certain manufacturers, importers, wholesalers and retailers at the beginning of the day after Budget Day would be subject to an inventory tax of $0.02 per cigarette (subject to certain exemptions). Taxpayers would have until June 30, 2021 to file a return and pay the cigarette inventory tax.

Table 9
Tobacco Excise Duty Rate Structure

Products	Current Excise Duty Rates (Effective April 1, 2021)	Proposed Excise Duty Rates after Budget Day
Cigarettes (per five cigarettes or fraction thereof)	$0.62725	$0.72725
Tobacco Sticks (per stick)	$0.12545	$0.14545
Manufactured Tobacco (per 50 grams or fraction thereof)	$7.84062	$9.09062
Cigars	$27.30379 per 1,000 cigars plus the greater of $0.09814 per cigar and 88 per cent of the sale price or duty-paid value	$31.65673 per 1,000 cigars plus the greater of $0.11379 per cigar and 88 per cent of the sale price or duty-paid value

This measure would come into force on the day after Budget Day.

Excise Duty on Vaping Products

Budget 2021 proposes to implement a tax on vaping products in 2022 through the introduction of a new excise duty framework.

The government invites input from industry and stakeholders on these proposals to help ensure the effective imposition and collection of excise duties on vaping products. Written comments should be sent by June 30, 2021 to: fin.vaping-taxation-vapotage.fin@canada.ca.

Tax Base

A new excise duty framework on vaping products is proposed to be introduced as part of the existing *Excise Act, 2001* ("the Act"), which currently applies excise duties on tobacco, wine, spirits, and cannabis products. The new duty would apply solely to vaping liquids that are produced in Canada or imported and that are intended for use in a vaping device in Canada. These liquids generally contain vegetable glycerin, as well as any combination of propylene glycol, flavouring, nicotine, or other ingredients, all of which must comply with Health Canada regulations. The new duty would apply to these vaping liquids whether or not they contain nicotine. Cannabis-based vaping products would be explicitly exempt from this framework, as they are already subject to cannabis excise duties under the Act.

Duty Rate

The proposed framework would impose a single flat rate duty on every 10 millilitres (ml) of vaping liquid or fraction thereof, within an immediate container (i.e., the container holding the liquid itself). This rate could be in the order of $1.00 per 10 ml or fraction thereof, and the excise duty would be calculated and imposed based on the volume of the smallest immediate container holding the liquid.

- To illustrate, if a retail package contains four separate pods of 1.0 ml of vaping liquid, each pod would be considered a separate container for the purpose of the duty. The duty would be calculated based on the volume of liquid in each separate pod (i.e., $1.00 per pod, for a total of $4.00 for the retail package), and not on the total volume of liquid in the package.
- Larger volumes of liquids, a 30 ml container for example, would be subject to excise duties of $3.00, while a 100 ml container would bear an excise duty burden of $10.00.

Generally, the flat rate would be imposed and payable at the time of packaging or importation. The last federal licensee in the supply chain who packaged the vaping product for final retail sale, including vape shops holding an excise licence, as applicable, would be liable to pay the applicable excise duty.

Administration

The Canada Revenue Agency (CRA) would be responsible for administering and enforcing the new excise duty framework for vaping products, including ensuring compliance with the general application and administrative rules contained within the Act. The Canada Border Services Agency (CBSA) would be responsible for administering and enforcing the framework at the border. To promote compliance with the taxation of vaping products, penalty and offence provisions broadly

similar to those applying to alcohol, tobacco and cannabis duties would apply.

Licensing and Registration Requirements

Manufacturers and importers of dutiable vaping products would be required to obtain a licence for their activities from the CRA. This would include any vape shops that would like to obtain and then use non-duty paid, bulk vaping products to mix or manufacture new vaping products on-site for immediate or subsequent sale to final customers, upon which duty would apply and need to be remitted.

Applicants who wished to obtain licences from the CRA would be expected to meet a number of criteria, similar to those for other excisable products already enumerated under the Act and its regulations, such as not having acted to defraud the government in the past five years. Licences for vaping product manufacturers and importers would be issued for a maximum of three years and would not be automatically renewed.

Excise Stamping Requirements

It is proposed that all dutiable vaping products removed from the premises of a federal licensee to enter the Canadian duty-paid market would be required to be packaged in a container intended for sale at the retail level (a "retail package"), and would be required to bear an excise stamp showing that duties have been paid. As with the current tobacco and cannabis stamping programs, a stamp would need to be affixed to a retail package:

- in a conspicuous place on the package;
- in a manner that seals the package (i.e., once the package is opened the stamp cannot be in a condition to be re-used);
- in a manner that the stamp remains affixed to the package after the package is opened; and
- in a manner that does not obstruct any information that is required under an Act of Parliament to appear on the package, including potential Health Canada warnings.

The issuance of stamps would be administered by the CRA, and the stamps would be sold through an authorized provider.

The Act would also prohibit the possession or sale of any unstamped dutiable vaping products by a person unless otherwise allowed under the Act. These allowances would include those made for persons licensed or registered with the CRA, and could further include those for:

- A person who is transporting the product under circumstances and conditions prescribed by regulations; or
- A licensee who has imported bulk vaping liquids intended for use in a vaping device but which require further processing, manufacturing, or packaging.

Reporting Requirements

All licensees would be required to submit to the CRA a monthly duty and information return. The return would include the following required information:

- the quantity (e.g., liquid volume) of products manufactured or imported;
- the amount of excise duty payable;
- inventory details, such as opening, additions, reductions, and closing; and
- the quantity of products sent for export under any special permit authorizations.

Imports and Exports

Importations of vaping products subject to the proposed taxation framework would be subject to excise duties, unless duty is not payable (e.g., if the product is not yet in a state where it could be entered into the retail market for sale to a final consumer). Exportations of vaping products would not be subject to excise duties. Stamps would also be made available to producers outside of Canada, as is the case for tobacco products.

Non-Dutiable Vaping Products

Aside from exports of non-duty paid vaping products, the Act could provide for certain circumstances in which vaping products would be non-dutiable. For example, duty would not be payable on vaping products taken for analysis or re-worked/destroyed (in a manner approved by the Minister) by a licensee or by the Minister. This would include vaping products delivered to a person prescribed by regulations for destruction by that person in circumstances prescribed by regulations.

Personal Use

Registration and licensing would not be required for individuals who mix vaping liquids strictly for their own personal consumption.

Federal-provincial-territorial Taxation Coordination

The government will also work collaboratively with any provinces and territories that may be interested in a federally coordinated approach to taxing these products, which could be achieved through the implementation of taxation on a common base of vaping products through federal legislation.

A coordinated framework for the taxation of vaping products could include an initial federal rate, with an additional rate to follow in respect of products intended for consumption in provinces and territories choosing to participate.

Licensees would have to apply an excise stamp with an indicator (e.g., colour) of the intended provincial or territorial market.

Tax on Select Luxury Goods

Budget 2021 proposes to introduce a tax on the retail sale of new luxury cars and personal aircraft priced over $100,000, and boats priced over $250,000, effective as of January 1, 2022. For vehicles, aircraft and boats sold in Canada, the tax would apply at the point of purchase if the final sale price paid by a consumer (not including the GST/HST or provincial sales tax) is above the $100,000 or $250,000 price threshold, as the case may be. Importations of vehicles, aircraft and boats would also be subject to the tax.

Tax Base

Luxury Vehicles

It is proposed that all new passenger vehicles typically suitable for personal use be included in the base, including coupes, sedans, station wagons, sports cars, passenger vans and minivans equipped to accommodate less than 10 passengers, SUVs, and passenger pick-up trucks.

It is proposed that the following vehicles typically purchased for personal use be excluded from the base:

- Motorcycles and certain off-road vehicles, such as all-terrain vehicles and snowmobiles;
- Racing cars (i.e., vehicles that are not street legal and are owned solely for on-track or off-road racing); and
- Motor homes (commonly known as recreational vehicles, or RVs) that are designed to provide temporary living, sleeping, or eating accommodation for travel, vacation, seasonal camping, or recreational use.

For greater certainty, off-road, construction, and farm vehicles would fall outside the scope of the tax. Similarly, certain commercial (e.g., heavy-duty vehicles such as some trucks and cargo vans) and public sector (such as buses, police cars and ambulances) vehicles, as well as hearses, would not be subject to the tax.

Aircraft

It is proposed that the tax apply to all new aircraft typically suitable for personal use, including aeroplanes, helicopters and gliders. As a general rule, it is proposed that large aircraft typically used in commercial activities, such as those equipped for the carriage of passengers and having a certified maximum carrying capacity of more than 39 passengers, be excluded from the base. Smaller aircraft

used in certain commercial (such as public transportation) and public sector (police, military and rescue aircraft, air ambulances) activities would also be excluded from the base.

Boats

It is proposed that the tax apply to new boats such as yachts, recreational motorboats and sailboats, typically suitable for personal use. Smaller personal watercraft (e.g., water scooters) would be excluded from the base. For greater certainty, floating homes, commercial fishing vessels, ferries, and cruise ships would fall outside the scope of the tax.

Tax Rate

For vehicles and aircraft priced over $100,000, the amount of the tax would be the lesser of 10 per cent of the full value of the vehicle or the aircraft, or 20 per cent of the value above $100,000.

For boats priced over $250,000, the amount of the tax would be the lesser of 10 per cent of the full value of the boat or 20 per cent of the value above $250,000.

Point of Imposition

The tax would generally apply at the final point of purchase of new luxury vehicles, aircraft and boats in Canada. In the case of imports, application would generally be either at the time of importation (in cases where there will not be a further sale of the goods in Canada) or at the time of the final point of purchase in Canada following importation.

Upon purchase or lease, the seller or lessor would be responsible for remitting the full amount of the federal tax owing, regardless of whether the good was purchased outright, financed, or leased over a period of time.

Exports will not be subject to the tax, in line with their treatment under other taxation regimes.

Treatment under the GST/HST

The GST/HST would apply to the final sale price, inclusive of the proposed tax.

Next Steps

Further details will be announced in the coming months.

Customs Tariff and Tax Measures

Duty and Tax Collection on Imported Goods

Budget 2021 proposes amendments to the *Customs Act* to improve the collection of duties and taxes on imported goods.

Currently, some importers with foreign ties value their goods at a lower price than most Canadian importers by using a previous foreign sale price. This practice results in a lower value of duties and taxes paid when importing these goods into Canada. The amendments to the *Customs Act* and related regulations would ensure that all importers value their goods using the value of the last sale for export to a purchaser in Canada, ensuring fairness for all importers and enhancing consistency with international rules.

A second element to the proposal would support a broad modernization of payment processes for commercial importers in the *Customs Act* and regulations. These changes will support the implementation and enforcement of a streamlined and harmonized billing cycle for commercial importations that will include flexibility to make good-faith corrections without incurring penalties or interest. These changes would coincide with implementation of key functionalities of the CBSA Assessment and Revenue Management initiative that is set to serve as a single portal for commercial importers.

Previously Announced Measures

Budget 2021 confirms the government's intention to proceed with the following previously announced tax and related measures, as modified to take into account consultations and deliberations since their release:

- Legislative proposals released on March 3, 2021 in respect of "baseline remuneration" for the Canada Emergency Wage Subsidy.
- Legislative proposals released on February 24, 2021 in respect of the Canada Emergency Wage Subsidy, the Canada Emergency Rent Subsidy and the Lockdown Support.
- Legislative proposals released on January 19, 2021 in respect of temporary adjustments to the Child Care Expense and Disability Supports deductions.
- Legislative proposals released on December 21, 2020 relating to temporary adjustments to the automobile standby charge to take into account COVID-19.
- Legislative proposals released on December 16, 2020 extending timelines in respect of flow-through shares by 12 months.
- Legislative proposals released on December 15, 2020 relating to capital cost allowance claims for purchases of zero-emission automotive equipment and vehicles.
- The anti-avoidance rules consultation and the income tax measures announced on November 30, 2020 in the Fall Economic Statement in respect of:
  - registered disability savings plans;
  - employee stock options; and
  - patronage dividends paid in shares.
- Measures announced on November 30, 2020 in the Fall Economic Statement regarding Goods and Services Tax/Harmonized Sales Tax relief on face masks and face shields.
- Legislative proposals announced on November 27, 2020 to facilitate the conversion of Health and Welfare Trusts to Employee Life and Health Trusts.
- Regulatory proposals announced on July 2, 2020 providing relief for Deferred Salary Leave Plans and Registered Pension Plans during the COVID-19 pandemic.
- Legislative proposals released on April 17, 2020 to clarify support for Canadian journalism.
- The income tax measure announced on December 20, 2019 to extend the maturation period of amateur athletes trusts maturing in 2019 by one year, from eight years to nine years.

- The income tax measure announced on December 9, 2019 to increase the Basic Personal Amount to $15,000 by 2023.
- The income tax measure announced on August 29, 2019 to clarify the definition of a shared-custody parent.
- Legislative proposals released on July 30, 2019 to implement Budget 2019 income tax measures in respect of:
  - multi-unit residential properties;
  - permitting additional types of annuities under registered plans;
  - contributions to specified multi-employer pension plans for older members;
  - pensionable service under an individual pension plan;
  - the allocation to redeemers methodology for mutual funds;
  - character conversion transactions;
  - electronic delivery of requirements for information;
  - the transfer pricing rules;
  - the foreign affiliate dumping rules; and
  - cross-border share lending arrangements.
- Measures released on July 30, 2019 modifying previously enacted measures from the November 21, 2018 Fall Economic Statement and Budget 2019, in respect of:
  - the Accelerated Investment Incentive;
  - the expensing of the cost of machinery and equipment used in the manufacturing or processing of goods and the cost of specified clean energy equipment; and
  - the expensing of the cost of certain zero-emission vehicles.
- Legislative proposals released on May 17, 2019 relating to the Goods and Services Tax/Harmonized Sales Tax.
- Remaining regulatory proposals released on July 27, 2018 relating to the Goods and Services Tax/Harmonized Sales Tax.
- The income tax measures announced in Budget 2018 to implement enhanced reporting requirements for certain trusts to provide additional information on an annual basis.
- Measures confirmed in Budget 2016 relating to the Goods and Services Tax/Harmonized Sales Tax joint venture election.

Budget 2021 also reaffirms the government's commitment to move forward as required with technical amendments to improve the certainty and integrity of the tax system.

Notices of Ways and Means Motions

Notice of Ways and Means Motion to Amend the Income Tax Act and Other Related Legislation

That it is expedient to amend the *Income Tax Act* (the "Act") and other related legislation as follows:

Disability Tax Credit

1 The Act is modified to give effect to the proposals relating to the Disability Tax Credit as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Canada Workers Benefit

2 (1) The portion of subsection 117.1(1) of the Act before paragraph (b) is replaced by the following:

Annual adjustment

117.1 (1) Each specified amount in relation to tax payable under this Part or Part I.2 for a taxation year shall be adjusted so that the amount to be used for the year under the provision for which the amount is relevant is the total of

(a) the amount that would, but for subsection (3), be the amount to be used under the relevant provision for the preceding taxation year, and

(2) Section 117.1 of the Act is amended by adding the following after subsection (1):

Annual adjustment — amounts

(2) For the purposes of subsection (1), each of the following amounts is a specified amount in relation to tax payable under this Part or Part I.2 for a taxation year:

(a) the amount of $300 referred to in subparagraph 6(1)(b)(v.1);

(b) the amount of $1,000 referred to in the formula in paragraph 8(1)(s);

(c) the amount of $400,000 referred to in the formula in paragraph 110.6(2)(a);

(d) each of the amounts expressed in dollars in subsection 117(2);

(e) each of the amounts expressed in dollars in the description of B in subsection 118(1);

(f) the amount of $12,298 in the description of A in subsection 118(1.1);

(g) the amount of $15,000 in paragraph (d) of the description of F in subsection 118(1.1);

(h) each of the amounts expressed in dollars in subsection 118(2);

(i) the amount of $1,000 referred to in subsection 118(10);

(j) the amount of $15,000 referred to in subsection 118.01(2);

(k) each of the amounts expressed in dollars in subsection 118.2(1);

(l) each of the amounts expressed in dollars in subsection 118.3(1);

(m) each of the amounts expressed in dollars in subsection 122.5(3);

(n) the amount of $2,500 referred to in subsection 122.51(1);

(o) each of the amounts expressed in dollars in subsection 122.51(2);

(p) the amounts of $14,000 referred to in subsection 122.7(1.3);

(q) the amounts of $1,395 and $2,403 in the description of A, and each of the amounts expressed in dollars in the description of B, in subsection 122.7(2);

(r) the amount of $720 in the description of C, and each of the amounts expressed in dollars in the description of D, in subsection 122.7(3);

(s) the amount of $10,000 in the description of B in subsection 122.91(2); and

(t) each of the amounts expressed in dollars in Part I.2.

(3) Subsections (1) and (2) apply to the 2021 and subsequent taxation years. However, the adjustment provided for in subsection 117.1(1) of the Act, as enacted by subsection (1), does not apply

(a) for the 2021 to 2023 taxation years, in respect of paragraph 117.1(2)(g) of the Act, as enacted by subsection (2); and

(b) for the 2021 taxation year, in respect of paragraphs 117.1(2)(p), (q) and (r) of the Act, as enacted by subsection (2).

3 (1) Section 122.7 of the Act is amended by adding the following after subsection (1.2):

Secondary earner exemption

(1.3) For the purposes of subsections (2) and (3),

(a) if an eligible individual had an eligible spouse for a taxation year and the working income for the year of the eligible individual was less than the working income for the year of the eligible spouse, the eligible individual's adjusted net income for the year is deemed to be the amount, if any, by which the eligible individual's adjusted net income for the year (determined without reference to this subsection) exceeds the lesser of

(i) the eligible individual's working income for the year, and

(ii) $14,000; and

(b) if an eligible individual had an eligible spouse for a taxation year and the working income for the year of the eligible individual was greater than or equal to the working income for the year of the eligible spouse, the eligible spouse's adjusted net income for the year is deemed to be the amount, if any, by which the eligible spouse's adjusted net income for the year (determined without reference to this subsection) exceeds the lesser of

(i) the eligible spouse's working income for the year, and

(ii) $14,000.

(2) The descriptions of A and B in subsection 122.7(2) of the Act are replaced by the following:

A is

(a) if the individual had neither an eligible spouse nor an eligible dependant, for the taxation year, the lesser of $1,395 and 27% of the amount, if any, by which the individual's working income for the taxation year exceeds $3,000, and

(b) if the individual had an eligible spouse or an eligible dependant, for the taxation year, the lesser of $2,403 and 27% of the amount, if any, by which the total of the working incomes of the individual and, if applicable, of the eligible spouse, for the taxation year, exceeds $3,000; and

B is

(a) if the individual had neither an eligible spouse nor an eligible dependant, for the taxation year, 15% of the amount, if any, by which the adjusted net income of the individual for the taxation year exceeds $22,944, and

(b) if the individual had an eligible spouse or an eligible dependant, for the taxation year, 15% of the amount, if any, by which the total of the adjusted net incomes of the individual and, if applicable, of the eligible spouse, for the taxation year, exceeds $26,177.

(3) The descriptions of C and D in subsection 122.7(3) of the Act are replaced by the following:

C is the lesser of $720 and 27% of the amount, if any, by which the individual's working income for the taxation year exceeds $1,150; and

D is

(a) if the individual had neither an eligible spouse nor an eligible dependant, for the taxation year, 15% of the amount, if any, by which the individual's adjusted net income for the taxation year exceeds $32,244,

(b) if the individual had an eligible spouse for the taxation year who was not entitled to deduct an amount under subsection 118.3(1) for the taxation year, or had an eligible dependant for the taxation year, 15% of the amount, if any, by which the total of the adjusted net incomes of the individual and, if applicable, of the eligible spouse, for the taxation year, exceeds $42,197, and

(c) if the individual had an eligible spouse for the taxation year who was entitled to deduct an amount under subsection 118.3(1) for the taxation year, 7.5% of the amount, if any, by which the total of the adjusted net incomes of the individual and of the eligible spouse, for the taxation year, exceeds $42,197.

(4) Subsections (1) to (3) are deemed to have come into force on January 1, 2021.

Northern Residents Deductions

4 The Act is modified to give effect to the proposals relating to Northern Residents Deductions as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Postdoctoral Fellowship Income

5 (1) The definition *earned income* in subsection 146(1) of the Act is amended by adding the following after paragraph (b):

(b.01) an amount included under paragraph 56(1)(n) in computing the taxpayer's income for a period in the year throughout which the taxpayer was resident in Canada in connection with a program that consists primarily of research and does not lead to a diploma from a college or a Collège d'enseignement général et professionnel, or a bachelor, masters, doctoral or equivalent degree,

(2) Subsection (1) applies in respect of the definition "earned income" under subsection 146(1) of the Act for taxation years after 2020. However, it also applies in respect of the definition "earned income" under subsection 146(1) of the Act for the 2011 to 2020 taxation years, for the purpose of determining the taxpayer's "RRSP deduction limit" under subsection 146(1) of the Act in respect of a taxation year after 2020 during which the taxpayer makes a request in writing with the Minister of National Revenue for an adjustment to their "earned income" for any of those prior years.

Tax Treatment of COVID-19 Benefit Amounts

6 (1) Subparagraph 56(1)(r)(iv) of the Act is replaced by the following:

(iv) financial assistance provided under a program established by a government, or government agency, in Canada that provides income replacement benefits similar to income replacement benefits provided under a program established under the *Employment Insurance Act*, other than amounts referred to in subparagraph (iv.1),

(iv.1) financial assistance provided under

(A) the *Canada Emergency Response Benefit Act*,

(B) Part VIII.4 of the *Employment Insurance Act*,

(C) the *Canada Emergency Student Benefit Act*,

(D) the *Canada Recovery Benefits Act*, or

(E) a program established by a government, or government agency, of a province, that provides income replacement benefits similar to income replacement benefits provided under a program established under an Act referred to in any of clauses (A) to (D), or

(2) Subsection (1) is deemed to have come into force on January 1, 2020.

7 (1) Section 60 of the Act is amended by adding the following after paragraph (v.2):

COVID-19 – other benefit repayments

(v.3) any benefit repaid by the taxpayer before 2023 to the extent that the amount of the benefit was included in computing the taxpayer's income for the year under any of clauses 56(1)(r)(iv.1)(A) to (D), except to the extent that the amount is

(i) deducted in computing the taxpayer's income for any year under paragraph (n), or

(ii) deductible in computing the taxpayer's income for any year under paragraph (v.2);

(2) Subsection (1) is deemed to have come into force on January 1, 2020.

8 (1) Paragraph 115(1)(a) of the Act is amended by adding the following after subparagraph (iii.21):

(iii.22) the total of all amounts, each of which is an amount included under subparagraph 56(1)(r)(iv.1) in computing the non-resident person's income for the year,

(2) Subsection (1) is deemed to have come into force on January 1, 2020.

Fixing Contribution Errors in Defined Contribution Pension Plans

9 The Act is modified to give effect to the proposals relating to Fixing Contribution Errors in Defined Contribution Pension Plans as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Taxes Applicable to Registered Investments

10 (1) Subsection 204.6(1) of the Act is replaced by the following:

Tax payable

204.6 (1) If at the end of any month a taxpayer that is a registered investment described in paragraph 204.4(2)(b), (d) or (f) holds property that is not a prescribed investment for that taxpayer, it shall, in respect of that month, pay a tax under this Part equal to the total of all amounts each of which is an amount determined in respect of such a property by the formula

$$0.01(A \times B/C)$$

where

A is the fair market value of the property at the time of its acquisition by the taxpayer;

B is the total number of issued units or issued and outstanding shares of the capital stock of the registered investment held at the end of the month by

(a) registered retirement savings plans,

(b) deferred profit sharing plans,

(c) registered retirement income funds, or

(d) registered investments described in paragraphs 204.4(2)(b), (d) or (f); and

C is the total number of issued units or issued and outstanding shares of the capital stock of the registered investment at the end of the month.

(2) Subsection (1) applies in respect of months after 2020. It also applies to a taxpayer in respect of a month before 2021 if, on or before Budget Day,

(a) no notice of assessment in respect of an amount payable under subsection 204.6(1) of the Act for the month has been sent to the taxpayer in respect of the month, or

(b) if such a notice of assessment has been sent to the taxpayer in respect of the month, it is not the case that the taxpayer has no further right of objection and appeal in respect of the assessment.

Registration and Revocation Rules Applicable to Charities

11 (1) The definition *ineligible individual* in subsection 149.1(1) of the Act is amended by striking out "or" at the end of paragraph (d), by adding "or" at the end of paragraph (e) and by adding the following after paragraph (e):

(f) a listed terrorist entity or a member of a listed terrorist entity,

(g) a director, trustee, officer or like official of a listed terrorist entity during a period in which that entity supported or engaged in terrorist activities, including a period prior to the date on which the entity became a listed terrorist entity, or

(h) an individual who controlled or managed, directly or indirectly, in any manner whatever, a listed terrorist entity during a period in which that entity supported or engaged in terrorist activities, including a period prior to the date on which the entity became a listed terrorist entity; (*particulier non admissible*)

(2) Subsection 149.1(1) of the Act is amended by adding the following in alphabetical order:

listed terrorist entity, at any time, means a person, partnership, group, fund, unincorporated association or organization that is at that time a *listed entity*, as defined in subsection 83.01(1) of the *Criminal Code*; (*entité terroriste inscrite*)

(3) Section 149.1 of the Act is amended by adding the following after subsection (1.01):

Deeming rule — listed terrorist entity

(1.02) If, but for this subsection, a person, partnership, group, fund, unincorporated association or organization becomes a listed terrorist entity at a particular time and ceases to be a listed terrorist entity at a later time further to an application made under subsection 83.05(2), or as a result of paragraph 83.05(6)(d), of the *Criminal Code*, then the entity is deemed not to have become a listed terrorist entity and not to have been a listed terrorist entity throughout that period.

(4) Paragraph 149.1(4.1)(c) of the Act is replaced by the following:

(c) of a registered charity, if a *false statement* (as defined in subsection 163.2(1)) was made in circumstances amounting to *culpable conduct* (as defined in subsection 163.2(1)) in the furnishing of information for the purpose of obtaining or maintaining its registration;

12 Section 168 of the Act is amended by adding the following after subsection (3):

Listed terrorist entities

(3.1) Notwithstanding subsections (1), (2) and (4), if a qualified donee is a *listed terrorist entity* for the purposes of section 149.1, the registration of the qualified donee is revoked as of the date on which it became a listed terrorist entity.

13 The portion of subsection 188(1) of the Act before paragraph (a) is replaced by the following:

Deemed year-end on notice of revocation

188 (1) If on a particular day the Minister issues a notice of intention to revoke the registration of a taxpayer as a registered charity under any of subsections 149.1(2) to (4.1) and 168(1), it becomes a listed terrorist entity or it is determined, under subsection 7(1) of the *Charities Registration (Security Information) Act*, that a certificate served in respect of the charity under subsection 5(1) of that Act is reasonable on the basis of information and evidence available,

14 Subsection 188.2(2) of the Act is amended by striking out "or" at the end of paragraph (d), by adding "or" at the end of paragraph (e) and by adding the following after paragraph (e):

(f) in the case of a person that is a registered charity, if a *false statement* (as defined in subsection 163.2(1)) was made in circumstances amounting to *culpable conduct* (as defined in subsection 163.2(1)) in the furnishing of information for the purpose of maintaining its registration.

Electronic Filing and Certification of Tax and Information Returns

15 The Act is modified to give effect to the proposals relating to Electronic Filing and Certification of Tax and Information Returns as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Emergency Business Supports and Canada Recovery Hiring Program

16 Paragraph 87(2)(g.6) of the Act is replaced by the following:

COVID-19 – wage subsidy

(g.6) for the purposes of section 125.7, the new corporation is deemed to be the same corporation as, and a continuation of, each predecessor corporation unless it is reasonable to consider that one of the main purposes of the amalgamation is to cause the new corporation to qualify for the deemed overpayment under any of subsections 125.7(2) to (2.2) or to increase the amount of that deemed overpayment;

17 (1) The portion of paragraph (a) of the definition *base percentage* in subsection 125.7(1) of the Act before subparagraph (i) is replaced by the following:

(a) for the fifth qualifying period,

(2) The portion of paragraph (b) of the definition *base percentage* in subsection 125.7(1) of the Act before subparagraph (i) is replaced by the following:

(b) for the sixth qualifying period,

(3) The portion of paragraph (c) of the definition *base percentage* in subsection 125.7(1) of the Act before subparagraph (i) is replaced by the following:

(c) for the seventh qualifying period,

(4) The portion of paragraph (d) of the definition *base percentage* in subsection 125.7(1) of the Act before subparagraph (i) is replaced by the following:

(d) for the eighth qualifying period,

(5) The portion of paragraph (e) of the definition *base percentage* in subsection 125.7(1) of the Act before subparagraph (i) is replaced by the following:

(e) for the ninth qualifying period,

(6) The portion of paragraph (f) of the definition *base percentage* in subsection 125.7(1) of the Act before subparagraph (i) is replaced by the following:

(f) for the tenth qualifying period,

(7) Paragraph (g) of the definition *base percentage* in subsection 125.7(1) of the Act is replaced by the following:

(g) for the eleventh qualifying period to the seventeenth qualifying period,

(i) if the entity's revenue reduction percentage is greater than or equal to 50%, 40%, and

(ii) in any other case, the amount determined by the formula

$$0.8 \times A$$

where

A is the revenue reduction percentage;

(h) for the eighteenth qualifying period,

(i) if the entity's revenue reduction percentage is greater than or equal to 50%, 35%, and

(ii) in any other case, the amount determined by the formula

$$0.875 \times (A - 10\%)$$

where

A is the revenue reduction percentage;

(i) for the nineteenth qualifying period,

(i) if the entity's revenue reduction percentage is greater than or equal to 50%, 25%, and

(ii) in any other case, the amount determined by the formula

$$0.625 \times (A - 10\%)$$

where

A is the revenue reduction percentage;

(j) for the twentieth qualifying period,

(i) if the entity's revenue reduction percentage is greater than or equal to 50%, 10%, and

(ii) in any other case, the amount determined by the formula

$$0.25 \times (A - 10\%)$$

where

A is the revenue reduction percentage; and

(k) for a qualifying period after the twentieth qualifying period, a percentage determined by regulation in respect of the eligible entity or, if there is no percentage determined by regulation for the qualifying period, nil. (*pourcentage de base*)

(8) Subparagraphs (b)(i) to (iv) of the definition *baseline remuneration* in subsection 125.7(1) of the Act are replaced by the following:

(i) begins on March 1, 2019 and ends on May 31, 2019, in respect of any of the first qualifying period to the third qualifying period,

(ii) begins on March 1, 2019 and ends on June 30, 2019, in respect of the fourth qualifying period, unless the eligible entity elects to use the period that begins on March 1, 2019 and ends on May 31, 2019 for that qualifying period,

(iii) begins on July 1, 2019 and ends on December 31, 2019, in respect of any of the fifth qualifying period to the thirteenth qualifying period,

(iii.1) begins on March 1, 2019 and ends on June 30, 2019, in respect of any of the fourteenth qualifying period to the seventeenth qualifying period, unless the eligible entity elects to use the period that begins on July 1, 2019 and ends on December 31, 2019 for that qualifying period,

(iii.2) begins on July 1, 2019 and ends on December 31, 2019, in respect of the eighteenth qualifying period and any subsequent qualifying period, or

(iv) if the eligible employee was on leave for any reason mentioned in subsection 12(3) of the *Employment Insurance Act* or section 2 of the *Act respecting parental insurance*, CQLR, c. A-29.011 throughout the period that begins on July 1, 2019 and ends on March 15, 2020, begins 90 days prior to the date on which the employee commenced that leave and ends on the day prior to the date on which they commenced their leave, in respect of the fifth qualifying period and any subsequent qualifying period. (*rémunération de base*)

(9) Paragraphs (a) to (c.7) of the definition *current reference period* in subsection 125.7(1) of the Act are replaced by the following:

(a) for the first qualifying period, March 2020;

(b) for the second qualifying period, April 2020;

(c) for the third qualifying period, May 2020;

(c.1) for the fourth qualifying period, June 2020;

(c.2) for the fifth qualifying period, July 2020;

(c.3) for the sixth qualifying period, August 2020;

(c.4) for the seventh qualifying period, September 2020;

(c.5) for the eighth qualifying period, October 2020;

(c.6) for the ninth qualifying period, November 2020;

(c.7) for the tenth qualifying period, December 2020;

(c.8) for the eleventh qualifying period, December 2020;

(c.9) for the twelfth qualifying period, January 2021;

(c.91) for the thirteenth qualifying period, February 2021;

(c.92) for the fourteenth qualifying period, March 2021;

(c.93) for the fifteenth qualifying period, April 2021;

(c.94) for the sixteenth qualifying period, May 2021;

(c.95) for the seventeenth qualifying period, June 2021;

(c.96) for the eighteenth qualifying period, July 2021;

(c.97) for the nineteenth qualifying period, August 2021;

(c.98) for the twentieth qualifying period, September 2021;

(c.99) for the twenty-first qualifying period, October 2021;

(c.991) for the twenty-second qualifying period, November 2021; and

(10) The definition *eligible employee* in subsection 125.7(1) of the Act is replaced by the following:

eligible employee, of an eligible entity in respect of a week in a qualifying period, means an individual employed by the eligible entity primarily in Canada throughout the qualifying period (or the portion of the qualifying period throughout which the individual was employed by the eligible entity), other than, if the qualifying period is any of the first qualifying period to the fourth qualifying period, an individual who is without remuneration by the eligible entity in respect of 14 or more consecutive days in the qualifying period. (*employé admissible*)

(11) Subparagraphs (a)(i) to (x) of the definition *prior reference period* in subsection 125.7(1) of the Act are replaced by the following:

(i) for the first qualifying period, March 2019,

(ii) for the second qualifying period, April 2019,

(iii) for the third qualifying period, May 2019,

(iv) for the fourth qualifying period, June 2019,

(v) for the fifth qualifying period, July 2019,

(vi) for the sixth qualifying period, August 2019,

(vii) for the seventh qualifying period, September 2019,

(viii) for the eighth qualifying period, October 2019,

(ix) for the ninth qualifying period, November 2019,

(x) for the tenth qualifying period, December 2019,

(xi) for the eleventh qualifying period, December 2019,

(xii) for the twelfth qualifying period, January 2020,

(xiii) for the thirteenth qualifying period, February 2020,

(xiv) for the fourteenth qualifying period, March 2019,

(xv) for the fifteenth qualifying period, April 2019,

(xvi) for the sixteenth qualifying period, May 2019,

(xvii) for the seventeenth qualifying period, June 2019,

(xviii) for the eighteenth qualifying period, July 2019,

(xix) for the nineteenth qualifying period, August 2019,

(xx) for the twentieth qualifying period, September 2019,

(xxi) for the twenty-first qualifying period, October 2019, and

(xxii) for the twenty-second qualifying period, November 2019;

(12) Paragraphs (e) to (g) of the definition *public health restriction* in subsection 125.7(1) of the Act are replaced by the following:

(e) it does not result from a violation by the eligible entity – or a party with which the eligible entity does not deal at arm's length that rents, directly or indirectly, the qualifying property from the eligible entity (referred to in this definition as the "specified tenant") – of an order or decision that meets the conditions in paragraphs (a) to (d);

(f) as a result of the order or decision, some or all of the activities of the eligible entity – or the specified tenant – at, or in connection with, the qualifying property (that it is reasonable to expect the eligible entity – or the specified tenant – would, absent the order or decision, otherwise have engaged in) are required to cease (referred to in this definition as the "restricted activities") based, for greater certainty, on the type of activity rather than the extent to which an activity may be performed or limits placed on the time during which an activity may be performed;

(g) it is reasonable to conclude that at least approximately 25% of the qualifying revenues of the eligible entity – or the specified tenant – for the prior reference period that were earned from, or in connection with, the qualifying property were derived from the restricted activities; and

(13) The portion of paragraph (c) of the definition *qualifying entity* in subsection 125.7(1) of the Act before subparagraph (i) is replaced by the following:

(c) if the qualifying period is any of the first qualifying period to the fourth qualifying period, its qualifying revenues for the current reference period are equal to or less than the specified percentage, for the qualifying period, of

(14) Paragraphs (a) to (d) of the definition *qualifying period* in subsection 125.7(1) of the Act are replaced by the following:

(a) the period that begins on March 15, 2020 and ends on April 11, 2020 (referred to in this section as the “first qualifying period”);

(b) the period that begins on April 12, 2020 and ends on May 9, 2020 (referred to in this section as the “second qualifying period”);

(c) the period that begins on May 10, 2020 and ends on June 6, 2020 (referred to in this section as the “third qualifying period”);

(c.1) the period that begins on June 7, 2020 and ends on July 4, 2020 (referred to in this section as the “fourth qualifying period”);

(c.2) the period that begins on July 5, 2020 and ends on August 1, 2020 (referred to in this section as the “fifth qualifying period”);

(c.3) the period that begins on August 2, 2020 and ends on August 29, 2020 (referred to in this section as the "sixth qualifying period");

(c.4) the period that begins on August 30, 2020 and ends on September 26, 2020 (referred to in this section as the "seventh qualifying period");

(c.5) the period that begins on September 27, 2020 and ends on October 24, 2020 (referred to in this section as the "eighth qualifying period");

(c.6) the period that begins on October 25, 2020 and ends on November 21, 2020 (referred to in this section as the "ninth qualifying period");

(c.7) the period that begins on November 22, 2020 and ends on December 19, 2020 (referred to in this section as the "tenth qualifying period");

(c.8) the period that begins on December 20, 2020 and ends on January 16, 2021 (referred to in this section as the "eleventh qualifying period");

(c.9) the period that begins on January 17, 2021 and ends on February 13, 2021 (referred to in this section as the "twelfth qualifying period");

(c.91) the period that begins on February 14, 2021 and ends on March 13, 2021 (referred to in this section as the "thirteenth qualifying period");

(c.92) the period that begins on March 14, 2021 and ends on April 10, 2021 (referred to in this section as the "fourteenth qualifying period");

(c.93) the period that begins on April 11, 2021 and ends on May 8, 2021 (referred to in this section as the "fifteenth qualifying period");

(c.94) the period that begins on May 9, 2021 and ends on June 5, 2021 (referred to in this section as the "sixteenth qualifying period");

(c.95) the period that begins on June 6, 2021 and ends on July 3, 2021 (referred to in this section as the "seventeenth qualifying period");

(c.96) the period that begins on July 4, 2021 and ends on July 31, 2021 (referred to in this section as the "eighteenth qualifying period");

(c.97) the period that begins on August 1, 2021 and ends on August 28, 2021 (referred to in this section as the "nineteenth qualifying period");

(c.98) the period that begins on August 29, 2021 and ends on September 25, 2021 (referred to in this section as the "twentieth qualifying period");

(c.99) the period that begins on September 26, 2021 and ends on October 23, 2021 (referred to in this section as the "twenty-first qualifying period");

(c.991) the period that begins on October 24, 2021 and ends on November 20, 2021 (referred to in this section as the "twenty-second qualifying period"); and

(d) a prescribed period that ends no later than November 30, 2021. (*période d'admissibilité*)

(15) The portion of paragraph (a) of the definition *rent subsidy percentage* in subsection 125.7(1) of the Act before subparagraph (i) is replaced by the following:

(a) if the qualifying period is any of the eighth qualifying period to the seventeenth qualifying period,

(16) The definition *rent subsidy percentage* in subsection 125.7(1) of the Act is amended by striking out "and" at the end of paragraph (a) and by replacing paragraph (b) with the following:

(a.1) if the qualifying period is any of the eighteenth qualifying period to the twentieth qualifying period, the percentage determined by the formula

A + B

where

A is the eligible entity's base percentage for the qualifying period, and

B is the eligible entity's top-up percentage for the qualifying period; and

(b) for a qualifying period after the twentieth qualifying period, a percentage determined by regulation in respect of the eligible entity or, if there is no percentage determined by regulation for the qualifying period, nil. (*pourcentage de subvention pour le loyer*)

(17) The description of A in the definition *rent top-up percentage* in subsection 125.7(1) of the Act is replaced by the following:

A is 25%, or a prescribed percentage, for any of the eighth qualifying period to the twentieth qualifying period and nil, or a prescribed percentage, for any subsequent qualifying period,

(18) Paragraphs (a) to (c) of the definition *specified percentage* in subsection 125.7(1) of the Act are replaced by the following:

(a) for the first qualifying period, 85%; and

(b) for any of the second qualifying period to the fourth qualifying period, 70%. (*pourcentage déterminé*)

(19) The definition *top-up percentage* in subsection 125.7(1) of the Act is replaced by the following:

top-up percentage, of an eligible entity for a qualifying period, means the percentage determined by regulation for the qualifying period or, if there is no percentage determined by regulation for the qualifying period,

(a) for any of the fifth qualifying period to the tenth qualifying period, the lesser of 25% and the percentage determined by the formula

1.25 × (A – 50%)

where

A is the entity's top-up revenue reduction percentage for the qualifying period;

(b) for any of the eleventh qualifying period to the seventeenth qualifying period, the lesser of 35% and the percentage determined by the formula

1.75 × (A – 50%)

where

A is the entity's top-up revenue reduction percentage for the qualifying period;

(c) for the eighteenth qualifying period, the lesser of 25% and the percentage determined by the formula

1.25 × (A – 50%)

where

A is the entity's top-up revenue reduction percentage for the qualifying period;

(d) for the nineteenth qualifying period, the lesser of 15% and the percentage determined by the formula

0.75 × (A – 50%)

where

A is the entity's top-up revenue reduction percentage for the qualifying period;

(e) for the twentieth qualifying period, the lesser of 10% and the percentage determined by the formula

0.5 × (A – 50%)

where

A is the entity's top-up revenue reduction percentage for the qualifying period; and

(f) for a qualifying period after the twentieth qualifying period, a percentage determined by regulation in respect of the eligible entity or, if there is no percentage determined by regulation for the qualifying period, nil. (*pourcentage compensatoire*)

(20) The portion of paragraph (a) of the definition *top-up revenue reduction percentage* in subsection 125.7(1) of the Act before the formula is replaced by the following:

(a) for any of the fifth qualifying period to the seventh qualifying period, the result (expressed as a percentage) of the formula

(21) The portion of paragraph (b) of the definition *top-up revenue reduction percentage* in subsection 125.7(1) of the Act before subparagraph (i) is replaced by the following:

(b) for any of the eighth qualifying period to the tenth qualifying period, the greater of

(22) Paragraph (c) of the definition *top-up revenue reduction percentage* in subsection 125.7(1) of the Act is replaced by the following:

(c) for the eleventh qualifying period and each subsequent qualifying period, the eligible entity's revenue reduction percentage for the qualifying period. (*pourcentage compensatoire de baisse de revenue*)

(23) Subsection 125.7(1) of the Act is amended by adding the following in alphabetical order:

executive compensation repayment amount, of an eligible entity, means

(a) nil, unless

(i) shares of the capital stock of the eligible entity are listed or traded on a stock exchange or other public market, or

(ii) the eligible entity is controlled by a corporation described in subparagraph (i); and

(b) if the conditions in subparagraph (a)(i) or (ii) are met, the amount determined by the formula

A × B

where

A is

(a) a percentage assigned to the eligible entity under an agreement if

(i) the agreement is entered into by

(A) the eligible entity,

(B) an eligible entity, shares of the capital stock of which are listed or traded on a stock exchange or other public market, that controls the eligible entity (referred to in this definition as the "public parent corporation"), if the public parent corporation received a deemed overpayment under subsection (2) in respect of the seventeenth qualifying period or any subsequent qualifying period, and

(C) each other eligible entity that received a deemed overpayment under subsection (2) in respect of the seventeenth qualifying period or any subsequent qualifying period and was controlled in that period by the eligible entity or the public parent corporation, if any,

(ii) the agreement is filed in prescribed form and manner with the Minister,

(iii) the agreement assigns, for the purposes of this definition, a percentage in respect of each eligible entity referred to in subparagraph (i) of this description,

(iv) the total of all the percentages assigned under the agreement equals 100%, and

(v) the percentage allocated to any eligible entity under the agreement would not result in an amount allocated to the eligible entity in excess of the total of all amounts of deemed overpayments of the eligible entity under subsection (2) for the seventeenth qualifying period and any subsequent qualifying period, and

(b) in any other case, 100%, and

B is the lesser of

(a) the total of all amounts each of which is an amount of a deemed overpayment under subsection (2) for each of the entities described in subparagraph (a)(i) of the description of A for the seventeenth qualifying period and each subsequent qualifying period, other than amounts in respect of employees on leave with pay, and

(b) the amount determined by the formula

C – D

where

C is the executive remuneration of the eligible entity, or of the public parent corporation that controls the eligible entity, if any, for the 2021 calendar year (prorated based upon the number of days of the eligible entity's, or public parent corporation's, fiscal periods in the calendar year, if those fiscal periods are not the calendar year), and

D is the executive remuneration of the eligible entity, or of the public parent corporation that controls the eligible entity, if any, for the 2019 calendar year (prorated based upon the number of days of the eligible entity's, or public parent corporation's, fiscal periods in the calendar year, if those fiscal periods are not the calendar year). (*montant du remboursement de la rémunération de la haute direction*)

executive remuneration, of an eligible entity, means

(a) the total amount of compensation that is reported in the eligible entity's Statement of Executive Compensation for Named Executive Officers pursuant to National Instrument 51-102 Continuous Disclosure Obligations, as amended from time to time, of the Canadian Securities Administrators in respect of Named Executive Officers of the eligible entity;

(b) if paragraph (a) does not apply and the eligible entity is required to make a similar disclosure to shareholders under the laws of another jurisdiction, the amount of total compensation reported in that disclosure (if the compensation of more than five individuals is required to be reported under that disclosure, using the five most highly compensated of those individuals); and

(c) if paragraphs (a) and (b) do not apply, the amount that would be required to be reported by the eligible entity using the methodology for preparing the Statement of Executive Compensation referred to in paragraph (a). (*rémunération de la haute direction*)

qualifying recovery entity, for a qualifying period, means an eligible entity that meets the following conditions:

(a) it files an application with the Minister in respect of the qualifying period in prescribed form and manner no later than 180 days after the end of the qualifying period;

(b) it is a qualifying entity for the qualifying period;

(c) if it is a corporation (other than a corporation that is exempt from tax under this Part), it

(i) is a Canadian-controlled private corporation, or

(ii) would be a Canadian-controlled private corporation absent the application of subsection 136(1);

(d) if it is a partnership, throughout the qualifying period it is the case that

$$\mathbf{A \leq 0.5B}$$

where

A is the total of all amounts, each of which is the fair market value of an interest in the partnership held — directly or indirectly, through one or more partnerships — by

(i) a person or partnership other than an eligible entity, or

(ii) a corporation, other than a corporation that

(A) is exempt from tax under this Part, or

(B) is described in subparagraph (c)(i) or (ii), and

B is the total fair market value of all interests in the partnership; and

(e) it has a revenue reduction percentage

(i) greater than 0%, if it is the seventeenth qualifying period, or

(ii) greater than 10%, if it is any of the eighteenth qualifying period to the twenty-second qualifying period. (*entité de relance admissible*)

recovery wage subsidy rate, for a qualifying period, means

(a) for any of the seventeenth qualifying period to the nineteenth qualifying period, 50%;

(b) for the twentieth qualifying period, 40%;

(c) for the twenty-first qualifying period, 30%; and

(d) for the twenty-second qualifying period, 20%. (*taux de subvention salariale de relance*)

total base period remuneration, of an eligible entity, means the total of all amounts, each of which is for an eligible employee in respect of a week in the fourteenth qualifying period, equal to the least of

(a) $1,129,

(b) the eligible remuneration paid to the eligible employee in respect of the week,

(c) if the eligible employee does not deal at arm's length with the eligible entity in the qualifying period, the baseline remuneration in respect of the eligible employee determined for that week, and

(d) if the eligible employee is on leave with pay in the week, nil. (*rémunération totale de la période de base*)

total current period remuneration, of an eligible entity for a qualifying period, means the total of all amounts, each of which is for an eligible employee in respect of a week in the qualifying period, equal to the least of

(a) $1,129,

(b) the eligible remuneration paid to the eligible employee in respect of the week,

(c) if the eligible employee does not deal at arm's length with the eligible entity in the qualifying period, the baseline remuneration in respect of the eligible employee determined for that week, and

(d) if the eligible employee is on leave with pay in the week, nil. (*rémunération totale de la période actuelle*)

(24) Section 125.7 of the Act is amended by adding the following after subsection (2.1):

Canada Recovery Hiring Program

(2.2) For a qualifying recovery entity for a qualifying period, an overpayment on account of the qualifying entity's liability under this Part for the taxation year in which the qualifying period ends is deemed to have arisen during the qualifying period in an amount determined by the formula

$$A \times (B - C)$$

where

A is the recovery wage subsidy rate for the qualifying period;

B is the qualifying recovery entity's total current period remuneration for the qualifying period; and

C is the qualifying recovery entity's total base period remuneration.

(25) Subsection 125.7(3) of the Act is replaced by the following:

When assistance received

(3) For the purposes of this Act other than this section, and for greater certainty, an amount that an eligible entity is deemed under any of subsections (2) to (2.2) to have overpaid is assistance received by it from a government immediately before the end of the qualifying period to which it relates.

(26) Paragraph 125.7(4.2)(d) of the Act is replaced by the following:

(d) if the seller meets any of the following conditions, the eligible entity is deemed to meet that condition:

(i) either of the conditions in paragraph (d) of the definition *qualifying entity* in subsection (1), and

(ii) both of the conditions in subparagraph (c)(ii), or the condition in subparagraph (c)(iii), of the definition *qualifying renter* in subsection (1); and

(27) Paragraphs 125.7(5)(a) and (b) of the Act are replaced by the following:

(a) the amount of any deemed overpayment by an eligible entity under any of subsections (2) to (2.2) in respect of a qualifying period cannot exceed the amount claimed by the eligible entity — in the application referred to in paragraph (a) of the definition *qualifying entity* in subsection (1), paragraph (a) of the definition *qualifying renter* in subsection (1) or paragraph (a) of the definition *qualifying recovery entity* in subsection (1) — in respect of that qualifying period; and

(b) if an eligible employee is employed in a week by two or more qualifying entities that do not deal with each other at arm's length, the total amount of the deemed overpayment under subsection (2) or (2.2) in respect of the eligible employee for that week shall not exceed the amount that would arise if the eligible employee's eligible remuneration for that week were paid by one qualifying entity.

(28) Subparagraph 125.7(6)(b)(ii) of the Act is replaced by the following:

(ii) in respect of the fifth qualifying period and subsequent qualifying periods, increase the amount of a deemed overpayment under subsection (2), or

(29) Section 125.7 of the Act is amended by adding the following after subsection (6):

Anti-avoidance — recovery wage subsidy

(6.1) Notwithstanding any other provision in this section, the total current period remuneration of an eligible entity for a qualifying period is deemed to be equal to the total base period remuneration of the eligible entity, if

(a) the eligible entity, or a person or partnership not dealing at arm's length with the eligible entity, enters into a transaction or participates in an event (or a series of transactions or events) or takes an action (or fails to take an action) that has the effect of increasing the difference between the total current period remuneration and the total base period remuneration of the eligible entity for the qualifying period; and

(b) it is reasonable to conclude that one of the main purposes of the transaction, event, series or action in paragraph (a) is to increase the amount of a deemed overpayment under subsection (2.2).

(30) Paragraphs 125.7(7)(a) and (b) of the Act are replaced by the following:

(a) for the purposes of subsections (2) to (2.2) and subsections 152(3.4) and 160.1(1), to be a taxpayer, and

(b) for the purposes of subsections (2) to (2.2), to have a liability under this Part for a taxation year in which a qualifying period ends.

(31) Subparagraphs 125.7(8)(a)(i) and (ii) of the Act are replaced by the following:

(i) the percentages in subparagraphs (a)(i), (b)(i), (c)(i), (d)(i), (e)(i), (f)(i), (g)(i), (h)(i), (i)(i) and (j)(i), and

(ii) the factors in subparagraphs (a)(ii), (b)(ii), (c)(ii), (d)(ii), (e)(ii), (f)(ii), (g)(ii), (h)(ii), (i)(ii) and (j)(ii); and

(32) Paragraph 125.7(8)(b) of the Act is replaced by the following:

(b) the definition *rent subsidy percentage* in subsection (1), the factors and percentages in paragraphs (a) and (a.1) of that definition;

(b.1) the definition *recovery wage subsidy rate*, the percentages in that definition; and

(33) Section 125.7 of the Act is amended by adding the following after subsection (9):

Special case

(9.1) For the purposes of paragraph (9)(b), if the particular qualifying period is the eleventh qualifying period, then the immediately preceding qualifying period is deemed to be the ninth qualifying period.

Greater of wage and recovery subsidies

(9.2) For a qualifying period,

(a) if the amount of any deemed overpayment under subsection (2) is equal to or greater than the amount of any deemed overpayment under subsection (2.2), the amount of any deemed overpayment under subsection (2.2) is deemed to be nil; and

(b) if the amount of any deemed overpayment under subsection (2.2) is greater than the amount of any deemed overpayment under subsection (2), the amount of any deemed overpayment under subsection (2) is deemed to be nil.

(34) Section 125.7 of the Act is amended by adding the following after section (13)

Executive compensation

(14) The amount of a refund made by the Minister to an eligible entity in respect of a deemed overpayment under subsection (2) on a particular date under subsection 164(1.6), in respect of any of the seventeenth qualifying period to the twenty-second qualifying period, is deemed to be an amount that has been refunded to the eligible entity on that particular date (for the taxation year in which the refund was made) in excess of the amount to which the eligible entity was entitled as a refund under this Act to the extent of the lesser of the amount of the refund and the amount determined by the formula

A – B

where

A is the executive compensation repayment amount of the eligible entity; and

B is the total of all amounts deemed to be an excess refund to the eligible entity under this subsection in respect of refunds made after the particular date.

Foreign currency — executive remuneration

(15) For the purposes of paragraphs 261(2)(b) and (5)(c), amounts referred to in the definition *executive remuneration* in subsection (1) are deemed to arise on the last day of the eligible entity's fiscal period to which the amount relates and not at any other time.

(35) Subsections (12) and (26) are deemed to have come into force on September 27, 2020.

18 Subsection 152(3.4) of the Act is replaced by the following:

COVID-19 — notice of determination

(3.4) The Minister may at any time determine the amount deemed by any of subsections 125.7(2) to (2.2) to be an overpayment on account of a taxpayer's liability under this Part that arose during a *qualifying period* (as defined in subsection 125.7(1)), or determine that there is no such amount, and send a notice of the determination to the taxpayer.

19 (1) Subparagraph 163(2)(i)(i) of the Act is replaced by the following:

(i) the amount that would be deemed by any of subsections 125.7(2) to (2.2) to have been an overpayment by the person or partnership if that amount were calculated by reference to the information provided in the application filed pursuant to paragraph (a) of the definition *qualifying entity* in subsection 125.7(1), paragraph (a) of the definition *qualifying renter* in subsection 125.7(1) or paragraph (a) of the definition *qualifying recovery entity* in subsection 125.7(1), as the case may be

(2) Section 163 of the Act is amended by adding the following after subsection (2.901):

Penalty — COVID-19

(2.902) Every eligible entity that is deemed by subsection 125.7(6.1) to have an amount of total current period remuneration for a qualifying period is liable to a penalty equal to 25% of the amount that would be deemed by subsection 125.7(2.2) to have been an overpayment by the eligible entity during that qualifying period if that amount were calculated by reference to the information provided in the application filed pursuant to paragraph (a) of the definition *qualifying recovery entity* in subsection 125.7(1).

20 Subsection 164(1.6) of the Act is replaced by the following:

COVID-19 refunds

(1.6) Notwithstanding subsection (2.01), at any time after the beginning of a taxation year of a taxpayer in which an overpayment is deemed to have arisen under any of subsections 125.7(2) to (2.2), the Minister may refund to the taxpayer all or any part of the overpayment.

21 Section 8901.2 of the *Income Tax Regulations* is replaced by the following:

8901.2 The amount determined by regulation in respect of a qualifying entity for the purposes of clause (b)(iv)(B) of the description of A in subsection 125.7(2) of the Act for a week in a qualifying period is

(a) for the seventh qualifying period and eighth qualifying period, the greater of

(i) the amount determined for the week under subparagraph (a)(i) of the description of A in subsection 125.7(2) of the Act, and

(ii) the amount determined for the week under subparagraph (a)(ii) of the description of A in subsection 125.7(2) of the Act;

(b) for the ninth qualifying period and the tenth qualifying period, the greater of

(i) $500, and

(ii) the lesser of

(A) 55% of *baseline remuneration* (as defined in subsection 125.7(1) of the Act) in respect of the eligible employee determined for that week, and

(B) $573;

(c) for any of the eleventh qualifying period to the nineteenth qualifying period, the greater of

(i) $500, and

(ii) the lesser of

(A) 55% of *baseline remuneration* (as defined in subsection 125.7(1) of the Act) in respect of the eligible employee determined for that week, and

(B) $595; and

(d) for the twentieth qualifying period and any subsequent qualifying period, nil.

Immediate Expensing

22 The Act is modified to give effect to the proposals relating to Immediate Expensing as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Rate Reduction for Zero-Emission Technology Manufacturers

23 The Act is modified to give effect to the proposals relating to a Rate Reduction for Zero-Emission Technology Manufacturers as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Capital Cost Allowance for Clean Energy Equipment

24 The Act is modified to give effect to the proposals relating to Capital Cost Allowance for Clean Energy Equipment as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Film or Video Production Tax Credits

25 The Act is modified to give effect to the proposals relating to Film or Video Production Tax Credits as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Mandatory Disclosure Rules

26 The Act is modified to give effect to the proposals relating to Mandatory Disclosure Rules as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Avoidance of Tax Debts

27 The Act is modified to give effect to the proposals relating to Avoidance of Tax Debts as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Audit Authorities

28 (1) Subsection 231.1(1) of the Act is amended by striking out "and" at the end of paragraph (a), by adding "and" at the end of paragraph (b) and by replacing the portion of that subsection after paragraph (b) with the following:

(c) require the owner or manager of a property or business of a taxpayer — and any particular person on the premises or place where the business is carried on, the property is kept, anything is done in connection with the business or any books or records of the taxpayer are or should be kept — to give the authorized person all reasonable assistance and to answer all proper questions and, for those purposes, the authorized person may require

(i) the owner or manager to attend at the premises or place with the authorized person, and

(ii) the owner, manager or the particular person to answer those questions orally or in writing, in any form specified by the authorized person.

(2) Subsection 231.1(2) of the Act is replaced by the following:

Entry to premises

(2) For the purposes of subsection (1), an authorized person may enter into the premises or place where any business is carried on, any property is kept, anything is done in connection with any business or any books or records are or should be kept, except if the premises or place is a dwelling-house, the authorized person may enter the dwelling-house without the consent of the occupant only under the authority of a warrant under subsection (3).

Base Erosion and Profit Shifting

Interest Deductibility Limits

29 The Act is modified to give effect to the proposals relating to Interest Deductibility Limits as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Hybrid Mismatch Arrangements

30 The Act is modified to give effect to the proposals relating to Hybrid Mismatch Arrangements as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Notice of Ways and Means Motion to amend the Excise Tax Act

That it is expedient to amend the *Excise Tax Act* as follows:

Application of the GST/HST to E-commerce

1 (1) The definition *reporting period* in subsection 123(1) of the *Excise Tax Act* is replaced by the following:

reporting period of a person means the reporting period of the person as determined under sections 211.18 and 245 to 251; (*période de déclaration*)

(2) Paragraph (c) of the definition *activité commerciale* in subsection 123(1) of the French version of the Act is replaced by the following:

c) la réalisation d'une fourniture, sauf une fourniture exonérée, d'un immeuble de la personne, y compris les actes qu'elle accomplit dans le cadre ou à l'occasion de la fourniture. (*commercial activity*)

(3) Subsections (1) and (2) come into force, or are deemed to have come into force, on July 1, 2021.

2 (1) Paragraph 141.01(1)(c) of the French version of the Act is replaced by the following:

c) la réalisation de fournitures d'immeubles de la personne, y compris les actes qu'elle accomplit dans le cadre ou à l'occasion des fournitures.

(2) Subsection (1) comes into force, or is deemed to have come into force, on July 1, 2021.

3 (1) Subsection 143(1) of the Act is amended by striking out "or" at the end of paragraph (b) and by adding the following after that paragraph:

(b.1) the supply is a *qualifying tangible personal property supply* (as defined in subsection 211.1(1)) and the person is required under section 211.22 to be registered under Subdivision D of Division V at the time the supply is made; or

(2) Subsection (1) comes into force, or is deemed to have come into force, on July 1, 2021.

(3) For the purposes of applying subsection 143(1) of the Act, as amended by subsection (1), in respect of a supply in respect of which subparagraph 7(2)(c)(ii) applies, the supply is deemed to have been made on July 1, 2021.

4 (1) Subsection 148(3) of the Act is replaced by the following:

Non-application

(3) This section does not apply to

(a) a person registered under Subdivision E of Division II; or

(b) a non-resident person that makes a supply in Canada of admissions in respect of a place of amusement, a seminar, an activity or an event and whose only business carried on in Canada is the making of such supplies.

(2) Subsection (1) comes into force, or is deemed to have come into force, on July 1, 2021.

5 (1) Subsection 178.8(9) of the Act is replaced by the following:

Application

(9) Subsections (2) to (7) do not apply in respect of goods imported in circumstances in which subsection 169(2) applies or in which section 180 or subparagraph 211.23(1)(c)(i) deems a person to have paid tax in respect of a supply of property equal to the tax under Division III in respect of the importation of goods.

(2) Subsection (1) applies to goods imported on or after July 1, 2021 and to goods imported before that day that were not accounted for under section 32 of the *Customs Act* before that day.

6 (1) Section 179 of the Act is amended by adding the following after subsection (3):

Exception — distribution platform operator

(3.1) For the purposes of this Part, if

(a) paragraphs (1)(a) to (c) apply to a taxable supply in respect of particular tangible personal property that is made by a registrant and is referred to in any of subparagraphs (1)(a)(i) to (iii),

(b) the transfer referred to in paragraph (1)(b) of physical possession of the particular property is to a person (in this subsection referred to as the "consignee") that is acquiring physical possession of the particular property as the recipient of a taxable supply made by way of sale of the particular property that

(i) is deemed under subsection 211.23(1) to have been made by a *distribution platform operator* (as defined in subsection 211.1(1)), and

(ii) would, in the absence of subsection 211.23(1), be made by a non-resident person that is not registered under Subdivision D of Division V,

(c) the distribution platform operator is registered under Subdivision D of Division V, and

(d) the non-resident person gives to the registrant, and the registrant retains, a certificate that

(i) acknowledges that the consignee acquired physical possession of the particular property as the recipient of a taxable supply and that the distribution platform operator is required to collect tax in respect of that taxable supply, and

(ii) states the distribution platform operator's name and registration number assigned under section 241,

the following rules apply:

(e) paragraphs (1)(d) to (g) do not apply to the taxable supply referred to in paragraph (a), and

(f) the taxable supply referred to in paragraph (a) is deemed to have been made outside Canada.

(2) Subsection (1) comes into force, or is deemed to have come into force, on July 1, 2021.

7 (1) The Act is amended by adding the following after section 211:

SUBDIVISION E

Electronic Commerce

Interpretation

Definitions

211.1 (1) The following definitions apply in this Subdivision.

accommodation platform means a digital platform through which a person facilitates the making of supplies of short-term accommodation situated in Canada by another person that is not registered under Subdivision D of Division V. (*plateforme de logements*)

accommodation platform operator, in respect of a supply of short-term accommodation made through an accommodation platform, means a person (other than the supplier or an excluded operator in respect of the supply) that

(a) controls or sets the essential elements of the transaction between the supplier and the recipient;

(b) if paragraph (a) does not apply to any person, is involved, directly or through arrangements with third parties, in collecting, receiving or charging the consideration for the supply and transmitting all or part of the consideration to the supplier; or

(c) is a prescribed person. (*exploitant de plateforme de logements*)

Canadian accommodation related supply means a taxable supply of a service

(a) that is made to a person in connection with a supply of short-term accommodation situated in Canada made to the person; and

(b) the consideration for which represents a booking fee, administration fee or other similar charge. (*fourniture liée à un logement au Canada*)

digital platform includes a website, an electronic portal, gateway, store or distribution platform or any other similar electronic interface but does not include

(a) an electronic interface that solely processes payments; or

(b) a prescribed platform or interface. (*plateforme numérique*)

distribution platform operator, in respect of a supply of property or a service made through a specified distribution platform, means a person (other than the supplier or an excluded operator in respect of the supply) that

(a) controls or sets the essential elements of the transaction between the supplier and the recipient;

(b) if paragraph (a) does not apply to any person, is involved, directly or through arrangements with third parties, in collecting, receiving or charging the consideration for the supply and transmitting all or part of the consideration to the supplier; or

(c) is a prescribed person. (*exploitant de plateforme de distribution*)

electronic filing means using electronic media in a manner specified by the Minister. (*transmission électronique*)

excluded operator means a person that, in respect of a supply of property or a service,

(a) meets all of the following conditions:

(i) the person does not set, directly or indirectly, any of the terms and conditions under which the supply is made,

(ii) the person is not involved, directly or indirectly, in authorizing the charge to the recipient of the supply in respect of the payment of the consideration for the supply, and

(iii) the person is not involved, directly or indirectly, in the ordering or delivery of the property or in the ordering or rendering of the service;

(b) solely provides for the listing or advertising of the property or service or for the redirecting or transferring to a digital platform on which the property or service is offered;

(c) is solely a payment processor; or

(d) is a prescribed person. (*exploitant exclu*)

false statement includes a statement that is misleading because of an omission from the statement. (*faux énoncé*)

qualifying tangible personal property supply means a supply made by way of sale of tangible personal property that is, under the agreement for the supply, to be delivered or made available to the recipient in Canada, other than

(a) an exempt or zero-rated supply;

(b) a supply of tangible personal property sent by mail or courier to the recipient at an address in Canada from an address outside Canada by the supplier or by another person acting on behalf of the supplier, if the supplier maintains evidence satisfactory to the Minister that the property was so sent;

(c) a supply that is deemed under subsection 180.1(2) to have been made outside Canada; and

(d) a prescribed supply. (*fourniture admissible d'un bien meuble corporel*)

specified Canadian recipient means a recipient of a supply in respect of which the following conditions are met:

(a) the recipient has not provided to the supplier, or to a distribution platform operator in respect of the supply, evidence satisfactory to the Minister that the recipient is registered under Subdivision D of Division V; and

(b) the usual place of residence of the recipient is situated in Canada. (*acquéreur canadien déterminé*)

specified distribution platform means a digital platform through which a person facilitates the making of specified supplies by another person that is a specified non-resident supplier or facilitates the making of qualifying tangible personal property supplies by another person that is not registered under Subdivision D of Division V. (*plateforme de distribution déterminée*)

specified non-resident supplier means a non-resident person that does not make supplies in the course of a business carried on in Canada and that is not registered under Subdivision D of Division V. (*fournisseur non-résident déterminé*)

specified supply means a taxable supply of intangible personal property or a service other than

(a) a supply of intangible personal property that

(i) may not be used in Canada,

(ii) relates to real property situated outside Canada, or

(iii) relates to tangible personal property ordinarily situated outside Canada;

(b) a supply of a service that

(i) may only be consumed or used outside Canada,

(ii) is in relation to real property situated outside Canada, or

(iii) is rendered in connection with criminal, civil or administrative litigation (other than a service rendered before the commencement of such litigation) that is under the jurisdiction of a court or other tribunal established under the laws of a country other than Canada or that is in the nature of an appeal from a decision of a court or other tribunal established under the laws of a country other than Canada;

(c) a supply of a service that is deemed under subsection 180.1(2) to have been made outside Canada;

(d) a supply of a service

(i) that is made to a person in connection with a supply of short-term accommodation made to the person, and

(ii) the consideration for which represents a booking fee, administration fee or other similar charge; and

(e) a prescribed supply. (*fourniture déterminée*)

Registration

(2) For greater certainty, in this Part (other than this Subdivision) and in Schedules V to X, a reference to registration does not include registration under this Subdivision.

Accommodations, Intangible Personal Property and Services

Residence indicators

211.11 (1) For the purposes of this Subdivision, the following are indicators in respect of the usual place of residence of a recipient of a supply:

(a) the home address of the recipient;

(b) the business address of the recipient;

(c) the billing address of the recipient;

(d) the Internet Protocol address of the device used by the recipient or similar data obtained through a geolocation method;

(e) payment-related information in respect of the recipient or other information used by the payment system;

(f) the information from a subscriber identity module, or other similar module, used by the recipient;

(g) the place at which a landline communication service is supplied to the recipient; and

(h) any other relevant information that the Minister may specify.

Indicator — Canada and provinces

(2) For the purposes of this section,

(a) a Canadian indicator in respect of the recipient of a supply is an indicator obtained in connection with the supply that reasonably supports the conclusion that the usual place of residence of the recipient is situated in Canada;

(b) a foreign indicator in respect of the recipient of a supply is an indicator obtained in connection with the supply that reasonably supports the conclusion that the usual place of residence of the recipient is situated outside Canada;

(c) a participating province indicator in respect of the recipient of a supply is an indicator obtained in connection with the supply that reasonably supports the conclusion that the usual place of residence of the recipient is situated in a participating province; and

(d) a non-participating province indicator in respect of the recipient of a supply is an indicator obtained in connection with the supply that reasonably supports the conclusion that the usual place of residence of the recipient is situated in a non-participating province.

Usual place of residence — Canada

(3) For the purposes of this Subdivision, the usual place of residence of the recipient of a supply is situated in Canada if a person that is the supplier or a distribution platform operator in respect of the supply,

(a) in the ordinary course of the person's operations, has obtained two or more Canadian indicators in respect of the recipient and has not obtained more than one foreign indicator in respect of the recipient;

(b) in the ordinary course of the person's operations, has obtained two or more Canadian indicators in respect of the recipient and two or more foreign indicators in respect of the recipient, but the Canadian indicators are, in the circumstances, reasonably considered to be more reliable in determining a place of residence; or

(c) if paragraphs (a) and (b) do not apply, has determined that the usual place of residence of the recipient is situated in Canada based on any method that the Minister may allow.

Usual place of residence — participating province address

(4) For the purposes of this Subdivision, if the usual place of residence of the recipient of a supply is situated in Canada and if a person that is the supplier or a distribution platform operator in respect of the supply has obtained in the ordinary course of the person's operations one or more addresses that are a home or business address of the recipient in a participating province and has not obtained in the ordinary course of the person's operations the same number or a greater number of addresses that are a home or business address of the recipient in a non-participating province, the usual place of residence of the recipient is situated in the following participating province:

(a) if those addresses of the recipient that are in a participating province are all in the same participating province, that participating province; and

(b) if those addresses of the recipient that are in a participating province are in two or more participating provinces and if the tax rates for those participating provinces are the same, the participating province among those participating provinces that has the largest population.

Usual place of residence — participating province indicators

(5) For the purposes of this Subdivision, if the usual place of residence of the recipient of a supply is situated in Canada but is not determined under subsection (4) to be in a participating province and if a person that is the supplier or a distribution platform operator in respect of the supply has obtained in the ordinary course of the person's operations one or more participating province indicators in respect of the recipient and has not obtained in the ordinary course of the person's operations the same number or a greater number of non-participating province indicators in respect of the recipient that could reasonably be considered to be as reliable in determining a place of residence as those participating province indicators, the usual place of residence of the recipient is situated in the following participating province:

(a) if those participating province indicators are in respect of the same participating province, that participating province;

(b) if those participating province indicators are in respect of two or more participating provinces and the participating province indicators in respect of one of those participating provinces are, in the circumstances, reasonably considered to be more reliable in determining a place of residence, that participating province;

(c) if the usual place of residence of the recipient is not determined under paragraph (a) or (b) and if the person has determined that the usual place of residence of the recipient is situated in one of the participating provinces based on any method that the Minister may allow, that participating province; or

(d) if the usual place of residence of the recipient is not determined under any of paragraphs (a) to (c) and if those participating province indicators are in respect of two or more participating provinces, the participating province among those participating provinces for which the tax rate is the lowest or, if the tax rates for those participating provinces are the same, the participating province among those participating provinces that has the largest population.

Usual place of residence — participating province

(6) For the purposes of this Subdivision, if, in respect of a supply, the usual place of residence of the recipient is situated in Canada but is not determined under subsection (4) or (5) to be in a participating province and if a person that is the supplier or a distribution platform operator in respect of the supply has determined that the usual place of residence of

the recipient is situated in a participating province based on any method that the Minister may allow, then the usual place of residence of the recipient is situated in that participating province.

Threshold amount

211.12 (1) For the purposes of this section, the threshold amount of a particular person for a period is the total of all amounts each of which is an amount that is, or that could reasonably be expected to be, the value of the consideration for a supply that is, or that could reasonably be expected to be,

(a) a specified supply made during that period by the particular person to a specified Canadian recipient (other than a zero-rated supply or a supply that is deemed to have been made by the particular person under paragraph 211.13(1)(a) or subparagraph 211.13(2)(a)(i));

(b) a Canadian accommodation related supply made during that period by the particular person to another person that is not registered under Subdivision D of Division V;

(c) if the particular person is a distribution platform operator in respect of a specified supply (other than a zero-rated supply) made during that period through a specified distribution platform by a specified non-resident supplier to a specified Canadian recipient, a specified supply (other than a zero-rated supply) that is made during that period through the specified distribution platform by a specified non-resident supplier to a specified Canadian recipient and in respect of which any person is a distribution platform operator; or

(d) if the particular person is an accommodation platform operator in respect of an accommodation supply — being a taxable supply of short-term accommodation situated in Canada made by any person that is not registered under Subdivision D of Division V to a recipient that is not registered under that Subdivision — that is made during that period through an accommodation platform, an accommodation supply that is made during that period through the accommodation platform and in respect of which any person is an accommodation platform operator.

Registration required

(2) Every person (other than a registrant or a person that carries on a business in Canada) that is a specified non-resident supplier at any time, a distribution platform operator in respect of a supply made at any time or an accommodation platform operator in respect of a supply made at any time is required at that time to be registered under this Subdivision if the threshold amount of the person for any period of 12 months (other than a period that begins before July 2021) that includes that time exceeds $30,000.

Application

(3) A person required under subsection (2) to be registered under this Subdivision shall apply to the Minister for registration. The application is to be made in prescribed form containing prescribed information and is to be filed with the Minister by way of electronic filing on or before the first day on which the person is required to be registered under this Subdivision.

Registration

(4) The Minister may register any person that applies for registration under subsection (3) and, upon doing so, the Minister shall assign a registration number to the person and notify the person of the registration number and the effective date of the registration.

Notice of intent

(5) If the Minister has reason to believe that a person that is not registered under this Subdivision is required to be registered under subsection (2) and has failed to apply for registration under subsection (3) as and when required, the Minister may send a notice in writing (in this section referred to as a "notice of intent") to the person that the Minister proposes to register the person under subsection (7).

Representations to Minister

(6) Upon receipt of a notice of intent, a person shall apply for registration under subsection (3) or establish to the satisfaction of the Minister that the person is not required to be registered under subsection (2).

Registration by Minister

(7) If, after 60 days after the particular day on which a notice of intent was sent by the Minister to a person, the person has not applied for registration under subsection (3) and the Minister is not satisfied that the person is not required to be registered under subsection (2), the Minister may register the person under this Subdivision and, upon doing so, shall assign a registration number to the person and notify the person in writing of the registration number and the effective date of the registration, which effective date is not to be earlier than 60 days after the particular day.

Cessation of registration

(8) If a person is registered under this Subdivision and if the person becomes registered under Subdivision D of Division V on a particular day, the person ceases to be registered under this Subdivision effective on the particular day.

Cancellation on notice

(9) The Minister may, after giving a person that is registered under this Subdivision reasonable written notice, cancel the registration of the person if the Minister is satisfied that the registration is not required under this Subdivision.

Cancellation on request

(10) On request from a person, the Minister shall cancel the registration of the person under this Subdivision if the Minister is satisfied that the registration is not required under this Subdivision.

Cancellation — notification

(11) If the Minister cancels the registration of a person under subsection (9) or (10), the Minister shall notify the person of the cancellation and its effective date.

Public disclosure

(12) Despite section 295, the Minister may make available to the public, in any manner that the Minister considers appropriate, the names of persons registered under this Subdivision (including any trade name or other name used by those persons), the registration numbers assigned to those persons under this section, the effective date of the registration and, if a person ceases to be registered under this Subdivision, the date on which the person ceases to be registered.

Specified supply — operator

211.13 (1) If a specified supply is made through a specified distribution platform by a specified non-resident supplier to a specified Canadian recipient and if another person registered under this Subdivision is a distribution platform operator in respect of the specified supply, then, for the purposes of this Part (other than section 211.1, paragraph 211.12(1)(c) and section 240)

(a) the specified supply is deemed to have been made by the other person and not by the specified non-resident supplier; and

(b) the other person is deemed not to have made a supply to the specified non-resident supplier of services relating to the specified supply.

Specified supply — registered operator

(2) If a specified supply is made through a specified distribution platform by a specified non-resident supplier, if another person that is registered under Subdivision D of Division V, or that carries on a business in Canada, is a distribution platform operator in respect of the specified supply and if, in the absence of section 143, the specified supply would have been a supply made in Canada, the following rules apply:

(a) if the other person is registered under Subdivision D of Division V, for the purposes of this Part (other than section 211.1, paragraph 211.12(1)(c) and section 240)

(i) the specified supply is deemed to have been made by the other person and not by the specified non-resident supplier, and

(ii) the other person is deemed not to have made a supply to the specified non-resident supplier of services relating to the specified supply; and

(b) in any other case, for the purposes of sections 148 and 249, the specified supply is deemed to have been made by the other person and not by the specified non-resident supplier.

Accommodation — operator

(3) If a particular supply that is a taxable supply of short-term accommodation situated in Canada is made through an accommodation platform by a particular person that is not registered under Subdivision D of Division V, if another person that is registered under this Subdivision is an accommodation platform operator in respect of the particular supply and if the recipient has not provided to the other person evidence satisfactory to the Minister that the recipient is registered under Subdivision D of Division V, then, for the purposes of this Part (other than sections 148 and 211.1, paragraph 211.12(1)(d) and sections 240 and 249)

(a) the particular supply is deemed to have been made by the other person and not by the particular person; and

(b) the other person is deemed not to have made a supply to the particular person of services relating to the particular supply.

Accommodation — registered operator

(4) If a particular supply that is a taxable supply of short-term accommodation situated in Canada is made through an accommodation platform by a particular person that is not registered under Subdivision D of Division V and if another person that is registered under that Subdivision, or that carries on a business in Canada, is an accommodation platform operator in respect of the particular supply, then, for the purposes of this Part (other than for the purposes of applying sections 148 and 249 in respect of the particular person and other than for the purposes of section 211.1, paragraph 211.12(1)(d) and section 240)

(a) the particular supply is deemed to have been made by the other person and not by the particular person; and

(b) the other person is deemed not to have made a supply to the particular person of services relating to the particular supply.

Joint and several, or solidary, liability

(5) If a particular person that is deemed under paragraph (1)(a), subparagraph (2)(a)(i) or paragraph (3)(a) or (4)(a) not to have made a supply made a false statement to another person that is deemed under paragraph (1)(a), subparagraph (2)(a)(i) or paragraph (3)(a) or (4)(a), as the case may be, to have made the supply and if the false statement is relevant to the determination of whether the other person is required to collect tax in respect of the supply or the determination of the amount of tax that the other person is required to collect in respect of the supply, the following rules apply:

(a) the particular person and the other person are jointly and severally, or solidarily, liable for all obligations under this Part (in this subsection referred to as the "obligations in respect of the supply") that arise upon or as a consequence of

(i) the tax in respect of the supply becoming collectible by the other person, and

(ii) a failure to account for or pay as and when required under this Part an amount of net tax of the other person, or an amount required under section 230.1 to be paid by the other person, that is reasonably attributable to the supply;

(b) the Minister may assess the particular person for any amount for which the particular person is liable under this subsection and sections 296 to 311 apply with any modifications that the circumstances require; and

(c) if the other person did not know and could not reasonably be expected to have known that the particular person made a false statement and if the other person relied in good faith on the false statement and, because of such reliance, did not charge, collect or remit all the tax in respect of the supply that the other person was required to charge, collect or remit, despite section 296, the Minister is not to assess the other person for any obligations in respect of the

supply in excess of the obligations in respect of the supply that arise upon or as a consequence of the other person having charged, collected or remitted an amount of tax in respect of the supply.

Supply — Canada

211.14 (1) For the purposes of this Part and despite paragraphs 136.1(1)(d) and (2)(d), subsection 142(2) and section 143, if a person registered under this Subdivision makes a specified supply to a specified Canadian recipient, or makes a Canadian accommodation related supply to a recipient that has not provided to the person evidence satisfactory to the Minister that the recipient is registered under Subdivision D of Division V, the supply is deemed to be made in Canada and, in the case of a Canadian accommodation related supply that is included in Schedule VI, the supply is deemed not to be included in that Schedule.

Supply — Canada

(2) For the purposes of this Part and despite paragraph 136.1(2)(d), subsection 142(2) and section 143, if a person registered under Subdivision D of Division V or carrying on a business in Canada makes a Canadian accommodation related supply, the supply is deemed to be made in Canada and, if the supply is included in Schedule VI, the supply is deemed not to be included in that Schedule.

Specified supply — participating province

(3) For the purposes of this Part and despite section 144.1, if a specified supply (other than a supply of intangible personal property, or a service, that relates to real property) is deemed to be made in Canada under subsection (1), the following rules apply:

(a) if the usual place of residence of the specified Canadian recipient is situated in a participating province, the supply is deemed to be made in the participating province; and

(b) in any other case, the supply is deemed to be made in a non-participating province.

Canadian accommodation related supply — participating province

(4) For the purposes of this Part and despite section 144.1, if a Canadian accommodation related supply is deemed to be made in Canada under subsection (1) or (2), the supply is deemed to be made in the province in which the accommodation is situated.

Billing agent

211.15 For the purposes of this Part, if a particular person that is registered under this Subdivision makes an election in respect of a supply under subsection 177(1.1) with a registrant described in subsection 177(1.11), the registrant is deemed not to have made a supply to the particular person of services of acting as an agent described in subsection 177(1.11) in respect of the supply.

Disclosure of tax

211.16 A person registered under this Subdivision that is required under section 221 to collect tax in respect of a supply shall indicate to the recipient, in a manner satisfactory to the Minister,

(a) the consideration paid or payable by the recipient for the supply and the tax payable in respect of the supply; or

(b) that the amount paid or payable by the recipient for the supply includes the tax payable in respect of the supply.

Restrictions

211.17 (1) No amount of an input tax credit, rebate, refund or remission under this or any other Act of Parliament shall be credited, paid, granted or allowed to the extent that it can reasonably be regarded that the amount is determined, directly or indirectly, in relation to an amount that is collected as or on account of tax, or in relation to an amount of tax that is required to be collected, by a person that is registered or required to be registered under this Subdivision.

Exception

(2) Subsection (1) does not apply

(a) to a rebate, refund or remission in relation to an amount that a person may

(i) deduct under subsection 231(1), 232(3) or 234(3) in determining the net tax of the person for a reporting period of the person,

(ii) claim as a rebate under section 259 or 259.1, or

(iii) claim as a rebate under section 261 in respect of an amount that is collected as or on account of tax from the person at a time when the person is not registered under Subdivision D of Division V;

(b) for the purposes of subsections 232(1) and (2); and

(c) for prescribed purposes.

Return

211.18 (1) Despite subsection 238(2), every person registered under this Subdivision shall file a return with the Minister by way of electronic filing for each reporting period of the person within one month after the end of the reporting period.

Reporting period

(2) Despite sections 245 and 251 and subject to subsections (3) and (4), the reporting period of a person registered under this Subdivision is a calendar quarter.

Becoming registered

(3) If a person becomes registered under this Subdivision on a particular day, the following periods are deemed to be separate reporting periods of the person:

(a) the period beginning on the first day of the reporting period of the person, otherwise determined under section 245, that includes the particular day and ending on the day immediately preceding the particular day; and

(b) the period beginning on the particular day and ending on the last day of the calendar quarter that includes the particular day.

Cessation of registration

(4) If a person ceases to be registered under this Subdivision on a particular day, the following periods are deemed to be separate reporting periods of the person:

(a) the period beginning on the first day of the calendar quarter that includes the particular day and ending on the day immediately preceding the particular day; and

(b) the period beginning on the particular day and ending on the last day of the reporting period of the person, otherwise determined under section 245, that includes the particular day.

Definition of *qualifying foreign currency*

211.19 (1) In this section, ***qualifying foreign currency*** means the U.S. dollar, the euro or another foreign currency that the Minister may specify.

Manner of payment

(2) Every person that is registered or required to be registered under this Subdivision and that is required under subsection 278(2) to pay or remit an amount to the Receiver General shall pay or remit that amount in the manner determined by the Minister.

Non application — subsection 278(3)

(3) Subsection 278(3) does not apply in respect of an amount that a person that is registered or required to be registered under this Subdivision is required under this Part to pay or remit to the Receiver General.

Foreign currency — no designation

(4) Despite section 159 and subject to subsection (7), if tax is collected, or required to be collected, in respect of a supply made by a person that is registered or required to be registered under this Subdivision and if the value of the consideration for the supply is expressed in a foreign currency, the consideration is to be converted into Canadian currency using the exchange rate applicable on the last day of the reporting period in which the tax is collected or required to be collected, as the case may be, or using any other conversion method that the Minister may allow.

Foreign currency — application

(5) A person registered under this Subdivision may apply to the Minister, in prescribed form containing prescribed information and filed in prescribed manner with the Minister, to be designated as a person eligible to determine the net tax for a reporting period of the person in a qualifying foreign currency. The Minister may require that the application be filed by way of electronic filing.

Foreign currency — authorization

(6) If the Minister receives an application of a person under subsection (5), the Minister may, subject to such conditions as the Minister may at any time impose, designate the person as a person eligible to determine the net tax for a reporting period of the person in the qualifying foreign currency indicated by the Minister.

Foreign currency — designated persons

(7) Despite section 159, if a person is designated under subsection (6) in respect of a reporting period of the person, the following rules apply in respect of the reporting period:

(a) the net tax for the reporting period is to be determined in the return for that reporting period in the qualifying foreign currency indicated by the Minister;

(b) any amount to be remitted or paid by the person to the Receiver General in respect of the reporting period is to be remitted or paid in the qualifying foreign currency indicated by the Minister; and

(c) any amount that is required to be converted into the qualifying foreign currency indicated by the Minister for the purposes of determining the net tax for the reporting period, or for the purposes of determining any other amount to be remitted or paid to the Receiver General in respect of the reporting period, is to be converted into that qualifying foreign currency using the exchange rate applicable on the last day of the reporting period or using any other conversion method that the Minister may allow.

Prohibition

211.2 No person shall, in respect of a supply of property or a service made to a particular person who is a consumer of the property or service, provide to another person that is registered or required to be registered under this Subdivision evidence that the particular person is registered under Subdivision D of Division V.

Information return — accommodation platform operator

211.21 A person (other than a prescribed person) that, at any time during a calendar year, is registered or required to be registered under this Subdivision or is a registrant and that is an accommodation platform operator in respect of a supply of short-term accommodation situated in Canada made in the calendar year shall file with the Minister an information return for the calendar year, in prescribed form containing prescribed information, before July of the following calendar year. The Minister may require that the information return be filed by way of electronic filing.

Definition of *specified recipient*

211.22 (1) In this section, ***specified recipient***, in respect of a supply of property, means a person (other than a non-resident person that is not a consumer of the property) that is the recipient of the supply and that is not registered under Subdivision D of Division V.

Registration required

(2) Every person that is a non-resident person that does not at any time make supplies in the course of a business carried on in Canada or a distribution platform operator in respect of a supply made at any time is required at that time to be registered under Subdivision D of Division V if, for any period of 12 months (other than a period that begins before July 2021) that includes that time, the amount determined by the following formula is greater than $30,000:

A + B

where

A is the total of all amounts, each of which is an amount that is, or that could reasonably be expected to be, the value of the consideration for a taxable supply that is, or that could reasonably be expected to be, a qualifying tangible personal property supply made during that period by the person to a specified recipient (other than a supply deemed to have been made by the person under subparagraph 211.23(1)(a)(i)); and

B is

(a) if the person is a distribution platform operator in respect of a qualifying tangible personal property supply made during that period through a specified distribution platform, the total of all amounts, each of which is an amount that is, or that could reasonably be expected to be, the value of the consideration for a supply that is, or that could reasonably be expected to be, a qualifying tangible personal property supply made during that period through the specified distribution platform to a specified recipient and in respect of which any person is a distribution platform operator, and

(b) in any other case, zero.

Qualifying supply — operator

211.23 (1) If a particular supply that is a qualifying tangible personal property supply is made through a specified distribution platform by a particular person that is not registered under Subdivision D of Division V and if another person that is registered under Subdivision D of Division V, or is carrying on a business in Canada, is a distribution platform operator in respect of the particular supply, the following rules apply:

(a) for the purposes of this Part (other than for the purposes of applying sections 148 and 249 in respect of the particular person and other than for the purposes of section 211.1, paragraph (a) of the description of B in subsection 211.22(2) and section 240)

(i) the particular supply is deemed to have been made by the other person and not by the particular person, and

(ii) the particular supply is deemed to be a taxable supply;

(b) for the purposes of this Part (other than sections 179 and 180), the other person is deemed not to have made a supply to the particular person of services relating to the particular supply; and

(c) if the other person is registered under Subdivision D of Division V, if the particular person has paid tax under Division III in respect of the importation of the tangible personal property, if no person is entitled to claim an input tax credit or a rebate under this Part in respect of the tax in respect of the importation, if no person is deemed under section 180 to have paid tax in respect of a supply of the tangible personal property that is equal to the tax in respect of the importation and if the particular person provides to the other person evidence satisfactory to the Minister that the tax in respect of the importation has been paid,

(i) for the purposes of determining an input tax credit of the other person, the other person is deemed

(A) to have paid, at the time the particular person paid the tax in respect of the importation, tax in respect of a supply made to the other person of the tangible personal property equal to the tax in respect of the importation, and

(B) to have acquired the tangible personal property for use exclusively in commercial activities of the other person, and

(ii) no portion of the tax in respect of the importation paid by the particular person shall be rebated, refunded or remitted to the particular person, or shall otherwise be recovered by the particular person, under this or any other Act of Parliament.

Joint and several, or solidary, liability

(2) If a particular person that is deemed under subparagraph (1)(a)(i) not to have made a supply made a false statement to another person that is deemed under that subparagraph to have made the supply and if the false statement is relevant to the determination of whether the other person is required to collect tax in respect of the supply or the determination of the amount of tax that the other person is required to collect in respect of the supply, the following rules apply:

(a) the particular person and the other person are jointly and severally, or solidarily, liable for all obligations under this Part (in this subsection referred to as the "obligations in respect of the supply") that arise upon or as a consequence of

(i) the tax in respect of the supply becoming collectible by the other person, and

(ii) a failure to account for or pay as and when required under this Part an amount of net tax of the other person, or an amount required under section 230.1 to be paid by the other person, that is reasonably attributable to the supply;

(b) the Minister may assess the particular person for any amount for which the particular person is liable under this subsection and sections 296 to 311 apply with any modifications that the circumstances require; and

(c) if the other person did not know and could not reasonably be expected to have known that the particular person made a false statement and if the other person relied in good faith on the false statement and, because of such reliance, did not charge, collect or remit all the tax in respect of the supply that the other person was required to charge, collect or remit, despite section 296, the Minister is not to assess the other person for any obligations in respect of the supply in excess of the obligations in respect of the supply that arise upon or as a consequence of the other person having charged, collected or remitted an amount of tax in respect of the supply.

Joint and several, or solidary, liability

(3) If a particular person provides to another person evidence that tax in respect of an importation has been paid, if the particular person made a false statement to the other person, if the false statement is relevant to the determination of whether paragraph (1)(c) is applicable in respect of the importation and if the other person claimed an input tax credit (in this subsection referred to as the "non-allowable input tax credit") to which the other person was not entitled but to which the other person would have been entitled if paragraph (1)(c) were applicable in respect of the importation, the following rules apply:

(a) the particular person and the other person are jointly and severally, or solidarily, liable for all obligations under this Part that arise upon or as a consequence of the other person having claimed the non-allowable input tax credit;

(b) the Minister may assess the particular person for any amount for which the particular person is liable under this subsection and sections 296 to 311 apply with any modifications that the circumstances require; and

(c) if the other person did not know and could not reasonably be expected to have known that the particular person made a false statement and if the other person relied in good faith on the false statement and, because of such reliance, claimed the non-allowable input tax credit, despite section 296, the Minister is not to assess the other person for any obligations under this Part that arose upon or as a consequence of the other person having claimed the non-allowable input tax credit.

Notification and records — warehouse

211.24 A particular person (other than a prescribed person) that in the course of a business makes one or more particular supplies of a service of storing in Canada tangible personal property (other than a service that is incidental to the supply by the particular person of a *freight transportation service*, as defined in section 1 of Part VII of Schedule VI) offered for sale by another person that is a non-resident person shall

(a) notify the Minister of this fact, in prescribed form containing prescribed information and filed with the Minister in prescribed manner, on or before

(i) the day that is

(A) if the particular person makes those particular supplies in the course of a business carried on as of July 1, 2021, January 1, 2022, and

(B) in any other case, six months after the day on which the particular person last began making those particular supplies in the course of a business, or

(ii) any later day that the Minister may allow; and

(b) in respect of those particular supplies, maintain records containing information specified by the Minister.

Information return — operator

211.25 A person (other than a prescribed person) that is a registrant at any time during a calendar year and that is a distribution platform operator in respect of a qualifying tangible personal property supply made in the calendar year shall file with the Minister an information return for the calendar year, in prescribed form containing prescribed information, before July of the following calendar year. The Minister may require that the information return be filed by way of electronic filing.

(2) Subsection (1) comes into force, or is deemed to have come into force, on July 1, 2021, except that

(a) subsections 211.13(1) to (4) and section 211.14 of the Act, as enacted by subsection (1), apply

(i) in respect of supplies made after June 2021, and

(ii) in respect of supplies made before July 2021 if all or part of the consideration for the supply becomes due, or is paid without having become due, after June 2021;

(b) sections 211.21 and 211.25 of the Act, as enacted by subsection (1), apply to 2021 and subsequent calendar years except that, in applying those sections to the 2021 calendar year,

(i) the references to "a calendar year" in those sections are to be read as references to "the period that begins on July 1, 2021 and ends on December 31, 2021", and

(ii) the references to "the calendar year" in those sections are to be read as references to "that period"; and

(c) subsection 211.23(1) of the Act, as enacted by subsection (1), applies

(i) in respect of supplies made after June 2021, and

(ii) in respect of supplies made before July 2021 if all of the consideration for the supply becomes due, or is paid without having become due, after June 2021.

(3) For the purposes of applying sections 211.12 to 211.14 of the Act, as enacted by subsection (1), in respect of a supply in respect of which subparagraph (2)(a)(ii) applies, the supply is deemed to have been made on July 1, 2021.

(4) If subparagraph (2)(a)(ii) and subsection 211.13(3) or (4) of the Act, as enacted by subsection (1), apply in respect of a supply of short-term accommodation and if part of the consideration for the supply becomes due, or is paid without having become due, before July 2021, for the purposes of Division II of Part IX of the Act, that part of the consideration shall not be included in calculating the tax payable in respect of the supply.

(5) If subparagraph (2)(a)(ii) and section 211.14 of the Act, as enacted by subsection (1), apply in respect of a supply that is a specified supply or a Canadian accommodation related supply, if paragraph 143(1)(c) of the Act does not apply in respect of the supply and if part of the consideration for the supply becomes due, or is paid without having become due, before July 2021, the following rules apply:

(a) for the purposes of Division II of Part IX of the Act, that part of the consideration is not to be included in calculating the tax payable in respect of the supply; and

(b) for the purposes of Division IV of Part IX of the Act,

(i) despite section 211.14 of the Act, as enacted by subsection (1), the supply is deemed to be made outside Canada, and

(ii) the part of the consideration for the supply that becomes due, or is paid without having become due, after June 2021 is not to be included in calculating the tax payable in respect of the supply.

(6) For the purposes of applying sections 211.22 and 211.23 of the Act, as enacted by subsection (1), in respect of a supply in respect of which subparagraph (2)(c)(ii) applies, the supply is deemed to have been made on July 1, 2021.

8 (1) Subsection 240(2) of the Act is replaced by the following:

Non-resident supplier — tangible personal property

(1.5) Despite subsection (1), every person that is required under section 211.22 to be registered under this Subdivision is required to be registered for the purposes of this Part.

Non-resident performers, etc.

(2) Every person (other than a person registered under Subdivision E of Division II) that enters Canada for the purpose of making taxable supplies of admissions in respect of a place of amusement, a seminar, an activity or an event is required to be registered for the purposes of this Part and shall, before making any such supply, apply to the Minister for registration.

(2) The portion of subsection 240(2.1) of the Act before paragraph (a) is replaced by the following:

Application

(2.1) A person required under any of subsections (1) to (1.2) and (1.5) to be registered must apply to the Minister for registration before the day that is 30 days after

(3) Subsection 240(2.1) of the Act is amended by striking out "and" at the end of paragraph (a.1) and by adding the following after that paragraph:

(a.2) in the case of a person required under subsection (1.5) to be registered, the first day on which the person is required under section 211.22 to be registered under this Subdivision; and

(4) The portion of subsection 240(3) of the Act before paragraph (a) is replaced by the following:

Registration permitted

(3) An application for registration for the purposes of this Part may be made to the Minister by any person that is not required under subsection (1), (1.1), (1.2), (1.5), (2) or (4) to be registered, that is not required to be included in, or added to, the registration of a group under subsection (1.3) or (1.4) and that

(5) Subsections (1) to (4) come into force, or are deemed to have come into force, on July 1, 2021.

9 The Act is amended by adding the following after section 285.01:

Penalty

285.02 In addition to any other penalty under this Part, the recipient of a supply of property or a service that evades or attempts to evade the payment or collection of tax payable by the recipient under Division II in respect of the supply by providing false information to a particular person that is registered or required to be registered under Subdivision E of Division II or, if the recipient is a consumer of the property or service, by providing to the particular person evidence that the recipient is registered under Subdivision D of Division V is liable to pay a penalty equal to the greater of $250 and 50% of the amount of tax that has been evaded or attempted to be evaded.

10 (1) Subsection 286(1) of the Act is replaced by the following:

Keeping books and records

286 (1) Every person that carries on a business or is engaged in a commercial activity in Canada, every person that is required under this Part to file a return and every person that makes an application for a rebate or refund shall keep all records that are necessary to enable the determination of the person's liabilities and obligations under this Part or the amount of any rebate or refund to which the person is entitled.

Minister may specify information

(1.1) The Minister may specify the form a record is to take and any information that the record shall contain.

Language and location of record

(1.2) Unless otherwise authorized by the Minister, a record shall be kept in Canada in English or in French.

(2) Subsection (1) comes into force, or is deemed to have come into force, on July 1, 2021.

11 (1) The definition *business number* in subsection 295(1) of the Act is amended by striking out "or" at the end of paragraph (a) and by adding the following after that paragraph:

(a.1) a person registered under Subdivision E of Division II; or

(2) Paragraph 295(6.1)(a) of the Act is replaced by the following:

(a) the identified person is registered under Subdivision E of Division II or Subdivision D of Division V; and

(3) Subsections (1) and (2) come into force, or are deemed to have come into force, on July 1, 2021.

12 Paragraph 298(1)(e) of the Act is replaced by the following:

(e) in the case of any penalty payable by the person, other than a penalty under section 280.1, 285, 285.01, 285.02 or 285.1, more than four years after the person became liable to pay the penalty;

GST New Housing Rebate Conditions

13 (1) Subsection 262(3) of the Act is replaced by the following:

Group of individuals

(3) If a supply of a residential complex or a share of the capital stock of a cooperative housing corporation is made to two or more individuals or if two or more individuals construct or substantially renovate, or engage another person to construct or substantially renovate, a residential complex, the following rules apply in respect of those individuals:

(a) subject to paragraphs (b) and (c), the references in sections 254 to 256 to a particular individual shall be read as references to all of those individuals as a group;

(b) the references in paragraphs 254(2)(b), 254.1(2)(b), 255(2)(c), 256(2)(a) and (2.2)(b) to the primary place of residence of the particular individual or a relation of the particular individual are to be read as references to the primary place of residence of any of those individuals or a relation of any of those individuals;

(c) the references in clause 254(2)(g)(i)(A), subparagraphs 254.1(2)(g)(i), 255(2)(f)(i) and 256(2)(d)(i) and paragraph 256(2.2)(c) to the particular individual or a relation of the particular individual are to be read as references to any of those individuals or a relation of any of those individuals; and

(d) only one of those individuals may apply for the rebate under section 254, 254.1, 255 or 256, as the case may be, in respect of the complex or share.

(2) Subsection (1) applies in respect of

(a) any rebate under subsection 254(2), 254.1(2) or 255(2) of the Act in respect of which the agreement referred to in paragraph 254(2)(b), 254.1(2)(a) or 255(2)(c) of the Act, as the case may be, is entered into after Budget Day; and

(b) any rebate under subsection 256(2) of the Act

(i) in respect of a residential complex (other than a mobile home or floating home) if the construction or substantial renovation of the residential complex is substantially completed after Budget Day, or

(ii) in respect of a mobile home or floating home acquired or imported after Budget Day.

Rebate of Excise Tax for Goods Purchased by Provinces

14 (1) Section 68.19 of the *Excise Tax Act* is replaced by the following:

Payment — use by province

68.19 (1) If tax under Part III has been paid in respect of any goods that Her Majesty in right of a province has purchased or imported, an amount equal to the amount of that tax shall, subject to this Part, be paid to Her Majesty in right of the province if Her Majesty in right of the province has purchased or imported those goods for any purpose other than

(a) resale;

(b) use by any board, commission, railway, public utility, university, manufactory, company or agency owned, controlled or operated by the government of the province or under the authority of the legislature or the lieutenant governor in council of the province; or

(c) use by Her Majesty in right of the province, or by any agents or servants of Her Majesty in right of the province, in connection with the manufacture or production of goods or use for other commercial or mercantile purposes.

Application

(1.1) No amount shall be paid under subsection (1) in respect of goods purchased or imported by Her Majesty in right of a province unless an application for the payment is made within two years after Her Majesty in right of the province purchased or imported those goods.

Election

(1.2) Her Majesty in right of a province and the particular person that is, as the case may require, the importer, transferee, manufacturer, producer, wholesaler, jobber or other dealer in respect of goods that Her Majesty in right of the province purchases or imports may jointly elect, in prescribed form containing prescribed information, to have the following rules apply in respect of the purchase or importation:

(a) the particular person, and not Her Majesty in right of the province, is entitled to apply for a payment under subsection (1) in respect of the purchase or importation; and

(b) the amount payable by the Minister under subsection (1) in respect of the purchase or importation shall be paid to the particular person, and not to Her Majesty in right of the province.

Limitation

(1.3) No more than one election under subsection (1.2) may be made by Her Majesty in right of a province in respect of a particular purchase or importation of goods.

Exception

(2) Subsection (1.2) does not apply in respect of goods purchased or imported by Her Majesty in right of a province at a time when a reciprocal taxation agreement referred to in section 32 of the *Federal-Provincial Fiscal Arrangements Act* is in force in respect of the province.

Non-application of subsection 68.2(1)

(3) For greater certainty, if an application for a payment in respect of goods can be made by any person under subsection (1), subsection 68.2(1) does not apply in respect of the goods.

(2) Subsection (1) applies in respect of any goods purchased or imported after 2021.

Electronic Filing and Certification of Tax and Information Returns

15 The Act is modified to give effect to the proposals relating to Electronic Filing and Certification of Tax and Information Returns described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Avoidance of Tax Debts

16 The Act is modified to give effect to the proposals relating to Avoidance of Tax Debts described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Audit Authorities

17 Subsection 98(3) of the Act is replaced by the following:

Inspection

(3) Every person required by subsection (1) to keep records and books of account shall, at all reasonable times, make the records and books of account and every account and voucher necessary to verify the information therein available to officers of the Agency and other persons thereunto authorized by the Minister, give them all reasonable assistance to inspect the records, books, accounts and vouchers and answer all proper questions orally or in writing, in any manner specified by the officers or the other persons.

18 (1) Subsections 288(1) and (2) of the Act are replaced by the following:

Inspections

288 (1) Subject to subsection (2), an authorized person may, at all reasonable times, for any purpose related to the administration or enforcement of this Part,

(a) inspect, audit or examine the documents, property or processes of a person that may be relevant in determining the obligations of that or any other person under this Part or the amount of any rebate or refund to which that or any other person is entitled;

(b) enter any premises or place where any business or commercial activity is carried on, where any property is kept, where anything is done in connection with any business or commercial activity or where any documents are or should be kept; and

(c) require the owner or manager of the property, business or commercial activity — and any particular person on any premises, or in any place, where the business or commercial activity is carried on, where the property is kept, where anything is done in connection with the business or commercial activity or where any documents are or should be kept — to give to the authorized person all reasonable assistance and to answer all proper questions relating to the administration or enforcement of this Part and, for that purpose, the authorized person may require

(i) the owner or manager to attend at the premises or place with the authorized person, and

(ii) the owner, the manager or the particular person to answer those questions orally or in writing, in any manner specified by the authorized person.

Prior authorization

(2) If any premises or place referred to in subsection (1) is a dwelling-house, an authorized person may not enter that dwelling-house without the consent of the occupant, except under the authority of a warrant issued under subsection (3).

(2) Paragraph 288(3)(a) of the Act is replaced by the following:

(a) there are reasonable grounds to believe that a dwelling-house is a premises or place referred to in subsection (1),

Notice of Ways and Means Motion to amend the Excise Act, 2001 and Other Legislation

That it is expedient to amend the *Excise Act, 2001* and other legislation as follows:

Excise Duty on Tobacco

1 (1) The definition *adjustment day* in section 58.1 of the *Excise Act, 2001* is amended by striking out "or" at the end of paragraph (a.1) and by adding the following after that paragraph:

(a.2) the day after Budget Day; or

(2) Subsection (1) is deemed to have come into force on the day after Budget Day.

2 (1) Section 58.2 of the Act is amended by adding the following after subsection (1.1):

Imposition of tax — 2021 increase

(1.2) Subject to section 58.3, every person shall pay to Her Majesty a tax on all taxed cigarettes of the person held at the beginning of the day after Budget Day at the rate of $0.02 per cigarette.

(2) Subsection (1) is deemed to have come into force on the day after Budget Day.

3 (1) Subsection 58.5(1) of the Act is amended by striking out "or" at the end of paragraph (a.1) and by adding the following after that paragraph:

(a.2) in the case of the tax imposed under subsection 58.2(1.2), June 30, 2021; or

(2) Subsection (1) is deemed to have come into force on the day after Budget Day.

4 (1) Subsection 58.6(1) of the Act is amended by striking out "or" at the end of paragraph (a.1) and by adding the following after that paragraph:

(a.2) in the case of the tax imposed under subsection 58.2(1.2), June 30, 2021; or

(2) Subsection (1) is deemed to have come into force on the day after Budget Day.

5 (1) Paragraph 1(a) of Schedule 1 to the Act is replaced by the following:

(a) $0.72725; or

(2) Subsection (1) is deemed to have come into force on the day after Budget Day.

6 (1) Paragraph 2(a) of Schedule 1 to the Act is replaced by the following:

(a) $0.14545; or

(2) Subsection (1) is deemed to have come into force on the day after Budget Day.

7 (1) Paragraph 3(a) of Schedule 1 to the Act is replaced by the following:

(a) $9.09062; or

(2) Subsection (1) is deemed to have come into force on the day after Budget Day.

8 (1) Paragraph 4(a) of Schedule 1 to the Act is replaced by the following:

(a) $31.65673; or

(2) Subsection (1) is deemed to have come into force on the day after Budget Day.

9 (1) Subparagraph (a)(i) of Schedule 2 to the Act is replaced by the following:

(i) $0.11379, or

(2) Subsection (1) is deemed to have come into force on the day after Budget Day.

Electronic Filing and Certification of Tax and Information Returns

10 The *Excise Act, 2001* is modified to give effect to the proposals relating to Electronic Filing and Certification of Tax and Information Returns described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

11 The *Air Travellers Security Charge Act* is modified to give effect to the proposals relating to Electronic Filing and Certification of Tax and Information Returns described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

12 The *Greenhouse Gas Pollution Pricing Act* is modified to give effect to the proposals relating to Electronic Filing and Certification of Tax and Information Returns described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Avoidance of Tax Debts

13 The *Excise Act, 2001* is modified to give effect to the proposals relating to Avoidance of Tax Debts described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

14 The *Greenhouse Gas Pollution Pricing Act* is modified to give effect to the proposals relating to Avoidance of Tax Debts described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Audit Authorities

15 (1) The portion of subsection 260(2) of the *Excise Act, 2001* before paragraph (a) is replaced by the following:

Powers of officer

(2) The officer may, at all reasonable times, for any purpose related to the administration or enforcement of this Act

(2) Paragraphs 260(2)(b) and (c) of the Act are replaced by the following:

(b) stop a conveyance or direct that it be moved to a place where an inspection or examination may be performed;

(c) require any individual to be present during an inspection, audit or examination, require any individual to answer all proper questions orally or in writing, in any manner specified by the officer and require any individual to give to the officer all reasonable assistance;

16 (1) The portion of subsection 70(2) of the *Air Travellers Security Charge Act* before paragraph (a) is replaced by the following:

Powers of authorized person

(2) The authorized person may, at all reasonable times, for any purpose related to the administration or enforcement of this Act

(2) Paragraph 70(2)(b) of the Act is replaced by the following:

(b) require any individual to be present during an inspection, audit or examination, require any individual to give to the authorized person all reasonable assistance and require any individual to answer all proper questions orally or in writing, in any manner specified by the authorized person.

17 (1) The portion of subsection 141(2) of the *Greenhouse Gas Pollution Pricing Act* before paragraph (a) is replaced by the following:

Powers of authorized person

(2) The authorized person may, at all reasonable times, for any purpose related to the administration or enforcement of this Part

(2) Paragraph 141(2)(b) of the Act is replaced by the following:

(b) require any individual to be present during an inspection, audit or examination, require any individual to answer all proper questions orally or in writing, in any manner specified by the authorized person and require any individual to give to the authorized person all reasonable assistance.

Excise Duty on Vaping Products

18 The *Excise Act, 2001* is modified to give effect to the proposals relating to Excise Duty on Vaping Products described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Notice of Ways and Means Motion to introduce an Act to implement a Tax on Select Luxury Goods

That it is expedient to introduce an Act to give effect to the proposals relating to the Tax on Select Luxury Goods described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Draft Amendments to Various Regulations

Draft Amendments to Various GST/HST Regulations

Input Tax Credit Information Requirements

Input Tax Credit Information (GST/HST) Regulations

1 The definition *intermediary* in section 2 of the *Input Tax Credit Information (GST/HST) Regulations* is replaced by the following:

intermediary of a person, means, in respect of a supply made by the person, a registrant

(a) that, acting as agent of the person or under an agreement with the person, causes or facilitates the making of the supply, or

(b) that is deemed under subsection 177(1.11) of the Act to have acted as agent of the person in making the supply; (*intermédiaire*)

2 (1) The portion of paragraph 3(a) of the Regulations before subparagraph (i) is replaced by the following:

(a) where the total amount paid or payable shown on the supporting documentation in respect of the supply or, if the supporting documentation is in respect of more than one supply, the supplies, is less than $100,

(2) The portion of paragraph 3(b) of the Regulations before subparagraph (i) is replaced by the following:

(b) where the total amount paid or payable shown on the supporting documentation in respect of the supply or, if the supporting documentation is in respect of more than one supply, the supplies, is $100 or more and less than $500,

(3) The portion of paragraph 3(c) of the Regulations before subparagraph (i) is replaced by the following:

(c) where the total amount paid or payable shown on the supporting documentation in respect of the supply or, if the supporting documentation is in respect of more than one supply, the supplies, is $500 or more,

3 Sections 1 and 2 are deemed to have come into force on the day after Budget Day.

GST New Housing Rebate Conditions

New Harmonized Value-added Tax System Regulations, No. 2

4 Section 40 of the *New Harmonized Value-added Tax System Regulations, No. 2* is replaced by the following:

Group of individuals

40 If a supply of a residential complex or a share of the capital stock of a cooperative housing corporation is made to two or more individuals or if two or more individuals construct or substantially renovate, or engage another person to construct or substantially renovate, a residential complex, the following rules apply in respect of those individuals:

(a) subject to paragraphs (b) and (c), the references in sections 41, 43, 45 and 46 and the references in section 256.21 of the Act to an individual are to be read as references to all of those individuals as a group;

(b) the references in subsection 41(2) and paragraphs 45(2)(a), 46(2)(a) and 46(5)(c) to the primary place of residence of an individual or a relation of the individual are to be read as references to the primary place of residence of any of those individuals or a relation of any of those individuals;

(c) the reference in paragraph 46(5)(d) to the particular individual or a relation of the particular individual is to be read as a reference to any of those individuals or a relation of any of those individuals; and

(d) only one of those individuals may apply for a rebate under subsection 256.21(1) of the Act in respect of the complex or share, the amount of which is determined under section 41, 43, 45 or 46.

5 Section 4 applies in respect of

(a) any rebate under subsection 256.21(1) of the *Excise Tax Act*, the amount of which is determined under subsection 41(2), 43(1) or 45(2) of the Regulations, in respect of which the agreement referred to in paragraph 254(2)(b), 254.1(2)(a) or 255(2)(c) of that Act, as the case may be, is entered into after Budget Day; and

(b) any rebate under subsection 256.21(1) of the *Excise Tax Act*, the amount of which is determined under subsection 46(2) of the Regulations

(i) in respect of a residential complex (other than a mobile home or floating home) if the construction or substantial renovation of the residential complex is substantially completed after Budget Day, or

(ii) in respect of a mobile home or floating home acquired, imported or brought into a participating province after Budget Day.

Annex 7
Consultations on Other Tax Measures: Supplementary Information

Overview

This annex provides detailed information on the Digital Services Tax proposed in the Budget and invites input from stakeholders. It also provides information about the proposed Tax on Unproductive Use of Canadian Housing by Foreign Non-resident Owners, including plans for consultation.

The costing for the measures in this annex is presented in Table 1 – Cost of Proposed Tax Measures in Annex 6.

Digital Services Tax

Context

Digital technology has resulted in the development of new business models and ways of creating value. In the digital economy, data is a key commodity and the collection, processing and monetization of data is a key commercial activity. New business models have developed involving online platforms that attract users through certain service offerings, collect data and content contributions from the users, and then monetize that data and content in order to earn a profit. Examples of such business models include:

- social media platforms and search engines that earn revenue from advertising that they target based on data they have gathered about their users' interests; and
- intermediation platforms that create online markets for sellers and buyers of goods or services (e.g., taxi rides, short-term accommodations), exchange information across the platform about those on the other side of the market and facilitate transactions between them.

In these business models, the users are not mere customers of the platform or passive recipients of its services. The active participation of users, in interacting with the platform and providing data and content contributions, is a key contributor to the product offering of the platform. This user participation is a key input in the platform business's production process in a way similar to labour and physical capital in a more traditional business. For example:

- a search engine cannot earn advertising revenue without users to view ads and provide information allowing those ads to be targeted; and

- an accommodation platform cannot facilitate transactions without information about available apartments to share with potential renters and information about renters seeking premises to share with apartment providers.

Current tax systems, however, were generally designed for a bricks-and-mortar economy and effectively assume that value is created only in places where physical resources, like employees, facilities and equipment, are located. Given their reliance on digital technology, businesses of this type do not require a local physical presence in order to engage with users and collect their data and content. These businesses nevertheless can reasonably be considered to be conducting this part of their value-creating activity, even if it is controlled remotely, in the location of the users. This activity, however, is not always subject to local tax under current rules.

Since user-intensive commercial activity of this kind is dominated by businesses that are multinational in scope, this issue would be best addressed multilaterally. To this end, the international community has been discussing possible approaches for a number of years. In the project on Base Erosion and Profit Shifting (BEPS) undertaken by the members of the Organisation for Economic Co-operation and Development (OECD) and the G20 from 2013 to 2015, digital economy challenges were designated as Action 1 of the 15 action items. No agreement, however, was reached under Action 1 on a common approach with respect to corporate-level tax. Intensive discussions on the challenges of digitalization re-started in 2017 through the OECD-led Inclusive Framework on BEPS (which now has 139 member jurisdictions). Due to the inability to reach consensus, however, in October 2020 the target date for agreement was deferred to mid-2021.

Canada has a strong preference for a multilateral approach and so continues to work actively toward this goal with our international partners. However, there have been delays in reaching agreement and there is uncertainty about when an eventual agreed approach will come into effect. The government therefore proposes to implement an interim measure.

Proposed Measure

As announced in the November 2020 Fall Economic Statement, Budget 2021 proposes to implement a Digital Services Tax (DST). The proposed tax is intended to ensure that revenue earned by large businesses – foreign or domestic – from engagement with online users in Canada, including through the collection, processing and monetizing of data and content contributions from those users, is subject to Canadian tax. The DST is intended to be interim in nature – it would apply as of January 1, 2022 until an acceptable multilateral approach comes into effect with respect to the implicated businesses.

The proposed tax would have the following key features.

- **Rate and Base:** The DST would apply at a rate of 3 per cent on revenue from certain digital services reliant on the engagement, data and content contributions of Canadian users. For greater certainty, revenue would not include any applicable value-added tax or sales tax amounts collected on the revenue transaction.
- **In-Scope Revenue:** The DST would apply to revenue from online business models in which the participation of users, including by the provision of data and content contributions, is a key value driver. Specifically, it would apply to revenue from:
  - *Online marketplaces:* Services provided through an online marketplace that helps match sellers of goods and services with potential buyers, whether or not the platform facilitates completion of the sale. Included would be optional (e.g., "premium") services that enhance the basic intermediation function or affect its commercial terms. This category would not generally include:
    - revenue in respect of the storage or shipping of tangible goods sold through the marketplace, to the extent the revenue reflects a reasonable rate of compensation for those services;
    - the sale of goods and services (including the sale, licensing or streaming of digital content such as audio, video, games, software, e-books, newspapers and magazines) by a seller on its own account; and
    - trading in financial instruments and commodities.
  - *Social media:* Services provided through an online interface to facilitate interaction between users or between users and user-generated content. This category would not generally include an interface of which the sole purpose is to provide communications services (such as telephone service through Voice over Internet Protocol).
  - *Online advertising:* Services aimed at the placing of online advertisements that are targeted based on data gathered from users of an online interface. This would include online interfaces such as online marketplaces, social media platforms, internet search engines, digital content streaming services, and online communications services. Advertisements would include preferential search listings. The scope would encompass both revenue earned by an interface operator from the display of advertising on the interface as well as revenue earned from systems for facilitating online advertising placement by third parties (including demand-side platforms, supply-side platforms, ad exchanges and advertising performance monitoring services).

- *User data:* The sale or licensing of data gathered from users of an online interface, including anonymized and aggregated data.

- **Taxpayers**:
  - *Thresholds:* The DST would apply to businesses organized under various forms including corporations, trusts and partnerships. The DST would apply in a particular calendar year to an entity that meets, or is a member of a business group that meets, both of the following thresholds:
    - global revenue from all sources of €750 million or more (the threshold for country-by-country reporting under an OECD standard) in the previous calendar year; and
    - in-scope revenue associated with Canadian users of more than $20 million in the particular calendar year.

    For such entities or groups, the DST would apply only to in-scope revenue associated with Canadian users in excess of the $20 million threshold.
  - *Group-level calculation:* Group-level calculation of thresholds is important because a firm's administrative capacity is linked to its overall size and the revenue-generating activities linked to Canadian users may be dispersed across multiple entities in a business group. It is anticipated that groups will generally be defined in the same manner as for country-by-country reporting.
  - *Large firms:* Large firms are the focus of the proposed tax for several reasons.
    - Successful leveraging of user participation, data and content as a key value creation method in an online platform involves significant economies of scale and important network effects. Users are attracted by the presence of other users with whom they can interact, so market share tends to gravitate toward platforms that attract large user groups. Larger platforms thus tend to have a greater ability to generate value from user engagement.
    - Larger, more mature firms are more likely to be profitable and able to bear the burden of a tax on revenue, which is not sensitive to profitability. Exclusion from the tax of smaller firms, from all countries, will help ensure that smaller, less mature and growing firms, which are less likely to be profitable, are not prejudiced in their ability to compete against larger, more established firms.
    - Large firms are better able to manage the burden of compliance associated with a new tax and can absorb the relevant costs over a larger amount of revenue. The relative costs of administration for government are also proportionately smaller relative to the tax revenue for larger firms. In particular, the costs of administering a tax applicable to large numbers of smaller firms, many of which have little or no local physical presence, would be inordinate.

- **Revenue Sourcing:** When revenue of an entity is contractually related to both activities within the scope of the DST and other activities, the in-scope revenue would need to be determined on a reasonable basis. In determining an entity's in-scope revenue associated with users in Canada (as opposed to users in another jurisdiction), two general methods would be used. Where it is possible to trace revenues to relevant users in Canada on the basis of transactional information, such tracing would be required. Where such tracing is not possible, a specified formulaic allocation would be required. Revenue sourcing principles would vary according to the nature of the revenue.
  - *Online marketplaces:* Fee revenue of online marketplaces would generally be sourced to the locations of the users who interact through the interface.
    - *Transactional*: Fee revenue associated with a particular transaction between users (e.g., a fee set as a percentage of the transaction price or as a fixed amount per transaction, or a fee otherwise set for a particular transaction) would generally be considered to be sourced 50:50 to the locations of the buyer and seller. This allocation recognizes that regardless of the legal arrangement for payment of the fee, the intermediation service of the marketplace is reliant on the engagement and data contributions of both parties. However, where the transaction is an arrangement for the performance of a tangible service in a particular location (e.g., accommodations, food delivery, taxi ride), the revenue would be sourced to the location where the service is performed.
    - *Non-transactional:* Fee revenue that is not associated with a particular transaction (e.g., interface subscription fees) and revenue from advertising goods or services listed for sale on the marketplace would be sourced to the locations of the interface users on a formulaic basis. The revenue associated with users in Canada would be considered to be equal to the total of the relevant revenue multiplied by the ratio of the number of marketplace transaction participants in Canada to the total number of transaction participants. For this purpose, the buyer and seller in a transaction would each be considered a "transaction participant" and a participant would be counted each time it participates in a transaction. This allocation reflects the fact that non-transactional interface fees are generally paid for the ultimate purpose of concluding transactions with other interface users, even if those users cannot be identified at the time the fee is paid.

- *Social media*: Fee revenue of social media interfaces (e.g., interface subscription fees) would be sourced to the locations of the interface users on a formulaic basis. The revenue associated with users in Canada would be considered to be equal to the total of the relevant revenue multiplied by the ratio of the number of active users of the interface that are users in Canada to the total number of active users in all locations. This allocation reflects the fact that interface fees are generally paid for the purpose of facilitating interactions with other interface users, including those who do not pay fees.
- *Online advertising*: Online advertising revenue would generally be sourced based on the location of the user who views, listens to, clicks on, or otherwise consumes the advertisement. This user would often be the same user whose data has been used to target the advertisement. As an exception, revenue of an online marketplace from advertising goods or services listed for sale on the marketplace would be sourced using the formula applicable to non-transactional marketplace fee revenue (outlined above). Outside of this exception, advertising revenue would be sourced using tracing or a formulaic basis, according to the circumstances.
  - *Tracing*: Advertising revenue would be required to be traced to viewers in Canada where possible. For example, this would include revenue from a series of advertisements that is shown all or substantially all (generally 90 per cent or more) to viewers in Canada and revenue from individual advertisements that are shown to viewers in Canada (e.g., where advertising fees are contractually charged on the basis of a user viewing or clicking on the advertisement or taking some other action).
  - *Formula*: Where under a contract advertising revenue associated with users in Canada and other jurisdictions is not separately identifiable, revenue associated with users in Canada would be considered to be equal to the total contract revenue multiplied by the ratio of the number of advertisement views by viewers in Canada to the total number of advertisement views by viewers in all locations.
- *User data*: Revenue from the sale of user data would be sourced where possible to the location of the user to whom the data relates. If particular revenue relates to data in respect of both users in Canada and users in other locations, the revenue associated with users in Canada would be considered to be equal to the total of the relevant revenue multiplied by the ratio of the number of users from which the data was collected that are users in Canada to the total number of users.

- **User Location:**
  - *Ordinary location*: The determination of whether a user of an interface is located in Canada or some other country for purposes of revenue sourcing would generally be based on the ordinary (i.e., usual) location of an individual user and the ordinary place of business of a business user. The determination of the ordinary location, or ordinary place of business, of a user would be based on information generally available to the digital service provider. This would include such indicators as recurring data on device geolocation or internet protocol (IP) address, billing address, delivery address (where relevant), and telephone area code.
  - *Real-time location*: By exception, in the cases of advertising targeted based on the real-time location of a user and the sale of data based on the real-time location of a user, the real-time location of a user would be based on device geolocation if available, or other information if not.
  - *Consistency*: Firms would be expected to use a consistent approach in determining user location, though different approaches might be used for different services depending on differences in data availability.
- **Treatment for Income Tax Purposes:** As with other non-income taxes, the deductibility of the DST liability of an entity in computing taxable income for Canadian income tax purposes would be determined based on general principles – e.g., whether it is incurred for the purpose of earning the entity's income subject to Canadian income tax. DST liability would not be eligible for a credit against Canadian income tax payable.
- **Administration:** It is proposed that firms subject to DST be required to file an annual return following the end of the reporting period, which is proposed to be the calendar year. It is contemplated that:
  - one annual payment would be required after the end of the reporting period;
  - a group would be able to designate an entity to file the DST return and pay the DST liability on behalf of the group; and
  - to facilitate enforcement, each entity in a group would be jointly and severally liable for DST payable by any other group member.

Coming Into Force

The DST would apply as of January 1, 2022.

Consultation

The government plans to engage with the provinces and territories to discuss the implications of the DST.

The government welcomes feedback from stakeholders on the proposed approach to implementing the DST. Interested parties are invited to send written representations by June 18, 2021 to the Department of Finance Canada, Tax Policy Branch at: DST-TSN@canada.ca.

It is anticipated that draft legislation for a new statute implementing the DST would be released for public comment during summer 2021, taking into account the feedback received. The legislation would subsequently be included in a bill to be introduced in Parliament.

Tax on Unproductive Use of Canadian Housing by Foreign Non-resident Owners

Budget 2021 proposes to introduce a new national 1-per-cent tax on the value of non-resident, non-Canadian owned residential real estate considered to be vacant or underused. This tax would be levied annually beginning in 2022.

Beginning in 2023, all owners of residential property in Canada, other than Canadian citizens or permanent residents of Canada, would be required to file an annual declaration for the prior calendar year with the Canada Revenue Agency in respect of each Canadian residential property they own. The requirement to file this declaration would apply irrespective of whether the owner is subject to tax in respect of the property for the year.

In a declaration in respect of a property, the owner would be required to report information such as the property address, the property value and the owner's interest in the property. The owner may also be eligible to claim in their declaration an exemption from the tax in respect of a property for the year. An exemption may be available, for instance, where a property is leased to one or more qualified tenants in relation to the owner for a minimum period in a calendar year. Where an exemption in respect of a property for the year is not available, the owner would be required to calculate the amount of tax owing and report and remit it to the Canada Revenue Agency by the filing due date.

The failure to file a declaration with respect to a property for a calendar year as and when required could result in the loss of any available exemptions in respect of the property for the calendar year. Penalties and interest would also be applicable and the assessment period would be unlimited.

In the coming months, the government will release a backgrounder to provide stakeholders with an opportunity to comment on further parameters of the proposed tax. These parameters would include, for example, the definition of residential property, the value on which the tax would apply, how the tax would apply where a property is owned by multiple individuals and/or non-individuals, potential exemptions and compliance and enforcement mechanisms. Additionally, the consultation will consider whether, how and when the proposed tax would apply in smaller, resort and tourism communities.

Notices of Ways and Means Motions

Notice of Ways and Means Motion to Introduce an Act to Implement a Digital Services Tax

That it is expedient to introduce an Act to implement a Digital Services Tax to give effect to the proposals relating to the Digital Services Tax as described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Notice of Ways and Means Motion to introduce an Act to implement a Tax on Unproductive Use of Canadian Housing by Foreign Non-resident Owners

That it is expedient to introduce an Act to give effect to the proposals relating to the Tax on Unproductive Use of Canadian Housing by Foreign Non-resident Owners described in the budget documents tabled by the Minister of Finance in the House of Commons on Budget Day.

Making a difference...together

REPORT TO PENINSULA RECREATION COMMISSION
MEETING OF THURSDAY, APRIL 29, 2021

SUBJECT **Panorama Recreation Main Electrical Transformer**

ISSUE SUMMARY

To amend the capital budget for the main electrical transformer project to allow for transformer replacement.

BACKGROUND

As part of the Main Electrical Transformer Project, the 1500 kVa transformer was removed from its location so the transformer pad could be relevelled. During the process of lifting the transformer back on to its pad, the unit broke loose from its rigging and fell 18-24 inches partially landing on the concrete pad. The transformer was briefly inspected for damage on site and reinstalled. The unit energized and showed no initial signs of damage from the impact.

After the incident, Panorama engaged a third-party high voltage electrical contractor to perform extensive testing of the unit. The report found that the main transformer that feeds Panorama Recreation Center is in less than suitable condition for reliable operation. Testing of the unit revealed oil leaking from one set of bushings that was found to be likely caused by the fall. Testing also found significant faults in some of the unit's windings. The report was unable to confirm if the fall contributed to, or worsened the conditions of the windings due to inconsistencies in prior testing results. The report recommends removing the transformer from operation as failure of the unit is considered likely.

Based on the report findings, the transformer should be replaced as soon as possible. Staff are gathering additional quotes to have this work completed.

ALTERNATIVES

Alternative 1:
The Peninsula Recreation Commission recommends to the Capital Regional District Board:

That the approved Panorama Recreation project 19-02-Main Electrical Transformer Upgrade be amended by $52,100 to accommodate for the emergency replacement of the main electrical transformer, and to proceed with the purchase of the transformer.

Alternative 2:
That the Peninsula Recreation Commission receive this report for information.

IMPLICATIONS

Financial Implications

The estimated budget to replace the transformer including permits, installation, commissioning and disposal of the old transformer is $80,000.00. The transformer replacement can be done

within the original Transformer Maintenance Upgrade Project which currently has an approximate remaining balance of $27,900, leaving a required project budget increase of $52,100.

Staff are involved in negotiations for compensation of damages arising from this incident.

Failure of the transformer prior to replacement would result in substantial costs to provide emergency power and would drastically limit our operations. Under temporary generator power we would not be able to operate the refrigeration plant or pool.

Service Delivery Implications

The 1500 kVa transformer provides power to Panorama Recreation and is imperative to the operation of the facility. These transformers are not readily available and typically have a 20-30 week lead time on ordering. Failure of the transformer would cause extensive service delivery interruptions.

CONCLUSION

The main electrical transformer at Panorama Recreation was found to be in poor condition following an incident during the Main Electrical Transformer Maintenance Project. The assessment of the unit revealed that the transformer is in less than suitable condition for reliable operation and should be taken out of service. A project budget increase of $52,100. is required to cover the transformer replacement costs.

RECOMMENDATION

The Peninsula Recreation Commission recommends to the Capital Regional District Board:

That the approved Panorama Recreation project 19-02-Main Electrical Transformer Upgrade be amended by $52,100 to accommodate for the emergency replacement of the main electrical transformer, and to proceed with the purchase of the transformer.

REPORT TO PENINSULA RECREATION COMMISSION
MEETING OF THURSDAY, APRIL 29, 2021

SUBJECT **2021/2022 Fees and Charges – Panorama Recreation Services**

ISSUE SUMMARY

To provide the Peninsula Recreation Commission with recommendations for the 2021/2022 fees and charges.

BACKGROUND

Each year, all Capital Regional District (CRD) recreation centres are required to review and analyze their fees and charges and recommend any changes for approval by the CRD Board. Existing fees and charges are compared to other recreation centres in the area and the lower mainland. As well, other data and background information is gathered to determine social and economic conditions in the community.

The COVID-19 pandemic continues to impact Panorama Recreation operations. Staff have considered this, as well as the impact on the community when reviewing the fees and charges. Staff are recommending no changes to admissions and pass fees and have limited changes to other fees with the goal of supporting community health and wellness. In addition, keeping fees static may assist in bringing back community members who haven't yet returned, or have been using other options for recreation, particularly fitness and weights. Monthly and annual (timed passes) are included in the fees and charges but will continue to be on hold until operations resume without capacity limits. The Employee Wellness program will also be placed on hold, pending a review from staff once normal operations resume. The proposed changes are listed below:

- *Adjustment to Junior B ice rental rates:* The current fees and charges list the Junior B practice rate at $127/hr and games at $128/hr. The proposal is to combine these fees at $128/hr for ease of reference and use.

- *Outdoor tennis court rental rate extended to inclusive multisport court:* The Jumpstart inclusive multisport courts are expected to open this fall. Staff propose to extend the current rate of $6 per hour used at the existing outdoor tennis courts to the new courts.

- *New rate for Greenglade Fitness/Dance Studio:* The Greenglade fitness/dance studio (Room #4) is currently rented out at the standard Greenglade classroom rate. The space is double the size of the other Greenglade classrooms, so the current structure doesn't reflect a fair rental rate. Staff are proposing an increase to align more closely with the Fitness Studio at Panorama Recreation Centre.

ALTERNATIVES

Alternative 1

That the Peninsula Recreation Commission recommend to the Capital Regional District Board:

That the proposed fees and charges be approved for inclusion in the 2021/2022 Fees and Charges Bylaw for Panorama Recreation Services.

Alternative 2

That the proposed fees and charges, as amended, be approved for inclusion in the 2021/2022 Fees and Charges Bylaw for Panorama Recreation Services.

IMPLICATIONS

Social Implications

Maintaining current admission rates and pass rates without increase will continue to make recreation accessible to our community members and encourage them in a healthy lifestyle.

Economic Implications

The user fees collected by Panorama Recreation are used to reduce the tax requisition and for the delivery of recreation services. Recreation fees and charges continue to be reasonable and affordable for the majority of residents and visitors to this area. Given the current financial impact of the pandemic, and increase in admission and passes, may be prohibitive to families in the post-pandemic recovery. A new preschool program and a return of regular operations should generate sufficient revenue to meet budget targets for 2021/2022.

CONCLUSION

Each year the fees and charges for recreation services are re-evaluated to determine if new charges are required and if existing fees need to be adjusted. Comparing fees to other recreation centres and looking at social and economic factors, the recommendation is that most fees should remain unchanged.

RECOMMENDATION

That the Peninsula Recreation Commission recommend to the Capital Regional District Board:

That the proposed fees and charges be approved for inclusion in the 2021/2022 Fees and Charges Bylaw for Panorama Recreation Services.

Making a difference...together

REPORT TO REGIONAL PARKS COMMITTEE
MEETING OF WEDNESDAY, APRIL 28, 2021

SUBJECT **Sustainable Funding Model for Future Land Acquisitions**

ISSUE

To address resource funding required to sustain future land acquisitions.

BACKGROUND

At its March 27, 2019 meeting, the Parks & Environment Committee directed staff to identify options during the 2020 budget process for service level adjustments to sustain Capital Regional District (CRD) Regional Parks service delivery. At the October 23, 2019 meeting, staff presented sustainable service delivery report cards that identified that financial and human resources were no longer sufficient to meet current asset renewal demands. That meeting resulted in two motions related to sustainable service delivery: 1) that an additional $925,000 be requisitioned each year for capital reserves to fund the refurbishment and replacement of existing assets; and 2) that staff report back in 2020 on strategies to ensure that sufficient funding is in place in future years to sustain the Regional Parks service.

At its November 13, 2019 meeting, the Board approved an extension to the Land Acquisition Fund (LAF) for 10 years. At its October 28, 2020 meeting, the Board approved a $1 increase per average residential household every year from 2021 until 2025. The Board did not support utilizing the LAF to resource increased costs associated with the additional land acquisitions.

Increases in the regional parks land base come with costs at the time of acquisition, as well as later on when implementing an approved management plan for the area. As soon as land is acquired, the CRD has a responsibility to manage the land to ensure visitor safety and park values are protected; therefore, all costs associated with the acquisition of properties need to be made available for immediate site management needs.

Costs associated with land management will vary widely based on the size of the land, the amount of development already on the land and where the land is located relative to the CRD Regional Parks' service yards and offices. To understand the real costs associated with managing, developing and maintaining a new property, staff have developed a cost sheet that identifies many of the individual one-time costs associated with immediate management needs as well as some of the ongoing costs that are associated with maintaining park assets (Appendix A).

In addition to the costs described within Appendix A, there are incremental costs associated with supporting new land acquisitions. Support services such as First Nations Relations, park planning, ecological biology, GIS, management and administration increase with each acquisition. For each new land acquisition a detailed unique cost schedule for immediate management needs will be brought forward.

All draft management plans presented to the Regional Parks Committee will identify a cost schedule for plan implementation. This cost schedule will form part of the draft management plan for consideration during the decision-making process (Appendix B), including any additional staffing resources that are required.

ALTERNATIVES

Alternative 1

The Regional Parks Committee recommends to the Capital Regional District Board:

1. That all future recommended regional park land acquisition purchases include a detailed unique operating cost schedule until a management plan is completed, and all draft management plans presented to the Regional Parks Committee will identify a cost schedule for plan implementation.

2. That costs required for future property acquisitions be identified within the subsequent Capital Regional District Regional Parks Financial Plan.

Alternative 2

That this report be referred back to staff for additional information.

IMPLICATIONS

Financial Implications

The acquisition of new land requires additional resources for its securement, protection and management. These costs are not included in the estimated costs when acquiring land for CRD Regional Parks. These costs have historically been absorbed through the Regional Parks' core budget. Increases in the annual requisition that account for new acquisition costs will be required in each year where new lands are purchased. Requests for funding to support new land acquisitions will be made through the budgeting process. The requested increases will vary depending on the complexities associated with the lands and depending on how many staffing resources are required.

Strategic Plan Implications

The current Board Strategic Plan priority initiative under Climate Action and Environmental Stewardship is to "Ensure appropriate funding for parks and trails infrastructure, improvements and maintenance by updating the Regional Parks Strategy with consideration to ecological, recreation and reconciliation principles, land acquisition capacity, and expanded partnerships with First Nations." Actions and key deliverables to date include renewing the LAF for an additional 10 years, development of an asset management plan, $925,000 increase in the operating budget to address deficiencies and asset replacement, additional staffing, update the Regional Parks Plan and a zero based budget exercise for regional parks.

Social Implications

From 2010 to 2020, visits to regional parks and trails have increased by more than 60% from 5.2 million in 2010, to 8.5 million in 2020. Public expectations are that lands purchased to become regional parks will be made accessible to the public and will provide some level of recreational service even before park management planning processes are completed. Without the resources required to operate newly acquired park lands, existing parks will continue to face capacity issues that will have implications for both park values and quality visitor experience.

Environmental & Climate Implications

The acquisition of land for regional parks and trails contributes significantly to achieving corporate environmental protection and climate action strategic priorities. Land acquired protects ecosystems, provides habitat for plants and animals, supports the natural cleansing of water and air and helps reduce fossil fuel use and greenhouse gas emissions.

If newly acquired lands are not actively managed and developed for visitor use, those lands may be at risk of being used by the public without appropriate guidance and oversight. This has the potential to impact culturally sensitive sites as well as sensitive ecosystems and their related federally and provincially protected species.

Regional Growth Strategy Implications

The regional population is increasing. The Regional Growth Strategy indicates an intent to protect, enhance and expand natural areas and to provide recreation areas. With increasing population and changing population demographics, there will be increasing demands on the regional park system. The acquisition of land for regional parks and trails sets aside parkland to meet the needs of current residents and future population growth.

CONCLUSION

At its November 13, 2019 meeting, the Board approved an extension to the Land Acquisition Fund (LAF) for 10 years and did not support utilizing the LAF to resource increased costs associated with additional land acquisitions. With increasing park use and the addition of more land, there will be ongoing pressure on the regional parks budget. Staff will provide a summary of expected costs associated with each new land acquisition. An increase in the requisition would be required beyond the projected increase in the operational budget.

RECOMMENDATION

The Regional Parks Committee recommends to the Capital Regional District Board:

1. That all future recommended regional park land acquisition purchases include a detailed unique operating cost schedule until a management plan is completed, and all draft management plans presented to the Regional Parks Committee will identify a cost schedule for plan implementation.

2. That costs required for future property acquisitions be identified within the subsequent Capital Regional District Regional Parks Financial Plan.

GOVERNANCE COMMITTEE

PREAMBLE

The Capital Regional District (CRD) Governance Committee is a standing committee established by the CRD Board to make recommendations to the Board regarding items related to governance and corporate administration. The Committee will also provide advice to the Board on agenda items for Committee of the Whole meetings.

The Committee's official name is to be:

Governance Committee

1.0 PURPOSE

(a) To consider matters and make recommendations to the Board or to the Committee of the Whole regarding the following functions:

i. Board, committee and commission governance and meeting procedures;

ii. General governance issues such as communication, access and accountability processes;

iii. Corporate administration and operations such as but not limited to:
- Labour Relations and Human Resource Matters
- Internal and external communications systems
- Intergovernmental relations

iv. Legal and Risk Management;

v. Identification of items of regional interest and/or items that are relevant to more than one standing committee that are better suited for consideration at a Committee of the Whole meeting;

(b) The Committee may also make recommendations to the Board to advocate to provincial and federal governments on matters effecting the Regional District.

(c) The Committee may establish an Appointment Advisory Committee, on an as-and-when needed basis, responsible for reviewing applications and making recommendation for appointments to external boards.

i. The Appointment Advisory Committee is permitted to meet in closed when evaluating public member applications.

2.0 ESTABLISHMENT AND AUTHORITY

a) The Committee will make recommendations to the Capital Regional District Board for consideration; and

b) The Board Chair will appoint the Committee Chair, Vice Chair and Committee members annually.

3.0 COMPOSITION

a) Committee members will be appointed CRD Board Members;

b) All Board members are permitted to participate in standing committee meetings, but not vote, in accordance with the CRD Board Procedures Bylaw; and

c) First Nation members are permitted to participate in standing committee meetings at their pleasure, in accordance with the CRD Procedures Bylaw, where the Nation has an interest in matters being considered by the committee.

4.0 PROCEDURES

a) The Committee shall meet every second month on even months, or at the call of the Committee Chair;

b) The agenda will be finalized in consultation between staff and the Committee Chair and any Committee member may make a request to the Chair to place a matter on the agenda through the Notice of Motion process;

c) With the approval of the Committee Chair and Board Chair, Committee matters of an urgent or time sensitive nature may be forwarded directly to the Board for consideration;

d) A quorum is a majority of the Committee membership and is required to conduct Committee business

5.0 RESOURCES AND SUPPORT

a) The General Manager, Corporate Services will act as liaison to the Committee;

b) Minutes and agendas are prepared and distributed by the Corporate Services Department; and

c) The Executive Services Department will provide additional Committee support as required.

Approved by CRD Board _____

Making a difference...together

REPORT TO THE CAPITAL REGIONAL DISTRICT BOARD
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **Capital Regional District 2020 Annual Report**

ISSUE SUMMARY

To present the Capital Regional District 2020 Annual Report.

BACKGROUND

The Capital Regional District (CRD) 2020 Annual Report, attached as Appendix A, provides a profile of CRD services and our progress and accomplishments in advancing Board and Corporate priorities, together with service delivery results and financial highlights. The report also features key activities of the CRD's other corporate entities, the Capital Regional Hospital District (CRHD) and Capital Region Housing Corporation (CRHC), and the many CRD-appointed Commissions.

The report is prepared to give stakeholders information about the CRD's activities and performance and together with the approval of the 2020 financial statements, will close-out the prior year. This report is filed with the provincial government together with the detailed financial statements, circulated to stakeholders and submitted to the Government Finance Officers Association to share our reporting and performance.

2020 marked completion of the second year of the Board's four year term and the report provides an opportunity to share the progress on the Board's Strategic Priorities for 2019 – 2022 advancing actions and initiatives related to Transportation and Housing; Climate Change Adaptation and Mitigation; First Nations Reconciliation; and Advocacy, Governance & Accountability (including EA specific initiatives). The Board's Strategic Priorities confirm the CRD's vision, mission and mandate and set the long-term strategic direction for the CRD in order to respond to community needs. This work is done in alignment with the Statement of Reconciliation.

Despite the challenges that the COVID-19 pandemic presented in 2020, the CRD continued to provide essential services and make significant progress on the Board and Corporate priorities. Some of the most visible projects across the region included the completion of the Core Area Wastewater Treatment Plant construction project, the addition of more than 1000 new affordable homes as part of the Regional Housing First Program and Capital Regional Housing Corporation construction projects, the acquisition of four new areas including more than 100 hectares for regional park, and completion of the restoration of the Todd Creek Trestle along the Galloping Goose Regional Trail.

We also focused on developing our organization improving our operations, systems and processes to effectively manage taxpayer resources and steward our more than $2.3 billion of assets that contribute to the health and wellbeing of residents.

The results contained in the report show the breadth and scope of what we do on a daily basis and demonstrates how the CRD contributes to an improved quality of life for the residents through the efficient and effective delivery of services across the region.

ALTERNATIVES

Alternative 1:
That the Capital Regional District 2020 Annual Report be received for information.

Alternative 2:
That the Capital Regional District 2020 Annual Report be referred back to staff for additional information.

RECOMMENDATION

That the Capital Regional District 2020 Annual Report be received for information.

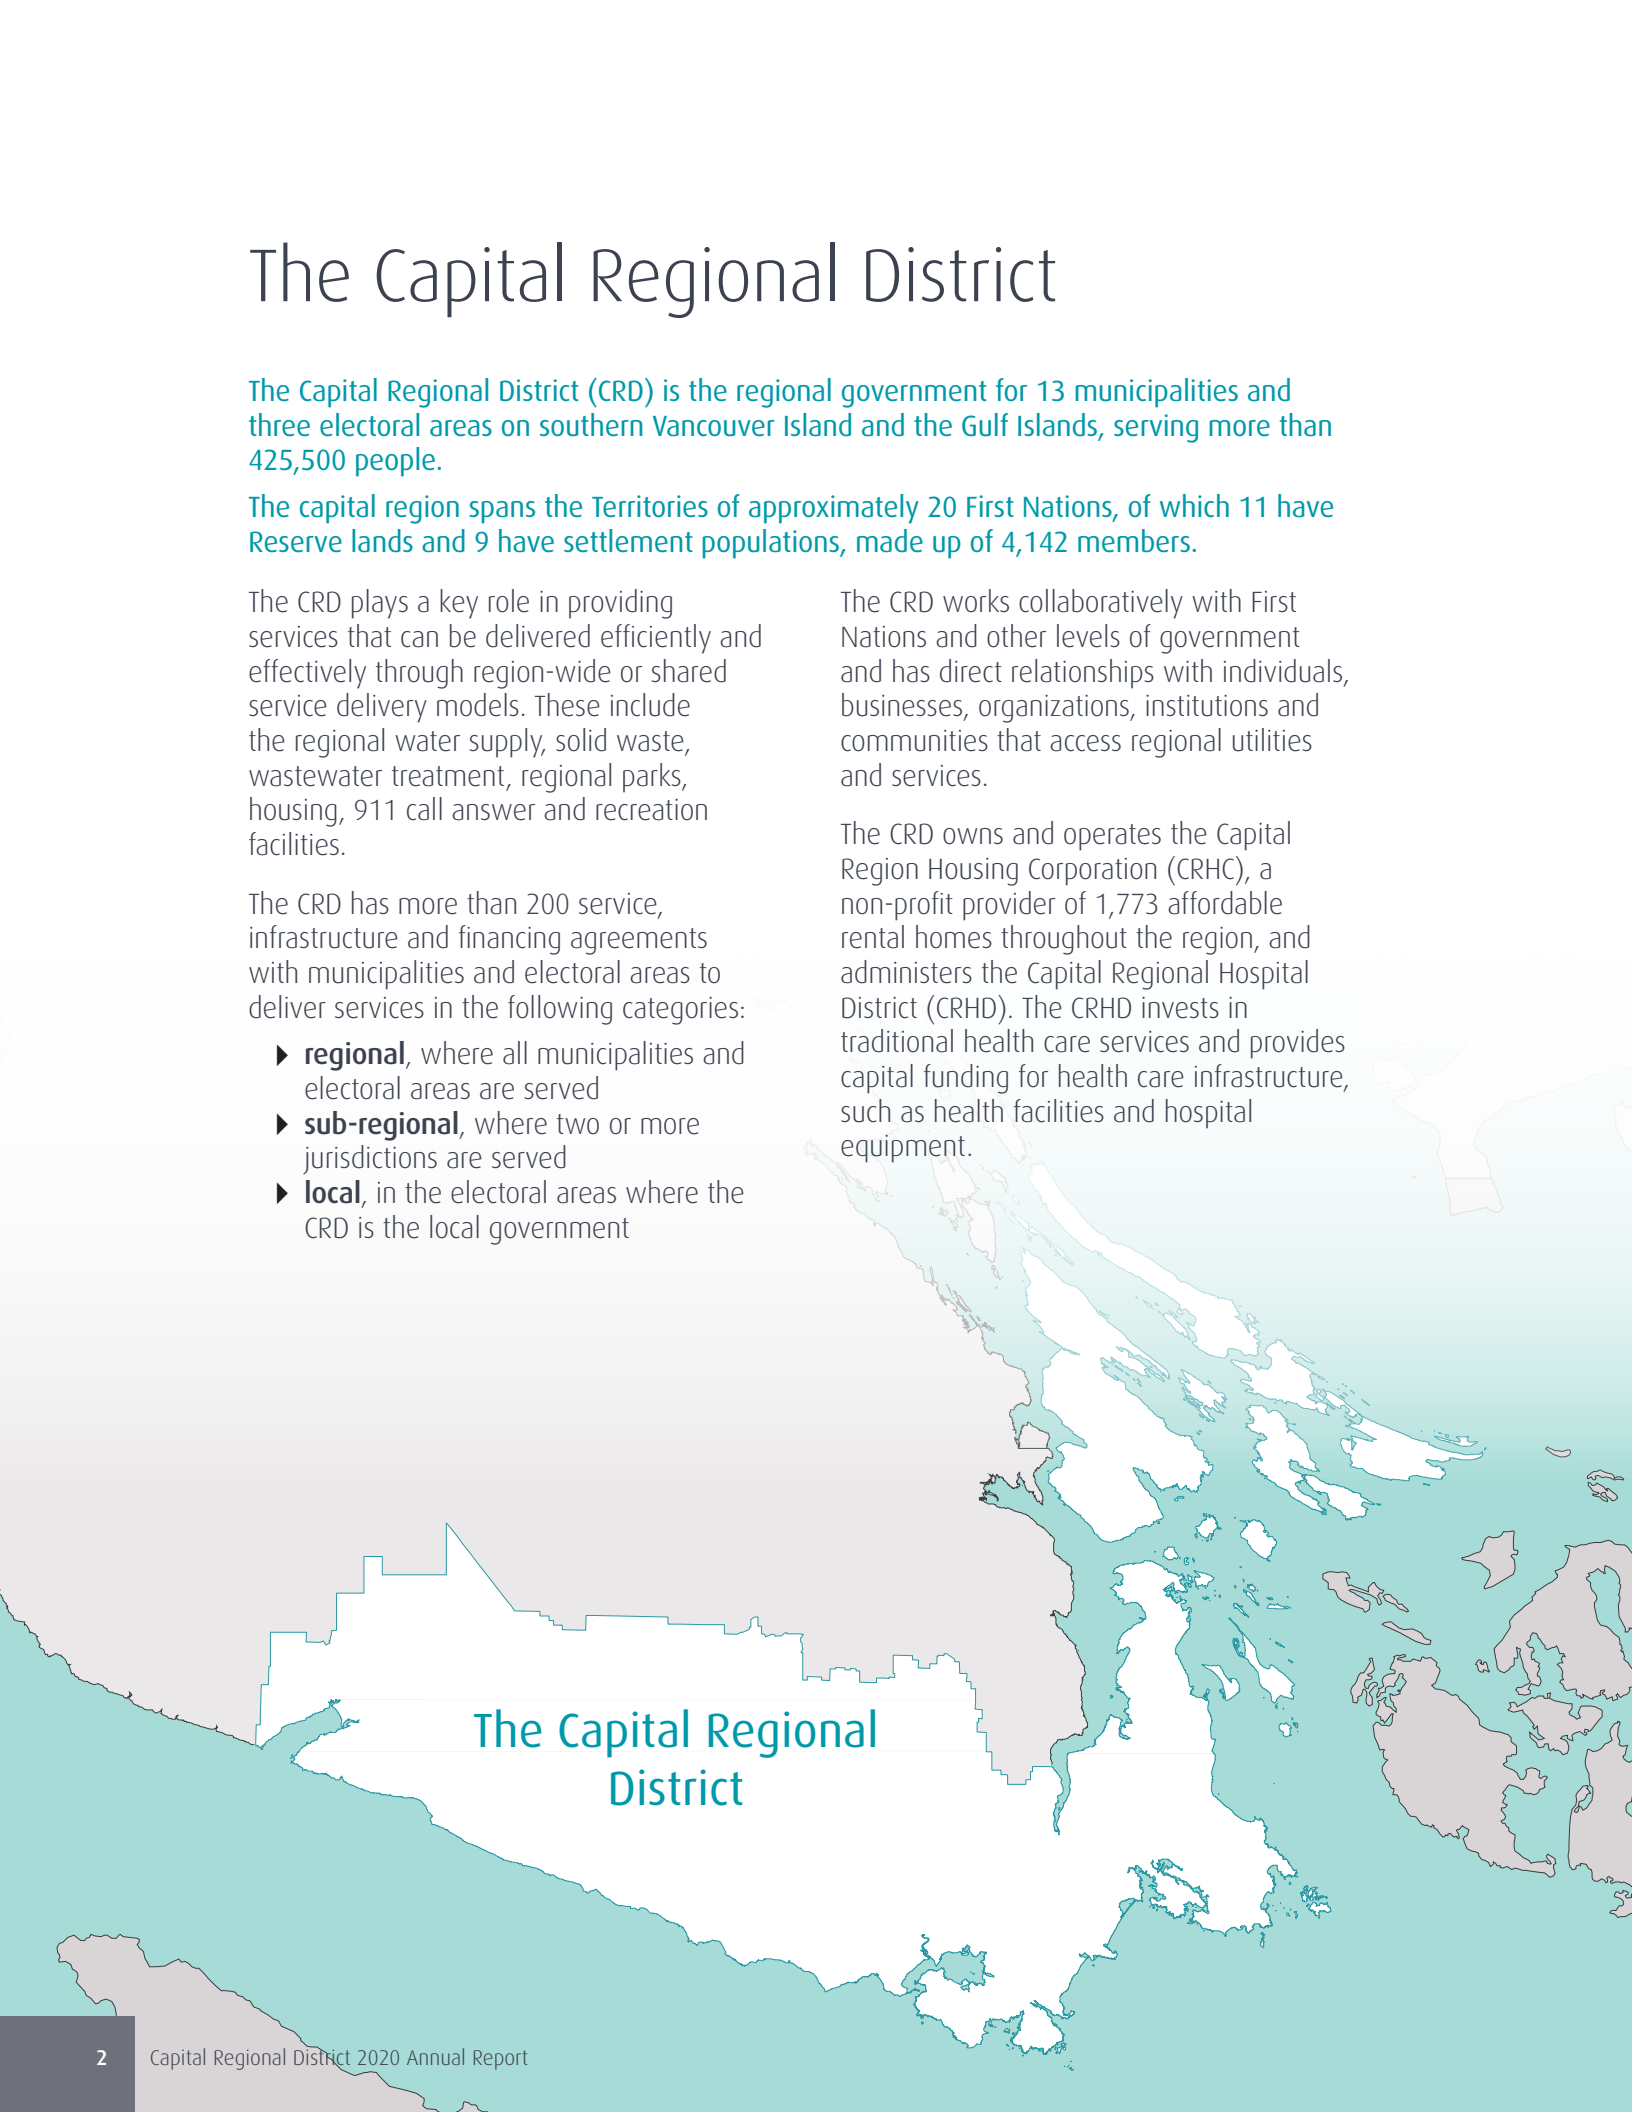
The Capital Regional District

The Capital Regional District (CRD) is the regional government for 13 municipalities and three electoral areas on southern Vancouver Island and the Gulf Islands, serving more than 425,500 people.

The capital region spans the Territories of approximately 20 First Nations, of which 11 have Reserve lands and 9 have settlement populations, made up of 4,142 members.



The CRD plays a key role in providing services that can be delivered efficiently and effectively through region-wide or shared service delivery models. These include the regional water supply, solid waste, wastewater treatment, regional parks, housing, 911 call answer and recreation facilities.

The CRD has more than 200 service, infrastructure and financing agreements with municipalities and electoral areas to deliver services in the following categories:

- **regional**, where all municipalities and electoral areas are served
- **sub-regional**, where two or more jurisdictions are served
- **local**, in the electoral areas where the CRD is the local government

The CRD works collaboratively with First Nations and other levels of government and has direct relationships with individuals, businesses, organizations, institutions and communities that access regional utilities and services.

The CRD owns and operates the Capital Region Housing Corporation (CRHC), a non-profit provider of 1,773 affordable rental homes throughout the region, and administers the Capital Regional Hospital District (CRHD). The CRHD invests in traditional health care services and provides capital funding for health care infrastructure, such as health facilities and hospital equipment.

OUR ORGANIZATION

Message from the Board Chair

As with other organizations, the CRD needed to adapt quickly to the COVID-19 pandemic in 2020. As a result of strong leadership and staff dedication, the CRD has been able to safely continue delivering services and still make significant progress moving forward on the Board Strategic Priorities.

The crucial services and infrastructure that we operate and maintain are critical to the wellbeing, health and safety of our residents.

The supply and distribution of drinking water, disposal of wastewater and refuse, operation of parks and maintenance of affordable homes, among many other services, required ongoing attention and remain essential in an emergency.

While the CRD has been mandated to deliver these services, we are also committed to working with partners to advance many other initiatives.

In 2020, some of the most visible projects across the region included the completion of the Core Area Wastewater Treatment Plant, the construction of many new affordable housing units as part of the Regional Housing First Program and the acquisition of additional regional parkland.

Another initiative, while less visible but vitally important, included the progress made on the inclusion of First Nations in regional governance and decision-making, a truly significant and important change to CRD governance as part of our commitment to reconciliation.

Looking forward, under the re-established Transportation Committee, the CRD's goal is to identify a list of regional transportation priorities and work with jurisdictional partners and stakeholders to realize them.

Throughout 2020, I enjoyed finding new ways to connect virtually with colleagues, residents and the media about the CRD. It hasn't always been easy to stay connected while staying apart, but I am constantly impressed by our ability to adapt and maintain relationships in difficult times.

Thank you to my Board colleagues for our thoughtful deliberations, to staff for their tremendous efforts in 2020, and I hope 2021 will be a year of collective economic and public health recovery.

I am proud of the resilience shown by the CRD as an organization by continuing to stay on track with projects and operations throughout the COVID-19 pandemic and I am excited about the future ahead.

Colin **PLANT**
Chair
Capital Regional District Board

Message from the Chief Administrative Officer

I am exceptionally proud of how our organization was able to adjust and sustain operations through 2020 and continue to make progress on Board and Corporate priorities. We executed a large capital program and saw the construction or completion of many significant projects, despite the challenges presented by the COVID-19 pandemic.

Our staff was able to quickly adjust and safely implement the necessary measures to ensure that essential service delivery continued while respecting public health orders and following our COVID-19 Safety and Exposure Control Plan.

The extraordinary efforts to assess, prepare and deploy new operational procedures demonstrated how prepared, resilient and willing our staff are to meet the needs of the region, and assured residents and customers that our workforce could maintain business continuity.

The CRD focused on developing our organization, investing in infrastructure and improving our systems to effectively manage taxpayer resources and steward our more than $2.3 billion of assets that contribute to the health and wellbeing of residents.

As we continue to progressively address a growing number of economic, social and governmental issues, I have great confidence in how prepared and capable the organization is to take a leading role for the entire region, now and in the future.

Our vision for achieving exemplary environmental stewardship, a dynamic vibrant economy and an inclusive, caring society was significantly advanced by the many major initiatives in 2020 and by the continued service we were able to provide.

The progress we made is very inspiring given the impacts of the pandemic and the enormous challenges many people will continue to face through the restart and recovery of the economy.

Thank you to our Board for their leadership and to our staff for their dedication and ability to adapt. These efforts made 2020 a successful year of meeting the unexpected challenges and demonstrating that the CRD truly makes a difference...together.

Robert **LAPHAM**
Chief Administrative Officer
Capital Regional District
Capital Region Housing Corporation
Capital Regional Hospital District

Board of Directors

The Capital Regional District is governed by a 24-member Board of Directors, supported by more than 75 committees and commissions. The Board is composed of one or more elected officials from each of the municipalities and three electoral areas within the CRD's boundaries. Each municipality has one director for every 25,000 people (or portion thereof). Each electoral area is represented by one director.

The directors also serve on the Capital Region Housing Corporation Board and the Capital Regional Hospital District Board.

Executive Leadership Team

The Executive Leadership Team (ELT) consists of the Chief Administrative Officer, Chief Financial Officer, Corporate Officer and the General Managers, who are also officers of the corporation. These officers direct the departments and divisions of the CRD and work collaboratively to:

- consider strategic issues related to corporate decision-making
- discuss solutions to organizational challenges
- provide direction on corporate-wide policies, systems, projects and initiatives
- ensure employees are empowered to achieve organizational goals

The ELT ensures that corporate policies are clear and appropriate and that there are effective management actions to meet statutory obligations, mitigate risks and report on progress, outcomes and concerns.

The ELT has the administrative responsibility and delegated authority to manage and coordinate various programs, projects and initiatives and makes decisions to support overarching corporate goals that are in the best interests of the organization as a whole.

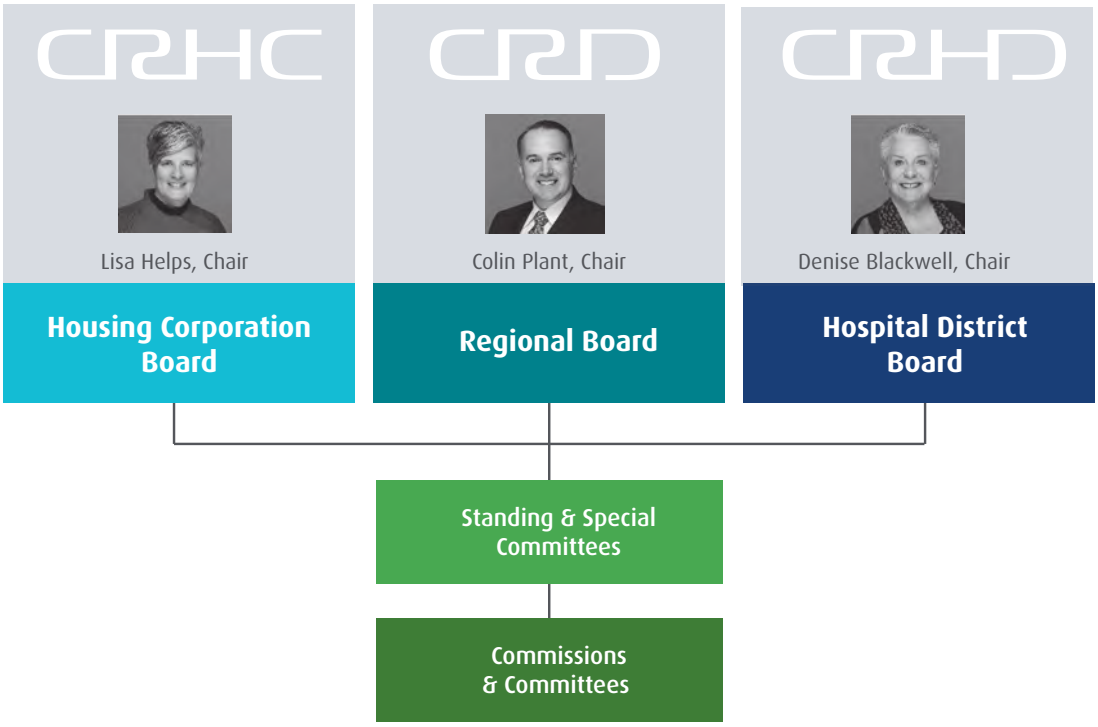
Executive Leadership Team

- Robert **LAPHAM,** Chief Administrative Officer
- Kristen **MORLEY,** General Manager, Corporate Services & Corporate Officer
- Nelson **CHAN,** Chief Financial Officer
- Kevin **LORETTE,** General Manager, Planning & Protective Services
- Larisa **HUTCHESON,** General Manager, Parks & Environmental Services
- Ted **ROBBINS,** General Manager, Integrated Water Services

(Shown from left to right below)

Governance Framework

The CRD is governed by a 24-member Board of Directors, which serves as a political forum and a vehicle for advancing the interests of the region as a whole. The Board is composed of one or more elected officials from each of the local governments within the CRD's boundaries:



- For areas outside municipal boundaries (electoral areas), citizens elect one director to the Board during general local elections.
- Each municipal council appoints one or more elected officials to the Board. The formula is one director for every 25,000 population (or portion thereof).

All members also sit on the Capital Region Housing Corporation (CRHC) Board and the Capital Regional Hospital District (CRHD) Board. Board meetings are held once a month and are open to the public.

Collectively, these Boards establish the CRD vision, set priorities and provide direction on service delivery, collaboration and partnerships. Various committees and commissions oversee delivery of services and report to the CRD, CRHC and CRHD Boards.

The chair and vice-chair of each regional board are elected from among the directors at an inaugural meeting held each November. Next, the regional board chairs define various committees and their membership.

To make decisions, directors must vote. The CRD uses special voting rules based on population and the combination of participants in each service. Some votes are unweighted (one vote per director) and others are weighted based on population (one vote per 5,000 population or portion thereof).

OUR PROFILE

The CRD has more than 200 service, infrastructure and financing agreements with municipalities and electoral areas to deliver services.

A Resilient Region

Encompassing 237,000 hectares, including 70 Gulf Islands, the capital region is a sought-after destination, renowned for its mild climate, beautiful coastlines and natural ecosystems.

The region offers a balance between rural and urban lifestyles, including the farming communities in North Saanich, the evergreen hills of Sooke, the artisan networks on the Gulf Islands and the government and business hub of Victoria, the province's capital city. It is home to the Canadian Pacific Naval Fleet and multiple post-secondary educational institutions, including Camosun College, Royal Roads University and the University of Victoria.

Tourism, technology, health care and government services are key industries in the region, a place where residents and tourists can enjoy the Pacific Ocean, old-growth rainforests, outdoor adventure and a vibrant arts and culture scene.

The region has seen a steady increase in population and sustained growth in housing starts and property values. The CRD will continue to work with local residents, community groups, businesses, First Nations, major institutions, municipalities and other stakeholders to ensure we continue to meet the needs of this resilient and growing region through major infrastructural development and services.

Supporting & Responding to Community Needs

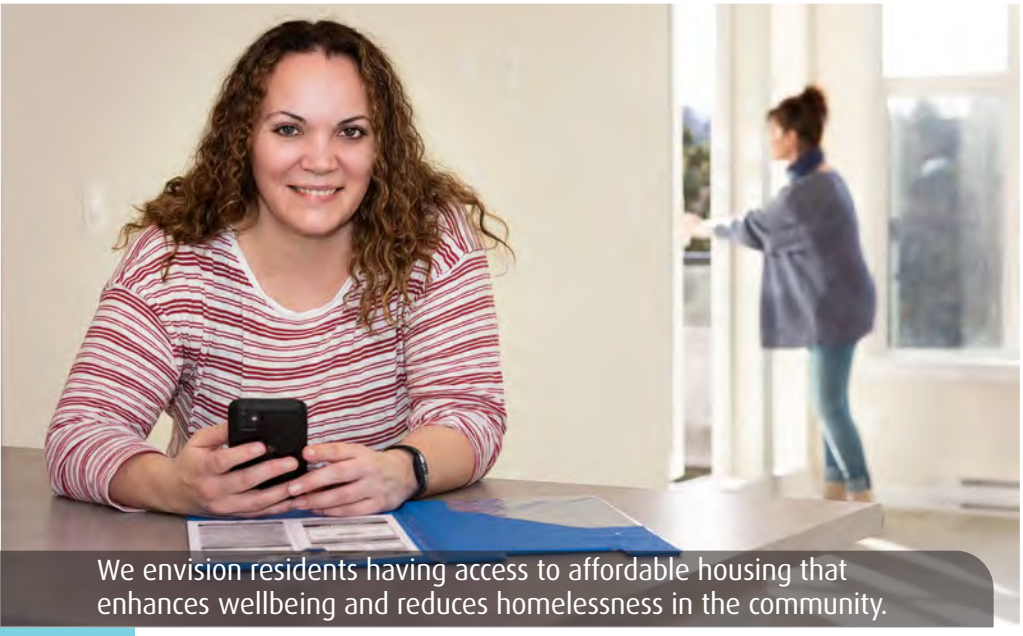
In hearing and responding to the concerns of constituents, the CRD Board identified 15 community needs to focus and drive work. Through strategic and corporate planning, the strategic course for the CRD is set over a four-year mandate to respond to community needs and to deliver on the Board's mission, vision and priorities and the organization's ongoing service mandates and approved plans.

The CRD budget cycle ensures that we respond to changes in our external and internal environments. The Executive Leadership Team identifies projects that enhance our corporate capacity to ensure we are well-positioned to meet evolving Board and community needs. Each Spring, the corporate annual report is presented to demonstrate progress, capture major accomplishments and summarize financial highlights.

The following 15 community needs have been identified to guide the work the organization delivers.

1. Affordable Housing
2. Transportation
3. First Nations Relations
4. Economic Development
5. Climate Action & Adaptation
6. Parks & Natural Resource Protection
7. Protective Services
8. Wastewater
9. Landfill & Recycling
10. Water
11. Planning & Development
12. Arts & Culture
13. Recreation
14. Health Facilities
15. Accountability

COMMUNITY NEEDS



For each community need identified in our Corporate Plan, the CRD Board approved an outcome statement to capture what we envision our work will accomplish.

We envision being leaders in accountability through transparency, organizational performance and service delivery.

ACCOUNTABILITY

The CRD leads organizational accountability through corporate best practices and effective financial and audit reporting. Guided by our Organizational Development Plan, we continually strengthen the organization and engage employees by investing in operational efficiency and transparency systems to ensure public access to CRD information and through ongoing workforce training and development. Our Corporate Plan and Board Strategic Priorities inform service and financial planning to best serve our communities. Exceptional customer service and service delivery are central to our operations.

We envision residents having access to affordable housing that enhances wellbeing and reduces homelessness in the community.

AFFORDABLE HOUSING

Affordable housing is key to a strong economy and healthy region. The Capital Region Housing Corporation (CRHC) provides 1,773 units of affordable housing, and the CRD Regional Housing Trust Fund provided over $11 million to build 959 affordable rental housing units. The CRD-initiated Regional Housing First Program partnered the CRD, BC Housing and the Canada Mortgage and Housing Corporation, each committing $40 million to create up to 2,000 affordable housing units, including 400 units renting at the provincial income assistance rate, with a total program value of $600 million.

ARTS & CULTURE

The CRD Arts & Culture Support Service provides various grant funding streams to not-for-profit organizations in the region. By supporting, promoting and celebrating the arts, the CRD contributes to the development of a healthy, livable and vibrant community and fosters collaboration between arts organizations, funders and audiences. On behalf of participating municipalities and electoral areas, the CRD manages and funds performing arts venues, libraries and museums, in addition to developing, operating and maintaining numerous local amenities. The Service is guided by the CRD Arts & Culture Support Service Strategic Plan.

We envision strategic investment to maximize the artistic, social and economic contribution that arts organizations make to the quality of life of our residents.

CLIMATE ACTION & ADAPTATION

The CRD Climate Action Service develops both corporate and community-focused mitigation and adaptation strategies. To help the region become climate neutral by 2030, we support local governments in achieving their climate goals and are striving to be greenhouse gas (GHG) emission neutral corporately. At the community level, the Regional Climate Action Strategy guides climate mitigation and adaptation actions for the 200 services the CRD delivers, with some services requiring comprehensive strategies to best respond.

We envision reduced GHG emissions, triple bottom-line solutions and progress on adaptation.

ECONOMIC DEVELOPMENT

As the local government for the Salt Spring Island, Southern Gulf Islands and Juan de Fuca electoral areas, the CRD advances committee and commission-directed projects and provides data and recommendations from the CRD Regional Information Service. The Salt Spring Island Community Economic Development Commission and the Southern Gulf Islands Community Economic Sustainability Commission develop strategies to foster resilient and sustainable local economies.

We envision increasing economic development potential in the region, with a special emphasis on sustainable, resilient local economies for all the communities in the capital region.

We envision strong relationships with First Nations based on trust and mutual respect, partnerships and working together on shared goals.

FIRST NATIONS RELATIONS

The First Nations Relations Service supports the CRD and its Board to build strong and enduring relationships with neighbouring First Nations governments. We are committed to respectfully and appropriately engaging those First Nations communities in regional strategies, decision-making and shared interests. Priorities include implementing the actions and recommendations outlined in the First Nations Task Force Final Report. Underpinning the report is a Statement of Reconciliation, which will guide the organization's initiatives at the Board, leadership and staff level.

We envision effectively contributing to improved community health and wellbeing.

HEALTH FACILITIES

The Capital Regional Hospital District (CRHD) fosters a healthy region by investing in traditional health care services, developing and improving health care facilities and providing capital funding for infrastructure such as acute care, residential care and hospital equipment. The CRHD strategically acquires property, plans and delivers capital projects, and partners with Island Health on public health bylaws and capacity-building through a Community Health Network. The CRHD and the CRD share the same Board of Directors and Officers.

We envision minimizing waste disposal and maximizing waste diversion.

LANDFILL & RECYCLING

The CRD's comprehensive and ever-evolving solid waste management system minimizes waste and maximizes resource recovery. The Environmental Resource Management Service operates the landfill, oversees solid waste planning, explores opportunities for resource recovery and identifies best practices to further reduce waste, increase recycling and mitigate climate change. The CRD seeks the best use for waste resources through initiatives such as methane gas capture and the diversion of kitchen scraps from the landfill.

We envision additional land acquisitions and increased access to parks and recreational trails for residents.

PARKS & NATURAL RESOURCE PROTECTION

The CRD protects and manages more than 13,000 hectares of spectacular natural areas in 34 regional parks and trails on southern Vancouver Island and the Gulf Islands, providing outdoor experiences and activities that improve personal health and foster appreciation and respect for the region's natural environments. Guided by the Regional Parks Strategic Plan, the CRD develops and maintains park facilities, offers interpretive programs for continued park stewardship and plans for future land acquisitions focused on parcels with high potential for conserving and restoring our natural resources.

PLANNING & DEVELOPMENT

The CRD provides information on and analysis of the region's population, development, land use, transportation, housing and employment trends. Transportation planning, as well as developing, implementing, maintaining and updating a regional growth strategy supports regional sustainability and quality of life. Building Inspection is responsible for overseeing the construction, alteration, repair or demolition of buildings within the capital region's three electoral areas (Juan de Fuca, Salt Spring Island and the Southern Gulf Islands).

We envision keeping approved plans current and monitoring for effectiveness to ensure we achieve our goals and to remain accountable to CRD residents.

We envision effective regional cooperation in protecting public safety and preparing for, responding to and recovering from emergencies.

PROTECTIVE SERVICES

CRD Protective Services continues to maintain safety, good order and public health through emergency management and animal control and by enforcing bylaws using education, mediation, fines and injunctions. Collaborating with other agencies and partners ensures a coordinated and effective response to regional emergencies and bylaw enforcement, and furthers involvement in the Public Alert Notification System and the Regional Emergency Management Partnership. As the local government for three electoral areas, the CRD supports volunteer fire departments and local-level emergency services.

We envision residents having access to appropriate and affordable recreation opportunities.

RECREATION

A diverse range of recreation opportunities in the capital region ensures a healthy high quality of life for residents and visitors who can enjoy both indoor activities such as swimming, skating and fitness as well as outdoor activities like golf, skateboard and tennis. The CRD owns and operates three recreation centres across the region: Panorama Recreation, SEAPARC Leisure Complex and Salt Spring Island Recreation.

TRANSPORTATION

The CRD supports local governments and partner agencies to implement a multi-modal transportation system, enabling residents to access activities and the natural wonders of our region. Our Regional Information and Planning Service coordinates with regional and provincial stakeholders, collects and analyzes data, conducts research and analysis and enables partners to advance active transportation programming. Our work supports inter-jurisdictional transportation projects and initiatives that benefit the region as a whole.

We envision residents having access to convenient, green and affordable multi-modal transportation systems that enhance community wellbeing.

WASTEWATER

The CRD wastewater management services prioritize the health of residents and the environment. We work with municipalities, electoral areas and industry to ensure consistent wastewater management, while protecting urban and rural watersheds and the marine environment. These services manage liquid waste, septic systems and wastewater collection, treatment and disposal infrastructure across the region. Five of the six secondary wastewater treatment plants we operate are in the electoral areas. The Core Area Liquid Waste Management Plan applies to Colwood, Esquimalt, Langford, Oak Bay, Saanich, Victoria and View Royal. The Saanich Peninsula Liquid Waste Management Plan applies to North Saanich, Central Saanich and the Town of Sidney.

We envision efficient and effective management of the region's wastewater through advanced management of wastewater & stormwater.

WATER

The CRD carefully manages the supply and delivery of safe and sustainable drinking water through the Regional Water Supply System serving Greater Victoria and distributes water directly to customers in several municipalities and electoral areas. Delivering safe drinking water from source to tap includes protecting the source, disinfecting the water, monitoring water quality and operating and maintaining transmission and distribution systems and investing in infrastructure renewal.

We envision a sustainable and resilient water supply for CRD residents.

Delivering on Priorities & Projects

Board Priorities

To guide the direction and major activities of the Capital Regional District for the 2019–2022 mandate, the Board of Directors agreed to focus on four regional priorities:

COMMUNITY WELLBEING – TRANSPORTATION & HOUSING

The CRD Board will advocate, collaborate and form partnerships to address the affordable housing and transportation needs of the region's diverse and growing population.

CLIMATE ACTION & ENVIRONMENTAL STEWARDSHIP

The CRD Board will encourage and implement bold action on climate change by enhancing its natural and built assets to achieve environmental resilience, food security and continued wellbeing of our current and future residents.

FIRST NATIONS RECONCILIATION

The CRD Board will take measurable steps toward strengthening government-to-government relationships with First Nations to foster shared prosperity for all.

ADVOCACY, GOVERNANCE & ACCOUNTABILITY

The CRD Board will advocate for infrastructure, regulatory, legislative, financial and operational support, focus its governance and committees/commissions on advancing regional, sub-regional and local priorities and work to resolve issues that the CRD does not have the direct mandate to address.

Corporate Priorities, Projects & Awards

To guide the effective development and coordination the Executive Leadership Team identified key priorities and projects to enhance corporate capacity and delivery of services.

CORPORATE PRIORITIES

With a focus on Accountability, Corporate Priorities include: Business Capacity & Continuity, Fiscal Responsibility, Transparency, Efficiency & Collaboration and Customer Service.

MAJOR PROJECTS

As an essential and critical infrastructure service provider, a number of capital projects were progressed and completed in 2020.

AWARDS

The CRD was the recipient of a number of awards in 2020.

As many initiatives and projects span multiple years and involve other organizations, the achievements described here capture only a snapshot of our organization's work.

2020 PROGRESS

Todd Creek Trestle

Board Priorities

Community Wellbeing

PLANNING & DEVELOPMENT

The CRD provides knowledge and expertise to explore new areas of regional interest and assess the feasibility of developing new services. This involves coordinating numerous internal and external stakeholders to collect data and conduct research, modelling and analysis on regional, sub-regional and local levels. Information related to population change, employment, land use and transportation supports the development and implementation of both regional district and municipal services. Our data services collect and provide regional information, and through the Regional Growth Strategy Indicators Report, monitors economic development. Building Inspection oversees the construction, alteration, repair or demolition of buildings within the capital region's three electoral areas (Juan de Fuca, Salt Spring Island and the Southern Gulf Islands). While we envision additional land acquisitions and increased access to parks and recreational trails for residents, we aim to keep approved plans current and monitor for effectiveness.

TRANSPORTATION

The CRD supports the development and implementation of regional district services and informs transportation and land use planning processes for agencies and both local and senior government. Our transportation service is responsible for data collection, research and modelling related to multi-modal regional travel. We analyze the impacts of actual and projected changes to the transportation system and provide transportation planning advice and expertise to regional, sub-regional and local planning and transportation projects and initiatives, on demand. Our Ready Step Roll initiative successfully delivers active school travel planning services to five schools per year. Our work supports interjurisdictional transportation projects and initiatives that benefit the region as a whole. We envision that residents have access to convenient, green and affordable multi-modal transportation systems that enhance community wellbeing.

CRD TRAFFIC SAFETY COMMISSION AWARDS FOURTH ANNUAL CONSTABLE SARAH BECKETT SCHOLARSHIP

The CRD Traffic Safety Commission (TSC) and Westshore RCMP awarded the fourth annual Constable Sarah Beckett Memorial Scholarship to two recipients in 2020. Cassandra Olson from Belmont Secondary School was awarded the $2,000 Cst. Sarah Beckett Memorial Scholarship. Faith Brown from Stelly's Secondary School was awarded a $2,000 scholarship by the Vancouver Island Slain Police Officers Fund, created to honour officers killed in the line of duty. Recipients are selected based on academic achievement, financial need, community service and an expressed interest in pursuing a career in law enforcement.

WESTVIEW HOUSING

Westview opened in Saanich with 73 affordable new homes for low-to moderate-income families, individuals, seniors and adults with disabilities. The CRHC owns and operates the building, which provides studio and 1, 2 and 3 bedroom apartments. The CRHC is the largest not-for-profit housing provider on Vancouver Island with a portfolio of 1,773 units.

THE REGIONAL HOUSING FIRST PROGRAM (RHFP)

The RHFP is an equal partnership agreement between the CRD, the Government of BC through BC Housing, and the Government of Canada through the Canada Mortgage and Housing Corporation (CMHC). The partners reached agreement to expand the program by contributing additional matching grants of $10 million each, for a total contribution of $120 million to this $600 million initiative. This will ensure the program reaches its target number of 400 homes renting at the provincial income assistance rate for people experiencing chronic homelessness who are ready to live independently with supports.

In December, the program opened West Park in View Royal and Spencer Close in Langford, providing 282 affordable mixed-market rental homes on the Westshore for families and single people with mixed incomes.

Spencer Close

Climate Action & Environmental Stewardship

LAND ACQUISITION

Following the Board's 10-year extension of the Regional Parks Land Acquisition Fund (LAF) in 2019, the CRD was able to acquire and conserve four new areas for regional park purposes, including a 12 hectare addition to Mt. Work Regional Park in Saanich, 41 hectares in Mt. Parke Regional Park on Mayne Island and through donations, 30 hectares near Money Lake on Saturna Island. The CRD Board has also agreed to purchase a 20 hectare property known as the Mountain Road Forest in Saanich in partnership with the Habitat Acquisition Trust.

MOUNTAIN BIKING ADVISORY COMMITTEE

In 2020, a Mountain Biking Advisory Committee (MBAC) was established with the goal of providing advice and guidance to the CRD Regional Parks Committee in developing mountain biking guidelines for regional parks. The MBAC met throughout 2020 and developed an Advice and Guidance Report. This report along with the mountain biking guidelines will be presented to the CRD Regional Parks Committee for review in the spring of 2021. The CRD Regional Parks mountain bike guidelines will assist with the planning of sustainable and quality mountain biking activities within regional parks, giving consideration to all regional park values.

SOLID WASTE MANAGEMENT PLAN

The CRD is developing a new solid waste management plan to reduce and manage solid waste in the capital region. The plan will guide how the region manages solid waste in the coming years and will look at ways to extend the life of the Hartland Landfill through future landfill design options, significantly reducing waste and reusing and/or recycling materials as much as possible.

The draft plan includes proposed strategies and actions for reducing and managing all streams of solid waste—including recyclables, compostable material and garbage—with an eye to extending the life of Hartland Landfill to 2100 and beyond.

Public engagement is a key part of developing the region's Solid Waste Management Plan and feedback from residents was received on the draft. In 2020, an additional consultation period was added to this process and included presentations to First Nations leadership groups in the fall, Hartland site tours for area residents in November and an interactive, live-streamed public information session.

COASTAL FLOOD INUNDATION MAPPING PROJECT

In 2020, the CRD completed and published its Capital Region Coastal Flood Inundation Mapping Project. On behalf of local government and other regional stakeholders, staff worked closely with an inter-municipal and multi-disciplinary project team to complete the project in order to better understand regional impacts from coastal storm flooding due to sea level rise and tsunamis. The project was completed with support from the federal and provincial National Disaster Mitigation Program.

ENERGY RETROFIT SUPPORT THROUGH NEW CLIMATE PROGRAM

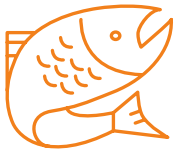
Homeowners in the capital region had an opportunity to take action and make their homes more climate friendly through the new Bring It Home 4 The Climate program.

Residential buildings are a large source of greenhouse gas emissions in the capital region, second only to on-road transportation. Homeowners interested in reducing energy consumption benefitted from participating in this program and could also make a difference in reducing our region's carbon footprint.

Through the program, homeowners accessed free virtual home energy check-ups with a Bring It Home Energy Expert, up to $250 subsidy for a COVID-safe EnerGuide Home Energy Evaluation, supplies to reduce the air leakage in their homes, learning opportunities to increase home energy literacy and support with do-it-yourself projects. They also had access to existing provincial and municipal retrofit incentives offered through the Better Homes BC program, making retrofits more affordable.

Bring It Home was supported by the Federation of Canadian Municipalities Transition 2050 project, the CRD, the District of Central Saanich, the District of Saanich, the Township of Esquimalt and the City of Victoria. The program ran until the end of 2020.

CRD low energy fleet options



FIRST NATIONS REPRESENTATION

As part of our commitment to reconciliation, the CRD Board amended the CRD Board Procedure Bylaw to include First Nations elected representatives on CRD standing committees, creating space for more inclusive discussions and First Nations involvement in CRD governance.

Archaeology work along Dallas Road

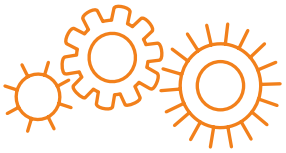
First Nations Reconciliation

BIOSOLIDS TRUCKING

In 2020, the CRD signed a Memorandum of Understanding with ḰENES Transportation, a WSÁNEĆ First Nations partnership company, to contract the trucking of biosolids produced at its Residuals Treatment Facility (RTF).

Under this agreement ḰENES, a new business created by the WSÁNEĆ Leadership Council (WLC) and Sangan Resource Management, will transport dried biosolids to the Lafarge Canada cement plant in Richmond for up to five years while the CRD develops its long-term management plan for the continued beneficial use of this material.

Seeking out economic development opportunities with First Nations communities is a strategic priority of the Board and a core part of our commitment to shared prosperity and reconciliation. This is the first time the CRD has approached a service contract with this lens, recognizing community capacity and vision in a way that makes good sense, meets our business need to transport this material and hits the triple bottom line of positive social, environmental and financial impact. With provincial approval and these beneficial use contracts now in place, the CRD has started developing a long-term management plan for biosolids that will include public consultation.



CRD PROTECTION AND CONSERVATION OF HERITAGE SITES POLICY

The First Nations Relations Division engaged Terra Archaeology to provide corporate-wide training to support the new Protection and Conservation of Heritage Sites Policy, which was approved in late January 2020. The policy enhances the requirements of the provincial *Heritage Conservation Act* while addressing the need for a more informed, respectful engagement with local First Nations, and facilitates the protection of archaeological sites during CRD land-altering works that may impact their Traditional Territories. First Nations have been stewards in taking care of the land and water since time immemorial, and the CRD is continuing to respect the Nations traditional land use for cultural and ceremonial practices, food and medicine harvesting, traditional management practices and reclaiming Indigenous place names.

INDIGENOUS CULTURAL PROGRAMMING IN PARKS

In 2020, an Indigenous cultural programmer joined the CRD Regional Parks team in a newly created position. One of the goals of this position is to develop and deliver an interpretive program that aligns with BC's education curriculum requirements for Indigenous content and CRD's reconciliation statement. In 2020, the cultural programmer drafted a school program titled EAGLE (Education & Appreciation Garnered through Listening & Exploring). The program consists of three age-appropriate program outlines and accommodates the unique elements of four regional parks. These draft outlines have been sent to representatives of both the Lək̓ʷəŋən and WSÁNEĆ First Nations for review and future discussion. In addition, the cultural programmer developed Indigenous content for existing interpretive programs, exhibits, kiosks and social media and has developed a new self-guided program featuring Indigenous perspectives in regional parks. On November 25, 2020 a virtual tour of Mill Hill Regional Park, featuring an Indigenous perspective, was filmed and recorded in partnership with the Royal BC Museum.

Advocacy, Governance & Accountability

CRD BOARD AFFIRMS PRIORITIES

In their annual review, the CRD Board confirmed that the Strategic Board Priorities identified in the 2019–2022 Corporate Business Plan remain as important as ever, and have renewed their commitment to addressing them. The four priorities are:

- Community Wellbeing – Transportation & Housing
- Climate Action & Environmental Stewardship
- First Nations Reconciliation
- Advocacy, Governance & Accountability

The Board commented that it was evident staff had taken great care in advancing the strategic priorities by using them to inform day-to-day decision-making. In addition, the Board asked the CRD to:

- Identify options to accelerate actions on Climate Action
- Review the Land Acquisition Fund rate
- Explore the options to further contribute to the region's economic development

This advice from the Board gives the organization clear direction to continue prioritizing initiatives that meaningfully advance the Board Priorities and the Corporate Plan and informs operational plans and budgets for the coming years.

SALT SPRING ISLAND LICENSED PRESCHOOL AND MODULAR CLASSROOM

The Salt Spring Island Parks and Recreation Commission received $214,600 in funding towards the installation of a new modular classroom located at the Rainbow Road Aquatic Centre. The main purpose of the new building is to create licensed care spaces on Salt Spring Island. The project was completed in 2020 with the licensed care program opening in January of 2021.

SALT SPRING ISLAND NORTH GANGES TRANSPORTATION PROJECT

In 2020, the CRD completed construction of Phase 3 of the approximately $1.7 million North Ganges Transportation project. This included the installation of sidewalks, bike lanes, crosswalks and stormwater drainage systems along Rainbow Road and Lower Ganges Road with improvements at the intersections of Rainbow Road and Upper Ganges Road, and Park Drive with the Lower Ganges Road. The project has provided long-awaited additional active transportation infrastructure to downtown Salt Spring Island and significantly improved pedestrian and cycling safety in the areas.

SOUTHERN GULF ISLANDS CONNECTIVITY PROJECT UPDATE

In 2020, the CRD contracted TANEx Engineering to create a Connectivity Infrastructure Design Plan for the Southern Gulf Islands. The project builds on work done by the CRD in 2019 to document community perceptions and experiences regarding internet connectivity on Galiano, Mayne, Pender and Saturna Islands ("Phase 1"). The project is expected to be completed in April 2021.

SOUTHERN GULF ISLANDS TRANSPORTATION SERVICE

In 2020, the CRD advanced a study to consider establishment of an Integrated Transportation Service for the Southern Gulf Islands. This service would create new opportunities for public transit, active transportation and inter-island passenger ferry travel — all integrated to enable multi-modal travel options throughout the islands. The study will be underway throughout 2021 with recommendations for possible service establishment in 2022.

Salt Spring Island Preschool

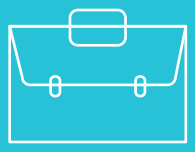
SOUTHERN GULF ISLANDS LIAISON PROGRAM

In 2020, the Southern Gulf Islands Liaison Program saw much success and has been continued to 2022. This program has island-based CRD contractors coordinating some CRD projects on Galiano, Pender, Mayne and Saturna Islands. The liaisons also share information, connect community groups and facilitate community member access to various CRD staff and services.

2020 ARTS DEVELOPMENT OPERATING GRANTS, PROJECTS AND FUNDING

In 2020, 92 not-for-profit organizations throughout the region received $2,491,400 in overall funding approved by the CRD Arts Commission through the Arts & Culture Support Service.

Grants were given to emerging and established organizations to support arts programming in participating municipalities, providing support in a particularly challenging year. This funding allowed organizations to continue developing inspiring and accessible arts and culture, while adapting programming in compliance with COVID-19 regulations.



Arts organizations continued to bring communities together in a year where connection was particularly necessary given the cancellation of large in-person gatherings. To continue delivering the creativity that defines the arts, organizations adapted programming for the times; activities in 2020 included online gatherings and workshops, drive-in and pop-up events, virtual galleries, podcasts, livestreams and recordings of performances, and stay-at-home activity kits for children. Information about funding recipients and activities can be found at **crd.bc.ca/arts**.

Public conversations about performing arts facilities in the CRD were conducted virtually over the year, resulting in a report and recommendations regarding arts facilities for the region.

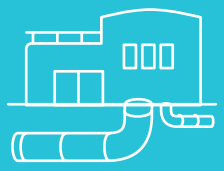
Corporate Priorities

ORGANIZATIONAL DEVELOPMENT PLAN UPDATE

The 2017 CRD Organizational Development Plan (ODP) was established on two foundational strategies to continue moving our organization forward on its path of success: Strengthening Our Foundational Core and Engaging our Employees.

In 2020, a pilot Performance Management process for CRD managers was launched to foster stronger alignment of employee performance to corporate goals. We continued to build the foundations of our Diversity and Inclusion Framework by establishing a working group, approving a staff position to support the Framework and educating managers and staff. We improved technological business solutions by developing a new Enterprise Asset Management System, a mobile maintenance work order system and a Cyber Security Education program.

While COVID-19 tested our organization in 2020, our focus on business continuity was able to proceed in tandem with the new requirement for an organization-wide COVID-19 Safety and Exposure Control Plan and with IT support for remote access and MS Teams. An employee survey on CRD programs, practices and policies and the implementation of the Occupational Health and Safety Certification of Recognition are planned for 2021.



CRD'S EMERGENCY OPERATING CENTRE

In March, the CRD activated a corporate Emergency Operations Centre in response to the COVID-19 global pandemic. The CRD has maintained critical services and infrastructure throughout the ongoing public health emergency, and continues to provide reliable and essential services that play a significant role in economic recovery for the region. Many CRD services are vital to community wellbeing and the vast majority of CRD operations maintained service levels by implementing new measures to address health risks and safety.

CYBER SECURITY PROGRAM

Information Technology resources are valuable corporate assets that enable and support the business of the CRD. The CRD's Cyber Security Program promotes the implementation of appropriate security controls, processes and tools to mitigate cyber security risk and protect confidential and personal information. One goal of the CRD's Cyber Security Program is to build a security-aware culture that provides CRD staff with the information they need to spot and react to potential security problems at the office and at home. To reach this goal, the CRD has adopted a Security Awareness Training program.

Critical Infrastructure

WASTEWATER TREATMENT PROJECT

The Government of Canada, the Government of British Columbia and the CRD announced in December that the Wastewater Treatment Project is now treating wastewater and is exceeding regulatory requirements. The $775 million Wastewater Treatment Project provides tertiary treatment for the core area municipalities of Victoria, Esquimalt, Saanich, Oak Bay, View Royal, Colwood and Langford, and the Esquimalt and Songhees Nations. It was approved in 2016 and has been under construction for four years.

The Wastewater Treatment Project consists of three main components:

The McLoughlin Point Wastewater Treatment Plant in Esquimalt can treat 108 megalitres of wastewater per day to a tertiary level – one of the highest levels of treatment available.

The Residuals Treatment Facility at Hartland Landfill in Saanich turns residual solids, piped from the wastewater treatment plant, into what are known as Class A biosolids. These are the highest quality by-product suitable for beneficial use.

The Conveyance System carries wastewater from across the core area to the treatment plant, and residual solids to the Residuals Treatment Facility at Hartland Landfill. Major upgrades to pump stations, sewer mains, integrated monitoring and controls and an attenuation tank were part of the project.

SOUTHERN GULF ISLANDS HARBOURS & DOCKS FACILITIES

Under the Southern Gulf Islands Harbours Service (SGIHS), there are 12 dock facilities on six islands owned and operated by the CRD. These facilities are a vital link for island community residents and visitors, providing moorage, access points for supplies and mail delivery, water taxi and ambulance services, Royal Canadian Search and Rescue, and refuge in case of inclement weather or emergency.

In 2020, the SGIHS capital projects included starting construction of a new dock facility at Anson Road and installing a large new float at the Miner's Bay Dock, both on Mayne Island.

- **Anson Road Dock** — The new public dock on Mayne Island will provide 91 meters of boat moorage, space for approximately 30 boats. The upland portion of the dock will consist of upper and lower gravel parking lots and public access to the waterfront. The project will be completed in 2021.
- **Miner's Bay Dock** — The Miner's Bay Dock is located on the northeast side of Mayne Island facing Active Pass, the main shipping route between south Vancouver Island and the lower mainland. To better withstand the conditions at the location and improve the safety and usability of the dock, the CRD constructed a new float and anchoring system and re-aligned the dock.

McLoughlin Point Wastewater Treatment Plant

SEAPARC building expansion

SEAPARC EXPANSION

SEAPARC opened a new weight room and fitness studio expansion at the Leisure Complex in Sooke in early 2020. This project was made possible with the assistance of a $1.24 million grant from the Federal Gas Tax Fund.

TODD CREEK TRESTLE

CRD Regional Parks completed restoration of the Todd Creek Trestle along the Galloping Goose Regional Trail near Sooke Potholes Regional Park. This four-storey wooden trestle is over 100 years old and is a landmark of the Canadian National Railway. This restoration work adds an additional 35-50 years to the life span of the structure.

JUAN DE FUCA WATER DISTRIBUTION SERVICE ASBESTOS CEMENT PIPE REPLACEMENT PROGRAM

The Juan de Fuca Water Distribution Service has been investing in infrastructure renewal annually to ensure the system remains safe and reliable. The Asbestos Cement Pipe Watermain Replacement Program has been part of water mains and service infrastructure across the West Shore communities. Five projects were completed as part of the program during 2020, investing $4 million renewing over 3,500 metres of water main along Scafe Road, Hockley Avenue, and Walfred Road in the City of Langford and Kaltasin Road in the District of Sooke.

THE SUMMIT OPENING

The CRD and Island Health welcomed seniors living with complex health issues and dementia to a brand-new place to call home at The Summit, an $86 million, 320 bed modern long-term care home in Victoria's Quadra Village neighbourhood.

Residents at The Summit will have private bedrooms with ensuite bathrooms, grouped into "houses" (clusters of 16-24 residents). Private rooms offer a significant benefit for residents as an effective way to help keep them safe from the spread of communicable illnesses, such as influenza and the COVID-19 virus.

The site also includes a hair salon and a dialysis room to eliminate the need to travel to the hospital. Outdoor spaces include patios on every floor, a secure central courtyard on the main floor and a walking path around the property.

The Summit was developed through an innovative partnership between Island Health and the Capital Regional Hospital District (CRHD) to develop a long term care facility.

Construction on The Summit began in 2016. Plans to open the facility in April 2020 were paused to facilitate the building's use as a possible field hospital during the COVID-19 pandemic. With the oversight of Island Health's Chief Medical Health Officer, The Summit officially opened in July 2020.

The Summit

Awards

BC TOP EMPLOYER & GREEN EMPLOYER AWARDS

For the fourth year in a row, the CRD was recognized as one of BC's Top Employers and has previously been recognized as one of Canada's Greenest Employers, with announcements of this program honour pending. We received these awards as a result of our progressive human resources policies and programs, our commitment to continued employee professional development and our impactful environmental programs and earth-friendly policies.

GOVERNMENT FINANCE OFFICERS ASSOCIATION AWARDS

The Government Finance Officers Association of US & Canada recognized the CRD with three awards for best practices in financial management and reporting. These awards reflect the CRD's commitment to meeting the highest principles of financial reporting in both the United States and Canada.

- **Distinguished Budget Award** (best practices in budgeting)
- **Canadian Award for Excellence in Financial Reporting** (going beyond minimum requirements in the spirit of transparency & full disclosure)
- **Popular Annual Financial Reporting Award** (recognizes local government financial reports specifically designed to be readily accessible and easily understandable to the general public and other interested parties without a background in public finance)

Lab services staff featured for the Green Employer Award

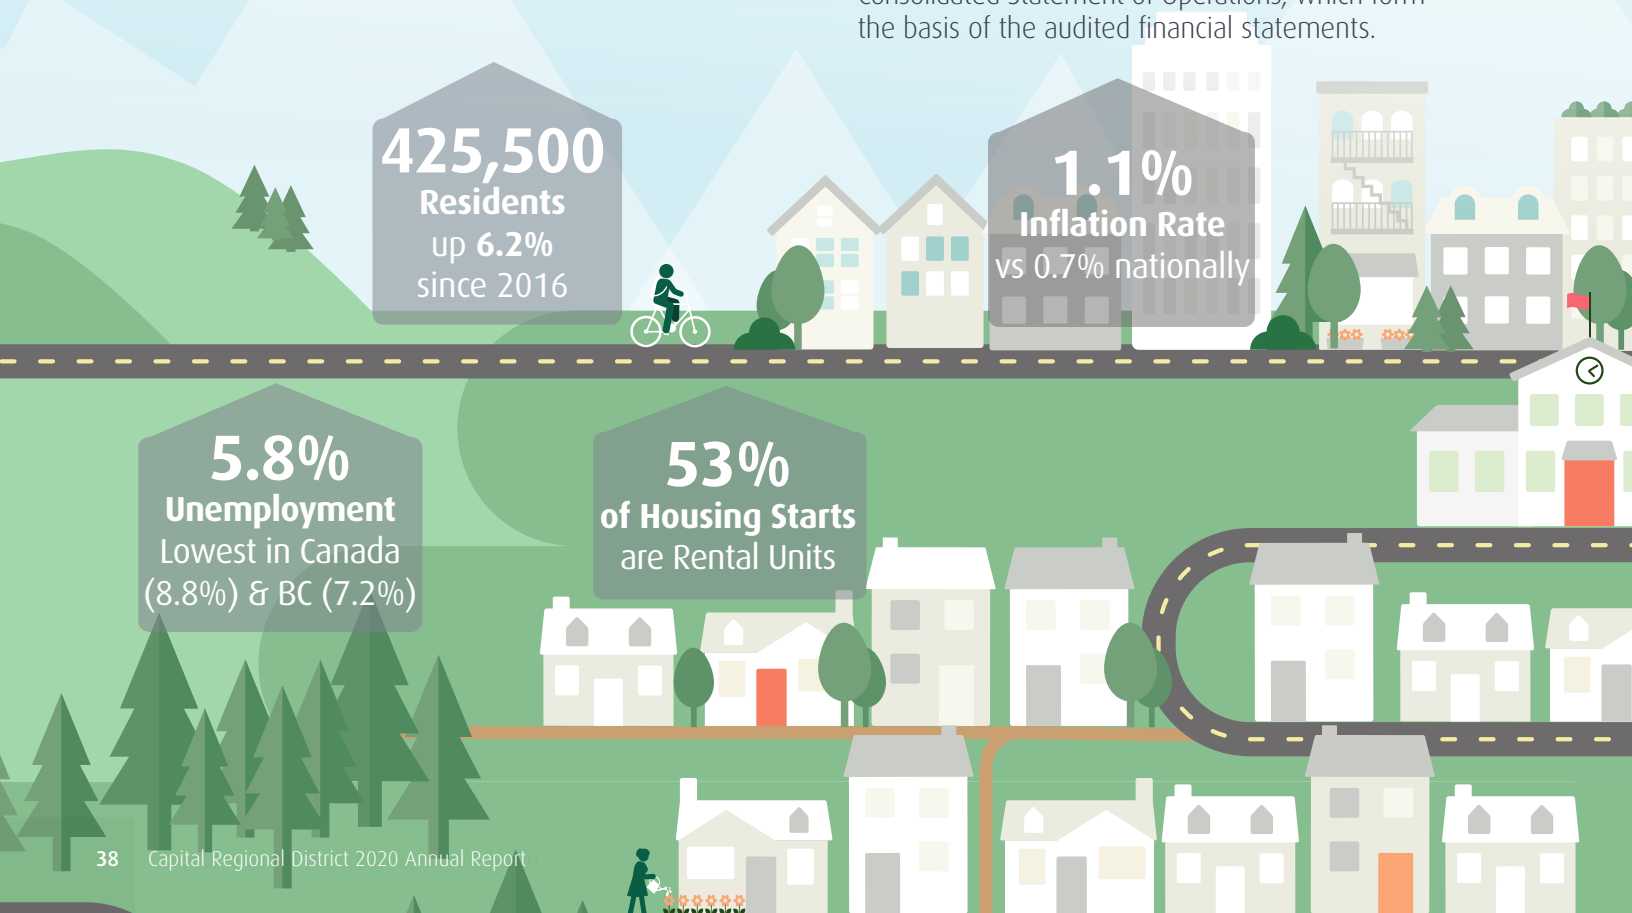
2020 FINANCIAL HIGHLIGHTS

Financial Reporting Overview

The Capital Regional District (CRD) is pleased to provide this consolidated financial overview for the 2020 fiscal year.

Our Region

The economic uncertainty in 2020 due to the global COVID-19 pandemic led to provincial restrictions, operational health and safety measures impacting service delivery, and increased unemployment throughout the region. While unemployment showed signs of improvement towards the end of 2020, rates remained more than 50% higher than 2019.[1]



Throughout the year, with the exception of CRD recreation centres, demand for services remained strong and some services experienced record utilization. In 2020, visitations to Regional Parks increased by more than 25%, landfill tipping tonnage grew by 2.8%, and water consumption rose by 2.0%. Proactive management and continuous adjustments of service delivery resulted in minor impacts to the organization's overall financial health.

The Consumer Price Index (CPI) for greater Victoria was 1.1%, compared to Vancouver at 0.6% and British Columbia at 0.8%; significantly higher than the national average of 0.7%.[2] The average price of a single family home grew by 9.0% to $948,200.[3] As of December 2020, the region's unemployment rate was amongst the lowest in Canada at 5.8% and lower by comparison to 7.2%[4] in BC, and 8.8%[5] nationally.

Property assessment values across the region increased to $127 billion versus $125 billion in 2019 (increase of 2%). The annual increase remains lower from recent highs of 9%, 16% and 18% in 2019, 2018 and 2017 respectively.[6] New building permit values increased 26% to $1.4 billion[7] while housing starts decreased by 8.3% in 2020[8] suggesting that while construction is expected to decline in the near term, activity will rise in the future.

Our Process

This report includes the CRD's Consolidated Statement of Financial Position and the Consolidated Statement of Operations, which form the basis of the audited financial statements.

Each year, the CRD prepares audited financial statements in accordance with legislative requirements and presents them at a public Board meeting for approval. The 2020 financial statements were prepared by management, in accordance with Canadian Public Sector Accounting Board (PSAB) standards, and were audited by KPMG LLP.

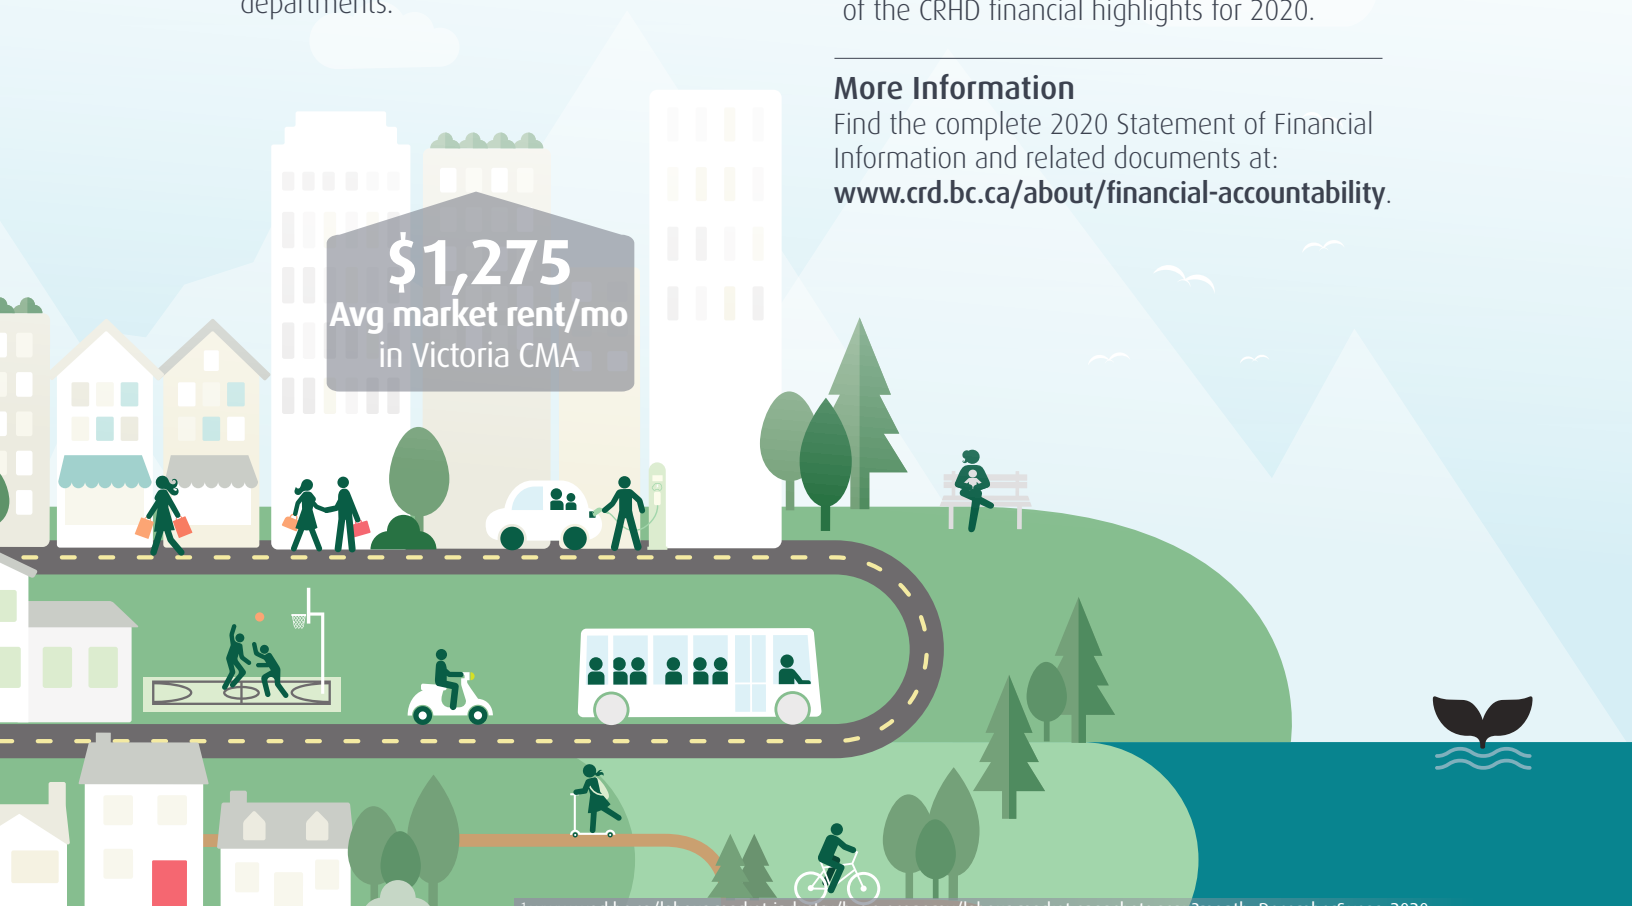
Under PSAB regulations, governments are required to present five statements with explanatory notes:

- Statement of Financial Position
- Statement of Operations
- Statement of Change in Net Debt
- Statement of Remeasurement Gains and Losses
- Statement of Cash Flows

The CRD also includes a number of schedules for additional reference. The consolidated financial statements include all CRD divisions and departments.

Capital Region Housing Corporation

The Capital Region Housing Corporation (CRHC) is a non-profit organization wholly owned by the Capital Regional District and is governed by the same 24 member Board of Directors as the CRD.



As an entity of the CRD, the CRHC's financial statements are consolidated within the audited CRD financial statements as required by PSAB standards.

Capital Regional Hospital District

The Capital Regional Hospital District (CRHD) operates under the authority of the *Hospital District Act* and shares the same boundaries, directors and administrative staff as the CRD. It partners with Island Health and community agencies to develop and improve health-related facilities in the region. The CRHD prepares a set of audited financial statements independent from the CRD. Page 47 features a brief summary of the CRHD financial highlights for 2020.

CRD Statement of Financial Position (Consolidated CRD+CRHC)

This statement presents the organization's assets, liabilities, net debt position and accumulated surplus or equity position. The net debt position decreased by $20.0 million, primarily due to an increase in cash and investments and accounts receivable offset by an increase in debt. Amounts invested in capital assets in 2020 totalled $230.9 million contributing to the net increase in accumulated surplus of $251.9 million.

	2020	2019	2018
Financial assets	**(in millions)**	**(in millions)**	**(in millions)**
Cash and investments	$362.7	$298.7	$238.3
Accounts receivable	$35.0	$23.2	$25.0
Member municipality debt	$146.9	$153.0	$150.8
Restricted cash – MFA Debt Reserve Fund	$3.9	$4.0	$3.2
Land for resale	–	$8.3	$19.1
	$548.5	**$487.2**	**$436.4**
Financial liabilities			
Accounts payable and accrued liabilities	$117.2	$111.3	$94.5
Deferred revenue	$32.7	$16.0	$16.4
Short-term debt – CRHC	$61.3	–	–
Long-term debt – CRD, CRHC, & member municipalities	$405.0	$447.3	$384.5
Landfill closure liability	$11.3	$10.7	$10.1
Other long-term liabilities	$1.4	$2.3	$2.8
	$628.9	**$587.6**	**$508.3**
Net debt	**($80.4)**	**($100.4)**	**($71.9)**
Non-financial assets*			
Tangible capital assets	$1,760.5	$1,529.6	$1,246.4
Inventory of supplies and prepaid expenses	$2.7	$1.7	$1.4
	$1,763.2	**$1,531.3**	**$1,247.8**
Accumulated surplus	**$1,682.8**	**$1,430.9**	**$1,175.9**

*Non-financial assets are resources that are normally held for service provision over one or more future periods.

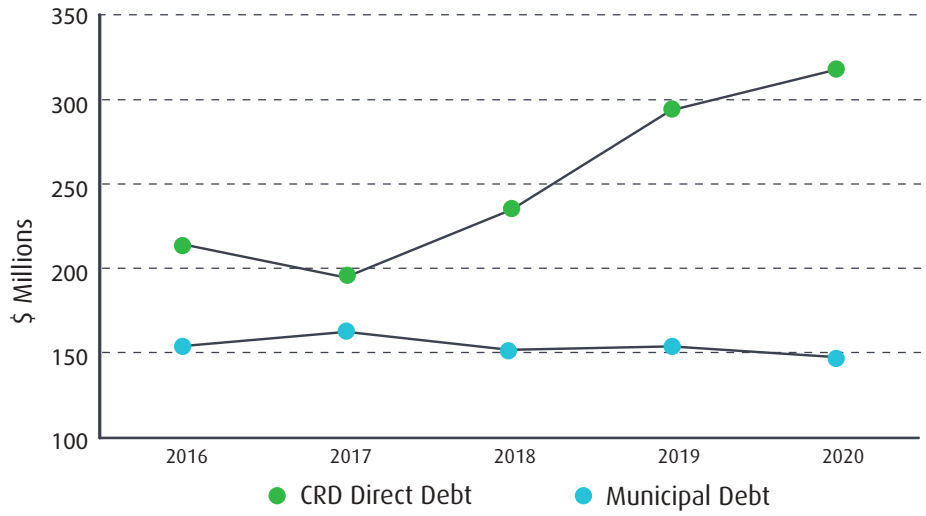
CRD Statement of Operations (Consolidated CRD+CRHC)

This statement identifies the results of the organization's financial activities for the year by presenting revenues less expenses, resulting in the organization's annual surplus on a PSAB basis. Overall, in 2020, revenue increased by $1.8 million. This increase was driven primarily by an increase in developer contributions of $2.4 million, an increase in rental revenue from CRHC of $1.3 million, and an increase in other revenue and sale of service revenue of $1.2 million. This was offset by a $3.0 million decrease in government grants. The change in expenses for 2020 relates primarily to an increase in salaries, wages and benefits, and contract for services and consultants related to third party payments. Financial surpluses generated from operations are generally carried forward and used to make principal debt repayments and reduce the appropriate service requisitions or funding requirements.

	2020	2019	2018
Revenue	**(in millions)**	**(in millions)**	**(in millions)**
Requisition – CRD	$71.0	$67.6	$63.7
Sale of services	$115.3	$109.5	$105.0
Other revenue	$231.6	$239.4	$109.9
Requisition – municipal debt	$15.3	$14.9	$15.4
	$433.2	**$431.4**	**$294.0**
Expenses			
General government services	$22.1	$20.4	$14.6
Protective services	$10.9	$10.5	$10.8
Sewer, water and garbage services	$84.5	$81.4	$76.4
Planning and development services	$2.5	$2.5	$2.4
Affordable housing – rental expenses	$17.8	$16.5	$14.7
Recreation and cultural services	$26.9	$28.6	$28.0
Other	$2.8	$2.3	$2.2
Municipal debt servicing	$15.4	$15.0	$15.5
	$182.9	**$177.2**	**$164.6**
Annual surplus	**$250.3**	**$254.2**	**$129.4**

CRD Financial Health (Consolidated CRD+CRHC)

Current Ratio



The current ratio is a measure of the liquidity of an organization, meaning the CRD's ability to meet current obligations through current assets. A high ratio indicates a greater ability to meet budgeted and unexpected expenditures. Generally, a current ratio greater than one is considered healthy for a government entity.

CURRENT RATIO

7.3

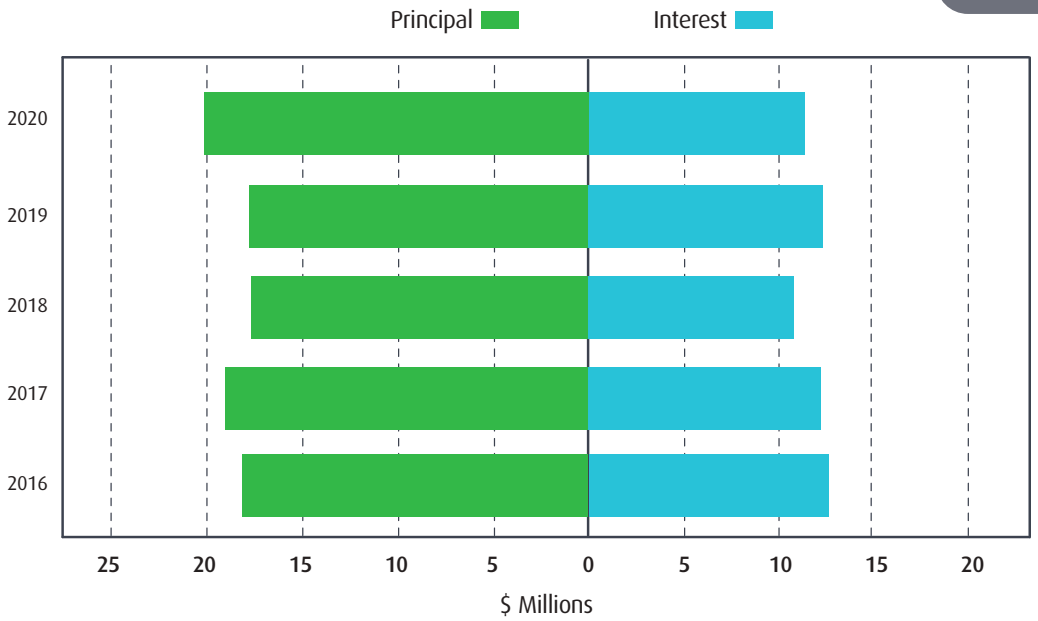
Debt

Debt includes CRD, CRHC and member municipalities. Short-term debt increased by $61.3 million in CRHC related to new housing purchases through the Regional Housing First Program. This debt was rolled into long-term mortgages subsequent to year-end. Long-term debt decreased by $42.3 million to $405.0 million in 2020. The majority of the decrease comes from CRD which payed down $36.1 million in total. $30.9 million related to WTP debt repayments as the project nears completion. The remaining decrease relates to member municipality debt which decreased by $6.1 million.

Assets Funded by Debt

The Capital Investment Funded by New Debt ratio measures the current year acquisition of capital assets that are funded by new debt. In 2020, excluding $133.2 million investment towards the WTP, new debt funded $71.6 million out of the CRD's capital investment balance of $135.2 million.

CAPITAL INVESTMENT FUNDED BY NEW DEBT



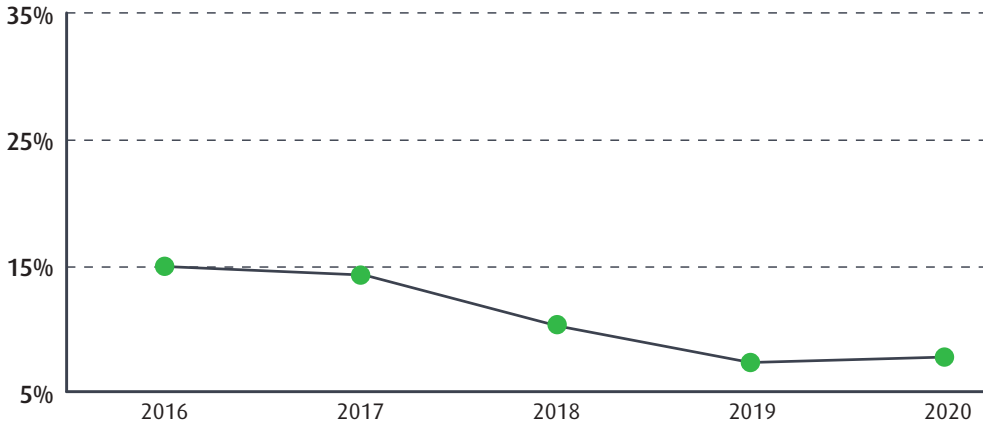
53.0%

Payments on Debt

The table below shows the split between principal and interest of total debt payments over the last five years. The portion of debt payments going to pay interest is trending lower, as a result of lower rates and reduced principal.

PRINCIPAL PORTION OF DEBT PAYMENTS

65.0%

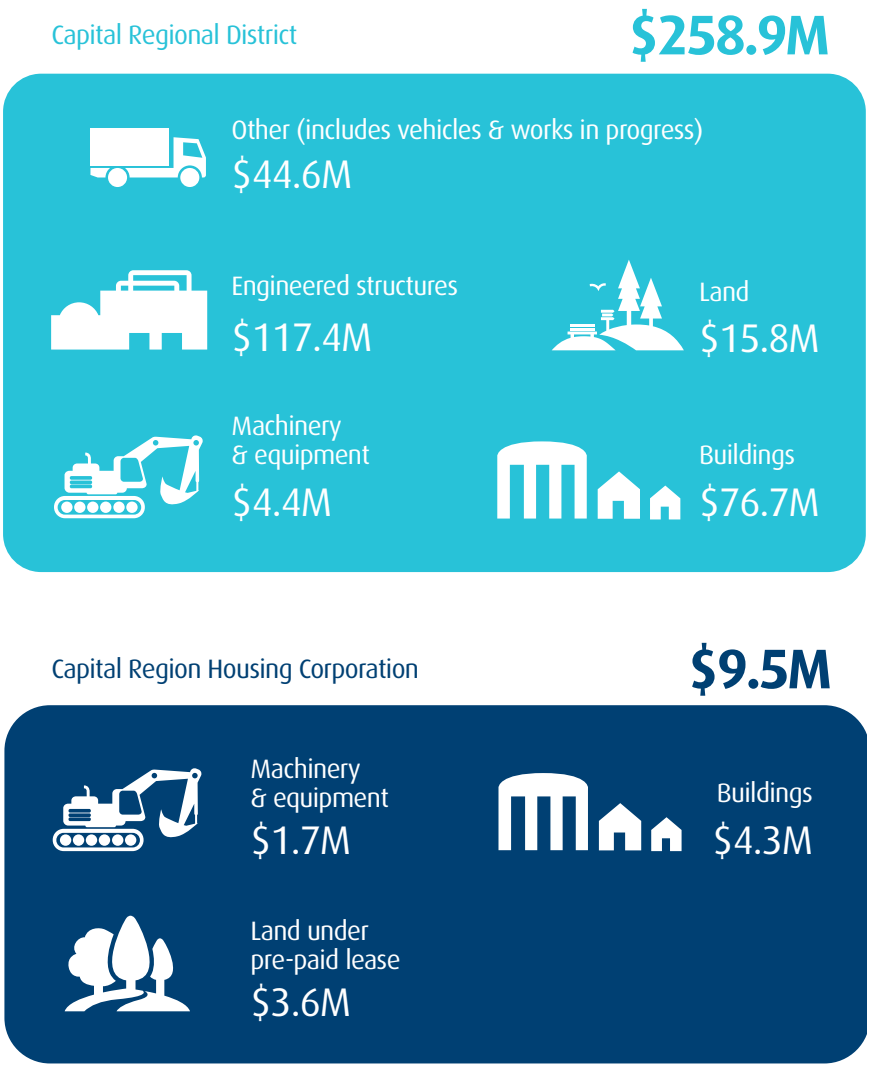


Debt Servicing Costs

The Debt Service Costs to Total Revenue ratio is the percentage of revenue committed to the payment of interest and principal on temporary and long-term debt. A high percentage indicates greater use of revenue for the repayment of debt and less ability to adjust to unplanned events and changing circumstances. The CRD's debt servicing costs (excluding member municipality debt servicing costs) have been trending down year over year. In 2020, debt servicing costs were $31.9 million and revenue was $417.8 million.*

DEBT SERVICE COSTS TO TOTAL REVENUE

7.6%

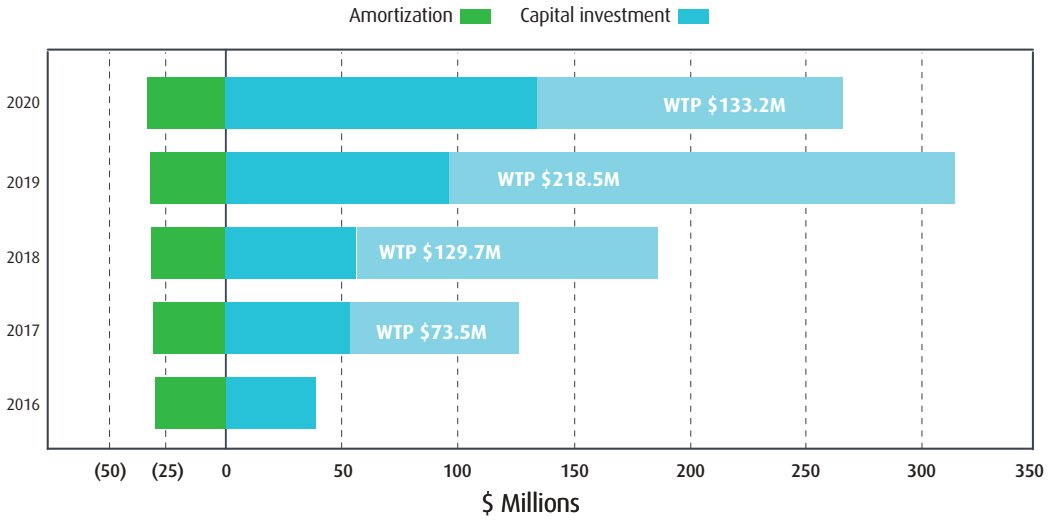


*Revenue excludes debt servicing costs paid by member municipalities.

CRD Capital Investment (Consolidated CRD+CRHC)

The CRD's capital assets continue to grow as the organization invests in infrastructure to meet capacity demands and the Board's strategic priorities and corporate plan.

Additions to Capital Assets in 2020

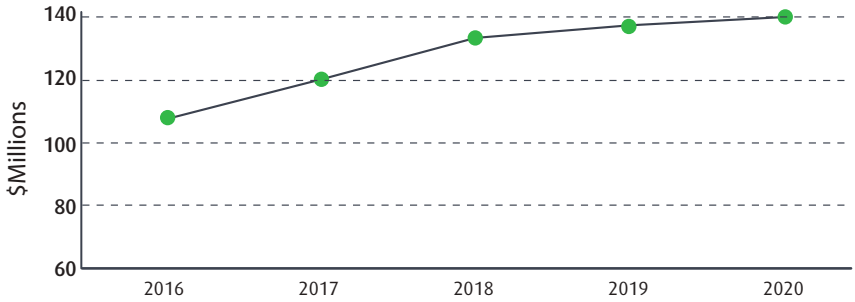


Capital Investment & Amortization

This ratio is the amount of capital invested in infrastructure for every dollar that assets depreciate each year. In 2020, investment in capital was $268.4 million, which includes $133.2 million in acquisitions for the WTP. Excluding the impact of WTP, the investment in capital was $135.2 million compared to amortization of $33.8 million.

INVESTMENT IN CAPITAL OVER AMORTIZATION

7.9x



Contributions to Reserves

Contributions to reserves are needed to reduce costs of borrowing for asset renewal, replacement and to mitigate risk of asset failure. Reserves are essentially savings supporting sustainable service delivery while balancing fluctuations in requisition and user fees. Transfers to operating and capital reserves increased the total reserve to $141.4 million in 2020, an increase of $3.6 million.

RESERVE BALANCE

$141.4M

CRHD Statement of Financial Position

This statement presents the Capital Regional Hospital District's assets, liabilities, tangible capital assets and accumulated deficit. The net debt for 2020, also represented as total assets minus total liabilities, is $117.7 million. The overall position is a deficit, since the CRHD primarily borrows funds to distribute capital grants in support of regional hospitals, equipment and other investments in infrastructure. These grants are recorded as expenses rather than assets owned by the CRHD.

The accumulated deficit decreased by $28.5 million, as a result of capital investment in The Summit at Quadra Village; an asset where the CRHD retains ownership.

	2020	2019	2018
Financial assets	**(in millions)**	**(in millions)**	**(in millions)**
Cash and cash equivalents	$23.6	$30.4	$26.5
Investments	–	–	$26.0
Accounts receivable	$0.8	$0.3	$0.8
Prepaid expenses	–	–	$0.1
Restricted cash – MFA Debt Reserve Fund	$3.9	$4.1	$4.1
Land for resale*	–	–	$0.0
	$28.3	**$34.8**	**$57.5**
Financial liabilities			
Accounts payable and other liabilities	$3.8	$8.5	$8.9
Deferred revenue	$0.4	–	–
Due to Capital Regional District	–	$0.1	$0.1
Long-term debt	$141.8	$161.7	$175.3
	$146.0	**$170.3**	**$184.3**
Net debt	**($117.7)**	**($135.5)**	**($126.8)**
Non-financial assets*			
Tangible capital assets	$99.7	$89.0	$58.5
	$99.7	**$89.0**	**$58.5**
Accumulated deficit	**($18.0)**	**($46.5)**	**($68.3)**

*Non-financial assets are resources that are normally held for service provision over one or more future periods.

CRHD Statement of Operations

This summary identifies the result of the CRHD's financial activities for the year by presenting revenues less expenses, resulting in the organization's annual surplus on a PSAB basis. The annual surplus of $28.5 million was an increase of $6.7 million over 2019. The increase was due to the $9.3 million non-cash recognition of revenue related to the fair value of the Oak Bay Lodge donation from Island Health and $4.1 million in lease revenue from The Summit property. This was offset by $1.2 million decrease in requisitions and $0.8 million decrease in interest income. Expenses increased by $4.6 million due to $2.6 million increase in grants to district hospitals and $3.1 million in amortization on the new Summit property. This was offset by a $1.6 million decrease in interest on long-term debt.

	2020	2019	2018
Revenue	**(in millions)**	**(in millions)**	**(in millions)**
Requisition	$29.4	$30.6	$30.4
Other revenue	$20.6	$8.0	$7.7
	$50.0	**$38.6**	**$38.1**
Expenses			
Grants to district hospitals	$9.0	$6.4	$7.4
Interest and operating expenses	$12.5	$10.4	$11.5
	$21.5	**$16.8**	**$18.9**
Annual surplus	**$28.5**	**$21.8**	**$19.2**

CRHD Financial Health

Current Ratio

The current ratio is a measure of the liquidity of an organization, meaning the CRHD's ability to meet current obligations through current assets. A high ratio indicates a greater ability to meet budgeted and unexpected expenditures. Generally, a current ratio greater than one is considered healthy for a government entity.

CURRENT RATIO

5.9

Interest Coverage Ratio

This ratio is a measure of the organization's ability to meet interest expense obligations on temporary and long-term debt. A high ratio indicates a greater ability to meet budgeted and unexpected expenditures. Generally an interest coverage ratio greater than two is considered healthy for a government entity.

Making a difference...together

REPORT TO CAPITAL REGIONAL DISTRICT BOARD
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **Capital Region Housing Corporation Annual General Meeting**

ISSUE SUMMARY

Complete the annual shareholder meeting of the Capital Region Housing Corporation (CRHC) by written resolution.

BACKGROUND

The Capital Regional District (CRD) is the sole shareholder of the CRHC, a corporation incorporated under the *Business Corporations Act* (BC).

As a corporation, the CRHC must hold an annual meeting of the shareholders, also called an annual general meeting, within 15 months of its last annual meeting. This may be in writing, which requires no additional administrative time to coordinate and can be included as a standard agenda item at a meeting of the CRD Board.

A shareholder's resolution is attached as Appendix A of this report. At a corporation's annual general meeting, the financial statements must be received by the shareholder (included as Appendix B). The corporation's annual report is also attached for shareholder information as Appendix C.

ALTERNATIVES

Alternative 1
That the unanimous shareholder's resolution attached as Appendix A to the Capital Region Housing Corporation Annual General Meeting report be adopted, and the Chair and Corporate Officer execute it on behalf of the Capital Regional District.

Alternative 2
That this matter be referred back to staff for further information based on Capital Regional District Board direction.

IMPLICATIONS

Former Practice at CRD
Starting in 2019, a resolution in writing, signed after a CRD Board meeting, was adopted as the process for holding an annual meeting. In prior years, the CRD appointed its Board Chair as shareholder representative. The Board Chair would attend a CRHC shareholders meeting, called for that purpose in accordance with the timelines in the legislation and corporate articles. The Board Chair of the CRD would then vote to adopt the financial statements, auditor's report, and any other business required to be transacted. This was prior to CRHC's governance reorganization.

The downside of the former practice is that it requires additional administrative time to be spent organizing an in-person meeting in strict compliance with the legislation and articles. As a sole-shareholder corporation that shares directors with the CRD, such administrative burden is no longer required as the directors of the CRD are those persons appointed as directors of the CRHC.

Economic Implications
By completing a resolution in writing, administration costs of organizing and hosting a formal in-person annual general meeting are avoided.

Public Participation Implications
By moving forward by way of resolution in writing, members of the public may attend to speak to CRHC's business as a delegation on a standard CRD agenda item. This may lead to increased transparency and public involvement.

Record Keeping Implications
By proceeding by way of corporate resolution in writing, it will be easier to track the business conducted by CRD as shareholder. The corporate resolution in writing will be filed in the CRHC's minute book, easily accessible if necessary, as well as noted in the CRD's minutes.

CONCLUSION

Staff recommend the CRD conduct the annual meeting of the shareholder of the CRHC by way of resolution in writing, and the CRD authorize the Chair and Corporate Officer to execute the unanimous shareholder resolution on its behalf.

RECOMMENDATION

That the unanimous shareholder's resolution attached as Appendix A to the Capital Region Housing Corporation Annual General Meeting report be adopted, and the Chair and Corporate Officer execute it on behalf of the Capital Regional District.

Submitted by:	Steven Carey, BSc, JD, Manager, Legal Services, Corporate Services
Concurrence:	Don Elliott, MUP, Senior Manager, Regional Housing & CRHC
Concurrence:	Kevin Lorette, P. Eng., MBA, General Manager, Planning & Protective Services
Concurrence:	Kristen Morley, J.D., General Manager, Corporate Services & Corporate Officer

Appendix A

CONSENT UNANIMOUS RESOLUTION OF THE SHAREHOLDER OF

THE CAPITAL REGION HOUSING CORPORATION

(the "CRHC")

The Capital Regional District, being the sole shareholder of the CRHC entitled to vote at an annual general meeting of the CRHC, hereby consent to the following unanimous resolutions:

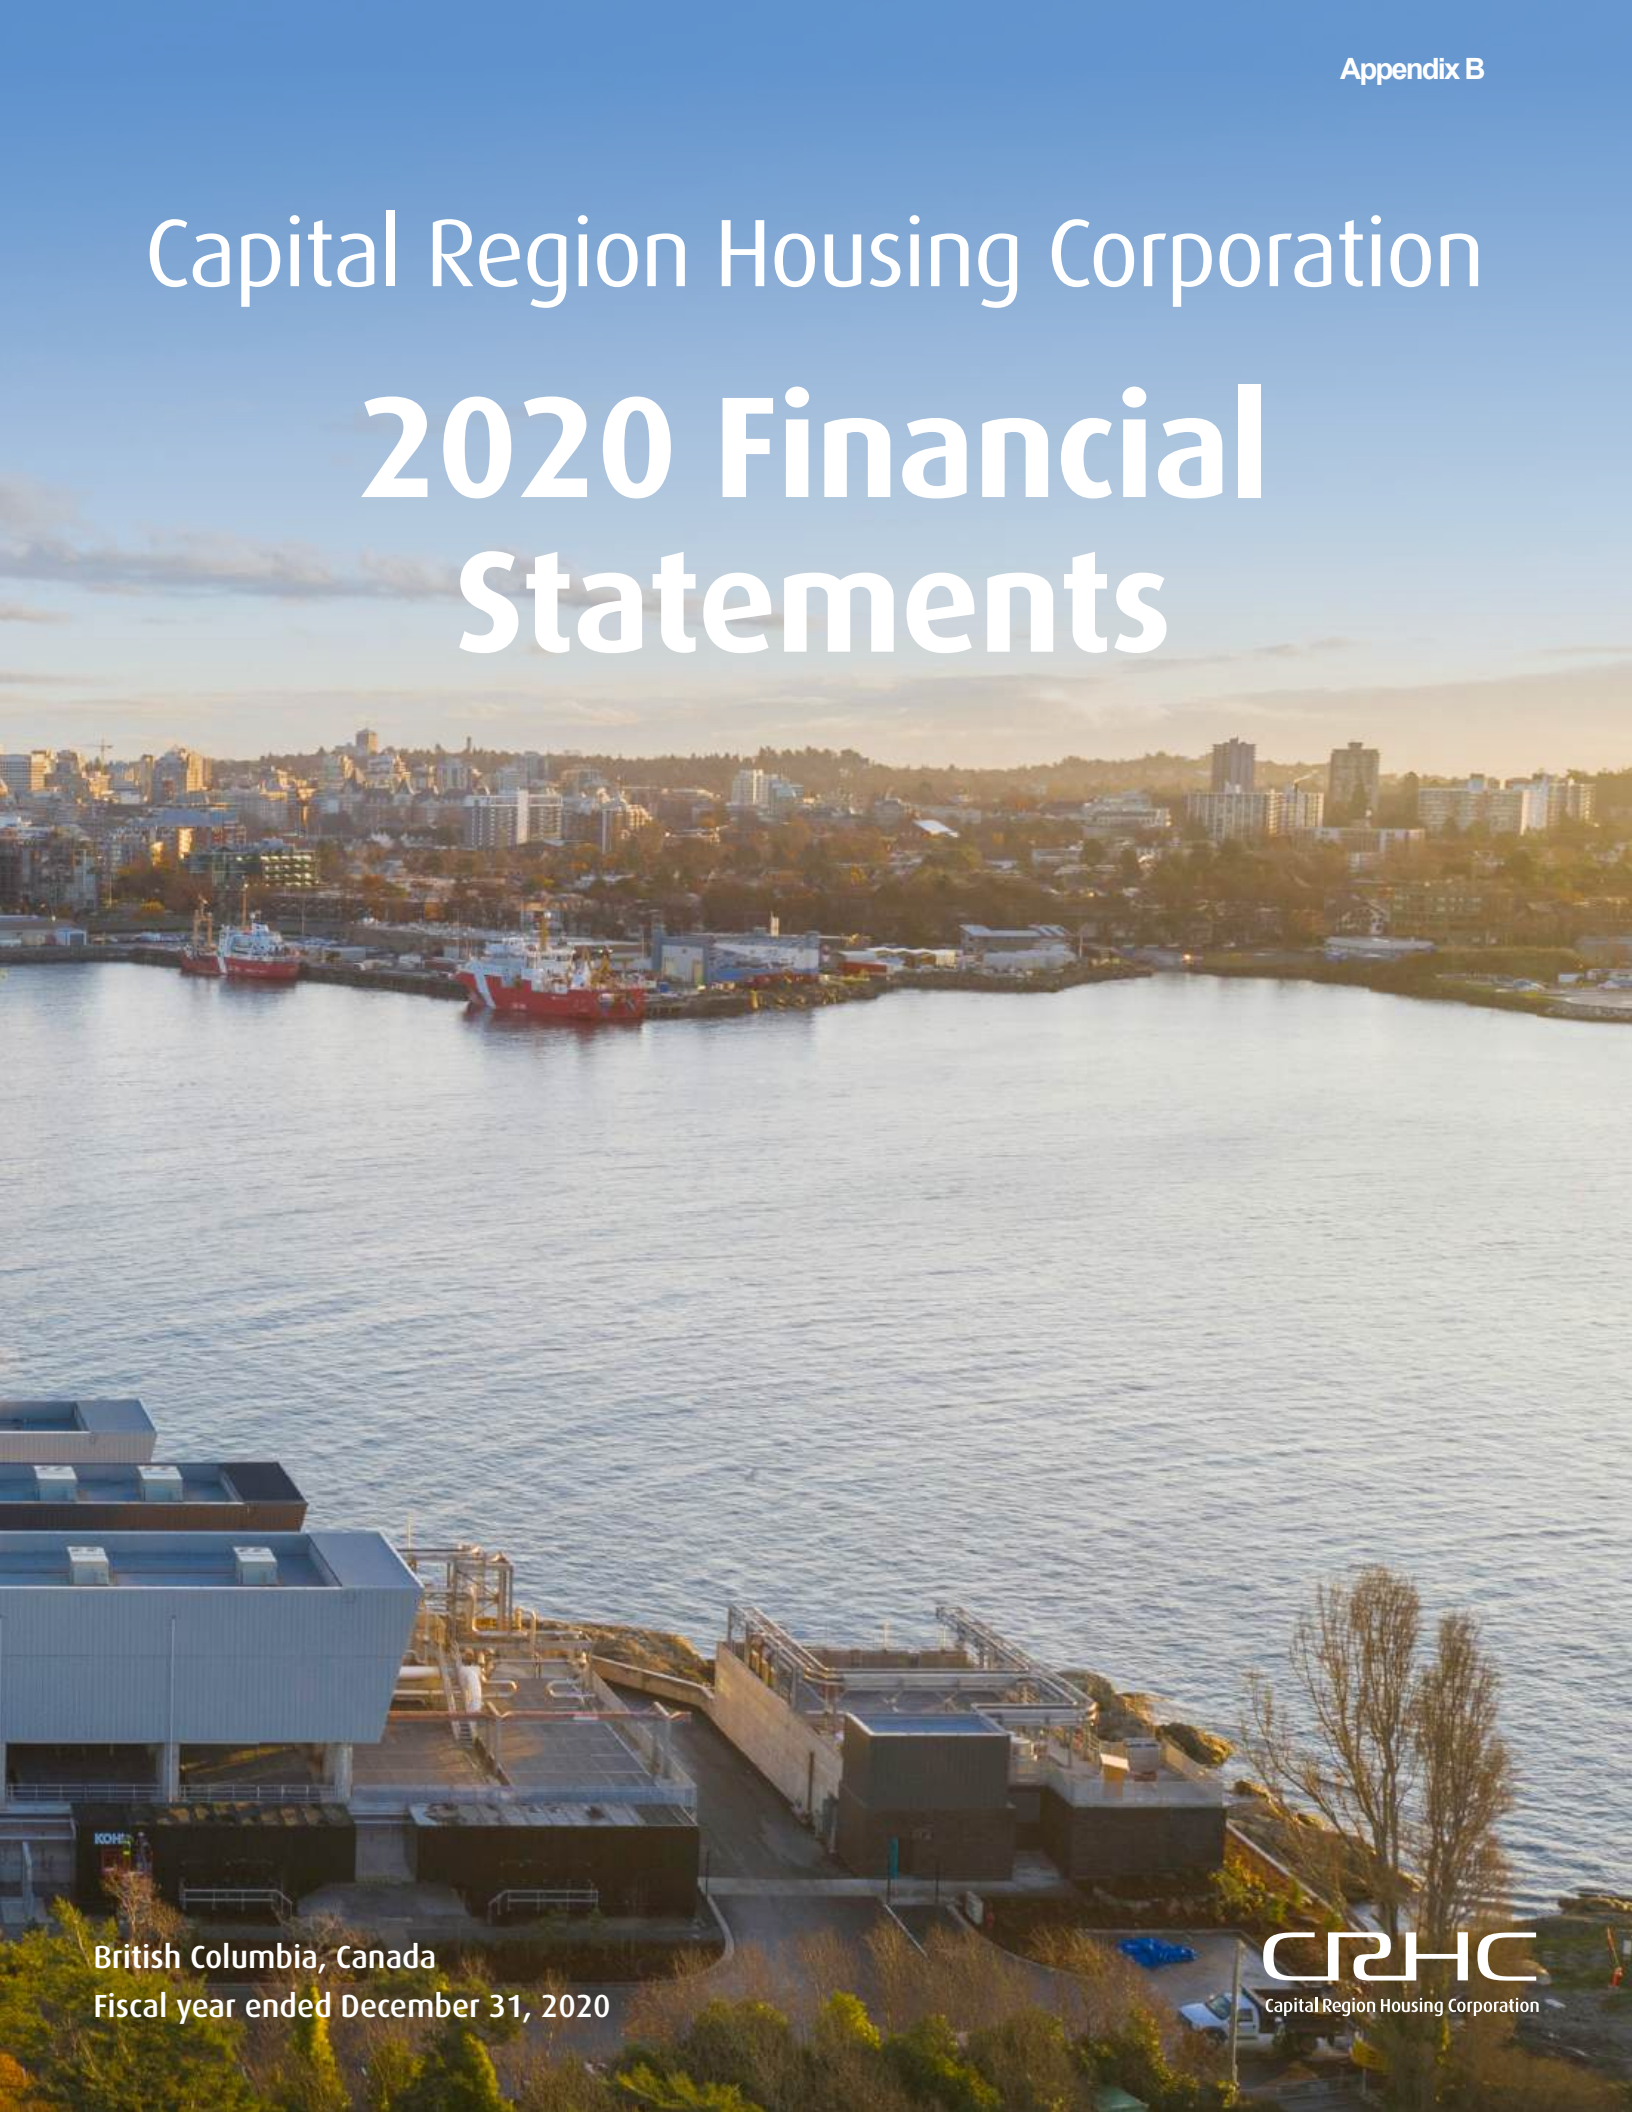
RESOLVED that:

1) the financial statements of the CRHC for the period ended December 31, 2020, are hereby approved;

2) all lawful acts, contracts, proceedings, appointments and payments of money by the directors of the CRHC since the last annual general meeting of the CRHC, and which have previously been disclosed to the shareholder, are hereby adopted, ratified and confirmed;

3) that KPMG LLP be appointed auditors for the CRHC until the next annual general meeting or until a successor is appointed, at a remuneration to be fixed by the CRHC directors; and

4) this resolution may be signed on behalf of the corporate shareholder, the Capital Regional District, by the Chair of the Capital Regional District and the Corporate Officer.



RESOLVED as of _____ May, 2021.

Colin Plant	Kristen Morley
Capital Regional District Board Chair	Corporate Officer

INDEPENDENT AUDITORS' REPORT

To the Shareholder of the Capital Region Housing Corporation

Opinion

We have audited the financial statements of the Capital Region Housing Corporation (the Corporation), which comprise:

- the statement of financial position as at December 31, 2020
- the statement of operations for the year then ended
- the statement of changes in net assets and remeasurement gains and losses for the year then ended
- the statement of cash flows for the year then ended
- and notes to the financial statements, including a summary of significant accounting policies

(Hereinafter referred to as the "financial statements").

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2020, and its results of operations, its changes in net assets and remeasurement gains and losses, and its cash flows for the year then ended in accordance with Canadian public sector accounting standards.

Basis for Opinion

We conducted our audit in accordance with Canadian generally accepted auditing standards. Our responsibilities under those standards are further described in the "Auditors' Responsibilities for the Audit of the Financial Statements" section of our auditors' report.

We are independent of the Corporation in accordance with the ethical requirements that are relevant to our audit of the financial statements in Canada and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

DRAFT

KPMG LLP is a Canadian limited liability partnership and a member firm of the KPMG network of independent member firms affiliated with KPMG International Cooperative ("KPMG International"), a Swiss entity. KPMG Canada provides services to KPMG LLP.

Other Information

Management is responsible for the other information. Other information comprises:

- the information, other than the financial statements and the auditors' report thereon, included in the Annual Report.

Our opinion on the financial statements does not cover the other information and we do not and will not express any form of assurance conclusion thereon.

In connection with our audit of the financial statements, our responsibility is to read the other information identified above and, in doing so, consider whether the other information is materially inconsistent with the financial statements or our knowledge obtained in the audit and remain alert for indications that the other information appears to be materially misstated.

We obtained the information, other than the financial statements and the auditors' report thereon, included in the Annual Report as at the date of this auditors' report.

If, based on the work we have performed on this other information, we conclude that there is a material misstatement of this other information, we are required to report that fact in the auditors' report.

We have nothing to report in this regard.

Responsibilities of Management and Those Charged with Governance for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with Canadian public sector accounting standards, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Corporation's ability to continue as a going concern, disclosing as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Corporation or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Corporation's financial reporting process.

Auditors' Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Canadian generally accepted auditing standards will always detect a material misstatement when it exists.

Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions

KPMG LLP is a Canadian limited liability partnership and a member firm of the KPMG network of independent member firms affiliated with KPMG International Cooperative ("KPMG International"), a Swiss entity. KPMG Canada provides services to KPMG LLP.

of users taken on the basis of the financial statements.

As part of an audit in accordance with Canadian generally accepted auditing standards, we exercise professional judgment and maintain professional skepticism throughout the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion.

  The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.

- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Corporation's internal control.

- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.

- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Corporation's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditors' report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditors' report. However, future events or conditions may cause the Corporation to cease to continue as a going concern.

- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.

- Communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

MANAGEMENT REPORT

The Financial Statements contained in this report have been prepared by management in accordance with Canadian public sector accounting standards. The integrity and objectivity of these statements are management's responsibility. Management is also responsible for all the statements and schedules, and for ensuring that this information is consistent, where appropriate, with the information contained in the financial statements.

Management is also responsible for implementing and maintaining a system of internal controls to provide reasonable assurance that reliable financial information is produced.

The Capital Region Housing Corporation Board of Directors are responsible for approving the financial statements and for ensuring that management fulfills its responsibilities for financial reporting and internal control and exercises this responsibility through the Hospitals and Housing Committee of the Board.

The external auditors, KPMG LLP, conduct an independent examination, in accordance with Canadian public sector accounting standards, and express their opinion on the financial statements. Their examination includes a review and evaluation of the Corporation's system of internal control and appropriate tests and procedures to provide reasonable assurance that the financial statements are presented fairly. The external auditors have full and free access to staff and management. The Independent Auditors' Report outlines the scope of the audit for the year ended December 31, 2020.

On behalf of Capital Region Housing Corporation,

Nelson Chan, MBA, FCPA, FCMA
Chief Financial Officer

DRAFT

General

The Capital Region Housing Corporation (the “Corporation”) is incorporated under the laws of British Columbia and its principal activity is the provision of rental accommodation. As a wholly owned subsidiary of the Capital Regional District ("CRD"), the Corporation is exempt from taxation under the Income Tax Act and is regarded as a municipality for GST purposes.

1. Significant Accounting Policies

The financial statements have been prepared in accordance with Canadian Public Sector Accounting Standards including the 4200 standards for government not-for-profit organizations.

a. Revenue Recognition

The Corporation follows the restricted fund balance method of accounting for contributions. Unrestricted contributions are recognized as revenue of the Operating Fund in the year received or receivable if the amount to be received can be reasonably estimated and collection is reasonably assured. Restricted contributions related to general operations are recognized as revenue of the Operating Fund in the year to which the funding relates. All other restricted contributions are recognized as revenue of the appropriate restricted fund in the year received or receivable.

b. Fund Accounting

i. Operating Funds

The Operating Funds reflect the Corporation’s assets, liabilities and transactions relating to the ongoing rental and non-rental operations (“Corporation”). In accordance with the agreements with British Columbia Housing Management Commission (BCHMC), a Portfolio Stabilization Reserve has been established for each portfolio’s accumulated operating surplus. The Corporation has also established a reserve for the No Operating Agreement portfolio. These reserves are used in the event that annual rental revenues and government subsidies are inadequate to meet the portfolio’s mortgage payments and operating costs. The Corporation can also contribute funds from these reserves to the Replacement Reserve Fund, if required. At the discretion of the Board, the unrestricted Corporate Stabilization Reserve provides funding for administration and special projects.

ii. Capital Fund

The Capital Fund reflects the Corporation’s investment in capital assets and related financial activities.

iii. Replacement Reserve Fund

In accordance with the agreements with BCHMC, a Replacement Reserve Fund has been established for each building to pay for the replacement of worn-out capital equipment and other approved items. The Replacement Reserves are funded by an annual transfer from the Rental Housing Operating Fund. Capital expenditures made from the reserve are transferred to the Capital Fund.

DRAFT

1. Significant Accounting Policies (continued)

c. Capital Assets

Land, buildings, equipment and vehicles are stated at cost. Amortization over their estimated useful lives is provided on the straight-line basis at the following rates:

Asset	Rate
Prepaid leases	29-60 Years
Buildings	35 Years
Equipment	10 Years
Vehicles	5 Years

All transfers from the Replacement Reserve Fund and office equipment are stated at cost and amortization is provided on the declining balance basis at 20% per annum.

Amortization is charged upon the asset becoming available for productive use in the year of acquisition.

Capital assets are written down when conditions indicate that they no longer contribute to the Corporation's ability to provide goods and services or when the value of the future economic benefits associated with the asset is less than the book value of the asset.

d. Debt Retirement

Payment of principal on long-term debt is funded by a transfer from the Rental Housing Operating Fund to the Capital Fund.

e. Operating Agreements

i. Umbrella

Effective April 1, 2012, the Corporation signed a thirty-three month Interim Umbrella Operating Agreement (the “Umbrella Agreement”) with BCHMC to consolidate three operating agreements to reduce administrative duplication, allow the Corporation more flexibility to determine priorities for the portfolio maintenance and management and create a stable and predictable funding stream for the Corporation. In addition, the parties agreed to work together to develop a long-range capital planning tool to enable the Corporation and BCHMC to determine the capital replacement needs of the portfolio for the next thirty years and to negotiate on the transfer of the land ownership of the BCHMC projects from the Provincial Rental Housing Corporation to the Corporation. The final agreement was signed on December 2, 2014 with an effective date of January 1, 2015, for a five year term, and was renewed in December 2019 for an additional five year term ending 2024.

Effective August 17, 2020, the Umbrella Agreement was modified to remove three properties, Portage Place, Campus View Court, and Royal Oak Square, whose mortgages had matured and

DRAFT

1. Significant Accounting Policies (continued)

e. Operating Agreements (continued)

i. Umbrella (continued)

which were originally part of the CMHC Agreement described below. The properties were moved to the CRHC No Operating Agrement portfolio and their corresponding Replacement Reserve balances were moved to the CRHC No Operating Agreement Replacement Reserve. No transfers were made between Portfolio Stabilization Reserves. As a result of this change, the Umbrella Agreement now contains 39 buildings and 1,142 units.

Except as modified by the Umbrella Agreement, all provisions of the original three operating agreements with CMHC, BCHMC and Homes BC will continue to apply to each project in the portfolio.

a) CMHC

Prior to April 1, 2012 the Corporation had entered into agreements with CMHC pursuant to Section 95 (formerly Section 56.1) of the National Housing Act whereby CMHC will provide mortgage assistance grants to the Corporation that reduce interest costs to not less than 2% on all mortgages payable. As of January 1, 2005 when a mortgage loan is renewed the mortgage assistance grants shall increase or decrease by the same dollar amount as the monthly loan payment of principal and interest changes.

b) BCHMC

Prior to April 1, 2012 the Corporation had entered into agreements with BCHMC whereby BCHMC, on behalf of the Provincial and Federal governments, will provide rent subsidy assistance equal to the BCHMC approved difference between tenant rent contributions and BCHMC defined economic rents.

c) Homes BC Program

Prior to April 1, 2012 the Corporation had entered into agreements with BCHMC under the unilaterally funded Homes BC Program. The Provincial Government agrees to provide rent subsidy assistance for Rent Geared to Income (RGI) units (approximately 60% of total units) based on the difference between the tenant rent contribution and the approved economic rents. The Province also agrees to provide Repayable Assistance equal to the difference between the economic and the approved low-end of market rents for the remaining units.

ii. Independent Living BC II Program

The Corporation has entered into an agreement with BCHMC under the unilaterally funded Independent Living BC II Program. The Provincial Government agrees to provide subsidy assistance for shelter and defined hospitality costs based on the difference between seventy percent (70%) of the residents' net income and the approved operating budget.

DRAFT

1. Significant Accounting Policies (continued)

e. Operating Agreements (continued)

iii. Regional Housing First Program

The Regional Housing First Program (RHFP) is a partnership between the Provincial and Federal governments and the CRD to provide capital funding to affordable housing projects in the region. The Corporation has entered into a 40-year agreement with BCHMC on behalf of the RHFP whereby the Corporation provides shelter-rate and affordable rents to low and moderate income tenants.

iv. Investment in Housing Innovation Program

The Corporation has entered into a 40-year agreement with BCHMC under the Investment in Housing Innovation (IHI) program. Capital funding was provided in the form of a forgivable loan to facilitate the construction of the Westview building. No other financial contribution will be received to subsidize the ongoing operation of the building.

v. CRHC No Operating Agreement

This category includes buildings that receive no mortgage assistance or rent subsidy assistance. Tenant rent contributions are determined by the Corporation.

f. Allocation of Investment Income

Funds available for investment are pooled and interest revenue is allocated to restricted funds at the rate of average prime minus 0.11% (2019: average prime minus 0.45%).

g. Financial Instruments

Financial instruments are recorded at fair value on initial recognition. Derivative instruments, bonds and equity instruments that are quoted in an active market are subsequently reported at fair value. All other financial instruments are subsequently recorded at cost or amortized cost unless management has elected to carry the instruments at fair value. The Corporation has not elected to carry any other such financial instruments at fair value.

Unrealized changes in fair value are recognized in the statement of remeasurement gains and losses until they are realized, when they are transferred to the statement of operations.

Transaction costs incurred on the acquisition of financial instruments measured subsequently at fair value are expensed as incurred. All other financial instruments are adjusted by transaction costs incurred on acquisition and financing costs, which are amortized using the straight-line method.

DRAFT

1. Significant Accounting Policies (continued)

g. Financial Instruments (continued)

All financial assets are assessed for impairment on an annual basis. When a decline is determined to be other than temporary, the amount of the loss is reported in the statement of operations and any unrealized gain is adjusted through the statement of remeasurement gains and losses.

h. Use of Estimates

The preparation of the financial statements requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the year. Significant estimates and assumptions include amortization of capital assets. Actual results could differ from those estimates.

2. Cash and Cash Equivalents

Cash and cash equivalents have a maturity of three months or less at acquisition and are held for the purpose of meeting short-term cash commitments. Included in cash and cash equivalents are investments in the Municipal Finance Authority of British Columbia (MFA) Short Term Bond and Money Market Funds. See Schedule A for details of cash and cash equivalents restricted for replacement reserve.

3. Capital Assets

December 31, 2020	**Cost**	**Accumulated Amortization**	**Net Book Value**
Land	$ 9,496,053	$ -	$ 9,496,053
Prepaid leases	109,499,053	7,233,959	102,265,094
Buildings	122,362,585	81,567,634	40,794,951

	$ 212,935,399	$ 113,000,530	$ 99,934,869

DRAFT

4. Mortgages Payable

Pursuant to Section 5 of the National Housing Act, CMHC has undertaken to insure all mortgages payable by the Corporation except the mortgages on Village on the Green and Vergo. As additional security, the mortgagors hold chattel mortgages and assignments of rent.

Principal due within each of the next five years on these mortgages is approximately as follows:		**Assuming no mortgage renewal**	**Assuming mortgage renewal**
	2021	$ 8,018,514	$ 4,901,224
	2022	7,926,882	4,872,303
	2023	5,410,602	4,927,348
	2024	12,068,342	4,745,516
	2025	$ 6,425,327	$ 4,291,919

Interest on mortgages ranges from 0.68% to 3.50% with renewal dates February 1, 2021 to September 1, 2030 and maturity dates from February 1, 2021 to September 1, 2055.

5. Capital Stock

Authorized capital: 2,000 shares with par value of $1 each

Issued capital: 1 share of $1 par value, owned by the Capital Regional District.

6. Invested in Capital Assets

Investment in capital assets is calculated as follows:

	December 31, 2020	December 31, 2019
Capital assets	$ 161,085,348	$ 99,934,869

Equipment replacement reserve	(30,184)	(37,979)
	$ 498,122	$ 658,224

9. Commitments and Contingencies

a. Related Party Transactions

The Corporation is a wholly owned subsidiary of the Capital Regional District (CRD). In 1997, the Corporation committed to a sixty year prepaid land lease at 625 Superior Street from the CRD at the agreed upon price of $525,000 which was recognized as an acquisition in the Corporation Capital Fund. In 2017, the Corporation committed to a sixty year land lease at 3816 Carey Road from the CRD for one dollar, with the land use restricted to affordable housing.

In 2018, a RHFP project management office was created to support the delivery of the Program. During the year the Corporation contributed $63,520 (2019: $62,275) to the CRD, to cost share in administrative support and project management services.

On January 25, 2019, as part of the RHFP, the CRD purchased Millstream Ridge and entered into a 60-year prepaid lease in the amount of $33,250,194 and a 35-year operator agreement with the Corporation. The Corporation secured 35-year mortgage financing to fund the prepaid lease.

On November 2, 2020, as part of the RHFP, the CRD purchased West Park and entered into a 60-year prepaid lease in the amount of $29,430,822 and a 35-year operator agreement with the Corporation. The CRD's Regional Housing Trust Fund provided a capital grant to the Corporation in the amount of $660,000 for this project. The Corporation secured short-term capital financing from BCHMC to fund the prepaid lease. This short-term financing was converted to a 35-year mortgage subsequent to year-end for a 10-year term at 1.519% interest.

On November 20, 2020, as part of the RHFP, the CRD purchased Spencer Close and entered into a 60-year prepaid lease in the amount of $28,419,513 and a 35-year operator agreement with the Corporation. The Corporation secured short-term capital financing from BCHMC to fund the prepaid lease. This short-term financing was converted to a 35-year mortgage subsequent to year-end for a 10-year term at 1.519% interest.

DRAFT

9. Commitments and Contingencies (continued)

b. Sublease of Kings Place Housing Development

The Corporation entered into agreement with the Cridge Housing Society and the Provincial Rental Housing Corporation to sublease the land and improvements at 1070 Kings Road, Victoria for a term of thirty years commencing August 1, 1997. The Homes BC Program Operating Agreement was assigned to the Corporation from the Cridge Housing Society with the approval of the BCHMC. Current annual lease payments amount to $231,000 and are based on the annual mortgage payments.

c. Building Envelope Remediation (BER)

Prior to the signing of the Umbrella Agreement in 2012, BCHMC provided funding for building envelope failure remediation for BCHMC and Homes BC buildings. BCHMC may require repayment of certain BER subsidies. Repayment would be funded by second mortgages. Funding for future BER for all buildings except No Operating Agreement buildings, Village on the Green and Vergo, is subject to future negotiations with BCHMC. In 2014, BCHMC entered into an agreement with the Corporation to fund the Heathers BER with a 35 year forgivable mortgage of $1,258,358.

10. Pension Liability

The Corporation and its employees contribute to the Municipal Pension Plan (the Plan), a jointly trusteed pension plan. The Board of Trustees, representing plan members and employers, is responsible for administering the Plan, including investment assets and administration of benefits. The Plan is a multi-employer defined benefit pension plan. Basic pension benefits provided are based on a formula.

As at December 31, 2019, the Plan has about 213,000 active members and approximately 106,000 retired members. Active members include approximately 32 contributors from the Corporation.

Every three years an actuarial valuation is performed to assess the financial position of the Plan and the adequacy of plan funding. The actuary determines an appropriate combined employer and member contribution rate to fund the Plan. The actuary's calculated contribution rate is based on the entry-age normal cost method, which produces the long-term rate of member and employer contributions sufficient to provide benefits for average future entrants to the Plan. This rate may be adjusted for the amortization of any actuarial funding surplus and will be adjusted for the amortization of any unfunded actuarial liability.

The most recent valuation for the Municipal Pension Plan as at December 31, 2018 indicated a $2,866 million funding surplus for basic pension benefits on a going concern basis.

The Corporation's employer contributions to the Plan for the fiscal year ended December 31, 2020 is $222,396 (2019: $183,804). The next valuation will be as at December 31, 2021, with results available in 2022.

Employers participating in the Plan record their pension expense as the amount of employer contributions made during the fiscal year (defined contribution pension plan accounting). This is because the Plan records accrued liabilities and accrued assets for the Plan in aggregate, resulting in no consistent and reliable basis for allocating the obligation, assets and cost to individual employers participating in the Plan.

11. Financial risks and concentration of risk

a. Credit risk

Credit risk refers to the risk that a counter party may default on its contractual obligations resulting in a financial loss. The Corporation is exposed to credit risk with respect to the accounts receivable, cash, and cash equivalents. The Corporation assesses, on a continuous basis, accounts receivable and provides for any amounts that are not collectible in the allowance for doubtful accounts. The maximum exposure to credit risk of the Corporation at December 31, 2020 is the carrying value of these assets. The carrying amount of accounts receivable is valued with consideration for an allowance for doubtful accounts. The amount of any related impairment loss is recognized in the statement of operations. Subsequent recoveries of impairment losses related to accounts receivable are credited to the statement of operations. The balance of the allowance for doubtful accounts at December 31, 2020 is $0 (2019: $0). There have been no significant changes to the credit risk exposure from 2019.

b. Liquidity risk

Liquidity risk is the risk that the Corporation will be unable to fulfill its obligations on a timely basis or at a reasonable cost. The Corporation manages its liquidity risk by monitoring its operating requirements. The Corporation prepares budget and cash forecasts to ensure it has sufficient funds to fulfill its obligations.

Accounts payable and accrued liabilities are generally due within 30 days of receipt of an invoice. The contractual maturities of mortgages payable are disclosed in Note 4. There have been no significant changes to the liquidity risk exposure from 2019.

c. Market risk:

Market risk is the risk that changes in market prices, such as foreign exchange rates or interest rates will affect the Corporation's income or the value of its holdings of financial instruments. The objective of market risk management is to control market risk exposures within acceptable parameters while optimizing return on investment.

i. Foreign exchange risk:

The Corporation does not enter into foreign exchange transactions and therefore is not exposed to foreign exchange risk. There have been no significant changes to foreign exchange risk exposure from 2019.

ii. Interest rate risk:

Interest rate risk is the risk that the fair value of future cash flows or a financial instrument will fluctuate because of changes in the market interest rates.

The Corporation holds cash equivalents in MFA Short Term Bond and Money Market Funds where changes in fair value have parallel changes in unrealized gains or losses until realized on disposal.

DRAFT

11. Financial risks and concentration of risk (continued)

c. Market risk: (continued)

The Corporation's mortgage interest rates are fixed and are subject to interest rate risk upon renewal. The interest rate risk is mitigated by the subsidy assistance received for most properties from BCHMC and CMHC, which is based on mortgage principal and interest payments. At December 31, 2020, there are four properties which do not receive subsidy assistance based on mortgage interest rates: Village on the Green, Vergo, Millstream Ridge, and Westview. The Corporation entered into a fixed rate 10-year mortgage for Millstream Ridge in 2019 which will be subject to unsubsidized interest rate risk upon renewal.

12. Subsequent Events

Subsequent to December 31, 2020, the short-term capital financing provided by BCHMC to acquire the prepaid leases of West Park and Spencer Close was converted to 35-year mortgage financing at a fixed rate for a 10-year term at 1.519% interest.

On March 22, 2021, the Corporation obtained short-term financing from BCHMC and entered into a prepaid lease of Hockley House from the CRD in the amount of $23.8 million. The financing will be converted to a 35-year mortgage after being placed with a lender by BCHMC.

On April 14, 2021, the Corporation's Board authorized staff to enter into a pre-paid lease agreement with the CRD in the amount of $10.1 million for an affordable housing project in the region.

13. COVID-19

On March 11, 2020, the COVID-19 outbreak was declared a pandemic by the World Health Organization. This resulted in governments worldwide, including the Canadian federal and provincial governments enacting emergency measures to combat the spread of the virus. The economic conditions and the Corporation's response to the pandemic did not have a material impact on the Corporation's operating results and financial position in 2020. The situation is dynamic and the ultimate duration and magnitude of the impact on the economy and the financial effect on the Corporation is not known at this time.

Capital Region Housing Corporation

CRD | CRHC

2020 ANNUAL REPORT

Message from the Board Chair

Lisa Helps, CRHC Board Chair

For the Capital Region Housing Corporation (CRHC), 2020 was about determination, momentum, perseverance and delivery.

At its core, the CRHC mandate is to create and deliver more affordable housing across the region, and when faced with a global pandemic, this mandate could have been significantly affected. But through the resourcefulness, professionalism and focus of staff, in 2020 the CRHC delivered more affordable new homes to a community in crisis than it has since its inception. This significant achievement, and the positive impacts the new housing is already having for those in need, remains an incredible accomplishment and will go a long way to supporting a healthy and thriving region into the future.

Under the Regional Housing First Program (RHFP), the CRHC opened two new mixed-market buildings in 2020, Spencer Close in Langford and West Park in View Royal. It has taken immense efforts to build the variety of housing options our community needs.

I'm grateful for the level of deep collaboration and agility that has exemplified the work of the CRHC Board and staff through 2020. Those attributes will support our work as we continue to address our mandate to create much needed housing and build our economy into 2021. I'm also grateful for the contributions and leadership of the members of the Tenant Advisory Committee who are helping to shape each of the CRHC sites into stronger communities.

Message from the Chief Administrative Officer

Robert Lapham, CRD CAO

2020 was a year like no other and the CRHC's response to the COVID-19 pandemic is an accomplishment to be proud of. Increasing support for tenants during a time of uncertainty and taking appropriate precautions throughout our properties to keep people safe remains our top priority.

Affordable housing is a key component of the CRD's Strategic Plan, and the dedicated staff of the CRHC advanced this commitment through the continued planning and development of nine projects under the RHFP. The CRHC opened 355 new homes in 2020, and when Hockley House opens in the spring of 2021, it will be the CRHC's fourth building to open in a 12-month period.

This has required significant leadership to navigate the corporation through unprecedented times. My thanks go to the Board and administration of the CRD and CRHC, and our municipal, provincial and federal government partners that are essential to this success.

I am exceptionally proud of how the CRHC has adjusted and sustained operations throughout the past year. As we move forward into 2021, our key focus remains supporting our tenants while continuing efforts to increase affordable housing options in the region.

Staff inspecting Spencer Close

Supporting Tenants Through COVID-19

It has been said that in 2020 we were navigating uncharted territory. That is exactly what CRHC staff were faced with when a provincial state of emergency was declared in March. Operationally, their attention was focused on how to continue to deliver services safely in the face of an unfolding global pandemic to more than 3,500 tenants in almost 1,800 homes across the region.

In the midst of constant change, CRHC staff and management remained resilient, and through their dedication were able to ensure our buildings were well maintained and the needs of our tenant population responded to. Tenant engagement continued with regular updates including COVID-19 safety protocols and compassion for those in delicate circumstances that were adversely impacted financially.

The pandemic struck at a time of the most rapid change the corporation has seen, both in adding capacity to the CRHC team and to the number of completed affordable housing units. The year presented difficult challenges, but tremendous opportunities and progress for the CRHC, and 2021 will continue on a positive track as the corporation provides even more homes for those in our community that desperately need them.

Kevin Lorette, General Manager, Planning and Protective Services
Don Elliott, Senior Manager, Regional Housing

CRHC Vision

As leaders in non-profit housing in the capital region, the CRHC delivers affordable, attractive, inclusive, sustainable housing.

CRHC Mission

The CRHC's mission is to develop and manage affordable housing within the capital region for low to moderate income households.

COMPLETED

WEST PARK — *completed*

West Park opened in View Royal near Thetis Lake under the RHFP, with 152 units of mixed-market housing including 20 accessible units. West Park consists of two six-storey buildings with studio, 1 and 2 bedroom apartments.

SPENCER CLOSE — *completed*

Spencer Close opened in Langford under the RHFP, with 130 units of mixed-market housing including 13 accessible units. Spencer Close is a six-storey building with 1 bedroom, 1 bedroom plus den, 2 bedroom and 2 bedroom plus den apartments.

WESTVIEW — *completed*

Westview opened in Saanich with 73 affordable new homes for low-to moderate-income families, individuals, seniors and adults with disabilities. Westview is a four-storey building with studio and 1, 2 and 3 bedroom apartments.

UNDER DEVELOPMENT

HOCKLEY HOUSE — *opening Spring 2021*

Hockley House, the fourth building to open under the RHFP, is a six-storey rental building in downtown Langford comprised of studios and 1 and 2 bedroom apartments. The property includes 12 accessible units and will be managed by the CRHC.

CALEDONIA — *under development*

A redevelopment in Fernwood that is proposed to create 158 new affordable rental housing units within 2 apartments and 3 townhouse buildings.

MICHIGAN SQUARE — *under development*

A redevelopment in James Bay under the RHFP that will provide a mix of rental options in 2 four-storey apartment buildings with 97 new mixed-market units ranging in size from studio to 3 bedrooms.

DRAKE ROAD — *under development*

An affordable housing project on Salt Spring Island with potential for 80 new housing units.

We envision that residents have access to affordable housing that enhances community wellbeing.

Regional Housing First Program (RHFP)

The RHFP is an equal partnership agreement between the CRD, the Government of BC through BC Housing and the Government of Canada through the Canada Mortgage and Housing Corporation (CMHC).

In 2020, the partners reached agreement to expand the program by contributing additional matching grants of $10 million each, for a total contribution of $120 million to this $600 million initiative. This will ensure the program reaches its target number of homes for people experiencing chronic homelessness who are ready to live independently with supports.

The RHFP currently includes nine projects, which have created, or are in the process of creating, 960 units of affordable housing. In December, the program opened West Park in View Royal and Spencer Close in Langford, providing 282 new affordable rental homes on the Westshore for families and single people with mixed incomes. Hockley House opens in Spring 2021 with an additional 120 units of mixed-market housing in downtown Langford.

Laura Reid and family

Tenant Profile Laura Reid

If you had told Laura Reid 10 years ago that one day she would live in social housing and later become co-chair of the Tenant Advisory Committee (TAC) of the organization she rented from, she probably would not have believed you.

Up until 2012, Laura had been a homeowner, never needing to work outside of the home and was content raising her two adopted children, both with levels of learning challenges. But a sudden break-up left them with nothing and on the verge of becoming homeless.

"I had no income, we had nowhere to live - and there certainly wasn't anywhere to live that was 'affordable,'" she recalls.

Laura made calls to her local MLA and eventually filled out an application with BC Housing. The CRHC rented the family a three bedroom townhouse and the safety, security and confidence that came along with their affordable shelter is something Laura says simply can't be understated.

"My mandate was to find a decent, safe, stable place...a home that no one could take away from my children, where they would be secure," she says. "When you are not under the whim of a landlord who is going to raise your rent beyond what you can afford, or kick you out on the street, it allows you to build the kinds of emotional and physical supports your family needs - there's just nothing more important than stable housing."

Her children Michael, 19, and Emma, 18, have benefitted from this stability, and Laura says she never thought living in social housing would have such a profound effect on all of their lives, even leading her to seek out the co-chair role on the TAC.

"Social housing has allowed me to re-invent myself, twice, allowing me to go back to school and provide for my family," she says. "Now I can bring that experience to the TAC along with the many different groups of people who know no one will take their home away and make them homeless."

Tenant Advisory Committee

The Tenant Advisory Committee (TAC) reports through the CRD's Hospitals and Housing Committee to advise the CRHC Board of Directors on tenant policies and programs and may include up to eight tenant representatives. The purpose of the TAC is to promote effective communication, engagement and collaboration between the CRHC and its tenants, and provide information and advice regarding tenant-related policies and programs to support healthier and more livable communities.

REPORT TO THE CAPITAL REGIONAL DISTRICT BOARD
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **Bylaw No. 4372 Development Cost Charges Transfer to Capital Reserve**

ISSUE SUMMARY

To abandon Bylaw No. 4372 and enact the repayment of debt through a transfer of funds from Development Cost Charges (DCC) Reserve to Capital Reserve for the Saanich Peninsula Wastewater Service through a Board motion.

BACKGROUND

On November 18, 2020, the Board approved the recommended "Saanich Peninsula Water and Wastewater Development Cost Charges Transfer to Capital Reserve Bylaw No. 1, 2020". On seeking Ministry approval for the bylaw, staff were notified that the transferring of development cost charge funds by bylaw is meant for the permanent transfer and wind-up of DCC reserve funds only, and not for transfers to fulfill the purpose of the DCC fund.

This transfer of funds from the DCC Reserve to the Capital Reserve for the Saanich Peninsula Wastewater service is required to repay additional capacity already built into the wastewater facility which is the basis of the DCC program. The total value of the capital cost to be recovered by way of DCC program is $9.205 million. The transfer of $1.7 million contemplated in Bylaw No. 4372 constitutes only a partial repayment of the additional capacity at this time. The transfer amount was included in the financial plan and is therefore authorized.

At the October 15, 2020, meeting, the Saanich Peninsula Wastewater Commission made a recommendation to the Board "that Bylaw No. 4372 cited as 'Saanich Peninsula Water and Wastewater Development Cost Charges Transfer to Capital Reserve Bylaw No. 1, 2020' be introduced and read a first, second, and a third time". As there are no changes to the Commission's recommendation, the transfer of funds can be completed by abandoning the bylaw and passing a Board motion.

ALTERNATIVES

Alternative 1

1. That Bylaw No. 4372, cited as "Saanich Peninsula Water and Wastewater Development Cost Charges Transfer to Capital Reserve Bylaw No. 1, 2020", be abandoned; and
2. That the transfer of development cost charge funds be approved in the amount of $1.7 million from the Saanich Peninsula Water and Wastewater Development Cost Charge fund, under Bylaw No. 3208, to the Saanich Peninsula Wastewater Capital Reserve Fund, established under Bylaw No. 2760, to be used to fund capital improvements and capital debt servicing for projects covered by the DCC program.

Alternative 2

1. That abandonment of Bylaw No. 4372 be deferred to a future meeting pending receipt of further information.

IMPLICATIONS

Transferring the available balance from the DCC Reserve to the Capital Reserve allows for the use of funds as planned in the 2021 five-year Capital Plan. Future transfers are anticipated with continued collections of DCC and ongoing capital requirements in delivering wastewater treatment in the Saanich Peninsula.

CONCLUSION

Staff are seeking to abandon Bylaw No. 4372 and enact the repayment of debt through a transfer of funds from DCC Reserve to Capital Reserve for the Saanich Peninsula Wastewater Service through a Board motion.

RECOMMENDATION

1. That Bylaw No. 4372 cited as "Saanich Peninsula Water and Wastewater Development Cost Charges Transfer to Capital Reserve Bylaw No. 1, 2020" be abandoned.
2. That the transfer of development cost charge funds be approved in the amount of $1.7 million from the Saanich Peninsula Water and Wastewater Development Cost Charge fund, under Bylaw No. 3208, to the Saanich Peninsula Wastewater Capital Reserve Fund, established under Bylaw No. 2760, to be used to fund capital improvements and capital debt servicing for projects covered by the DCC program.

SPWWC 20-04

REPORT TO SAANICH PENINSULA WASTEWATER COMMISSION
MEETING OF THURSDAY, OCTOBER 15, 2020

SUBJECT **Bylaw No. 4372, Transfer of Funds from Development Cost Charges Reserve to Related Capital Reserve**

ISSUE SUMMARY

A bylaw is required to transfer funds from the Saanich Peninsula Wastewater Development Cost Charge (DCC) reserve to its related capital reserve fund.

BACKGROUND

The Capital Regional District (CRD) established a combined water and wastewater development cost charges program with the intent of funding growth and capacity related improvements to the CRD Saanich Peninsula water and wastewater systems, initially under, now-repealed, *Bylaw No. 2569, Capital Regional District Sewage Facilities Development Cost Charge Bylaw No 1, 1998* and its current successor, *Bylaw No. 3208, Saanich Peninsula Water and Wastewater Development Cost Charges Bylaw No. 1, 2004*.

The current Saanich Peninsula Wastewater (SPWW) system was constructed in 1999 and included spare capacity to accommodate future growth. The justification for establishment of the wastewater DCC program was to collect funds from development to pay for the additional capacity and capital cost that was built into the SPWW system. The total value of the additional capacity and capital cost is $9.205 million.

In July 2018, the Saanich Peninsula Wastewater Commission received a DCC Program Review Report prepared by Kerr Wood Leidal Associates (KWL) which applied updated growth projections to 2037. The result of the report was a DCC rate update, and a DCC capital program covering 2018 to 2037. This capital program totals $0.73 million and includes a strategic plan update in 2019, a replacement of the Turgoose Pump Station in 2019, and a subsequent DCC update in 2023. KWL recommended that remaining funds left over in the DCC reserve fund be transferred into the SPWW capital reserve fund to pay for the additional capacity and capital cost built into the system.

The SPWWC service has completed its strategic plan update and is finalizing the Turgoose Pump Station replacement project. Combined, these project make up $0.68 million of the DCC eligible project to 2037. The DCC reserve fund opening balance in 2020 is $1.5 million. The only project left in the DCC capital program is the DCC update in 2023 estimated at $50,000. Following the recommendations in the 2018 DCC program review and, consistent with the objective of the DCC initiation, the attached DCC's transfer bylaw (Appendix A) will establish the authority to transfer funds and requires approval by the Inspector of Municipalities.

IMPLICATIONS

Financial Implications

As detailed in the fund continuity schedule below, staff recommend an initial transfer of $1.7 million to be completed in 2020. Until such time as the capital cost of the additional capacity is covered by DCC fund transfers to capital reserve, staff will put forward additional bylaws to transfer funds as the DCC capital program allows. Without the recommended transfer, the service would have to borrow funds to maintain current capital project spending.

Figure 1: Development Cost Charges Reserve Continuity

DCC Portion	Estimate	Budget				
Fund: 1012 Fund Center: 101356	2020	2021	2022	2023	2024	2025
Beginning Balance	1,534,961	35,004	205,004	375,004	545,004	65,004
Planned Capital Expenditure (Based on Capital Plan)	-	-	-	-	(50,000)	-
Transfer OUT - To Capital Reserve	(1,700,000)	-	-	-	(600,000)	(200,000)
Transfer IN - DCC Funding	170,000	170,000	170,000	170,000	170,000	170,000
Interest Income	30,043	-	-	-	-	-
Ending Balance $	**35,004**	**205,004**	**375,004**	**545,004**	**65,004**	**35,004**

RECOMMENDATION

That the Saanich Peninsula Wastewater Commission recommends to the Capital Regional District Board:

1. That Bylaw No. 4372 cited as "Saanich Peninsula Water and Wastewater Development Cost Charges Transfer to Capital Reserve Bylaw No. 1, 2020" be introduced and read a first, second, and a third time.

2. That Bylaw No. 4372 be referred to the Inspector of Municipalities for review as required by the *Local Government Act* and *Community Charter*.

CAPITAL REGIONAL DISTRICT

BYLAW NO. 4372

****

A BYLAW TO AUTHORIZE FUND TRANSFERS FROM SAANICH PENISULA WASTEWATER DEVELOPMENT COST CHARGE RESERVE TO THE SAANICH PENISULA WASTEWATER CAPITAL RESERVE

****

WHEREAS:

A. By Supplementary Letters Patent, Division VII dated December 28, 1967, the Capital Regional District was granted the function of acquisition, design, construction, operation, maintenance, renewal and administration of trunk sewers and sewage disposal facilities within all member municipalities of the Regional District, except the then electoral areas of Sooke and Outer Gulf Islands;

B. Under Bylaw No. 2569, Capital Regional District Sewage Facilities Development Cost Charge Bylaw No 1, 1998, and its successor Bylaw No. 3208, Saanich Peninsula Water and Wastewater Development Cost Charges Bylaw No. 1, 2004, the Regional District imposed development cost charges for the Saanich Peninsula Wastewater System, and under Bylaw No. 2760, Saanich Peninsula Wastewater System Capital Reserve Fund Bylaw No. 1, 2000, established a capital reserve fund to hold the development cost charge monies for wastewater system upgrades and other related capital expenses;

C. Pursuant to sections 377 and 559 of the *Local Government Act* and section 189 of the *Community Charter*, the Regional District desires to transfer monies to the capital reserve fund.

NOW THEREFORE, the Board of the Capital Regional District enacts as follows:

1. One million seven hundred thousand dollars ($1.7 million) shall be transferred from the Saanich Peninsula Wastewater System Development Cost Charge reserve fund established by Saanich Peninsula Water and Wastewater Development Cost Charges Bylaw No. 1, 2004 (Bylaw No. 3208) to the Saanich Peninsula Wastewater System Capital reserve fund established by Saanich Peninsula Wastewater System Capital Reserve Fund Bylaw No. 1, 2000 (Bylaw No. 2760);

2. This bylaw may be cited as the “Saanich Peninsula Water and Wastewater Development Cost Charges Transfer to Capital Reserve Bylaw No. 1, 2020”.

EEP 21-18

REPORT TO CAPITAL REGIONAL DISTRICT BOARD
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **CRD Bylaw No. 4397 to Amend Ticket Information Authorization Bylaw No. 1857 – Saanich Peninsula Stormwater Source Control Bylaw**

ISSUE SUMMARY

The Capital Regional District (CRD) Ticket Information Authorization Bylaw requires an amendment to allow for the offences and fines related to the Saanich Peninsula Stormwater Source Control Bylaw.

BACKGROUND

The CRD Board adopted Bylaw No. 4168, "A Bylaw to Regulate Stormwater Discharges to the Municipal Drainage System of the District of Central Saanich, District of North Saanich and the Town of Sidney" (Saanich Peninsula Stormwater Source Control Bylaw) on July 14, 2017. The Board also adopted Bylaw No. 4228, which added the ticketing provisions for the Saanich Peninsula Stormwater Source Control Bylaw to Bylaw No. 1857, "Capital Regional District Ticket Information Authorization Bylaw, 1990", on February 13, 2019.

While staff work proactively and cooperatively with businesses and residents to obtain voluntary compliance with the bylaw, under some circumstances offences and fines are required to ensure bylaw compliance. Bylaw No. 1857, "Capital Regional District Ticket Information Authorization Bylaw, 1990", defines offences and fines and provides for the enforcement of bylaws through ticketing by designated bylaw enforcement officers.

Bylaw No. 4228, "Capital Regional District Ticket Information Authorization Bylaw, 1990, Amendment Bylaw No. 64, 2019" contained errors related to the section numbers in Bylaw No. 1857 and also lacked an entry that referenced Designated Bylaw Enforcement Officers. Bylaw No. 4397 (Appendix A) corrects these errors and omissions. There are no changes to the offences and fines from Bylaw No. 4228.

ALTERNATIVES

Alternative 1

1. That Bylaw No. 4397, "Capital Regional District Ticket Information Authorization Bylaw, 1990, Amendment Bylaw No. 69, 2021" be introduced, and read a first, second and third time; and
2. That Bylaw No. 4397 be adopted.

Alternative 2

That Bylaw No. 4397 be referred back to staff for further review.

IMPLICATIONS

Service Delivery Implications

The amendment to the CRD Municipal Ticketing Information Bylaw will allow CRD Bylaw Enforcement Officers, Stormwater Control Officers and the Stormwater Control Manager to enforce Bylaw No. 4168 when proactive and cooperative measures to achieve voluntary bylaw compliance are not sufficient.

Environmental Implications

Prevention of the release of contamination and enforcement of the Saanich Peninsula Stormwater Source Control Bylaw are tools for the protection of watercourses and the marine environment from contamination carried by stormwater from residential, industrial, commercial and institutional properties on the Saanich Peninsula.

CONCLUSION

The Capital Regional District Ticket Information Authorization Bylaw requires an amendment to allow for the offences and fines related to the Saanich Peninsula Stormwater Source Control Bylaw. While staff will continue to work proactively and collaboratively with stormwater dischargers on the Saanich Peninsula to obtain voluntary compliance with the bylaw, this change provides for the bylaw enforcement necessary to ensure protection of watercourses and the marine environment from contamination carried by stormwater from commercial, industrial, institutional and residential properties.

RECOMMENDATION

1. That Bylaw No. 4397, "Capital Regional District Ticket Information Authorization Bylaw, 1990, Amendment Bylaw No. 69, 2021" be introduced, and read a first, second and third time; and
2. That Bylaw No. 4397 be adopted.

A BYLAW TO AMEND BYLAW NO. 1857, CAPITAL REGIONAL DISTRICT TICKET INFORMATION AUTHORIZATION BYLAW, 1990

****

The Board of the Capital Regional District in open meeting assembled enacts as follows:

1. Bylaw No. 4228, Capital Regional District Ticket Information Authorization Bylaw, 1990, Amendment Bylaw No. 64, 2019, is hereby repealed.

2. Bylaw No. 1857, Capital Regional District Ticket Information Authorization Bylaw, 1990, is amended as follows:

   (a) Sections 3 and 4 of the Capital Regional District Ticket Information Authorization Bylaw, 1990 are amended by deleting the words “Schedules 2 to 37” wherever they appear and substituting “Schedules 2 to 39”.

   (b) Schedule “1” to Bylaw No. 1857 is amended by renumbering Section 38 as 37, and inserting Section 38 as follows:

“38.	Saanich Peninsula Stormwater Source Control Bylaw, No. 1, 2017	Bylaw Enforcement Officer Municipal Stormwater Control Officer Stormwater Control Manager”

   (c) by adding Schedule “39” attached as Appendix 1 to this Bylaw.

3. This Bylaw may be cited for all purposes as "Capital Regional District Ticket Information Authorization Bylaw 1990, Amendment Bylaw No. 69, 2021".

99. Fail to retain records for inspection by manager or officer	Sch. D, 5.3	$250

Making a difference...together

REPORT TO CAPITAL REGIONAL DISTRICT BOARD
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **AAP for Bylaws 4393 and 4394 – Florence Lake Improvement District Conversion to CRD Service**

ISSUE SUMMARY

To conduct an Alternate Approval Process for Bylaw No. 4393 and 4394 by confirming the deadline to receive elector responses, establish the total number of electors, and approve the Notice of Alternative Approval Process and the Electoral Response Form.

BACKGROUND

At its meeting held December 9, 2020, the CRD Board gave three readings to the following bylaws attached as Appendix A:

- Bylaw No. 4393, "Florence Lake Water System Local Service Establishment Bylaw No. 1, 2020" to establish a water system local service in the area formerly serviced by Florence Lake Improvement District; and
- Bylaw No. 4394, "Florence Lake Water System Local Service Loan Authorization Bylaw No. 1, 2020" to authorize the borrowing of three hundred thousand dollars ($300,000) for the Florence Lake water system upgrade.

The bylaws obtained Inspector of Municipalities approval on December 23, 2020. The next step prior to adopting the bylaw is to obtain elector assent. The CRD Board directed elector assent be obtained via alternate approval process (AAP) for the electors within the Florence Lake Improvement District. The Florence Lake Improvement District is comprised of properties with an odd-numbered street address ranging between 2601 and 2649 Savory Road within the municipal boundary of Langford. The boundaries of the service area are shown in Schedule "A" to Bylaw 4393 (Appendix A).

In order to conduct the AAP, the attached Notice (Appendix B) and Elector Response Form (Appendix C) have been prepared in accordance with the applicable sections of the *Local Government Act* and the *Community Charter*. With an AAP, the Board may proceed with adopting the bylaw unless more than 10% of electors indicate that the Board must obtain the assent of the electors by way of assent voting (referendum). The proposed deadline to receive elector responses is July 5, 2021.

The total number of registered resident electors and registered non-resident property electors is determined to be 32, of which 10% is 4 electors.

ALTERNATIVES

Alternative 1

1) That in accordance with section 86(3) of the *Community Charter*, the date of July 5, 2021 be confirmed as the deadline by which electoral response, under the Alternate Approval

process for CRD Bylaw No. 4393 and 4394, must be submitted to the Capital Regional District by qualified electors within the Florence Lake Improvement District;
2) That the attached Notice of Alternative Approval Process (Appendix B) and the Elector Response Form (Appendix C) be approved; and
3) That the total number of registered electors within the service area is 32 and that 10% of that number is 4 electors.

Alternative 2
That this report be referred back to staff for additional information.

CONCLUSION

The CRD Board has previously approved obtaining elector approval for an Alternative Approval Process for Bylaw No. 4393 and 4394 for converting the Florence Lake Improvement District to a CRD service. To conduct the Alternative Approval Process, the Board has to confirm the deadline to receive elector responses, establish the number of electors, and approve the Notice of Alternative Approval Process and the Elector Response Form.

RECOMMENDATION

1) That in accordance with section 86(3) of the *Community Charter*, the date of July 5, 2021 be confirmed as the deadline by which electoral response, under the Alternate Approval process for CRD Bylaw No. 4393 and 4394, must be submitted to the Capital Regional District by qualified electors within the Florence Lake Improvement District;
2) That the attached Notice of Alternative Approval Process (Appendix B) and the Elector Response Form (Appendix C) be approved; and
3) That the total number of registered electors within the service area is 32 and that 10% of that number is 4 electors.

CAPITAL REGIONAL DISTRICT
BYLAW NO. 4393

****

A BYLAW TO ESTABLISH THE FLORENCE LAKE WATER SYSTEM LOCAL SERVICE AREA

****

WHEREAS:

A. The Capital Regional District may, under Section 263(1)(a) of the *Local Government Act*, establish and provide any service that the Board considers necessary or desirable for all or part of the Capital Regional District;

B. The Board of the Capital Regional District wishes to establish a water distribution local service of the regional district (the "Service"), in the area formerly serviced by the Florence Lake Improvement District, in order to fund upgrades to the water system, while the former water supply service provided by the Florence Lake Improvement District will be taken on by the Juan De Fuca Water Distribution Service and Commission, respectively;

C. Participating area approval is required and assent of the electors has been obtained pursuant to Section 342(2)(b) of the *Local Government Act*; and

D. The approval of the Inspector of Municipalities has been obtained under Section 343(1)(a) of the *Local Government Act*.

NOW THEREFORE the Board of the Capital Regional District in open meeting assembled enacts as follows:

Service

1. The Service established by this Bylaw is for the purposes of upgrading the existing Florence Lake Water System, the operation of a water utility, and assuming responsibility for the administration, operation, and maintenance of the infrastructure providing water to the residences of Savory Road, Langford BC, in the area formerly known as the Florence Lake Improvement District.

Boundaries

2. The boundaries of the Service Area are shown in heavy outline on the Plan attached as Schedule "A" to this Bylaw, which are within the City of Langford.

Participating Area

3. Only the City of Langford includes a participating area for this service.

Cost Recovery

4. As provided in Section 378 of the *Local Government Act*, the annual costs of providing the Service may be recovered by one or more of the following:

a) parcel taxes imposed in accordance with Division 2 of Part 11 of the *Local Government Act;*

b) fees and charges imposed under Section 397 of the *Local Government Act*;

c) revenues raised by other means authorized under the *Local Government Act* or another Act;

d) revenues received by agreement, enterprise, gift, grant or otherwise.

Maximum Requisition

5. In accordance with Section 339(1)(e) of the *Local Government Act*, the maximum amount that may be requisitioned annually for the cost of the Service is the greater of:

a) Seventy five thousand ($75,000); or

b) An amount equal to the amount that could be raised by a property value tax rate of $6.3298 per One Thousand Dollars ($1,000) that, when applied to the net taxable value of land and improvements in the Service Area, will yield the maximum amount that may be requisitioned for the Service.

Citation

6. This Bylaw may be cited as the "Florence Lake Water System Local Service Establishment Bylaw No. 1, 2020".

CAPITAL REGIONAL DISTRICT

BYLAW NO. 4394

****

A BYLAW TO AUTHORIZE THE BORROWING OF THREE HUNDRED THOUSAND DOLLARS ($300,000) FOR THE FLORENCE LAKE WATER SYSTEM UPGRADE

****

WHEREAS:

A. Under Bylaw No. 4393, Florence Lake Water System Local Service Establishment Bylaw No. 1, 2020, the Capital Regional District established a local service for the payment of upgrades to the former Florence Lake Improvement District water distribution service;

B. The Board of the Capital Regional District wishes to upgrade the existing Florence Lake Water System in connection with the Service (the "**Project**") to facilitate integration with the Juan de Fuca Water Distribution Service;

C. The estimated cost of the Project, including expenses incidental thereto to be funded by debt servicing, is the sum of Three Hundred Thousand Dollars ($300,000), which is the amount of debt intended to be authorized by this bylaw;

D. Pursuant to Section 342, 348 and 351 of the *Local Government Act*, participating area approval is required and shall be obtained by assent of the electors under Section 342(2)(b) of the *Local Government Act*;

E. The approval of the Inspector of Municipalities is required under Section 403 of the *Local Government Act*; and

F. It is proposed that the financing of the Project is to be undertaken by the Municipal Finance Authority of British Columbia pursuant to proposed agreements between that Authority and the Capital Regional District.

NOW THEREFORE the Board of the Capital Regional District in open meeting assembled, enacts as follows:

1. The Board is hereby empowered and authorized to undertake and carry out or cause to be carried out the planning, study, design and construction of works for the provision of the facilities and equipment for the purpose of the Project in connection with the Service and to do all things necessary in connection with the Project and without limiting the generality of the foregoing:

   (a) to borrow upon the credit of the Capital Regional District a sum not exceeding Three Hundred Thousand Dollars ($300,000);

   (b) to acquire all such real property, easements, rights-of-way, leases, licenses, rights or authorities as may be requisite or desirable for or in connection with the Project.

2. The maximum term for which debentures may be issued to secure the debt intended to be created by this bylaw is fifteen years.

3. This Bylaw may be cited as the “Florence Lake Water System Local Service Loan Authorization Bylaw No. 1, 2020”.

NOTICE TO ELECTORS
WITHIN THE FLORENCE LAKE IMPROVEMENT DISTRICT

Alternative Approval Process for Bylaws No. 4393 ad 4394
Florence Lake Water System Local Service Area

Notice is hereby given that the Board of Directors of the Capital Regional District ("CRD") proposes to adopt:

- Bylaw No. 4393, “Florence Lake Water System Local Service Establishment Bylaw No. 1, 2020” to establish a water system local service in the area formerly serviced by Florence Lake Improvement District; and
- Bylaw No. 4394, “Florence Lake Water System Local Service Loan Authorization Bylaw No. 1, 2020” to authorize the borrowing of three hundred thousand dollars ($300,000) for the Florence Lake water system upgrade.

The intent of Bylaw No. 4393 is to establish a water system local service in the area formerly serviced by Florence Lake Improvement District and requisition annually for the cost of the service. Adoption of Bylaw No. 4394 is also required to authorize the borrowing of $300,000 over 15 years to fund upgrades to the Florence Lake water system.

Take further notice that the CRD may proceed with Bylaws No. 4393 and 4394 unless at least 4 electors within the Florence Lake Improvement District area indicate, by signing the elector response form, that the Board must obtain the assent of the electors by way of an assent vote (referendum) before proceeding to adopt Bylaws No. 4393 and 4394.

The elector response must be in the form as established by the CRD and is available from the CRD on request or from the CRD website. The only persons entitled to sign elector response forms are electors of the area to which the alternative approval process opportunity applies. The Alternative Approval Process opportunity applies to electors within the Florence Lake Improvement District, comprised of properties with an odd-numbered street address ranging between 2601 and 2649 Savory Road, in the City of Langford, BC in the Capital Regional District.

The deadline for delivering the original signed elector response forms, in relation to Bylaws No. 4393 and 4394, to the CRD is **4:00 pm on Monday, July 5, 2021**. Forms must be received by the deadline to be counted.

The CRD has determined that the total number of electors within the service area is 32 and that 10% of that number or 4 electors must submit elector response forms to prevent the CRD from enacting Bylaws No. 4393 and 4394 without the assent of the electors by referendum.

Questions regarding the proposed Florence Lake Water System Local Service Area may be directed to Joseph Marr, Manager, Water Distribution Engineering and Planning, 479 Island Hwy, Victoria, BC, 250.474.9656, jmarr@crd.bc.ca, from 8:30 am to 4:30 pm, Monday to Friday (excluding statutory holidays) from the date of this notice until July 5, 2021.

Qualifications for Resident and Non-Resident Property Electors

Resident Elector*:* You are entitled to submit an elector response form as a Resident Elector if you are 18 years or older on the date of submission of the elector response form, are a Canadian citizen, have

resided in British Columbia for 6 months and at a property located within the Florence Lake Improvement District in Langford, BC for at least 30 days prior to signing the elector response form.

***Non-Resident Property Elector**:* You may submit an elector response form as a Non-Resident Property Elector if you are 18 years or older on the date of submission of the elector response form, are a Canadian citizen, have resided in British Columbia for 6 months, have owned and held registered title to property within the Florence Lake Improvement District in Langford, BC for 30 days and do NOT qualify as a Resident Elector. If there is more than one registered owner of the property (either as joint tenants or tenants in common) only one individual may, with the written consent of the majority, submit an elector response form.

To obtain an elector response form, or for questions about the alternative approval process, contact CRD Legislative Services, PO Box 1000, 625 Fisgard Street, 5th Floor, Victoria, BC V8W 2S6, email legserv@crd.bc.ca, telephone 250.360.3127 or toll free 1.800.663.4425 local 3127 from 8:30 am to 4:30 pm, Monday to Friday (excluding statutory holidays).

A copy of the elector response form may be downloaded from: www.crd.bc.ca/florencelakeAAP

Elector response forms, a copy of Bylaws No. 4393 and 4394, and a copy of this Notice may be inspected during regular office hours, 8:30 am to 4:30 pm, Monday to Friday (excluding statutory holidays) from the date of this notice until July 5, 2021 at the following CRD locations:

- CRD headquarters, 625 Fisgard Street, Victoria
- on the CRD website: www.crd.bc.ca/florencelakeAAP

Given under my hand at Victoria, BC this th day of May, 2021

ELECTOR RESPONSE FORM

Appendix C

Alternative Approval Process for Bylaws No. 4393 and 4394 – to establish a water system local service and authorize borrowing in the area formerly serviced by Florence Lake Improvement District

By completing this elector response form I, the undersigned elector, residing or owning real property within the Florence Lake Improvement District, as defined below, of the Capital Regional District ("CRD"), do hereby present my name on this elector response form for purposes of **OPPOSING** the CRD adopting Bylaw No. 4393, to establish a water system local service in the area formerly serviced by Florence Lake Improvement District and requisition annually for the cost of the service, and Bylaw No. 4394 to authorize the borrowing of $300,000 over 15 years to fund upgrades to the Florence Lake water system, unless a vote is held.

I acknowledge that I am a person who would otherwise be entitled to register and vote in respect of this matter, had the assent of the electors by voting been required. I hereby certify that:

1. I am 18 years of age or older;
2. I am a Canadian citizen;
3. I have lived in British Columbia for at least 6 months immediately before signing this elector response form;
4. I have lived in the Florence Lake Improvement District as defined below for at least 30 days before signing this elector response form;
5. In the case of a Non-Resident Property Elector:
   a) I am not entitled to vote as a Resident Elector in the CRD for purposes of this matter;
   b) I have been a registered owner of real property in the Florence Lake Improvement District as defined below for at least 30 days before signing this elector response form;
   c) I acknowledge that I may sign this elector response form on behalf of only one property that I own in the Regional District;
   d) If there is more than one individual who is the registered owner of the property, only one of those individuals may sign this elector response form in relation to the property, assuming the Non-Resident Property Elector has the written consent of the number of individuals who, together with the person signing this elector response form constitutes a majority of the registered owners.
   e) The only persons who are registered owners of the real property are individuals who do not hold the property in trust for a corporation or another trust.
6. I am not disqualified from voting under the *Local Government Act* or any other enactment or otherwise disqualified by law from voting.

The proposed local service area is comprised of the Florence Lake Improvement District, consisting of properties with an odd-numbered street address ranging between 2601 and 2649 Savory Road, in the City of Langford, BC in the Capital Regional District.

I understand and acknowledge that I may not sign an elector response form against Bylaws No. 4393 and 4394 more than once and may not withdraw my name from an elector response form after **July 5, 2021.** I understand and acknowledge that this elector response form must be received by the CRD no later than **4:00 pm on July 5, 2021.** In an effort to obtain signatures with respect to this matter, I declare that I have not knowingly made any false or misleading statements to another person with respect to this elector response form, action or other matter to which this elector response form relates.

Signed original elector response forms must be returned to the CRD, from 8:30 am to 4:30 pm, Monday to Friday (excluding statutory holidays), on or before 4:00 pm on Monday, July 5, 2021 at the following CRD office location: Legislative Services, 625 Fisgard Street, 5th Floor, PO Box 1000, Victoria, BC, V8W 2S6.

FULL NAME OF ELECTOR (please print):	
FULL RESIDENTIAL ADDRESS OF ELECTOR Street Address including Town/City **(please print):**	
FOR NON-RESDIENT PROPERTY ELECTOR Address of Property in CRD service area **(please print):**	
SIGNATURE OF ELECTOR:	

Section 86(7) of the Community Charter requires the elector's full name and residential address or the address of the property in relation to which the person is entitled to register as a Non-Resident Property Elector in order for this response form to be counted.

REPORT TO CAPITAL REGIONAL DISTRICT BOARD
MEETING OF WEDNESDAY, MAY 12, 2021

SUBJECT **City of Langford Request to Withdraw; Bylaw No. 3854**

ISSUE SUMMARY

The City of Langford has requested to withdraw from participation in Bylaw No. 3854 which authorizes the emergency communication dispatch services specific to fire dispatch services contracted by the Capital Regional District (CRD).

BACKGROUND

Bylaw No. 3854, "Emergency Communication Dispatch Service Establishment Bylaw No. 1, 2012", was first established in December 2012 to guide the collaboration of City of Langford, the District of Highlands, the District of Metchosin, the District of Sooke, and the Directors of the Electoral Areas of Juan de Fuca, Salt Spring Island, and the Southern Gulf Islands for the delivery of fire dispatch services for the fire services of those areas.

On April 22, 2021, the City of Langford sent a letter to the CRD requesting a Service Review of the Regional Service established pursuant to Bylaw No. 3854. An attached letter to the Bylaw No. 3854 participants indicated that the City of Langford wished to withdraw from the service pursuant to section 349 of the *Local Government Act* as of December 31, 2021. These letters are attached as Appendix A.

Service withdrawal either requires two-thirds consent of the other service participants to amend the service establishment bylaw to let a participant out of a service, along with the approval of the Inspector of Municipalities; or the undertaking of a formal service review and withdrawal process. Clarification was sought from the City of Langford as to their intent and staff were informed that Langford wished to withdraw from the service and, if prevented from doing so, would then pursue the Service Review of the Regional Service consistent with Bylaw No. 3854.

For the City of Langford to withdraw from the service as a participant requires support from the participant councils in the form of a motion in conjunction with support from the CRD Board, a written notice to the Inspector of Municipalities seeking approval for the City's withdrawal, and that Bylaw No. 3854 be amended to reflect the departure of the participant.

In order to facilitate the withdrawal process, the CRD Board will have to amend the current Bylaw to reflect the change in participants (Appendix B).

ALTERNATIVES

Alternative 1

1. That Bylaw No. 4426, "Emergency Communication Dispatch Service Establishment Bylaw No. 1, 2012, Amendment Bylaw No. 1, 2021", be introduced and read a first, second, and third time; and
2. That elector approval for Bylaw No. 4426 be obtained via municipal consent and electoral area director consent, as applicable, and if successful, referred to the Inspector of Municipalities for approval.

Alternative 2

That the City of Langford Request to Withdraw from Bylaw No. 3854: A Bylaw to Establish an Emergency Communication Dispatch Service report be referred back to staff for additional information based on Capital Regional District Board direction.

IMPLICATIONS

Financial Implications

The CRD is required to follow approved procurement policies to contract a provider to deliver fire dispatch services to the participants of Bylaw No.3854. The CRD is currently undertaking a Request for Proposals (RFP) to procure Fire Dispatch services for the Bylaw participants at the end of the current contract which expires at the end of 2021. Based on a high level assessment of potential fire dispatch providers, it is expected that a new contractor can deliver Next Generation 911 (NG911) and National Fire Protection Association (NFPA) compliant fire dispatch services at half the cost of the present model and the departure of the City of Langford from the Bylaw will not negatively impact the financial health of the remaining participants.

Service Delivery Implications

The City of Langford currently provides Fire Dispatch services for the Bylaw participants under contract which expires on December 31, 2021. The City of Langford's departure from the Bylaw will have no negative impact on the delivery of fire dispatch services to the remaining participants as they will be transitioning to the successful fire dispatch contractor that will be determined through the RFP process.

Legal Implications

A service establishing bylaw may be amended by two-thirds consent of the participants and approval of the Inspector of Municipalities. Consent for a municipality may be by municipal council approval, alternative approval process, or referendum; consent for an electoral area may be by Electoral Area Director consent on behalf, alternative approval process, or referendum. The most appropriate method in this case is consent on behalf by municipal councils and electoral area directors. Any other method would increase costs and complexity.

CONCLUSION

The City of Langford has requested to withdraw from participation in Bylaw No. 3854 as of December 31, 2021. This withdrawal will not produce a negative impact on the remaining participants from a financial or service delivery perspective.

RECOMMENDATION

1. That Bylaw No. 4426, "Emergency Communication Dispatch Service Establishment Bylaw No. 1, 2012, Amendment Bylaw No. 1, 2021", be introduced and read a first, second, and third time; and
2. That elector approval for Bylaw No. 4426 be obtained via municipal consent and electoral area director consent, as applicable, and if successful, referred to the Inspector of Municipalities for approval.

To: The Board of Directors of the Capital Regional District

Re: **Service Review of the Regional Service established pursuant to CRD Bylaw 3854 "Emergency Communication Dispatch Service Establishment Bylaw No. 1, 2012".**

The City of Langford hereby provides formal notice of its request for a service review of the CRD emergency communication dispatch service of which the City of Langford is a participating area. This service was previously provided pursuant to a contract for services. In 2012, the service was established to replace those contracted services.

Dispatch services are currently provided by the City of Langford Fire Dispatch under a services agreement as provided for in the bylaw. Effective December 31, 2021, the services agreement will expire and is not being renewed. This has provided Langford with the opportunity to review its options with respect to the regional service, the City's changing needs and whether or not continuing in the service is in the best interests of the City's constituents. It also provides the other participating areas the opportunity to reevaluate their dispatch needs to determine if remaining in the service is the right choice or if they would be better positioned to enter into service agreements directly with a dispatch provider.

The City of Langford works closely with its neighbouring municipalities of Colwood, View Royal and Esquimalt in delivering the highest level of support and assistance with respect to fire and rescue operations. We share mutual and automatic aid agreements, including through sharing specialized expertise between the departments. As Langford and these other West Shore communities continue to grow rapidly, it becomes increasingly important to build and maintain interoperability and a collaborative relationship with these Fire Departments. As all three of these partner communities receive their dispatching services through an agreement with Surrey, the City of Langford is of the view that being a part of that same dispatch service may provide the most seamless and timely response between our departments. Currently we experience some delay as coordination of shared services is a manual rather than an automatic process, thereby potentially impacting life-safety in situations where every second counts.

Further, it is important to the City of Langford that the cost for all services should be the lowest possible while still receiving the highest level of service. If, as has been proposed, a new contract is awarded without going to a Request for Proposals, the City can never be certain that this objective has been

achieved. While we respect the desire for a local response service, it is our sincere belief that given the vast technology available today this is no longer the critical criteria that it may once have been (something that is demonstrated daily by other fire departments within the CRD boundaries).

With respect to the future plans for this service, the City of Langford has concerns with the lack of substantive communication and the intention to sole source a new provider. These factors will have a significant impact on the City of Langford.

As the largest participating area in this service, the City of Langford is most affected by any proposed changes. Moreover, Langford is the only urban fire department in the CRD that does not have the ability to independently select their own fire dispatch provider that best meets their needs. Therefore, we respectfully request that the CRD initiate a service review pursuant to section 357 of the *Local Government Act*. As required, notice will be provided concurrently to the remaining participating areas and to the Minister.

Sincerely,

Mayor Stewart Young

Re: Fire Dispatch Service

As you are aware, the CRD is currently providing Emergency Dispatch Communication Services to our communities pursuant to CRD Establishing Bylaw 3854. Prior to the establishment of the service area, Fire Dispatch was provided by the Langford Fire Department for decades through agreements. This service was initiated in 2012 in response to a desire for increased services from those provided under contract.

After the service was established, dispatch services continued to be provided out of the Langford Fire Hall by way of a service agreement between the CRD and the City of Langford, as contemplated in the bylaw. The service agreement is due to expire on December 31 of this year and is not going to be renewed, making this the ideal time for all of us to reevaluate whether the service is still the best option for us. Should the service be dissolved, each participating area would be in a position to negotiate, either individually or collectively, an agreement that meets their specific needs.

The City of Langford is focused on ensuring that any new service provider meets our needs from a cost perspective, but more importantly from an operational perspective. We have partnered with other fire departments in our area to share specialized services and believe it is critical that we are operating from the same dispatch platform to minimize response times, maximize utilization of manpower and equipment, and enhance fire-fighter safety. As such, we have sent the attached letter to the CRD Board requesting a service review of the regional service established pursuant to CRD Bylaw 3854 "Emergency Communication Dispatch Service Establishment Bylaw No. 1, 2012."

The City of Langford would prefer to forgo the service review and is seeking your support to amend the CRD Bylaw to permit Langford to withdraw from the service, as contemplated in section 349 of the *Local Government Act.* This would require the consent of 2/3 of the participating areas. Should you be willing to provide that consent now, we would proceed with the withdrawal from the service to be effective December 31, 2021. Further, should you also wish to withdraw from the service, the City of Langford would be prepared to support your Fire Department in issuing a Request for Proposals to find the most cost effective and operationally best fire dispatch provider for each of your communities.

City of Langford

Given the importance of issuing a Request for Proposals and selecting the best service provider in advance of the expiring of the existing contract on December 31, 2021, I respectfully request a response from your local area on this matter by May 21, 2021.

Sincerely,

Mayor Stewart Young

CAPITAL REGIONAL DISTRICT

BYLAW NO. 4426

****

A BYLAW TO AMEND THE PARTICIPANTS UNDER "EMERGENCY COMMUNICATION DISPATCH SERVICE ESTABLISHMENT BYLAW NO. 1, 2012" (BYLAW NO. 3854)

****

WHEREAS:

A. The Capital Regional District operates an emergency communication dispatch service for the areas of the City of Langford, the District of Highlands, the District of Metchosin, the District of Sooke, and the Salt Spring Island, Southern Gulf Islands, and the Juan de Fuca Electoral Areas;

B. The City of Langford no longer desires to be part of the service, with its last full day being December 31, 2021, and the participants may amend the service by two-thirds consent of the participants and approval of the Inspector of Municipalities;

NOW THEREFORE, the Capital Regional District Board in open meeting assembled enacts as follows:

1. Bylaw No. 3854 "Emergency Communication Dispatch Service Establishment Bylaw No. 1, 2012," is amended as follows, effective January 1, 2022:

   (a) In Section 2, Boundaries, by removing the "City of Langford";

   (b) In Section 3, Participating Area, by removing the "City of Langford";

2. This Bylaw may be cited for all purposes as "Emergency Communication Dispatch Service Establishment Bylaw No. 1, 2012, Amendment Bylaw No. 1, 2021".

ERM 21-13

REPORT TO ENVIRONMENTAL SERVICES COMMITTEE
MEETING OF WEDNESDAY, APRIL 21, 2021

SUBJECT **Finalizing the Solid Waste Management Plan**

ISSUE SUMMARY

To present the results of phase two consultation and the final draft Solid Waste Management Plan (SWMP), and to recommend next steps for adoption, regulatory approval and implementation.

BACKGROUND

The Capital Regional District (CRD) has completed the second phase of consultation as part of the multi-phase public engagement process to develop a new SWMP. The SWMP seeks to reduce how much material is sent to Hartland Landfill and guide how the region's waste is managed in a safe, secure and sustainable way now and in the future, with a focused planning horizon of 10-years. The SWMP is a "living document" that may be amended to reflect new considerations, technologies and issues as they arise. Development of a SWMP is a regulatory requirement under the Environmental Management Act.

Work on revising the SWMP was substantially initiated in 2011, put on hold in 2014 to investigate integrated resource management alternatives, and re-initiated in 2018. The CRD is now in phase four of the 4-step solid waste management planning process identified by the Province of BC.

Throughout the planning process, the Solid Waste Advisory Committee has provided feedback on the development of the draft SWMP, including the plan goals, targets and strategies which were endorsed by the Environmental Services Committee and CRD Board. Public engagement has been a key part of developing the plan, and staff have coordinated two rounds of public consultation. Results from this engagement have been incorporated into the final draft Plan (Appendix A), proposed plan revisions are summarized in Appendix B. If the final draft SWMP is approved by the CRD Board, it will be forwarded to the Ministry of Environment and Climate Change Strategy for their review and approval.

ALTERNATIVES

Alternative 1

The Environmental Services Committee recommends to the Capital Regional District Board:

1. That the final draft Solid Waste Management Plan be approved, that the final draft plan be submitted to the Ministry of Environment and Climate Change Strategy for regulatory approval, that staff immediately begin implementing the Solid Waste Management Plan, and that the Solid Waste Advisory Committee begins to function as the Plan Monitoring Advisory Committee;

2. That staff work with the W̱SÁNEĆ Leadership Council to implement recommendations from their February 9, 2021 letter, including establishing a W̱SÁNEĆ Leadership Council/Capital Regional District negotiation table and related meeting schedule, and providing information regarding the Solid Waste Management Plan; and,

3. That staff prepare a package of Hartland area road access mitigation options costing up to $4 million funded by the Capital Regional District's Environmental Resource Management division, review these options with District of Saanich staff and area residents, and return to the CRD Board for direction on next steps.

Alternative 2

That the final draft Solid Waste Management Plan not be approved and alternate direction be provided.

IMPLICATIONS

Intergovernmental Implications

Staff reached out to electoral areas and municipalities inviting feedback on the draft plan, offering presentations and requesting letters of support. CRD staff provided presentations to Victoria, Central Saanich, Saanich, Oak Bay, Esquimalt, Highlands and Colwood. All municipalities that received presentations formally provided expressions of support for the plan, except for Highlands and Colwood, which provided neither support nor opposition. Municipalities not listed above provided no response.

Specific feedback received, along with copies of letters of response are included in Appendix C. A summary of feedback is as follows:

- There was support for the draft Plan and its focus on the 5R pollution prevention hierarchy;
- Desire was expressed for the CRD to maximize the use of municipal authorities to reduce waste and provide the necessary resources to support municipalities;
- Desire was expressed for the CRD to provide bold leadership and facilitate accelerated regional collaboration on actions that achieve waste disposal targets;
- It was identified that *Zero Waste Victoria* plan is aligned with the SWMP, and a desire to prioritize actions within the SWMP to support implementation of *Zero Waste Victoria;*
- It was requested to add a section to the Plan regarding integrated resource management and gasification;
- It was requested that the Plan reference the additional benefits of a regional organics processing facility associated with the greenhouse gas emissions savings from the reduced transportation of organics outside of the region;
- It was requested that the CRD work with local governments to advocate for flow control to regulate the export of solid waste.
- There was no formal opposition to the plan expressed by any municipality or electrical area;

A summary of all feedback received by municipalities, cross referenced against the draft Plan, along with how this feedback is addressed in the final draft Plan is found in Appendix D.

Staff reached out to all First Nations communities located within the CRD region inviting feedback on the draft plan, offering a presentation and requesting letters of support. CRD staff met with W̱SÁNEĆ Leadership Council (W̱LC) and delivered a presentation. W̱LC expressed desire for the CRD to educate First Nation communities about the Plan and waste reduction principles as well as establish an ongoing W̱LC/CRD negotiation table and associated meeting schedule regarding impact benefit and partnership agreements. Esquimalt First Nation also received a presentation. Further information about the First Nation engagement process, and copies of the letters of response received are included within Appendix C.

The CRD reached out by letter to neighbouring regional districts inviting feedback and requesting letters of support. The Regional District of Cowichan Valley provided formal written support of the Plan. Regional District of Nanaimo reciprocated the CRD's invitation with a presentation of their own SWMP. Further information on neighbouring regional district responses is included in Appendix C.

Social Implications

Phase two consultation occurred between November 18, 2020 and February 15, 2021, and adhered to the Provincial guidance provided in the *Guide to Solid Waste Management Planning*. A high-level summary of what was heard through the phase two consultation process is provided in the 'implications' sections, below. An in depth report documenting the consultation approach, summary results, along with verbatim results of consultation are included as Appendix C.

At its April 9, 2021 meeting, the Solid Waste Advisory Committee reviewed this staff report and provided comments in support of the finalized Solid Waste Management Plan, and expressed their desire to move forward with the plan as drafted. The Solid Waste Advisory Committee passed two motions (Appendix F) supporting ongoing plan management through active implementation and monitoring of the Solid Waste Management Plan. The Solid Waste Advisory Committee Chair, thanked the Committee members for their commitment and participation in advising the CRD during the development of this plan.

Feedback was solicited from the general public through a variety of media including a media release, social medial (paid and earned), print media, emails to a resident database and an online public information session. Feedback sentiment was a mix of supportive, critical and neutral. Similar reoccurring themes emerged. The three most commonly occurring 'supportive' themes included:

- That the plan reflects ambitious reduction goals;
- That the plan is based on rational analysis;
- That the plan reflects a well thought out multi-pronged approach.

'Critical' feedback focused on four key issues of concern:

- Strong opposition to removal of trees (this was the most frequently heard comment);
- Desire for more aggressive waste reduction initiatives rather than landfill expansion (zero-waste);
- Negative impact the plan will have on park/mountain bike trails;
- Feeling that the plan is not in alignment with addressing the climate emergency.

Other reoccurring feedback themes included:

- Desire for the exploration of gasification and incineration options as a means to eliminate expansion requirements; also desire to avoid thermally combusting waste and opposition to gasification and incineration;
- Looking for additional incentives or penalties to encourage/enforce reduction of waste.

Much of the phase two public consultation was conducted with community associations in proximity to Hartland Landfill including the Prospect Lake Community Association, Willis Point Community Association and Highlands Community Association. Consultation activities included small-group site tours, focused community input meetings, direct neighborhood outreach and through receipt of and staff responses to letters and emails.

While vocal opposition was expressed to elements of the draft Plan, conversations were productive with both concerns and mitigation opportunities raised. Key areas of concern include:

- Strong opposition to any full build-out of the Hartland property and strong support for more aggressive waste reduction targets;
- Strong opposition to tree removal and destruction of natural habitat;
- Concerns around illegal dumping;
- Concerns around loss of peaceful parkland and impact on bike trails;
- Concern that a reliance on tipping fees to fund Hartland operations is counter-intuitive to zero-waste.

Proposed mitigation suggestions include:

- Postpone a final decision on the full build-of out of the Hartland property until after waste diversion rates are known;
- Provide unmet funding to secure the 49-acre Mountain Road Forest as parkland to offset the future impact of using forested areas of the Hartland property for landfilling;
- Continue to build and enhance the mountain biking trails on Mount Work, specifically ensuring a sustainable multi-use trail network through the entire park;
- Increase bylaw enforcement for dumping, illegal truck traffic and unsecured loads;
- Develop of transfer station serving the Westshore community;
- Invest in the playground at Hamsterly Beach.

To meet operational requirements, the CRD will need to shift the commercial Hartland Landfill vehicle access to Willis Point Road in 2023. While this topic is out of scope of the SWMP, it was identified by the community as a primary area of concern. A traffic study was commissioned and placed on the CRD rethink waste website for reference and comment, and focused community input meetings were held to gather input. Primary feedback included strong concerns around traffic and traffic safety, including vehicle, cycling and pedestrian safety at key intersections; concern that slow-moving commercial traffic will impede the traffic flow on Willis Point Road; and concern that moving the Hartland Access to Willis Point Road will reduce property values on the road. Conversely, other residents expressed strong support for moving the commercial traffic access, and the view that this shift will improve overall traffic safety in the area.

Through this discussion, the community suggested a variety of road access mitigation and community benefit options including:

- addition of a new parking lot near the Hartland North Entrance and Durrance Lake/Mount Work;
- trailhead improvements at Interurban Trail terminus;
- addition of uphill passing lane or uphill vehicle pull outs;
- intersection improvements at the Willis Point/Wallace Road intersection and the Wallace Road/West Saanich Road intersection;
- addition of bike lanes on Willis Point Road;
- electronic signaling to control commercial vehicle flow on Willis Point Road; and
- changing the name of Willis Point Road between West Saanich Road and Durrance Lake.

Further information on road access mitigation and community benefit options is included in Appendix E. While the CRD's jurisdiction over these activities is limited (other than the addition of the parking lot), the CRD could provide funding in support of a package of road access improvements. Staff have initiated preliminary conversations with District of Saanich staff (jurisdictional authority) which has indicated initial support for intersection improvements, and

identified that further engineering analysis is required to determine if improvements would result in increased safety.

Two advocacy organizations provided feedback to the plan: Zero Waste BC, and the Mount-Work Coalition. Specific feedback received are included in Appendix C. A review of this feedback cross referenced against the draft Plan, along with how this feedback is addressed in the final draft Plan is found in Appendix D.

Financial Implications

The strategies and actions outlined in the final draft SWMP are intended to decrease community waste generation from 380kg per capita down to 250kg per capita over the 10 year planning horizon. The CRD currently spends approximately $5.8 million per year on diversion activities, net of the revenues received from extended producer responsibility, sale of recyclables, tip fees at the organics processing transfer station and recycling fees. The annual incremental cost to deliver the new strategies and actions in the final draft SWMP is $320,000 to $345,000. This is an increase of approximately 1% per year, and will fund activities including sustained and enhanced education programs, waste prevention, increasing residential and multi-family, industrial commercial and institutional and construction, renovation and demolition diversion, and enhancing public space waste management.

The 10-year operating and capital projections for the CRD's solid waste services, including the proposed SWMP investments, road access mitigation funding and resulting tonnage reductions, can be funded by tipping fees ($110/tonne), program revenues, reserve balances and other projected revenues (including renewable natural gas), without the need for tax requisition or external debt. Schedule D of the final draft Plan shows the estimated financial impact of the projected expenditures and decreasing per capita disposal including proposed spending of up to $4 million on a package of Hartland area road access mitigation alternatives.

Environmental & Climate Implications

In 2019, the CRD Board identified Climate Action & Environmental Stewardship as a priority for the region and approved a motion to declare a climate emergency. The goals and guiding principles of this plan build upon the 5R pollution prevention hierarchy, focusing first on strategies that promote zero waste and support a circular economy to reduce the greenhouse gas emissions associated with producing materials that eventually become waste. This plan also considers strategies to beneficially use waste as a resource and to manage the residual waste stream to minimize fugitive emissions.

Service Delivery Implications

The final draft SWMP includes an Implementation Schedule as Schedule C to the document. The schedule identifies actions that will be implemented in the short term (3- years) and medium term (5-years) timeframe. Once the final draft Plan is approved, staff will immediately begin implementation, and return to the Environmental Services Committee with an implementation update that considers the requests for prioritization of certain actions made by municipalities.

CONCLUSION

The CRD is now in phase four of the 4-step solid waste management planning process identified by the Province of BC. Throughout of planning process, the Solid Waste Advisory Committee has provided feedback on the development of the draft SWMP, including the plan goals, targets and

strategies which were endorsed by the Environmental Services Committee and CRD Board. Public engagement has been a key part of developing the plan, and staff have coordinated two rounds of public consultation. Results from this engagement have been incorporated into the final draft Plan. If the final draft SWMP is approved by the CRD Board, it will be forwarded to the Ministry of Environment and Climate Change Strategy for their review and approval, and staff will begin implementation.

RECOMMENDATION

The Environmental Services Committee recommends to the Capital Regional District Board:

1. That the final draft Solid Waste Management Plan be approved, that the final draft plan be submitted to the Ministry of Environment and Climate Change Strategy for regulatory approval, that staff immediately begin implementing the Solid Waste Management Plan, and that the Solid Waste Advisory Committee begins to function as the Plan Monitoring Advisory Committee;

2. That staff work with the W̱SÁNEĆ Leadership Council to implement recommendations from their February 9, 2021 letter, including establishing a W̱SÁNEĆ Leadership Council/Capital Regional District negotiation table and related meeting schedule, and providing information regarding the Solid Waste Management Plan; and,

3. That staff prepare a package of Hartland area road access mitigation options costing up to $4 million funded by the Capital Regional District's Environmental Resource Management division, review these options with District of Saanich staff and area residents, and return to the CRD Board for direction on next steps.

Glossary

Advisory Committee	The Solid Waste Advisory Committee (see description below)
Disposal	Landfilling
Diversion	Activities that divert waste materials away from disposal as garbage to alternatives such as recycling or composting. Does not include combustion of garbage to produce energy.
Circular Economy	An economic system aimed at eliminating waste and the continual use of resources. Circular systems employ reuse, sharing, repair, refurbishment, remanufacturing and recycling to create a closed-loop system, minimizing the use of resource inputs and the creation of waste, pollution and carbon emissions
Controlled Waste	Selected waste materials that are not suitable for disposal on the active face of the landfill because of specific health and safety or environmental concerns associated with the physical or chemical properties of the waste. Items that are considered controlled waste include animal feces, sewage contaminated grit, catch basin waste and dead animals.
CRD	Capital Regional District
CR&D	Construction, renovation and demolition
EPR	Extended producer responsibility
(Waste) Generation	The sum of all materials discarded that require management as solid waste, including garbage, recycling and composting. Does not include organic waste composted at home.
ICI	Industrial, commercial and institutional (does not include heavy industry)
Ministry of Environment	BC Ministry of Environment & Climate Change Strategy
MSW	Based on BC's Environmental Management Act, municipal solid waste (MSW) is refuse that originates from residential, commercial, institutional, demolition, land clearing or construction sources, or refuse specified by a Ministry of Environment director to be included in a waste management plan
Organic Waste / Organics	Generally refers to kitchen scraps, food waste, yard and garden waste.
Plan	CRD's Solid Waste Management Plan
Producer Responsibility Organization	A "producer responsibility organization" (PRO), is usually a not-for-profit organization or an industry association, that is designated by a producer or producers to act on their behalf to administer an extended producer responsibility or product stewardship program (e.g. Encorp Pacific, Product Care Association, Recycle BC)
Recycle BC	Formerly MMBC (Multi-Material BC), the producer responsibility organization established to manage the residential packaging and paper products EPR program

Residuals / Residual Waste	Residual waste refers to discarded materials that are not diverted to reuse, recycling or composting and therefore require disposal
SWMP	Solid Waste Management Plan
Solid Waste Advisory Committee	A multi-stakeholder committee established to advise the CRD, and to provide input on matters related to solid waste management upon request by the CRD, including the development and implementation of the Solid Waste Management Plan.
Transfer Station	A site at which municipal solid waste or recyclable material is received from the general public and is sorted, compacted, consolidated or rearranged and stored for subsequent transfer off-site for further processing or final disposal.
Zero Waste	Zero waste is a philosophy and aspirational goal that envisions a point where nothing is wasted. It eliminates traditional concepts of managing waste materials and instead focuses on design for environment. It is intended as an approach to pursuing sustainability through circular economy and is aligned with the Pollution Prevention Hierarchy, seeking to move materials up the hierarchy from residual management through recovery, recycling, reuse and ultimately reduction.

1 Introduction

In British Columbia, regional districts develop solid waste management plans under the provincial Environmental Management Act that are high-level long term visions of how the regional district would like to manage its solid waste in accordance with the Pollution Prevention Hierarchy. This plan should ideally be renewed approximately every ten years to ensure that it reflects the current needs of the regional district, as well as current market conditions, technologies and regulations.

The Capital Regional District (CRD) initiated a process to update its 1995 Solid Waste Management Plan (SWMP) to identify goals and strategies for the next ten years. The SWMP update process considered existing solid waste management policies and programs; identified and evaluated options for reduction, diversion and residual management; and addressed system financing.

This draft document represents an update of the CRD's 1995 SWMP and once approved by the Province (along with any approval conditions), becomes a regulatory document for solid waste management in the CRD, and serves to guide solid waste management related activities and policy development. In conjunction with regulations and operational certificates that may apply, this plan regulates the operation of sites and facilities that make up the region's waste management system.

1.1 Guiding Principles

The principles guiding the development and implementation of this plan are a slightly modified version of those recommended in the BC Guide to Solid Waste Management Planning and were prepared by the CRD's Solid Waste Advisory Committee in June 2018 to enhance their clarity, and were subsequently approved by the CRD Board in October 2018. They are:

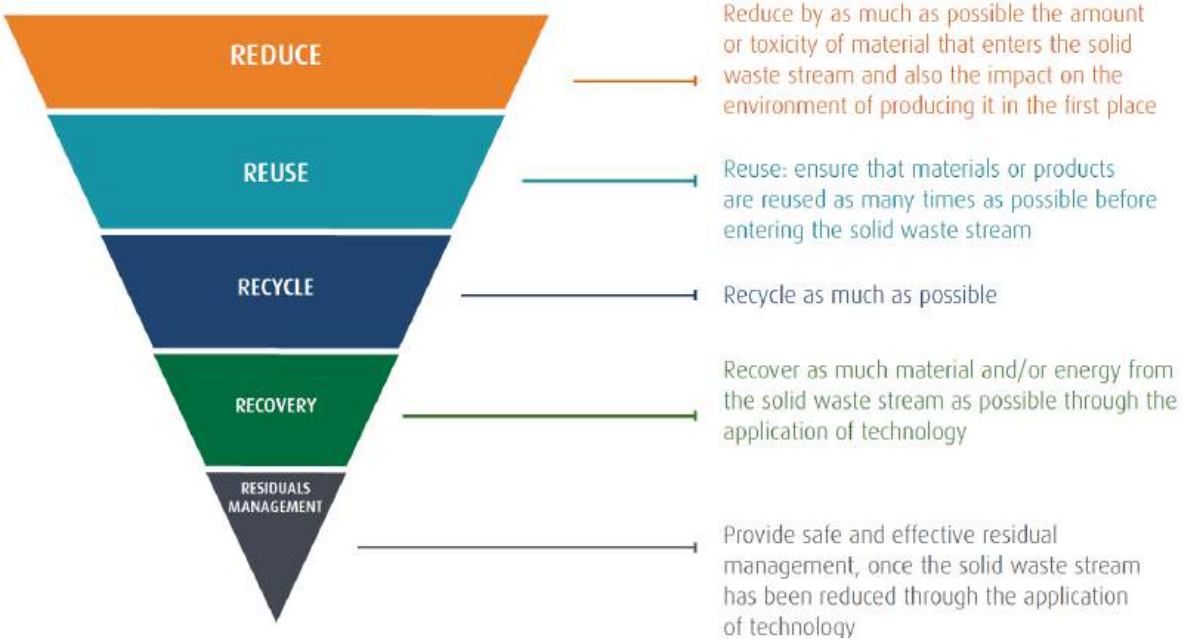
1. Promote zero waste approaches and influence others in support of a circular economy;
2. Promote the first 3Rs (Reduce, Reuse and Recycle);
3. Maximize beneficial use of waste materials and manage residuals appropriately;
4. Support polluter-pay and user-pay approaches and manage incentives to maximize positive behaviour outcomes;
5. Prevent organics, recyclables and hazardous household waste from going into the garbage wherever practical;
6. Collaborate with other jurisdictions wherever practical;
7. Develop collaborative partnerships with interested parties, both within and outside of the CRD, to achieve regional targets set in plans; and
8. Level the playing field within regions for private and public solid waste management facilities.

1.2 Plan Goals

The Province's guidelines for solid waste management planning require Solid Waste Management Plans to have goals and targets. Goals are the long-term aims to be achieved as an outcome of the plan. A goal may be achieved within the timeframe of this plan, but a goal may also be aspirational; something for the CRD to strive for beyond the timeframe of this plan. Targets (see section 1.3), on the other hand, are a way of measuring the plan's progress and have clear timelines.

The goals for this plan are:

1. To surpass the provincial per capita waste disposal target and aspire to achieve a disposal rate of 125 kg/capita/year;
2. To extend the life of Hartland Landfill to the year 2100 plus;
3. To have informed citizens that participate effectively in proper waste management practices; and
4. To ensure that the CRD's solid waste services are financially sustainable.



These goals were established by the Solid Waste Advisory Committee in 2018 based on a review of the Existing System Report, and a discussion of the challenges and opportunities presented by the current system. The first goal associated with reducing the amount of waste disposed was refined in 2020 based on further input from the Solid Waste Advisory Committee to include an aspirational disposal target of 125 kg per capita.

1.3 Pollution Prevention Hierarchy

This plan adopts the 5R Pollution Prevention Hierarchy (see Figure 1-1). Strategies to address each tier in the hierarchy are laid out in Section 5. Implementation of these strategies over the plan's 10-year timeframe is expected to contribute to the provincial disposal rate target of 350 kg per person (capita), and result in achievement of the following regional targets. These targets are discussed further in Section 8.

1. By the end of the 3rd year of this plan, the CRD's per capita disposal rate will be 340 kg or less.
2. By the end of the 5th year of this plan, the CRD's per capita disposal rate will be 285 kg or less.
3. By the end of the 10th+ year of this plan, the CRD's per capita disposal rate will be 250 kg or less.

Figure 1-1: 5R Pollution Prevention Hierarchy

1.4 Climate Change and the Solid Waste Management Plan

What we consume and how we dispose of it contributes to climate change. Greenhouse gas emissions are generated from the management of waste in the region—primarily from decomposing garbage, especially organic waste like food scraps and wood, but also from transportation and management.

We can reduce our collective emissions by decreasing the amount of waste we produce and by managing Hartland Landfill in a sustainable manner. By finding beneficial ways to use our waste materials, we can also displace other sources of greenhouse gas emissions in the region.

In 2019, the CRD Board identified Climate Action & Environmental Stewardship as a priority for the region and approved a motion to declare a climate emergency. The goals and guiding principles of this plan build upon the 5R Pollution Prevention Hierarchy, focusing first on strategies that promote zero waste and support a circular economy to reduce the greenhouse gas emissions associated with producing materials that eventually become waste. This plan also considers strategies to beneficially use waste as a resource and to manage the residual waste stream to minimize fugitive emissions.

Greenhouse gas emissions associated with the 5th R – residuals management, are generated from the disposal of residual waste in the region—primarily from decomposing garbage, especially organic waste like food scraps and wood, but also from transportation and management.

What we consume, the production of new products and extraction of raw materials and how we manage items at end-of-life all contribute to climate change. We can reduce our collective emissions by decreasing the amount of waste we produce, and managing Hartland Landfill in a sustainable manner. By finding beneficial ways to use our waste materials, we can also displace other sources of greenhouse gas emissions in the region.

1.4.1 Hartland Landfill's Contribution to Greenhouse Gas Emissions

When organic matter decomposes within the landfill, it produces gas which is mainly made up of carbon dioxide and methane, a very potent greenhouse gas. Landfills are typically one of the largest contributors of greenhouse gas emissions in the community. In 2020, the CRD completed a regional greenhouse gas emissions inventory based on a recognized global standard (called the GPC Basic+) to measure emissions generated locally from buildings, transportation and waste. Total regional emissions are approximately 1.7 million tonnes of carbon dioxide equivalents. Waste contributes approximately 5% of the region's greenhouse gas emissions, with Hartland Landfill accounting for the majority[1].

The CRD is actively working to improve landfill gas collection efficiency and produce renewable natural gas using captured methane from the historical waste decomposing in the landfill in addition to minimizing any fugitive emissions. Strategy 14, 'Optimize Landfill Gas Management', will support and accelerate this work.

1.5 Alignment with Other CRD Strategies and Plans

The SWMP is aligned with several other CRD strategies and plans. Figure 1-2 shows each of these strategies and plans and how they are linked with this plan.

[1] Source: Capital Regional District 2018, GPC BASIC+ Community Greenhouse Gas Emissions Inventory Report (Stantec, August 2020).

1.6 Alignment with Provincial Targets

The Province has two solid waste performance targets:

1. Lower the provincial municipal solid waste (MSW) disposal rate to 350 kg per capita; and
2. 75% of BC's population covered by organic waste disposal restrictions.

The CRD supports these two provincial goals through its current solid waste management system, which prohibits the disposal of both kitchen scraps and yard waste at Hartland Landfill, and through this SWMP which presents strategies that aim to reduce the per capita disposal rate to even less than 350 kg per capita.

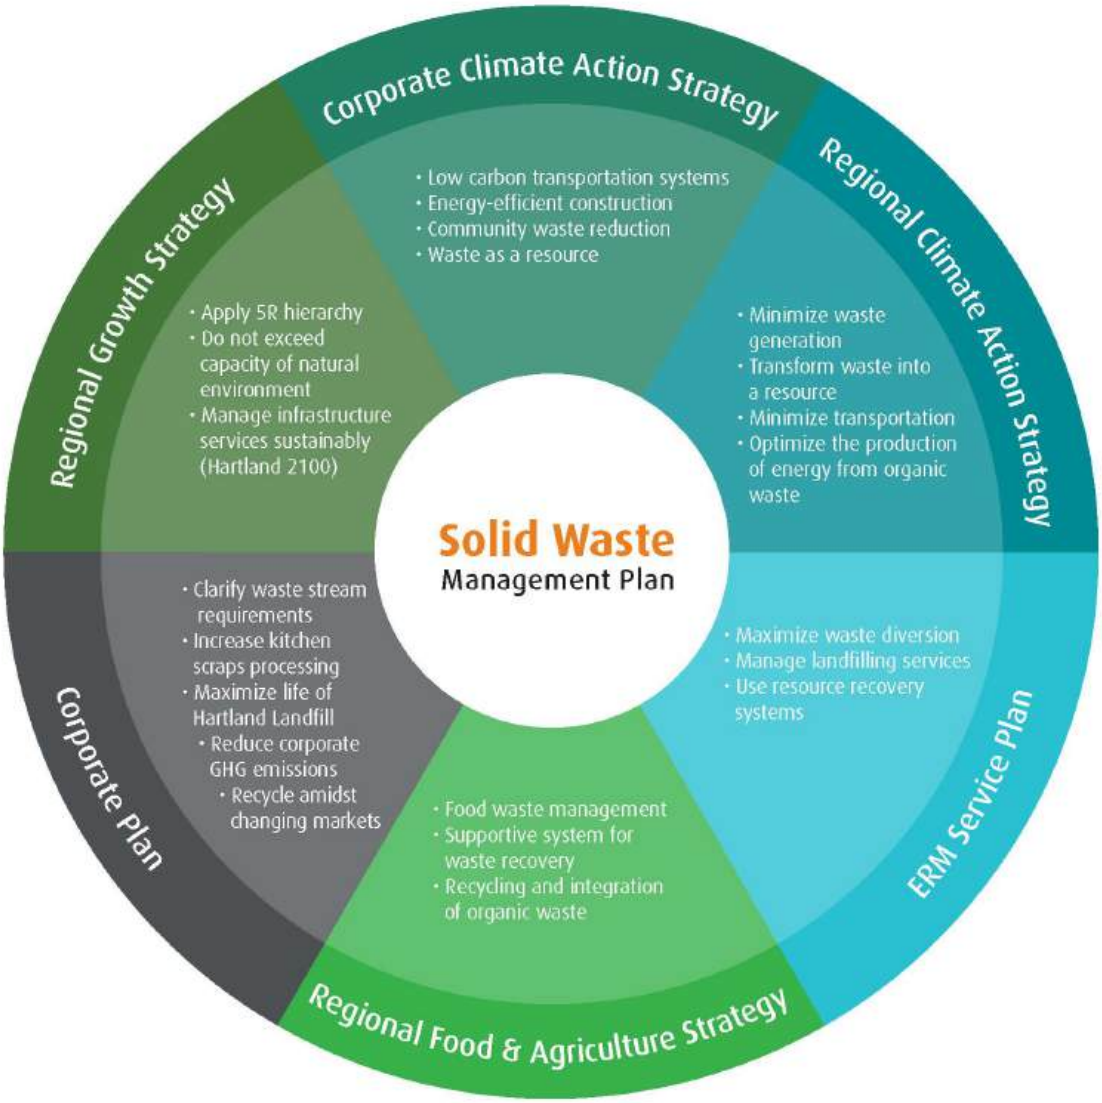


Figure 1-2 Alignment with CRD Strategies and Plans

2 Plan History and Development

The CRD's first SWMP was approved by the Province in 1989. It was updated in 1991, and again in 1995. Since 1995, eight amendments have been added to the Plan and most of the original goals have been achieved. The eight amendments are listed in Table 2-1.

Table 2-1: Plan Amendments

Amendment 1 (2005)
To allow the Capital Regional District (CRD) to regulate composting in the CRD through the adoption of a regulatory bylaw under Section 25 (3) of the *Environmental Management Act.*
Amendment 2 (2001)
To allow the Capital Regional District (CRD) to regulate transfer stations on Salt Spring Island through the adoption of a regulatory bylaw.
Amendment 3 (2004)
To modify the legal description of Hartland Landfill to include additional land that was acquired as a buffer strip.
Amendment 4 (2004)
Add a new Section 16.0 that outlines the CRD's public review process for solid waste related matters.
Amendment 5 (2004)
Establishes procedures for resolving conflicts associated with the Hartland Landfill.
Amendment 6 (2007)
Include the Highwest Waste Management Facility in the SWMP and set operating requirements (replaces Section 10.1.28 in the Plan). This section includes cessation of burning at the site by the end of 2009.
Amendment 7 (2007)
Replace Section 15.1 of the Plan with "Funding for all Hartland Capital Works will be borrowed through loan authorization bylaws or cash flow generated from solid waste operations in accordance with the CRD *Solid Waste Disposal Local Services Establishment Bylaws."*
Amendment 8 (2013)
To allow the siting, construction and operation of a biosolids treatment and resource recovery facility at Hartland Landfill for treatment, processing, storage and beneficial utilization of screenings and waste sludge.

2.1 Process to Update the Plan

In March 2011, the CRD Board passed a motion to undertake a process to update the CRD's 1995 SWMP. In 2012, the CRD embarked on the process to create a new plan that would reflect the changes that have been made since 1995, including the eight plan amendments and changes to the solid waste management system, such as the significant expansion of Extended Producer Responsibility as a means of managing solid waste. Updating the Plan would also allow for consideration of future options for solid waste management in the CRD within the current context and to create an updated vision.

In 2012, a Public and Technical Advisory Committee was formed to provide input into the development of an updated plan. This committee reviewed several reports prepared by consultants, including a 2012 Existing System Report and technical memorandum outlining options for consideration in the new plan.

The planning process, however, was put on hold in 2015 to investigate integrated resource management opportunities. In November 2017, the Board approved restarting the process to update the SWMP.

The process to update the SWMP was restarted in 2018, with the preparation of an updated Existing System report and the establishment of new multi-stakeholder committee, with a mandate of being an advisory committee to the CRD's Environmental Services Committee for the SWMP update process. This new committee is called the Solid Waste Advisory Committee and it also serves as an advisory body on current solid waste management initiatives in the CRD referred to it by the Environmental Services Committee. This committee will also be the Plan Monitoring Advisory Committee upon completion of the SWMP update process. Terms of Reference for the Solid Waste Advisory Committee are included as Schedule A.

The members of the Solid Waste Advisory Committee represent a diversity of backgrounds, interests and geographical locations and includes technical and non-technical members.

Table 2-2: Composition of the Solid Waste Advisory Committee

Representation	Number of Members
Regional district director (member of Environmental Services Committee)	1
Municipal engineering staff who are involved in solid waste collection	2
Electoral Area representative	1
First Nations	2
Environmental organizations	1
Business groups	1
Non-profit group with an interest in solid waste (e.g. reuse organization)	1
Large waste generators (industrial, commercial, institutional)	2
Owners/operators of private waste management facilities	2
Private sector industry collection service providers	2
Composting industry representative	1
Product stewardship agency	1
Community representative (representing Prospect Lake/Hartland area)	1
Public representatives, at large	3
Willis Point community representative	1
District of Highlands representative	1
Solid Waste Technology representative	1

In October 2018, the Board approved the guiding principles, objectives and goals developed by the Solid Waste Advisory Committee for the new plan. In September 2019, the Board reviewed the Solid Waste Advisory Committee's proposed strategies, actions and targets for the updated SWMP, and directed that these be taken out for public consultation.

The first phase of public consultation took place between October 18, 2019 and December 1, 2019, and included a media launch event, public open houses, stakeholder meetings and extensive social media outreach. A dedicated web page was created where people could sign up for project updates, review background information and submit their feedback through a survey. Overall, there was a high level of support for all plan elements. Some actions—particularly those associated with ensuring Hartland Landfill is used as effectively and efficiently as possible—generated important questions from the community.

The results of the consultation and an initial draft Plan were presented to the Solid Waste Advisory Committee in the summer of 2020. As a result of consultation and the Solid Waste Advisory Committee's input, the draft Plan was modified to improve clarity and the waste minimization goal was strengthened, however no changes were made to the draft Plan's strategies and actions.

3 Plan Area

The CRD is the regional government for 13 municipalities and three electoral areas, covering an area of 2,341 sq. km on the southern tip of Vancouver Island. A map showing the administrative boundaries of the CRD is provided in Figure 3-1.

Member municipalities include:

- District of Central Saanich
- City of Colwood
- Town of Esquimalt
- District of Highlands
- City of Langford
- District of Metchosin
- District of North Saanich
- District of Oak Bay
- District of Saanich
- Town of Sidney
- District of Sooke
- City of Victoria
- Town of View Royal

Unincorporated areas are organized into electoral areas. The three electoral areas in the CRD are:

- Salt Spring Island Electoral Area;
- Southern Gulf Islands Electoral Area, which includes Galiano Island, North Pender Island, South Pender Island, Saturna Island, Mayne Island, and smaller islands in the vicinity; and
- Juan de Fuca Electoral Area, which includes the areas of East Sooke, Jordan River, Malahat, Otter Point, Port Renfrew, Shirley, Willis Point, and inland rural areas.

First Nations communities located within the region include: Beecher Bay, Esquimalt, Malahat, Pacheedaht, Pauquachin, Penelakut, Songhees, Tsartlip, Tsawout, Tseycum and T'Sou-ke Bands. Each of these Bands has reserve lands within the boundaries of the CRD as shown in Figure 3-2.

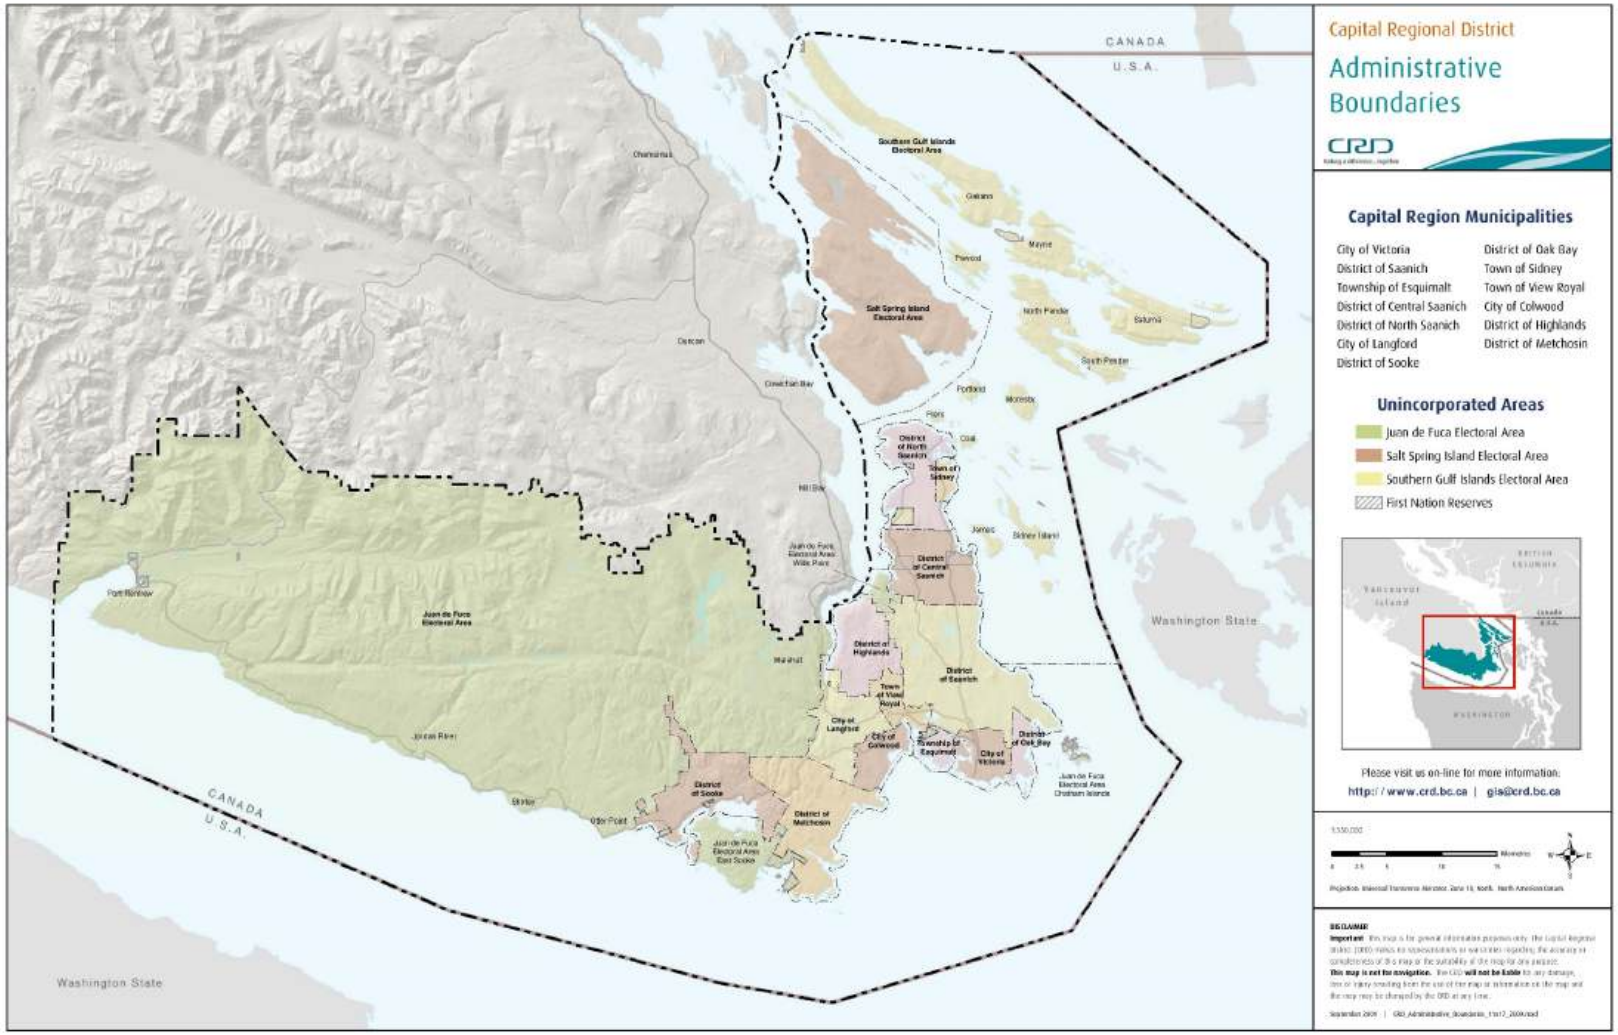

Figure 3-1: Map of Capital Regional District

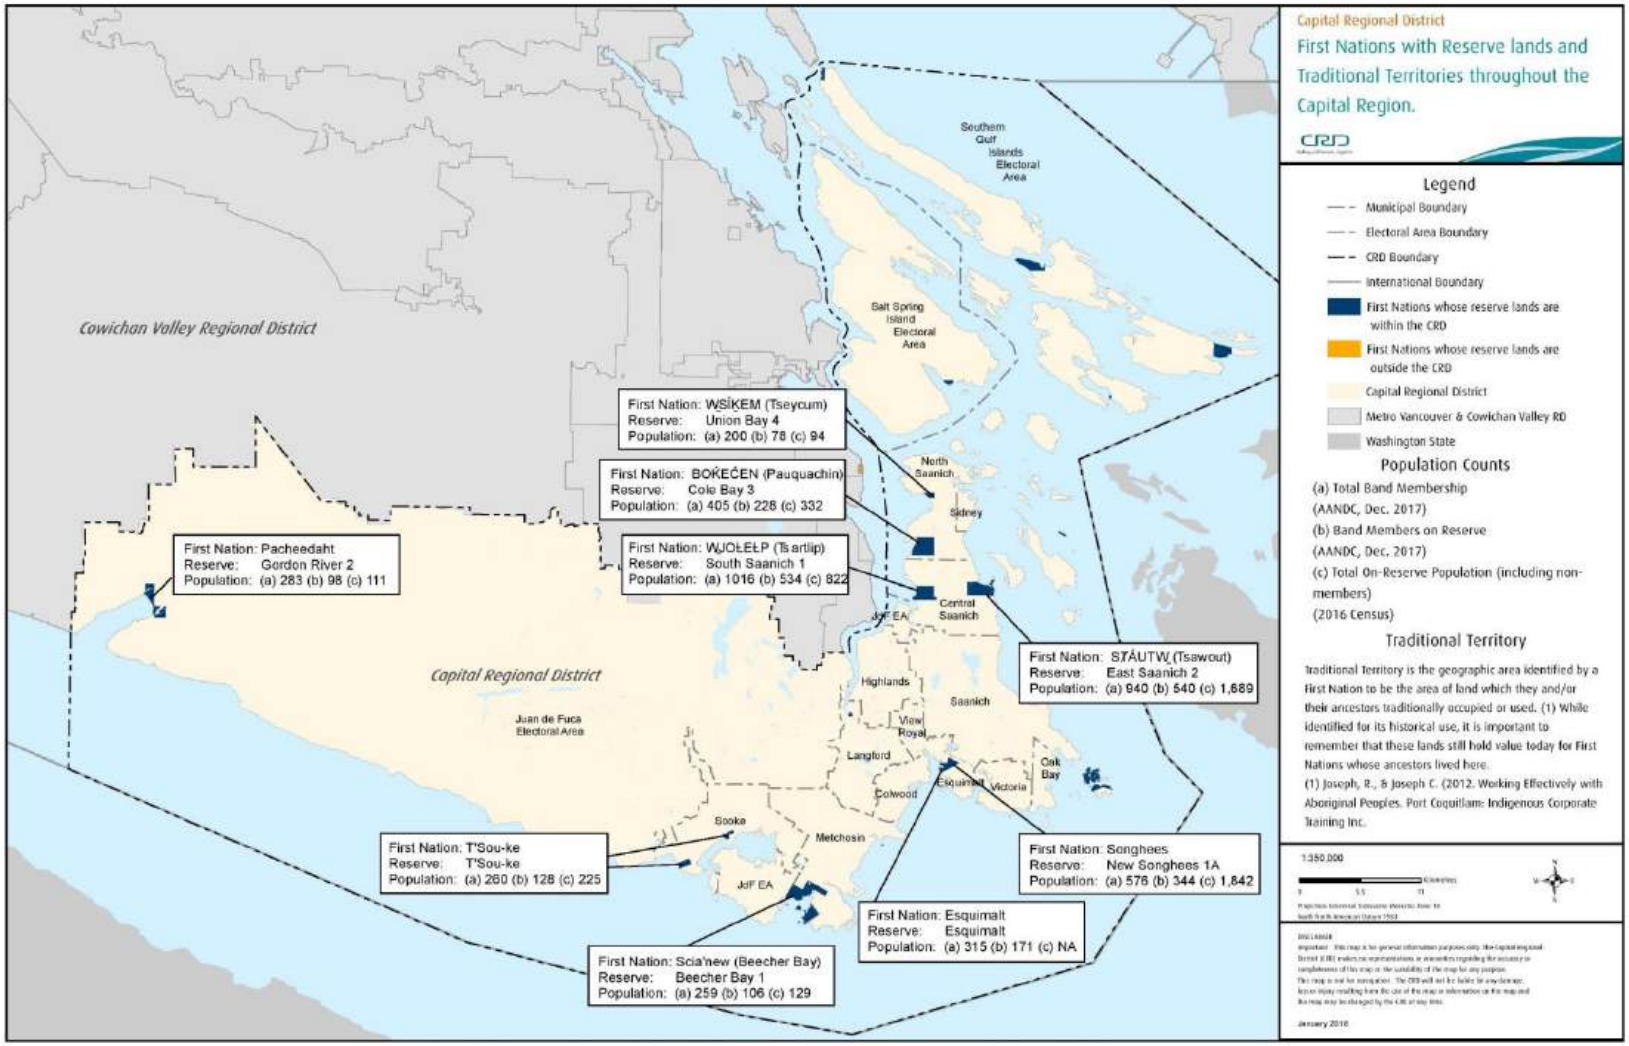

Figure 3-2: First Nations Reserves in the Region

3.1 Population

As shown in Table 3-1, the population of the CRD in 2019 was estimated at 418,414, including persons living on First Nations Reserves. Table 3-2 provides population projections to 2030, as supplied by BC Stats. Based on these estimates, the population of the region is expected to grow by 10% over the next decade

Table 3-1: Population, By Area (2019 estimate)[2]

Area	2017 Population	% of CRD total
CAPITAL REGION	**418,414**	
Central Saanich	18,089	4%
Colwood	18,867	5%
Esquimalt	18,716	4%
Highlands	2,481	1%
Langford	42,653	10%
Metchosin	5,168	1%
North Saanich	11,876	3%
Oak Bay	18,568	4%
Saanich	122,173	29%
Sidney	12,235	3%
Sooke	14,657	4%
Victoria	94,005	22%
View Royal	11,567	3%
Unincorporated Areas		
Juan De Fuca Electoral Area	5,427	1%
Salt Spring Island Electoral Area	11,247	3%
Southern Gulf Islands Electoral Area	5,072	1%
First Nation Reserves	5,613	1%

[2] CRD website: https://www.crd.bc.ca/docs/default-source/regional-planning-pdf/population/population-pdfs/2019_populationestimate.pdf?674c4fcc_2

Table 3-2: Capital Region Population Projections[3]

Year	Population Projection
2020	421,613
2021	426,029
2022	430,530
2023	435,114
2024	439,761
2025	444,330
2026	448,825
2027	453,249
2028	457,563
2029	461,765
2030	465,850

3.2 Housing

Table 3-3 provides a breakdown of the housing types in the region, based on 2016 Census data and building permits for residential structures.

Table 3-3: Housing in the Capital Region[4]

	#	%
Single Detached Houses	70,630	41.5%
Semi Detached Houses (includes flats, duplexes)	32,375	19.0%
Row Houses	10,380	6.1%
Apartments (all types)	54,775	32.2%
Mobile Homes	1,990	1.2%
Total	170,150	100.0

3.3 Economic Data

The CRD has a well-diversified economy. A large public sector comprised of the provincial government offices and military installations as well as universities and colleges are the key drivers of this area's economy.

The area also has a growing technology and health services sector, along with a vibrant tourism industry. Retirement living and residential expansion continue to shape the demographics of this community.

[3] Source: https://www.bcstats.gov.bc.ca/apps/PopulationProjections.aspx

[4] Data provided by the CRD. Does not include housing on First Nation Reserves.

Based on the 2016 census, the main employment sectors in the region are health care (13% of employment), public administration (12%), retail (11%), accommodation and food services (9%), and professional, scientific and technical services (8%).[5]

4 Existing System Overview

The following is a high-level overview of the current system for solid waste management in the region. A more detailed description is provided in the report *Existing Solid Waste Management System (2018)* which can be found on the CRD's website (https://www.crd.bc.ca/docs/default-source/recycling-waste-pdf/2018existingsystemsreport.pdf).

4.1 Disposal Data and Trends

Figure 4-1 shows how per capita disposal in the CRD has changed over the past two decades, incorporating the quantities of waste disposed at Hartland Landfill and the privately owned Highwest Landfill. In 2019, the per capita disposal rate was 382 kg per capita, a reduction of 43% since 1989.

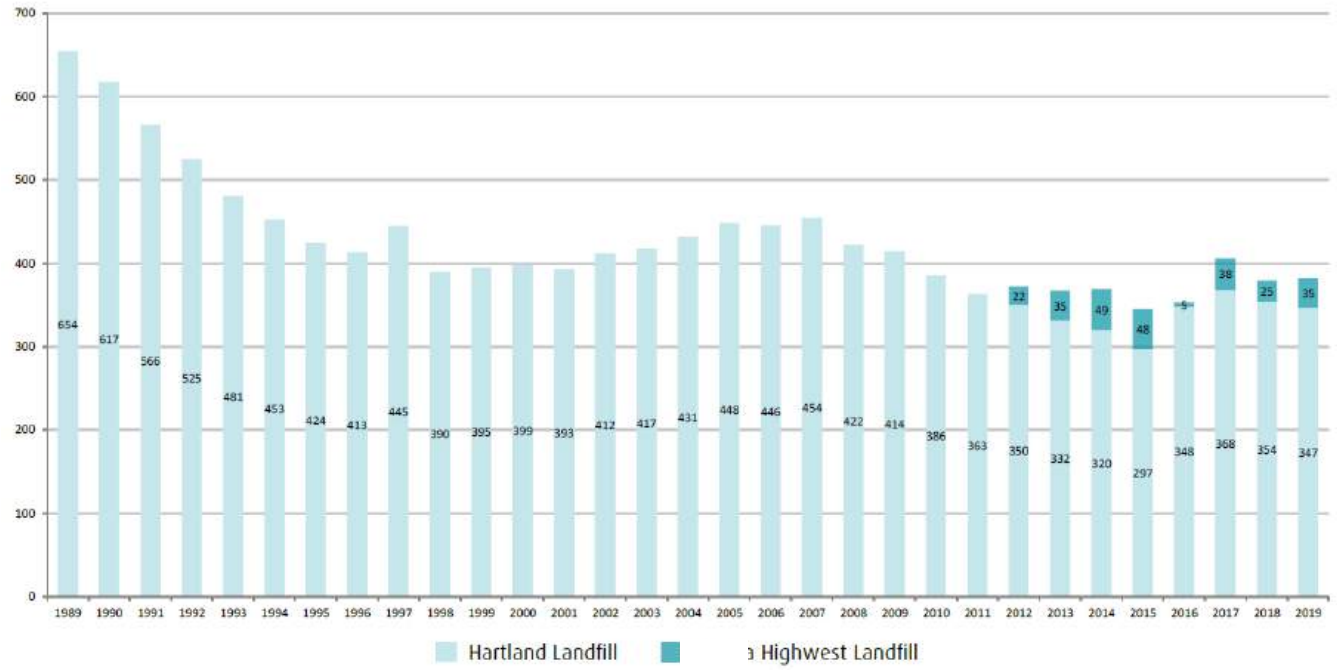

Figure 4-1: CRD Disposal (1989 – 2018)

[5] Source: 2016 Census Profile Statistics Canada

Figure 4-2 shows the estimated composition, by weight, of the waste landfilled at Hartland in 2016 (the last time a waste composition study was conducted at the site). The largest component of the garbage arriving at Hartland Landfill was compostable organics (21.1%), followed by wood and wood products (17.0%), paper (15.4%), and plastic (14.3%).

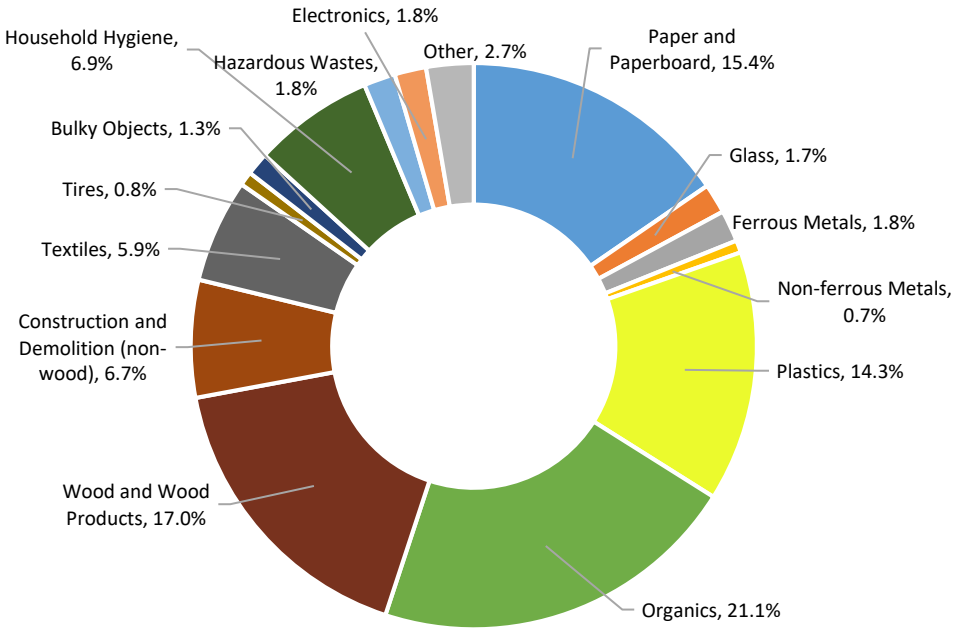

Figure 4-2: Estimated Composition of All Waste Landfilled at Hartland (By Weight), 2016

Figure 4-3 shows the proportion of waste sent to Hartland Landfill in 2019 from each sector. As shown, 41% comes from Industrial/Commercial/Institutional (ICI) activities, while 38% comes from residences (curbside residential plus multi-family).

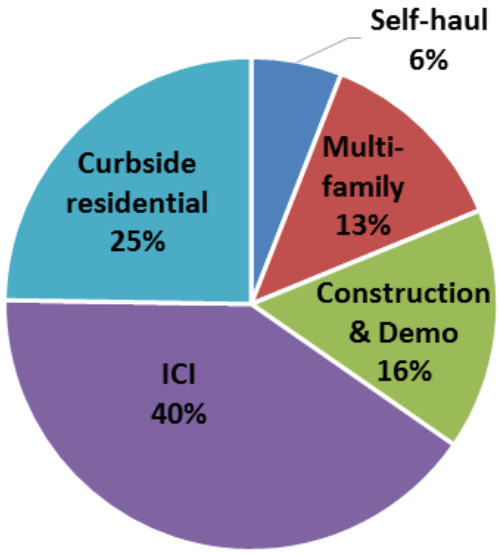

Figure 4-3: Sectors Contributing to Waste Disposed at Hartland (2019)

4.2 Existing System Description

This section provides an overview of the components that currently make up the system for managing solid waste in the region.

4.2.1 Solid Waste Management Facilities

Figure 4-4 is a map showing the location of solid waste management facilities operating in the region as of 2020; including CRD-operated sites (shown in yellow), private waste management operations such as recyclers, recycling depots and transfer stations (in red), non-profit second-hand stores (in green), municipal recycling and yard waste depots (in blue), and Gulf Island recycling depots (in purple).

The region is home to two landfills authorized by the Province of BC: Hartland and Highwest. Both landfills have Operating Certificates issued by the Ministry of Environment that define the activities permitted at these sites. The Highwest Landfill is expected to permanently close in 2021 (see next section for additional details). Additional information on these two facilities can be found in Section 4.3.1.

Future Facilities

This plan anticipates the potential addition of an organic waste processing facility located at the Hartland site. Additional information on this potential facility can be found in Sections 5.2 and 6.

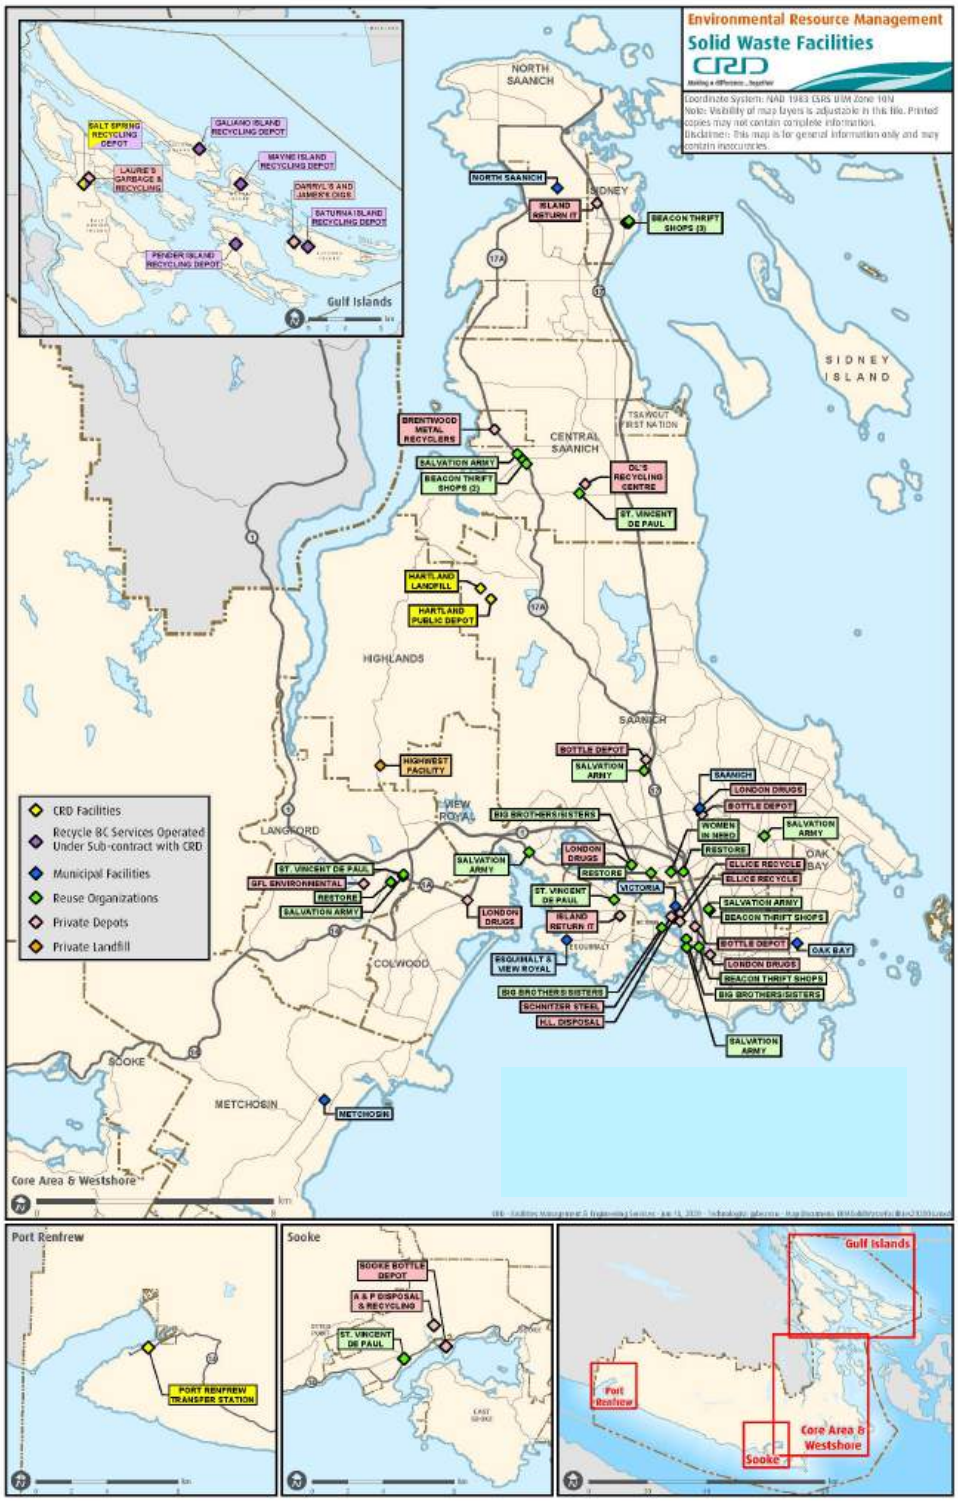

Figure 4-4: Map of Solid Waste Facilities

4.2.2 Solid Waste Disposal

4.2.2.1 Hartland Landfill

The CRD became responsible for solid waste disposal for the region in 1973 when, at the request of the CRD Board, the Province of British Columbia established solid waste disposal as a regional function of the CRD.

In 1975, the CRD acquired the Hartland Landfill site, which had been operating as a private facility since the 1950s. The facility continued to be managed by a private operator under contract to the CRD until 1985, when the CRD assumed direct operation of the site.

Lands surplus to the needs of the landfill operation were subsequently transferred to CRD Parks for public use. This included 210 hectares in 1994, and another 40 hectares in 2003. These areas formed a large portion of the land conserved within Mount Work Regional Park. An additional 29 hectares of land adjacent to the current landfill footprint was temporarily leased to CRD Parks until 2019.

Hartland Landfill is located 14 km northwest of Victoria and is the only sanitary landfill in the capital region. The 125-hectare site is owned by the CRD and operated by a combination of CRD staff and contractors. The landfill is operated under Operational Certificate # PR12659 issued under the Environmental Management Act and follows a detailed Operating Plan based on the Operational Certificate. Figure 4-5 shows the current property boundary of Hartland Landfill. In 2013, the CRD acquired additional land to the east of the site to increase the buffer around the landfill. Additional land acquisitions to further increase the buffer are under consideration and may be acquired during the lifespan of this SWMP. Additional buffer land acquisitions would be consolidated into a single parcel of land. The acquisition of any additional lands are to increase the buffer lands and operational flexibility at Hartland and not to expand the area for landfilling.

In 2013, the Minister of Environment approved Amendment No. 8 of the current SWMP that allows the siting of a biosolids treatment facility at Hartland. A Residuals Treatment Facility has been constructed at Hartland North.

The Hartland Landfill site is a multi-purpose facility that currently includes the following waste management functions:

- Disposal and landfill service for residential and non-residential customers;
- Disposal facility for controlled waste;
- Public drop-off depot for:
    - Recyclable materials;
    - Extended producer responsibility materials
    - Household hazardous waste materials;
    - Reusable goods;
    - Yard and garden material;
- Kitchen scraps transfer station;
- Leachate collection, treatment and disposal;
- Landfill gas collection, processing, conversion utilization and sale;
- Administration and weigh scale facilities; and
- Other solid waste disposal and diversion initiatives as approved by the CRD Board.

Over the years, the CRD has sought to ensure the conservation of landfill space. The practice of banning the disposal of specific wastes at Hartland Landfill when viable recycling alternatives are in place, has been used by the CRD since 1991. Current landfill bans include drywall (implemented in 1991), cardboard, directories, large appliances, tires (1993), scrap metal, fill, aggregate, concrete, asphalt, rubble and clean soil (1995), paper fibres (1998), yard and garden waste (2006), EPR materials (current and future) designated under BC's Recycling Regulation (2011), and kitchen scraps (2015).

The waste diversion and disposal services and policies at Hartland will continue to evolve as needed based on available recycling markets, changes to provincial regulations like BC's Recycling Regulation, and community need.

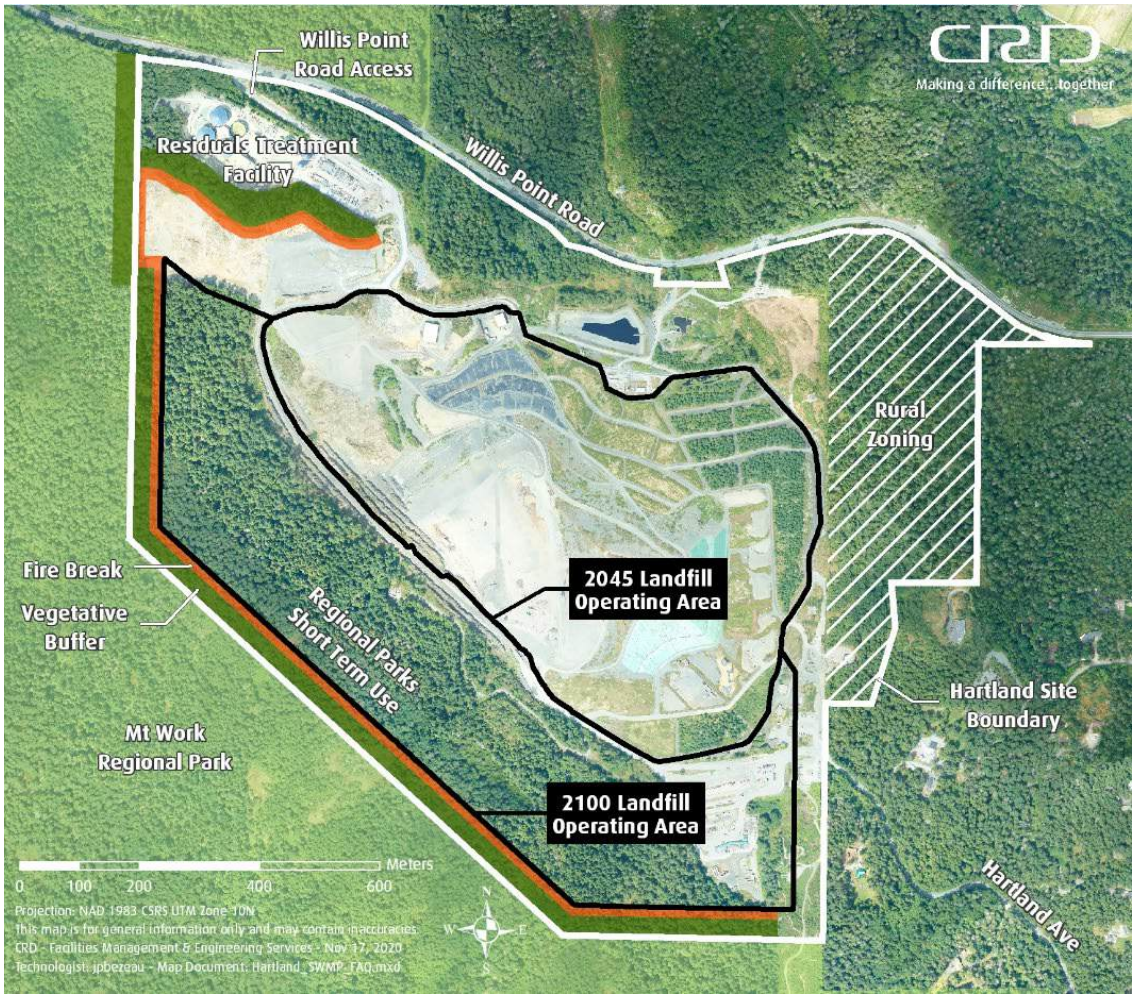

Figure 4-5: Hartland Landfill Boundaries

4.2.2.1.1 Phase 1 and Phase 2 History

Phase 1 is the original part of Hartland Landfill that was completely closed by 1998. This area was filled with approximately 4.5 million cubic metres of garbage. It is permanently covered with a specially designed durable plastic liner and soil cap.

The Final Closure design for Phase 1 was completed in 2010 which included a final cover complete with a new wetland sedimentation pond in addition to gas, leachate and road upgrades. More than 22,000 native trees and bushes have been planted over the Phase 1 area.

Phase 2 refers to the current active filling area which was officially opened on April 30, 1997. It consists of a system of liners, drains and collection pipes to provide for long-term engineered, environmentally secure waste disposal.

Phase 2 is designed to accept approximately 10.3 million cubic metres of solid waste. The most recent final closure was of the north face of Phase 2, Cell 1 in 2011. In 2016, progressive closure of the East and South Faces of Phase 2, Cell 2 was put in place and construction and initial filling of a new landfill cell (Phase 2, Cell 3) began.

4.2.2.1.2 Hartland Landfill Infrastructure

In addition to the landfill itself, the site has other infrastructure that supports its operation. This includes a staffed scale house that weighs all incoming and outgoing vehicles and an automatic scale for account holders. Weighing of vehicles allows the CRD to track the quantity of the waste received at the facility and to charge fees based on the weight of waste deposited at the site. Material collected at the depot and transfer station for subsequent transportation off site is also tracked using the scale system.

Other infrastructure is associated with pollution control and includes leachate and landfill gas management infrastructure, which are described below.

4.2.2.1.3 Gas Management

As garbage decomposes in the landfill, landfill gas is generated. Landfill gas is primarily methane but also includes other organic compounds. Methane is a powerful greenhouse gas – 20 to 30 times more potent than carbon dioxide. To minimize greenhouse gas impacts, reduce odours associated with landfill gas and reduce risk of fires associated with the buildup of methane, active collection and management of the landfill gas is a critical part of managing Hartland Landfill.

Landfill gas has been collected at Hartland for about 20 years. Prior to 2004, the collected gas was flared off and thermally destroyed. Since 2004, the gas is used for generation of electricity and only the excess gas above the generator's capacity is flared. The generator typically produces enough energy to power 1,600 homes annually. In 2013, the CRD purchased their private sector partner's portion of the power project which gives the CRD full control over the landfill gas.

A site specific Landfill Gas Management Plan was approved in 2012 which detailed a strategy for capturing landfill gas and meeting BC Ministry of Environment collection targets. The Plan includes installation, operation and maintenance of collection infrastructure and routine reporting. This has resulted in landfill gas collection increasing by nearly 40% since 2000 and reductions in greenhouse gas emissions by approximately 50% since 2010. Collection infrastructure continues to be installed in accordance with the Landfill Gas Management Plan. Strategy 14 of this plan seeks to optimize and maximise landfill gas collection for beneficial use.

4.2.2.1.4 Leachate Management

Water that has filtered through garbage is called leachate. To minimize the leachate generation area, impermeable covers are installed as cover on the landfill and perimeter ditches are lined to divert more clean surface water away from the landfill. The leachate generated in the landfill is collected, contained and conveyed via a micro-tunnel to two leachate storage lagoons. The leachate is tested on a once-a-month basis and managed through the sanitary sewer system.

4.2.2.1.5 Monitoring

An environmental monitoring, assessment and management program to identify potential impacts of landfill operations on groundwater, surface water and air, is in place in accordance with BC Ministry of Environment requirements. With over 40 years of engineered controls and continuous improvement, groundwater and surface water quality at Hartland Landfill has improved. Monitoring stations include a series of test wells both on and off the landfill site.

The 2016 landfill gas collection efficiencies were within estimated ranges in the Landfill Gas Management Plan, working effectively and reducing greenhouse gas emissions from closed areas of the landfill. New gas wells installed in Phase 2 as part of the long-term gas management plan resulted in gas infrastructure improvements.

The progressive closure of the East and South Faces of Phase 2, Cell 2 that occurred in 2016 significantly reduced the total leachate generation area of the landfill.

The newly constructed Phase 2 Cell 3 area included installation of new leachate containment with gravity flow conveyance piping that discharges into the upper leachate lagoon. Groundwater quality monitoring data obtained in 2016 indicated that landfill leachate is effectively contained and controlled on site.

Leachate quality monitoring, done at the point that it is discharged to the sewer system, confirms that leachate discharged from the site is in compliance with the CRD's Sewer Use Bylaw which regulates discharges to the sanitary sewer. Surface water monitoring in 2016 indicated that nearby surface water bodies are not impacted by leachate.

4.2.2.1.6 Estimated Lifespan

Based on current estimates and assuming no major changes to the volume of waste being disposed of in the near-term, Phase 2 of Hartland Landfill is expected to reach capacity around 2045.

Provincial legislation requires the CRD to provide a safe, secure and sustainable disposal option for regional solid waste in perpetuity. With this responsibility in mind, an additional 29 hectares of landfill property adjacent to the current Phase 2 footprint could be developed to extend the life of Hartland Landfill to 2100 and beyond.

This undeveloped landfill property was temporarily leased to CRD Parks until 2019 and is currently used for recreation by visitors to the adjacent Mount Work Regional Park, including hikers and mountain bikers. When regional demand requires the landfill to develop further, the recreational users of this portion of landfill property will be impacted by the loss of these temporary trails (see section 4.2.2.1.7 for details).

The vision for Hartland 2100 is to keep the landfill's footprint as small as possible. This property will need to be developed for future landfilling starting in approximately 2030 unless significantly more waste is diverted or a new technology for managing waste becomes available and economically feasible for the

CRD. With this planning horizon in mind, development of a Hartland 2100 design concept has been included in this Solid Waste Management Plan in Section 5.3, but its implementation will be phased in over the next 10 years in alignment with evolving regional demand and the landfill's Operational Certificate requirements. CRD staff will review and report out on regional demand as it relates to Hartland Landfill capacity as part of its annual progress report on this solid waste management plan.

Future development of landfill property, including the removal of second-growth trees, would be offset by the reforestation program already in place for all closed areas of the landfill, including 20 acres of reforested land now that will have grown to 50 acres by 2040. The Hartland 2100 design concept will also include a progressive reforestation plan that will reduce the greenhouse gas emissions generated by the landfill through carbon sequestration.

4.2.2.1.7 Community Benefits and Engagement

Based on current population growth and waste trends, the CRD anticipates needing to permanently close the existing biking trails on undeveloped Hartland Landfill property before the landfill reaches capacity in 2045. As CRD staff review and report out on regional demand as it relates to Hartland Landfill capacity and work towards phasing-in implementation of the Hartland 2100 design concept, staff will collaborate with the mountain biking community on alternative options.

There are also residents who live near Hartland Landfill, share the use of transportation routes in the area with landfill-bound traffic and feel impacted by the landfill's location. The CRD endeavours to operate and develop the landfill in a manner that recognizes the interests of the community (recreational and residential), while continuing to provide an essential regional service. The CRD has engaged and will continue to engage with these communities to ensure that their perspectives continue to be understood and that the ongoing development the Hartland site is done with these interests in mind.

4.2.2.2 Highwest Landfill

In addition to the Hartland Landfill, there is the privately owned and operated Highwest Landfill located at 1943 Millstream Road in the District of Highlands. This landfill receives construction and demolition waste and non-hazardous/non-putrescible ICI waste for disposal. This facility is expected to permanently close in 2021 once it reaches capacity. Highwest operates under an Operational Certificate #100193 issued by the Province of BC.

4.2.3 Transfer Stations

The CRD owns and operates a transfer station in Port Renfrew where garbage is received from local residents and transferred to Hartland Landfill. Source separated recyclables and kitchen scraps are also accepted at the site for recycling.

Additionally, there are several private transfer stations in operation in the CRD. Many of these sites offer recycling services as well.

Transfer stations on Salt Spring Island are subject to *Capital Regional District Bylaw 2810, a Bylaw to Regulate the Operation of Transfer Stations on Salt Spring Island* which requires all transfer stations to hold a license. This bylaw was put in place to ensure that all transfer stations on Salt Spring Island are operated at a standard that ensures the protection of environmental and community health.

4.2.4 Solid Waste Collection

Collection of residential and commercial garbage and kitchen scraps is conducted by the private sector, with the exception of single-family dwelling collection service offered by six of the region's municipalities.

The private sector also collects recycling from multi-family buildings, commercial buildings and institutions, and garbage and recycling from construction / demolition sites.

The CRD provides region-wide residential recycling service through a combination of single-family dwelling curbside collection and depot collection programs under contract to Recycle BC.

4.2.5 Streetscape Waste Management

Litter and recycling collection in public spaces such as urban streetscapes is a municipal service, as well as a responsibility of Recycle BC. Streetscape recycling is part of the Recycle BC's EPR program for packaging and printed papers. Encorp also provides streetscape recycling containers for beverage containers.

4.2.6 Reduce and Reuse

There are a broad range of rental and repair services throughout the region plus many opportunities for reuse of goods through private and non-profit retailers, online platforms (e.g. Used Victoria, Kijiji) and informal activities (e.g. garage sales, rummage sales). The CRD supports reuse through two main mechanisms:

- **Diversion Funding for Non-Profit Organizations**: Since 1992, the CRD has provided funding to non-profit organizations involved in recycling clothing and used household goods. The funding assists with their garbage disposal costs at Hartland, in recognition that some donated used goods are unusable and destined for the landfill. Ten organizations participated in the program in 2019.

- **Hartland Reusable Materials Program**: The CRD partners with five organizations for the management of donated items received in the Hartland depot. Goods such as textiles, household items, some building materials and bicycles are redistributed through a variety of networks operated by these non-profit associations.

4.2.7 Communications, Outreach and Education Programs

Environmental education is of paramount importance to the CRD's waste reduction strategies. The CRD provides a number of communications, education and outreach programs to support the 5R hierarchy and promote resident awareness and participation in waste reduction and disposal services, including:

- **School Outreach Programs:** Curriculum-linked educational workshops and tours for students from Kindergarten to Grade 12.

- **The Hartland Learning Centre**: Located at Hartland Landfill, this recycled building is the venue for school and community workshops, as well as the starting point for tours. Tours are provided to school groups, community groups, members of the public and technical groups.

- **Community Outreach and Events:** Displays are set up at fairs, festivals, community gatherings and other community events or locations. The displays often focus on ways to reduce and divert waste,

proper sorting techniques for recyclable materials or more specific topics such as how to prepare demolition waste and dispose of asbestos.

- **MyRecyclopedia.ca:** A comprehensive online listing of items including local recycling listings and tips on how to reduce and reuse.

- **Infoline**: This dedicated phone line and email address allows the CRD to respond to inquiries about waste reduction, waste management, recycling and Hartland Landfill.

- **Ready, Set, Sort!:** An online waste sorting game where residents can test their knowledge about local recycling opportunities.

- **CRD website**: The CRD's website has a range of information associated with the 5Rs and CRD's solid waste services.

- **Compost Education Centre:** Through a contract with the CRD, the centre offers organic waste diversion presentations, workshops, and educational demonstrations at on-site gardens and throughout the community.

- **Public Education Campaigns:** The CRD develops and implements a number of seasonal, multi-media public education campaigns to promote and provide information on a range of waste management subjects. In 2019, those subjects included:

    - end markets for recyclable materials
    - household hazardous waste
    - safe renovation waste disposal
    - avoidable food waste reduction
    - illegal dumping prevention
    - holiday season waste reduction
    - abandoned boat reporting and prevention

In addition to the above activities undertaken by the CRD, municipalities with waste management services, waste management companies, EPR organizations and many environment-oriented non-profit organizations provide their own communication and education services.

4.2.8 Recycling Depots

There are public and privately operated depots located throughout the region accepting recyclables of many types, kitchen scraps, yard waste, EPR products, and household hazardous waste. Some of these depots also receive garbage.

The public drop-off depot at Hartland receives garbage, reusable goods, recyclables and household hazardous waste. This area is intended for residential quantities and limits vehicle size to 5,500 kg gross vehicle weight.

Residents on Salt Spring Island and the Southern Gulf Islands are provided recycling services through drop-off programs set up at depots in their communities. The CRD, under agreement with Recycle BC, partners with local on-island non-profit associations for recycling services for residential packaging and paper products at these depots. In addition to receiving packaging and paper products, most depots offer additional services such as scrap metal, electronics recycling and other recycling.

4.2.9 Extended Producer Responsibility

British Columbia's industry-led product stewardship programs require producers of designated products to take extended producer responsibility for the life-cycle management of their products, including collection and recycling.

The BC Recycling Regulation, under authority of the Environmental Management Act, sets out the requirements for product stewardship in BC. The region is served by all of BC's EPR programs through a broad range of take-back programs and service providers, including depots and retailers. The CRD participates directly in EPR by acting as a collector for the following EPR programs at Hartland depot:

- Beverage Containers
- Electronics, Electrical Products, Batteries, Smoke Detectors and Lighting Products
- Lead-Acid Batteries
- Paints, Solvents, Flammable Liquids, Gasoline and Pesticides
- Residential Packaging and Paper Products
- Tires
- Used Lubricating Oil, Filters and Containers and Antifreeze

4.2.10 Household Hazardous Waste Management

Most household hazardous waste in the CRD is collected through EPR programs, including those provided at the Hartland depot.

Since not all HHW is currently covered by EPR programs, the CRD accepts both EPR and non-EPR household hazardous waste materials at the Hartland depot. This program will remain available as long as there is a need for the service.

The CRD will continue to encourage the province to expand the list of household hazardous waste products covered by EPR so that the cost of managing all household hazardous waste is ultimately borne by the producers and consumers of these products.

4.2.11 Organics Management

Regional Kitchen Scraps Strategy

In January 2015, a landfill ban on kitchen scraps was implemented, saving a valuable resource, conserving landfill space and reducing greenhouse gas emissions from Hartland Landfill. Collected kitchen scraps are currently processed at composting facilities in outside of the capital region.

Compost Facilities Bylaw

The CRD Board adopted the regional composting bylaw in December 2005. The bylaw regulates the operation of composting facilities in the region to protect public health and the environment. In 2019, there were no facilities licensed under the bylaw in the region.

Yard and Garden Material Landfill Restriction

In 2006, a yard and garden material landfill ban came into effect. A number of private facilities in the area accept the region's yard and garden material.

In 2019, 1,142 tonnes of source-separated yard and garden material was received at Hartland where it was ground and beneficially used on-site. The landfill ban excludes invasive, infectious and noxious plants

which are received at Hartland as garbage or controlled waste at a discounted tipping fee in an effort to reduce their proliferation.

4.2.12 Illegal Dumping Mitigation

The CRD's aims to mitigate illegal dumping through the following on-going measures:

- Communication campaigns that target specific illegal dumping behaviours;
- Funding to non-profit associations to conduct clean-up events in public places;
- Funding for the removal of abandoned boats and marine debris;
- Support of non-profit organizations involved in recycling clothing and used household goods;
- Funding towards the disposal and recycling of unusable materials received as donations;
- Provision of safe disposal of abandoned hazardous materials; and
- A web page on illegal dumping on the CRD website that provides information on how to reduce illegal dumping and abandonment.

4.2.13 Participants in the Solid Waste Management System

There are many participants in the solid waste management system, as described in Table 4-1.

Table 4-1: Participants in the Solid Waste Management System

Who	Roles in Solid Waste Management
BC Ministry of Environment	• Regulates municipal solid waste management through the Environmental Management Act • Establishes provincial targets for management of solid waste in B.C. • Approves regional solid waste management plans • Authorizes discharges to the environment through permits and operational certificates • Enforces provincial regulations and the conditions set out in discharge permits and operational certificates • Mandates EPR in BC through the Recycling Regulation
Capital Regional District	• Operates the Hartland Landfill site and the Port Renfrew transfer station • Provides residential recycling services through a combination of curbside and depot collection (through a contract with Recycle BC) • Prepares the regional solid waste management plan (SWMP) • Works with municipalities and First Nations to implement the SWMP • Regulates the operation of composting facilities through the Compost Facility Bylaw • Regulates the operation of transfer stations on Salt Spring Island through the Salt Spring Island Transfer Station Bylaw • Reports annual MSW disposal rate to ministry • Provides education and outreach • Monitors the implementation of the SWMP through the Solid Waste Advisory Committee
Municipalities	• May provide various curbside collection or drop-off services to residents • Litter collection, streetscape sanitation and waste collection services for public spaces • Provides education and outreach associated with local solid waste services • Municipal waste management planning, which may include zero waste planning • Liaises with the regional district with regards to solid waste services and issues • Participates in the development and implementation of the SWMP • May undertake local zero waste initiatives • Provides land use zoning approval for a variety of solid waste and recycling facilities in their municipality

Who	Roles in Solid Waste Management
First Nations	• May provide curbside collection of garbage and kitchen scraps to residents • Provides education and outreach associated with the local solid waste services • Liaises with the regional district on items of mutual interest • May participate in the development and implementation of the SWMP
Producer Responsibility Organizations	• Provides collection services for stewarded products • Provides education/promotion to increase product recovery • Provides deposit refunds to consumers (where applicable) • Monitors and reports on diversion/recovery rates to the Province • Participates in the development and implementation of the SWMP
Private sector involved in waste management (e.g., haulers, facility operators)	• Provides garbage and recycling collection services to municipalities, businesses, residents, institutions, and construction/ demolition projects • May operate private facilities such as bottle depots, recycling depots, transfer stations and composting facilities • May be regulated by Provincial government • Liaises with waste generators (customers) to minimize contamination of waste streams • Complies with CRD requirements for source separation of controlled waste • Participates in the development and implementation of the SWMP
Waste generators (residents and businesses)	• Participates in municipal and regional solid waste management programs and services • Is informed regarding source separation requirements, disposal restrictions and options to minimize waste sent to disposal
Non-profit organizations	• Provide recycling depot services on Salt Spring and the Southern Gulf Islands • Receive reusable goods for sale in thrift stores and distribution in social support programs

4.2.14 Bylaws

The CRD has the following bylaws in place for the purposes of managing solid waste:

Bylaw 1903, Solid Waste Disposal Local Service Establishment Bylaw No. 1, 1991 establishes a local service to allow the CRD to acquire, construct, establish, maintain, operate and regulate:

(a) transfer depots and facilities for receiving collected waste for packing, processing, loading and transporting the waste to disposal grounds;
(b) facilities for collecting, processing, storing, marketing and disposing of recyclable waste;
(c) facilities for composting waste;
(d) facilities for collection, storage and disposal of hazardous, biomedical or special waste;
(e) facilities for carrying out resource recovery from waste; and
(f) waste disposal grounds and facilities.

The above bylaw has been amended twice since 1991:

- **Bylaw 2564 To Amend Bylaw No. 1903 "Solid Waste Disposal Local Service Establishment Bylaw No. 1, 1991"** to establish the service of the regulation, storage and management of municipal solid waste and recyclable material, including the regulation of facilities and commercial vehicles used in relation to these matters
- **Bylaw 3900 To Amend Bylaw 1903 "Solid Waste Disposal Local Service Establishment Bylaw No. 1, 1991"** to include facilities for carrying out resource recovery from recyclable material, and the generation of energy from landfill gas.

Bylaw 3881, The Hartland Landfill Tipping Fee and Regulation Bylaw lists items that are banned from disposal at Hartland Landfill and established tipping fees for garbage and recyclables.

Bylaw 2810, a Bylaw to Regulate the Operation of Transfer Stations on Salt Spring Island requires all transfer stations on Salt Spring Island to hold a license. This bylaw was put in place to ensure that all transfer stations on the island are operated at a level that ensures the protection of environmental and community health.

Bylaw 2736, a Bylaw to Regulate the Operation of Composting Facilities ensures that composting operations do not contaminate ground or surface water, or generate unacceptable levels of nuisance odour, vectors, litter or dust, and to protect the public from composting operations which violate the requirements of the bylaw. The CRD bylaw supplements existing provincial regulations under the Organic Matter Recycling Regulation.

The bylaw sets out four classes of licenses, as follows:

- Class 1: composting general organic matter on an impermeable surface or in-vessel (this type of facility is exempt from licensing unless the facility generates leachate or creates nuisance odours, vectors, litter or dust).
- Class 2: composting biosolids with general organic matter on an impermeable surface or in-vessel.
- Class 3: composting restricted organic matter.
- Provisional: operations not using proven technology to compost restricted organic matter.

Bylaw 2290, **a Bylaw for the purpose of establishing regulations for the use of recycling containers and the collection of recyclable material** within the Capital Regional District.

In addition to the above, municipalities may have bylaw provisions associated with the waste management services they provide, in addition to littering, open burning, zero waste, and the location of waste management facilities.

5 Strategies and Actions

This section outlines the strategies to be implemented to achieve the Plan's goals and the specific actions to be undertaken as part of each strategy. Figure 5-1 provides a graphical summary of the four goals of this plan and the associated strategies.

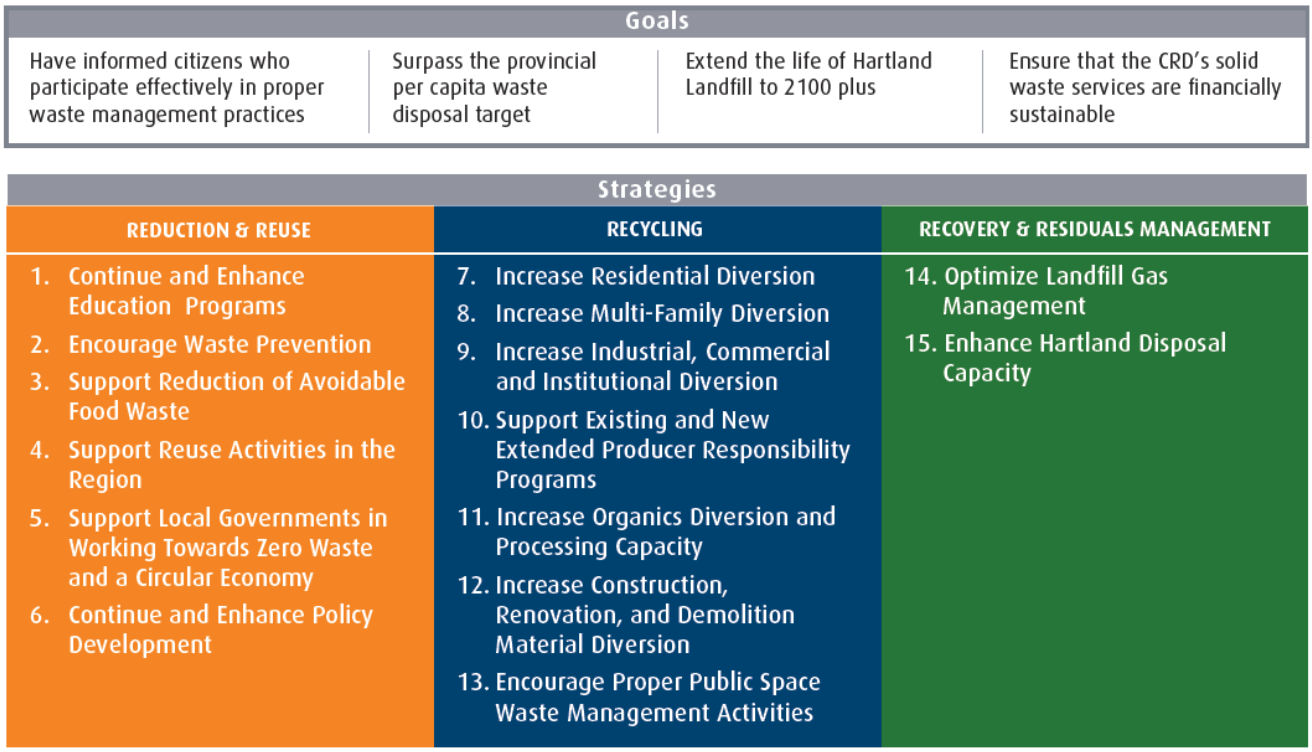

Figure 5-1: Plan Goals and Strategies

The selection of the plan's strategies and actions were based on feedback from the Solid Waste Advisory Committee and an evaluation of each strategy for:

- Technical Feasibility and Effectiveness;
- Environmental Impact and Benefits;
- Social Impact;
- Effect on Waste Disposal, and
- Cost Considerations.

These actions are deliberately broad in scope to enable a wide range of current, emerging and future activities related to each program area. This Plan is intended as a guiding document and does not encompass operational details or articulate every ongoing program or activity undertaken by the CRD. The guiding principles, goals, targets and strategies outlined in this Plan provide the policy framework to guide CRD's programming around solid waste. Activity progress will be reported annually through a detailed plan monitoring report.

Implementation of the actions outlined in this plan will require collaboration with many participants in the solid waste system.

This Plan does not preclude municipalities, First Nations, local businesses, institutions or non-profit organizations of undertaking their own initiatives, except for where those initiatives require inclusion in the regional Plan

5.1 Reduction and Reuse

Strategy #1: Continue and Enhance Education Programs

Actions:

A. Ensure ongoing, up-to-date promotion and education resources to enable effective participation in CRD programs and initiatives.
B. Incorporate behaviour change components wherever possible; using a variety of education and communication strategies and tools.
C. Expand and prioritize education programs for the multi-family and ICI sectors.
D. Enhance K-12 school program to include concepts of zero waste and the circular economy.
E. Collaborate with stakeholders on education campaigns (in partnership with First Nations communities, municipalities and product stewards).
F. Continue supporting environmental stewardship recognition.
G. Continue to engage residents on solid waste matters using the appropriate level of consultation.

Strategy #2: Encourage Waste Prevention

Actions:

A. Promote less consumption and advocate for consumer responsibility.
B. Establish a community-based waste reduction grant program.
C. Support municipal, provincial and federal single-use item reduction efforts.
D. Promote sustainable and/or packaging-free purchasing options.
E. Advocate provincially and federally to limit or eliminate the manufacturing, distribution and/or sale of single use items and non-recyclable materials.
F. Advocate provincially and federally for sustainable product and packaging design.

Strategy #3: Support Reduction of Avoidable Food Waste

Actions:

A. Continue to support residential food waste reduction through education campaigns and composting promotion.
B. Continue to encourage the donation of edible food and support food recovery organizations.
C. Advocate for regulations that support avoiding food waste.

Strategy #4: Support Reuse Activities in the Region

Actions:

A. Continue to provide funding for non-profit reuse organizations to help offset costs for managing unusable donated items.
B. Continue to support and promote donations to reuse establishments.
C. Support reuse, renting and sharing programs (e.g. tool libraries, repair cafes and centres, sewing hubs, etc.) and other materials exchange activities.
D. Investigate the possibility of a free store at Hartland or other facilities.

Strategy #5: Support Local Governments in Working towards Zero Waste and a Circular Economy

Actions:

A. Develop model language for bylaws, best practices, official community plans, and economic development strategies for use by local governments using research and collaboration to guide this process (in partnership with municipalities and potentially other regional districts).
B. Work with local governments to identify the need for solid waste facilities and zoning for waste management activities. To be done in partnership with member municipalities.
C. Use policy tools to enable local recycling infrastructure.
D. Investigate 'pay-as-you-throw' principles to use as tools to incent less waste disposal.
E. Investigate use of clear bags for garbage or recyclables collection to encourage proper recycling of materials, where practicable and enforceable (e.g. at events).

Strategy #6: Continue and Enhance Policy Development

Actions:

A. Develop model procurement policies for use by local governments, non-profits, etc. To be done in partnership with member municipalities and other interested organizations.
B. Continue to expand material bans when viable alternatives exist.
C. Investigate licensing waste management facilities in the region to encourage transparency, consistency, and a requirement that all facilities protect public health and the environment.
D. Investigate regulatory mechanisms to manage municipal solid waste and recyclable materials in the region.
E. Investigate options for managing debris from extreme weather (e.g. community chipping days, special burning allowances in electoral areas).

5.2 Recycling

Strategy # 7: Increase Residential Diversion

Actions:

A. Continue to promote residential diversion of recyclable materials (including organics), ensuring that education campaigns strive to minimize contamination in these streams.
B. Collaborate with municipal and private sector service providers to support depot diversion efforts in the region for non-curbside materials.
C. Encourage local processing and markets for residential recyclables.
D. Develop tools, such as a guide, to support event recycling.

Strategy # 8: Increase Multi-Family Diversion

Actions:

A. Allocate resources to support multi-family recycling, for example, by developing standardized education materials.
B. Work with local governments and private sector service providers to develop multi-family waste source separation requirements.
C. Develop policy guide and recommendations for recycling, composting and garbage space and access in multi-family developments.
D. Collaborate with stakeholders (e.g., private haulers who service multi-family buildings or multi-family property managers) to implement support for multi-family recycling.

Strategy # 9: Increase Industrial, Commercial and Institutional Diversion

Actions:

A. Allocate resources to increase ICI diversion, for example, a business waste reduction liaison.
B. Advocate to expand the packaging and paper product EPR program to the ICI sector.
C. Create a business waste reduction toolkit, including education about how to apply circular economy principles.
D. Encourage municipalities to require waste management plans with business licenses.
E. Develop policy guide for ICI waste management space and access requirements.
F. Work with local governments and private sector service providers to develop ICI waste source separation requirements.
G. Investigate shifting disposal ban enforcement to the ICI generator, rather than hauler.

Strategy #10: Support Existing and New Extended Producer Responsibility Programs

Actions:

A. Advocate to the province to expand EPR programs.
B. Collaborate with stewards to increase consumer awareness about EPR programs.
C. Advocate for increased return-to-retailer opportunities.
D. Advocate federally to standardize EPR programs across Canada.

Strategy #11: Increase Organics Diversion and Processing Capacity

Actions:

A. Continue to promote organics waste material diversion.
B. Continue to utilize and monitor existing private sector organics processing capacity and seek to develop a facility at the Hartland Landfill site in the future should needed processing capacity not be found to be sufficiently available to meet the region's requirements. (Additional information on the process to develop this facility is in Section 6).
C. Support compost markets by purchasing back materials.
D. Collaborate with service providers and users (e.g., local businesses) to develop guidelines for use of compostable products and packaging.

Strategy #12: Increase Construction, Renovation and Demolition (CR&D) Material Diversion

Actions:

A. Develop a comprehensive CR&D strategy, including characterization of materials, best practices, and pilot projects.
B. Develop educational tools to support CR&D material diversion (e.g. create an industry toolkit, a deconstruction guide, and/or guidelines for diverting and utilizing reused materials).
C. Promote green building standards.
D. Continue collaboration with local governments to develop and use policy tools (e.g., construction permits, building codes) to maximize diversion and to align management plans.
E. Investigate beneficial uses of CR&D waste, including a clean wood waste landfill ban.
F. Investigate banning or surcharging mixed CR&D loads at the landfill to encourage source separation
G. Further develop programs for managing hazardous materials(e.g. asbestos)

Strategy #13: Encourage Proper Public Space Waste Management Activities

Actions:

A. Develop educational materials to prevent and reduce litter and abandoned materials in our neighbourhoods and public spaces.
B. Continue promoting alternatives to abandoned materials and illegal dumping by educating about proper management and disposal
C. Collaborate with stakeholders, including local governments and private sector facilities, to develop a regional approach to prevention of illegal dumping.
D. Investigate developing regionally-aligned litter bylaws. To be done in partnership with member municipalities.
E. Develop and pilot methodologies to 'observe, record, and report' on abandoned materials and illegal dumping incidents throughout the region.
F. Investigate options for large bulky item disposal, e.g., free drop-off days or large item pick-up days

5.3 Recovery and Residuals Management

Strategy #14: Optimize Landfill Gas Management

Actions:

A. Continue to maximize and optimize the capture of landfill gas for beneficial use.[6]
B. Investigate collaboration opportunities with educational institutions to research new beneficial uses and technologies.

Strategy #15: Enhance Hartland Disposal Capacity

Actions:

A. Review Hartland tipping fee structure and ban enforcement levels, subject to recycling market conditions
B. Continue to operate Hartland Landfill using best practices.
C. Develop design options that maximize the disposal capacity of Hartland Landfill to 2100 and beyond. (Note: See section 4.2.2.1.6 for details. Design and aggregate management options could extend landfill life significantly.)
D. Continue to conduct research, investigate and report out on emerging waste management technologies (including alternatives to landfilling such as integrated resource management and gasification).

[6] On April 22, 2020, the CRD announced approval in principle of an agreement where FortisBC will purchase renewable natural gas (RNG) generated from Hartland Landfill for beneficial use in its natural gas distribution system. The CRD and FortisBC are currently working together on a supply contract that will be submitted to the British Columbia Utilities Commission for approval. If approved by the commission, the CRD will continue to be responsible for the ownership and operation of the Hartland Landfill, the landfill gas collection system and the upgrade facility. The project is expected to reduce the region's greenhouse gas emissions by approximately 264,000 tonnes of carbon dioxide equivalent over the 25-year project life.

6 Organic Processing Facility Decision Process

Strategy #11 includes an action to continue to utilize and monitor existing private sector organics processing capacity, and seek to develop a facility at the Hartland site in the future should needed processing capacity not be found to be sufficiently available to meet the region's needs. This section provides additional detail on the history of organic material management and potential future management options.

The CRD implemented a kitchen scraps disposal ban at Hartland Landfill in 2015. In recognition of a lack of sufficient local processing capacity, the CRD expanded the kitchen scraps transfer area at Hartland to receive additional volumes of kitchen scraps collected within the region. Kitchen scraps are received from municipal and private sector split packer and single stream collection vehicles, loaded for efficient transport and hauled for processing at facilities on southern Vancouver Island.

The CRD intends to continue to provide the community with receiving and transport services for kitchen scraps through the transfer facility at Hartland while monitoring in-region and on-island processing capacity.

In response to a need to secure additional processing capacity for the community, a facility at Hartland may also be pursued in an effort to reduce the greenhouse gas emissions associated with the current transportation and processing model.

7 Implementation Schedule

In the short-term (the first 3 years of the plan's implementation), the focus will be on the actions that target the reduction and diversion of CR&D waste and organic materials. Also in the short-term, the actions associated single-family, multi-family, and ICI diversion will be implemented.

In the medium-term (4-5 years), the focus will be on continuing and improving the single-family, multi-family, and ICI programs.

In the long-term (full plan implementation), all programs will be refined to maintain and/or improve diversion levels. Additionally, new EPR programs are anticipated to be implemented within the timeframe of this plan; in particular the Plan anticipates the introduction of EPR for ICI-generated paper and packaging and textiles.

Schedule C provides a detailed planned implementation schedule for the Solid Waste Management Plan from 2021 to 2030.

8 Plan Targets

The targets established for this plan are focused on reducing the amount of waste landfilled on a per capita basis. The CRD has set a goal of exceeding the provincial target for per capita waste disposal. At the time of preparing this plan, the provincial target is 350 kg per capita. The per capita disposal targets proposed for the CRD are based on the strategies and actions described in Section 5 and are presented below in Table 8-1.

Table 8-1: Plan Targets

	Short-Term Goal (3 years)	Medium-Term Goal (5 years)	Long-Term Goal (10+ years)
Targeted Sectors/ Materials	▪ Construction, Renovation, and Demolition waste ▪ Organic waste from: • Single-family • Multi-family • Industrial, Commercial and Institutional	▪ Recyclables and organic waste from: ▪ Single-family ▪ Multi-family ▪ Industrial, Commercial and Institutional	▪ Extended producer responsibility for Industrial, commercial and institutional - generated paper and packaging and textiles ▪ Refine programs to increase performance for all sectors
Disposal Target (kg per capita)	**340**[1]	**285**	**250**[2]

1. This target is aggressive and assumes that disposal bans for CR&D materials would be implemented.
2. This target is aggressive and assumes that new EPR programs will be implemented by the Ministry in the long-term timeframe.

9 Financing

The strategies and actions outlined in this Solid Waste Management Plan are intended to decrease community waste generation from 380kg per capita down to 250kg per capita over the 10 year planning horizon.

In 2019, all costs associated with solid waste disposal and diversion programs in the CRD were funded through tipping and user fee revenues at Hartland Landfill, collection contract revenues, sale of electricity and sale of recyclables. The costs of the CRD's solid waste services, including the funding of reserves, was $27,646,550.

The annual incremental cost to deliver the strategies and actions identified in the Solid Waste Management Plan is $320,000 to $345,000 per year as shown in Table 9-1. This is an increase of approximately 1% per year.

Table 9-1: New Costs Associated with Solid Waste Management Plan Strategies and Actions

Strategy		Annual Cost
1	Continue and Enhance Education Programs	$100,000
2	Encourage Waste Prevention	$50,000
7	Increase Residential Diversion	$25,000 (for 2 years)
8	Increase Multi- Family Diversion	$50,000
9	Increase Industrial, Commercial and Institutional Diversion	$50,000
12	Increase Construction, Renovation and Demolition Material Diversion	$50,000
13	Enhance Public Space Waste Management	$20,000
	Total	**$320,000 - $345,000**

The 10 year operating and capital projections for the CRD's solid waste services, including the proposed SWMP investments and resulting tonnage reductions, can be funded by tipping fees, program revenues, reserve balances and other projected revenues (including renewable natural gas), without the need for tax requisition or external debt. Schedule D shows the estimated financial impact of the projected expenditures and decreasing per capita disposal.

10 Plan Flexibility

Due to changing circumstances and priorities that may evolve over time, and with the input of the Solid Waste Advisory Committee and interested parties, all major actions identified in the Plan will be reviewed for appropriateness before implementation. This will generally occur on an annual basis. The Plan's implementation schedule will be flexible enough to reflect the availability of technologies that may arise over time, as well as the potential changes in regional issues and priorities. In addition, it will also take into account the financial priorities of member municipalities and other partners, the availability of funding to undertake actions listed in this Plan, and the availability of contractors and service providers.

The Plan is a "living document" that may be amended to reflect new considerations, technologies and issues as they arise.

An amendment of this Plan would be required if there were major changes to the solid waste management system of the following nature:

a. The opening (or changes to the location or status) of a site or facility that is *not* already identified in this *Plan* and requires an authorization under BC's Environmental Management Act; or any other facility that could have an adverse impact to human health or the environment, as determined by the BC Environmental Management Act;
b. Waste import / export options which would significantly impact the CRD's or neighbouring regional district's solid waste systems, or not conform to provincial legislation, goals and/or waste reduction targets;
c. Significant changes to the *Plan's* disposal targets or reductions in programs supporting the first 3Rs;
d. A change in the boundary of the *Plan*, which would significantly change the amount of solid waste to be managed under the *Plan* or significantly change the population of the *Plan* area;
e. The addition, deletion or revision of policies or strategies related to the conditions outlined in the Minster's approval letter; and
f. Major financial changes that warrant seeking elector assent.

If a Plan amendment becomes necessary, the CRD would need to undergo a public consultation process and submit an amended plan to the Minister of Environment for approval, along with a detailed consultation report.

11 Plan Monitoring and Measurement

The implementation of the Solid Waste Management Plan will be monitored to determine its on-going effectiveness. As part of this monitoring, CRD staff will review and report out on regional demand as it relates to Hartland Landfill capacity. Annual measurement and monitoring allows for course corrections to be made in a timely manner, and to consider strengthening plan targets.

The following monitoring and measurement actions will be undertaken.

1. **Plan Monitoring:** Monitoring progress on the Plan's implementation will be undertaken by the Solid Waste Advisory Committee on an annual basis. This will maintain the linkage between the development of the plan and its implementation. The terms of reference for the Solid Waste Advisory Committee are included in this Plan as Schedule A.

2. **Annual Reporting**: On an annual basis, CRD staff will continue to prepare and publicize an Environmental Resource Management Progress Report that describes the CRD's current solid waste management activities and provides several metrics including the amount of waste landfilled per capita. This report will include the status of the Plan's implementation and progress toward the Plan's targets. Additionally, the report will identify any challenges or opportunities that are affecting (or have the potential to affect) the Plan's implementation. This report will be provided to the Solid Waste Advisory Committee and the Board. It will also be promoted publicly through a range of CRD communications channels.

3. **BC Disposal Calculator:** CRD will continue to compile data annually on all of the municipal solid waste disposal activities in the regional district for reporting to the BC Ministry of Environment's on-line disposal calculator.

4. **Interim Assessment / Plan Update:** As per the BC Guidelines for Solid Waste Management Planning, five years into the implementation of the Plan, the CRD intends to carry out a review of the plan's implementation and effectiveness. The CRD also intends to undertake a Plan renewal after ten years.

5. **Waste Composition Study:** The CRD has been undertaking waste composition studies approximately every 5 years since 1990. The CRD will continue undertake these studies to provide valuable insight into how the Plan's implementation is affecting what is landfilled. This information will also help to inform the preparation of the Interim Assessment and next Plan renewal.

12 Inter-Regional District Cooperation

The CRD recognizes the value of collaborating with other regional districts with an aim to improve cost-efficiencies of providing solid waste services, and also to learn from each other through sharing ideas and experiences. To this end, the CRD are members of the following organizations:

- Coast Waste Management Association
- Recycling Council of BC
- Association of Vancouver Island and Coastal Communities Solid Waste Management Committee
- BC Product Stewardship Council
- Solid Waste Association of BC

Additionally, the CRD has partnered with the Cowichan Valley Regional District and the Regional District of Nanaimo to undertake solid waste technical studies of mutual interest.

During the implementation of this Plan, the CRD will continue to participate in the above organizations as a means of collaborating with other BC regional districts, and particularly to work on solid waste solutions for Vancouver Island.

13 Plan Amendments

This Plan represents the current understanding and approach to the solid waste management challenges being faced by the CRD. The Plan is a "living document" that may be amended to reflect new considerations, technologies and issues as they arise.

The need for a plan amendment will be triggered by major changes to the solid waste management system which would include:

a. The opening of a site or facility that requires an authorization under the Environmental Management Act that is not currently recognized in this Plan;
b. Any other facility that could have an adverse impact to human health or the environment, as determined by the BC Environmental Management Act;
c. Waste import / export options which would significantly impact the regional district's or neighbouring solid waste systems, or not conform to provincial legislation, goals and / or targets; and
d. Major financial changes that warrant seeking elector assent.

When a plan amendment becomes necessary, the CRD will undergo a public consultation process and submit an amended plan to the Minister of Environment for approval, along with a detailed consultation report.

14 Dispute Resolution

Although consultation efforts may prevent or minimize conflicts, at times disputes may arise during development or implementation of the plan. To this end, a dispute resolution procedure has been included to address complaints or concerns that occur during plan development or implementation.

This dispute resolution procedure, included as Schedule B, may apply to the following types of conflicts that could arise during plan implementation:

- Administrative decisions made by the regional district such as:
  - The issuance of a license
  - Interpretation of a statement, bylaw, policy or provision in the plan
- Any other matter not related to a proposed change to the wording of the plan or an operating certificate

Schedule A: Solid Waste Advisory Committee Terms of Reference

PREAMBLE

The Capital Regional District (CRD) Solid Waste Advisory Committee is an Advisory Committee established by the CRD Environmental Services Committee to provide input on solid waste management matters and meet the requirements of the Ministry of Environment's Guide to Solid Waste Management Planning for an advisory committee on the development and implementation of the Solid Waste Management Plan (SWMP).

The Committee's official name is to be: Solid Waste Advisory Committee

1.0 PURPOSE

The mandate of the Committee includes advising the Environmental Services Committee regarding the following:

a. providing input on major solid waste management matters
b. serving as the advisory committee to the Steering Committee (Environmental Services Committee) on the development of Revision 3 of the SWMP
c. acting as plan monitoring advisory committee for the new SWMP, once approved

2.0 ESTABLISHMENT AND AUTHORITY

a. The Environmental Services Committee will:
    - appoint the committee members for up to a three-year term
    - act as the Steering Committee for Revision 3 of the SWMP
    - appoint a member as the liaison between the advisory committee and the Environmental Services/Steering Committee
b. The Committee will report its input to the Environmental Services Committee for consideration. The CRD Board is the final decision-making authority.

3.0 COMPOSITION

The Committee shall consist of members representing a diversity of background, interests and geographical location, representing a balance between technical and non-technical members and industry and public members, as follows:

Representation	Number of Members
Regional district director (member of Environmental Services Committee)	1
Municipal engineering staff who are involved in solid waste collection	2
Electoral Area representative	1
First Nations	2
Environmental organizations	1
Business groups	1
Non-profit group with an interest in solid waste (e.g. reuse organization)	1
Large waste generators (industrial, commercial, institutional)	2
Owners/operators of private waste management facilities	2
Private sector industry collection service providers	2
Composting industry representative	1
Product stewardship agency	1
Community representative (representing Prospect Lake/Hartland area)	1
Public representatives, at large	3
Willis Point representative	1
District of Highlands representative	1
Solid Waste Technology representative	1

4.0 PROCEDURES

a. The CRD Board Procedures Bylaw will apply.
b. Member from Environmental Services Committee shall be Chair of Solid Waste Advisory Committee.
c. The committee shall meet at the call of the Chair and have special meetings, as required.
d. The agenda will be finalized in consultation between staff and the Chair.
e. A quorum is a majority of the committee membership and is required to conduct committee business.

5.0 RESOURCES AND SUPPORT

a. The Senior Manager, Environmental Resource Management, will lead the coordination and allocation of resources to the Committee.
b. Minutes and agendas are prepared and distributed by the Environmental Resource Management division.

Schedule B: Plan Dispute Resolution Procedures

Disputes will be settled using the following procedure:

Negotiation	• Parties involved in the dispute shall make every effort to resolve the dispute on their own through non-facilitated communication. If necessary, the parties will provide each other with a written summary of their position and any relevant supporting documentation. • Parties may agree to make use of a facilitator.
If this is unsuccessful, then:	
Environmental Services Committee	• Parties involved in the dispute will have opportunity to speak to the Committee. • Committee will review, consider and provide recommendations to the Board. Committee may refer to the Solid Waste Advisory Committee.
Then:	
CRD Board	• Board will receive recommendations from the Committee and settle the dispute; or, recommend mediation.
If the board is unable to settle the dispute, then:	
Mediation	• A neutral, impartial third-party facilitator who is acceptable to all the parties to the dispute will be selected. Using appropriate mediation techniques, the facilitator will attempt to develop a solution which satisfies all parties. The facilitator has no decision-making authority. If the parties cannot agree on a mediator, the matter shall be referred to the BC Mediation Roster Society or equivalent roster organization for selection of a mediator. • All efforts will be made to reach an agreement through mediation. • Costs for mediation will be shared by the parties in dispute.
If this is unsuccessful, then:	
Independent Arbitrator	• If the dispute cannot be resolved by a mediator, the matter will be referred to arbitration and the dispute will be arbitrated in accordance with any applicable legislation. A neutral, impartial third-party arbitrator who is acceptable to all the parties to the dispute will be selected. The arbitrator hears each party's evidence and arguments and renders a final, binding decision. • Costs for arbitration shall be apportioned at the discretion of the arbitrator.

Further to the above, the following principles will be followed if and when the dispute resolution process is invoked:

i. The parties will make all reasonable efforts to attempt to resolve the dispute in an amicable manner without outside intervention

ii. Disputes will be attempted to be resolved as early and at the lowest administrative level as possible; every effort will be made to avoid disputes requiring a formal resolution process

iii. The formal process is not intended to deal with inconsequential or frivolous disputes

iv. The cost of mediation or adjudication will be shared by the parties to the dispute

v. Information or data related to the dispute will be shared by the parties

vi. Rules of confidentiality and freedom of information will apply

Schedule C: Implementation Schedule

	Ongoing
	Planning/Design Phase
	Implementation Phase

Implementation Schedule is subject to revision based on annual review and Board direction.
Actions listed have been condensed in this schedule for readability, full descriptions can be found in Section 5.

Plan Strategies & Actions	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030
Reduction and Reuse										
Strategy #1: Continue and Enhance Education Programs (medium-term, 5 year goal)										
A. Ensure ongoing, up-to-date promotion and education resources										
B. Incorporate behaviour change components wherever possible										
C. Expand and prioritize education programs for the multi-family and industrial, commercial and institutional sectors										
D. Enhance K-12 school program to include concepts of zero waste and the circular economy										
E. Collaborate with stakeholders on education campaigns										
F. Continue supporting environmental stewardship recognition										
G. Continue to engage residents on solid waste matters										
Strategy #2: Encourage Waste Prevention (medium term, 5 year goal)										
A. Promote less consumption and advocate for consumer responsibility										
B. Establish a community-based waste reduction grant program										
C. Support municipal, provincial and federal single-use item reduction efforts										
D. Promote sustainable and/or packaging-free purchasing options										
E. Advocate to limit or eliminate manufacturing, distribution and/or sale of single use and non-recyclable materials										
F. Advocate provincially and federally for sustainable product design										

Plan Strategies & Actions	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030
Strategy #3: Support Reduction of Avoidable Food Waste (short-term, 3 year goal)										
A. Continue to support residential food waste reduction										
B. Continue to encourage the donation of edible food and support of food recovery organizations										
C. Advocate for regulations that support avoiding food waste										
Strategy #4: Support Reuse Activities in the Region (medium term, 5 year goal)										
A. Continue to provide funding for non-profit recycling organizations for managing unusable donations										
B. Continue to support and promote donations to reuse establishments										
C. Support reuse, renting and sharing programs										
D. Investigate the possibility of a free store at Hartland or other facilities										
Strategy #5: Support Local Governments in Working towards Zero Waste and a Circular Economy (medium term, 5 year goal)										
A. Develop model language for use by local governments										
B. Work with local governments to identify need for solid waste facilities/zoning for activities										
C. Use policy tools to enable local recycling infrastructure										
D. Investigate 'pay-as-you-throw' principles										
E. Investigate use of clear bags for garbage/recyclables collection										
Strategy #6: Continue and Enhance Policy Development (medium term, 5 year goal)										
A. Develop model procurement policies for use by local governments, non-profits, etc.										
B. Continue to expand material bans when viable alternatives exist										
C. Investigate licensing waste management facilities in the region										
D. Investigate regulatory mechanisms to manage municipal solid waste and recyclable materials in the region										
E. Investigate options for managing debris from extreme weather										

Plan Strategies & Actions	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030
Recycling										
Strategy # 7: Increase Residential Diversion (medium term, 5 year goal)										
A. Continue to promote residential diversion of recyclable and organic materials										
B. Support depot diversion efforts for non-curbside materials										
C. Encourage local processing and markets for residential recyclables										
D. Develop tools to support event recycling										
Strategy #8: Increase Multi-Family Diversion (medium term, 5 year goal)										
A. Allocate resources to support multi-family recycling										
B. Develop multi-family waste source separation requirements										
C. Develop policy guide and recommendations for waste management in multi-family developments										
D. Implement support for multi-family recycling										
Strategy #9: Increase Industrial, Commercial and Institutional Diversion (medium term, 5 year goal)										
A. Allocate resources to increase ICI diversion										
B. Advocate to expand the packaging and paper product extended producer responsibility program to the industrial, commercial and institutional sector										
C. Create a business waste reduction toolkit, including education about circular economy principles										
D. Encourage municipalities to require waste management plans with business licenses										
E. Develop policy guide for industrial, commercial and institutional waste management space and access requirements										
F. Develop industrial, commercial and institutional waste source separation requirements										
G. Investigate shifting disposal ban enforcement to industrial, commercial and institutional generator, rather than hauler										

Plan Strategies & Actions	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030
Strategy #10: Support Existing and New Extended Producer Responsibility Programs (medium term, 5 year goal)										
A. Advocate to the province to expand extended producer responsibility programs										
B. Increase consumer awareness about extended producer responsibility programs.										
C. Advocate for increased return-to-retailer opportunities										
D. Advocate federally to standardize extended producer responsibility programs across Canada										
Strategy #11: Increase Organics Diversion and Processing Capacity (short term, 3 year goal)										
A. Continue to promote organic waste material diversion										
B. Continue to utilize and monitor existing processing capacity										
C. Support compost markets by purchasing back materials										
D. Develop guidelines for use of compostable products and packaging										
Strategy #12: Increase Construction, Renovation & Demolition Material Diversion (short term , 3 year goal)										
A. Develop a comprehensive construction, renovation & demolition strategy										
B. Develop educational tools to support construction, renovation & demolition material diversion										
C. Promote green building standards										
D. Develop and use policy tools to maximize diversion and to align management plans										
E. Investigate beneficial uses of construction, renovation & demolition waste, including a clean wood waste landfill ban										
F. Investigate banning or surcharging mixed construction, renovation & demolition loads at the landfill										
G. Further develop programs for managing hazardous materials (like asbestos)										
Strategy #13: Encourage Proper Public Space Waste Management Activities (med term, 5 year)										
A. Develop educational materials to prevent and reduce litter and abandoned materials										

Plan Strategies & Actions	2021	2022	2023	2024	2025	2026	2027	2028	2029	2030
B. Continue promoting alternatives to abandoned materials and illegal dumping activity										
C. Develop a regional approach to prevention of illegal dumping										
D. Investigate developing regionally-aligned litter bylaws										
E. Develop and pilot methodologies to 'observe, record and report' abandoned material and illegal dumping incidents										
F. Investigate options for large bulky item disposal										
Recovery and Residuals Management										
Strategy #14: Optimize Landfill Gas Management										
A. Continue to maximize and optimize the capture of landfill gas for beneficial use										
B. Investigate collaboration opportunities with educational institutions										
Strategy #15: Enhance Hartland Disposal Capacity										
A. Review Hartland tipping fee structure and ban enforcement levels										
B. Continue to operate Hartland Landfill using best practices										
C. Develop design options to maximize disposal capacity of Hartland Landfill to until 2100 and beyond										
D. Continue to conduct research and investigate and report out on emerging waste management technologies										

Schedule D: Estimated Financial Impact

ERM Budget Implications Arising From Achieving 250 kg Per Capita Disposal Rate by 2030										
	2021	**2022**	**2023**	**2024**	**2025**	**2026**	**2027**	**2028**	**2029**	**2030**
Total Revenue [1, 2, 4]	**$24,413,500**	**$24,472,500**	**$24,182,090**	**$27,322,276**	**$27,163,064**	**$27,004,459**	**$26,736,469**	**$26,469,099**	**$26,202,355**	**$25,881,243**
Total Expenditures[3]	$25,462,000	$24,453,000	$24,178,000	$31,403,000	$27,403,000	$27,403,000	$27,403,000	$28,087,000	$28,275,000	$28,742,000
Net Annual Surplus/Deficit	**-$1,048,500**	**$19,500**	**$4,090**	**-$4,080,724**	**-$239,936**	**-$398,541**	**-$666,531**	**-$1,617,901**	**-$2,072,645**	**-$2,860,757**
Combined Reserve Fund Balance[3, 4]	$49,671,000	$34,824,000	$19,671,000	$15,590,276	$15,350,340	$14,951,799	$14,285,268	$12,667,366	$10,594,721	$7,733,964
Per Capita Disposal Rate	316	313	310	302	295	287	278	269	260	250

[1] General refuse tipping fee is $110 per tonne

[2] Controlled waste and asbestos tipping fees are $157 per tonne

[3] From CRD Finance and includes Sustainability, Equipment, Capital, Closure and Air Space reserve funds (2021 budget doc - Sept 2020).

[4] The Hartland renewable natural gas project significantly impacts reserve balances to fund construction (2022-2023) and increases revenues starting in 2024

APPENDIX B

PROPOSED PLAN REVISIONS

In line with provincial guidance, staff have considered all feedback received through phase two consultation. A fulsome summary of the feedback received, cross referenced against the draft plan, along with proposed approach to addressing feedback is found in Appendix D of the staff report. In response to phase two consultation, staff recommend a series of revisions that have been incorporated into the final draft Plan. These revisions include:

Glossary

- Definition of zero waste has been added to the plan.

Section 1.4: Climate Change and the Solid Waste Management Plan

- Content has been strengthened to further highlight the inter-relationship between climate change and solid waste management. This section discusses the greenhouse gas implications of the waste system more broadly than the landfill, references the important roles that zero waste and the circular economy play in addressing climate change, and identifies the potential to mitigate fugitive emissions from the landfill.

Section 4.2.2.1.6: Hartland Landfill (Estimated Lifespan)

- Content has been revised to speak more explicitly to the vision to keep the Hartland footprint as small as possible, and to review evolving regional demand and landfill capacity as part of the annual progress report on the Solid Waste Management Plan before phasing-in future development of the Hartland Property in 2030, unless more waste is diverted, or a new technology for managing waste becomes available and economically feasible for the CRD.

Section 4.2.2.1.7: Hartland Landfill (Community Benefit)

- Content has been revised to speak to how phasing-in future development of the Hartland Property will impact the existing mountain biking trails, and that if closing trails is necessary, staff will work with the mountain biking community on alternative trail options.

Section 5: Strategies and Actions

- A new paragraph has been added in the preamble that explains why the actions are articulated at a high-level and clarifies the scope of the plan as a guiding document intended to provide the policy framework to guide the CRD's programming around solid waste, rather than specific operational details.
- Minor revisions have been made to actions throughout, to clarify intent and ensure actions are consistent in their level of detail.
- Action 1E has been revised to explicitly reference First Nations groups.
- Actions 3B and 3C have been merged into one for clarity.
- Action 11B has been revised from "develop an organic waste processing facility at the Hartland Landfill site to receive and process kitchen scraps" to "continue to utilize and monitor existing private sector organics processing capacity and seek to develop a facility at the Hartland Landfill site in the future, should needed processing capacity not be found to be sufficiently available to meet the region's needs".
- Action 14A has been revised to clarify the CRD's intent to both maximize and optimize the beneficial use of landfill gas.
- Action 15C has been revised to explicitly reference the revised content within 4.2.2.1.6 on Hartland Landfill estimated lifespan (see above).
- Action 15D has been revised, based on feedback from the Township of Esquimalt, to clarify intention to explore alternatives to landfilling—including integrated resource management and gasification—and report out on findings.

Section 6: Organics Processing Facility Decision Process

- Section has been revised to indicate that the CRD intends to continue to provide the community with receiving and transport services for kitchen scraps through the transfer facility at Hartland, while monitoring in-region and on-island organics processing capacity. In response to a need to secure additional processing capacity for the community, a facility at Hartland may also be pursued in an effort to reduce the greenhouse gas emissions associated with the current transportation and processing model.

Section 11: Plan Monitoring and Measurement

- Section 11 now includes explicit commitment to publicly promote the annual report/per capita disposal rate.

Plan Appendices

- Following the *Guide to Solid Waste Management Planning*, the detailed evaluation of the plan strategies and actions, and the public consultation feedback on Hartland Landfill was included for engagement purposes and has been removed from the final draft Plan and is on the CRD website. The phase one and phase two engagement reports will be filed directly with the Ministry as part of the submission seeking plan approval, and are also on the website. The final draft plan now includes four schedules:
  - Schedule A: Solid Waste Advisory Committee Terms of Reference
  - Schedule B: Plan Dispute Resolution Procedures
  - Schedule C: Implementation Schedule
  - Schedule D: Estimated Financial Impact.

There have been no significant changes to the content of these schedules, except Schedule D, Estimated Financial Impact now considers the financial impact of the proposed Hartland access mitigation funding of up to $4 million.

Capital Regional District

Phase 2 Engagement Summary — Draft Solid Waste Management Plan

Final Report Date: April 13, 2021

Executive Summary

The Capital Regional District (CRD) is developing a new Solid Waste Management Plan (SWMP)—the plan that guides how the region will manage solid waste in the coming years. Solid waste includes recyclables, compostable materials and garbage from homes, businesses, institutions, and construction and demolition sites.
Solid waste management planning is a regional district responsibility, guided by the provincial Environmental Management Act and the provincial Guide to Solid Waste Management Planning. Public engagement is an important aspect of the development of a SWMP. In October 2018, the CRD Board approved guiding principles, goals and objectives for the new plan. In September 2019, the Board approved a waste reduction target and 15 proposed strategies with associated actions and directed staff to conduct a first phase of public consultation.

Phase 1 of public engagement was extensive and took place between October 18 and December 1, 2019. This first round was largely focused on research and consultation with the general public and a consultation report was completed in February 2020. Phase 2 of public and interested parties engagement took place from November 18, 2020 to February 15, 2021. This phase focused on consultation with CRD municipalities, local First Nations, neighbouring regional districts, Hartland neighbours as well as additional general public consultation.
The primary focus of this document is to present a summary the approach and feedback gathered in Phase 2.

Various forms of outreach were used in the consultation process including Chief Administrative Officer (CAO) letters offering presentation and invitation for input, a media release, social media (paid and earned), print media, emails to interested residents, online public information sessions, site tours of Hartland Landfill, focused community input meetings and direct neighbourhood outreach. The outreach approach adhered to Ministry of Environment and Climate Change's (ENV) provincial consultation requirements.

Several CRD municipal councils received presentations and formally provided expressions of support for the Draft Plan as well as confirmed many areas of alignment within their own municipal plans, including Victoria, Central Saanich, Saanich, Oak Bay and Esquimalt. Highlands received a presentation and provided neither support nor opposition to the Draft Plan. All other municipalities provided no response. What we heard from municipalities:

- No formal opposition was expressed from any municipality;
- Support for the Draft Plan and its focus on the 5R Pollution, Prevention Hierarchy;
- Desire for the CRD to maximize the use of municipal authorities to reduce waste, providing the necessary resources to support municipalities;
- Desire for the CRD to provide bold leadership and facilitate accelerated regional collaboration on powerful actions that achieve the waste disposal targets;

- City of Victoria's *Zero Waste Victoria* plan aligned. A desire to prioritize and accelerate actions within the SWMP to better support the City's implementation of *Zero Waste Victoria* and to demonstrate leadership in the circular economy.

Similarly, neighbouring Cowichan Valley Regional District provided formal written support of the Draft Plan and Regional District of Nanaimo reciprocated CRD's invitation with a presentation of their own SWMP.

CRD staff also met with WSÁNEĆ Leadership Council (WLC) and delivered a presentation that was well received. The WLC expressed desire for the CRD to establish a WSÁNEĆ Leadership Council/Capital Regional District negotiation table and provide information regarding the Solid Waste Management Plan to WSÁNEĆ communities. Esquimalt First Nations also received a presentation and the meeting was generally positive.

Public Consultation in Phase 2 was built upon extensive Phase 1 consultation activities. The 'public' category was subdivided into two segments: A) general public and B) community groups/residents living near Hartland Landfill. Much of Phase 2 public consultation was with community associations and community groups in immediate proximity to Hartland Landfill for whom the expansion and changes in traffic patterns would have the most direct impact. Specifically, Highlands District Community Association (HDCA), Prospect Lake District Community Association (PLDCA), Willis Point Community Association (WPCA) and the Mount Work Coalition (MWC).

Both MWC and WPCA have expressed vocal opposition to the Draft Plan. There appears to be some overlap between these two groups as MWC is comprised of mostly of WPCA residents as well as residents living close to the area. Summary of key feedback we heard:

- Traffic/traffic safety around Hartland Landfill was a key concern (vehicle, cycling and pedestrian safety; key intersections)
- Opposed any expansion and strongly supported more aggressive reduction targets
- Strongly opposed to any tree removal and destruction of natural habitat
- Concerned about illegal dumping
- Concerned about loss of peaceful parkland/ impact on bike trails
- Felt reliance on tipping fees to fund Hartland's operations is counter-intuitive to zero waste
- Want Hartland decision postponed so that both waste reduction achieved in the CRD, and the effectiveness of alternative methods be reviewed by Hartland staff and the CRD board in 2028 prior to any approval of Draft Plans to expand the landfill

PLDCA also expressed concerns though almost entirely focused on a single issue — traffic/traffic safety as it relates to the operational change to move commercial access to Hartland Landfill. Although this change is not part of the Draft Plan, a traffic study was commissioned and a copy of this study was placed on the website for reference and comment during Phase 2 consultation in recognition that traffic was a key concern for Hartland-area neighbours.

Phase 1 Recap

The Capital Regional District (CRD) is developing a new Solid Waste Management Plan (SWMP)—the Draft Plan that guides how the region will manage solid waste in the coming years. Solid waste includes recyclables, compostable materials and garbage from homes, businesses, institutions, and construction and demolition sites.

Solid waste management planning is a regional district responsibility, guided by the provincial Environmental Management Act and the provincial Guide to Solid Waste Management Planning. Public engagement is an important aspect of the development of a SWMP. In October 2018, the CRD Board approved guiding principles, goals and objectives for the new plan. In September 2019, the Board approved a waste reduction target and 15 proposed strategies with associated actions and directed staff to conduct a first round of public consultation.

The CRD carried out an extensive first phase of public engagement that sought feedback on the goals and strategies proposed for a new regional solid waste management plan in late 2019.

Phase 1 public engagement took place between October 18 and December 1, 2019. During this phase, all capital region residents were invited to provide their input through a variety of channels, including an online feedback form—the CRD received more than 1000 of these forms during the course of phase one—and in-person opportunities at 21 open houses and stakeholder meetings.

A phase 1 consultation report was completed in February 2020. Draft Plan elements and detailed feedback are available for review at www.crd.bc.ca/rethinkwaste

Phase 2 Engagement Approach

Phase 2 consultation took place between November 18, 2020 and February 15, 2021. It was focused on CRD municipalities, local First Nations, neighbouring regional districts as well as additional public consultation. Outreach methods were comprised of letters, phone calls, presentations, advertising, social media, site tours, website, rolling FAQ and information sessions. A breakdown of approach by audience segment is summarized below.

Municipalities, Electoral Areas and Neighboring Regional Districts Outreach Approach

At the outset of Phase 2 engagement, CAO letters were sent to each CRD municipality, electoral area as well as Nanaimo and Cowichan Valley Regional Districts offering presentation and invitation for feedback. Response from municipalities was mixed with several groups requesting presentations whereas others provided letter of support without presentation, others provided no response at all.

- Presentations and letters of support: Central Saanich, Victoria, Saanich, Oak Bay, Esquimalt
- City of Colwood staff asked for a meeting to discuss the Draft Plan but did not bring the report to council.

- Town of Sidney provided a letter of support without a presentation.
- District of Highlands requested a presentation but have not yet provided a letter of support or opposition.
- Municipalities that did not respond at all include most of the West Shore and North Saanich.

First Nations Outreach Approach

Similar to the approach taken with municipalities and regional districts, a CAO letter offering presentation and invitation for feedback was sent to local First Nations.

General Public Outreach Approach

From November 18, 2020 to February 15, 2021, general public outreach to inform and solicit feedback took a few different forms:

- Media Release
- Print Advertising: Times Colonist and Black Press newspapers (two rounds)
- Social Media (paid and organic): Eight Facebook posts and nine tweets
- Emails: Four emails sent to SWMP project subscriber list inviting feedback (358 residents)
- Online Public Information Session: Moderated by Gregor Craigie (via YouTube Live) the session received
  410 total views with 82 people watching live for some or all of the session.
  110 questions came in via Slido for this event that were either answered live or in the FAQs following the event.

Figure 1. Example of earned media Nov 18, 2020

Figure 2. Social media post promoting live-streamed information session

Hartland Neighbours Outreach Approach

Recognizing that municipalities and communities in close proximity to Hartland Landfill would be most affected by landfill development and traffic changes, an outreach program was specifically designed to engage with these audiences. Formal touchpoints included:

- Direct Outreach: At the outset of the public engagement process, a copy of the Draft Plan along with an invitation for input was sent to Highlands District, Prospect Lake District and Willis Point Community Associations.
- Small Group and Individual Site Tours: Three tours of Hartland Landfill and the Residuals Treatment Facility were organized. One took place, two were cancelled due to new provincial health orders. As an alternative, CRD staff offered individual tours of the site to all members of the Willis Point,Prospect Lake and Highlands District Community Associations. Several reminders of this tour offer were made via email and during Zoom calls held in January. To date nobody has taken up this opportunity.
- Focused Community Input Meetings: CRD staff organized two video meetings with the Highlands District, Prospect Lake District and Willis Point Community Associations on January 13 (27 area residents participated) and January 21 (38 areas residents participated).

It is acknowledged that the CRD SWMP public engagement process occurred during the Covid-19 pandemic. Some outreach initiatives were modified from in-person to online to reflect provincial health orders.

Opposition Groups Outreach Approach

One community association and one advocacy group have expressed vocal opposition to the Draft Plan — the Willis Point Association (WPCA) and Mount Work Coalition (MWC). There appears to be some overlap between these two groups as MWC is comprised of mostly of WPCA residents as well as residents living close to the area.

In addition to the formal communication touchpoints noted above, CRD staff responded to every request received during the feedback period. This included 15 inquiries and requests for access to reports and operational documents that were satisfied in a timely manner.

Confirmation of Adherence to Provincial Consultation Requirements

The Ministry of Environment and Climate Change's *Guide to Solid Waste Management Planning* was used by CRD as its framework for consulting with the general public and interested parties.

Consultation audiences per ENV Guidelines included First Nation communities, municipalities and electoral areas, neighbouring regional districts and the general public. In addition, though not stipulated by the Guidelines, CRD's

Board required Hartland neighbours be segmented for additional consultation as they most directly experience any impacts of landfill development and traffic changes.

The design of the consultation process reflects section B4.2 of the Guidelines and included numerous touch points to engage, build understanding of the Draft Plan and solicit input. Through its approach, CRD has demonstrated that the public and interested parties were consulted on the Draft Plan and that the outcome of consultation were considered in the finalization of the Draft Plan.

Municipal Governments Consultation Findings

Each of Capital Regional District's 13 municipalities and three electoral areas were consulted in Phase 2. Each received a CAO letter with the offer of a presentation and invitation for input. In response, several municipalities provided letters of support. These letters can be found in Appendix A.

District of Central Saanich

A presentation of the Draft Plan was delivered at a council meeting. Following this, District Councilors reviewed and provided a letter endorsing the Draft Plan.

City of Colwood

City of Colwood staff asked for a meeting to discuss the Draft Plan but did not bring the report to council. An endorsement letter has not been received to date though a suggestion that one might be coming was conveyed.

Township of Esquimalt

A presentation of the Draft Plan was delivered at a council meeting. Following this, Council provided a letter that expressed support of the Draft Plan along with a request for modification.

WHAT WE HEARD

- Specially, that the Draft Plan is deficient in not referring to the Township's attempt to carry out an integrated resource management strategy for solid waste, kitchen scraps and yard/garden waste streams generated within the Township. The Township is requesting the CRD include, within the SWMP, supportive language that addresses the Township's efforts in this endeavor.

District of Highlands

CRD staff met with the District of Highlands and delivered a presentation of the Draft Plan at a council meeting. To date neither a letter of support or opposition has been provided.

District of Oak Bay

District Council reviewed and provided a letter of support endorsing the Draft Plan as well as thanked CRD for the input opportunity.

"As a municipal partner in regional solid waste management, Council very much appreciated your offer to have CRD staff meet with them to review the Plan in more detail and as questions" Lou Varela, CAO

District of Saanich

Saanich is among the largest contributing regions of waste disposed of at Harland. A presentation of the Draft Plan was delivered at a council meeting. Following this, District Council provided a letter expressing support for the Draft Plan and for its focus on the 5R Pollution, Prevention Hierarchy.

WHAT WE HEARD

- Desire for the CRD to provide bold leadership and facilitate accelerated regional collaboration on powerful actions that achieve the waste disposal targets.
- The desire for the CRD to maximize the use of municipal authorities to reduce waste, providing the necessary resources to support municipalities, including the development of additional bans, surcharges, CRD bylaws, model municipal bylaws, processing facilities, requirements and guidelines that support actions such as waste stream management licensing, construction waste diversion, source separation in multi-family residences, use and acceptance of compostable and bio-based food service ware etc.
- The desire for the Draft Plan to reference the additional benefits of a regional organics processing facility associated with the greenhouse gas (GHG) emissions savings from the reduced transportation of organics outside of the region.

"These actions are clearly aligned with the CRD Draft SWMP. Further, most of the strategies and actions identified within the Draft SWMP will support the District of Saanich in implementing Climate Plan Strategy F2 and assist us in reaching our climate targets. As such, staff support the strategies and actions outlined in the Draft SWMP."

Town of Sidney

Town Council reviewed and provided a letter conveying their endorsement of the Draft Plan.

City of Victoria

It is estimated that one-third of the waste disposed at Harland is generated by residents, businesses, industry and construction activities within Victoria. A presentation of the Draft Plan was delivered at a council meeting. Following

this, letters were received by both Victoria City Manager as well as the Mayor. They reinforced that theCity's *Zero Waste Victoria* plan aligned well with the CRD's SWMP and that a desire for collaboration and accelerated action exists.

WHAT WE HEARD

Desire to prioritize actions within the SWMP to support the City's implementation of Zero Waste Victoria:

1. Organics diversion
    - That the CRD accelerate the creation of requirements for source separation in multi-family residences and commercial businesses, including through a model bylaw, to promote consistent messaging and compliance.
    - That the CRD accelerate the development of guidelines for the use and acceptance of compostable and bio-based food service ware.
2. Construction, renovation and demolition material diversion
    - That the CRD establish a waste stream management licensing bylaw for private solid waste transfer stations and recycling facilities operating in the region.
    - That the CRD prioritize implementing bans and/or surcharges for clean wood waste and mixed construction waste at the Hartland Landfill.
    - That the CRD prioritize work with member municipalities to develop requirements and guidelines for construction waste diversion including measures to grow the regional market for salvaged construction and demolition materials.
3. Supporting municipalities working toward zero waste and circular economy
    - That the CRD lead regional collaboration and leverage municipal authority.
    - The CRD can also demonstrate leadership by prioritizing waste stream management licensing (Strategy 6.C) and source separation requirements (Strategies S.B and 9.F).

"Victoria staff very much welcome the comprehensive and progressive range of strategies and actions and comment the inclusive and collaborative approach taken by your team in developing this highly important plan."

Non-Response Municipalities

The following communities received the Draft Plan, CAO letter offering of presentation and invitation for input. To-date no response either in support or in opposition has been received.

City of Langford

District of Metchosin

District of North Saanich

District of Sooke

Town of View Royal

Electoral Areas

The following electoral areas received the Draft Plan, CAO letter offering of presentation and invitation for input. To date no response either in support or in opposition has been received from Salt Spring or Southern Gulf Islands electoral areas. Willis Point is within Juan de Fuca electoral area, is a Hartland neighbouring community and has expressed concerns about the Draft Plan.

Salt Spring Island Electoral Area;
Southern Gulf Islands Electoral Area, which includes Galiano Island, North Pender Island, South Pender Island, Saturna Island, Mayne Island, and smaller islands in the vicinity; and
Juan de Fuca Electoral Area, which includes the areas of East Sooke, Jordan River, Malahat, Otter Point, Port Renfrew, Shirley, Willis Point, and inland rural areas.

First Nations Consultation Findings

First Nations communities located within the CRD region include: Beecher Bay, Esquimalt, Malahat, Pacheedaht, Pauquachin, Penelakut, Songhees, Tsartlip, Tsawout, Tseycum and T'Sou-ke Bands. Each of these Bands has reserve lands within the boundaries of the CRD.

CRD staff met with Esquimalt First Nation and delivered a presentation of the Draft Plan and this meeting was generally positive. Neither support nor opposition was expressed.

Similarly, CRD staff also met with WSÁNEĆ Leadership Council (WLC) and delivered a presentation that was well received. In return WLC provided a letter with feedback and suggestions. A copy of this letter can be found in Appendix B.

WHAT WE HEARD

Commitment to inform among First Nations communities

WLC would like CRD to share information regarding the SWMP with Tsartlip, Tsawout, and Tseycum community members by way of WLC communication portals, social media and a newsletter. Inform communities about opportunities on an ongoing basis and, considering the extent of the SWMP and Hartland Landfill facilities, deeper and more meaningful consultation moving forward.

Educate First Nation communities on waste reduction principles

Educational material needs to be made available to the WSÁNEĆ community to promote the principles of waste reduction and share information on waste reduction opportunities.

Creation of WLC-CRD negotiation table

Request the creation of negotiation table and meeting schedule per agreement under the current Residual Treatment Facilities Memorandum. Given that Hartland Landfill is a major CRD operation in the WSANEC territory and also is the site of the SWMP, WLC is interested in negotiating impact benefits and partnership agreements.

GENERAL COMMENTS

"WLC would like to acknowledge the work the CRD is doing toward reconciliation and look forward to the next steps in our relationship."

Neighbouring Regional Districts

CRD's outreach to interested parties including the neighbouring Regional Districts of Cowichan Valley and Nanaimo. Both received CRD's Draft Plan and an offer of a presentation and invitation for input.

Cowichan Valley Regional District provided a letter of support confirming Board adoption of a resolution to endorse CRD's Draft Plan. This letter of support can be found in Appendix C.

In the spirit of regional collaboration, staff from the Regional District of Nanaimo gave a presentation of their SWMP to CRD's Environmental Services Committee in February, 2021.

"The CRD definitely has one of the lowest per capita disposal rates in the Province and, I would argue, it's one of the lowest per capita disposal rates in the world." — Larry Gardner, Manager of Solid Waste for Regional District of Nanaimo

Several of members of the public, community association and groups mentioned municipalities of Victoria and Nanaimo as examples of regions with strong solid waste management initiatives. As such, it should be noted that in March 2021, CRD was ranked as the top regional district with the lowest waste level per household among all British Columbia municipalities.

Public Consultation Findings

Phase 2 built upon public consultation activities of Phases 1. The 'public' category can be subdivided into two segments: A) general public and B) community groups/residents living near Hartland Landfill.

As acknowledged by Ministry of Environment in its *Guide to Solid Waste Management Planning*, it is unrealistic to expect everyone involved in the process to agree on approaches to solid waste management planning in the region. Through its approach, CRD has demonstrated that the public and interested parties were consulted on the Draft Plan and that the outcome of consultation was considered in the finalization of the Draft Plan.

GENERAL PUBLIC

Through February 15, 2021, feedback was received from the general public through www.crd.bc.ca/rethinkwaste A comprehensive summary of all 208 verbatims gather through the entire consultation process can be found in Appendix F. Feedback sentiment was a mix of supportive and critical. Similar reoccurring themes emerged.

Additionally, 18 letters from the general public were sent to the CRD Board directly. Most were the same form letter expressing opposition of the Hartland Landfill expansion and were the result of an effort by regional advocacy group, Mount Work Coalition.

WHAT WE HEARD

Supportive

Of the feedback that could be interpreted as 'supportive' of the Draft Plan, the three most commonly reoccurring feedback were:

- Felt the Draft Plan reflects ambitious reduction goals
- The Draft Plan is based on rational analysis
- Reflected a well-thought multi-pronged approach

"As a lifetime resident of Victoria (69 years), I support the expansion of Hartland waste facility and the adoption of a waste treatment plan based on rational analysis considering costs and not on dogma."

"I am 100% in favour of moving the commercial access to Willis Point Road and think it is logical and supported by facts as per the traffic study. I also support the guiding principles and goals outlined in the plan."

Critical

Of the feedback identified as 'critical' in nature, most appear to be based on the same four key issues of concern:

- Strongly opposed to the removal of trees (most frequently recurring comment)
- Desire for more aggressive waste reduction initiatives rather than landfill expansion (zero-waste)
- Negative impact on park/mountain bike trails
- Feel the Draft Plan is not in alignment with addressing climate emergency

"I am against the destruction of more natural habitat and instead I propose that strategies for the reduction of waste get more attention and funding. "

"I just read Jon O'Riordon's recent article, "Strive for zero waste, not expanding landfill" (Times Colonist Dec. 17, 2020), and have also read portions of the CRD draft solid waste management plan. I feel that the zero-waste target that the CRD has set (250 kilograms/person by 2030) is not nearly ambitious enough…."

Contrasting feedback

Some strategies and actions generated both positive sentiments and a desire for changes to the Draft Plan. These theme areas included:

- Desire for the exploration of gasification and incineration options as a means to eliminate expansion requirements; also desire to avoid thermally combusting waste and opposition to gasification and incineration;
- Looking for additional incentives or penalties to encourage/enforce reduction of waste;
- Range of views around the plan's waste diversion targets from a desire to strengthen the target to a feeling that the target is too ambitious.

"I am heartened by the knowledge that reforestation on closed areas of Hartland Landfill are ongoing, but also hope that the CRD will look for opportunities to expand public parkland elsewhere in the region to make up for the loss of trails that must be closed. Thank you for the opportunity to review the plan and offer feedback."

"The CRD and partnering municipalities should explore gasification as a means of generating energy and reducing deposits to the landfill.

HARTLAND NEIGHBOURS

Much of Phase 2 public consultation was with three community associations in immediate proximity to Hartland Landfill for whom the development and changes in traffic patterns would have the most directimpact. Specifically, Willis Point Community Association (WPCA), Highlands District Community Association (HDCA) and Prospect Lake District Community Association (PLDCA). Letters from the community associations can be found in Appendix D.

In tandem with the creation of the Draft Plan a traffic study was commissioned to understand the potential impacts of moving commercial access to Hartland Landfill from Hartland Avenue to Willis Point Road. Although not a formal part of the Draft Plan, a copy of the traffic study was placed on the website for reference and comment given that the predominant concerns from Hartland neighbours were traffic related.

1. Prospect Lake District Community Association

WHAT WE HEARD

Traffic safety is key concern

Vehicle, cycling and pedestrian safety is a primary concern

Illegal dumping

Observation of illegal dumping in various locations including Meadowbrook Road and BC Hydro right-of-way site as well as roadside litter due to poorly secure loads travelling to the landfill.

Loss of peaceful park land

Noise and traffic near Durrance Lake

IDEAS AND SUGGESTIONS

Mountain Road Forest fundraising goal

- We encourage CRD to secure the Mountain Road Forest as parkland. While we are grateful the CRD has committed great deal of money from the Land Acquisition Fund, there is still risk the sale will fall through without enough funding.

Speed and litter mitigation efforts

- Signage at trailhead, signage reminders, garbage receptacles
- Ensuring safety of parking situation at Durrance Lake
- Increase speeding enforcement

Illegal dumping

- Targeted campaign – both impact on community and how to report
- Install no dumping signs
- Clean-up of illegal dumping more quickly
- Expand landfill hours, possible for residents only.
- Increased bylaw enforcement

Better road cycling infrastructure

- Introduce a bike lane along Wallace Drive to connect to Interurban Rail trail
- Safety crossing
- Bike repair station

2. The Willis Point Community Association

WHAT WE HEARD

Opposed to tree removal, natural habitat and de facto park

Particularly concerned about the removal of 73 acres of forest, destruction of habitat and engaging in extensive blasting and quarrying. Doing so undermines CRD's commitments to address climate change. It also impacts recreational opportunities for the community, particularly the mountain biking community.

Adopt more aggressive waste reduction strategies

In doing so, extend the life of the Landfill. Regional examples cited include Victoria's *Zero Waste Strategy*, waste to energy project (explored by Esquimalt) and *One Planet Saanich*.

Concerns over plans to move Hartland traffic to Willis Point Road

Concerns expressed over the Draft Plan to redirect commercial truck traffic accessing the Landfill from Hartland Avenue to Willis Point Road, beginning in 2023, and diverting all Landfill-bound traffic in 2040.

Traffic related safety concerns

Want CRD to address a number of safety, traffic circulation and perception issues related to heavy truck traffic on to Willis Point Road. This includes icy surfaces in winter on the straight 9 percent grade, and the impact of heavy traffic on the mountain bikers, recreational and competitive cyclists that also use the road. Specific problem areas include:

- Problem intersection at the junction of Wallace Drive and West Saanich Road.
- Truck Bypass on Willis Point Road Northbound

Road Name Connotations

Concerned that the name Willis Point Road will be associated with access to the landfill and have negative affect on property values.

IDEAS AND SUGGESTIONS

Postpone Decision on Hartland Expansion

- Would like approval of any expansion of Hartland to be Stage-Gated so that both actual waste reduction achieved in the CRD, and the effectiveness of alternative methods be reviewed by Hartland staff and the CRD board in 2028 prior to any approval of Draft Plans to expand the landfill

Improve traffic safety

- A proper bike lane should be constructed up to the point where trucks will enter the Landfill.
- Improve problem intersection at the junction of Wallace Drive and West Saanich Road.
- We believe it is essential that a couple of truck pull-offs be created along with appropriate signage to ensure trucks travelling below 40kmph comply. Doing so will mitigate slow-downs of traffic and unsafe passing.

Renaming Lower Part of Willis Point Road

- Disassociate the road with “access to the dump”. Willis Point Road would begin at Ross Durrance Road and run north to connect Willis Point residences with the southern section of the road. The name “Mount Work Parkway” has been suggested.

Explore and adopt more aggressive reduction strategies

GENERAL COMMENTS

“The CRD is to be commended for looking ahead at the waste disposal requirements of the region up to the year 2045 and beyond. Unfortunately, we find the SWMP wanting in several respects with regard to these factors.”

ADVOCACY GROUPS

3. Mount Work Coalition

Similar views are shared between Mount Work Coalition and The Willis Point Association. Only new feedback, suggestions and comments not previously stated are reflected below. It should also be noted that MWC coordinated anad hoc petition related to Strategy 15 of the draft plan ('Enhance Hartland Landfill Capacity') and submitted their documentation to the CRD Board.

WHAT WE HEARD

Business as usual mindset approach to the Draft Plan

A belief that the Draft Plan is written with a preconceived mindset that the landfill requires expansion rather than a mindset to retain the existing size and seek more aggressive reduction initiatives.

Does not meet carbon neutral goals

The Draft Plan does not address the climate emergency and commitment of the CRD to become carbon neutral by 2050. It is in direct conflict with the Province's stated Climate Action goals and will not enable us to meet our 2030 greenhouse gas emissions targets.

Reliance on tipping fees to fund Hartland's operations is counter-intuitive to zero waste.

The tipping fee model provides no material incentive to reduce waste rather, it is a disincentive as is demonstrated by concerns to keep all waste disposal in the region.

Hartland and FortisBC methane agreement

We disagree with this strategy as it relies on a steady stream of decomposing waste being dumped into a landfill to feed the FortisBC system for a small amount of RNG.

IDEAS AND SUGGESTIONS

Add more concrete waste management actions into the Draft Plan

- As examples dedicated funding for a public educational campaign and financial incentives to encourage startups and incentivize waste management businesses that reuse waste, such as scrap businesses and plastic and rubber recycling.

Multi-pronged approach should be a cornerstone to the region's solid waste management plan.

- Reduce waste through promoting circular economies, changing consumer behaviour such as banning single use plastics, and investigating alternative uses for waste to energy projects such as gasification
- The CRD staff must work in partnership with other leaders using best practices

Tipping fees levers

- Tipping fees must be used to incentivize waste diversion as is being done in the Nanaimo Regional District and if alternate sources of funding are required to maintain the Landfill operation, a general tax levy may be required.

Develop a strategy to optimize landfill gas management

Amended the SWMP submitted in 2025 must establish a target of 125kg/person/year by 2040

Notify the Ministry of Environment

- CRD should notify MOE of its intention to submit an amendment to the Draft Plan by 2025 with strategies for attaining this target including an aggressive Zero Waste program, and an independent analysis and testing of alternative technologies such as IRM/gasification/Waste to Energy.

Reference Esquimalt project

- The Draft Plan submitted in 2021 should contain a placeholder for the Esquimalt waste to energy project subject to a business case being completed.

Strengthen the Draft Plan's Zero Waste initiatives by adding concrete plans

- As examples dedicated funding to create business incentives for entrepreneurs; create a public education campaign to draw awareness to Zero Waste, and use tipping fees to incentivize waste reduction instead of encouraging continued use of landfilling as a source of revenue.

Conduct an independent environmental assessment

- Prior to any plans to expand or alter the design of the landfill, conduct an independent environmental assessment including the spread of biosolids, to protect the natural ecosystem, wildlife, community health and the recreational users of the area.

GENERAL COMMENTS

"The Coalition is pleased to see that the Board [CRD] at its February 10, 2021, meeting reiterated that it was prepared to consider a more aggressive approach to waste reduction a year following the submission of the SWMP this summer."

4. Zero Waste BC

During the consultation period, CRD staff received a review of the Draft Plan from Zero Waste BC, a non-profit organization based on the Lower Mainland.

Staff reviewed the 38 recommendations made in this report and found that most suggestions were either existing CRD activities or ideas that are enabled by the actions in the Draft Plan. Many of these recommendations will be further investigated when the SWMP is implemented.

One feature of the Zero Waste BC report is its anti-incineration stance. A copy of the report can be found in Appendix E: Advocacy Group Feedback.

Impact of Consultation Findings on the Draft Plan

Following consultation with CRD municipalities, local First Nations, neighbouring regional districts, members of the general public and Hartland neighbours, feedback was collated and evaluated to determine how the Draft Plan should be refined. A summary chart was created and cross referenced feedback with the Draft Plan to determine where the Draft Plan already addressed feedback, where gaps exists and how to address them. Additionally, similar feedback received from multiple sources was colour coded to distinguish between singular recurring feedback.

As a result of input from Phase 2 consultation, several revisions have been made for clarity and to provide context for the strategies and actions in the Draft Plan. In quite a few cases, feedback provided was already accounted for in strategies outlined in the Draft Plan. It also became clear there is some confusion about the role of the CRD and the need for this to be explained better. In several cases input not reflected in the Draft Plan was due to it being outside of CRD jurisdiction or regulatory framework. The Feedback Summary / Cross Reference Chart can be found in Appendix C of the CRD staff report presenting these findings.

Appendix A: Municipal Letters of Support

Support Letter: City of Victoria

CITY OF VICTORIA

February 12, 2021

Robert Lapham, Chief Administrative Officer
Capital Regional District
625 Fisgard Street, Victoria BC
PO Box 1000
Via email: rlapham@crd.bc.ca

Dear Robert,

Re: Draft Solid Waste Management Plan

Thank you for the opportunity to provide feedback on the Capital Regional District's Draft Solid Waste Management Plan (SWMP). Victoria staff very much welcome the comprehensive and progressive range of strategies and actions and commend the inclusive and collaborative approach taken by your team in developing this highly important plan.

The development of the SWMP is well timed to complement renewed efforts to improve plastics management and recycling performance from the provincial and federal government. This region has a long-standing history and embedded community values of environmental stewardship and the SWMP positions the region as a leader in waste reduction and a facilitator for municipal collaboration around shared goals.

The City sees itself as a key stakeholder in the Hartland Landfill asset. It is estimated that one-third of the waste disposed at Hartland is generated by residents, businesses, industry and construction activities within Victoria. The City recently approved *Zero Waste Victoria*, which outlines 40 strategies to achieve a 50% reduction in waste disposal by 2040 with many of these aligning with strategic actions identified in the draft SWMP. It is also telling that 15 actions within the draft plan require direct involvement from CRD member municipalities to be successful and many more would benefit from municipal support and cross promotion.

Municipalities will play a vital role in meeting our regional solid waste targets, through the provision of their solid waste services and programs, and through the authorities granted under the *Community Charter* and *Local Government Act* that influence waste reduction. Available municipal tools include zoning, permitting, business regulation and nuisance regulation.

1

The City of Victoria recognizes the Songhees and Esquimalt Nations in whose traditional territories we live and work
"Hay swx qə"

Victoria also has the authority to regulate land use, with existing permitting processes in place for development and construction and can influence the local market for reused and recycled construction materials through procurement as a land holder and purchaser, and through major expenditures for capital projects. Additionally, municipalities can influence the generation of solid waste in the community through regulations for the protection of the natural environment, subject to provincial approval.

There are opportunities for the CRD to leverage these municipal tools and authorities to maximize waste reduction potential and to this end, there are elements of the SWMP that are closely aligned with the City's own waste reduction goals and opportunities for local government collaboration.

This letter also provides recommendations for prioritizing actions under the SWMP to support the City's successful implementation of Zero Waste Victoria. Specifically:

1. Organics diversion
2. Construction, renovation and demolition material diversion
3. Supporting municipalities working towards zero waste and a circular economy

This will allow ongoing CRD/City engagement and collaboration and will create a framework for City staff to report back to Council on aligned strategies and planned implementation timelines.

1. ORGANICS DIVERSION

Despite regional landfill bans in place for kitchen scraps and yard waste, high volumes of organic material continue to be landfilled and downstream enforcement is challenging. Approximately 6% of Victoria's GHG emissions (21,000 tonnes CO_2e annually) are attributed to landfilled organic waste. Multifamily buildings and the commercial sector are responsible for about 85% of landfilled organic material generated in Victoria and improving source separation for this sector, including through regional harmonization, will be critical for reducing organics disposal.

Numerous BC jurisdictions have source separation guidelines or bylaws in place or planned, including the City of Surrey, Regional District of Nanaimo (RDN) and Metro Vancouver. Surrey's *Rethink Waste* organics collection service requires apartment residents to separate their organic waste from their regular household garbage. The RDN's Solid Waste Management Plan proposes to expand source separation requirements to all waste generators including businesses and multi-family residences. This action is supported through the licensing of waste haulers, which requires haulers to provide separated organics and recyclables collection. Metro Vancouver's Board has approved a commercial waste hauler licensing program, pending approval from the Minister of Environment and Climate Change Strategy, which aims to reduce waste and increase diversion at multifamily, commercial and institutional properties. Under the proposed bylaw, haulers will be required to provide their clients with bins for the separate collection of recyclables, organics and mixed municipal solid waste.

Improving source separation of waste materials is a short-term (2021-2023) priority action in Zero Waste Victoria and Victoria Council has explicitly directed staff to report back on options for increasing diversion rates for multi-family and commercial properties.

The CRD's SWMP highlights the importance of source separation requirements for multi-family and commercial waste diversion (Strategies 8.B and 9.F). The City has also heard strong support from local businesses and the community for consistent standards for private organics, recycling and waste collection. As part of implementing the SWMP, the CRD should create a model bylaw for such source separation requirements. This would support standardization across the region, consistent messaging and improved sorting behaviour.

To complement source separation requirements, the City of Victoria also supports shifting landfill disposal ban enforcement to the generator (Strategy 9.G). This action would increase compliance for current and future banned materials and avoid placing the burden of compliance only on haulers.

An additional challenge for organics diversion is inconsistent messaging for the acceptance of compostable and bio-based food service-ware and packaging at composting facilities. These materials represent significant waste management challenges and cause consumer confusion when sorting waste materials. Through engagement on Zero Waste Victoria, the City heard a desire from the business community for sustainable food service-ware purchasing guidelines that align with regional composting capacity.

Increased diversion of organics will require additional capacity for organics processing, preferably within the region and the City of Victoria is committed to working collaboratively with the CRD to support this essential infrastructure.

- **RECOMMENDATION:** That the CRD accelerate the creation of requirements for source separation in multi-family residences and commercial businesses, including through a model bylaw, to promote consistent messaging and compliance.

- **RECOMMENDATION**: That the CRD accelerate the development of guidelines for the use and acceptance of compostable and bio-based food service ware.

2. CONSTRUCTION, RENOVATION AND DEMOLITION MATERIAL DIVERSION

Material from the construction sector makes up between 23 and 37%[1] of Victoria's landfilled waste. Regionally, wood and wood products comprise 64% of waste from the construction and demolition sector disposed at the Hartland Landfill. Zero Waste Victoria includes several strategies to reduce waste from the construction sector, including requiring the salvage of reusable materials from building demolition, requiring recycling of other construction waste, and strengthening reuse markets for building materials.

Increasing local salvage and reuse of building materials presents new economic opportunities. A study produced for the Vancouver Economic Commission estimates that wood salvaged through deconstruction (i.e., dismantling rather than traditional demolition of buildings) in Metro

[1] Exact quantity not known. Between 50 and 75% of construction waste is estimated to leave the region and therefore not included in the reporting of material at the Hartland Landfill.

Vancouver is worth up to $340 million per year. Salvaging building materials will also create new jobs, including low-barrier and entry level employment.[2]

Complementary action by the CRD can accelerate diversion and salvage of valuable demolition materials, as the SWMP highlights. Specifically, the City of Victoria strongly supports the implementation of a clean wood waste ban and surcharges for mixed loads from the construction sector that contain recyclable or salvageable materials (SWMP Strategies 12.E and 12.F). The City also supports the CRD leading the development of, and facilitating regional collaboration on, policy and tools to support construction waste diversion (Strategies 12.B and 12.D). Additionally, collaborative action is needed to identify further opportunities to support material reuse markets in the region.

Waste stream management licensing is crucial for improving construction waste diversion. Waste stream management licensing has been shown to enable and support municipal tools and compliance in the lower mainland. For example, Metro Vancouver tracks construction and demolition waste through facility licensing under the Municipal Solid Waste and Recyclable Material Regulatory Bylaw which in turn supports member municipalities' construction and demolition recycling rules. The City of Victoria strongly recommends that the CRD prioritize the establishment of waste stream management licensing (Strategy 6.C). Facility licensing will provide crucial compliance tools for regulation of waste from the construction sector by the City of Victoria.

As an additional overall benefit, waste stream management would assist in tracking progress on the SWMP and municipal strategies, and support waste reduction through data disclosure and better understanding of material flow in the capital region.

- **RECOMMENDATION:** That the CRD establish a waste stream management licensing bylaw for private solid waste transfer stations and recycling facilities operating in the region.

- **RECOMMENDATION:** That the CRD prioritize implementing bans and/or surcharges for clean wood waste and mixed construction waste at the Hartland Landfill.

- **RECOMMENDATION:** That the CRD prioritize work with member municipalities to develop requirements and guidelines for construction waste diversion, including measures to grow the regional market for salvaged construction and demolition materials.

3. SUPPORTING MUNICIPALITIES WORKING TOWARDS ZERO WASTE AND A CIRCULAR ECONOMY

Regional District and member municipality waste reduction efforts are complementary and interdependent. Within this response to the draft Plan, we have sought to highlight the important role that municipalities play in reaching regional waste reduction targets. The success of Zero Waste Victoria depends on the CRD undertaking robust implementation of the SWMP.

[2] Elliot, K., E. Locatelli and C. Xu; The Business Case for Deconstruction (2020). Retrieved from: https://www.vancouvereconomic.com/research/the-business-case-for-deconstruction/

Likewise, the success of the CRD's SWMP requires action from member municipalities and leveraging of municipal authority.

Strategy 5 in the SWMP highlights several ways the CRD can support municipal waste reduction efforts. The City recommends that in addition to these measures, the CRD take a strong leadership role in facilitating regional collaboration on waste reduction and should establish a program to maximize use of municipal authorities to reduce waste. Such a program could include a working group or municipal liaison and support the development of regional tools and resources.

- **RECOMMENDATION:** That the CRD lead regional collaboration and leverage municipal authority.

The CRD can also demonstrate leadership by prioritizing waste stream management licensing (Strategy 6.C) and source separation requirements (Strategies 8.B and 9.F). These enabling actions will strongly support regional waste management and create opportunities to reduce waste from all sectors, in addition to organics and construction waste, as described above.

Concluding Remarks

The City of Victoria supports the strategies and actions drafted in the CRD's Solid Waste Management Plan and offers specific recommendations that relate to the implementation of the proposed plan in alignment with Zero Waste Victoria.

With the recent adoption of Zero Waste Victoria and given the important role within the region Victoria has in advancing waste reduction, on behalf of Council, I would like to invite your team to a future Committee of the Whole meeting to provide a presentation and take questions on the draft Solid Waste Management Plan.

Thank you again for providing this opportunity to comment.

Sincerely,

Jocelyn Jenkyns
City Manager

Support Letter: Victoria Mayor

THE CITY OF VICTORIA  OFFICE OF THE MAYOR

February 10, 2021

Dear Mr. Lapham and Ms. Hutcheson,

On behalf of Victoria City Council, it is my great pleasure to share *Zero Waste Victoria*, our plan to reduce waste disposal by 50% by 2040. Council recently approved this document which includes 40 strategies that eliminate unnecessary products, make reuse an everyday activity and improve our current recycling system.

When developing strategies and actions to implement this plan, we have been guided by our Waste Reduction Hierarchy which prioritizes reducing, reusing, and moving to a circular economy as areas with the biggest potential for cities to have an impact. However, proper disposal of waste plays a very important role and to this aim, Council has approved a Short-Term Action Plan which includes:

- Development of new single-use item regulations
- Changes to building permits to reuse and recycle materials from building demolitions
- New requirements for organics and recycling at multifamily and commercial properties
- Enhancements to the City's solid waste services

The City's waste services are guided by the Capital Regional District's Solid Waste Management Plan. As the CRD's Solid Waste Management Plan is under review, it is timely to share *Zero Waste Victoria* and to note our desire to continue collaborating at the staff and board levels on the review and updated plan, which will greatly impact our regional climate action.

Further, on behalf of Victoria Council I am also requesting that the CRD work with the City of Victoria and other local governments to advocate for "flow control" to regulate the export of solid waste outside the region. A regional approach is key to ensuring proper diversion from the landfill and eliminate the ability to simply export waste to another landfill outside our region.

We are proud of this action-oriented plan to steward a sustainable, prosperous future, and proud of City staff's hard work on *Zero Waste Victoria,* which involved two years of comprehensive analysis. It aligns well with the work that is underway at the CRD and we would welcome the opportunity to share more information or respond to any questions.

Sincerely,

Lisa Helps

THE CITY OF VICTORIA  OFFICE OF THE MAYOR

April 8, 2021

Dear Chair Plant,

On behalf of Victoria City Council, I would like to thank Capital Regional District staff for their presentation on the Solid Waste Management Plan (SWMP) review, and for answering Council's questions at our March 25 meeting.

I am writing to you today to express Victoria City Council's support for the CRD adopting stronger solid waste reduction targets and adopting a goal of becoming a national leader in zero waste and the circular economy.

As local governments, we have both a responsibility and an opportunity to respond to the causes and impacts of climate change for the future sustainability and prosperity of our communities. Through the City of Victoria's own *Zero Waste Strategy*, we have identified reducing, reusing, and moving to a circular economy as areas with the biggest potential for cities to have an impact. While the recent SWMP review makes waste reduction a priority, more ambitious targets and a stronger emphasis on the circular economy are needed to change consumer and business behaviour, encourage local innovation, and extend the lifespan of the Hartland landfill. As the CRD's plan guides local waste management programs, adopting more ambitious goals will have a great impact on regional, and even national, waste reduction.

The CRD has previously led the region by declaring a climate emergency and encouraging collaborative climate action. Now, the SWMP review provides another crucial opportunity to rapidly respond to this emergency. By ambitiously prioritizing waste reduction and the circular economy, we can prepare our community for the changing climate, encourage new economic opportunities, and ensure a continued high quality of life for all - while living within the limits of the Earth's capacity to sustain us.

Sincerely,

Lisa Helps

PLANNING

Russ Smith
Senior Manager of Environmental Resource Management
Parks & Environmental Services
Capital Regional District
625 Fisgard Street
Victoria, BC, V8W 1R7

March 18, 2021

Dear Mr. Smith,

Re: CAPITAL REGIONAL DISTRICT DRAFT SOLID WASTE MANAGEMENT PLAN – DISTRICT OF SAANICH FEEDBACK

Thank you for the opportunity to review and provide feedback on the Capital Regional District (CRD) Draft Solid Waste Management Plan (SWMP) and for your presentation to Saanich Council on March 8, 2021.

This letter confirms that at the Special Committee of the Whole meeting held March 8, 2021, Saanich Council considered the report of the Director of Planning and Director of Engineering, dated February 25, 2021, regarding the CRD Draft Solid Waste Management Plan and resolved as follows:

"That Council:

1. *Receive the report of the Directors of Engineering and Planning dated February 25, 2021 for information; and*
2. *Direct staff to provide feedback to the Capital Regional District on the Draft Solid Waste Management Plan outlining, amongst more detailed comments, the following:*
   a) *Support for the Draft Plan and its focus on the 5R Pollution Prevention Hierarchy;*
   b) *The desire for the Capital Regional District to provide bold leadership and facilitate accelerated regional collaboration on powerful actions that achieve the waste disposal targets;*
   c) *The desire for the Capital Regional District to maximize the use of municipal authorities to reduce waste, providing the necessary resources to support municipalities, including the development of additional bans, surcharges, Capital Regional District bylaws, model municipal bylaws, processing facilities, requirements and guidelines that support actions such as waste stream management licensing, construction waste diversion, source separation in multi-family residences, use and acceptance of compostable and bio-based food service ware etc.; and*
   d) *The desire for the Draft Plan to reference the additional benefits of a regional organics processing facility associated with the greenhouse gas (GHG) emissions savings from the reduced transportation of organics outside the region."*

The attached staff report provides additional details related to the above resolution and outlines the alignment with key Saanich plans and policies, notably the Official Community Plan and the Climate Plan: 100% Renewable & Resilient Saanich. Municipalities play a vital role in meeting the regional solid waste targets through our services, programs and the authorities granted

under the Community Charter and Local Government Act that influence waste reduction. As such, the CRD and member municipality waste reduction efforts are complementary and interdependent and we have a considerable role to play in collaborating with the CRD to achieve implementation of the Draft SWMP.

Similarly, robust implementation of the CRD SWMP will be required to support the District of Saanich in implementing our strategic climate goals and targets. The CRD will need to provide bold leadership and facilitate accelerated regional collaboration on powerful waste reduction actions that maximize the use of municipal authorities in order to achieve this.

We hope the information outlined above and within the Staff report attached are useful in refining the CRD SWMP and we look forward to working with the CRD on bold action to implement the final Plan and its actions once adopted by your Board.

Yours sincerely,

Dear Mr. Lapham,

Re: CRD Solid Waste Management Plan
District of Oak Bay Endorsement and Request for Presentation

Thank you for your correspondence of November 20, 2020 seeking endorsement from the District of Oak Bay Council on the Capital Regional District's draft Solid Waste Management Plan.

Council reviewed the draft Plan during their regular meeting of Monday, February 8, 2021 and subsequently passed the following resolution:

> *THAT the Draft Solid Waste Management Plan be endorsed and a letter be sent to the Capital Regional District thanking them for the opportunity to provide input and advising of Council's endorsement.*

As a municipal partner in regional solid waste management, Council very much appreciated your offer to have CRD staff meet with them to review the Plan in more detail and ask questions. As per your suggestion, I will follow up Mr. Russ Smith, Senior Manager, Environmental Resource Management to make the necessary arrangements.

Re: Comments on Draft Solid Waste Master Plan and Request for Modification

Dear Mr. Smith,

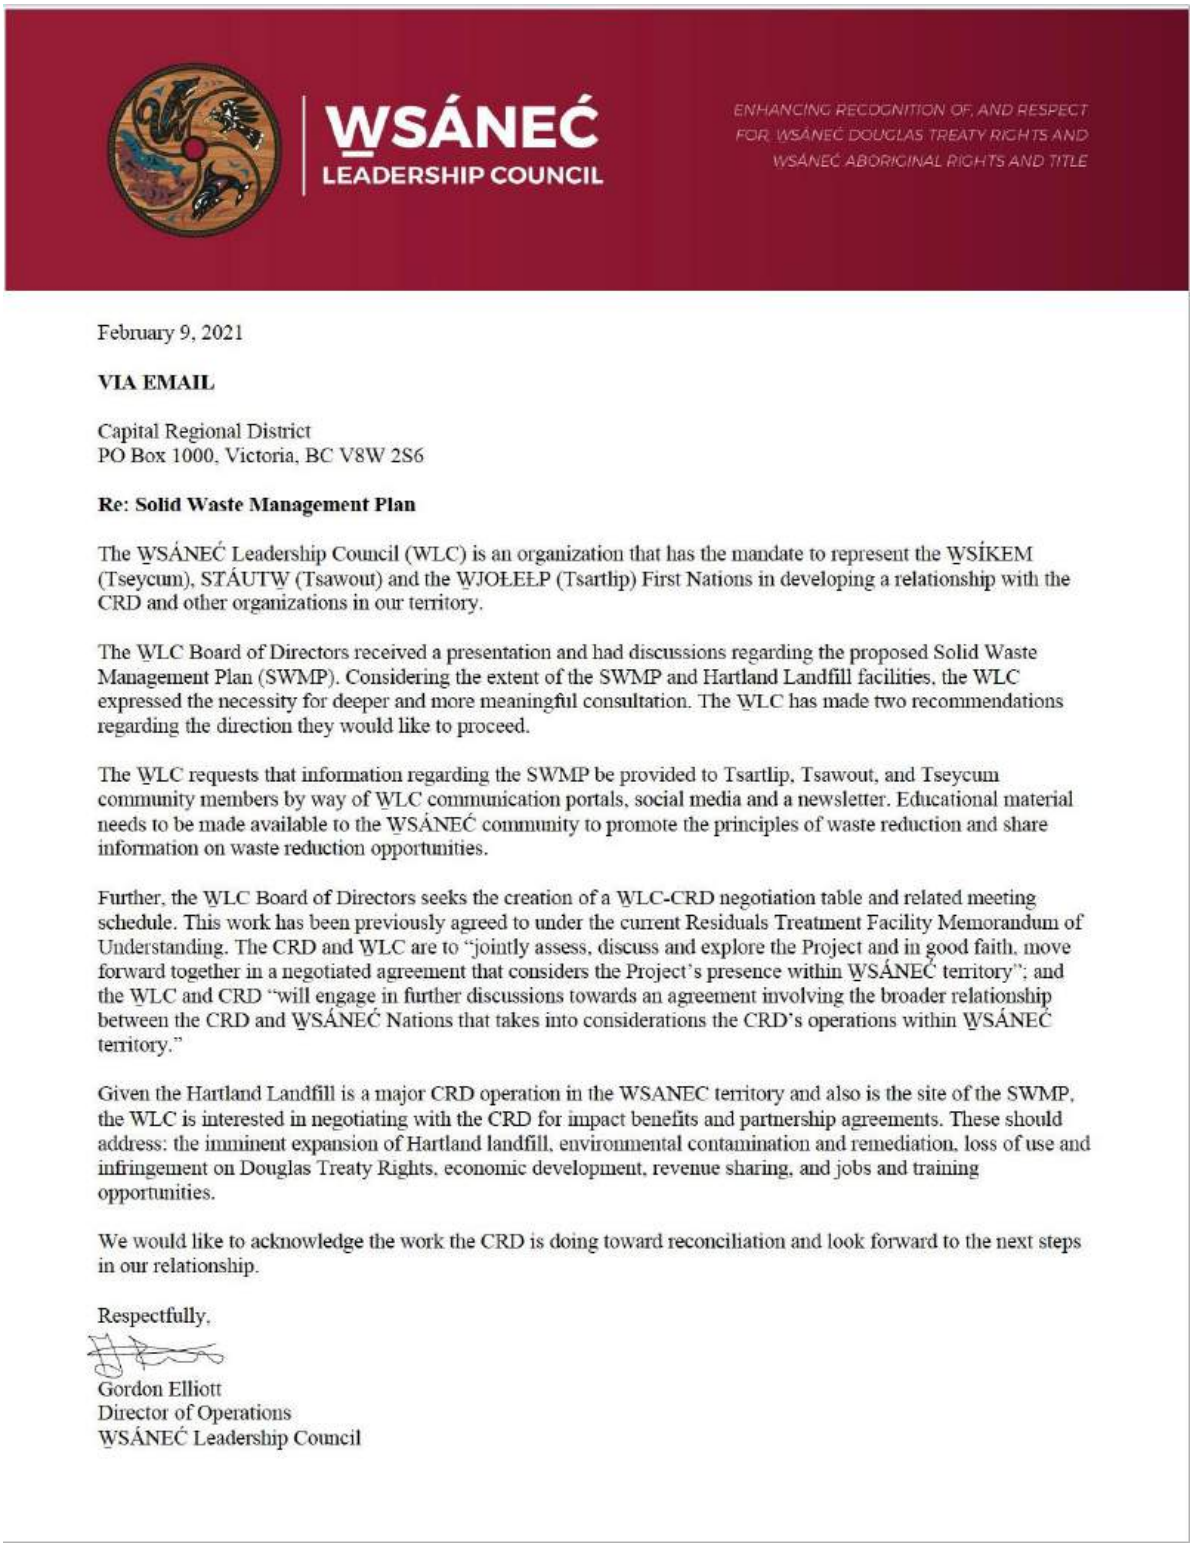
On February 22, 2021, Council had the opportunity to meet and discuss the Draft Solid Waste Master Plan (SWMP) that the Capital Regional District (CRD) presented at the January 25, 2021 Council meeting. The comments from this meeting are the ones referred to in the Township's letter of February 12, 2021. Please see the attachment for a copy of the February 22, 2021 report.

Council has reviewed the SWMP and agree with the draft as presented. However, the Township feels that the document is deficient in not referring to the Township's attempt to carry out an integrated resource management strategy for the solid waste, kitchen scraps and yard/garden waste streams generated within the Township. To rectify this deficiency, the Township is requesting that the CRD include, within the SWMP, an initiative that addresses the Township's efforts in this endeavour.

The Council resolution is contained within the attached report but reads as follows:

"That Council direct staff to contact the Capital Regional District to request that a section regarding Integrated Resource Management/Gasification be included in the submission of the draft Solid Waste Master Plan, as outlined in Staff Report No. EPW-21-006."

Please review the report and contact me to discuss how this deficiency can be addressed.



Yours truly,

Jeff W. Miller, P. Eng.
Director of Engineering and Public Works

VIA EMAIL

Capital Regional District
PO Box 1000, Victoria, BC V8W 2S6

Re: Solid Waste Management Plan

The W̱SÁNEĆ Leadership Council (WLC) is an organization that has the mandate to represent the W̱SÍKEM (Tseycum), STÁUTW̱ (Tsawout) and the W̱JOŁEŁP (Tsartlip) First Nations in developing a relationship with the CRD and other organizations in our territory.

The W̱LC Board of Directors received a presentation and had discussions regarding the proposed Solid Waste Management Plan (SWMP). Considering the extent of the SWMP and Hartland Landfill facilities, the WLC expressed the necessity for deeper and more meaningful consultation. The W̱LC has made two recommendations regarding the direction they would like to proceed.

The W̱LC requests that information regarding the SWMP be provided to Tsartlip, Tsawout, and Tseycum community members by way of W̱LC communication portals, social media and a newsletter. Educational material needs to be made available to the W̱SÁNEĆ community to promote the principles of waste reduction and share information on waste reduction opportunities.

Further, the W̱LC Board of Directors seeks the creation of a W̱LC-CRD negotiation table and related meeting schedule. This work has been previously agreed to under the current Residuals Treatment Facility Memorandum of Understanding. The CRD and W̱LC are to "jointly assess, discuss and explore the Project and in good faith, move forward together in a negotiated agreement that considers the Project's presence within W̱SÁNEĆ territory"; and the W̱LC and CRD "will engage in further discussions towards an agreement involving the broader relationship between the CRD and W̱SÁNEĆ Nations that takes into considerations the CRD's operations within W̱SÁNEĆ territory."

Given the Hartland Landfill is a major CRD operation in the WSANEC territory and also is the site of the SWMP, the WLC is interested in negotiating with the CRD for impact benefits and partnership agreements. These should address: the imminent expansion of Hartland landfill, environmental contamination and remediation, loss of use and infringement on Douglas Treaty Rights, economic development, revenue sharing, and jobs and training opportunities.

We would like to acknowledge the work the CRD is doing toward reconciliation and look forward to the next steps in our relationship.

Respectfully,

Gordon Elliott
Director of Operations
W̱SÁNEĆ Leadership Council

Capital Regional District
PO Box 1000
625 Fisgard Street
VICTORIA BC V8W 2S6

Dear Russ Smith:

Re: **Capital Regional District Solid Waste Management Plan (SWMP) Consultation**

Thank you for the opportunity to consult on the Capital Regional District's (CRD) Solid Waste Management Plan (SWMP). I am pleased to advise that the Cowichan Valley Regional District (CVRD) Board has adopted the following resolution at its meeting on January 13, 2021:

> *"That a letter be sent to the Capital Regional District (CRD) in support of their Solid Waste Management Plan update and that Cowichan Valley Regional District staff participate in the consultation process for development of the CRD's Solid Waste Management Plan."*

The CVRD Board supports the CRD's proposed updates to their Solid Waste Management Plan as drafted in the Solid Waste Management Plan report, dated November 9, 2020. The CVRD is particularly interested in the future progress of composting capacity within the CRD and increased capacity for the institutional and commercial Construction and Development (C&D) materials management within the CRD.

Fifteen strategies and action plans within the Draft SWMP will provide consistency in managing the solid waste as well as promote 5Rs of pollution prevention hierarchy across the two regional districts.

Sincerely,

Aaron Stone

Appendix D — Community Association Letters

Community Association Letter: Prospect Lake District Community Association

Prospect Lake District
COMMUNITY ASSOCIATION

February 4, 2021
RE: Commercial vehicle access to Hartland

To: Mr. Russ Smith
Senior Manager, Environmental Resource Management
Capital Regional District (CRD)

Thank-you for hosting the community conversations about commercial vehicle access to Hartland Landfill last month. As previously discussed, we have canvassed our members and compiled a list of concerns and mitigation suggestions for the CRD to consider as this project progresses.

On behalf of our members, we submit the following list of concerns, both directly related to the operational change, and additional concerns the CRD can support within our community:

1. Vehicle, cyclist, and pedestrian safety, specifically at the following locations:
    a. The intersection of West Saanich Road and Wallace Drive
    b. The intersection of Wallace Drive and Willis Point Road
    c. Rural roads in the area that often have illegal truck traffic (Wallace Drive, Prospect Lake Road)
2. Meadowbrook Road concerns:
    a. Increased use of the trail at the end of Meadowbrook Road has led to concerns including dog poop, traffic, parking, speeding, and litter
3. Illegal dumping
    a. Some notable locations include the BC Hydro right-of-way on Prospect Lake Road and several mailbox pull outs on Prospect Lake Road.
4. Roadside litter from poorly secured loads travelling to the landfill
5. The loss of peaceful parkland in our community due to noise and traffic near Durrance Lake

Further to these concerns, we offer the following mitigation ideas for your consideration:

1. The first, and most urgent way the CRD can help our community is to secure the Mountain Road Forest as parkland. While we are grateful the CRD has committed great deal of money from the Land Acquisition Fund, there is still risk the sale will fall through without enough funding. No amount of sidewalks, parking, infrastructure, or litter pick up can replace a natural forest. With the loss of forest in Mount Work Park and the detrimental effects of the construction at Hartland on the Durrance Lake area, we are

Prospect Lake District
COMMUNITY ASSOCIATION

losing greenspace. The single most effective thing the CRD can do for our community is to ensure the Mountain Road Forest fundraising goal is reached.

   a. The CRD should spread awareness of the fundraiser on social media and other available outlets to encourage community fundraising support.
   b. The CRD should commit any outstanding money at the culmination of the fundraising efforts. This land is not going to be for sale again; we cannot miss this opportunity. It would be a tragedy if we missed the target by a narrow margin. We need to add greenspace, not remove it.

2. Meadowbrook Road
   a. Speed limit and/or "respect the neighbours" sign on Meadowbrook Road
   b. Signage at the trailhead indicating "pack in, pack out" for trash
   c. Signage reminding dog owners to pick up poop and control their dogs
   d. Garbage receptacle installed and maintained at trailhead
   e. "No parking" signage along right-hand side of Wildview Crescent, or an assessment of parking issues in the area
3. Illegal dumping
   a. Campaign educating people about illegal dumping, something to make them think of how it affects us all. The average mattress or couch is not an expensive as many think it is to dispose of at the landfill; education goes a long way.
   b. Install no dumping signage with threats of fines in problem areas.
   c. Educate people on how to report illegal dumping.
   d. Clean up illegal dumping quicker.
   e. Expand landfill hours to include Sunday, possibly for residents only.
      i. Many people do their clean-ups and junk removal on weekends. This leads to people wanting to take their loads to the landfill on Sunday, finding the landfill closed, and then dumping illegally in our neighbourhoods.
4. Better road cycling infrastructure
   a. Bike lane along Wallace Drive to connect to Interurban Rail Trail
   b. Safe crossing for cyclists at the termination of the Interurban Rail Trail to cross or continue onto Wallace.
   c. A bike repair station in the area (many cyclists experience flat tires due to debris on the road in the area). Either the intersection of Wallace and West Saanich or Sparton and West Saanich would be excellent choices, as they would capture casual riders on the trail as well as road biking enthusiasts who ride along West Saanich Road.
5. Many residents live here for the access to mountain biking. It would serve a great deal of our community to continue to better the mountain biking trails on Mount Work, specifically ensuring a sustainable multi-use trail network throughout the entire park.

Prospect Lake District
COMMUNITY ASSOCIATION

6. Ensuring the safety of the parking situation for Durrance Lake. Residents do not want a huge parking lot encouraging more visitors than the natural space can handle, but they do want to be sure those parking are doing so safely.
7. Increased by-law enforcement for dumping, illegal truck traffic, and unsecured loads.
8. Increased police enforcement for speeding and other unsafe driving.
9. A transfer station serving the continuously growing Westshore community would have positive impacts for GHG emissions, road safety, and general traffic volume in our community. If it is unreasonable to have the landfill open to residents on Sundays, having a transfer station open could serve weekend users, in addition to these other benefits.
10. As the number of young families in the area is increasing, there is always desire for more playgrounds and other outdoor play areas for children. One idea is that the playground at Hamsterly Beach is in need of an overhaul, with plenty of space available.

As a Community Association Board, we are aware that we are not experts on implementing these changes, but we hope to inspire the CRD to help our community in a tangible way. Thank-you for considering these issues.

Sincerely,

Zoe Hole,

Secretary, Prospect Lake District Community Association

Community Association Letter: The Willis Point Community Association

The Willis Point Community Association, 6933 Willis Point Road, Victoria BC, V9E 2A1

February 14, 2021

Colin Plant
Chair, Capital Regional District
625 Fisgard Street

Copies to:

All CRD Board Members
Hon. George Heyman, Minister of the Environment and Climate Change
Hon. Lana Popham, MLA
Adam Olsen, MLA
Russell Smith, CRD Staff
Larisa Hutcheson, CRD Staff

Dear Mr. Plant,

I am writing on behalf of the Willis Point Community Association in response to the invitation for public comment on the CRD's Solid Waste Management Plan (SWMP).

The CRD is to be commended for looking ahead at the waste disposal requirements of the region up to the year 2045 and beyond. This plan needs to take into account a number of variable factors; population growth in the region, particularly on the West Shore, new technologies and strategies targeting zero waste and the climate emergency facing the region, the province, the nation and the globe. Unfortunately, we find the SWMP wanting in several respects with regard to these factors.

Landfill Expansion-Destruction of Natural Habitat

As the community association representing the Willis Point area, we are particularly concerned about the impact that the current plan will have on the Hartland Landfill, particularly the Plan's goal (based on the current waste reduction targets and strategy) to expand the waste disposal cells to the full perimeter of the property, in the process removing 73 acres of forest and engaging in extensive blasting and quarrying. These 73 acres are immediately adjacent to Mount Work Regional Park, and indeed have been a de facto part of the park for a number of years. They provide recreational opportunities for the community, particularly the mountain bike community, and are home to a number of endangered plant and animal species. Moreover, destruction of 73 acres of mature second-growth trees undermines the CRD's commitments to address climate change by removing a significant area of carbon sequestration. Continued expansion of the Landfill will also create more methane emissions, notwithstanding the intention to capture a portion of the increased emissions as renewable natural gas.

Explore More Aggressive Waste Reduction Alternatives

The alternative to Landfill expansion is to adopt more aggressive waste reduction strategies so that volumes of waste going to Hartland are significantly reduced, thus extending the life of the Landfill without expanding it and destroying part of Mount Work. There are several such initiatives underway in the region, such as the City of Victoria's Zero Waste Strategy, the waste-to-energy project being

explored by Esquimalt and Saanich's ***One Planet Saanich***. The current SWMP takes no account of these initiatives, and instead relies on a series of underfunded "best efforts" campaigns to reduce waste targets to 250kg per person in the region by 2030, in the process continuing to rely of a steady flow of waste in order to generate tipping fees to fund Hartland's operation. The Plan needs to go much further, as has been recommended by your own Solid Waste Advisory Committee.

Postpone Decision on Hartland Expansion

Given these developments, it would be irresponsible in our view for the CRD Board to approve any planned expansion of Hartland at this time. Instead, new more aggressive waste reduction targets and strategies should be explored and adopted. In the meantime, approval of any expansion of Hartland should be put on hold until progress in reducing waste is assessed.

In specific terms, the WPCA would like approval of any expansion of Harland to be Stage-Gated so that both actual waste reduction achieved in the CRD, and the effectiveness of alternative methods of dealing with MSW be reviewed by Hartland staff and the CRD board in 2028 prior to any approval of plans to expand the landfill.

Beyond planning for a Phase or Stage Gated review in 2028 to verify that there is a need for expansion, it would seem **no approval of expansion plans needs to be part of the current SWMP**.

Since no expansion implementation needs to take place before 2030, that allows time to consider expansion if necessary, and the Board and public will have had ample opportunity to apply new waste reduction strategies. We urge you to amend the SMWP accordingly, before it is submitted to the Ministry of the Environment for approval.

Moving Hartland Traffic to Willis Point Road

In addition to opposing the expansion of Hartland Landfill, we have grave concerns over the plan to redirect commercial truck traffic accessing the Landfill from Hartland Avenue to Willis Point Road, beginning in 2023, and diverting all Landfill-bound traffic in 2040. Despite earlier assurances in 2019 received from CRD staff that there were no plans to divert traffic, it would seem that a decision has already been made to do so. Our Association was offered two public consultation sessions to discuss this "proposed" change and was told that the decision was a "fait accompli", with the only thing left to discuss being mitigation efforts. While earlier discussion had argued for a road change based on "safety considerations" (despite the fact that Hartland Avenue has served quite adequately as the point of entry for the past half century), the rationale now put forward is "operational requirements". We have been told that there is "no viable alternative" to changing the access owing to the configuration of the Landfill which makes construction of internal access roads too expensive and challenging.

Safety Concerns

Unfortunately, the process of dealing with the traffic question has been less than transparent. That said, if this change is going to happen regardless of community opposition, then it is important that the CRD address a number of safety, traffic circulation and perception issues that will inevitably arise. The transfer of heavy truck traffic on to Willis Point Road will lead to several safety concerns, notably icy surfaces in winter on the straight 9 percent grade, and the impact of heavy traffic on the numerous

mountain bikers, recreational and competitive cyclists that regularly use the road. A proper bike lane should be constructed up to the point where trucks will enter the Landfill.

Willis Point Road is also heavily used by recreational users of Durrance Lake in Mount Work Park and McKenzie Bight in Gowland Tod Park, by commuters using the route through the Highlands to the West Shore and by residents of Willis Point. Willis Point Road is our only secure means of reaching the rest of the region. While the Bunt traffic study argues that Willis Point Road is designed for a heavier traffic load than Hartland Avenue, it ignores that fact that unless there is smooth traffic flow on to and off Willis Point Road, there will be traffic congestion and safety issues affecting residents, school bus operations, casual users and indeed the trucks accessing the Landfill. The biggest problem is the intersection at the junction of Wallace Drive and West Saanich Road.

Intersection of Wallace Drive and West Saanich Road

This intersection was not designed with heavy traffic loads in mind. It has a pull off area for residential mail collection and is also where the Interurban bike trail terminates. At the same time, it will be where heavy trucks collect to turn either north (left) on to West Saanich Road or south (right). In either case, trucks turning north will block sight lines and vehicles turning right. Wallace Drive joins West Saanich Road at the bottom of a hill where south bound traffic tends to pick up speed. Unless this intersection is redesigned, there will be serious safety and traffic concerns. The response from CRD staff during the traffic consultation was not encouraging. They noted the problems raised but indicated that the responsibility for addressing them lay with the District of Saanich. We are concerned that funding the necessary redesign and reconstruction will not be a priority for Saanich as relatively few Saanich residents will be directly affected. Therefore, it is important that the CRD recognize its responsibility to allocate funding for this work. If internal roads were constructed within Hartland to avoid shifting access to Willis Point Road, this would be feasible but costly. As the CRD will be saving considerable funds by using the public infrastructure of Willis Point Road, provided and funded by Saanich, it should allocate some of these savings to address the imminent real traffic and safety concerns of regular users of Willis Point Road.

Truck Bypass on Willis Point Road Northbound

Given the regular use of this road by Willis Point residents and the likely delays that will occur when traffic is stuck behind a slow moving heavily-loaded truck going uphill, we believe it is essential that a couple of truck pull-offs be created, with appropriate signage to ensure that trucks moving below 40 kph comply. The road speed limit is 60 kmph (although it is constructed for higher speed) and if traffic is impeded, there is a risk that drivers will take chances to pass despite only limited areas to do so. The traffic report, which argued against the construction of a passing lane, claims that traffic will be held up by less than a minute but that assumes that all trucks will maintain a speed of 60 kmph on the uphill grade, which is most unlikely. The provision of pullouts would be a compromise between doing nothing and risking impeding traffic and inviting unsafe driving, and constructing a full passing lane, which has apparently already been ruled out.

Renaming Lower Part of Willis Point Road

In addition to addressing concrete congestion and safety concerns on Willis Point Road and at the intersection of Wallace Drive and West Saanich Road, there is an additional, low-cost measure that the CRD can take to address concerns of Willis Point residents. In the minds of many, there will be an

unfortunate association of Willis Point with the Landfill once the new access point becomes the primary entry for trucks. This could have an impact on public perceptions, ultimately affecting property values, leaving the impression that Willis Point Road is the "access to the dump". We have discussed and support re-naming the lower part of Willis Point Road, the section running from Wallace Drive to Ross Durrance Road. Willis Point Road would begin at Ross Durrance Road and run north to connect Willis Point residences with the southern section of the road. We propose that the new name be connected to the prime function of this section of the road, which is to access Mount Work Park. The name "Mount Work Parkway" has been suggested.

Fortunately there are no residences on the part of the road to be re-named, and only one street sign (at Wallace Drive) to be changed. The new Residuals Treatment Plant is designated as "280 Willis Point Road". It has already been sign-posted so one small address change would be required but otherwise a change of road name would have no postal or property registration implications. While a cosmetic change, this would decouple the name "Willis Point" from the Landfill and is something that the Willis Point Community Association strongly endorses and advocates. We hope the CRD will work with Saanich to effect this name change.

Biosolids

We are one of the communities most affected by changes to the use of Hartland. Our community suffered through two years of construction as the new sewage pipeline was constructed and there continue to be occasional road interruptions. We have been subjected to odour problems arising from the commissioning of the Residuals Treatment Plant (RTP), which are ongoing. We are also concerned about the plan to spread biosolids at Hartland, once the RTP begins to produce them, as this could affect human, plant and animal life in areas adjacent to the Landfill. Given these and other concerns, we are hopeful that the CRD Board will review our input carefully and take action where possible.

Summary and Thank you

The CRD SWMP is important to the WPCA because of both proximity and general love of nature and concern for the environment among Willis Point residents. I believe that the general environmental and climate concerns expressed affect the greater community of the CRD well beyond Willis Point.

I thank you for the opportunity to provide the views of the Willis Point Community Association on the current draft of the Solid Waste Management Plan and related traffic issues.

Yours sincerely,

Daniel J. Kenway, P.Eng
President

Appendix E: ADVOCACY GROUP FEEDBACK

Advocacy Group Letter: Mount Work Coalition

FROM THE DESK OF

MOUNT WORK COALITION

February 12, 2021

Colin Plant, Chair CRD Board, and

CRD Board Directors

Feedback to the CRD on the draft Solid Waste Management Plan

Please find feedback to the draft Solid Waste Management Plan (the Plan) from the Mount Work Coalition, a non-profit society that formed as a group of concerned citizens with a mission to provide voice and support for the protection and responsible stewardship of the Mount Work Park area through education, advocacy and research.

1. Expanding the landfill

The Plan includes a proposal to extend the Hartland landfill site and earmarks 73 forested acres of carbon sequestering trees to be removed to prepare the area for blasting and excavating the side of a mountain. This is not a 21st century solution to waste management.

The Plan was written through the lens of a business as usual mindset predicting the landfill will reach capacity and therefore need to be expanded no later than 2045 - rather than through a lens of retaining the size of the existing landfill without expansion by rolling out new aggressive programs to reduce the waste over the next two decades. With less waste being dumped in the landfill, there will be less leachate into the rivers and lakes in the area. The Plan requires concrete waste management actions such as dedicated funding for a public educational campaign and financial incentives to encourage startups and incentivize waste management businesses that reuse waste, such as scrap businesses and plastic and rubber recycling.

This biodiverse forest of 73 acres should be kept intact to provide a natural buffer between the park and landfill, to protect species at risk, to protect the lakes and

streams and to protect the human health of those using/living next to Mount Work Park directly beside the landfill. The existing trails should remain for the enjoyment of mountain bikers.

The Coalition is pleased to see that the Board at its February 10, 2021, meeting reiterated that it was prepared to consider a more aggressive approach to waste reduction a year following the submission of the SWMP this summer. We strongly urge the Board not to trigger the expansion of the current footprint of the landfill until the amended plan is completed by 2025. The much more aggressive best practice solutions including Zero Waste, Circular Economy and emerging waste to energy technologies will reduce methane emissions to net zero through a complete transformation.

We firmly believe that the CRD can attain its aspirational target of 125 kg per person per year by 2040 with waste reduction strategies already being contemplated such as Zero Waste Victoria; the proposed waste to energy IRM project in Esquimalt and a change in tipping fees application as we will explain later. This new target should be included in the amended SWMP by 2025.

The current plan does not address the climate emergency and the commitment of the CRD and a number of municipalities to become carbon neutral by 2050, continues dumping of over a fifth of total waste in the form of organic matter though banned in law creates more methane and is in direct conflict with the Province's stated Climate Action goals and will not enable us to meet our 2030 greenhouse gas emissions targets.

According to the World Meteorological Organization's bulletin, "Carbon dioxide levels continue at record levels, despite COVID-19 lockdown", approximately 40 per cent of methane comes from natural sources, such as wetlands and termites, but 60 per cent comes from human activities, including cattle breeding, paddyfields, mines, landfills and biomass burning. Nature is now sending us a message, through wind storms and wildfires, and we must act now to do our part, as we have the ability to curb harmful methane emissions from a landfill.

2. What alternatives to landfilling has the CRD considered?

Landfills are a 19th-century solution to waste disposal. Today there are significant alternative technologies that can generate value from waste products. Furthermore, it is clear that without taking a hard look at how we consume and create waste, we will not be able to address the climate challenge that threatens our environment.

Governments across the globe, supported by their citizens have been installing multi-pronged strategies to reduce waste through promoting circular economies, changing consumer behaviour such as banning single use plastics, and investigating alternative uses for waste to energy projects such as gasification now under consideration in Esquimalt. This multi-pronged approach should be a cornerstone to the region's solid waste management plan. It can eliminate the need to build a bigger landfill, instead moving us in the appropriate direction of zero waste. The CRD staff must work in partnership with other leaders using best practices:

- Esquimalt is looking to be an early adopter of IRM/gasification technology that would see their waste converted to energy
- The Regional District of Nanaimo is promoting the 4Rs by cultivating a circular economy; uses tipping fees to encourage waste diversion rather that waste dumping and plans to divert 90% of its waste by 2027. If RDN can achieve a target of 109 kg/person/ year, so should the CRD.
- San Francisco is a global leader in waste reduction, has an effective pricing strategy that uses cost incentives/disincentives between waste and recycling.
- Switzerland has 100% waste recovery where they use a combination of material recovery and incineration for energy
- Sweden recovers 99% of its waste, converting it into heat that warms homes, power buses and taxis.
- The City of Victoria released its Zero Waste Victoria Plan to reduce current waste to Hartland by 50% by 2040.

3. Traffic Diversion to Willis Point Road

The planned relocation of commercial dump traffic to Willis Point Road is part of the draft SWMP. This decision is premature, given the opposition to expanding a landfill in the 21st century, the movement to Zero Waste, a circular economy, and waste-to-energy technologies.

The CRD staff should revisit this decision based on the premise that the landfill will not be expanded and that other regional municipalities will be implementing new technologies to manage their own waste. With less waste being trucked to the landfill, there will be less traffic, no expansion and no reason to reroute traffic. The CRD should be able to construct internal roads and fill alternate cells closer to the existing entrance off Hartland Avenue.

4. Biosolids

The CRD Board reversed its longstanding ban on the spreading of biosolids on land and will be spreading toxic biosolids within the Hartland perimeter for up to 6-8 weeks a year while the Lower Mainland facility undergoes maintenance. CRD communication describes this as a temporary solution, which is absurd since once spread, biosolid toxins remain in the ground, waterways and air - they are not temporary. CRD characterizes the area around the dump as a rural area, which is incorrect - it is a semi-rural with local residential communities and schools very close to the dump area, and the regional tourist attraction of Butchart Gardens, concerned as they are downstream of the dump and use the water in Todd Creek. The area is also home to many organic farmers in close proximity.

The primary challenge with the decision to spread biosolids at the Hartland dump is the lack of scientific evidence to demonstrate that it is safe for the human and wildlife populations in the area. Biosolids, even treated to Class A standards, contain microplastics. The scientific community is now researching the effects of microplastics in our lakes, rivers and streams. As the basic tenet of good environmental governance is the precautionary principle – given the lack of scientific certainty, the decision should be not to spread the biosolids.

Biosolids contain over 300 chemicals. Some will survive the drying process, and any trace of toxic chemical even at the lowest risk is unacceptable and will do significant damage to the 16 species that are endangered or threatened in the area, including the Western Painted Turtle and the Western Screech-Owl. Biosolids soak into the ground water and the wetlands and the 16 at risk species will digest or absorb the chemicals from the biosolids, destroying these endangered wildlife.

5. End Reliance on Tipping Fees as the Primary Source of Funding for Hartland

Reliance on tipping fees to fund Hartland's operations is counter-intuitive to zero waste. The tipping fee model provides no material incentive to reduce waste; indeed it is a disincentive as is demonstrated by concerns to keep all waste disposal in the region. Tipping fees must be used to incentivize waste diversion as is being done in the Nanaimo Regional District and if alternate sources of funding are required to maintain the Landfill operation, a general tax levy may be required. This is a small price to pay to meet climate change goals.

6. Strategy to Optimize Landfill Gas Management

The Hartland landfill signed an agreement with FortisBC to collect methane from the landfill. We disagree with this strategy as it relies on a steady stream of decomposing waste being dumped into a landfill to feed the FortisBC system for a small amount of RNG. Expanding the landfill and relying on a small fraction of the resulting methane gas collection is contrary to the mandate for the region to reduce GHGs. The landfill must be sustainable into the future without relying on outdated expansions.

In Summary

Our mission is to protect the Mount Work Park region and ensure science-based decisions are made concerning the Hartland landfill activities that impact the parks. As the CRD has declared a state of climate emergency and a goal for carbon neutrality, we believe that expanding a landfill by removing a biodiverse carbon sequestering forest, moving dump traffic and spreading biosolids is contrary to this goal and will lead to an overall increase in carbon. There are opportunities for emissions reductions using new technologies, zero waste initiatives, and increasing carbon sequestration by not expanding the landfill as trees absorb CO2. Minimizing GHG emissions are critical for meeting the CRD's goals.

1. Delay any approval for landfill expansion until an updated and amended plan is adopted in 2025.
2. The amended SWMP submitted in 2025 must establish a target of 125kg/person/year by 2040.
3. Notify the Ministry of Environment that the CRD intends to submit an amendment to the plan by 2025 with strategies for attaining this target including an aggressive Zero Waste program, and an independent analysis and testing of alternative technologies such as IRM/gasification/Waste to Energy.
4. The Plan submitted in 2021 should contain a placeholder for the Esquimalt waste to energy project subject to a business case being completed.
5. Conduct an independent environmental assessment prior to any plans to expand or alter the design of the landfill, including the spread of biosolids, to protect the natural ecosystem, wildlife, community health and the recreational users of the area.
6. Strengthen the plan's Zero waste initiatives by adding concrete plans such as dedicated funding to create business incentives for entrepreneurs; create a public education campaign to draw awareness to Zero Waste, and

use tipping fees to incentivize waste reduction instead of encouraging continued use of landfilling as a source of revenue

7. Ensure protection of species at risk in Mount Work Park, we are requesting the BC Ministry of Environment reinstate its longstanding ban (2011 and 2013) on the spreading of biosolids, planned to begin in February 2021.
8. Delay the decision to reroute landfill traffic to Willis Point Road until decisions are made to have regional municipalities manage their own waste with Zero waste and new waste to energy technologies.
9. The Amended Plan by 2025 would be subject to full public consultation during its development to ensure the public has ample opportunity to engage in accordance with Ministry policy.

1 CONTEXT

Under the *Environmental Management Act*, the Province of BC requires that each Regional District develop and implement a Solid Waste Management Plan (SWMP). These plans are to be renewed every ten years (previously every five years but now with an effectiveness review at five years) and require public consultation before submission to the Ministry of the Environment and Climate Change Strategy (the Ministry) for ministerial approval.

The Capital Regional District (CRD) last updated SWMP is from 1995 and though it has been amended over the years, the 2020 draft SWMP represents the first update since then.

This report is a review of the draft SWMP from a Zero Waste perspective, which is to greatly decrease the need for landfill expansion through minimizing waste with all of the concurrent benefits. The report will outline what Zero Waste is and why it should be pursued, followed by a review of the draft SWMP using the Zero Waste Hierarchy and a discussion of solid waste system funding.

2 ZERO WASTE

2.1 Definition

Zero Waste is "The conservation of all resources by means of responsible production, consumption, reuse, and recovery of products, packaging, and materials without burning and with no discharges to land, water, or air that threaten the environment or human health."[1] This Zero Waste International Alliance (ZWIA) definition is peer-reviewed and is in contrast to "Zero Waste to Landfill" which is an industry-created definition meant to promote burning of waste and often requires no changes in separation of materials nor reduction of waste. Many organizations, including the City of Victoria, are using the ZWIA definition to provide the vision of what their actions are driving towards. While some may focus on the elimination of waste at the end of pipe, the key aspect is the conservation of resources and eliminating problematic materials and products, starting at the design stage. The highest level of recognition as a Zero Waste Community by ZWIA is when a local government has reduced disposal (to landfills, incineration and the environment) by 90% or more but communities are encouraged to embark on the process beginning with the level "Working Towards Zero Waste".[2]

2.2 Zero Waste Hierarchy

To aid in understanding the scope of policies and strategies that are part of Zero Waste plans and to evaluate them, ZWIA developed a hierarchy (see Appendix A). The Zero Waste hierarchy defines each level of the hierarchy and includes the guiding questions, principles and definitions. Zero Waste is more than just having no waste but includes systemic changes to our ways or producing and consuming materials starting at the top of this hierarchy.

The levels of the hierarchy are shown in Figure 1. The upper levels of the hierarchy are larger to emphasize that the most benefit in terms of the guiding principles arises from actions taken in these areas. The top three levels help to prevent waste while recycling and composting put the materials back in the useful loop. Material recovery

[1] Zero Waste International Alliance (2018). Definition accessed at http://zwia.org/zero-waste-definition/.
[2] Zero Waste International Alliance (2014). Zero Waste Community Certification. Accessed at http://zwia.org/zero-waste-community-certification/.

can put further materials back in the loop or sequester materials that would be harmful to recirculate (such as mercury or asbestos). Residuals management looks at what can be learned from what remains to continually improve Zero Waste systems. Destructive disposal systems are deemed unacceptable for many reasons. They destroy materials and thus the materials and the embodied energy[3] are lost; the technology is usually very expensive to both build and operate, and takes years to build so the opportunity costs[4] are high; all atoms going in must come out in some form and sometimes new more harmful molecules (such as dioxins and furans) are formed so pollution is a concern, and pollution reduction or capture technologies are expensive and do not fully mitigate the issue; the energy produced is often carbon-based with significant greenhouse gas impacts; and there is still residual waste to manage in landfills. This clear stance is in contrast to the pollution prevention hierarchy still used by the Province[5] which has the steps of Reduce, Reuse, Recycle, Recovery (materials and/or energy) and then Residuals Management. The Zero Waste Hierarchy was developed, in part, based on the experience of Europe where waste to energy or incineration was used extensively at significant expense but with harmful consequences and no real reduction in the throughput of materials.[6] Both hierarchies are designed to be planning tools, starting at the top, and the provincial website states that "once all achievable opportunities at a higher level have been taken, only then should the next level be looked at."[7]

Figure 1 Zero Waste Hierarchy

[3] Embodied energy is the energy all along the lifecycle that it took to make and deliver the products.
[4] Opportunity costs are what other actions were not taken due to the resources (staff, time or money) being spent elsewhere.

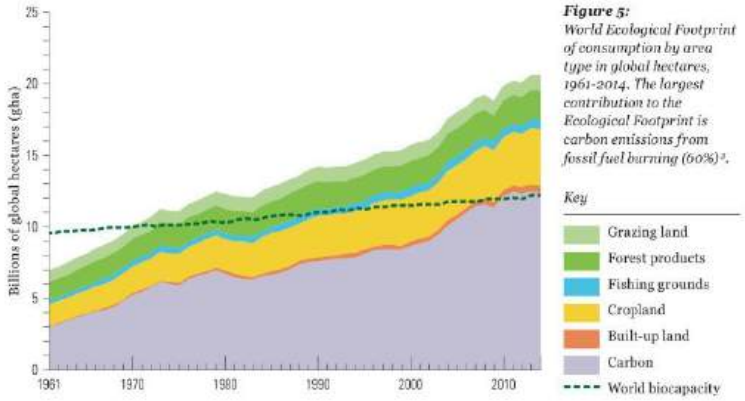
2.3 Circular Economy

A related concept to Zero Waste is the Circular Economy, with both having roots in the Cradle to Cradle concept of McDonough and Braungart.[8] Like Zero Waste, the Circular Economy also looks to design out waste and pollution, keep materials and products in use and regenerate natural systems.[9] Both concepts propose to move from a linear take-make-waste system to a circular model. This concept helps to highlight the employment and economic opportunities from reducing material throughput and waste and has growing momentum. The provincial waste planning guideline recommends both concepts be part of solid waste management plans.[10]

2.4 Why Zero Waste

As noted, Zero Waste is about more than having no materials for disposal, it is about reducing our footprint on the planet. Consumption patterns globally are not sustainable (see Figure 2 below).[11] Collectively humans use more than one planet's worth of area to provide goods and absorb wastes. This results in an ecological deficit where resources are not replenishing nor wastes absorbed to match the rate of consumption of materials or production of wastes. Growing and extracting materials and producing products has resulted in habitat and species loss, diminished soil quality, increased energy and water use, greenhouse gas emissions and other forms of pollution as well as the resulting solid waste. In addition to these ecological symptoms, there are also social ones such as inequity, injustices and human health risks. We are all starting to see the consequences of this, locally and globally.

Figure 2 Ecological Footprint of Consumption



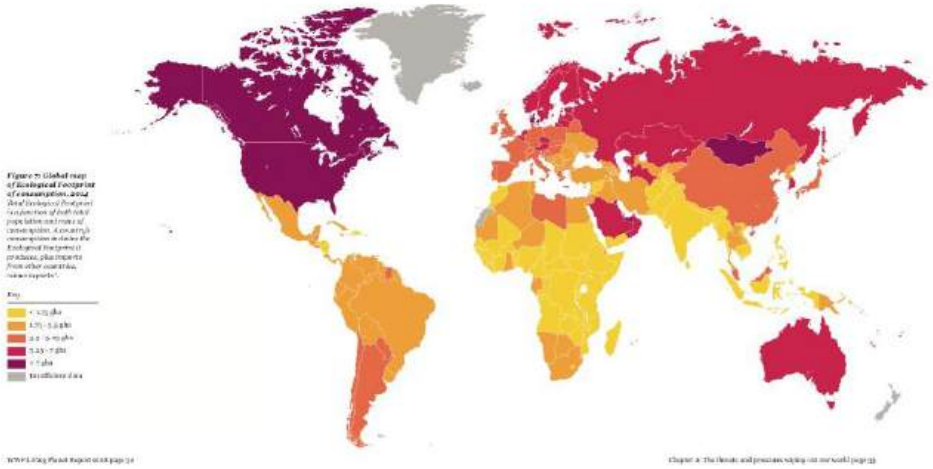


Figure 5:
World Ecological Footprint of consumption by area type in global hectares, 1961-2014. The largest contribution to the Ecological Footprint is carbon emissions from fossil fuel burning (60%)[2].

[11] World Wildlife Fund (2018). Living Planet Report 2018. Accessed at https://wwf.panda.org/knowledge_hub/all_publications/living_planet_report_2018/

Figure 3 below[12] shows that Canada and the US use a disproportionate amount of resources and so need to do more than other regions to decrease consumption of materials and production of wastes. To remedy this, we need to change to Zero Waste and Circular Economy systems. We also need all parties to do their part, whether it is federal, provincial and municipal governments, and businesses pursuing Zero Waste Strategies to citizens choosing purchases wisely and sharing or renting items.

Figure 3 Global Map of Ecological Footprint of Consumption

In addition to the environmental and social reasons to pursue Zero Waste, there is also a strong business case for it as a report commissioned by the Ministry showed with a net economic benefit, an increase in GDP and generation of income tax revenue.[13] There are many jobs and business opportunities that come with the pursuit of Zero Waste.

There is momentum building for Zero Waste and Circular Economy initiatives globally. In the EU, many cities have signed on to the Circular Cities Declaration.[14] The federal and provincial governments are also planning to take more steps and both have had recent papers out for feedback on some of their next steps. The CRD is well-placed to be a leader in this with the City of Victoria pushing for Zero Waste, Saanich's recent adoption of a plastic bag ban, neighbouring Regional Districts setting good examples, expertise within local academia and the community, a growing number of Zero Waste businesses, and broad support from citizens and environmental groups.

2.5 Role in Climate Change

Key elements of direct emissions from the solid waste management system include gas released from landfills (usually methane and carbon dioxide as a result of organic materials breaking down in anaerobic conditions) and transportation of materials from collection until the final destination. Landfill gas can be captured but the draft plan notes that only 68% was captured in 2018 at the Hartland Landfill. Ministry best practices aim for 75%[15] of the gas (though some systems report higher capture rates) meaning that significant amounts of gas, at least half of it methane, escape. This is especially problematic as methane is a very powerful GHG with a shorter lifespan (an impact of 84-87 global warming potential over a 20 year time span rather than 28-36 of 100 year time span is used).[16] There can also be significant emissions from burning of waste but this is not the case in the CRD at this time.[17]

Greenhouse gas (GHG) emissions are often looked at from a sector perspective as dictated by the Community Energy and Emissions Inventory protocol and from this view waste makes up 9% of the 2017 CRD emissions with buildings (36%) and on-road transportation (55%) making up the remainder. However, when looking at emissions from a systems perspective as Figure 4 below shows where all of the upstream emissions for the provision of goods, food and other consumption are included, it is apparent that choices of consumption and wastefulness have a bigger impact on GHGs. When the full ecological footprint is considered, it is clear that consumption choices have a very large impact.[18] This figure shows the comparison for the City of Victoria, which was one of the pilot communities for developing this tool, though other studies have found similar if not identical results.[19]

[16] US EPA (2020). Understanding Global Warming Potentials. Accessed at https://www.epa.gov/ghgemissions/understanding-global-warming-potentials#Learn%20why.
[17] Using data from Metro Vancouver's financial plan and 2019 Biennial report, despite handling only ⅓ of the region's solid waste, the Burnaby incinerator's operating costs were more than double the cost per tonne of the landfill and emitted more than double the GHGs per tonne of the landfill.

Figure 4 Global Protocol for Community Emissions (GPC) versus Consumption-Based Emissions Inventory (CBEI) versus Ecological Footprint

Because these upstream emissions are not counted in the current scope of the local government reporting, they are usually ignored and so both climate action and solid waste plans often do not include strategies to address them. They still exist however, and a study for the C40 Cities suggested "urban consumptions-based emissions must be cut by at least 50% by 2030 to maintain the possibility of keeping global temperature rise below 1.5 C."[20] Of the cities examined for that study, 85% of the emissions associated with goods and services consumed within their boundaries are imported from elsewhere. This same report goes on to advocate for ambitious action in the next ten years, noting the need for high income urban areas to reduce the climate impact of consumption by 2/3 in the next decade. While each of these studies uses slightly different methodologies and cover different geographies, the bottom line is that consumption of materials, including food, has a GHG impact at each stage of the process from growing or extracting resources to manufacturing to sales to home or business to disposal. By reducing wasteful and unnecessary consumption, GHGs can be reduced more significantly than with a sole focus on waste diversion (recycling or composting) and far, far more than any energy recovery system would. The Closing the Loop report found that aggressive Zero Waste policies could save 6.2 million tonnes of CO_2e by 2040 while creating 7000 new green jobs in BC.[21] The City of New York's One NYC 2050 Plan also acknowledges that "carbon neutrality necessitates New York City achieving zero waste."[22] The City of Amsterdam's Circular Strategy

[20] C40 Cities (2019). New Research Shows How Urban Consumption Drives Global Emissions. Accessed at https://www.c40.org/press_releases/new-research-shows-how-urban-consumption-drives-global-emissions.
[21] Lee, M., Legg, R., Maxwell, S. and Rees, R. (2013). Closing the Loop -Reducing Greenhouse Gas Emissions and Creating Green Jobs Through Zero Waste in BC. Accessed at https://pics.uvic.ca/sites/default/files/uploads/Closing%20the%20Loop...pdf.
[22] The City of New York (2019). One NYC 2050 Building a Fair and Strong City. Accessed at http://1w3f31pzvdm485dou3dppkcq.wpengine.netdna-cdn.com/wp-content/uploads/2020/01/OneNYC-2050-Full-Report-1.3.pdf

notes that a circular economy is needed to stay within planetary boundaries and is part of their path to climate neutrality.[23] They also use doughnut economics[24] and recognize the need for social justice.

This realization that consumption drives a significant portion of GHG regardless of where the actual emissions may occur is why many progressive communities are looking at adopting consumption-based emissions inventories to help them better understand their impact and develop suitable strategies. Looking at waste and GHGs with this lens changes the focus from the traditional one: what we discard from our homes, institutions and businesses, to what we choose to consume, how we do that (owning versus sharing, reusable versus disposable), how long we keep the items in use and then how we discard them.

As noted in the Regional Climate Action Strategy,[25] which includes a goal to minimize waste generation, there are many co-benefits of climate action and similarly there are also many co-benefits from pursuing Zero Waste which go beyond less waste and GHGs.

The Ministry's guidelines for solid waste planning recommend that plans address the climate impacts of waste. According to the CRD website,[26] "in February 2019, the Capital Regional District (CRD) Board identified Climate Action & Environmental Stewardship as a priority for the region and approved a motion to declare a climate emergency... The CRD is developing and implementing strategies to address this issue." A strengthened Solid Waste Management Plan could be one of those strategies.

Finally, it is important to acknowledge that while GHGs alter the global climate, the impacts can be seen locally, here in BC experienced as increased forest fires and smoke, altered rainfall patterns (droughts and floods) and loss of species, which will have knock-on effects and costs to many communities and businesses. It is through our collective global action to reduce the GHG emissions that the local impacts can be minimized.

3 REVIEW OF DRAFT PLAN

The draft SWMP was reviewed through the lens of Zero Waste and using the Zero Waste Hierarchy. Each level of the hierarchy is noted below as well as the plan direction and supporting systems.

3.1 Plan Direction

The plan adopts and strengthens the guiding principles (including Zero Waste and the Circular Economy) that are recommended by the Ministry.[27]

[26] CRD (2019). Climate Action webpage. Accessed at https://www.crd.bc.ca/project/climate-action.

[27] BC Ministry of Environment (2016). A Guide to Solid Waste Management Planning. Accessed at https://www2.gov.bc.ca/assets/gov/environment/waste-management/garbage/swmp.pdf.

The goals for the plan are to:

1. To surpass the provincial per capita waste disposal target and aspire to achieve a disposal rate of 125 kg/capita/year.
2. To extend the life of Hartland Landfill to the year 2100 plus.
3. To have informed citizens that participate effectively in proper waste management practices.
4. To ensure that the CRD's solid waste services are financially sustainable.

As the preface of this section states these are aspirational, these goals could be far more inspiring. The guiding principles include a Zero Waste approach and so the aspirational target should be Zero Waste, rather than 125 kg/capita/year. If that goal is seriously pursued then the lifespan of the Hartland Landfill could be greatly extended and its role could be more as a hub for materials, research and education than for waste disposal. The role of citizens in a Zero Waste and circular economy system should be more than as correct sorters of materials, but instead as active participants developing a vibrant circular economy that minimizes material throughput and environmental harms while maximizing local benefits. Businesses, institutions and other sectors should also be actively engaged. It is appropriate to ensure the long-term financial stability of the solid waste services.

The plan uses the pollution prevention hierarchy which covers many of the same aspects as the Zero Waste Hierarchy but misses the top level where the systemic rethink and redesign considerations are included. The pollution prevention hierarchy includes energy recovery as acceptable (unlike the Zero Waste one and places it above residual management).

From a starting point of 382 kg/capita in 2019, targets for the per capita disposal rate are set at 340 kg or less for the third year, 285 kg for the fifth year and 250 kg for the tenth year. It also should be noted that the CRD has been close to the provincial target of 350 kg/capita for two of the past five years and so while this may be a stretch target for some regions, it may not be rigorous enough for others including the CRD.
The importance of stretch goals can be seen from history. In 1989, BC set a goal to reduce the average per capita disposal rate by 50% by the year 2000.[28] During those years, waste disposal per capita in the CRD fell from 654 kg/capita to 399 kg/capita. The target of 327 kg was not reached but the drop was significant. Since then the per capita number has fluctuated between 352 and 454.

In comparison, the City of Victoria has a target of 50% less waste disposed by 2040 and fully circular by 2050.[29] Victoria represents 1/3 of the waste going to the Hartland Landfill. The C40 Cities has a Zero Waste Declaration (to which Vancouver is a signatory) which sets a goal of 50% less waste disposed by 2030 (compared to 2015).[30] The equivalent for the CRD would be 172 kg/capita. The C40 Declaration also sets targets for waste generation (as in all materials discarded which includes waste, recycling and organics) to be 15% less and for diversion to increase to 70% by 2030. The cities commit to biannual public reporting. While the CRD draft plan does not show the diversion rate, Figure 1 of Zero Waste Victoria shows that its diversion rate is 51%.[31] The Regional District of Nanaimo (RDN)

[28] Government of Canada (2006). An Analysis of Resource Recovery Opportunities in Canada and the Projection of Greenhouse Gas Emission Implications. Accessed at https://www.rcbc.ca/files/u3/RR-opport-data-report.pdf.
[29] City of Victoria (2020). Zero Waste Victoria. Accessed at https://www.victoria.ca/EN/main/residents/climate-change/waste-reduction.html.
[30] C40 Cities (n.d). Advancing Towards Zero Waste Declaration. Accessed at https://www.c40.org/other/zero-waste-declaration.
[31] Same as footnote 28

had comparable waste per capita to the CRD (347 kg in 2014 -RDN to 369 kg for the CRD) and yet their target is far more aggressive at 109 kg by 2027.[32]

Recommendations:

- Adopt Zero Waste as the goal and engage all sectors of society in pursuing this.
- Adopt the Zero Waste Hierarchy as a guide.
- Adopt stronger targets (similar to the Regional District of Nanaimo).
- Gather information and add targets for reduced waste generation and waste diversion that at least match the C40 Zero Waste Declaration.

3.2 Rethink/Reconsider

Under the rethink/reconsider level of the hierarchy, the CRD draft plan includes some good measures. Developing and implementing a purchasing policy can encourage production of products made from reused, recycled or sustainably-harvested renewable, non-toxic materials and products that are durable, repairable, reusable, fully recyclable or compostable, and easily disassembled. The purchasing policy could also improve the market for the finished compost material. This should be developed in partnership with member municipalities as noted but also regional districts, universities, the provincial government, and institutions to maximize the impact. The CRD could join the Canadian Collaboration for Sustainable Procurement to maximize the impact and reduce the work involved in research. An annual report back to the Board as happens for the City of Vancouver is recommended. Incentives are another key component and the plan includes a fund for waste reduction (action 2B) and Pay As You Throw (PAYT) for tipping fees. A key one needed is to have higher tipping fees (more on tipping fees in section 4), ideally matching the CVRD fees to prevent waste migration and provide stronger disincentive to wasting. Additional fees will help to fund programs. The CRD has differential fees (free for recycling and Household Hazardous Waste (and lower for yard waste than garbage)[33] however the charge for kitchen scraps is higher than for waste which would encourage putting kitchen scraps in the waste. In addition, there is no surcharge or penalty for mixed waste loads such as for the Sunshine Coast, Whistler and Squamish, where fees may be double if the waste has a significant amount of banned materials (including recyclables and organics). The Regional District of Kootenay Boundary charges five times the tipping fee for loads with banned recyclable materials.[34] In addition to PAYT at the landfill, the CRD should work with member municipalities to have PAYT at the curb and elsewhere that makes it progressively more expensive by weight or volume to waste.

Other areas that need addressing for fees are for tires and unsecured loads. The fees for rimmed tires may be a disincentive. Work should be done with Tire Stewardship BC and the Ministry to ensure that the Extended Producer Responsibility (EPR) program is covering all costs associated with their products including the handling of rimmed tires so that the landfill does not need to charge fees to the end user. Unsecured loads can create litter enroute to the disposal facilities. One way to prevent this is to charge an additional fee for loads arriving unsecured as is done by many other regional districts.

---

[33] CRD (2020). User Guide Hartland Depot. Accessed at https://www.crd.bc.ca/docs/default-source/recycling-waste-pdf/hartlanduserguide.pdf?sfvrsn=88e2c3ca_8.

[34] Regional District of Kootenay Boundary (n.d.). Garbage, Compost & Recycle. Accessed at https://rdkb.com/Utilities-Waste/Garbage-Compost-Recycle/Landfill#mckelvey.

In 3.8 Residual Management, the need for understanding what remains in the waste will be highlighted but this information should feed back into systems change. Items that are not recyclable nor compostable need to be identified and this feedback needs to inform the federal and provincial directions for what materials may need to be phased out or regulated into an EPR program.

This plan can help to increase the local economy, through procurement policy and fostering local businesses that reduce waste. The plan could include actions to measure and promote this. For example, the Vancouver Economic Commission reports on the green local jobs created through the Greenest City Action Plan.[35] There could also be a specific working group to develop the Local Circular Economy that goes beyond Plan Monitoring Advisory Committee members and engages citizens, businesses, academia and others to develop Zero Waste businesses beyond what the CRD already has. The CRD is well-placed to do this given that there is a wealth of expertise (the University of Victoria and the Provincial Government is within its boundaries), there are numerous environmental non-governmental groups like One Planet Saanich, and that there are already a host of Zero Waste businesses in place.[36] It is key to get the mindset of citizens and businesses to change. This can come from education programs, bans on single use and commonly wasted items, and be part of solutions designed to encourage people to consume less.

Leading by example is another key strategy. Leadership can be demonstrated through in-house programs such as employee education; increased use of electronic documents; double-sided copying and printing and only when necessary; decreased use of non- recyclable paper; use of cloth towels or electric hand dryers in rest rooms; and where packaging is required in food operations, using only reusable and recyclable containers. Use of standard signage and bins in appropriate collection areas can also decrease the corporate waste.

Recommendations

- Increase tipping fees to align with neighbouring regional districts, ensure kitchen scraps are at a lower fee than the waste and add a mixed waste fee at double or more the regular waste tipping fee to encourage waste diversion.
- Work to address fees on rimmed tires.
- Add a fee for unsecured loads.
- Add an action to promote the local circular economy potential.
- Develop a program for the CRD corporate entity to model Zero Waste actions.
- Join the Canadian Collaboration for Sustainable Procurement.
- Have the CRD lead by example.
- Work with federal and provincial government on policies to reduce material throughput and waste.

3.3 Reduce

Strategy #1 Continue and Enhance Education Programs

Reduction is critical area for change and source reduction and the elimination of problematic materials should be the main focus. Reducing the materials at the source can then be supported by behaviour change components, not just incorporated but as the key driver for new and existing programs. The expansion of education to multifamily and ICI sectors is good as is expanding the K-12 programs to include the circular economy. While supporting

[35] Vancouver Economic Commission (2018). Green Economy. Accessed at https://www.vancouvereconomic.com/focus/green-economy/.
[36] Project Zero (2020). Accessed at https://www.project-zero.ca/resources.

environmental stewardship recognition is noted, it should include awards, labelling, accreditation and other forms of public recognition. In addition to the actions already listed, these could be added as well:

- Partner with other jurisdictions to share materials (for example, consider rolling out Think Thrice -Metro Vancouver's textiles campaign).
- Create targeted behaviour change campaigns based on the needs shown in the waste composition studies.
- Monitor results with ongoing waste audits and modify campaigns based on the feedback.
- Consider partnering with other organizations (not just product stewards): environmental groups, universities, the Ministry, and others to test out pilot programs. Share the results with other jurisdictions.
- Instead of just engaging residents on solid waste matters, work to promote the Zero Waste concept and increase avoidance of waste-generating materials and products, and diversion for all residents and businesses. Help citizens to understand the environmental footprint of their purchases and how to evaluate different options.
- Consider a waste or sustainability-focused newsletter like the Regional District of Nanaimo and City of Vancouver have.
- Foster and promote the refill, reuse, sharing, rental, and repair businesses in the region.
- Enhance and encourage more repair cafes such as those in Sooke, Fairfield and North Saanich.
- Conduct a toxics reduction campaign to reduce the amount of hazardous materials used.

Strategy #2 Encourage Waste Prevention

The actions in this strategy are also key for waste reduction and include promoting reduced consumption and consumer responsibility, supporting single-use item reduction efforts, promoting better packaging options and advocacy. These actions are sound but it is unclear how extensive they will be or not. Additional actions could include :

- Ensuring access to drinking water instead of bottled water by mapping it out as Metro Vancouver has done
- Developing a regional reusable cup share programs as the City of Freiburg has and use the same model for takeout containers.
- Working with local partners to develop and promote sharing services such as for reusable mug and takeout containers as well as other services.
- Work to reduce waste at the source and eliminate problematic materials including bans where possible.
- Collaborating with other local governments (and non-governmental organizations) to increase the efficacy of the advocacy to higher levels of government.
- Develop a plastic reduction strategy to reduce the use of plastics, plastic waste and microplastics. Collaborate with other governments as well as businesses. The next ten years will eb a critical time for this.
- Developing a program to encourage renovation of buildings over demolition.

Strategy #3 Support Reduction of Avoidable Food Waste

A strategy addressing food waste is sound and could be strengthened by setting a food waste reduction target. The actions to support residential and ICI food waste reduction, and food recovery organizations, as well as advocating for clarity and education on best before dates are suitable but the degree of action is unclear.

Given the large percentage of single family homes and the amount of kitchen scraps and yard waste generated, consideration should be given to:

- Continue with the Love Food Hate Waste program but strengthen its implementation.

- Work with partner organizations to decrease food waste.
- Develop a program to increase wildlife-friendly backyard composting. This is considered reduction as the material does not need to be collected nor transported and it can replenish the nutrients in the gardens.
- Grasscycling and xeriscaping can also be encouraged to reduce the amount of yard waste.

3.4 Reuse

Strategy # 4 Support Reuse Activities in the Region

This strategy has actions to continue support for reuse organizations; support of rental, reuse and sharing programs; and investigating free stores at facilities. Other actions should include:

- Develop a sharing economy strategy that identifies the top priorities[37] could result in the option to borrow a wide-range of items like York Region's Lendary. Support local sharing systems or set up ones to fill in the gaps (bikes, tools, cars, toys, kitchen gadgets).
- Hosting a ReBuild it Centre at Hartland.
- Mapping out local resources for sharing, rental, reuse, and repair. See Portland as an example.
- Hosting or supporting local repair cafes like in Metro Vancouver.
- Set reuse/refill targets across CRD buildings/spaces and invest in infrastructure for this.
- Support reusable diapers systems as household hygiene is a significant waste segment.
- Advocate for the Right to Repair, mandatory warranties, time frames for parts availability, requirements for online manuals, and plans for components
- Advocate for EPR programs to be responsible for supporting repair and reuse of their products (where suitable).
- Ask for federal and provincial investment in reuse, repair, refill, etc. and circular systems for scaling local initiatives.
- Incentivize house moving and construction material reuse through regulatory strategies, enforcing limits on waste generation and expanding environmental obligations. This should be done in partnership with member municipalities.

3.5 Recycle

Table A of the Waste Composition study[38] (which is a more detailed look at the data in Figure 4.2 of the draft plan) shows that over 50% of the waste is comprised of materials that are banned or could be recycled. This highlights the needs for more education and enforcement of the bans. Products and packaging covered under the Canadian Council of Ministers of the Environment Canada-wide Action Plan for Extended Producer Responsibility[39] represent 61% of the waste and highlights the need for the Ministry to follow through on its 2009 commitment to require producer responsibility systems for Institutional, Commercial and Industrial (ICI) Packaging and Printed Paper (PPP); textiles and carpet; furniture; and construction and demolition materials (though the target date was 2017). The Ministry took a step towards parts of this with its recent Discussion Paper but the CRD must continue to play a strong role in pushing for complete and speedy delivery of the Canada-wide Action Plan.

[38] Tetratech (2016). 2016 Solid Waste Stream Composition Study. Accessed at https://www.crd.bc.ca/docs/default-source/recycling-waste-pdf/WasteCompositionStudy2016.pdf?sfvrsn=baab36ca_4.
[39] Canadian Council of Ministers of the Environment (2009). Canada-wide Action Plan for Extended Producer Responsibility. Accessed at https://www.ccme.ca/files/current_priorities/waste/pn_1499_epr_cap_e.pdf.

Many of the strategies in the CRD draft plan relate to recycling for different waste generating sectors (residential - single family and multifamily; ICI; construction and demolition; and public spaces). They are noted here along with ways to enhance the plan.

Strategy #7 Increase Residential Diversion

Actions for this strategy include promoting diversion, working with service providers to support depot diversion, encouraging local processing and markets and developing tools for event recycling. Additions could include:

- For events, the CRD should work with member municipalities to require zero waste plans to be part of event permitting process.
- The grey box system for glass collection, such as the City of Vancouver uses, should be examined to see if this could increase diversion.
- Work with service providers to do more checks, education and enforcement of disposal bans at point of collection.

Strategy #8 Increase Multi Family Diversion

Actions include supporting diversion through education, working with partners to develop source separation requirements, developing a policy guide and collaborating with stakeholders to support recycling. These are all suitable and good examples exist elsewhere that can be used.

- A review should be done to make sure the Recycle BC program covers all the appropriate multifamily buildings in the CRD.

Strategy #9 Increase ICI Diversion

Actions include providing resources such as a business waste reduction liaison, advocating EPR for ICI packaging and paper, creating a toolkit, encouraging municipalities to require waste management plans with business licenses, developing policy for ICI space and access requirements, working with partners on source separation requirements and investigating disposal ban enforcement of generators. These are all suitable and good examples exist elsewhere that can be used.

Strategy #10 Support Existing and New EPR Programs

These actions are to advocate for expanded EPR programs, standardized programs and return-to-retail opportunities. It also looks to work with the stewards to increase consumer awareness of programs. Advocacy is the main element for this and the CRD can also:

- Work to ensure that the EPR programs are fully delivering on their obligations including doing more on the first levels of the hierarchy.
- Ask that the Province meet its commitments to the Canada-wide Action Plan for EPR in a timely fashion.
- Work with other local governments to ensure the programs are as effective as possible and that local governments have a voice in program delivery and plans.

Strategy 12# Increase Construction, Renovation and Demolition Material Diversion

The actions include a clean wood waste ban and looking at surcharges for mixed waste loads along with programs for hazardous materials. In addition to this, the CRD could:

- Develop a Construction and Demolition materials hub at Hartland (as the City of Vancouver is investigating).
- Form a Construction and Demolition working group to determine best practices
- Require deconstruction not demolition (building on Metro Vancouver's model bylaw).
- Charge a waste levy on materials to drive diversion and track data.
- Ask the provincial government to work towards a building code that incorporates future deconstruction needs and factors in embodied carbon and to create a deconstruction step code.
- Work with province to include design guidelines in Building Code to ensure adequate space for waste sorting in new developments (both in unit and in building). Whistler is an example of a jurisdiction that has worked with existing buildings.

Strategy #13 Encourage Proper Public Space Waste Management Activities

The actions include developing educational materials, promoting alternatives to illegal dumping, developing a regional approach to prevention and bylaws, work on reporting systems and investigate large bulky item disposal. Other actions should include:

- For bulky disposal, the CRD should advocate for the promised EPR programs for furniture, mattresses and carpet and ensure that programs for bulky items have a pickup component.
- The CRD asking that the Recycle BC program is required by the Ministry to deliver service in public spaces as noted in the Recycling Regulation.

Additional Recommendations:

- Developing common regional signage to assist in correct sorting of materials. This should be done in conjunction with member municipalities, businesses and EPR programs. An example of this has been done by the Squamish-Lillooet Regional District.
- Banning materials before EPR programs exist. For example, Metro Vancouver have banned mattresses from their facilities and this ensures materials for the mattress recycling businesses that have arisen.
- Working with service providers to provide biweekly service for curbside garbage collection and weekly service for organics pickup. This has proven to reduce waste in other regions.[40]
- Targeting funding towards recycling materials that are not currently recycled by encouraging non-profit and private sector innovation such as in the RDN's plan.
- Educate around and enforce the bans. Feedback at each step of the process (at collection, at transfer and at the landfill) is essential to help educate waste generators on how to reduce their waste. This will require partnership with other organizations that deliver these waste collection and management services. This could require friendly waste educators monitoring collection runs and cameras on waste trucks checking each tip.

3.6 Compost

The 2016 Waste Composition study[41] (Table A, page 2) shows that 10% of the total waste was avoidable food waste and another 1.6% was of donatable quality. Another 7% was the type of material that could have been composted in backyard composters. These components are 18.6% of the waste compared to all organics at 21.1% of the waste stream. This shows that a strong focus on food waste prevention and a program to encourage backyard composting could significantly reduce the amount of organics that need to be collected and processed.

[40] Clean 50 (n.d). City of Surrey -Rethink Waste!. Accessed at https://clean50.com/projects/city-of-surrey-rethink-waste/.
[41] Tetratech (2016). 2016 Solid Waste Stream Composition Study. Accessed at https://www.crd.bc.ca/docs/default-source/recycling-waste-pdf/WasteCompositionStudy2016.pdf?sfvrsn=baab36ca_4.

This could reduce the costs for that infrastructure. It also highlights the risk in relying on the energy from organic material if the infrastructure is not scaled appropriately. The goal of composting should be high grade compost to support regenerative agriculture. This not only reduces waste but can help to support food security and resilience.

Strategy #11 Increase Organics Diversion and Processing Capacity

This strategy addresses some of the present issues and has actions to promote diversion, develop a processing facility, support compost markets and to develop guidelines for use of compostable products and packaging.

Recommendations:

- Consider also decentralized composting for high generation areas.
- Processing for the rest scaled to consider the reduction through reduced food waste and backyard composting.
- Education and enforcement for bans.
- Identify and develop other end market.

3.7 Recovery

While no specific strategies were in the plan under recovery, further work to reduce the use of hazardous materials and increase the coverage of hazardous materials under EPR programs should be done.

3.8 Residual management

Two strategies were noted under residual management. The Zero Waste Hierarchy recommends using existing landfills and managing them well (using best practices for gas, leachate, monitoring, etc.). This plan follows these recommendations.

Strategy #14 Optimize Landfill Gas Management

Capturing landfill gas helps to reduce the impacts of past mistakes (putting organics in the waste) but no system captures all of the emissions and there is still a loss of nutrients from the soil. There is also a risk that the drive to capture landfill gas takes precedence over the more beneficial reduction of organic waste and composting what remains. Caveats on this strategy are to ensure that the need to fulfill the contract with Fortis does not conflict with organics reduction strategies and that food waste prevention, back yard composting, support of practices to decrease yard waste, and other strategies higher up the hierarchy take precedence over the production of landfill gas. Ensure the systems are scaled appropriately to the intended volume of organic materials, not the current level.

Strategy #15 Enhance Hartland Disposal Capacity

The actions include reviewing ban enforcement levels (subject to recycling market conditions), use best practices at the landfill, develop design options to maximize capacity and conduct research into emerging technologies. One of the key ways to preserve capacity is to increase ban enforcement levels (not just review them) and to add new bans. As much of the material could be diverted already, strengthening this system along the disposal chain will be key. The CRD is to be commended for planning ahead but given that this plan is for ten years with an effectiveness review at five years, it may be premature to be developing additional capacity, especially when capacity can last longer through more aggressive Zero Waste policies. Phase 2 is expected to last until 2045 but this can be greatly

extended it by adopting the recommendations above. The less waste produced and the longer the existing landfill space can last, the lower the impact on the surrounding area.

Consider the waste that remains as a key source of information on the effectiveness of the plan's actions. This information should be used to then add or adjust actions or continue what is effective. This information should be used to tweak these programs, develop new ones or to share with higher levels of government and other stakeholders so that they can make appropriate changes as well. It can also be used to provide feedback to other entities. For example, the Zero Waste Research Center in Capannori found that the coffee pods were a problematic material so they worked with the producer to find a biodegradable solution.[42] EPR programs also have an interest in understanding the effectiveness of their programs so partnerships should include their support for waste composition studies, for which the data should be made public. It is also important to understand, gather data on, and ensure the same standards are met for waste flowing to outside the region. Victoria's Zero Waste plan also notes the need for improved regional waste flow data disclosure.

Recommendations

- Conduct regular waste audits and biannual waste composition studies. Work with EPR programs to have them pay for their share of waste composition studies. Make the data public. Make changes based on results.
- Understand and restrict waste flows outside of the region.
- Delay work on landfill expansion and pursue Zero Waste actions instead.
- Mandate clear bags for waste a soon as possible.
- Ensure the public is aware of the progress (or not to date) through publishing the annual report along with advertising and creative means such as a waste thermometer at the landfill.

3.9 Unacceptable

The Zero Waste hierarchy does not promote burning of waste. Backyard burning is noted as a debris management option but an analysis should be done to see if this material is suited for the organics management facility as such facilities may be short of chipped wood.

The CRD is also to be commended for not pursuing thermal technologies for waste destruction in this plan however the plan does mention investigating emerging technologies. While it is unclear what the scope of these technologies may be, it is important to note some examples from other regional districts where they have been clearer in their opposition to waste-to-energy technologies. The Squamish-Lillooet Regional District Solid Waste and Resource Management Plan states that thermal treatment of mixed waste is excluded from consideration for future management of residual waste.[43] The Fraser Valley Regional District notes in its plan that it "does not support the use or inclusion of incineration as a method of "recovery" and goes on to outline that the rationale is because it still requires landfilling, produces toxic residuals and air emissions, produces GHGs, wastes energy and natural resources, creates a demand for waste, imposes long-term financial burdens on local government and there are safer, smarter ways to manage non-recyclable material.[44] The RDN notes it will "continue to review and

[42] Zero Waste Europe Cities state of ZW (2020). https://zerowastecities.eu/wp-content/uploads/2020/12/zwe_report_state-of-zero-waste-municipalities-2020_en.pdf.
[43] Squamish-Lillooet Regional District (2016). SLRD Solid Waste and Resource Management Plan. Accessed at https://www.slrd.bc.ca/sites/default/files/pdfs/UES/recycling-composting-solidwaste/SWRMP/SLRD%20SWRMP%202016-03-16.pdf.
[44] Fraser Valley Regional District (2015). Solid Waste Management Plan Update 2016-2026. Accessed at https://www.fvrd.ca/assets/Services/Documents/Garbage/SWMP.pdf.

consider alternative technologies that are consistent with the Zero Waste Hierarchy and goal."[45] The Sunshine Coast Regional District adopted the Zero Waste Definition and a report noted that waste incineration would be contrary to their SWMP.[46]

Recommendation:

- Include clear language to prevent the use of destructive thermal technologies for managing waste.

3.10 Supporting Systems

In addition to the hierarchy there are some strategies that provide supporting systems to achieving Zero Waste and for which there are two strategies that would fall under this category.

Strategy # 5 Support Local Governments in Working Towards Zero Waste

This strategy includes actions for developing model language for bylaws, best practices, OCPs and economic development strategies; identifying need and zoning for solid waste facilities; enabling local recycling infrastructure; use of PAYT; and the use of clear bags. The CRD could also:

- Encourage more local governments to follow Victoria's example and create their own Zero Waste plans, tackle different strategies, and share the results. Collaboratively, local governments working on Zero Waste could engage with senior levels of government to work on road blocks they encounter.
- Work with local governments to encourage or mandate waste audits in the ICI sector.

Strategy # 6 Continue and Enhance Policy Development

This strategy includes model procurement policies, expanding material bans, investigating waste management facility licensing, investigating regulatory mechanisms for material management and looking at options for debris.

There also need to be:

- An inclusion of a requirement to report data with the licensing of waste management service providers and facilities.
- Interregional cooperation -working with other regional districts to share best practices and collaborate on advocacy.
- Membership in the National Zero Waste Council and other entities to foster Zero Waste systems.

Overall there are many sound strategies in this plan but the big question is how far and how quickly will they go. Appendix E of the draft plan shows that many new strategies (such as supporting renting/sharing/reuse programs and increasing residential, multifamily and ICI diversion will not be implemented until after year 5. The effectiveness of the plan will come down to resources dedicated to implementation. The key will be adequate staff time, scope and financial resources dedicated to solid waste. Frequently, regional districts will develop sound plans and then consistently underfund or ignore them until the next crisis in disposal capacity results. Sound management of solid waste requires early, ample and consistent efforts to minimize waste to preserve the

[45] See footnote 28.
[46] Sunshine Coast Regional District (2019). Special Infrastructure Services Committee agenda. Accessed at https://www.scrd.ca/files/File/Administration/Agendas/2019/2019-JAN-25%20ISC%20Agenda%20Package%20-%20Special.pdf.

remaining disposal capacity as long as is possible. This remaining capacity should be highly valued and decisions should factor in the ever-increasing costs to replace such an asset. This valuation should drive spending now to delay or prevent those future expenses.

A comparison with the RDN plan shows the difference in costs per capita. The RDN notes the difference between the status quo at 68% diversion to its Zero Waste strategy of 90% diversion was $10.03. The additional costs for the CRD plan at $3,245,000 represent $7.76 per capita.

Other Recommendations:

- Outline what the five-year plan review will include like the RDN plan.
- The climate strategy also notes many outreach programs and campaigns with other partners -the same needs to happen for the SWMP.
- Value the remaining landfill space.
- Increase funding and staff time to support this plan to ensure it can achieve higher targets.

4 FUNDING

Funding the plan adequately is important. The source of funds can come from tipping fees, grants, revenue from landfill gas and payments from EPR programs. It can also be funded through utility fees and taxes as many utilities are.

It is important to understand the multiple roles of tipping fees. The first is to fund the solid waste services. A high tipping fee with lower fees for source separated materials like yard and garden waste, food scraps and recyclables (also known as variable tipping fees) can be a strong incentive to recycle and compost rather than waste. Consideration of tipping fees in nearby regions is also important to avoid waste migration. Setting tipping fees lower than neighbouring districts can result in waste coming into the region. There are also some concerns that a very high tipping fee may result in illegal dumping but there are many factors that contribute to illegal dumping and the fees are not always the key driver. Tipping fees also need to continually increase both to maintain the level of incentive and to fund the system. Appendix F includes estimates of future financial requirements and revenue but appears to assume the tipping fees would remain static for ten years.

There are other sources of revenue as well. As more products and packaging are covered by EPR programs, the CRD should ensure that it is fairly compensated for services it provides to these programs and should work in collaboration with other regional districts through the BC Product Stewardship Council to ensure that local governments are also compensated for the materials that end up in the waste stream despite the programs. There is mention in the plan of developing markets for the finished compost material which could also provide revenue. The RDN is proposing a disposal levy to offset the regional district's fixed costs of solid waste system (particularly for materials shipped out of the region) with a discounted tipping fee offered to licensed haulers. In some cases, there are grants available such as the ones recently offered for organics management facilities by the provincial and federal governments. Fines may be another revenue source but not one that should be relied upon.

When regions pursue Zero Waste in a system funded mainly through tipping fees, there can be concerns that success will mean that there is inadequate income to fund the fixed costs of the solid waste system. To avoid the conflict between a goal of Zero Waste and an adequately funded system it is important to include a mix of funding sources that is adjusted as the waste is reduced. Some funds should come from property taxes and utility fees to ensure that there is a source of stable funding. These can start at a low level and can increase as the amount of waste decreases but initially the tipping fees need to be similar to neighbouring regions and high enough to

encourage waste diversion. If the revenue is higher than expected due to more waste than intended, these additional funds should be put towards additional programs to address the problem areas.

Looking at Zero Waste more broadly, the CRD can also encourage grants from other funding parties to local organizations to support Zero Waste and create a hub in the region.

Recommendations:

- Fund part of the solid waste system through property taxes and utility fees.
- Raise tipping fees to match the CVRD rates.
- Adjust funding sources as waste levels change.
- Consider a levy and discount system similar to the RDNs.
- Ensure EPR programs pay their way.
- Apply for grants and support other local partners applications as well.
- Ensure fines are applied after education measures and that they are sufficient to change behaviour.

5 SUMMARY

In general, the plan has many good strategies but a lot of them are to "investigate" possible actions rather than a firm commitment to enact them by a certain date. The plan also relies on existing staff to a fair degree to enact them. A stronger plan would have Zero Waste as the strong consensual vision and more aggressive interim targets, a commitment to the strategies listed as well as others recommended above and significantly more funding directed to achieving this vision. Rather than a focus on the need to expand the landfill, the emphasis must be on engaging the whole CRD community with broad and engaging partnerships to preserve existing space as long as possible, with regular community updates on progress, public annual reports and using the five year plan effectiveness review intervals as critical decision points to galvanize further actions if the new targets are not achieved. The degree to which these strategies will be effective will depend on the resources put towards them and the commitment to achieving Zero Waste.

APPENDIX A ZERO WASTE HIERARCHY

Zero Waste Hierarchy of Highest and Best Use 7.1

Purpose

The Zero Waste Hierarchy describes a progression of policies and strategies to support the Zero Waste system, from highest and best to lowest use of materials. It is designed to be applicable to all audiences, from policy-makers to industry and the individual. It aims to provide more depth to the internationally recognized 3Rs (Reduce, Reuse, Recycle); to encourage policy, activity and investment at the top of the hierarchy; and to provide a guide for those who wish to develop systems or products that move us closer to Zero Waste. It enhances the Zero Waste definition by providing guidance for planning and a way to evaluate proposed solutions.

Zero Waste Definition

Zero Waste: The Conservation of all resources by means of responsible production, consumption, reuse, and recovery of all products, packaging, and materials without burning them and without discharges to land, water, or air that threaten the environment or human health.

Guiding Questions

Rethink/ Redesign	What has led us to our present linear use of materials and thus, what needs to evolve to move towards a closed loop model? How do we re- design systems to avoid needless and/or wasteful consumption?
Reduce	What supports the use of less material and less toxic material?
Reuse	What supports the better use of those products we already have in ways that retain the value, usefulness and function?
Recycle/ Compost	How do we ensure materials are put back in the materials cycle?
Material Recovery	What was salvaged from mixed waste?
Residuals Management	What is still left and why?
	What do we need to take out of the system that should not have been circulated in the first place? How do we manage what is left in a flexible manner that continues to encourage movement towards Zero Waste?
Unacceptable	What systems and policies encourage wasting and should not occur?

***Guiding Principles**

Closed Loop Systems	Design systems to be closed loop rather than linear in their use of resources
Close to Source	Processes to occur as close to the source as practical
Conservation of Energy	More energy can be saved, and global warming impacts decreased, by reducing waste, reusing products, recycling and composting than can be produced from burning discards or recovering landfill gases.[1]
Do Not Export Harm	Avoid the export of toxic or potentially toxic waste or materials, as well as materials with limited or undefined recycling markets that will be landfilled or incinerated in other regions.
Engage the Community	Promote changes and systems that work with communities to facilitate meaningful and sustained participation, increase understanding, and influence behaviour change and perceptions
Highest and Best Use	Creating and keeping materials and products for a use as high on the hierarchy as possible and in the useful loop as long as possible. Keeping materials from being downcycled where the number of future uses or options are limited. **Source separate items and materials to the extent necessary to ensure clean and marketable products and materials for reuse, recycling and composting streams.**
Information & Improvement	Collect information on systems and use as feedback for continuous improvement
Local Economies	Support the growth and expansion of local economies (production, repair, and processing) in order to reduce greenhouse gases from transportation, improve accountability, and increase repair and parts opportunities
Materials Are Resources	Preserve materials for continued use and use existing materials before harvesting virgin natural resources
Minimize Discharges	Minimize all discharges to land, water or air that threaten the environment, or human health, including climate changing gases
Opportunity Costs	Consider opportunity costs of investments and ensure investments occur as high as possible on the Hierarchy
Precautionary Principle	Ensure that a substance or activity which poses a threat to the environment is prevented from adversely affecting the environment, even if there is no conclusive scientific proof linking that particular substance or activity to environmental damage
Polluter Pays	Whoever causes environmental degradation or resource depletion should bear the "full cost" to encourage industries to internalize environmental cost and reflect them in the prices of the products
Sustainable Systems	Develop systems to be adaptable, flexible, scalable, resilient, and appropriate to local ecosystem limits

[1] Source: http://zwia.org/standards/zw-community-principles/,

Zero Waste Hierarchy

1	**Rethink/ Redesign**	De sign and purchase products from reused, recycled or sustainably-harvested renewable, non-toxic materials to be durable, repairable, reusable, fully recyclable or compostable, and easily disassembled
2		Shift funds and financial incentives to support a Circular Economy * * over the harvesting and use of virgin naturalresources
3		Enact new incentives for cyclical use of materials, and disincentives for wasting
4		Facilitate change in how end users' needs are met from "ownership" of goods to "shared" goods and provision of services
5		Support and expand systems where product manufacturing considers the full life-cycle of their product in a way that follows the Zero Waste Hierarchy and moves towards more sustainable products and processes. Producers take back their products and packaging in a system that follows the Zero Waste Hierarchy.
6		Identify and phase out materials that cause problems for Closed Loop Systems*
7		Facilitate and implement policies and systems to encourage and support Local Economies*
8		Re-consider purchasing needs and look for alternatives to product ownership
9		Provide information to allow for informed decision-making
10		Eliminate or avoid systems that drive needless consumption
11	**Reduce**	Plan consumption and purchase of perishables to eliminate or avoid discards due to spoilage and non-consumption
12		Implement Sustainable Purchasing* * that supports social and environmental objectives as well as local markets
13		Minimize quantity and toxicity of materials used
14		Minimize ecological footprint required for product, product use, and service provision
15		Choose products that maximize the usable lifespan and opportunities for continuous reuse
16		Choose products that are made from materials that are easily and continuously recycled
17		Prioritize the use of edible food for people
18		Prioritize the use of edible food for animals
19	**Reuse**	Maximize reuse of materials and products
20		Maintain, repair or refurbish to retain Value* *, usefulness and function
21		Remanufacture with disassembled parts; dismantle and conserve "spare" parts for repairing and maintaining products still in use
22		Repurpose products for alternative uses
23	**Recycle/ Compost**	Support and expand systems to keep materials in their original product loop and to protect the full usefulness of the materials
24		Maintain diversion systems that allow for the highest and best use of materials, including organics
25		Recycle and use materials for as high a purpose as possible
26		Develop resilient local markets and uses for collected materials wherever possible
27		Provide incentives to create clean flows of compost and recycling feedstock
28		Support and expand composting as close to the generator as possible (prioritizing home, on site or local composting

29		Whenever home/decentralized composting is not possible, consider industrial composting, or if local conditions require/ allow, anaerobic digestion
30	**Material Recovery**	Maximize material s recovery from mixed discards and research purposes after extensive source separation
31		Recover energy using only systems that operate at Biological Temperature and Pressure**
32	**Residuals Management**	Examine materials that remain and use this information to refine the systems to rethink, reduce, reuse, and recycle in order to prevent further discards
33		Ensure minimization of imp acts by means of biological stabilization of ferment able materials.
34		Encourage the preservation of resources and discourage their Destructive Disposal or dispersal
35		Plan systems and infrastructure to be adjusted as discards are reduced and its composition changes
36		Minimize Gas Production and Release** and maximize gas collection
37		Use existing landfill capacity and maximize its lifespan. Ensure it is Responsibly Managed.**
38		Contain and control toxic residuals for responsible management
39	**Unacceptable**	Don' t support policies and systems that encourage the Destructive Disposal of organics and/ or the destruct ion ofrecyclables
40		Don't support energy and Destructive Disposal systems that are dependent upon the continued production of discards
41		Don't allow the Incineration** of discards
42		Don't allow toxic residuals into consumer products or building materials

**Definitions:

Biological Temperature and Pressure	The ambient temperature and pressure that occurs naturally without the use of added energy, or in any case not above 100 degrees Celsius or 212 degrees Fahrenheit. [2]
Circular Economy	An industrial economy that is, by design or intention, restorative and in which material flows are of two types, biological nutrients, designed to re-enter the biosphere safely, and technical nutrients, which are designed to circulate at high quality without entering the biosphere. Materials are consistently reused rather than discharged as waste.
Closed Loop System	A system not relying on matter exchange outside of the system, as opposed to open loop where material may flow in and out of the system.
Destructive Disposal	Discarded materials placed in a landfill or in an Incineration** facility
Diversion	An activity that removes a material from Destructive Disposal.

[2] Unless higher temperatures are required, not to exceed 150 degrees Celsius, as a pretreatment (e.g. to control diseases, or reduce pathogens) to be then subject to composting or Anaerobic Digestion; the pretreatment should never be used to destroy materials.

Incineration	Incineration is a form of Destructive Disposal via combustion or thermal conversion/ treatment of discarded materials into ash/slag, syngas, flu e gas, fuel, or heat. Incineration includes facilities and processes that may be stationary or mobile, may recover energy from heat or power and may use single or multiple stages. Some forms of incineration may be described as resource recovery, energy recovery, trash to steam, wast e to energy, energy from waste, fluidized bed, catalytic cracking, biomass, steam electric power plant (burning waste), pyrolysis, thermolysis, gasification, plasma arc, thermal depolymerization , refuse derived fuel, or chemical processing of plastics to fuel.
Minimize Gas Production and Release	Keeping out source-separated organics and biologically stabilizing the materials that go into landfill. For existing landfill cells that already contain unstabilized organics, the gas product ion should be minimized by keeping out rainwater and not recirculating leachate. Minimize methane release by permanently capping closed cells with permanent covers and installing gas collection systems within months of closure (not years). Maintain high suction on collection wells and do not damp down wells or rotate off the wells to stimulate methane production.Filter toxins in the gas into a solid medium that is containerized and stored on site. Note that this is not considered a renewable energy.
Problematic for a Closed Loop System	Materials that make it hard to recycle or compost the materials themselves or other materials. These may be contaminants for a material (like some forms of biodegradable plastics or stickers on fruit and vegetables) or materials that clog processing systems (like plastic bags)
Responsibly Managed Landfills	Manage landfills to minimize discharges to land, water or air that threaten the environment and human health. This must include plans for closure and financial liability.
Sustainable Purchasing	The purchase of goods and services that take into account the economic value (price, quality, availability and functionality) and the related environmental and social impacts of those goods and services at local, regional, and global levels.
Value	The importance, worth, or usefulness of something that may be economic, social, environmental, or sentimental.

Solid Waste Management Plan
Revision 3

Ms. Elaine Klimke
Mount Work Coalition
Via e-mail: esklimke@gmail.com

RE: CAPITAL REGIONAL DISTRICT'S SOLID WASTE MANAGEMENT PLAN

Dear Ms. Klimke:

Thank you for your November 27, 2020 letter following the Willis Point Community Association tour of Hartland Landfill, part of the Capital Regional District's (CRD) consultation process for the region's draft solid waste management plan (SWMP).

The provincial Solid Waste Management Planning Guide and "Waste to Energy and Solid Waste Management Plans" information sheet (Appendix A) indicate that any new Municipal Solid Waste (MSW) facility, like the facility being discussed by the Township of Esquimalt, would trigger a full SWMP amendment. In accordance with the Environmental Management Act and the SWMP guide, this amendment would require broad consultation across the regional district.

The CRD Board approves and determines the timing of any SWMP submissions to the Province. It is the CRD's understanding that any new MSW facility would have to be included in the region's SWMP before the Ministry could review an Operating Certificate submission by the owner of the new MSW facility. I have copied Ministry staff, Luc Lachance (Solid Waste Section Head, South Authorizations) on this letter, if you require further clarification regarding the CRD's role in MSW facility approvals.

The draft SWMP currently being considered by CRD residents, recommends using every tool available regionally to divert waste through reduction, reuse and recycling. While the CRD prioritizes waste reduction activities and funds numerous diversion programs to move our region closer to zero waste, it still must provide a disposal option and planning for this responsibility and is reflected in the draft SWMP.

Neglecting to plan for the future of Hartland Landfill will not compel residents to stop generating waste. Instead, our region's waste will simply be trucked elsewhere for disposal, as is currently the case for regions that don't plan for their own landfill. In addition to burdening other communities with our garbage, exporting all of our waste will produce significant transportation-based greenhouse gas emissions.

Extending the life of Hartland Landfill to 2100 does not preclude residents from changing their habits. The Hartland 2100 design concept allows for this flexibility and gives the CRD time to continue exploring and researching emerging technologies that may reduce the region's need to landfill, another priority that has been identified in the draft SWMP.

The Regional District of Nanaimo (RDN), of which your example of the City of Nanaimo is a major part, shares the CRD's commitment to responsibly managing its solid waste now and in the future. While the RDN aspires to zero waste, in 2004 it expanded the Cedar Landfill within its property boundary, as part of its SWMP update, much like the CRD is seeking to do with Hartland Landfill.

ENVS-1111098358-423

Despite its waste reduction achievements and aggressive goals, the RDN, like the CRD, is upholding its responsibility to provide a safe, secure and sustainable disposal option for future community needs.

Yours truly,

Larisa Hutcheson, P.Eng.
General Manager, Parks & Environmental Services, CRD

Solid Waste Management Plan
Revision 3

Ms. Loranne Hilton
Chief Administrative Officer / Chief Financial Officer
District of Highlands
1980 Millstream Rd.
Victoria, BC V9B 6H1
via email: lhilton@highlands.ca

Dear Ms. Hilton:

RE: CAPITAL REGIONAL DISTRICT'S SOLID WASTE MANAGEMENT PLAN PHASE TWO OF PUBLIC CONSULTATION

On October 18, 2020, the Capital Regional District (CRD) Board directed staff to proceed with phase two of consultation on the CRD's Draft Solid Waste Management Plan. The purpose of this letter is to inform you of this consultation process, invite input, provide opportunity for questions and seek endorsement from the District of Highlands council on the enclosed Draft Solid Waste Management Plan.

As was outlined in our letter of September 23, 2019, the CRD is developing a new Solid Waste Management Plan – a plan that guides how the region will manage solid waste in the coming years, including recyclables, compostable materials and garbage from homes, businesses, institutions and construction/demolition sites.

The plan outlines ways the community will work to reduce, reuse, recycle and recover materials and energy from the solid waste stream as much as possible over the next ten years. By moving waste materials up the 5R hierarchy, this plan will conserve landfill space and efficiently use the Hartland site for future community needs while continuing to investigate emerging technologies for managing materials. This plan also targets reducing solid waste in our region from 380 kg per person (2018 levels) to 250 kg per person by 2030 and sets an aspirational goal of 125 kg/capita/year. There are 15 proposed strategies and a number of proposed actions to help achieve this target.

As participants in the solid waste management system, municipalities play an important role in helping our community achieve its solid waste goals. Strategies in this plan include collaboration with municipalities in the following areas:

- reduce and reuse education campaigns
- zero waste and circular economy initiatives
- solid waste facilities and residential recycling depots
- waste management plan requirements (multi-family and business sectors)
- organic material diversion
- construction, renovation and demolition material diversion
- illegal dumping prevention
- procurement policies

EXEC-2102254355-4419

In 2019, the CRD conducted its first phase of consultation on this plan. The information gathered during this phase provided important input that was considered during the development of this Draft Solid Waste Management Plan. The Draft Plan, along with feedback received during the phase one consultation, including the Public Engagement Summary Report, can be found on the CRD's website at www.crd.bc.ca/rethinkwaste.

The CRD is now undertaking a second phase of consultation, where we are inviting further comment, providing an opportunity for questions and seeking endorsement from the District of Highlands and other municipalities in the region.

The proceedings and outcomes from phase two consultation will be documented into a phase two consultation summary report and reported back to the Solid Waste Advisory Committee and CRD Board. Following this consultation, the CRD will incorporate the results into the final plan, which will be submitted to the CRD Board for adoption and the Ministry of Environment and Climate Change for review and approval.

In order to give your municipality an opportunity to ask questions and provide feedback, our staff would be pleased to meet with you, your staff and/or council to share information and listen to how this plan can be used to address your community's needs.

For more information, please contact Russ Smith, Senior Manager, Environmental Resource Management, at 250.360.3080 or rsmith@crd.bc.ca.

Sincerely,

Robert Lapham, MCIP, RPP
Chief Administrative Officer

cc. Larisa Hutcheson, General Manager, Parks & Environment Services, CRD
Russ Smith, Senior Manager, Environmental Resource Management, CRD

EXEC-2102254355-4419

Appendix G — Public Consultation Verbatim

Draft Solid Waste Management Plan Feedback / Please provide your feedback on the CRD's draft solid waste management plan.

Please provide your feedback on the CRD's draft solid waste management plan.
A great deal of the material delivered to Hartland is flammable, so it can be used for power plant fuel. (Wood that isn't suitable for composting, paper, plastics outside the recycle stream, food oil that's too thick for use as vehicle fuel such as bacon fat, cheese-covered pizza boxes, etc.) Waste fueled power plants are used at several landfill sites, including Greater Vancouver. With filters and static precipitators, there shouldn't be serious air quality issues. The greater Vancouver waste fueled power plant also makes money recovering metals from the ash. This, of course, is not the same as Hartland's existing methane fueled power plant. [redacted]
This plan seems very well thought out and provides benefits to the greater community. Sincerely, Paul Fedrigo
(Using the term 'sustainable 'seems meaningless.....there will always be 'garbage '.....it is a question of how we reuse the material we call garbage .) Plastics and wood based products should be removed from the landfill . Plastics are overwhelmingly petroleum based ,so there is every reason for government sponsored research into broad based plastic s recycling ,especially given the broad based aversion to petroleum exploration and infrastructure . Ultimately these products can also be incinerated for power and heat production,much as it has been done for decades in Europe . If the sewage sludge were added into the incineration stream rather than being shipped to Vancouver ,that would make even more sense .It seems to be more a question of political will than money . If organics are removed from the waste stream,the waste stream would be more than cut in half . Why must we always reinvent the wheel when other jurisdictions have been dealing with these issues for years??
The CRD and partnering municipalities should explore gasification as a means of generating energy and reducing deposits to the landfill. This is a technology proven worldwide with relatively low entry costs and great potential for large and small scale systems to contribute to the electricity grid or power district energy systems.
I am writing as a resident of Hartland Avenue. When my husband and I bought our house on Hartland Avenue, we were told that the dump access for trucks would soon be moving to a different location on Willis Point Road. I was further told that trucks did not work on holidays. 4 years later and COVID 19 hit and not only have trucks been working on holidays which has disrupted the peaceful enjoyment of our home, but there have now been several occasions where I have been blocked access to my driveway for over 15 minutes as I waited in line behind trucks! I have also had trades and Company complaining that they got stuck in a line-up to get to my house! This is simply unacceptable when there is a simple solution to this problem by moving the commercial access to Willis Point Road! Willis Point Road could easily handle the commercial traffic and it would not impact residents as there are no residential driveways that can be blocked on that route! I would appreciate my grievances be addressed. Respectfully, [redacted]
The appropriate way to handle much waste is to incinerate it, as Metro Vancouver and several large Scandinavian cities do. Use the heat to generate electricity to run the landfill operation and Saanich government offices. PS: As for NIMBYs, I do not know the layout of things in the neighbourhood but do say that in general NIMBYs are characterised by an ethic of trying to control others at no cost to themselves.
-Offer CRD drop-off sites or pickup for household compost and organic yard waste -Provide incentives for organizations to alter/minimize packaging and take responsibility for the waste they produce -Increase incentives for reusing products/provide education on how to do this -Support organizations that create a sharing economy (i.e. promote opportunities for people to rent or borrow goods rather than buy and own them).
No more land, forest should be taken for this project. Instead, spend the money on ways to reduce the household use of plastics and other non-recyclable items, and help educate people on alternatives.
Although some of the plan is rather naive with respect to human nature (i.e. people say one thing and do what they like), the plan is fair. The one thing that should be emphasised is that improvements need to be made at Wallace and West Saanich Road in order to support the additional traffic leaving or turning onto West Saanich Road. The plan has done an excellent job at ensuring that Mount Work Park is protected. Perhaps moving the mountain bike trails now to the Western Communities would be a good idea. No doubt the residents living a long Hartland will welcome the reduced traffic.
Please DO NOT cut down the Douglas firs. There are alternatives. Google them.
I sincerely hope that the region is able to significantly reduce the volume of waste being landfilled or find new technology for solid waste management. I am against the removal trees to accommodate garbage. Isn't there a facility on the mainland that incinerates garbage? Can we adopt that method?
We need to save as much of our old growth trees as possible, they are so essential to our better climate, we just can't destroying our natural environment and expect cleaner air.
I am alarmed at the possibility that several acres of Douglas Fir could be wiped out to make room for a landfill. This seems so wrong headed. When you travel around the lower Island there is so much housing development that is taking place which involves clearing the land of the forest. Is there not another way to deal with our solid waste? Could the CRD not build processing plants which would allow people to recycle more of our waste. I find I am putting so much in our bin that in other cities would be going to a recycling facility.
As a lifetime resident of Victoria (69 years), I support the expansion of Hartland waste facility and the adoption of a waste treatment plan based on rational analysis considering costs and not on dogma.
Why does CRD allow foreign cruise ships to unload all their waste, none of which is originated from Canada, to be processed in Victoria? Does this waste from over 1,000,000 visitors not impact our landfill?
We must preserve trees, especially old trees with solid roots, both to prevent flooding and to distribute oxygen. their replacement with more fragile shoots has proven to be disastrous. We have already destroyed too many trees and endangered the health of our planet. Please think of the greater good and the greater consequences. Thank you.
Oil bottles, once emptied of oil except for some that always remains in the bottle continue to go to the landfill. Although there is an environment fee added, retailers simply toss the bottles into their waste containers. Could there be a way to recycle the containers?
I am against widespread tree removal in the area currently used as a mountain bike park.
I understand the plan as it stands calls for elimination of seventy plus fir trees...I say no to this plan Thank you
I am against the destruction of more natural habitat and instead i propose that strategies for the reduction of waste get more attention and funding. Instead of wasting all this money only to run into the same problem a couple of decades from now we have to become smarter. Enough places on this planet have implemented forward looking technologies to not only deal with waste but to eliminate its generation at its source. An absolute 'no' to cutting down trees. They are the planets life blood and if you still haven't figured that out then I ask you to educate yourselves. I am happy to provide you with information material should your google search not give you enough information. Sincerely, [redacted]

More onus and incentives are needed to be put on makers of products that have a high packaging to product ratio to significantly reduce packaging waste. No one, including consumers, taxpayers and the environment, likes to pay for packaging. All metal waste should be recycled. All avenues to reduce, reuse and recycle should be taken before the landfill is expanded and trees removed. Why not try some RFPs for innovative and creative solutions? What jurisdiction on the planet is doing the best job with ideas we can adopt or adapt?
What..?. Another mass murder on trees? aren't You tired of killing.?..
Dear Natural Custodian Partners. I know that we in CRD need a solid waste management plan, a responsibility we all share. Given our scientific knowledge of the positive impact of trees on climate change, we need to find creative ways to maintain the 73 acres of trees at risk in your plan. Please, I urge you to find another way to implement your plans without destroying trees. Every one of them is a gift to our air. Hugs with gratitude for serving our community with highest integrity, Maureen Matthew in Royal Oak.
I believe the CRD should work primarily to educate residents to reduce waste. They should also work with the provincial and federal governments to push manufacturers and other suppliers to reduce non-recyclable packaging. If our solution to more waste is always to simply expand the landfill, we will never reach a solution of the solid waste issue. Expansion of the landfill is a short-term solution and will only lead to more problems in the future. I do NOT agree with expansion of the landfill site. \ [redacted]
I am absolutely, 100% OPPOSED to the removal of 73 acres of trees for the purpose of a waste management site. How could you even entertain this option? 73 acres of trees! What on EARTH are you thinking, this is so absurd I almost could not believe it. This is completely irresposible on the part of the CRD and I am APPALLED and disgusted with this proposed plan.
Do not remove 73 acres of Douglas-fir trees.
Please leave the area intact and raise waste collection fees instead if you have to. Our nature is more than its weight in gold.
Deforestation of 73 acres of beautiful second growth forest in this time of climate change and loss of our forests and wildlife habitat to development isn't acceptable. One way or another, that area needs to be preserved and ways should be found to stay within existing boundaries. If that results in higher disposal costs, that should be passed on to the users. There is a cost to disposing of waste and the full cost should be paid by those who create it.
After experiencing the waste management tour at Heartland Dump , i am curious about a few things . #1 : Why are we still putting SO MUCH recyclable material into the land fill ? I was shocked to see what was still being dumped at the landfill face . Why not start using the people already working there to check each load and start a fine system .The amount of wood , plastic and metal was astounding ! #2 : Why aren't we maximizing the fuel plants already in place ? Why is only one of the two plants operational , for so long ? # 3 : Why isn't Victoria leading the way , as we could be , in converting ALL our waste into viable fuel sources , as other regions around the world are ? #4 : Why is it taking so long to affect worthwhile change ? I have been using Heartland dump for over 40 years and appreciate the development put in place for recycling . But i'm disappointed to see the soil production area discontinued .What gives?
I am disappointed with t he CRD's proposed plan. It seems to still focus on burying garbage, rather than looking to new and innovative ways to reduce, reuse, and recycle. Blasting the mountain, and taking down forest to bury more garbage is not the answer. The municipalities need to implement ways to encourage proper recycling of items, and also introduce plastic bans in their districts. There should be no non-compostable take away containers on Vancouver Island. There should be no plastic bags issued. The Nations should be supported in their garbage, recycling initiatives and composting initiatives after all the Hartland Landfill is on their land. This plan has many faults on so many levels that do not address concerns of local First Nations, nor the other surrounding communities that will be impacted by these proposed changes.
How will this solid waste strategy impact the liquid waste disposal approach from Salt Spring Island, which I hear has been problematic and under funded?
We need a system to dispose of soft plastics currently not accepted in the regular recycling system. Some rural communities do not have access to locations where soft plastics can be recycled.
I agree wholeheartedly with the Mount Work Coalition's concern regarding the solid waste management plan because it means the removal of 73 acres of Douglas-fir trees. We are increasingly becoming aware of the value of trees to ecosystems and to mitigating climate change. In Greater Victoria, I continually see properties cleared of every tree on the site in order to build housing or shopping areas and then little stick trees planted to replace them. I'm sure there are ways to build while leaving mature trees on these sites (including yours). To clear 73 acres of forest makes a mockery of the name "Ministry of Environment & Climate Change Strategy." Hurrah for the Mount Work Coalition.
Is it possible to use only half of the 76 Acres of Douglas Fir forest for landfill? Allowing increased capacity for more solid waste while keeping recreational use.
Save the trees! Find a way!
Hello and thank you for the opportunity to provide feedback on the draft solid waste mgmt plan. "The Hartland 2100 design concept will require the removal of second-growth trees from this strip of land, excluding tree and fire buffers required by the Provincial government." I am extremely alarmed and concerned with the Plan about the need for the removal of these second growth fir trees. With the exponential amount of residential growth and development occurring in the CRD, trees, and forests, are at a premium. Replanting of trees does not make a forest, and the diversity and animal species that have evolved and developed, and are housed in these spaces cannot just be displaced into a 'recreated' landscape and be expected to thrive and survive. Animals and the natural environment are already under threat, and the very thing that makes CRD and the Island unique is being cut down, bulldozed, developed and eliminated at an alarming rate already. We have already lost so many songbirds, mammals, larger birds, bees, amphibians, reptiles that will not come back. All of this does not even account for the loss of recreational areas and access to nature required by residents for their mental health. Every opportunity available to save a forest from destruction must be explored. A forest is not just trees - it is the very heart of a healthy community. PLEASE reconsider this decision.
How can you possibly justify removal of all these trees when we are in a climate emergency?? You are being very short sighted as usual. Please find a different solution than taking trees down.
Here is a link to a CRD document on at risk Coastal Douglas fir ecosystem. http://www.env.gov.bc.ca/wld/documents/douglasfir.pdf Need I say more - find an alternative.
I object strongly to the removal of 75 trees!! The object of the new sewage system etc. was to reduce pollution. Trees do this naturally! In so doing the removal is counter productive.
would really appreciate it if this large section of trees wasn't cut down!
WHAT....??? So many acres ...= how many trees is that? Surely NOT a real solution....
I've scanned the plan and am satisfied that the CRD is taking a well thought out multi-pronged approach to educate, offer recycling and reuse options and minimize impact to the public. The plan appears to be set out for maximized efficiency and reduced per capita disposal rates and greenhouse gas emissions. It is very unfortunate that Hartland land currently used for public access trails will be lost in the expansion process. I am heartened by the knowledge that reforestation on closed areas of Hartland Landfill are ongoing

alternative technology that utilizes the residuals or the last 5R without creating pollution should be adopted. 3. Section 5 - Enhance Hartland Disposal Capacity - I disagree with this strategy as I mentioned because it leads to more methane intentionally produced. Throwing garbage in a hole and producing methane is not sustainable and leads to climate warming. Capturing this methane by RNG only leads to more deforestation and the need to continuously expand a landfill. 4. Goal - Ensuring CRD's solid waste services is financially sustainable. While I agree this is a desired goal, it doesn't trump climate change. Actions to reduce methane should take priority - balancing the budget should take second priority - we are in a climate crisis. 5. Goal - Extending the life of Hartland to 2100 - I disagree with this goal. While forward thinking Esquimalt is showing leadership in waste to energy, the CRD should be encouraging other municipalities to join them. Municipalities could parter together and purchase the infrastructure to reduce costs and deploy a combination of Reduce, Reuse, Recycle plus waste to energy technology, to ensure that Hartland is never expanded - methane is life limiting and landfills must be closed. 6. FAQ - I disagree with the spreading of biosolids on land that contain a chemical stew of 400 pollutants, dried and marketed as fertilizer. These toxins will be absorbed in wildlife, waterways, rivers and lakes and end up in our bodies through the hydrologic cycle that could lead to increased risks associated with cancer. The potential risk to public health and the environment is not a risk worth taking over the value the CRD feels would be obtained by spreading the biosolids. It's a no-brainer - would we rather have a safe environment and public health or a fertilized tree? 7. FAQ states: Hartland Landfill is highly regulated, controlled and monitored to ensure Provincial standards are met under the Environmental Management Act. The fact that the landfill has to be severely regulated, controlled and monitored speaks to the extreme hazards and high risk of contamination the area is subject to from 1. older landfills are prone to leaking, 2. spreading of biosolids and 3. leachates that dump toxins into the ground waters. Landfilling is old technology that creates global warming and should be abolished.
Overall an excellent plan! However, on the Hartland compost facility timeline, you say "future" re: the facility's construction. Why are you so vague? Why can you not create a plan with specific targets and deadlines? I found this part of your plan disappointing. The CRD is infamous for putting off and dragging out projects over decades that would be planned and built anywhere else within a reasonable time. The CRD put off collecting organics for decades. Now it seems that you also intend to do the same old CRD waffling of putting off the compost facility as long as possible. Therefore, I feel that the CRD should broaden its definition of waste to include the waste of energy and resources used to haul and ship solid waste such as organics and wastewater biosolids to other regions in the province. When you calculate waste per capita, I suggest that you include the additional waste created (CO_2, $ of shipping, etc) in these figures to show the real cost and impact.
Comprehensive, professional. Super stoked that non-profit second-hand stores are highlighted. I think grants for these sites as part of waste reduction would be appropriate. I sincerely hope the budget needed is approved and that the leadership and hardworking employees continue to implement the plans as designed. Anne
I strongly believe this land should be protected for ecological and recreation value. This land provides endless recreation opportunities (mountain biking, hiking) and is incredibly valuable left intact. I would strongly protest and oppose the clear-cutting of 73 acres of Douglas-fir trees.
I am sorry, I do not have time to read this whole plan. Is there any way that we can have soft plastics picked up with our recycling? If a different colour plastic bag was provided for plastic, I believe this would reduce the garbage by at least 50%.
I am 100% in favour of moving the commercial access to Willis Point Road and think it is logical and supported by facts as per the traffic study. I also support the guiding principles and goals outlined in the plan.
The plan is a well done, comprehensive and wholistic document. Page 1 and 2 list the goals of the plan. The 1st goal is to achieve 125Kg/capita/year. Page 33 and 34 list the targets of the plan as achieving 340Kg/capita in 3 years, 285Kg in 5 years and 250Kg in 10+ years. Is the goal congruous with the targets? Page 12 shows the Kg/capita hovering around 400Kg for the last 24 years. 125Kg would be a 69% reduction. Page 13 shows the 2016 % Composition of landfilled material, specifically: Organics = 21%, Paper = 15%, Wood 17%, & Plastic 14.3% by weight. These materials add up to 67% of the materials landfilled. Page 26 lists Bylaw 3881 as the primary landfill diversion tool. This bylaw lists acceptable and non-acceptable materials. Schedule F of the bylaw lists organics and paper as non-acceptable for landfill, mandatory recyclable materials (36% of what is being landfilled). It also lists wood and plastic as voluntary recyclable materials (31% of what is being landfilled). How does the landfill accept 36% of the material it receives when doing so goes against Hartland's mandate? Is there alternate mechanism to deal with non-conforming loads? For example are fines levied for these non-acceptable deliveries with recyclable contamination? At what level of contamination does a load become non-acceptable? The document talks about education throughout. School children are specified as a primary target and I agree with this. But the actual generators need to be identified and collaborated with to establish a diversion system that works for all. And this should be elicited in detail to whom and how this will happen in the Plan. I.e.: the food waste generators, Construction, Reno & Demo wood waste producers. Scheduling a deadline to issue an RFP for a compost operator at Hartland as soon as possible would also be beneficial. In short, the general stuff and theory is well covered in this document. It needs further specific action items with deadlines elucidating how the Goals and Targets are going to be achieved. The 5R Strategy Actions are a good start, but need further development to be able to be acted upon and result in tangible deliverables. Completed tasks should be chronologically documented in their own section with updates as to their success. I commend the contributors of this document for doing a good job.
I have recycled anything possible since recycling became possible with the first bins for paper in the shopping malls. What we have now is a confusing patchwork. Recyclebc has been uninformative, or sometimes inaccurate when I have tried to use it. I can, because I have a car, go to the trouble of taking things I believe can be recycled to the multitude of reception points for batteries, light bulbs, electronics, styrofoam, plastic bags etc. Covid has made some of these things more difficult as grocery stores no longer take juice boxes/bottles and plastic bags. So many people without cars can't recycle much of the recyclables and yet we have so many shopping malls with large often underused parking lots that could make it more possible for more people. The plastic bag ban is illogical as it is only a tiny portion of the plastic that comes in, and those bags take the place of bags that I would have to buy. I am still trying to find a way to recycle books that no organization wants. And no-one answers their phone to tell me if they still take them for what I understand is a more complicated shredding and recycling process. There should be a more easy use, accessible process for one stop, or better still additional curbside recycling. Yes it will cost more for all of us communally to have it done more accessibly for more things, but it would be much more environmentally sane and in the long term, against more landfilling, probably less costly.
I agree with and fully support the four main goals of the plan, and am glad to see a commitment to achieving a 125 kg/capita solid waste disposal rate! Continued development of an in region option at Hartland for organics and other materials if possible is important. The strategies and actions are well thought out. The anticipating funding level would likely need to increase to fully support the action beyond the estimated $350k/yr, and more consideration should be given to other funding mechanisms for the solid waste plan beyond simply replying upon landfill tipping fees to fund the entire system.
As a resident of Saanich, I am strongly opposed to the CRD's plans to expand Hartland landfill and remove 73 acres of forest when other alternative, waste management technologies exist including the proposed gasification technology that Esquimalt is exploring or Nanaimo's Solid Waste Management Plan that seeks to divert 90% of municipal waste from the landfill. The CRD's status quo approach to digging a deeper hole, producing more methane emissions, is a move that is strikingly at odds with the declaration by the same board of a climate emergency! While I understand that our region is growing, it's time to stop burying garbage and waste and look at moving towards more bolder incentives to recycle and embrace some of the suggestions put forward to enhance recycling at the community level whether it's moving towards clear use garbage bags, or starting to look at charging people who do not recycle and just dump their recyclables into the clear garbage bags. I would also invite the CRD Board of Directors to halt the draft Solid Waste Management Plan until Esquimalt's business case and feasibility study for the proposed gasifier is publicly available and to look at what other jurisdictions are doing in Europe to divert waste from landfills and the use of alternate technologies. I realize the the CRD's Advisory Task Force only looked at what was available back in 2018 but we are now almost into 2021 and technology and waste solutions have advanced sine that time. Please re-think this plan that will just continue to emit methane into the atmosphere.
This plan is completely inadequate and needs to be comprehensively revised before adoption. 1. The CRD proposes a zero waste strategy and yet falls far short of this in its concrete goals. 2. The proposal to expand the landfill and remove 73 acres of endangered Douglas-fir forest is deplorable and should not happen. Douglas-fir ecosystems are currently at 1% of their former range on the island. As climate change worsens, they will become more imperilled. There is absolutely no justification for clearcutting 73 acres of

forest for garbage dumping. This is not "making a difference...together." 3. Biosolids should not be spread on the landfill site, at all, ever. 4. Landfilling is not the solution. There should be more support for comprehensive recycling (including soft plastics pickup in the region) to reduce waste at the consumer level. Subsequent bans (alongside the plastic bag ban) should be pursued to reduce waste at the producer level. This plan is not worthy of the beautiful, biodiverse region we live in. Please do better to ensure the protection of our natural environment.
I applaud the CRD's efforts to reduce/reuse/recycle/salvage. I would urge that there be some convenient way for apartment dwellers to recycle glass containers. Also that some recycling/salvaging effort be made for hardcover & softcover books. I understand there are businesses on the Island that use them as fuel, and perhaps big bins could be located at the various municipal works yards.
I have several concerns about the draft solid waste management plan & the FAQ documents provided. First, I would like to see an up-to-date audit of what is going into the landfill and where it is coming from. What do sections like "bulky objects" (1.3%) and "other" (2.7%) actually mean? Seeing the massive amount of construction and development going on around the CRD leads one to believe the numbers in your report may not accurately reflect current activities. Is impact on the landfill taken into account before building permits are issued? Why are we allowing garbage from cruise ships to be left on the Island? As a nearby resident, I also have concerns with moving Heartland access to Willis Point Rd. In the spring/summer this stretch of road becomes VERY busy with people enjoying trails and Durrance Lake. Wallace Rd is a rural route that attracts a ton of cyclists and other outdoor enthusiasts. Adding heavy truck traffic, turning left off of West Saanich Rd. seems irresponsible & possibly dangerous. Not to mention the impact on the natural environment and surrounding wetlands. I cannot support Hartland Landfill expansion. We need to move to a zero waste model more quickly and make developers & manufacturers take on more responsibility for their projects & products. Please let me know what I can do to help make this a reality. Thank you for allowing me to share my thoughts (and questions).
I object to more land being cleared to expand the Hartland Rd Waste Site. It is time for the Western Communities to develop their own Waste Site. Why are we trucking waste from Sooke all the way to Saanich, along with waste from the Gulf Islands too ? The Western Communities are a rapidly growing area and need to take responsibility for waste produced in their area. The removal of trees to expand the Hartland Rd site is a retrograde idea when the municipalities are trying hard to protect trees to reduce greenhouse gases.
Just look at the high percentages of demolition and wood waste. This is greater problem than plastic straws or cardboard cups. Steps must be taken to reduce the waste created through building demolition. This can best be accomplished through the building design process, i.e., building components are designed to be re-used for future developments and buildings can be deconstrcuted to facilitate reuse of materials. Buildings must enter into a circular enconomy. Burning the wood waste is unsustainable and contributes to gobal warming.
What is presently being done to ensure that the runoff coming from the recycle and kitchen waste recycle area, which is outside the original constructed berm area is not leaking, flowing into the Prospect Lake watershed?
We need to preserve the forest & re-cycle & re-create new products from our waste.
Please allow for the green bins to be used for yard waste as well as kitchen scraps. The fact that green bins do not take yard waste is a huge burden for victoria residents who do not have access to vehicles to take yard waste to the drop off. People end up putting yard waste in the black bins which goes against the aims of the plan to reduce the impact on the landfill. If Saanich can do it (with bigger properties and most likely lots more green waste), why can't Victoria? Please work this into the plan.
Well, I certainly do not support an expansion of Hartland landfill. We certainly need to manage our waste. However, more attention to source would be most beneficial (but maybe the CRD can't do much about packaging at this point), but we can do more around recycling and food waste. More needs to be diverted from the landfill. I produce just a tiny bit of garbage each month - and I patronize Pacific Mobile Depots and diligently recycle hard and soft plastic and foil (as well as everything else I can). PMD is a once-a-month process and one probably needs a vehicle to get to the locations. Instead, how about working with them (and others) for curbside pickup? Maybe some incentives to recycle - tax breaks, other? - and disincentives for not (e.g. paying more for trash pick up...). And while there are more colourful bins around - you could certainly increase their visibility and locations. Oh, and an educational campaign about how to recycle/repurpose almost everything (maybe some humorous YouTube videos). Well, that's probably enough to read!
The first two steps of the plan are "Promote". I assume this means "educate people about the impact of garbage, and teach them how they should shop differently and recycle better." This approach has been and will continue to be a failure, as it is not built on behaviour science. You should contact Ruben Anderson, who researched pro-environmental behaviour for Metro Vancouver, and ask him to help ground your work in science.
I support extending the lifetime of the landfill provided the CRD continue to look for alternative energy recovery and reduction strategies. Clearly the facility's future needs to be planned given its current 2045 capacity deadline. However if Esquimalt can show the CRD that an alternative process can work then it should do whatever it can to remain the location for energy recovery, especially with options to deal with biosolids and compost/kitchen scraps. An integrated approach looking at reducing and recovering should be pursued. One last point. While zero waste is an admirable intellectual concept, in a region where construction waste is a significant part of the waste stream and that the region is growing it is actually inconceivably naive. Plan for the worst, be prepared for the evolution in waste management and integrated resource management.
I just read Jon O'Riordon's recent article, "Strive for zero waste, not expanding landfill" (Times-Colonist Dec. 17, 2020), and have also read portions of the CRD draft solid waste management plan. I feel that the zero waste target that the CR has set (250 kilograms/person by 2030) is not nearly ambitious enough. I believe that the citizens of the CRD are ready to embrace change in order to a) combat climate change and b) avoid the expansion of the Hartland Landfill, with all the negative consequences that would entail. I was also interested in Mr. O'Riordon's suggestion that garbage collection could be charged on a per-pickup basis, thus giving added incentive to people to reduce their volume of waste. If Nanaimo Regional District can set a target of 109 kilograms/person by 2027, surely we can match this goal!
I believe that the SWMP is supposed to address management of closed landfills, specifically the site of the former Blackburn Landfill on Salt Spring Island. I don't see this in the draft SWMP. Potential contamination from this landfill of drinking water in Cusheon Lake should be investigated. Please respond to this comment to the email from which it was sent.
Please consider options that limit the size of the landfill I note that our neighbour contract out with a private firm and there seems to be no reccycling initiatives going on there. Can we "encourage" folks to take more responsibility for limiting waste? Rob Gage
My feedback is very simple - the CRD should be looking at alternatives rather than cutting down a forest. Forests are critical for the survival of all living creatures on this planet. The methane gas created by a landfill is contributing to the warming of the planet and this warming as scientists and the IIPCC reports have been telling us now for decades is going to result in extinction if we don't make different decisions. We cannot keep doing the same - cutting down forests, over consuming and being a throw away society. Please look at alternatives rather than expanding the landfill by cutting down a forest. I'm not an expert and cannot tell you which alternatives are the best, what I can say with confidence is that an alternative will be better than cutting down a forest.
I am very concerned about several aspects of the Solid Waste Mgmt Plan. Given this is the first update in 25 years (I believe I heard that correctly at the mtg), if there is a risk of waiting another 25 years for the next update, this needs to be a very forward looking plan. It needs to consider the Climate Emergency that is upon us. A comment from the presenter at the mtg indicated "the build out is as it was always contemplated". Of course if this plan is 25 years old, that would be the case, but we need to get ahead of the times. I also heard at the meeting that the plan is not at "the bleeding / leading edge". I think that's what we should be striving for. One other comment by the presenter was "I don't completely understand the carbon balancing piece" - I would suggest the leaders of our CRD waste system SHOULD DEFINITELY understand this. Cutting down 73 acres of trees has a significant impact on our sequestration and other biodiversity issues. Please go back to the drawing board and create a plan that charges appropriately for waste created, that ensures waste reduction levels in keeping with a climate emergency, and that considers new technologies so that our landfill does not continue to create 5% of the CRD's emissions.
The draft SWMP shouldn't be approved until Township of Esquimalt has completed their IRM/gasification business plans, and if successful, the references to a landfill expansion (Hartland 2100) should be removed and plans for future IRM/gasification should

be included in the SWMP. Also Zero waste initiatives should be strengthened in the SWMP, including more robust solutions, financial incentives for entrepreneurs, revisions to relying on tipping fees as revenue streams, elimination of cruise ship waste that is not recycled, and the formation of partnerships with the City of Victoria's Zero Waste plans. Other Greater Victoria municipalities should be asked to do their part and move to IRM/gasification. Hartland Landfill should not be expanded at the expense of our planet. Expanding this landfill means destroying carbon absorbing trees. Note that McGill University released its forecast for climate change "Threshold for dangerous climate warming will likely be crossed between 2027–2042". The CRD needs to take this seriously and respect the total elimination of carbon and methane pollution. There is no time to waste on deploying ineffective plans that continue to increase GHGs and rely on expanding a methane filled landfill.
The CRD cannot reasonably ask or expect residents or businesses to commit to the ambitious targets of net-zero carbon while inviting floating resorts into the city. While "embarrassed by the wastewater" delays, the CRD often spoke of pressure form Seattle/Washington. Yet, the CRD has not taken a stand against receiving American garbage and recycling.
I study the Plan and understand that it sets "focused on reducing the amount of waste landfilled on a per capita basis" (8. Plan targets, p. 33) as target and uses reduce, reuse, and recycle (3R) as the core strategy in waste management. I believe 3R is an efficient and effective strategy in many aspects, especially in overall cost. However, I wonder whether there is, or will be, a specific plan for "carrying out resource recovery from recyclable material" (4.2.14 Bylaws, p. 26) and "Maximize beneficial use of waste materials and manage residuals appropriately" (1.1 Guiding principles, p. 1), for example, adopting anaerobic digestion plants and facilities to recover and upgrade methane gas? Thank you for your time.
I'm appreciative that food scraps have been banned from the landfill. It would be great if construction waste were more expensive to get rid of. Also if bylaws were in place so that salvage companies like Nickel Bros could get permits faster and cheaper than disposal companies. If they had priority in accessing tear downs and reclaiming them or salvaging usable material from them then beautiful and otherwise reusable material would be worth reusing. Thanks for all you do! The CRD seems very progressive and caring of the environment.
The CRD needs to be proactive about stopping the trends it notes that are guiding this plan. More incentives to reduce waste generation per person. Incentives to reduce waste such as charging only for the times when residents use their waste bins. Research Esquimalt's business case study of thermal conversion of residual waste after recycling into a renewable gas used for heating buildings to see if it can be applied at Hartland. It's counterintuitive to remove 73 acres of forest when we need to be increasing carbon storage. Promote recycling and resource recovery in a truly circular economy. Work with the City of Victoria on its Zero Waste Plan.
I do not support the proposed expansion of the Hartland Landfill beyond 2045 because I believe that before that date we should shift to zero waste disposal. Zero Waste The CRD Board supports the principle of zero waste and encourages a circular economy by mid-Century. This goal can be achieved by reducing personal consumption in keeping with achieving carbon neutrality by 2050; requiring producers to be responsible for the full life cycle of packaging; levying user fees on packages that produce waste and encouraging comprehensive recycling in both single family and multi family homes. Resource Recovery - Waste to Energy Solutions The Solid Waste Management Plan must rigorously pursue the 5 R waste hierarchy with top emphasis on reduction, reuse and recycling. The 4th R of resource recovery requires use of waste to energy technology. I support the Township of Esquimalt proposal to complete a detailed analysis of a demonstration waste to energy facility as soon as possible. The CRD should support the operation of this facility if it is technically feasible. Then resource recovery must be implemented throughout the regional municipalities before expansion of the Hartland landfill is considered. Circular Economy Expanding the Hartland landfill is completely inconsistent with achieving a carbon neutral economy by 2050. Removal of 73 acres of public forest that sequesters local carbon, is inconsistent with the CRD and other municipalities' declaration of a climate emergency and the critical need for the Greater Victoria region to become carbon neutral by 2050. Carbon neutrality requires full implementation of a circular economy where there is no waste. All excess carbon produced is captured by restoring the health of our ecosystems to store carbon.
The time has come to take true responsibility for our impact on the earth. We can't continue to produce waste with the expectation that the earth will somehow deal with it at no cost to the planet, or to us. The old ways of disposing of our waste must change. It is not right to increase the size of the Hartland Landfill at the expense of our forest. But what is right is to find alternative ways of dealing with waste. One alternative is to stop producing so much of it in the first place! There are many creative solutions to the food waste, building waste, packaging waste that we produce. Let us put our imagination to work, as well as our dollar, to deal with a problem that could become an asset through innovative thinking. Let's truly recycle, reuse and rethink.
1. My primary concern is that the expansion proposal (which should not be done) is due to the failure to reduce plastic waste. My experience is that retailers are permitted to force consumers to accept unnecessary packaging if they wish to buy almost anything. It is nearly impossible to buy needed items without accepting unnecessary packaging. There are many things that could be done at the local level to pressure or require retailers to reduce unnecessary packaging in grocery stores, for example. 2. Secondly, it is very concerning that the contractors who pick up waste have no apparent incentive to "call out" or penalize homowners or businesses for throwing forbidden materials into the garbage. I read the current procedures and they are unacceptable. Recyclables and organics that are improperly placed in the garbage should be noticed by contractors and reported. Bylaw officers should issue warnings and fines. This may seem expensive and onerous but it is less so than the plan to expand the landfill. 3. Third, I submit that recycling is entirely inadequate. Only 10% or so of recyclables are sent for recycling. I observe that garbage cans in CRD parks are often full of aluminum cans and plastic beverage bottles, or else the people who have disposed of them put them on top or on the edge, in hopes that someone may pick them up and take them to the recycle depot. I request that all parks, arenas, recreational sites and other places where garbage is collected should be given proper recycle bins. I believe that would help somewhat. 4. I attended an open house for the CRD waste management plan and discussed the huge, relatively new problem of dog food bags. Not so long ago, these were made of heavy paper. Now, they are all made of very heavy-duty plastic coated with metal and plastic, which are impossible to recycle. I asked the CRD how they deal with that. They told me that the manufacturers of these and similar problem packaging materials pay a fee for the privilege of forcing consumers to buy them. To add insult to injury, they merely pass on the cost of the fee to the consumer in the form of higher prices. This is unacceptable. The companies have a very easy ride indeed! I demand that the CRD find ways to reduce the garbage produced by the citizens, rather than expanding the landfill. Be creative. You CAN DO IT.
Thank you for the opportunity to provide feedback on your Solid Waste Management Plan. As a local resident and business owner, we are facing higher than market pricing for all classes of waste disposal. We recognize that we are on an island, however the involvement of the CRD in the processing of waste seems to be an overreach. There is very little evidence that active government involvement in the waste disposal business - particularly where it is already established as a private enterprise - leads to cost savings for consumers. Ultimately the CRD faces competition or worse - Competition Bureau challenges - for such activities and these will ultimately set a higher bar for consumer pricing. One can look no further than Seaspan/BC Ferries to see the results that predatory government pricing can have on market conditions. Further, private enterprise is already heavily invested in the development of additional assets for the processing of organics and the diversion of solid garbage. By removing these competitors through investment in taxpayer funded infrastructure, the CRD is sending a clear message that they believe they are better managed, more innovative, and more cost efficient. This is simply not a fair reflection of the time and effort put forth by all levels of waste collectors, waste diversion and recycling facilities and haulers. In closing, I would suggest that the CRD spends the efforts to work with independent contractors to increase their capacity - both at the landfill in district and out of district - in order to meet the needs of tomorrow's waste generators. Anything other than this approach reeks of politics..... a smell much worse than a giant compost pile on Hartland Road.
Moving the access point to Willis Point Road from Hartland Road makes good sense. Willis Point Road is better suited to truck traffic, and the overall safer option. I also understand this change would facilitate maximizing the efficient use of landfill space which I support whole heartedly. the 2030 waste generation reduction target of 250kg/person/year is very ambitious, as a citizen I look forward to the actions CRD pursues to realize this goal.
As a regular user of Hartland Road to access the landfill, I think transitioning the access point to Willis Point Road is a good idea as it will be safer and more convenient for large trucks.
As approved by the CRD Board, we are in a climate emergency. I do not support the expansion of the filling area of the Hartland

Landfill, including the removal of trees. Reviewing the guiding principles in the document, I think more can be done to focus on these principles before removal of trees and expansion of the filling area within the landfill property. Just because the property is approved to be used as a landfill does not mean we should go ahead and use it without first exhausting other means to reduce waste going to the landfill and recover energy/materials from waste. Please see more feedback below for each of the guiding principles. I also request that future documents meant for the public contain executive summaries. It is too cumbersome to be expected to read a 60+ page document to find what is actually being proposed. I believe the proposals start on page 28. 1. Promote zero waste approaches and influence others in support of a circular economy; --> the waste prevention actions are vague and not specific; please indicate which products and producers you would target first. If that is somewhere in the document, I can't find it. 2. Promote the first 3Rs (Reduce, Reuse and Recycle); --> I would like to see the CRD actively work to reduce packaging, particularly single use items. I would like to see curbside recycling of soft plastics. There are so many plastics in packaging that need to go into the garbage. I tried to bring our soft plastics to London Drugs and they were at capacity so I couldn't. We shouldn't have to rely on London Drugs to organize recycling of soft plastics, and realistically most people will put things in the garbage if it's more convenient. 3. Maximize beneficial use of waste materials and manage residuals appropriately; --> I would like the CRD to be a leader to reviewing and implementing technologies that recover energy/material from plastics. 4. Support polluter-pay and user-pay approaches and manage incentives to maximize positive behaviour outcomes; --> increase fees associated with larger garbage bins. People could apply for exemptions/discounts (eg. families with babies requiring disposal diapers) 5. Prevent organics, recyclables and hazardous household waste from going into the garbage wherever practical; --> I sometimes see people with only a garbage bin out on pick up days. These people should be flagged and fined because it is practically impossible to only have garbage and to not have any kitchen scraps/organics.
4.2.2.1.6 Estimated Lifespan I support the extension of the landfill site. The Landfill is an important asset to the community and its growth must grow with the community. I am surprised that the gravel extraction that is currently on going at Hartland landfill was not addressed. The plan should address a plan for the gravel to leave the landfill for a secondary use instead of just burying it into the garbage. This volume of gravel is a waste of valuable air space, $$, a huge % of the landfill volume that is not shown in any of your graphs and not a green environmentally friendly use of this material when this whole thing is about reusing not burying??? 5.1 Reduction and Reuse strategy #6 C-Licensing facilities is a waste of tax payers money. This is not needed in the CRD as local facilities are well operated here. The CVRD and RDN use this to try and monopolize over private companies and control the flow of garbage which means money. The only problem locations in the CRD is First Nations land were illegal dumping occurs daily. CVRD also has this problem and cannot do anything about it even with the licensing process in place. Licensing will bog down CRD staff and burn them out with the constant pressure and negativity that comes with managing licensed facilities and the general public. This does not promote the solid waste industry it removes the solid waste industry. D- this is flow control and monopolizing. This should be taken out of this plan as it is a tool so CRD can direct the flow of recycling and waste to where they want it to go only. This is not in the best interest of the tax payer and business community as it creates a monopoly for the CRD. With flow control, rates will only go up and tax payers will pay more instead of a free market place. This does not promote the solid waste industry it removes the solid waste industry. Strategy #11- Processing facility is not needed at Hartland Landfill. There are three composting facility's that can handle the food waste from the CRD. The Nanaimo facility is expanding their processing capacity to 60,000 tonne annually in 2021, the Chemainus compost facility is switching from biosolids composting to food waste composting and Fisher Road composting will be expanding their composting capacity. This material will be divided amongst the three processing facilities and the CRD will not need to waste tax payers money on building a composting facility that will be redundant. The landfill air space is too valuable and the operation of this facility will be to costly compared to privately owned facility's.
Thank you for the opportunity to provide feedback on the draft Solid Waste Management Plan for the Capital Regional District. In response I would like to raise the following concerns: 1. Waste Composition Looking at the Hartland Landfill Waste Stream Analysis it would appear that a high proportion of the materials that are being landfilled could be diverted e.g. organic waste, wood, paper, metals, textiles and plastics. This strikes me as a significant missed opportunity and calls into question how effective the CRD has been in communicating with its citizens regarding waste. 2. Communication and Public Engagement I appreciate and value the strategies identified for increasing diversion. I also note the repeat references to continuing public education and awareness raising which I agree should be a key part of the CRD's SWMP. But, further to the point above, I think more is needed than a commitment to continue these programs, rather communication around waste in the CRD needs to be significantly expanded and strengthened, such that everyone understands the role they have and/or can play. A first step would be to reorder the goals retaining the 125kg target as #1 followed by having informed citizens (and businesses) that participate effectively. Then #3 extend the life of the landfill to 100 years plus but with the explicit statement of how this should be achieved i.e. through prevention, reduction, diversion and, as necessary, expansion. And lastly, Goal 4, ensure that CRD's waste services are financially sustainable. As a resident who has lived in a number of different rental properties and areas of the CRD over the past 7 years, I have never seen or received any communication from the CRD regarding the waste goals and per capita target. If this is reflective of the typical experience of (private) tenants in the CRD, which make up a significant portion of citizens in the region, then it is likely to significantly undermine efforts to reduce waste in the CRD. As highlighted in the plan raising awareness among ALL citizens is key, this could be achieved by including the target on stickers on our curbside bins, for example. While for property owners an update on average performance (kg/capita) could be included with annual property tax letters. Communication of the target, and performance, at the Landfill itself could also be improved through signage and potentially a handout or similar after payment/use of the scale. Lastly, given that 40% of waste arises from ICI sources, and private waste haulers have a vested interest in not promoting prevention or reduction. I feel it crucial that the CRD expands the scope of its education activities to actively engage business in addition to building managers and strata across the region. 3. Level of Ambition I would like to encourage the CRD to be truly ambitious in its plan. The Regional District of Nanaimo (RDN) is targeting a 90% reduction in waste to landfill by 2027, equal to 109kg per person. While the proposed SWMP for the CRD seems to only hope to achieve a per capita disposal rate of less than 250kg in 10 years time. According to the draft plans it will take the CRD three years to surpass the RDN current disposal rate of 347kg per capita, by which point they will be well on their way to their 109kg target. I am curious as to why the CRD SWMP is not more ambitious, when it is already lagging behind the RDN/other jurisdictions on the Island are already achieving higher levels of diversion. I welcome the suggestion of some kind of on site free-store and would encourage the CRD to look at the highly successful Re-Use it Centre in the Resort Municipality of Whistler, which actually provides goods for donation (not only helping to cover overhead but I believe in doing so, helps to add value to items that may otherwise be considered and treated as disposable). The other important note with respect to this facility is its proximity to the population centre/popular grocery store/transit links. Hence, I ask that the CRD considers going beyond the free-store in the current plan and consider establishing a green business hub or quarter. One of the biggest challenges to a green lifestyle is arguably time and (in)convenience - especially when compared to the ease of, say, shopping at a mall, relying heavily on disposable products and using a car for most journeys. If the CRD is truly seeking to promote less consumption, and foster the circular economy, it could consider establishing a green business quarter through favourable business rates etc. whereby a whole range of green/waste conscious businesses (e.g. CRD reuse store, bulk stores, refill stores, local food markets, repair cafe, bike repair etc.) are co-located in one area that can be accessed easily by transit, bike etc. as opposed to adding a facility at the dump itself, which is only accessible by car. I would also, in relation to the CRD's level of ambition, reiterate my point above (under Communication and Public Engagement) regarding reordering/prioritization of the goals in the SWMP. I hope that you will take the above into consideration as you continue to develop the Plan and thank you for your time.
Landlords of apartment buildings/multifamily housing NEED to be held accountable for the waste services they provide to tenants. I live in a building where the landlord has straight out refused to provide a kitchen scraps program over alleged concern for rats, and has recently stopped glass recycling (my experience is by no means unique). If it is illegal to dump organics at Hartland, how can landlords force tenants into a position where they have no choice but to put kitchen waste and recyclables in the garbage? "Education" of individual citizens doesn't go very far if the landlords managing our rental buildings refuse to provide the necessary services.
I would like to add my support of moving the truck delivery entrance to Willis point rd. as keeping it on Hartland would require a total rebuild of the bridge at start of the road as the heavy trucks keep damaging the road over the bridge sending asphalt into the Tod Creek. As a matter if interest which houses are you supplying with electricity, of the 1,100 houses how much do you charge?

Will CRD be invoking the Precautionary Principle with plastic? Thank you, Larry Wartels, freeusall1@gmail.com
Instead of expanding the landfill, let's figure out new methods of recycling and promoting a more circular economy to reduce solid waste at its source. As an avid hiker and longtime Victoria resident, I like many others place great value in our urban forests. Please reconsider this development action and instead plan for better sorting, recycling, and perhaps municipal bans on certain disposable items.
Do not expand the land area for the Hartland Landfill until all possible alternative solutions and technologies have been thoroughly evaluated. Site expansion must be the last option to be considered.
I am aware that solid waste (biosolids) are being used in various ways around the world but this is no solution either since dangerous heavy metals etc. remain wherever they are used. The only long term solution is to eliminate waste at the delivery end and increase awareness of consumers around this problem. It is necessary to imagine that the consumer must think of the waste stream with every purchase and this can be accomplished if more emphasis is put on both them and manufacturers with the costs associated. Expanding landfill sites and distributing biosolids into the natural world is simply not a lasting solution. Long term thinking must occur.
Halt the expansion of the Hartland landfill!
At this time in history we have the technology to turn solid waste and garbage into resources. Would you take a moment to watch the possibilities in this 2 minute clip: https://www.youtube.com/watch?v=fpDrUwd1uq4 In my opinion it is no longer acceptable to destroy forest land and turn it into a dump! We can do so much better. While forest lands capture carbon dioxide, dumps create CO2 and methane, a greenhouse gas many times more potent than carbon dioxide. Please be climate leaders and public officials who work for a livable future. Vote against expanding the Hartland Dump.
Expanding the garbage tip only helps for a little time. Educate people. ei. Sooke has a disposal company that most Sookies do not know about, lack of knowledge is the main cause of misuse of non disposable items. cutting down trees which among other things prevents run off of water otherwise stored in the ground is a very short sighted way of coping with our lack of resources.
Educating people on their mismanagement of waste would be vastly more productive. There is a wonderful company in Sooke who recycles waste that our blue boxes does not accept. I speak to people and they say good idea but do nothing about it. Please expand the contents of blue box collections. Please do not cut down the trees. They hold water in the ground apart from many other useful things to help stop global warming, with such vast areas of this planet burning out of control we need to keep water underground,
Hi I object to the proposed large expansion to the Hartland dump. I know that good actions are already in place to use and reduce waste. Let's have more. We need the beautiful forest that would be destroyed for carbon sequestration and much more. Thank you
CRD, I urge you to rethink your decision to expand the Hartland landfill. We need to find better solutions to disposing of our waste and increasing the size of landfill will only promote the same behaviour that put us in the crisis we are in. People will continue to consume, purchase and dispose as they have always done if they aren't forced to change. We need leaders who will put limits on our behaviour and not fear the political repercussions, leaders who will tell us that we have to be more responsible for our choices and less self centred. As Einstein said. "Doing things the same way and expecting a different outcome is the definition of insanity." Sincerely, [redacted]
In my opinion it is no longer acceptable to destroy forest land and turn it into a dump! We can do so much better. At this time in history, we have the technology to turn solid waste and garbage into resources. While forest lands capture carbon dioxide, landfills create CO2 and methane, a greenhouse gas many times more potent than carbon dioxide. It is time to be climate leaders and public officials who work for a livable future. Vote against expanding the Hartland Landfill.
I am heartened by your look to the future and input in a plan to manage waste. I am very much against chopping trees down to fill the landfill with waste, despite plans to replant trees. The trees are doing a great service on their own, especially as they are mature. More needs to be done with solid waste management and ridding of toxins. This has always been a known need but we opted for only the basic tertiary steps to treat human waste. Further work needs to be done before we get rid of environmentally sound trees on the property. Planting of trees does not give us back the same level of help by the mature trees. Other options should be explored and planned.
The solution to the garbage problem is not to cut down forests but to educate people in reduce, reuse and recycle. We need our trees.
Why are we tearing out trees to make room for more irresponsible garbage? This is 2021 and we haven't the sense to manage our own rapacious consumption? The population and garbage is only increasing while we look at further degradation as a solution? There must be something more intelligent.
You should be putting resources into Gasification IRM not cutting down trees.
Destroying another 73 acres of forest will achieve nothing. This is a finger in the dyke approach as a tsunami of solid waste overwhelms Victoria and other towns in BC. We must think bigger. Solid waste needs a Province wide solution, where all single use products are banned, all plastic and glass is recycled, all paper and cardboard is recycled and all larger items are returned to the manufacturers or reused under a circular economy model. We need to pay deposits and recycling charges as part of the cost of using/owning these products. Creating bigger and ever more holes in the ground, while destroying carbon sink working forests gets us nowhere except to increase GHG emissions and accelerate climate change.
By digging a bigger hole at Hartland we are simply digging ourselves into a bigger hole environmentally. The current plans for expansion are regressive and newer, sustainable solutions must be considered. Thank you.
Hartland provides valuable recreational opportunities that must not be compromised. We need to move towards zero waste, including restrictions and construction and demolition, and the requirement to unbuild houses. We must find better solutions than landfill expansions
Trees are precious and take hundreds of years to grow into an irreplaceable forest. Please do not sacrifice a precious forest for garbage. I enjoy hiking in the area thanks to the legacy left by my mother who campaigned for years to save places such as Todd Inlet from destruction. Thank you.
I am a primary school student and I want to see this plan use other land (without trees and other life in there). I love the park and I don't want to loose it, my life will be ruined. People can do much more than this, they are just lazy and don't know what to do. If you can encourage more and more people do to their part, I believe this landfill plan will be just a dream. Please consider multiple times before you make the final decision. I love life and I hate people who waste.
It is time to inform the public through various media regarding how they can reduce what goes to our landfill. I have noted in my area that the large dumpsters at apartment buildings do not include a place to recycle clean glass. Also, expanding the Hartland Dump is not a solution with which I can agree. Don't re-invent the wheel. Look at what other more progressive examples from other cities. Sincerely, [redacted]
While the guiding principles of this draft solid waste management plan are laudable, I am appalled that the CRD, after declaring a climate emergency, is planning to destroy a 73 acre forest in order to expand the Hartland landfill. Other regional districts, including Nanaimo, have established progressive policies to achieve significant reductions in waste, and that is exactly what the CRD needs to do. Our communities can meet this challenge and save the economic and ecological costs related to this ill-conceived proposal for Harland. It is simply not acceptable to destroy a forest in order to dump more garbage. Active promotion of campaigns to encourage residents to Rethink, Refuse, Reduce, Reuse, Repair, and Recycle, combined with policies to eliminate single use plastics and other packaging will save this forest and its important roles as a carbon sink, wildlife habitat and recreation area. As a concerned resident of the CRD I call on you to live up to the stated goals of the plan and reject the Hartland expansion.
Thank you for the opportunity to provide feedback on the CRD's draft solid waste management plan. It is time to rethink waste! The CRD continues to operate in an archaic business-as-usual manner that is not in alignment with the climate crisis and future generations. The CRD needs to walk its talk. Expanding landfills is NOT in alignment with the climate emergency and the principles supporting a One Planet Region. The CRD needs to show leadership and make bold moves NOW that include the following

progressive solutions: 1) Make waste socially unacceptable through education, with emphasis on the 6 R's (rethink, refuse, reduce, repair, reuse, recycle); 2) Encourage a circular economy through Repurpose and Repair Centers and Repair Cafes; 3) Change the current business model so tipping fees encourage DIVERSION of waste FROM the landfill vs into the landfill; 4) Use the Township of Esquimalt Waste to Energy proposal as a demonstration waste-to-energy project and make it a leading example of moving towards carbon neutrality; 5) Adopt the City of Victoria's plan to reduce waste by 50% by 2040 and adopt this as a minimum target for diverting waste throughout the region by 2040, and accelerate this to 90% by 2050 at the latest; 6) Recognize that carbon neutrality and zero waste are mandatory pre-requisites if we intend to be carbon neutral and address climate change, one of the greatest global threats to the survival of mankind; 7) Enforce mandatory fully compostable packaging; 8) Legislate that manufacturers are responsible for the full life cycle of their products and enforce this so that products can not be shipped or sold unless manufacturers are certified to do so and are actively regulated, inspected and licensed with mandatory accountability and transparency. Fees collected would be used to support local zero waste initiatives; 9) Create mandatory source separation for single and multi-family dwellings, as well as institutional, commercial and industrial (ICI) use; 10) Delay requesting the expansion of the landfill under the Solid Waste Management Plan until the CRD can publicly demonstrate progress on the following 3 key initiatives: 1) achieving zero waste and a circular economy; 2) operating a waste to energy project, like Esquimalt, to demonstrate its effectiveness in achieving zero waste and lowering carbon emissions; and 3) developing a new business model based on maximizing diversion from the landfill as proposed by the Regional District of Nanaimo. This is possible. Real leadership can make this happen! Frances Litman, on behalf of the Creatively United for the Planet Society
We are in the 21st century, and we have declared a climate crisis. Our solid waste treatment should thus not cut down forest to extend Hartland, maintain Hartland by counterproductive 'tipping fees', transfer trucks to Willis point road thus impairing recreational use of the road itself (by runners, hikers and cyclists), the Mount Work park and Durance Lake and Mckenzie Bite - all this increasingly valuable to increasingly densely housed Victorians. The CRD plan runs counter to its responsibilities to care for our piece of the planet and our inhabitants. What you are risking can never be reclaimed - and it is totally unnecessary. Switch to modern alternative solid waste management systems, like gasification, for example - just as operates in much of Europe. Also, given what we now know about viral particles surviving through current biosolid production, and have suffered with Covid, it is lunatic to land -spread biosolids ever, anywhere. This proposal must be changed: it can't be reversed. Once on land, whatever pollutants are there seep into our aquifers, our wells and are wind-dispersed. Stand up for what is right CRD, think again, follow the evidence and the public interest. We depend on you to change course. With thanks.
The Plan, "Rethinking Waste", is presented as a "plan to reduce how much material is sent to Hartland Landfill and guide how the region's waste is managed in a safe, secure and sustainable way now and in the future." In fact, as presently conceived and presented, it is a plan of insufficient ambition that avoids any serious decisions or commitments to rethinking waste and is instead designed to take the course of least resistance. The current Plan leads inevitably to the enlargement and expansion of the Hartland Landfill. Instead of being called the "Solid Waste Management Plan", it could more accurately be called the "Hartland Landfill Expansion Plan" because that is the inevitable, pre-determined outcome of the current plan. Current Plan is not sufficiently Ambitious The entire plan is premised on the target of reducing per person annual waste amounts from the current 380kg per person per year to 250 kg by 2030, with an undefined "aspirational target" of 125kg. This aspirational target was tacked on at the end of the planning process as a sop to the recommendation of the Solid Waste Advisory Committee, without any plan or commitment to achieving it. Assuming the 250kg target is met, according to the current plan, beginning in 2030 73 acres of forest will be removed in order to begin expansion of Hartland's filling footprint by approximately 50% so that the expanded Landfill will be ready to continue receiving waste beyond 2045. (All this without the benefit of an environmental assessment which CRD staff claims is not required). Expansion is the chosen strategy to extend the life of the Landfill to 2100 and the entire plan is predicated on this outcome. All the assumptions in the plan, including a financial model that relies primarily on continued tipping fees, is based on the expectation of expansion. It is the wrong strategy for a number of reasons, and must be rejected. Instead of the presumption that Hartland must be expanded, with work beginning in 2030, the Plan should start from the goal of avoiding further expansion, and set waste reduction targets and strategies accordingly, based on this goal. Deferral of Approval of Design Concept for Expansion is Required Rather than approve the current plan, the CRD Board should amend the plan by deferring any decision on expansion of Hartland until an effectiveness review is conducted, as required by the Province, in 2025. In the meantime, the CRD should maintain flexibility in the plan allowing for the potential incorporation of current initiatives being pursued within the CRD, such as Esquimalt's evaluation of the business case for Integrated Resource Management and the City of Victoria Zero Waste strategy, and other developments between now and 2025. In 2025 a full evaluation should be undertaken of progress toward waste reduction targets, including the aspirational target of 125kg per person annually (note that the Regional District of Nanaimo has adopted an annual waste reduction target of 109kg per person by 2027, with measures being put in place to achieve that goal). This review could lead to a further modification of the Plan to incorporate new strategies including waste to energy initiatives if they prove practical. In the meantime, CRD Board should not approve the design concept of Hartland expansion that is scheduled to begin in 2030 under the current plan. Environmental Assessment Needed if Expansion Plans Approved The Plan argues unconvincingly that the removal of the trees and the quarrying of the 73 acres is not an "expansion" but merely "maximizing the use of land currently within the property boundary". This ignores the fact that the expansion will remove a significant buffer area that until 2019 was a de facto part of Mount Work Park. It will push the area being used for landfilling operations to the very boundary of the property. The Plan's language also dismisses the fact that the actual filling footprint will expand significantly, both in terms of surface area and removal of rock to create airspace. In fact the expanded filling space will be well in excess of the 30% increase that triggers an environmental review under the Environmental Assessment Act, despite the CRD statement that it does not believe that an environmental assessment is required. This expansion will have a number of significant negative impacts. First removal of forest cover is inconsistent with climate action goals. The statement that new trees will be planted elsewhere is insufficient as replacement of mature trees with seedlings is a suboptimal outcome when the removal of the mature trees can be avoided. Expansion of the Landfill will further put at risk the 16 endangered species in Mount Work Park. It will remove 73 acres from recreational use and create noise, air and water pollution for the adjacent areas, all of which is unnecessary. It will redirect traffic to a busy commuter, residential and recreational road from the current access route that terminates at the Landfill. Most important, expansion will ensure that the CRD continues to dispose of waste through landfilling, creating significant methane emissions in the process to the detriment of federal, provincial and regional greenhouse gas reduction commitments, instead of seriously examining alternatives to continued landfilling. Despite vague language in the Plan that new technology and waste reduction methods might change the planned expansion, there is no commitment or concrete planning to move beyond the goal of 250 kg of waste per person annually. The notation of an "aspirational goal" of reaching 125 kg per person annually by 2030 has no concrete action plan or funding behind it. In fact, CRD staff recommended rejection of the proposal of the Solid Waste Advisory Committee to adopt a target more aggressive than 250 kg because it would cause delay and undermine the current financial model. Most of the strategies in the Plan designed to achieve the relatively modest goal of a reduction of per capita waste production to 250kg per year by 2030 are vague and without any measurable outcomes. The strategies are full of unquantifiable terms such as "continue to", "explore" and "advocate for". Funds allocated to strategies to achieve important reduction goals are modest in the extreme, amounting to only 1% of annual expenditures, or about $300,000 per year for all initiatives. Dependence on Tipping Fee Financial Model is Fundamentally at Odds with Waste Reduction It is true that a waste generation target of 125 kg would upend the financial model of depending primarily on tipping fees to fund Hartland's operating expenses. Staff have confirmed that when waste per person drops below 200 kg per year, tipping fees will no longer cover expenses, and alternative sources of income will have to be found. As it stands now, the Plan has a built-in bias ensuring that waste continues to be brought to the Landfill for disposal. The plan needs to consider a mix of funding models, including the possibility of tax revenues, to avoid the current tipping fee funding model from working against the objectives of zero waste. Primary reliance on tipping fees to fund Hartland's operation is in fundamental contradiction to the expressed goal of reduce, recycle and re-use. Instead, tipping fees should be used to incentivize waste reduction behaviour, as is being done in the new tipping fee and funding model being adopted by the Regional District of Nanaimo. Alternatives to Hartland Expansion There are a number of alternatives. Nanaimo's aggressive waste reduction strategy breaks with the tipping fee financial model. The City of Victoria has embarked on a comprehensive zero-waste initiative and has set a target of 50% waste reduction by 2040 that should result in significantly less waste being sent to Hartland. Saanich is developing a One Planet Saanich strategy that embraces zero waste and

carbon neutrality. Other regional municipalities could do the same. The Township of Esquimalt is undertaking a business study of small-scale waste-to-energy (Integrated Resource Management) processes that will obviate the need to send waste to Hartland. Yet the SWMP makes only passing reference to "new technologies" with no concrete plan to embrace them. Instead, the default setting is "reduce to 250 kg and then begin expansion of Hartland". According to the draft plan, almost 70% of waste deposited at Hartland falls into four categories (organics 21.1%; wood products 17%; paper 15.4% and plastics 14.3%). All of these are highly amenable to reduce, reuse and recycle. Moreover 56% of waste comes from ICI (institutional, commercial and industrial) sources and construction and demolition, yet most of the initiatives in the plan to reduce waste are directed at consumers and households through education rather than dealing with the heavy ICI users and construction industry. Cruise ship waste is another issue that needs addressing. Bans that are in place on kitchen scraps, gardens waste and paper fibres are clearly not being implemented and effectively enforced. The current focus is to accept just about whatever shows up at the gate. The current operation of Hartland is hooked like a drug user on tipping fees. This needs to change. CRD Director Responsibility Directors need to be aware that if they approve the Plan as currently presented, they will be giving the green light to expansion of the Hartland Landfill beginning in 2030. The argument that this is just a "design concept" belies the fact that all planning and financial modelling is premised on reducing per capita waste to just 250 kg per year within a decade, an outcome that feeds directly into the start of construction for expansion. The current plan ignores new commitments to carbon neutrality made by various levels of government, takes no account of zero waste initiatives, and ignores the full potential of the circular economy. It makes only passing reference to the impact of new technologies with no actions in the plan designed to examine or harness such technologies. In effect, this is a plan for the status quo, more suited for a world of the late 20th century, not the first or second quarters of the 21st century. Directors should reject the Plan as currently constructed. Staff should be instructed to go back to the drawing board and revise the plan based on public input to present a plan that is more in sync with the realities of climate change, aggressive waste reduction, innovative financial mechanisms, government commitments and public expectations. A revised plan should defer any decision on Hartland expansion or approval in principle of an expansion design concept at least until the next scheduled review in 2025 and should adopt a more aggressive per person waste reduction target in order to avoid the necessity for expansion in future years. In the meantime, staff should be instructed to develop strategies, proposed actions and financial modelling building on zero waste strategies, new technologies and financial incentives and disincentives, to produce a plan that will extend Hartland's usable life without expansion, avoiding the negative environmental and social impacts that will come with that expansion.
Farmers are interested in compost for the regional farm community, and how a program can be established with you to nurture and build soils, protect our fields and the environment and contribute positively to climate change and soil carbon sequestration or 'carbon sinks'. We would like to discuss approaches to collaborative partnerships within the CRD to achieve regional targets; and can align to your principals by building soils with compost, growing crops and providing nutritious food to the region. If citizens of the region see and know their compost is going onto fields, providing local landscapes of vegetables fruits and berries, grains and forage fields – they will be enthused about recycling organic matter and have more faith in sustainability and climate mitigation practices. The continued application of compost to fields will increase the organic matter and soil structure, increase the nutrient holding capacity and improve the soil biology. This provides less use of fertilizers and water, less runoff and leachate, better crop growth and less GHG emissions.
In order to truly Rethink Waste, the CRD needs to: 1. Make waste socially unacceptable through education, with emphasis on the 6 R's (rethink, refuse, reduce, repair, reuse, recycle); 2. Encourage a circular economy through repurpose and repair centers and repair cafes; 3. Change the current business model so tipping fees encourage DIVERSION of waste FROM the landfill vs into the landfill; 4. Use the Township of Esquimalt Waste to Energy proposal as a demonstration waste-to-energy project and make it a leading example of moving towards carbon neutrality; 5. Adopt the City of Victoria's plan to reduce waste by 50% by 2040 and adopt this as a minimum target for diverting waste throughout the region by 2040, and accelerate this to 90% by 2050 at the latest; 6. Recognize that carbon neutrality and zero waste are mandatory pre-requisites if we intend to be carbon neutral and address climate change, one of the greatest global threats to the survival of mankind; 7. Enforce mandatory fully compostable packaging; 8. Encourage the provincial government to legislate that manufacturers are responsible for the full life cycle of their products and enforce this so that products can not be shipped or sold unless manufacturers are certified to do so and are actively regulated, inspected and licensed with mandatory accountability and transparency. Fees collected would be used to support local zero waste initiatives; 9. Create mandatory source separation for single and multi-family dwellings, as well as institutional, commercial and industrial (ICI) use; 10. Delay requesting the expansion of the landfill under the Solid Waste Management Plan until the CRD can publicly demonstrate progress on the following 3 key initiatives: A) achieving zero waste and a circular economy; B) operating a waste to energy project, like Esquimalt, to demonstrate its effectiveness in achieving zero waste and lowering carbon emissions; and C) developing a new business model based on maximizing diversion from the landfill as proposed by the Regional District of Nanaimo. This is possible and your leadership can make this happen!
This plan sounds ambitious with respect to reducing waste and pushing the 3 Rs but in fact there are no concrete commitments or measurables. Most of the "actions" are simply "to continue to", "to explore", "to work with". There are no measurable outcomes for the strategies so it is impossible to hold the CRD accountable for this plan. When the targets are missed because of weak implementation, it will be impossible to analyze why. Most disappointing is the lack of any significant budget commitment to make this plan work. The budget allocated to support all the initiatives outlined in the plan amounts to only one percent of the annual budget for solid waste management at Hartland. If you are really serious about reducing waste in this region--thereby avoiding the need to expand the Landfill, which is a backward step at a time of a climate emergency--put some meaningful budget behind the 3 R initiatives. Right now, it is mostly empty rhetoric and window-dressing.
Please advocate for less packaging in consumer products! For example, even fresh produce that needs NO packaging at all is now overly packaged. I tried to buy tomatoes the other day and one store I went in to had at least half a dozen varieties of fresh tomatoes, but every single one came only in either bags or clamshell plastic packaging. Other non food items are often worse for unnecessary packaging that cannot be reused or recycled. Consumers will make the right choice if they actually have it to make. Thank you.
I would like to see more details regarding strategy 15 on enhancing capacity. I see the new landfill footprint but if the goal is for circular economy or zero waste why is such a big expansion being planned? Also where are the details to how many trees will be removed/ how long blasting will take place? (Years/months) / how much rock will be removed/The number of trucks going in and out to deal with expansion? I think putting this big item at the end of the draft plan makes it look like there is something to hide also it has so few facts when compared to the other strategies it's hard to provide informed comments or meaningful feedback.
When it comes to solid waste, a key principle should be "polluter-pay" by fully accounting for several factors such as volume, mass and while it would be difficult to measure, environmental impact (1 kg of batteries has a larger impact that 1 kg of dog hair). The user pay cost curve should be exponential to encourage a zero-waste target. These cost factors should should be measured from a low floor threshold. For example, the cost curve should start at the first gram of waste when considering the mass factor and not some higher threshold (such as one garbage can per household that is typical now). Right now, most users have no economic incentive to get to a zero-waste target. To complement the exponential cost curve, users should have a variety of no/low cost and convenient options to recycle their waste and divert it from the solid waste stream. A good example is polystyrene which is very inconvenient to recycle right now and depending on where the user goes in the CRD, can have an associated cost as well. I would want to see something like retailers that are selling products containing polystyrene taking it back as well.
Within your Solid Waste Management Plan there are plans for the expansion of the Hartland Landfill which I feel is counter-intuitive to addressing the Climate Emergency that the CRD declared almost 2 years ago. We need to be finding solutions to stop, not increase the methane emissions coming from the landfill and lower the GHGs coming from all that trucking of garbage and aggregate. We feel that selling the methane to Fortis to produce RNG is definitely not helping us tackle climate change. It is only helping to prop up the continued use of fracked gas. In order for the landfill to provide enough methane we would need to continue dumping more garbage. Where is the logic and the "greenness" in that when we should be working towards zero waste and carbon neutrality? Another one of my concerns regarding the expansion of the landfill would be the worsening of our air quality through the unconscionable destruction of 73 acres of our priceless urban forest coupled with the expanded trucking of garbage. We are losing millions of trees every year so

every tree saved now is critical to our health and survival. CAPE, the Canadian Association of Physicians for the Environment have been sounding the alarm bells on air pollution and how it is taking its toll on our health care system. And as we destroy more nature, they are saying we are giving rise to more zoonotics such as the likes of covid-19. We just cannot afford to lose the 73 acres of forest in order to accommodate garbage! Our planet is losing its biodiversity at breath-taking speed. Did you know that within this forested area are 16 at risk species? Our urban forests are an incredible natural asset for filtering our air and for carbon sequestration. The trees planted today will take decades if not generations to absorb as much carbon as these mature trees currently do. Our trees are worth millions of dollars for all the services they provide. I feel the Hartland Landfill business model really needs to be revised and brought into the 21st century. As it currently stands, the survival of the landfill appears to be dependent on the tipping fees and that does not jive well at all with what we are trying to achieve with zero-waste and a circular economy. The City of Victoria recently set out it's Zero Waste Strategy for a 50% reduction by 2040. If other municipalities start getting on board with this there should be no need to for the expansion of the landfill. And if Nanaimo can shoot for a 90% reduction by 2027 why can't we? If we don't aim for the moon we won't even get off the ground. There are other technologies too like wte that could greatly help reduce the amount of waste going to the landfill. I would like the CRD to support and consider the IRM system that the Township of Esquimalt is currently working on. This is totally different from the Enerkem system proposed for Edmonton that is definitely not what we would want. So, before the CRD makes plans to expand the landfill I would like you to hit the pause button. I understand that you can always amend the SWMP once it is approved but do you truly believe that will ever happen? How many years has it already been since it was last looked at? Too often we citizens have seen our governments kick the can down the road. If all governments had heeded the warnings of the scientists and experts back in the 70's and took the issues head on, we wouldn't be facing these monumental challenges we have now. In your Regional Growth Strategy Indicator Report 2020 under Community GHGs it says, "The current trend suggests we will not meet the target by 2038 unless greater effort is taken." I sincerely hope that the current CRD Board of Directors and staff will take greater effort and will finally be the government that we wish to see and take profound, rapid and real climate action. I hope you will take immediate action to reduce our GHGs before the clock runs out on us. Let's roll up our sleeves together to get this done. I know the people would be willing to do what it takes if we have strong leadership we can trust to get us there.
The CRD needs to focus more on the ICI sector. The educational image of the per person garbage cans is misleading. It makes me think that it is individuals that are generating too much waste, but really ICI generates 40% of the waste. The ICI sector should be fined if they don't recycle or compost. A friend of mine worked at a local Royal Bank branch. There were recycling bins inside, but none outside so the custodian emptied the recycling bins into the dumpster with the trash. Royal bank can afford to recycle and should be held accountable. The Plan's idea of requiring a waste plan with a business licence is great. The CRD could also give awards to companies that are leaders in reducing waste. There could be a competition to see who can reduce the most waste in a year. The media could draw attention to the businesses that don't recycle or compost. My family tries to reduce our waste, but it is hard in a society with so much packaging. Stop blaming the individual and make businesses take responsibility for their products.
Our CRD should be all over this great idea: <https://www.byfusion.com/byblock/>. -- wmj
The regional district on Nanaimo is using tipping fees as a way of incentivizing waste diversion. The CRD SWM plan actually encourages more waste delivery to Hartland by basing financial sustainability (one of the four key principles) on maintaining revenue from tipping fees. The plan needs to recognize the fundamental contradiction between trying to reduce waste while funding the operation on tipping fees. It is time to look at a ne financial model.
The plan to divert commercial traffic to Willis Point Road fails to take adequate account of congestion and safety concerns that will occur because of the poor design on the intersection of West Saanich Road and Wallace Drive. Trucks turning north onto West Saanich will block traffic coming from Hartland trying to turn south. Southbound traffic will find it difficult to merge into traffic on West Saanich streaming southbound downhill. Cyclist exiting the Interurban bike trail will find Wallace Drive clogged with trucks. Compounding these problems are the post boxes on that corner. The move is poorly planned and the remedies are out of CRD's hands as Saanich is responsible for this intersection. A fully costed design is necessary if this move of traffic is to take place, for everyone's safety and for the efficient movement of traffic, and work needs to be completed before the move takes place.
We need to go to zero waste - see city of Nanaimo's strategy. To expand the CRD Hartland Rd. landfill means the loss of 73 acres of forested land, according to an article on the Times Colonist. We cannot afford to sacrifice forests, our best bet for sequestering carbon, in a life-changing climate crisis for wasteful landfill.
Too lengthy Cannot find specific info. Please publish a condensed, stick to specific facts.
As a resident of Hartland Avenue, I am in full support of the plan to move the commercial access of the Hatland Landfill to Willis Point Road as proposed . It is a crucial step to the future of the solid waste management of the CRD.
I am a resident of Hartland Avenue and fully support moving the commercial access of the Hartland Landfill to Willis Point Road. The commercial truck traffic has become very busy and has outgrown the safety of Hartland Road.
Totally ridiculous short-sighted solution. Area surrounded by multiple parkland preserves, Gowland-Todd, Durance Lake, Mt. Work, fragile ecosystem, community on well-water, limited road access.... Bio-solids, sewage treatment plant, truck diversion to Willis Point Road, none of this makes sense and will be fought.
I do not support the proposed expansion of the Hartland Landfill beyond 2045 because I believe that before that date we should shift to zero waste disposal. Zero Waste The CRD Board supports the principle of zero waste and encourages a circular economy by mid-Century. This goal can be achieved by reducing personal consumption in keeping with achieving carbon neutrality by 2050; requiring producers to be responsible for the full life cycle of packaging; levying user fees on packages that produce waste and encouraging comprehensive recycling in both single family and multi family homes. Resource Recovery - Waste to Energy Solutions The Solid Waste Management Plan must rigorously pursue the 5 R waste hierarchy with top emphasis on reduction, reuse and recycling. The 4th R of resource recovery requires use of waste to energy technology. I support the Township of Esquimalt proposal to complete a detailed analysis of a demonstration waste to energy facility as soon as possible. The CRD should support the operation of this facility if it is technically feasible. Then resource recovery must be implemented throughout the regional municipalities before expansion of the Hartland landfill is considered. Expanding the Hartland landfill is completely inconsistent with achieving a carbon neutral economy by 2050. Removal of 73 acres of public forest that sequesters local carbon, is inconsistent with the CRD and other municipalities' declaration of a climate emergency and the critical need for the Greater Victoria region to become carbon neutral by 2050. Carbon neutrality requires full implementation of a circular economy where there is no waste. All excess carbon produced is captured by restoring the health of our ecosystems to store carbon.
We live here and pay property taxes and refuse to let this short-sighted expansion move forward at the expense of Willis Point and Highlands residents and our fragile ecosystem. No!
I don't see how it's going to work when recycling has gotten more and more restrictive. In my own life, here's what I've experienced in the last few years: - Private recycling companies (like the one my apartment building uses) stopped accepting glass - Most bottle depots stopped accepting glass, plastic wrap, styrofoam - Hartland stopped accepting hard plastics - My building (Devon Properties) has no organics cart and is not interested in providing one We throw away literally 8x more garbage now than we did 5 years ago (when we lived somewhere with organics and glass recycling, and other items were easier to recycle). I measured it -- we used to throw out a 1/4 full Costco kitchen bag every 2 weeks, whereas now we throw out a full bag once a week. I can't always take everything to Hartland, and have zero options for composting. If you want to reduce waste, recycling needs to be easier and you need to enforce the food scraps rule (I tried emailing the City of Victoria about it -- they didn't care and told me "my building was probably paying a fine").
The public consultation on traffic changes coming as a result of shifting primary truck access to Willis Point Road revealed a major loophole in the SWMP strategy. The shift in traffic will result in a number of safety issues for regular commuters, cyclists and pedestrians ranging from winter maintenance to the need to redesign and reconstruct the intersection of West Saanich Road and Wallace Drive where the combination of trucks, commuters, cyclists and pedestrians will result in major congestion and safety issues. Trucks turning north from Wallace Drive will impede southbound traffic coming off Wallace Drive. Traffic turning south will have sight lines blocked by trucks turning north and traffic streaming south down West Saanich on the downhill slope leading to the intersection

with Wallace will not be able to see traffic turning south. Plus the Interurban bike lane ends at precisely this point, spilling onto Wallace Drive that is narrow, bordered by deep ditches and has no sidewalk or bike path. These concerns were all raised and acknowledged in the traffic consultation but the response in the FAQ's is that this is all the responsibility of Saanich. Saanich should not be required to bear the full cost of these necessary road changes, and it is unlikely to do so. It will give low priority to these changes as very few Saanich residents will be affected. The increased danger and inconvenience will be borne by commuters from the West Shore, Highlands and Willis Point as well as users of Mount Work and Gowlland Tod Parks. While Willis Point Road will not be at capacity, a huge bottleneck will be created at the confluence of West Saanich Road and Wallace Drive. It doesn't matter how much capacity a road has if traffic cannot enter or exit smoothly. The only solution is for the CRD to fund these necessary safety and traffic flow improvements. Residents are understandably skeptical when given "assurances" by CRD officials that this will be looked at. Residents of Hartland Avenue pointed out that the CRD and Saanich have done nothing over the past half century to improve that road, construct bike lanes or sidewalks, despite it being the primary entry for the landfill. Why should users of Willis Point Road be reassured? The CRD could construct internal roads to access the new tipping faces in the north west corner of the Landfill but is unwilling to commit the funding and engineering resources to do so, arguing that it is not feasible. By shifting the truck traffic to Willis Point Road, the CRD and Hartland will be saving hundreds of thousands of dollars if not more from not having to construct internal roads. Instead of downloading the additional costs off on to Saanich taxpayers, the CRD should take a portion of these savings, and provide them to Saanich on the condition that they are used to fund the necessary safety and traffic flow needs arising from the shift of access to Willis Point Road.
1. Hartland Road at the head of one of the larger watersheds (Tod Creek/Saanich Inlet) in the CRD is not well-situated in the first place. It is finite in its capacity with Phase 1 closure scheduled for 2021. 2. This "plan" focuses solely on Hartland. There is absolutely no mention of seeking an additional site. CRD directors have been remiss not seeking a site, probably in the rapidly developing Western Communities (Esquimalt, Langford, Colwood, View Royal, Sooke). By CRD's own figures over 26% of Hartland refuse now comes from the Western Communities and is trucked from as far away as a transfer site at Port Renfrew. An additional site should be selected. This site could serve the Western Communities - unorganized territories could use the nearest site. It could become the site for the region's fibreglass recycling since Hartland handles the region's sewer sludge. Errors have been made and much has been learned at Hartland in waste management. An additional site could be cutting edge. An additional localized site is preferable to expansion at Hartland and would better reflect the cost of the development in the Western Communities. Thousands of acres were removed from the tree farm licenses in the Western Communities. Surely a suitable site could be found. 3. The carbon footprint must be huge and the trucking of the treated biosolid product to the Lafarge Plant on the mainland increases traffic considerably. 4. The cleanup and disposal of derelict vessels and marine equipment is becoming a major issue. Federal and provincial funds have been made available to clean up the marine environment. The only place for disposal of boats, particularly fibreglass boats is Hartland (no mention is made in the draft plan). Many fibreglass boats, large and small, are reaching the end of basically a 40 year lifespan. Note all the fibreglass boats deteriorating in backyards and the amount of material could be quite huge. There is no capacity to recycle fibreglass. This is not a plan the CRD should support.
This is my response to the Solid Waste Management Plan's request for public consultation. I am completely disheartened by the report which presents platitudes and no real change. It seems that the staff which deals with Hartland Landfill are determined to continue to dig large holes and fill them with garbage. The plan to cut down 72 acres of mature forest directly adjacent to Mount Work Regional Park to make space for that large hole is not well considered. There is a plan for some reforestation in the future but knowing that a single mature tree sequesters a thousand times more carbon than a sapling which will take many decades to mature, it is a very long-term solution at best. In addition, the present forest provides a habitat for endangered species such as the screech owl and other animals, Where is there a real commitment to reduce, reuse and recycle? The plans are so vague and couched in such general terms that there is plenty of wiggle room for not meeting even their low-ball targets. Hartland Landfill is part of Saanich which has recently initiated two programmes to encourage better use of its area, environmentally and ecologically. I think that the CRD should be supporting Resilient Saanich and One Planet Saanich by committing to increasing their waste reduction targets so that by 2030 there will be no need to deforest the 72 acres. The very least they could agree on is not to finalize the SWMP as it is, in the hope that the reduction in waste will be enough to not require expanding Hartland Landfill. The budget provided for reducing the amount of garbage currently coming to Hartland is pathetic at 1% of the total budget and so their plans will inevitably fail due to a severe lack of funding coupled with no real interest in changing the status quo. This inadequate budget needs to be increased so that programmes to reduce waste can actually be funded. Now is the time to really apply strategies that will succeed in eliminating the need for the expansion of Hartland. More and more people and companies are realizing that we have to act now, if we are to save our planet. For example, Loblaws Ltd., one of our largest supermarket chains in the country, is implementing an aggressive programme to greatly reduce the use of plastics. I feel that others will follow this lead. In general, many more people are concerned about our excessive waste and are banding together to make everyone aware of the problem. Victoria's Zero Waste initiative is a good example. Saanich and the CRD need to be attuned to these campaigns and present their own plans for a zero waste target. As well, The CRD has not made much progress, if any, on reducing their greenhouse gas emissions as they continue to spew more and more carbon into the air. Changing their way of operating by using a waste to energy solution would go a long way to purifying the air that we breathe. Please consider rethinking the draft SWMP to better reflect the importance of doing something concrete about the challenges of solid waste reduction in a society that no longer sees burying their garbage as an acceptable practice for the area or the health and safety of the planet. Sent from my iPhone
I wish to congratulate the CRD in setting ambitious goals to reduce per capita waste generation, and ensure the utility of our collective regional landfill site is maximized for many years to come. All levels of government, business, and consumers must work together to reduce the amount of waste generated, which could extend the life of the landfill well beyond 2100.
February 11, 2021 RE: Vehicle Access to the Hartland Landfill To: CRD In 2020 two items related to the Hartland Landfill were reported upon and discussed in local newspapers, television and social media. These two items are 1) Expansion of the Hartland Landfill, and 2) Changing Road Access to the Hartland Landfill. As a 30 plus year resident of 151 Hartland Ave, both of these items directly affect me. I will begin with the Hartland Landfill expansion. To be clear, I am certain no one in the CRD wants to see the landfill expanded - least of all the residents of Prospect Lake, Hartland, Highlands or Willis Point. However, unless a more feasible alternative is readily available, I believe, at this point some form of expansion is most likely inevitable. While I don't like the idea of the landfill expanding, the result of that expansion will more or less affect all local neighbours equally. No one stakeholder will be more adversely affected than another. Which leads me to – "Changing Road Access to the Hartland Landfill". To start, I must confess to procrastinating about writing to voice my opinion on this matter. Why? Simply, I was of the belief that the decision to move all commercial vehicle access from Hartland Ave to Willis Point Rd had already been made – that it was a done deal. A logical conclusion when one considers all information available from and to the CRD. In fact, taking into account all available information, it appears that Willis Point Rd is a far more appropriate choice for all landfill traffic – not just commercial. I have attached a copy of the "Hartland Landfill Alternate Access Transportation Impact Analysis" study for your reference. Since this expensive and comprehensive study was commissioned by the CRD I am sure you are well aware of the report's conclusions and recommendations. Recommendations, that clearly and overwhelmingly support the movement of all primary vehicle access from Hartland Ave to Willis Point Rd. Also important is the fact, that Willis Point Rd's grade and construction were engineered with the intent that it would someday be used as the primary access point for the Hartland Landfill. In any event, the report is 36 pages long and does a far better job of advocating for a change of access from Hartland Ave to Willis Point Rd, than I ever could, so I will let it speak for itself. Instead, I will give you the realistic observations of someone who lives on Hartland Ave and is also a very frequent user of Willis Point Rd. To support my observations, I offer a proposal to any CRD director or Willis Point resident. I invite you to spend an hour sitting with me at the end of my driveway at 151 Hartland Ave - while the Landfill is open. During that time you will get to enjoy the following: Non-stop traffic for the entire hour – literally. Large commercial trucks labouring under the excessive grade of the hill, making so much noise it will be impossible to hold a conversation while they pass. Any vehicle that is able to travel faster uphill than the posted 40 km/h doing so, as to keep up their momentum on the hill. All vehicles coming downhill exceeding the 40 km/h posted limit as the steep grade simply entices them to do so – travelling so fast that you do not feel safe while standing on the shoulder of the road – ever. It is actually uncomfortable being a pedestrian on Hartland Rd. So much so, that whenever my wife and I venture out for a walk we are forced to drive to the bottom of Hartland Rd, park and then

walk from there. Mountain Bike vehicle traffic exceeding the 40 km/h posted limit both up and downhill. In 30 years I have never once seen a traffic enforcement officer on Hartland Ave. Which is logical, since the road is so narrow and winding with inadequate shoulders –they could never safely pull a vehicle over? Understandable, given the volume of dead branches and tree debris that litters the shoulders. My wife has written several letters addressing this issue – to date no action has been taken. Then you have the mountain bikers themselves, on bike, racing downhill at neck-braking speed. I am quite surprised there hasn't been a fatality yet. Throw a little snow in the mix and you really have some entertainment. The steep grade of Hartland makes for many mishaps. The latest snowfall resulted in the Landfill having to close for two days – something that would be avoided by the gentler grade of Willis Point Rd. Finally, though I could go on, the non-stop accumulation of garbage along the side of the road, waste that flies out of the backs of vehicles with unsecured loads – another bylaw infraction that I have yet to see enforced. Except for the mountain bike traffic, moving the landfill access to Willis Point Rd will alleviate all of these problems, for not only me but all residents of Hartland Ave. Hartland residents also acknowledge, that logically the mountain bike traffic must stay on Hartland given the fact that the parking lots and trail access is located at the top of the road. Just think of the increased safety for the mountain bikers that actually ride their bikes up the hill, now being able to do so without dodging the landfill traffic. More importantly, moving the Landfill access to Willis Point Rd doesn't off-load these problems to the residents of Willis Point, because, there are no residential dwellings and not a single driveway on the proposed route. In fact, the residents of Willis Point have never experienced any of the problems listed above and never will, as again, the access point to the Landfill is literally kilometers away from where they live. Unfortunately, their concerns are completely emotional rather than logical. By moving access to Willis Point road, the CRD has the ability to significantly improve the safety and quality of life for 200 Hartland residents. A move that would have virtually zero impact on the quality of life of the residents of Willis Point – even though they would like you to believe otherwise. As I stated before, their arguments, while impassioned and emotional are not logical, and most importantly not supported by the "Hartland Landfill Alternate Access Transportation Impact Analysis" commissioned by the CRD. One has to ask "what was the point and expense of this study if the CRD is simply going to ignore the conclusions and advice of the experts?" Additionally, the access point to the landfill from Willis Point Rd is well before Durance Lake and Mt. Work Park. All of the mountain bikers that park their vehicles on the side of Willis Point Rd do so well beyond the new access point to the landfill. Consequently, the traffic to the landfill will have no impact on any of them. Not so on Hartland Rd, where you regularly see vehicles parked on the side of the road when the mountain bike parking lots are full. This has created a congested and unsafe area directly at the access point to the landfill, a point that all landfill traffic must pass through. One has to know that the commercial truck drivers would welcome the new access route. A route that is easier on their trucks, has better visibility, no adjacent roads or driveways and is far safer. Also, the property on the north side of the proposed route is unlikely to experience future development as it is owned by DND, posted no trespassing, fenced, gated and locked with zero access. Finally, if the landfill traffic is the dangerous burden that the residents of Willis Point espouse, surely that is reason enough to move it from the residential neighbourhood of Hartland to the vacancy of Willis Point Rd. For your convenient reference, in addition to the "Hartland Landfill Alternate Access Transportation Impact Analysis" I have also attached, "Hartland Landfill Access – Frequently Asked Questions" as further support of my argument. Lastly, I have attached a photo of the latest road sign to appear in rural Saanich. These signs are obvious on Goward, Spartan and Prospect Lake Roads but are conspicuously absent from Hartland. Which I find perplexing, as I have walked all four of the roads and in my opinion, Hartland is, by far, the most dangerous. Sincerely, Douglas Carter 151 Hartland Ave Victoria B.C. V9E 1L7
What a bunch of sleazy bastards that put all that together. It needs an independent consultant to say NO
The target to reduce our waste by 1/3 to 250kg/year is not enough. We need to do better. All private contractors serving apartment buildings must be required to separate out organics and recyclables. Wood should be salvaged if possible, or mulched and burned. Takeout containers should be banned. Soft plastics should be collected through the Blue Box program and converted back to fuel. And the CRD should demand that the province expand its EPR programs and increase their fees. If not us, who? If not now, when?
I actually found myself getting excited, reading this draft report. The proposed strategies and actions (p. 27 passim) are great (as always, assuming sufficient political will behind them). 5.1 #4, #5, and #6 align closely with what Zero Waste Sooke is already doing. They already run Repair Cafés, are working at developing a tool library, and run region-wide clean-up days. They are also building political pressure on the District to create a local recycling yard and associated business development park. The long-term waste goals are very good; they are ambitious, have measurable benchmarks, and are politically sell-able. But the most important two words actually appear in this draft report: circular economy. I swear, I welled up when I read that. This is the first time I've seen that phrase in a government document. The most aspirational goal, and one that is driven by the other proposed directions in the report. In short, I can wholeheartedly support the goals in this draft report, and the directions it wants us all to move. (As an aside, have you any idea how long it has been since I could say that? Thank you all for the work that went into this!)
FROM THE DESK OF MOUNT WORK COALITION February 14, 2021 Colin Plant, Chair CRD Board, and CRD Board Directors Feedback to the CRD on the draft Solid Waste Management Plan Please find feedback to the draft Solid Waste Management Plan (the Plan) from the Mount Work Coalition, a non-profit society that formed as a group of concerned citizens with a mission to provide voice and support for the protection and responsible stewardship of the Mount Work Park area through education, advocacy and research. 1. Expanding the landfill The Plan includes a proposal to extend the Hartland landfill site and earmarks 73 forested acres of carbon sequestering trees to be removed to prepare the area for blasting and excavating the side of a mountain. This is not a 21st century solution to waste management. The Plan was written through the lens of a business as usual mindset predicting the landfill will reach capacity and therefore need to be expanded no later than 2045 - rather than through a lens of retaining the size of the existing landfill without expansion by rolling out new aggressive programs to reduce the waste over the next two decades. With less waste being dumped in the landfill, there will be less leachate into the rivers and lakes in the area. The Plan requires concrete waste management actions such as dedicated funding for a public educational campaign and financial incentives to encourage startups and incentivize waste management businesses that reuse waste, such as scrap businesses and plastic and rubber recycling. This biodiverse forest of 73 acres should be kept intact to provide a natural buffer between the park and landfill, to protect species at risk, to protect the lakes and streams and to protect the human health of those using/living next to Mount Work Park directly beside the landfill. The existing trails should remain for the enjoyment of mountain bikers. The Coalition is pleased to see that the Board at its February 10, 2021, meeting reiterated that it was prepared to consider a more aggressive approach to waste reduction a year following the submission of the SWMP this summer. We strongly urge the Board not to trigger the expansion of the current footprint of the landfill until the amended plan is completed by 2025. The much more aggressive best practice solutions including Zero Waste, Circular Economy and emerging waste to energy technologies will reduce methane emissions to net zero through a complete transformation. We firmly believe that the CRD can attain its aspirational target of 125 kg per person per year by 2040 with waste reduction strategies already being contemplated such as Zero Waste Victoria; the proposed waste to energy IRM project in Esquimalt and a change in tipping fees application as we will explain later. This new target should be included in the amended SWMP by 2025. The current plan does not address the climate emergency and the commitment of the CRD and a number of municipalities to become carbon neutral by 2050, continues dumping of over a fifth of total waste in the form of organic matter though banned in law creates more methane and is in direct conflict with the Province's stated Climate Action goals and will not enable us to meet our 2030 greenhouse gas emissions targets. According to the World Meteorological Organization's bulletin, "Carbon dioxide levels continue at record levels, despite COVID-19 lockdown", approximately 40 per cent of methane comes from natural sources, such as wetlands and termites, but 60 per cent comes from human activities, including cattle breeding, paddyfields, mines, landfills and biomass burning. Nature is now sending us a message, through wind storms and wildfires, and we must act now to do our part, as we have the ability to curb harmful methane emissions from a landfill. 2. What alternatives to landfilling has the CRD considered? Landfills are a 19th-century solution to waste disposal. Today there are significant alternative technologies that can generate value from waste products. Furthermore, it is clear that without taking a hard look at how we consume and create waste, we will not be able to address the climate challenge that threatens our environment. Governments across the globe, supported by their citizens have been installing multi-pronged strategies to reduce waste through promoting circular economies, changing consumer behaviour such as banning single use plastics, and investigating alternative uses for waste to energy projects such as gasification now under consideration in Esquimalt. This multi-pronged approach should be a cornerstone to the region's solid waste management plan. It can eliminate the need to build a bigger landfill, instead moving us in the appropriate direction of zero waste. The CRD staff must work in partnership with other leaders using best practices: Esquimalt is looking to be an early adopter of IRM/gasification technology that would see their waste converted to

energy. **The Regional District of Nanaimo is promoting the 4Rs by cultivating a circular economy; uses tipping fees to encourage waste diversion rather that waste dumping and plans to divert 90% of its waste by 2027. If RDN can achieve a target of 109 kg/person/year, so should the CRD. **San Francisco is a global leader in waste reduction, has an effective pricing strategy that uses cost incentives/disincentives between waste and recycling. **Switzerland has 100% waste recovery where they use a combination of material recovery and incineration for energy. **Sweden recovers 99% of its waste, converting it into heat that warms homes, power buses and taxis. **The City of Victoria released its Zero Waste Victoria Plan to reduce current waste to Hartland by 50% by 2040. 3. Traffic Diversion to Willis Point Road The planned relocation of commercial dump traffic to Willis Point Road is part of the draft SWMP. This decision is premature, given the opposition to expanding a landfill in the 21st century, the movement to Zero Waste, a circular economy, and waste-to-energy technologies. The CRD staff should revisit this decision based on the premise that the landfill will not be expanded and that other regional municipalities will be implementing new technologies to manage their own waste. With less waste being trucked to the landfill, there will be less traffic, no expansion and no reason to reroute traffic. The CRD should be able to construct internal roads and fill alternate cells closer to the existing entrance off Hartland Avenue. 4. Biosolids The CRD Board reversed its longstanding ban on the spreading of biosolids on land and will be spreading toxic biosolids within the Hartland perimeter for up to 6-8 weeks a year while the Lower Mainland facility undergoes maintenance. CRD communication describes this as a temporary solution, which is absurd since once spread, biosolid toxins remain in the ground, waterways and air - they are not temporary. CRD characterizes the area around the dump as a rural area, which is incorrect - it is a semi-rural with local residential communities and schools very close to the dump area, and the regional tourist attraction of Butchart Gardens, concerned as they are downstream of the dump and use the water in Todd Creek. The area is also home to many organic farmers in close proximity. The primary challenge with the decision to spread biosolids at the Hartland dump is the lack of scientific evidence to demonstrate that it is safe for the human and wildlife populations in the area. Biosolids, even treated to Class A standards, contain microplastics. The scientific community is now researching the effects of microplastics in our lakes, rivers and streams. As the basic tenet of good environmental governance is the precautionary principle – given the lack of scientific certainty, the decision should be not to spread the biosolids. Biosolids contain over 300 chemicals. Some will survive the drying process, and any trace of toxic chemical even at the lowest risk is unacceptable and will do significant damage to the 16 species that are endangered or threatened in the area, including the Western Painted Turtle and the Western Screech-Owl. Biosolids soak into the ground water and the wetlands and the 16 at risk species will digest or absorb the chemicals from the biosolids, destroying these endangered wildlife. 5. End Reliance on Tipping Fees as the Primary Source of Funding for Hartland Reliance on tipping fees to fund Hartland's operations is counter-intuitive to zero waste. The tipping fee model provides no material incentive to reduce waste; indeed it is a disincentive as is demonstrated by concerns to keep all waste disposal in the region. Tipping fees must be used to incentivize waste diversion as is being done in the Nanaimo Regional District and if alternate sources of funding are required to maintain the Landfill operation, a general tax levy may be required. This is a small price to pay to meet climate change goals. 6. Strategy to Optimize Landfill Gas Management The Hartland landfill signed an agreement with FortisBC to collect methane from the landfill. We disagree with this strategy as it relies on a steady stream of decomposing waste being dumped into a landfill to feed the FortisBC system for a small amount of RNG. Expanding the landfill and relying on a small fraction of the resulting methane gas collection is contrary to the mandate for the region to reduce GHGs. The landfill must be sustainable into the future without relying on outdated expansions. In Summary Our mission is to protect the Mount Work Park region and ensure science-based decisions are made concerning the Hartland landfill activities that impact the parks. As the CRD has declared a state of climate emergency and a goal for carbon neutrality, we believe that expanding a landfill by removing a biodiverse carbon sequestering forest, moving dump traffic and spreading biosolids is contrary to this goal and will lead to an overall increase in carbon. There are opportunities for emissions reductions using new technologies, zero waste initiatives, and increasing carbon sequestration by not expanding the landfill as trees absorb CO2. Minimizing GHG emissions are critical for meeting the CRD's goals. Our Recommendations: 1. Delay any approval for landfill expansion until an updated and amended plan is adopted in 2025. 2. The amended SWMP submitted in 2025 must establish a target of 125kg/person/year by 2040. 3. Notify the Ministry of Environment that the CRD intends to submit an amendment to the plan by 2025 with strategies for attaining this target including an aggressive Zero Waste program, and an independent analysis and testing of alternative technologies such as IRM/gasification/Waste to Energy. 4. The Plan submitted in 2021 should contain a placeholder for the Esquimalt waste to energy project subject to a business case being completed. 5. Conduct an independent environmental assessment prior to any plans to expand or alter the design of the landfill, including the spread of biosolids, to protect the natural ecosystem, wildlife, community health and the recreational users of the area. 6. Strengthen the plan's Zero waste initiatives by adding concrete plans such as dedicated funding to create business incentives for entrepreneurs; create a public education campaign to draw awareness to Zero Waste, and use tipping fees to incentivize waste reduction instead of encouraging continued use of landfilling as a source of revenue. 7. Ensure protection of species at risk in Mount Work Park, we are requesting the BC Ministry of Environment reinstate its longstanding ban (2011 and 2013) on the spreading of biosolids, planned to begin in February 2021. 8. Delay the decision to reroute landfill traffic to Willis Point Road until decisions are made to have regional municipalities manage their own waste with Zero waste and new waste to energy technologies. 9. The Amended Plan by 2025 would be subject to full public consultation during its development to ensure the public has ample opportunity to engage in accordance with Ministry policy. Elaine Klimke, Chair on behalf of Mount Work Coalition cc: Russ Smith, Senior Manager Environmental Resource Management Larisa Hutcheson, General Manager of Parks & Environmental Services · Barb Dejardins, Chair CRD Environmental Services Committee Sources: https://public.wmo.int/en/media/press-release/carbon-dioxide-levels-continue-record-levels-despite-covid-19-lockdown
In Nov. 2019 Coexisting with Carnivores Alliance (CWCA) communicated by letter to the CRD in the first round of public consultations. We chose to engage with the CRD on the SWMP material to that date being the Strategy Dev. Summary Report & the Proposed Strategies and Targets which did not speak to the issue of solid waste as an attractant to wildlife. Our letter requested of the CRD that this issue be addressed in the draft SWMP as a means of educating residents and the industries and providing options of ways to reduce human/wildlife conflicts. And we offered specific comments, suggestions and recommendation for consideration and potential inclusion into the version of the draft which is now Nov. 2020. I am very disappointed that it appears that none of our input has been incorporated into the draft SWMP. Our letter also provided information and links to other Regional Districts in BC where their SWMP's to reduce conflicts for potential bear-human conflicts IS in their Plans. If Okanagan-Similkameen and Squamish-Lillooet Regional Districts can do this why can't the CRD? Our letter also spoke to education and solid waste collection equipment modifications and standards for wildlife resistant garbage bins & collection containers in an effort to reduce conflicts with wildlife such as bears and racoons and take measures to address section 33.1 (2) Attracting Dangerous Wildlife of the Provincial Wildlife Act, where by the way "compost" is listed as an attractant to dangerous wildlife. Again, I am very disappointed that SWAC or CRD staff chose not to address this important educational and awareness issue in the draft SWMP. The opportunity is NOW! The CRD should be helping to increase people's responsibilities, increasing understandings of this issue and enhancing positive behavior outcomes for humans and wildlife. This is also a public safety matter. But, the CRD has chosen for some reason to ignore an issue that is not going to just go away and it is an issue that is directly linked to solid waste. Please review our letter again, look at the other Regional Districts that we provided links to and used this opportunity to do something positive towards the issue! For your information the collective authors of that letter were a sub-committee of CWCA (although the final version was approved by the Alliance) myself, the chair of CWCA Nitya Harris, Mike Badry Ministry of Environment Wildlife Biologist and Provincial Wildlife Conflict Manager, and (former now retired) CRD Parks staff person Todd Golumbia ecologist and Environmental Conservation Specialist. This CWCA is composed of mostly professional experts in the field of wildlife conflicts in BC. We would be happy to work more closely with the CRD on this important issue. [redacted]
Has anyone studied the areas which will receive the run off from the bio solid sites.? It would be great to know the species / population numbers .
Please don't kill wildlife. There's hardly any left.
Please don't dump biosolids where animals, fish, plants will be destroyed. There has to be another safer solution. Yes, it may cost more, but this is our planet's future we're talking about - and that includes your/our grandchildren and all future generations. Can't you see that?
Please Rethink an alternative to this plan as. The toxins will enter our waterways and harm our wildlife who are a precious part of our

progressive solutions: 1) Make waste socially unacceptable through education, with emphasis on the 6 R's (rethink, refuse, reduce, repair, reuse, recycle); 2) Encourage a circular economy through Repurpose and Repair Centers and Repair Cafes; 3) Change the current business model so tipping fees encourage DIVERSION of waste FROM the landfill vs into the landfill; 4) Use the Township of Esquimalt Waste to Energy proposal as a demonstration waste-to-energy project and make it a leading example of moving towards carbon neutrality; 5) Adopt the City of Victoria's plan to reduce waste by 50% by 2040 and adopt this as a minimum target for diverting waste throughout the region by 2040, and accelerate this to 90% by 2050 at the latest; 6) Recognize that carbon neutrality and zero waste are mandatory pre-requisites if we intend to be carbon neutral and address climate change, one of the greatest global threats to the survival of mankind; 7) Enforce mandatory fully compostable packaging; 8) Legislate that manufacturers are responsible for the full life cycle of their products and enforce this so that products can not be shipped or sold unless manufacturers are certified to do so and are actively regulated, inspected and licensed with mandatory accountability and transparency. Fees collected would be used to support local zero waste initiatives; 9) Create mandatory source separation for single and multi-family dwellings, as well as institutional, commercial and industrial (ICI) use; 10) Delay requesting the expansion of the landfill under the Solid Waste Management Plan until the CRD can publicly demonstrate progress on the following 3 key initiatives: 1) achieving zero waste and a circular economy; 2) operating a waste to energy project, like Esquimalt, to demonstrate its effectiveness in achieving zero waste and lowering carbon emissions; and 3) developing a new business model based on maximizing diversion from the landfill as proposed by the Regional District of Nanaimo. This is possible. Real leadership can make this happen! Frances Litman, on behalf of the Creatively United for the Planet Society
We are in the 21st century, and we have declared a climate crisis. Our solid waste treatment should thus not cut down forest to extend Hartland, maintain Hartland by counterproductive 'tipping fees', transfer trucks to Willis point road thus impairing recreational use of the road itself (by runners, hikers and cyclists), the Mount Work park and Durance Lake and Mckenzie Bite - all this increasingly valuable to increasingly densely housed Victorians. The CRD plan runs counter to its responsibilities to care for our piece of the planet and our inhabitants. What you are risking can never be reclaimed - and it is totally unnecessary. Switch to modern alternative solid waste management systems, like gasification, for example - just as operates in much of Europe. Also, given what we now know about viral particles surviving through current biosolid production, and have suffered with Covid, it is lunatic to land -spread biosolids ever, anywhere. This proposal must be changed: it can't be reversed. Once on land, whatever pollutants are there seep into our aquifers, our wells and are wind-dispersed. Stand up for what is right CRD, think again, follow the evidence and the public interest. We depend on you to change course. With thanks.
The Plan, "Rethinking Waste", is presented as a "plan to reduce how much material is sent to Hartland Landfill and guide how the region's waste is managed in a safe, secure and sustainable way now and in the future." In fact, as presently conceived and presented, it is a plan of insufficient ambition that avoids any serious decisions or commitments to rethinking waste and is instead designed to take the course of least resistance. The current Plan leads inevitably to the enlargement and expansion of the Hartland Landfill. Instead of being called the "Solid Waste Management Plan", it could more accurately be called the "Hartland Landfill Expansion Plan" because that is the inevitable, pre-determined outcome of the current plan. Current Plan is not sufficiently Ambitious The entire plan is premised on the target of reducing per person annual waste amounts from the current 380kg per person per year to 250 kg by 2030, with an undefined "aspirational target" of 125kg. This aspirational target was tacked on at the end of the planning process as a sop to the recommendation of the Solid Waste Advisory Committee, without any plan or commitment to achieving it. Assuming the 250kg target is met, according to the current plan, beginning in 2030 73 acres of forest will be removed in order to begin expansion of Hartland's filling footprint by approximately 50% so that the expanded Landfill will be ready to continue receiving waste beyond 2045. (All this without the benefit of an environmental assessment which CRD staff claims is not required). Expansion is the chosen strategy to extend the life of the Landfill to 2100 and the entire plan is predicated on this outcome. All the assumptions in the plan, including a financial model that relies primarily on continued tipping fees, is based on the expectation of expansion. It is the wrong strategy for a number of reasons, and must be rejected. Instead of the presumption that Hartland must be expanded, with work beginning in 2030, the Plan should start from the goal of avoiding further expansion, and set waste reduction targets and strategies accordingly, based on this goal. Deferral of Approval of Design Concept for Expansion is Required Rather than approve the current plan, the CRD Board should amend the plan by deferring any decision on expansion of Hartland until an effectiveness review is conducted, as required by the Province, in 2025. In the meantime, the CRD should maintain flexibility in the plan allowing for the potential incorporation of current initiatives being pursued within the CRD, such as Esquimalt's evaluation of the business case for Integrated Resource Management and the City of Victoria Zero Waste strategy, and other developments between now and 2025. In 2025 a full evaluation should be undertaken of progress toward waste reduction targets, including the aspirational target of 125kg per person annually (note that the Regional District of Nanaimo has adopted an annual waste reduction target of 109kg per person by 2027, with measures being put in place to achieve that goal). This review could lead to a further modification of the Plan to incorporate new strategies including waste to energy initiatives if they prove practical. In the meantime, CRD Board should not approve the design concept of Hartland expansion that is scheduled to begin in 2030 under the current plan. Environmental Assessment Needed if Expansion Plans Approved The Plan argues unconvincingly that the removal of the trees and the quarrying of the 73 acres is not an "expansion" but merely "maximizing the use of land currently within the property boundary". This ignores the fact that the expansion will remove a significant buffer area that until 2019 was a de facto part of Mount Work Park. It will push the area being used for landfilling operations to the very boundary of the property. The Plan's language also dismisses the fact that the actual filling footprint will expand significantly, both in terms of surface area and removal of rock to create airspace. In fact the expanded filling space will be well in excess of the 30% increase that triggers an environmental review under the Environmental Assessment Act, despite the CRD statement that it does not believe that an environmental assessment is required. This expansion will have a number of significant negative impacts. First removal of forest cover is inconsistent with climate action goals. The statement that new trees will be planted elsewhere is insufficient as replacement of mature trees with seedlings is a suboptimal outcome when the removal of the mature trees can be avoided. Expansion of the Landfill will further put at risk the 16 endangered species in Mount Work Park. It will remove 73 acres from recreational use and create noise, air and water pollution for the adjacent areas, all of which is unnecessary. It will redirect traffic to a busy commuter, residential and recreational road from the current access route that terminates at the Landfill. Most important, expansion will ensure that the CRD continues to dispose of waste through landfilling, creating significant methane emissions in the process to the detriment of federal, provincial and regional greenhouse gas reduction commitments, instead of seriously examining alternatives to continued landfilling. Despite vague language in the Plan that new technology and waste reduction methods might change the planned expansion, there is no commitment or concrete planning to move beyond the goal of 250 kg of waste per person annually. The notation of an "aspirational goal" of reaching 125 kg per person annually by 2030 has no concrete action plan or funding behind it. In fact, CRD staff recommended rejection of the proposal of the Solid Waste Advisory Committee to adopt a target more aggressive than 250 kg because it would cause delay and undermine the current financial model. Most of the strategies in the Plan designed to achieve the relatively modest goal of a reduction of per capita waste production to 250kg per year by 2030 are vague and without any measurable outcomes. The strategies are full of unquantifiable terms such as "continue to", "explore" and "advocate for". Funds allocated to strategies to achieve important reduction goals are modest in the extreme, amounting to only 1% of annual expenditures, or about $300,000 per year for all initiatives. Dependence on Tipping Fee Financial Model is Fundamentally at Odds with Waste Reduction It is true that a waste generation target of 125 kg would upend the financial model of depending primarily on tipping fees to fund Hartland's operating expenses. Staff have confirmed that when waste per person drops below 200 kg per year, tipping fees will no longer cover expenses, and alternative sources of income will have to be found. As it stands now, the Plan has a built-in bias ensuring that waste continues to be brought to the Landfill for disposal. The plan needs to consider a mix of funding models, including the possibility of tax revenues, to avoid the current tipping fee funding model from working against the objectives of zero waste. Primary reliance on tipping fees to fund Hartland's operation is in fundamental contradiction to the expressed goal of reduce, recycle and re-use. Instead, tipping fees should be used to incentivize waste reduction behaviour, as is being done in the new tipping fee and funding model being adopted by the Regional District of Nanaimo. Alternatives to Hartland Expansion There are a number of alternatives. Nanaimo's aggressive waste reduction strategy breaks with the tipping fee financial model. The City of Victoria has embarked on a comprehensive zero-waste initiative and has set a target of 50% waste reduction by 2040 that should result in significantly less waste being sent to Hartland. Saanich is developing a One Planet Saanich strategy that embraces zero waste and

ecosystem!
Care needs to be taken to avoid putting toxic substances where they do not belong and where they will adversely affect living organisms
Please care for the animals and environment. We only get one world. And our children need to be able to thrive.
I am concerned about the impact that extending the Landfill will have on mountain bike trail access. A growing number of bike trail users are having to make do with an ever-shrinking area of sanctioned trails. Some of the best trails are slated for demolition with the expansion of the landfill, and if this must happen, we need more area opened up for riding. There is already a shortage of advanced/challenging trails at Hartland, and the growth of the sport has seen the already paltry technical terrain tamed down for newer riders. I understand that our city needs a place to put and process our waste, but expanding the landfill at the expense of recreation will not leave a legacy to be proud of. A solution that I propose is to extend the mountain bike park to include more of the east face of Mt. Work, extending closer towards the hiking trail. Another action that would benefit the growing number of mountain bikers in our community would be to sanction trails on Partridge hills, and instal signage to designate best routes for walking/horseback so as to avoid trail conflict between user groups.
I don't understand how "toxic" biosolids-as per the CRD original plan can suddenly become safe fertilizer!! You guys are insane! You threaten our water, lakes and wildlife by proceeding with the "new" plan. Give your heads a shake.
Please reconsider your plan in order to protect the vulnerable marine ecosystems in the area. We treat the earth terribly as it is and for a city that aims to be greener, this is a step in the wrong direction. There has to be a better option than this one
Bio- solids, aka human shit, should never be spread on fields. It is a very dangerous practice, This means that all the medications, and all the different varieties of pesticides we ingest that find their way into the bio-fuel, after passing in the human intestinal tract,, will be ingested again in food, lettuce, milk when cows grazed the field, etc. Bio-waste should be buried, in a dumpsite area.
As a current Willis Point resident and long time Peninsula resident and active member of the community, this is highly concerning. Every time we now drive by the dump we need to hold our breath to prevent vomiting from the reek of the sewage treatment facility, which is obviously leaking despite the CRD saying otherwise. This is in fact illegal. As for biosolids, this was rejected in the past and numerous studies have clearly concluded it is simply not feasible. Yet here we go again, without adequate consultation.
So many reasons this is impractical, irresponsible, and outright criminal: massive increase in heavy truck traffic though single-access corridor, increased vehicle emissions, increased surface pollution, increased aerial pollution, increased noise pollution, water table contamination, pollution run-off, heavy metal and antibiotic leeching, ground water pollution, ~75 acres of pristine pacific Northwest rainforest decimation, animal habitat destruction, negative ecosystem impact...
Why would this even be considered in an area surrounded by farmland, regional, provincial, and marine parks, pristine watershed, endangered habitats, and delicate ecosystem. This idea has already been rejected. But now, with last minute "consultation", it is being forced through. Discussions of blockades to Willis Point point have already begun, which will cause further disruption.
I do not support the proposed expansion of the Hartland Landfill beyond 2045 because I believe that before that date we should shift to zero waste disposal. Paragraph 1. Zero Waste The CRD Board supports the principle of zero waste and encourages a circular economy by mid-Century. This goal can be achieved by reducing personal consumption in keeping with achieving carbon neutrality by 2050; requiring producers to be responsible for the full life cycle of packaging; levying user fees on packages that produce waste and encouraging comprehensive recycling in both single family and multi family homes. Paragraph 2. Resource Recovery - Waste to Energy Solutions The Solid Waste Management Plan must rigorously pursue the 5 R waste hierarchy with top emphasis on reduction, reuse and recycling. The 4th R of resource recovery requires use of waste to energy technology. I support the Township of Esquimalt proposal to complete a detailed analysis of a demonstration waste to energy facility as soon as possible. The CRD should support the operation of this facility if it is technically feasible. Then resource recovery must be implemented throughout the regional municipalities before expansion of the Hartland landfill is considered. Paragraph 3. Circular Economy Expanding the Hartland landfill is completely inconsistent with achieving a carbon neutral economy by 2050. Removal of 73 acres of public forest that sequesters local carbon, is inconsistent with the CRD and other municipalities' declaration of a climate emergency and the critical need for the Greater Victoria region to become carbon neutral by 2050. Carbon neutrality requires full implementation of a circular economy where there is no waste. All excess carbon produced is captured by restoring the health of our ecosystems to store carbon.
I have been a resident of Hartland Avenue for 15 years, and plan to be here for another 30-50. I have several concerns about the future plans for the landfill. To my mind, we should be working towards eliminating the landfill entirely, so I'm surprised that such an extensive expansion is in the works. We all know that we need a zero-waste future and it's disappointing that this plan seems to support quite the opposite of this goal. It is also disturbing that several acres of forest with be destroyed to do this. Again, we understand that forests are precious, especially the severely degraded Douglas Fir ecosystem that will be destroyed. I also continue to strongly disagree with the spreading of biosolids in the "cultivated" land at the landfill and threat to the waterways. I do support the moving of the landfill entrance to Willis Point Road. Hartland is entirely inappropriate for heavy industrial traffic. I live on a blind corner and have a close call at least once a week. My family drives a truck with trailer, requiring plenty of time to turn, and I ride a motorcycle. I truly believe my life is endangered each time I turn onto my driveway, and there are several folks on our street in a similar situation. I have already been in one serious accident on our road, and I request that if the entrance is not moved, that serious safety improvements are made to slow down vehicles and improve sight lines.
This is an important issue for everyone in the Greater Victoria region because alternatives do exist to better manage and reduce waste, live more sustainably and be more climate accountable, but the CRD draft SWMP fails to seriously consider these alternatives and to swiftly adopt measures that address the climate emergency. What does CRD have planned for Hartland landfill? Expanding the landfill far over its operational capacity and blasting against the slope of Mount Work. Removal of 73 acres of forest and destroying biodiverse habitat. Increasing greenhouse gas emissions, as landfills create deadly methane. Creating more leachate that pollutes the aquifers to the north of Hartland landfill. Risking the safety of recreational users by turning Willis Point Rd into an industrial corridor. CRD has declared a climate emergency - but are doing business as usual. Expanding landfills is an outdated response to the region's waste problems. We need twenty-first century solutions - which other municipalities are adopting successfully. Better solutions exist such as gasification and the CRD should explore and adopt them.
The following item is from your Draft Solid Waste Management Plan: (quotation marks mine) 4.2.2.1.7 Community Benefits and Engagement Some of the undeveloped landfill property is currently used for recreation by users of the adjacent park lands, such as walkers and mountain bike enthusiasts. As the landfill develops and this land is needed, these recreational users of those portions of the landfill property "may be impacted". Additionally, there are residences who share the use of the route to the landfill that "feel impacted" by the landfill's location. The CRD "endeavours" to operate and develop the landfill in a manner that recognizes the interests of the community (recreational and residential) while continuing to provide an essential regional service. The CRD has "engaged" and will continue to engage with these communities to ensure that their perspectives continue to be understood and that the ongoing development the Hartland site is done with these interests in mind. Your deceitful wording of this item alone has many recreational users of the park and residents tearing their hair out!! You say they MAY be impacted and they FEEL impacted when in fact you know they WILL BE MAJORILY IMPACTED by the loss of recreational trails and bike paths, the loss of 73 acres of forest and their creatures as well as the loss of peacefulness and quiet caused by the removal of the dump buffer zone. They WILL ALSO BE MAJORLY IMPACTED by the noise and air pollution caused by the addition of 200 to 300 heavy truck trips a day on Willis Point Road which WILL create a severe traffic safety threat to motorists, school buses, cyclists, wildlife and pedestrians, particularly on the hills and at the intersection of Wallace Drive and the intersection of West Saanich Road. This relocating of the dump entrance to Willis Point Road will also cause Western Community dump customers to shortcut through the Highlands road, most of which is a very dangerous single lane road. In short, this relocation of the dump entrance is irresponsible insanity that is going to result in traffic accidents, injuries and perhaps fatalities. Unfortunately, your idea of "engaging" with the affected communities is to simply TELL them PART of what is planned or already happening and to completely ignore their inputs and concerns instead of undertaking to actually do something concrete about them. Sadly, your process has come across to most of us as disingenuous and condescending. Clearly it is the CRD staff and not the Directors who are making the decisions and who seem to have a vested interest in expanding their

empire with little regard for the welfare of the public they are supposed to serve. It is time for the CRD Directors to take charge of this process and to direct staff to halt landfill expansion and to look into and pursue proven landfill alternatives which are successfully practiced world wide. Even the Municipality of Esquimalt is examining gasification of their waste which will provide an estimated 91% landfill diversion, generate clean energy to displace fossil fuels along with many other specified benefits and will save their taxpayers major dollars in the process. reference link: Microsoft Word - Esquimalt_IRM_Summary.doc If the CRD had properly investigated and pursued landfill and sewage alternatives such as gasification in their decision making process both the landfill expansion and the costly sewage pipeline would have been shown to be unnecessary... sorry taxpayers.
I didn't have time to read the entire plan. Just a few observations about solid waste. (1) Encourage back yard composting and digestors or community composting in a responsible manner to get green waste out of the system. The current system of saving scraps in the fridge is too labour intensive for most people. This would involve education and outreach. (2) Fund and enhance return it centres. The one in Sidney is terrible - too small a facility for the population it serves. Allow capturing and upcycling of some materials - like a store to give working electronics a second life before being shipped to the great graveyard in China or India. (3) Support a municipal pick up of big items once or twice a year. Couches by the side of the road are ridiculous. And this would cut down on illegal dumping and help elderly people that can't get out to the landfill. (4) Pay the people that collect and handle our garbage a decent wage. One person per truck (Emterra) is inhuman. (5) Have a partnership with a local business to recycle hard plastics for things like composite wood. Sponsor and foster these types of businesses. (6) And it would be great if the CRD responded to email inquiries. (7)Check out what they have done in Taiwan.
Please do not spread toxic bio-solids in areas where wildlife will be adversely affected like Mt. Work, these solids seep into ground water, creeks, and streams and end up in the ocean in areas like MacKenzie Bight. Thank you.
Please don't use biosolids. If anything please give a look to the growing health issues caused by biosolids... there are many studies showing how it can cause cancers, thyroid issues, nausea, vomiting, boils and rashes, MRSA etc etc. Eventually something is going to go wrong using this stuff. The waste management industry is just making money off of it. Please consider the community and waterways instead, they're more important. Thanks.
1. "As the landfill develops and this land is needed, these recreational users of those portions of the landfill property may [WILL] be impacted." It is really sad that CRD continues to increase industrial operations in a park area. Recreational space so close to town can never be replaced once destroyed. The plan has a significant impact on the park users with additional traffic, noise from trucks and the operations, garbage stuck in trees, smell, and the unsightliness of it all. That the operations are not "in" the park is immaterial, the proximity makes the adjacent areas of the park unusable. CRD must add to the park significant area away from the landfill interference to make up for what has been done to date. What is the point of going for a hike next to garbage and the rumbling of trucks? 2. It is incredible in this age that CRD is considering cutting down more trees for the landfill. There is no rush, alternative technology is available and needs to be considered and implemented. We cannot keep proceeding as if we are not impacting the environment. 3. Apart from the recreational park destruction, waste to energy alternatives can help reduce our impact on wildlife and the screech owl and other species that live here. I was so thrilled to hear of the progressive efforts of Esquimalt investigating IRM, and that Barb Desjardins and Rory Tooke are leading the SWAC. CRD needs to listen to this committee and to people who make the effort to find the best possible solution, rather than the easiest. 4. More research needs to be done on the biosolids, am VERY concerned about this, especially with proximity to Durrance Lake and farms. It's not necessary, find another solution that is guaranteed safe, not a "hope for the best" path. You cannot un-do contamination. 5. It is extremely difficult in a region with such an incredibly high cost of living to continually force the cost of recycling and waste onto the users. People with lower incomes have to buy cheaper goods, these goods are of low quality, break, and end up in landfill. They can't afford to dump and so things are left by the side of the road. I would like to see more strategy at discouraging the sale of goods that just break and/or have too much packaging. I am always distressed in the dollar store, racks of items that I know will break in a short span of time, encased in plastic packaging. I don't know how you can address this. Strategy always seems to include user pay, but often, it's not our fault. Why is buying in bulk or using low packaging stores more expensive? I do appreciate the attention in the plan to help reuse, upcycle and recycle. It seems though, we need to pressure manufacturers to just stop with the packaging. 6. Lastly, the CRD does not have a good track record of respecting/compensating the residents and communities that bear the impact of landfill and other unpleasant industry. I heard Hartland Rd residents say are afraid to walk on their road and in fact choose not to do so. The Willis Point Rd commuters are rightfully afraid for the hazards they will face, I myself have careened off the road on the flats due to black ice, thankfully there were no trucks. Even that on the other side, the Highlands community has been fighting for years to preserve their aquifers from a strip mine. This is incredible to me that the CRD has so little respect for the land and the residents. Out of sight, out of mind. While I don't live there, I go there often, and I feel for these people that have to fight for safety and the assurance of clean water. Do no more harm.
The island is in desperate need for a proper filtration plant to keeo the environment and its occupants, including us healthy. No more biosolids please.
Make our climate change a priority. We, at Willis Point, care about our inlet. We don't want toxins in our waterway. There is diverse and abundant marine life in our front yard. Don't ruin it with runoff into our waters.
https://www.epa.gov/biosolids/basic-information-about-biosolids?fbclid=IwAR2GRVNADLw2vTTp2WlsrDzqbH3dtSXHSO044BswbnRm7Ca9xLtCoiM_3Jo
Please don't spread biosolids out in the wild! Either burn, or landfill them, please [redacted]
We are extremely disappointed that the CRD's Draft Solid Waste Management Plan did not address or even mention in the Draft Solid Waste Management Plan -the Blackburn Road Landfill site on Salt Spring Island. The environmental concerns and risk to the water quality have been brought to the attention of the CRD staff since 2007 that is over 13 years. In 2007 the Cusheon Watershed Management Plan was completed and sent to all levels of gov't after input from all sources. We have been continuously told to be patient, as this would be addressed in the new SWMP. I guess the CRD, by not mentioning this site in the SWMP, hoped the concerns and risks would magically disappear (out of site out of mind). In case you are not familiar with the site. Please read the Blackburn Road Landfill Closure Plan for details. The letter dated 18 July1991 was sent to the CRD by MoE . Other History of site: -Operated under MoE Waste Management Permit# PR-1839. Waste Management Permit was issued in joint names i.e. owner and CRD. -site accepted municipal solid waste from1966-1991 CRD provided approx. $20,000 from 1984 until 1987towards the cost of daily cover. -disposal site was unsupervised and unmonitored for content being deposited. -no on-going ground water monitoring program was ever completed. -tests on site and off site of surface water courses and existing water supply wells done by MoE showed elevated levels with respect to background data found at the landfill site CRD in a Aug.16, 1988 letter to the Minister asked to have their name removed from the Waste Management Permit PR-1839. This was not granted by the Minister in a Jan 24,1989 response letter. Blackburn Road Landfill Site was ordered by the Ministry of Environment to be closed on Dec.31, 1991 due to environmental concerns that may be affecting water quality. Landfill site was closed at midnight on Dec 31, 1991 Operator/ owner and the CRD were required to submit a Closure Plan for the Blackburn landfill site Closure plan states that Leachate Monitoring will be carried out twice per year using existing surface water courses and water supply wells. Records show Leachate Monitoring was last done in 2000. Why has no monitoring been done in the last 20 years. One of the indicators for leachate contamination is manganese. The Beddis Water Services Treatment Plant operators have noticed an increase in manganese levels Leachate Monitoring of the Blackburn landfill site should be included in the Draft Solid Waste Management Plan. Please allow us to recommend that laboratory assessed water quality parameters included the following need to be done ASAP. • • T otal Alkalinity (total as CaCO3); • • Hardness (dissolved, as CaCO3); • • T otal dissolved solids (TDS); • • pH and electrical conductivity; • • Anions (bromide, chloride, fluoride, and sulphate); • • Nutrients: (nitrate (as N), nitrite (as N), ammonia (as N), dissolved potassium, and dissolved phosphorus); • • Dissolved organic carbon (DOC); • • Total organic carbon(TOC); • • Volatile organic compounds (VOC's – once per year); • • Polycyclic aromatic hydrocarbons (PAH's – once per year); and • • Dissolved Metals (total metals for domestic wells and surface water). This uncontrolled landfill site has no liner and only a final cover of 600 mm of soil. Please note even in the Landfill Criteria forMunicipal Solid Waste(Last Revised June 1993 required the following. 6.2 Water (M) 6.3 Final Cover (M) The disposal of municipal solid waste into water is unacceptable. Surface water diversion to restrict storm water runoff from contacting the wastes is required. Final cover for landfill sites is to consist of a minimum of 1 metre of low permeability (<1 x 10 - 5 cm/s) compacted soil plus a minimum of 0.15 metre of topsoil with approved

vegetation established. The depth of the topsoil layer should be related to the type of vegetation proposed (i.e. rooting depth). Soils of higher permeability may be approved based on leachate generation potential at the landfill site. Final cover is to be constructed with slopes between 4% and 33% with appropriate run- on/run-off drainage controls and erosion controls. It is unfortunate that attachments can not be sent as part of the feedback.
I offer the following comments on the draft Solid Waste Management Plan: 1. Provide evidence (preferably in the form of quantitative estimates) that the 15 Strategies and 69 Associated Actions will achieve the desired annual landfill target of 250 kg per capita. 2. Provide a basis for the expectation that the CRD staff can, with its current and projected (small) increases in resources, manage 15 Strategies and 69 Associated Actions. 3. Indicate the origin and provide an estimate of the solid wastes that are generated in the CRD. 4. Provide evidence that the commercial waste processing capacities exist or can be developed in the CRD to help meet the annual landfill target of 250 kg per capita. Views of the commercial waste processors should be given in summary form. 5. Provide a table that shows the total wastes that need to be processed as the CRD population grows and the annual landfill target of 250 kg per capita is approached by about 2030. Projections beyond 2030 should also be given since they affect decisions on the Hartland Landfill site. 6. Provide qualitative and quantitative information on how composted materials will likely be used as volumes increase. 7. Provide information on the recipients of wastes that are diverted from the Hartland Landfill site. It is presently unclear that these recipients will continue to receive CRD wastes and have the capacity to process them in accordance with CRD expectations. 8. Provide comprehensive information, including major options, regarding the Hartland Landfill site and its future. This information must also include information on the area surrounding the site since it is heavily impacted by current and future operations. 9. Highlight and add innovative ideas pertinent to the future of solid waste management in the CRD. The present draft contains few innovative ideas. 10. Edit the draft Solid Waste Management Plan document with the objective of making it more succinct and readable. In conclusion and for the reasons stated above, I consider the current draft Solid Waste Management Plan to be deficient. These deficiencies can be corrected without great difficulties, time, and staff resources. I hope that this submission provides encouragement to make the corrections.
1. In Strategy 1 (pg. 28), you mention expanding education on reduce/reuse to ICI sectors. This is good, but I believe that there need to be more emphasis on this. If ICI's & Construction & Demo groups are responsible for half of the CRD's waste, then an equal amount of attention to education should be given to them. 2. In your documents, it says there are currently no facilities under the "Bylaw to Regulate the operation of composting facilities in the CRD". I would reach out further and offer a tenure to a group(s) to divert more organics from the waste stream & into compost. This group could then sell/distribute the compost to local markets and agricultural businesses to create a circular economy. (ex. Compost Education Center) 3. I would push companies & ICI's (local and non-local) to reduce the amount of waste and packaging that comes from their products. A lot of packaging that I notice feels unnecessary and wasteful which puts more pressure on your capacity to deal with more waste. There are local companies starting up that limit or eliminate their waste and promote refilling and reusing concepts (ex. Westcoast Refill, Zero Waste Emporium) 4. Looking at the map you provide of Solid Waste Management Facilities (pg. 15), there are none that specifically manage textiles (not just clothing). I would recommend doing researching on how much textile waste is entering the waste stream & then finding new inventive ways to divert it from the landfill. (ex. FABSCRAP)(ex. "Recycling fashion: The town turning waste into clothes- BBC News")(ex. Victoria Eco Fashion Week) 5. The biggest recommendation I can make is to take serious look at the cost-benefit analysis of a "Landfill Waste Reclamation Project". If the Hartland Landfill became responsible for waste in 1973 and major recycling initiatives didn't begin until 1987, then that's about 14 years of potentially recyclable materials sitting in the ground. Furthermore, because the material has been buried and compacted, most, if not all, the organics buried will not have composted due to the lack of oxygen. By taking reclaiming materials out of the landfill, you can make more room for materials that can't be recycled or diverted, thus extending the lifespan of the landfill. An expansion would not be necessary. However, I'm not a economist and I don't have the exact numbers so you will need to see if this could be economically feasible. However there are cities that have started utilizing these concepts (ex. Johnny Poore TED Talk). 6. Be more outspoken and transparent about these things. Maybe I'm wrong, but I'm unsure about how much of the community you are actually reaching. Honestly I don't even think that many people are aware that you are even planning the expand the landfill. I ask that you look into expanding your communication and social media horizons to be more inclusive and get more community participation. 7. Look into the CRD's "urban metabolism"!
We need to stop the spread of toxic biosolids in the region - we don't want them spread in our community. Biosolids are absorbed into the groundwater and enter our streams, rivers and lakes and end up in the ocean. Come on government! Start thinking about the long game and the impact of these dangerous human decisions! I want a protected ecosystem my children can witness!!! So do you! So get with the program and ban use of dangerous chemicals!
This plan starts from the premise that Hartland needs to stay in operation for the next 80 years and in order to do so (1) waste disposal needs to be reduced in the CRD and (2) preparations need to begin for the expansion of the Landfill. While waste reduction certainly has to be part of the Plan, the premise of the current SWMP (The Plan) is wrong. The Plan should start from the premise that Hartland will NOT be expanded, and from there develop a strategy, including actions to be taken between now and 2045 (when Hartland will be full at current waste disposal rates) to avoid expansion of the landfill. With that as the baseline, a strategy can be devised to adopt aggressive waste reduction targets, such as the "aspirational" target of 125kg per person. If the aspirational target was the real target, there would be no need to expand Hartland. Unfortunately the aspirational reduction target has been inserted into the plan SWMP with no concrete actions or budget attached to it, making it certain that it will not be achieved. Instead the default will be to expand Hartland, beginning with the destruction of 73 acres of forest on the eastern slope of Mount Work. Revise the Plan to start from the premise that Hartland will not be expanded, and work from there.
Work more at conservation and limiting the amount of garbage people throw out. Make stores limit the amount of packaging they use which ends up in the landfill. Let's try and reduce as much as possible before recycling and throwing into the garbage. We don't want to use good farm land to expand the landfill or take away forest if we can avoid it. Accessing the landfill from a different direction will definitely impact local rural areas which would be a shame. Keep things small and simple which we all need to be doing these days!
Greetings to the CRD administrators, managers, and other related CRD leadership: As a private citizen residing within the CRD's administration region, I applaud the collective effort to move Victoria forward, especially related to the accomplishment of the completion of the sewage processing facility. However, we are still faced with other significant environmental challenges. On this topic, I appreciate the CRD's openness to invite outside input regarding their long-term plan to create a sensible approach to handling the legacy of waste management. The proposal to reduce the per capita annual waste foot-print from 380kg to 250kg by 2030 is a step in the right direction. Along with this target proposal is the natural outcome of the extension of the life expectancy of the Hartland landfill until 2100. In addition to these goals are the advancements in peripheral processing technologies to handle the methane production from the current landfill and the solid sludge output from the sewage processing facility. Since the governing body of the CRD's board is composed of elected officials, it is of primary importance to keep these leaders accountable regarding the choices they make on behalf of the greater CRD residents. This accountability includes decisions affecting both financial and environmental outcomes. I consider it part of my personal responsibility to maintain a conduit of open communication regarding this topic of accountability. It is with this spirit that I have decided to submit my own personal input on the CRD's long-term solid waste management plan. Given the current serious public conscientiousness regarding sensitive environmental issues, I will cite the importance of how our society deals with the legacy of our archaic landfill philosophy – bury it and forget it. Most of the talk these days focuses on the carbon footprint problem, but then the potentially greater issue of the plastics legacy gets lost in the noise. Combined with the dilemma that the world's waterways and oceans become the living-landfill destination, we must collectively strike at the heart of this monumental issue with gusto. My personal outlook on these topics have been formulated throughout my life. I often think of my maternal grandmother who began her own recycling efforts in a small northern Minnesota town in the mid-80s. Also having had direct exposure to the impact of solid waste mis-management in the suburbs of greater Manila. In addition, consider the affluence of our western society regarding making each of us garbage-producing entities, by default. It is well past time to make a serious effort to create change to this depressing legacy issue. My family legacy also includes the element of technological innovation since my great grandfather was an inventor and industrialist within the US economy. His innovations made life easier for many serving in the railway maintenance industry. I have been made aware of the existence of a particular waste-processing technology that will go a long way to solving this solid-waste

legacy dilemma. And I will do my best to lend credence and offer maximum exposure in order to promote the legitimacy of this significant stride forward in offering hope to humanity. I hope that the CRD leadership will heed my input on this matter and take notice. Qualitatively, the outcome of this new technology would render Victoria a net-zero entity within 3 years of implementation, conservatively. This would make Victoria the world leader and would not only meet the Paris Accord goals, but would put to rest the modest internal 2030 waste-reduction goal referenced at the start of my input statement. Why would the CRD leadership not entertain training their attention to this matter? It most certainly is my intention to make them stand-up and pay attention at this critical decision-making juncture. If not now, when? Why delay on such a critical matter when acting now is most certainly in the best interest of each resident of the CRD – let alone each citizen of the world? It is with sincere intent and of greatest hope that I make my thoughts known to those involved in the overall considerations that will be included in any and all assessment for this purpose of the solid waste management plan. I look forward to further engagement on a personal and professional level in the near future. Sincere regards and all the best for 202[redacted]
Dear crd You have heard all the logical, scientific and emotional responses to the Hartland expansion. It is within your power to change this path. It would be an enormous example of government doing their part to contribute to climate change soulutions.
Waste to energy is a standard to be sought, rather than digging holes to accommodate garbage. How can you support the destruction of paradise to meet the rapacious appetite of Man to operate on the head-in-the -sand principle? Rethink your plan!!
Stop the spread of toxic biosolids in the CRD..... we don't want them spread in our community. Biosolids are absorbed into the groundwater and enter our streams, rivers and lakes and end up in the ocean.
I believe the free store idea to be invaluable to our communities. We need to be reimagining economies and impacts and the ramifications of a free store are far reaching and hugely positive. I also feel that there is now as much as ever, a need for more recycling education. With the plastics ban in 2018, there is even more waste entering our landfills. People often don't know what's recyclable and are even more unaware of the full process of recycling or disposal, cradle to grave. With regards to a free store, what exactly is the hold up? There could be nothing that makes more logical sense. From the consumer's standpoint, there are plenty of things we could be spending our savings on other than overpriced goods that could be relatively easily be transacted, traded and donated through a free store and or a sliding scale store, operated by the CRD, or a non profit, or co operative organization. And of course it is very easy to see the huge potential environmental benefits and pollution reduction of a free store. A recycling education center adjacent to or incorporated into the Free Store, would be brilliant. The mystery of recycling and waste is important - not just for occasional tours or school visits. With the new wastewater treatment plant, continually changing recycling protocols (i.e. plastics ban 2018), an increasingly interested public, and hopefully with a Free Store, further education and involvement of the public should certainly be sought. My hope is you could initiate your investigative review as soon as possible, prior to 2022, and that you would set an implementation date immediately. There is overwhelming support from the public for a free store and the potential is incredible. Also there has never been more need for a more thorough recycling education program. The public cares, and what better place to interact and educate than adjacent to a pollution and cost saving Free Store. Thank you for reading.
The draft plan was informative and I learned a lot about the current situation (projections of CRD population, % of waste from different sources , trends in waste per capita etc.). Although the overall goal of 250kg/capita in 10 years is a significant target, I would like to see some additional information and targets for diversion from each source. It is not clear to me how much waste is currently being diverted from the landfill for each source and what a diversion target would be for each source. The plan does not appear to be bold enough given the increases in population that are expected. I would also like to know the impact of the proposed plan on greenhouse gas emissions, particularly emissions of methane. I think waste accounts for 9% of the current regional emissions. There should be a target for greenhouse gas emissions included in the plan. My apologies if I missed it.
Thank you for the opportunity to comment on the draft solid waste management plan. The existing CRD solid waste management plan was originally created in 1995; the revision process began in 2012 and included a two-year period to investigate integrated resource management opportunities (2015-2017) before resuming. The draft plan mainly seems to address how to extend the life of Hartland landfill from 2045 to possibly 2100. CRD solid waste management mainly consists of diverting and composting organic wastes, diverting and recovering raw materials from recyclable materials, and landfilling the remainder. Sanitary landfilling, although considered an acceptable and mainstream practice since the 1950s, effectively involves burying non-recycled waste in a hole which is lined to prevent the loss of toxic leachate to surrounding surface and ground water, capped when full, and eventually "restored" to useable, if unnatural, space. The waste stays put and breaks down very slowly, but releases greenhouse gases (GHG), of which methane (CH4) is the most potent and of primary concern. In order to conserve useable space at Hartland landfill, CRD has banned an increasing variety of materials from Hartland landfill, and invests in education and outreach programs intended to encourage waste reduction and reuse, maximize diversion and minimize contamination of recyclable and compostable wastes, and educate the community about landfill operations. Landfilling is becoming increasingly problematic for the CRD, given population growth in the region, and a finite (and increasingly expensive) land base and competing demands for land. Minimizing CH4 emissions is increasingly and critically important, given its role as a GHG and as the effects of climate change have become apparent; some of the CH4 is captured and used to generate electricity for on-site use or fed into the regional natural gas network as renewable natural gas (RNG). CRD is obligated to maintain the landfill site after the landfill is full. Current operations (with significant fixed costs) are funded largely by tipping fees; hence, CRD requires inflows of solid waste and tipping fees to cover its costs even while trying to convince the public of the need to reduce its solid waste generation. Under the current business model, CRD's need to reduce solid waste inflow and extend the life of the landfill seems to conflict with its need to maintain sufficient income from tipping fees; decreased waste inflow may, over time, need to be accompanied by steep increases in tipping fees and costs to the public. Clearly, CRD must plan far in advance when considering options for managing the region's future solid waste. It must make appropriate assumptions about population growth, solid waste generation, deployment of alternative technologies for resource and energy recovery, and development of policies by senior levels of government to incentivize reuse and recycling of wastes. In addition, solid waste management options must strongly address now the critical need to minimize net atmospheric emissions of carbon as CH4 or carbon dioxide (CO2). I have read this draft plan several times and read CRD-supplied supporting material. I'm disappointed. I don't feel the plan adequately addresses our future solid waste management issues. The approach seems to be "business-as-usual" with little underlying urgency when more dramatic action is required. The draft plan does not provide a basis for many of its optimistic assumptions and downplays impacts of landfill expansion. Some specific concerns: 1. CRD population projections 10, 20, or more years in the future may be way off. For example, estimates done for the 2008 RGS projected a CRD population of ca. 400,000 in 2019, but the actual CRD population was ca. 412,000. The draft solid waste plan assumes a 2038 population of 475,000, whereas the 2018 RGS assumes a 2038 population of 442,000, but BC Stats (2019) projects a 2038 population of 494,000. It might be prudent to revisit the assumptions of different projections and consider the possibility that southern Vancouver Island may become even more desirable to live in as climate change makes other areas less habitable. This is certainly at least as reasonable as suggesting the current landfill may fill before 2045 "in the event of a major earthquake" (Appendix C, page 54). If there was a major earthquake, how would this affect population, per-capita solid waste generation types and amounts, and ability to even transport waste to the landfill? Reference to earthquakes in this context is absurd and meaningless without additional analyses and discussion. 2. The draft plan has a goal to reduce per capita waste generation from the recent 382 kg/year (2019) to the provincial goal of 350 kg/year, possibly to 250 kg/year by 2030, and then, at some undetermined point, to 125 kg/year. What analyses and assumptions underly those targets? Is that an adequate decrease if population growth is underestimated and "in the event of a major earthquake"? How does CRD propose to decrease per-capita waste generation by 35% by 2030 and (eventually) by 67% from 2019 rates? While the plan states that 2019 per-capita waste generation rates are 43% less than in 1989, that is misleading; effectively, per capita rates have not changed meaningfully since 1995. Table B-2 provides qualitative assessments of strategies to increase diversion rates from landfilling, but the wording suggests few if any strategies will significantly reduce the amount of waste to be landfilled. How can those assumed decreases in per-capita landfill waste happen without significant changes in policies by senior governments, markets for recycled feedstock, or alternative technologies to process non-recyclable waste? 3. The draft plan glosses over the significance of destroying (according to one source) 73 acres of a mature second-growth coastal Douglas-fir-dominated forest in order to expand the current landfill. The plan provides no detail on the number, size, species, and condition of trees which would be removed, nor impacts on other components of that ecosystem. This is a

forest type limited to the most heavily - populated area of Vancouver Island and is considered imperiled (Biodiversity BC). This mature forest not only provides critical habitat in abutting Mount Work Regional Park, but likely sequesters significant amounts of atmospheric carbon. Protection and enhancement of intact mature forest is increasingly recognized as one of many necessary steps to mitigate climate change. However, the draft plan and associated "engagement" materials refers to the impacted area of forest merely as a "strip of land" and do not indicate the area to be impacted or the number, size, species, and condition of trees which could be removed. The materials also claim the landfill is not being expanded, but that the expansion is "not an expansion of the landfill's existing boundaries, it's a filling plan". That is technically correct and clever, but verges on insulting. The plan should clearly describe how much forest will be impacted and how. The plan states that "the development of this land will be offset by the reforestation program already in place for all closed areas of the landfill" and "These trees reduce the greenhouse gas emissions generated by the landfill through carbon sequestration." Please recognize (1) that replanting trees into manufactured soil is not the same as replacing a mature second-growth Douglas-fir ecosystem with respect to biodiversity and resilience to effects of climate change and (2) planted seedlings will not replace the carbon sequestration capacity provided by the mature Douglas-fir they replace for decades; assuming that these forests grow as they did before climate change took hold. 4. Given the uncertainty of how CRD can reduce solid waste inflows to Hartland and the importance of minimizing greenhouse gas emissions from landfill operations, why is integrated resource management (IRM) not discussed more? IRM, presumably referring to a gasification process, has the potential to greatly reduce the volume of material requiring landfilling while recovering more energy than do current landfill practices; and, if a pyrolytic process, could produce biochar with a variety of uses, market value, and potential for long-term sequestration of carbon. Operational-scale advanced gasification / pyrolysis plants to process suitable municipal solid waste are being deployed around the world. The plan refers to IRM only once (page 6), noting that the planning process for expanding Hartland was paused for two years "to investigate integrated resource management opportunities." Well, what happened during that two-year period? What did the CRD learn? I assume this was part of the CRD exploration into IRM for processing sewage sludge (or biosolids), a process that arguably was a bit of a mess. Fortunately, the Township of Esquimalt is investigating the feasibility of IRM / gasification / pyrolysis for processing appropriate wastes. The draft solid waste plan should discuss in greater detail the advantages and disadvantages of IRM as it relates to lengthening the lifespan of Hartland and acknowledge what Esquimalt is doing.
On Section - 1 Guiding Principles Observation: multiple uses of limiting phrase "wherever practical". This is inappropriate for a principle; suggest replacing that posterior qualifier with the prefix "Maximize". This could produce the following re-write of some principles: 5. _Maximize_ upstream handling of all waste categories to minimize their entry into the waste stream going into the landfill. 6. _Maximize_ collaborate across all jurisdictions.
On Section 11 – Plan Monitoring and Measurement Observe that reporting to all stakeholders is, at most, on an annual basis, and some updated after three (3) or five (5) years. Further, observe in Section 5 Strategies and Actions that one Plan goals includes "Have informed citizens who participate effectively in proper waste management practices". Suggest that this SWMP could seek to _maximize_ production of data, such as some form of open data capability, and production of possibly daily, weekly month waste dashboards, broken down by type and source. And with constant inclusion of target versus actual.
Feedback on CRD draft Solid Waste Management Plan Thank you for opportunity to comment and provide feedback on the SWMP. Introduction: Where the plan succeeds: Focusing on the 4 Rs Where the plan fails: In true innovation and community-based planning: • No real strategies or budget for actually reducing waste and ensuring there is no need for landfill expansion. • Failure to specify and adopt technologies and strategies that will significantly reduce waste-to-landfill, reduce waste per person and adopt zero-waste goals. • Failure to hold municipalities responsible (e.g. Langford) for massive increases in waste production. • Failure to investigate ALL alternatives to dumping waste in a landfill, including emerging technologies relevant for this region (and stop looking at Edmonton Enerkem example!). • Rushing to expand the landfill with no real plan to avoid doing so. • SWMP has a heavy focus on profiting from waste, rather than a focus on responsible climate accountability and reduction in GHG emissions from landfilling, blasting, forest destruction. • Declaring a climate emergency and then proposing a Solid Waste Management Plan that ensures significant increases in waste disposal and GHG emissions and environmental degradation. • Failure to allow citizens and the CRD Solid Waste Advisory Committee any real impact towards a better SWMP. Re: RETHINK/RECONSIDER: There is a terrific opportunity for CRD to lead by example, or at least come into alignment with what other progressive municipalities and regions are doing. The CRD draft SWM plan includes what look to be some good measures, but they are vague and do not go far enough and should include: • Implementing a purchasing policy that encourages production of products made from reused, recycled or sustainably-harvested renewable, non-toxic materials and products that are durable, repairable, reusable, fully recyclable or compostable, and easily disassembled. • Develop this in partnerships with member municipalities and regional districts, universities, the provincial government, and institutions to maximize the impact. Join the Canadian Collaboration for Sustainable Procurement to maximize the impact and reduce the work involved in research. • Incentives to reduce waste to landfill - higher tipping fees • Match the CVRD fees to prevent waste migration and provide stronger disincentive to wasting. • Charging significantly higher tipping fees for banned materials and recyclables. • CRD should work with member municipalities to have PAYT at the curb and elsewhere that makes it progressively more expensive by weight or volume to waste. • Adopting similar fee structure to District of Nanaimo: Regional District of Nanaimo (2018). Regional District of Nanaimo: Solid Waste Management Plan -Planning for the Future of Our Waste -Road to 90% Waste Diversion. Accessed at: https://www.rdn.bc.ca/sites/default/files/inline-files/2018%20SWMP%20Amendment_1.pdf. • The plan should included actions and measures to increase the local economy, through procurement policy and fostering local businesses that reduce waste. For example, the Vancouver Economic Commission reports on the green local jobs created through the Greenest City Action Plan. • Initiating a specific working group to develop the Local Circular Economy that goes beyond Plan Monitoring Advisory Committee members and engages citizens, businesses, academia and others to develop Zero Waste businesses beyond what the CRD already has. Ensure this working group has authority. • Investing in education programs, bans on single use and commonly wasted items, and developing more solutions designed to encourage people to consume less. • Leading by example in-house at CRD. • Charging municipalities a surcharge for exceeding per person waste generation, or charge for overdevelopment without waste mitigation strategies (i.e. Langford) – encourage municipalities (like Langford) to take stronger measures towards waste reduction within their communities. • Vancouver Economic Commission (2018). Green Economy. Accessed at: https://www.vancouvereconomic.com/focus/green-economy/ . • Project Zero (2020). Accessed at https://www.project-zero.ca/resources . SUMMARY of RETHINK: Actually rethink – make the primary goal of the SWMP to reduce the footprint of Hartland landfill to actually be consistent with 1.4 of the plan – to make climate action and environmental stewardship a priority. Re: REDUCE Recommendations: • Work to reduce waste at the source and eliminate problematic materials including bans where possible - I don't see enough specifics on this in the SWMP - give it some teeth. • Collaborating with other local governments (and non-governmental organizations) to increase the efficacy of the advocacy to higher levels of government. • Develop a plastic reduction strategy to reduce the use of plastics, plastic waste and microplastics. And ban spread of microplastics (biosolids) on the land including at Hartland. • Collaborate with other governments as well as businesses. The next ten years will be a critical time for this. • Developing a program to encourage renovation of buildings over demolition. • Strengthen the vague strategies to reduce food waste • SWMP should include reducing environmental degradation of Mount Work region by undertaking a regular assessment of the impact of the Hartland facility on the surrounding ecosystem. • In Figure 1-2 it notes that the growth strategy must not exceed the capacity of the natural environment, but I do not see how and where the CRD is assessing and reporting out on the capacity of the Mount Work area to absorb the cumulative impact of all the current and planned industrial activity at the Hartland facility. • Proposed future activity includes the spreading of biosolids at the facility, a natural gas conversion plant, an organics facility, the blasting and expansion of the landfill into 73 hectares of Mount Work, and the transfer of commercial truck traffic to the Willis Point Road (the access route into the Mount Work, Gowlland Tod and Durrance Lake areas) – all are inconsistent with reducing waste and reducing environmental impact on ecosystems and humans. RE: REUSE There is so much more CRD could do – here are a few recommendations I would like to see included in the SWMP: • Hosting a ReBuild it Centre at Hartland. • Mapping out local resources for sharing, rental, reuse, and repair. See Portland as an example. • Hosting or supporting local repair cafes like in Metro Vancouver. • Set reuse/refill targets across CRD buildings/spaces and invest in infrastructure for this. • Support reusable diapers systems. • Advocate for the Right to Repair, mandatory warranties, time frames for parts availability, requirements for online manuals, and plans for components. • Advocate for EPR programs to be responsible for supporting repair and reuse of their products. • Ask for federal and provincial investment in reuse, repair, refill, etc. and circular systems for scaling local initiatives. • Incentivize

house moving and construction material reuse through regulatory strategies, enforcing limits on waste generation and expanding environmental obligations. This should be done in partnership with member municipalities RE: RECYCLE Table A of the Waste Composition study (which is a more detailed look at the data in Figure 4.2 of the draft plan) shows that over 50% of the waste is comprised of materials that are banned or could be recycled. This highlights the needs for more education and enforcement of the bans. Recommendations to add to the Recycle section of SWMP: • CRD should work with member municipalities to require zero waste plans to be part of event permitting process. • The grey box system for glass collection (e.g. City of Vancouver) should be examined to see if this could increase diversion. • Work with service providers to do more checks, education and enforcement of disposal bans at point of collection. • Work to ensure that the EPR programs are fully delivering on their obligations including doing more on the first levels of the hierarchy. • Ask that the Province meet its commitments to the Canada-wide Action Plan for EPR in a timely fashion. • Work with other local governments to ensure the programs are as effective as possible and that local governments have a voice in program delivery and plans. • Develop a Construction and Demolition materials hub at Hartland (as the City of Vancouver is investigating). • Require deconstruction not demolition (building on Metro Vancouver's model bylaw). • Charge a waste levy on materials to drive diversion and track data. • Ask the provincial government to work towards a building code that incorporates future deconstruction needs and factors in embodied carbon and to create a deconstruction step code. • Work with province to include design guidelines in Building Code to ensure adequate space for waste sorting in new developments - both in unit and in building (e.g. Whistler's example). RE: COMPOSTING It would be terrible for CRD to go down the road of other regions in which composting was poorly research and implemented with the result of making regions into unliveable. Recommendations: • Fully research the options – both successes and failures. • Consider also decentralized composting for high generation areas. • Ensure processing is scaled to consider the reduction through reduced food waste and backyard composting. • Add specifics to the SWMP on education and enforcement of bans. RE: RECOVERY There are no specific strategies in the plan under recovery - further work to reduce the use of hazardous materials and increase the coverage of hazardous materials under EPR programs should be done and specifics included in the SWMP. A Final Suggestion: The vibe from the CRD is that the region is not important enough to consider the community and ecosystem impacts of actions undertaken by the CRD; that the CRD is only interested in profiting from waste, rather than truly planning to ensure a healthy and livable region. In the SWMP and in how the CRD staff have approached producing and manipulating this plan into adoption, I do not see priority placed on community – the true sense of community. Nor do I see any real consideration for making this region more climate accountable. There is a missed opportunity here – one of true stewardship innovation and through the lens of values-based leadership. The CRD could really lead the way for the rest of Canada and it is disappointing to see CRD staff and Board be laggards. Thank you.

February 15, 2021 Re: CRD Solid Waste Management Plan: Hartland 2100 Design Concept I am writing to you with grave concern over "the (approximately 28.9 hectares) within the existing property boundary" of Hartland Landfill from which trees are to be removed for future expansion. Specifically, I note that you say, "this work needs to start now to ensure the most effective design." I am a climate change expert and have provided advice to several NGOs, appeared in the media and developed the first major museum exhibit on climate change in Canada at the Royal BC Museum. I regularly lecture on climate change impacts and adaptation. Please see this video (https://www.youtube.com/watch?v=0E2vG8wt2Ck). I also live in the Tod Creek Valley. One of your guiding points from the draft plan is as follows: "In 2019 the CRD Board identified Climate Action & Environmental Stewardship as a priority for the region and approved a motion to declare a climate emergency." Your climate initiatives focus on GHGs from the landfill. Are you aware that conversion and destruction of forest cover is a major contributor to GHG emissions? Maintaining extant forest cover is a vital tool in mitigating climate change and furthermore it helps in adaptation through the preservation of biodiversity (see most recent IPCC assessment report 5) (https://www.ipcc.ch/site/assets/uploads/2018/02/ipcc_wg3_ar5_chapter11.pdf). Recent province of BC and Sierra Club reports emphasize the vital role forest cover has as we progress into a future shaped by anthropogenic climate change. Taking unnecessary action now through the removal of forest cover and conversion to non-forest land use, when forest will be even more valuable in the future is a poor strategy and reflects inappropriate and short-sighted planning. Why does this action need to be undertaken now "to ensure the most effective design"? In the interest of local and global environmental and climatic sustainability, we need every tree that we can keep into the future. This is especially true for second growth and older trees, which have experienced widespread removal for timber. Furthermore, we need to keep naturally-developed soils and organic matter in place and limit its disturbance. Conversion through clearing rapidly releases CO2 and prevents its future removal by living trees just when we need our forests to do so. Forest clearing further exposes our landscape to the risk of increased catastrophic flooding events as we experience intensifying extreme weather. I praise the CRD for the proposed actions to reduce waste and landfill-related GHG emissions. However, we should not be sacrificing the ability of the natural forested landscape to help us mitigate and adapt to our ongoing climatic emergency. In the coming decades, our advancing knowledge and understanding of impacts of climate change will advance by leaps and bounds. Many studies have already demonstrated the importance of forest cover as a key carbon sink (for example, this Sierra Club report) (https://sierraclub.bc.ca/wp-content/uploads/2019-Clearcut-Carbon-report.pdf), and I guarantee that forested landscapes will be recognized to have even greater importance than today. Conceptual and technological advances will offer other mechanisms to meet regional landfill requirements. Please leave the forests alone, focus on the current footprint and fight climate change in the area already in use. Who knows what options the future may bring us? Respectfully submitted; R [redacted]

Please notice - Maura Walker & Associates Environmental Consultants Existing Solid Waste Management System Reports of May 7 2018 and July 27 2012 states the following: May 7 2018 11.5.1 Blackburn Road Landfill pg.51 "The Blackburn Road landfill site is located on Salt Spring Island on approximately 0.7 hectares of privately owned land. The landfill began operation in 1966 under the provincial discharge permit # PR-1839 and was ordered closed by the Province on July 18, 1991 for environmental reasons." July 27 2012 Integrated Solid Waste Management & Resource Management Plan 10.7.1 Blackburn Road Landfill pg.10-11 "The Blackburn Road landfill site is located on Salt Spring Island on approximately 0.7 hectares of private land owned by ..... . The landfill began operation in 1966 under the provincial discharge permit #PR-1839 and was ordered closed by the Province on July 18, 1991 for environmental reasons." As a condition of closure, the permittees owner operator and the Capital Regional District were required to submit a closure plan for the Blackburn Road Landfill. The closure plan submitted can be found at the website address below. https://www.crd.bc.ca/docs/default-source/recycling-waste-pdf/appendix-e.pdf?sfvrsn=e84e8fc9_2 The Blackburn Road Landfill site was open to the general public and operated as an unsupervised, uncontrolled waste site for 25 years. This means that the closed site probably contains or releasing hazardous waste, heavy metals, PCB's insecticides, pesticides, fungicides herbicides, petroleum products such as used oil, filters and other automotive fluids. Many of these manufactured products were readily available under many trade names to the general public. They were used widely and some of these products are now totally banned or have restricted use provincially and or federally. It is unknown what was dumped into this landfill site and being SSI it could be anything. According to the University of Toronto Environmental Health and Safety the Definition of a Polychlorinated biphenyls (PCB). A PCB material is legally defined as any monochlorinated or polychlorinated biphenyl or any mixture that contains one or more of them. This includes equipment, solids [including empty containers] and contaminated liquids. PCBs were used in a variety of applications including additives in lubricants, heat transfer dielectric fluids, adhesives etc. All these uses were banned in Canada in 1977. Hydraulic equipment, oil-filled electromagnets, circuit breakers, voltage regulators, cables and vacuum pumps may contain PCB liquid. Fluorescent light fixtures may contain several ballasts. The small capacitors inside the ballasts are contaminated with high levels of PCB liquid if they were manufactured prior to 1980. Since the Blackburn Land fill site was used from 1966 to 1977 it likely has PCB material buried in it. The stream locally referred to as Hitchcock Creek with tributaries and wetland flows from the closed landfill and current recycling depot should be tested . No monitoring (lab tests) of surface or groundwater for leachate contaminant from this landfill site have not been done since 2000. 2014-2016 Ecology of Blackburn and Cusheon Lake Study, monitoring lake inflows and outflows (hourly to weekly) states the following: -" PO4, TP, NO3, and DOC exports per unit area from Hitchcock Creek catchment that is the site of the garbage transfer station (former garbage dump) were the highest among the nine study catchments. It can take decades for anthropogenic nutrients accumulated in soils to return to normal after inputs stop (Bennett et al. 1990); " The BC Provincial government shut down this landfill site for environmental reasons. There was and is a great risk of leachate contaminating the ground or surface water in the Cusheon Drinking Watershed. Therefore, as co-permitee, the CRD should have addressed these issues in their draft SWMP. Why have they not done this? Thanks for the opportunity to comment and submit information to the draft

SWMP
Change of entrance to Hartland Landfill Hartland Rd has been the entrance for over 50 years and it should remain the entrance. There are many safety concerns changing to Willis Point Rd., Ice conditions in the winter, 2 school buses daily, the intersection of Wallace Dr. and West Saanich and Wallace and Willis Point Rd.not adequate and dangerous. Also, the Interurban Trail entrance and end is just a few feet from the turn at West Saanich and Wallace. It is dangerous now and will be even worse with dump trucks lined up turning there. Many bikes on the road now, proper bike lanes will e needed. The CRD says all these issues are Saanich's concern not theirs. How will the tax payers of Saanich feel about paying for upgrades to this intersection when it affects only a very small number of Saanich residents. The last of 2 Zoom meeting I attended concerning this matter we were told this is a done deal, what kind of consultation is that? One sided from the CRD. Landfill Expansion; The proposed removal of 73 acres of mature second growth forest, destroying the biodiverse habitat and blasting against the slope of Mount Work is unacceptable. This is the 21st Century! Continued expansion of the landfill will increase greenhouse gas emissions, as landfills create deadly methane.This will also create more leachate that pollutes the aquifers. The CRD needs to adopt a more aggressive waste reduction strategy so the volumes of waste going to the landfill are reduced. Other municipalities have now committed to plans to do just this and they will make a difference to the volume of waste coming to the landfill. Also Nanaimo has a plan that is working. The CRD must remove this expansion from their SWMP to be revisited, no approval for expansion need take place before 2030. Report their progress in examining other alternatives annually to the CRD Board. Expanding Landfills is an outdated response to the regions waste problems. Spreading Biosolids at Hartland; Very concerned about the spread of Biosolids at Hartland, as this could affect human, plant, animal life and waterways in areas adjacent to the landfill. There is no scientific evidence to support this plan.
The draft plan does not consider operations at the land fill. You can not make a future plan with out considering operations and how it effects the community. There has been a lack of proper and meaningful consultations with the local residents. The process is more about informing the residents than consulting with them. The SWMP does not take future growth of the CRD into consideration. Talking about reducing waste per person is pointless if you dont consider population growth? Why has there been no consideration for changing the tipping fees? Relocation of the Dump access has not been properly considered. Staff have overlooked many other options and are only presenting one solution. Proper public consultation on dump access has not happened Should the access relocation go ahead, a full passing lane could be feasible, if planned properly taking into the consideration of the need for new natural gas infrastructure. (natural gas pipeline) on Willis Point Rd. Hartland has surplus rock, and a new gas line and passing lane could be installed beside the existing roadway at little additional cost, mediating most concerns with the road usage, and safety concerns. The newer section of Willis Point Rd, from Wallace to Ross Durrance lake Road should be renamed to something else in an effort to limit land value loss in Willis Point.
This is a good draft plan. I appreciate the thoroughness and thought that the CRD puts into managing and maintaining Hartland to ensure that its lifespan is as long as possible so we don't need to create a landfill at another location. Having lived in other municipalities where less effort is put into environmental monitoring and reforestation of the closed parts of the landfill, I am proud to live somewhere where these things are done well and a lot effort and expertise goes into managing all aspects, including moving the access to Willis Point Road. Ultimately, the lifespan of the landfill will depend on the actions of individual residents in the region they are the ones who are truly responsible. Initiatives that I would like the CRD to consider as part of the plan implementation include higher fees for garbage and landfill services and incentives and breaks for those who make the effort not to buy things that will need to end up in the landfill in the first place.
During the initial consultation regarding the Solid Waste Management Plan, I attended an information session at Willis Point, and asked the CRD representative what the plan was for biosolids, and whether this would affect the landfill use. The answer that was provided was that CRD had banned land application of biosolids, and so they would have no impact on the facility since they would all be shipped off-site. In a more recent consultation, I asked the same individual about this, commenting that the position of CRD had changed with respect to land application of biosolids not long after the consultation, and that this led to concern about how I can trust commitments that are made during public consultation, if they can subsequently be changed months later? The answer that was provided by the CRD staff-member was that biosolids are part of the liquid waste plan, and they didn't know much about them. This response is concerning on two levels. First, the concern that was raised about how the public can trust a process in which a direction is changed in the span of months was ignored. And second, biosolids are indeed a solid, and they should be considered in the context of the Solid Waste Management Plan. In particular, given the current uncertainty regarding when biosolids will be produced, where they will be shipped, and how much material will be retained on site, it appears highly appropriate that these matters be addressed in the Solid Waste Management Plan. They are indeed a solid, and they are waste. Unless they are all being shipped away, they should be addressed clearly in the Management Plan.
Please accept this as my feedback on the draft Solid Waste Management Plan February 15, 2021 I have three main suggestions that I feel should be included in the SWMP: 1. The draft Solid Waste Management Plan needs more aggressive measures towards Zero Waste: The CRD Board states that it supports the principle of zero waste and encourages the achievement of a circular economy by mid-Century in accordance with Provincial guidelines. This goal can only be achieved with: -more aggressive measures to reuse, recycle and reduce personal consumption in keeping with achieving carbon neutrality by 2050, following the lead of the City of Victoria's zero waste strategy: by requiring producers to be responsible for the full life cycle of packaging; -levying user fees on packages that produce waste, offering financial incentives for entrepreneurs to reuse materials and encouraging comprehensive recycling in both single family and multi-family homes, -Enforcement of existing bans on dumping of organics and garden waste is also essential. 2. The draft SWMP should rigorously pursue alternative resource recovery options such as waste-to-energy solutions: The Solid Waste Management Plan must rigorously pursue the 5 R waste hierarchy with top emphasis on reduction, reuse and recycling. The CRD must defer increasing the landfill until an independent evaluation and a business plan is conducted on alternative technologies (such as thermal, gasification and waste to energy technology and any emerging technologies). If feasible, alternative resource recovery options must be implemented throughout all regional municipalities to avoid expanding the Hartland Landfill. If not feasible, the CRD must conduct an Environmental Assessment prior to implementing plans that increase the landfill. The BC Ministry of Environment also has the responsibility to ensure that this is carried out. A minimum five year deferral is required to fully evaluate emerging technologies. 3. The draft SWMP should include specific plans to support a Circular Economy towards Carbon Neutrality: Expanding the Hartland landfill is counter-productive to achieving a carbon neutral economy by 2050. Removing 73 acres of public forest that sequesters local carbon emissions is inconsistent with the CRD and other municipalities' declaration of a climate emergency and the critical need for the Greater Victoria region to become carbon neutral by 2050. THE SWMP should specify action towards full implementation of a circular economy and means in which excess carbon produced is captured to restore the health of our ecosystems which, in turn, naturally store carbon. The Minister of Environment should not approve any CRD plan without first requiring the CRD adopt aggressive waste reduction measures that would avoid an unnecessary expansion of the Hartland landfill and be in conformity with the climate change policies adopted by the Province of British Columbia. Thank you.
Submitting feedback on CRD draft solid waste management plan: While there are some good points in the plan, they are vague and the plan is too focused on continuing to dump garbage in the ground. I want to see more aggressive and specific strategies in the solid waste management plan: 1. The draft Solid Waste Management Plan needs more aggressive measures towards Zero Waste: The CRD Board states that it supports the principle of zero waste and encourages the achievement of a circular economy by mid-Century in accordance with Provincial guidelines. This goal can only be achieved with more aggressive measures to reuse, recycle and reduce personal consumption in keeping with achieving carbon neutrality by 2050, following the lead of the City of Victoria's zero waste strategy: by requiring producers to be responsible for the full life cycle of packaging; levying user fees on packages that produce waste, offering financial incentives for entrepreneurs to reuse materials and encouraging comprehensive recycling in both single family and multi-family homes. Enforcement of existing bans on dumping of organics and garden waste is also essential. 2. The draft SWMP should rigorously pursue alternative resource recovery options such as waste-to-energy solutions: -Rigorously pursue the 5 R waste hierarchy with top emphasis on reduction, reuse and recycling. -The CRD must defer increasing the landfill until an independent evaluation and business plan is conducted that studies alternative technologies (such as thermal, gasification and waste to energy technology). -If feasible, alternative resource recovery options must be implemented throughout all regional municipalities to avoid

expanding the Hartland Landfill. -If not feasible, the CRD must conduct an Environmental Assessment prior to implementing plans that increase the landfill. The BC Ministry of Environment also has the responsibility to ensure that this is carried out. A minimum five year deferral is required to fully evaluate emerging technologies. 3. The draft SWMP should include specific plans supporting a Circular Economy towards Carbon Neutrality: Expanding the Hartland landfill is counter-productive to achieving a carbon neutral economy by 2050. Removal of 73 acres of forest (that sequesters local carbon emissions) and blasting holes in the ground to dump garbage into is inconsistent with the CRD and other municipalities' declaration of a climate emergency and the critical need for the Greater Victoria region to become carbon neutral by 2050. Carbon neutrality requires full implementation of a circular economy in which excess carbon produced is captured by restoring the health of our ecosystems which naturally store carbon. The CRD needs to take the climate crisis seriously and this draft SWMP does not come close. The Minister of Environment must require the CRD to adopt aggressive waste reduction measures and not approve any plan that unnecessarily expands Hartland landfill. CRD should be in conformity with the climate change policies adopted by the Province of British Columbia. The CRD has a chance to be leaders and this SWMP falls short. Thank you.

Solid Waste Management Planning — PHASE II FEEDBACK – *Local Governments*

FEEDBACK	STAKEHOLDER	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Provide information regarding solid waste management to Tsartlip, Tsawout and Tseycum community members through W̱SÁNEĆ Leadership Council (WLC) portals	W̱SÁNEĆ Leadership Council	No	Revised (Action 1E)	Action 1E was revised to specify First Nations community groups as a stakeholder
Create a WLC/CRD negotiation table and related meeting schedule to continue conversations regarding Hartland Landfill	W̱SÁNEĆ Leadership Council	No	No	This recommendation is being brought to the CRD Board for focused consideration
Include a section regarding integrated resource management/gasification	Township of Esquimalt	Yes (Action 15D)	Revised (Action 15D)	Action 15D was revised to specify integrated resource management and gasification as alternatives to landfilling
Accelerate the creation of requirements for source separation in multi-family and commercial businesses, including through a model bylaw	City of Victoria	Yes (Action 6D, 8B, 9F)	N/A	These actions would enable the creation of regulations such as a model bylaw.
Accelerate the development of guidelines for the use/acceptance of compostable and bio-based food service ware	City of Victoria	Yes (Action 11D)	N/A	These actions will be considered for implementation in the short term action plan.
Establish a waste stream management licensing bylaw for private solid waste transfer stations and recycling facilities operating in the region	City of Victoria	Yes (Action 6C, 6D)	N/A	This will be investigated as part of these actions.
Work with local governments to advocate for flow control to regulate the export of solid waste	City of Victoria			
Prioritize implementing bans and/or surcharges for clean wood waste and mixed construction waste at Hartland	City of Victoria	Yes (12E/F)	N/A	These actions will be considered for implementation in the short term action plan.
Prioritize work with municipalities to develop requirements and guidelines for construction waste diversion, including measures to grow the regional market for salvaged materials	City of Victoria	Yes (12A/B/D)	N/A	These actions will be considered for implementation in the short term action plan.

FEEDBACK	STAKEHOLDER	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Lead regional collaboration and leverage municipal authority with regards to zero waste and building a circular economy	City of Victoria	Yes (5A)	N/A	
Provide bold leadership and accelerate regional collaboration on actions that achieve waste disposal targets	District of Saanich	Yes (Strategies 1-5	N/A	This is the broad intent of the Solid Waste Management Plan.
Maximize the use of municipal authorities to reduce waste, including the development of additional bans, surcharges, CRD bylaws, model bylaws, processing facilities, requirements and guidelines that support actions such as waste stream management licensing, construction waste diversion, source separation in multi-family residences, use and acceptance of compostable items	District of Saanich	Yes (Strategies 5-12)	N/A	These will be investigated as part of these strategies.
Reference additional benefits of a regional organics processing facility associated with greenhouse gas emissions savings from reduced transportation outside the region	District of Saanich	Yes (Section 6)	Revised (Section 6)	Section 6 of the plan has been revised to reflect current on-island processing capacity, and to reference transportation-related greenhouse gas benefits associated with a facility at Hartland.

Solid Waste Management Planning — PHASE II FEEDBACK – *Community Associations*

FEEDBACK	STAKEHOLDER	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Implement illegal dumping prevention education campaigns	Prospect Lake District Community Association	Yes (Action 13A/B)	N/A	
Implement illegal dumping reporting education campaigns	Prospect Lake District Community Association	Yes (Action 13E)	N/A	
Install 'No Dumping' signage in problem areas	Prospect Lake District Community Association	No	No	This is the responsibility of the jurisdictional authority of the location.
Clean up illegal dumping quicker	Prospect Lake District Community Association	No	No	This is part of the landfill operating plan and is reviewed regularly.
Open Hartland Landfill on Sundays so that residents don't dump illegally when they drive up and find the landfill closed	Prospect Lake District Community Association	No	No	Details such as operating hours are part of the landfill operating plan and are reviewed regularly.
Increase bylaw enforcement of dumping and unsecured loads	Prospect Lake District Community Association	No	No	Unsecured/uncovered loads arriving at Hartland are already subject to fines. Illegal dumping is regulated by municipalities and the CRD in Electoral Areas.
Build a transfer station in the West Shore	Prospect Lake District Community Association	Yes (Action 5B, 7B)	N/A	*Note: private facilities already exist in Langford and Sooke.*
Continue to enhance mountain biking trails in Mount Work Regional Park	Prospect Lake District Community Association	No	Revised (Section 4.2.2.1.7)	Revised this section to discuss actions related to mitigating trail loss.

FEEDBACK	STAKEHOLDER	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Secure Mountain Road Forest as parkland if the Habitat Acquisition Trust (HAT) fundraising campaign is unsuccessful; support of HAT's fundraising project in the interim	Prospect Lake District Community Association	No	No	This project is a partnership between Regional Parks and HAT. HAT anticipates having sufficient funding however, staff will continue to monitor unmet need.
Overhaul the playground at Hamsterly Beach in Elk/Beaver Lake Regional Park	Prospect Lake District Community Association	No	No	This Regional Parks project is underway, with construction set to start in fall 2021.
Do not remove trees to extend the use of Hartland Landfill to 2100 and beyond	Willis Point Community Association	No	Revised (Section 4.2.2.1.6)	Revised this section to clarify rationale for and potential impact and decision making process for Hartland 2100
Delay approval of the Hartland 2100 design concept	Willis Point Community Association	No	Revised (Section 4.2.2.1.6)	Revised this section to clarify rationale for and potential impact and decision making process for Hartland 2100
Adopt a more aggressive waste reduction target	Willis Point Community Association	Yes (Plan Goals)	N/A	An aspirational goal to reduce per capita waste volume to 125kg/year was included in the draft plan based on public feedback
Align the regional plan's targets with the City of Victoria's Zero Waste strategy	Willis Point Community Association	Yes (Plan Target)	N/A	The City of Victoria's Zero Waste strategy target is aligned with the CRD's target. With both following the same trajectory.
Consider Esquimalt's waste-to-energy plan in the Solid Waste Management Plan	Willis Point Community Association	No	Revised (Action 15D)	Revised action to clarify investigation of landfilling alternatives.
Do not landfill Class A biosolids	Willis Point Community Association	No	No	Management of biosolids is within the scope of the CRD's Liquid Waste Management Plan.

Solid Waste Management Planning — PHASE II FEEDBACK – *Public Feedback*

**Orange shading indicates a comment that appeared 3+ times*

FEEDBACK	IN DRAFT?	ADDED TO PLAN?	RATIONALE
STRATEGY 1: Continue and Enhance Education Programs			
Educate people about reduce, reuse and recycle	Yes (Action 1A/E)	N/A	
Apply behavioural science to education programs	Yes (Action 1B)	N/A	
Make waste socially unacceptable by funding education campaigns promoting zero waste	Yes (1D)	Revised (1D)	Action revised to include specific reference to zero waste
STRATEGY 2: Encourage Waste Prevention			
Provide funding for start-up businesses aimed at reducing waste	Yes (2B)	N/A	
Ban single-use items	Yes (Action 2C/E, 5A)	N/A	The CRD will continue its advocacy and education role to support others that have authority to regulate in this area.
Ban/work with government to ensure manufacturers reduce non-recyclable packaging	Yes (Action 2F)	N/A	
Enforce mandatory fully compostable packaging	Yes (Action 2E/F)	N/A	
Legislate that manufacturers are responsible for the full life cycle of their products	Yes (Action 2E/F and 10A/C/D)	N/A	
Allow green bins to be used for yard waste as well as kitchen scraps	No	No	These items are banned from garbage disposal at Hartland. Organics drop-off and collection services are provided by the private sector and some municipalities. The CRD provides drop-off and transfer services for kitchen scraps and yard waste material at Hartland.
Fund drop-off points or curbside pick-up of organic materials, including yard waste	No	No	
Introduce tax breaks for people who recycle properly/do not put banned items in the garbage	No	No	Curbside recycling services are not funded by taxpayer requisition.
STRATEGY 3: Support Reduction of Avoidable Food Waste			
Encourage backyard composting	Yes (Action 3A)	Revised (Action 3A)	Action revised to include reference to backyard composting.
STRATEGY 4: Support Reuse Activities in Region			
Support organizations that create a sharing economy	Yes (Action 2B, 4B/C)	N/A	

FEEDBACK	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Encourage a circular economy through Repurpose and Repair Centers and Repair Cafes	Yes (Action 2B & 4C)	Revised (Action 4C)	Action revised to include reference to repair centres.
Explore ways to divert textile waste from the landfill, including building a processing facility	Yes (Action 4A, 4B)		Programs are in place to support existing textile collection and reuse industry in the region.
Support a book recycling program	Yes (Action 4A, 4B)	N/A	
Consider attaching a recycling education centre to the potential free store at Hartland Landfill	Yes (4D)	N/A	This option can be considered in the free store research project under Action 4D.
Consider attaching a build-it centre to the potential free store at Hartland Landfill	Yes (4D)	N/A	
Go beyond the free store at Harland and consider establishing a green business hub in the region	Yes (4D)	N/A	
Create a map of local resources for sharing, rental, reuse, and repair	Yes (4C)	N/A	The CRD's MyRecyclopedia (Section 4.2.7) provides this function.
STRATEGY 5: Support Local Governments in Working Towards Zero Waste and Circular Economy			
Require municipalities to incorporate zero waste plans as part of their community event permitting process	Yes (Action 5A, 13A)	N/A	Although the CRD cannot require municipalities to do this, the creation of a model policy for zero waste event planning could be included in this action.
Implement user-pay/pay by weight model for garbage collection	Yes (Action 5D)	N/A	The user-pay model for garbage collection services provided by the private sector and municipalities supports the intent of these ideas.
Hold specific municipalities accountable for massive increases in waste disposal (e.g. charge municipalities a fine per resident for exceeding waste per capita targets)	No	No	
Create a multi-disciplinary working group to develop the local circular economy	No	No	CRD staff participate in already established working groups focused in this area.
STRATEGY 6: Continue and Enhance Policy Development			
Implement a purchasing policy with other public organizations that encourages products made from reused, recycled or sustainably harvested materials and products that are durable, repairable, reusable, recyclable or compostable	Yes (Action 6A)	N/A	
Set reuse/refill targets across CRD buildings and invest in infrastructure for this	Yes (Action 6A)	N/A	These targets will be considered in the model procurement policies.

FEEDBACK	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Ensure municipal and private waste collectors fine banned materials and contaminated loads at the household level to enforce source separation	Yes (Action 6D, 9G)	N/A	Although the CRD doesn't have the authority to issue generator fines, landfill bans are enforced by the CRD when materials are delivered to the landfill.
Do not explore licensing for waste management facilities	No	No	Licensing programs provide a level playing field, support diversion activity and subsequently reduce garbage disposal. Review of this option is included in Action 6D.
STRATEGY 7: Increase Residential Diversion			
Build a transfer station in the West Shore	Yes (Action 5B, 7B)	N/A	*Note: private facilities already exist in Langford and Sooke.*
Fund return-it centres across the region	Yes (Action 2B, 7B)	N/A	The CRD has an advocacy role in this area.
Build processing plants to ensure more material is recycled	Yes (Action 7C)	N/A	The CRD will encourage local processing of recyclable material
STRATEGY 8: Increase Multi-Family Diversion			
Engage businesses in addition to building managers and strata across the region with waste prevention education	Yes (Action 8A, 9A)	N/A	
Hold landlords, building managers and stratas accountable for organics diversion and glass recycling	Yes (Action 8B)		Municipalities have the authority to regulate activities in multi-family buildings. Licensing programs identified for exploration in the plan have the potential to regulate this activity through the service provider.
Hold waste haulers accountable for organics diversion and glass recycling in multi-family residences	Yes (Action 6D, 8B)		
Enforce mandatory source separation for multi-family residences through fines	Yes (Action 8B)		
Find a solution for multi-family residents to recycle glass	Yes (Action 8B)		
Work with the Province on building code guidelines that ensure adequate space for waste sorting in new developments	Yes (Action 8C)	Revised (8C)	Revised action to note policy recommendations in this area
STRATEGY 9: Increase Industrial, Commercial and Institutional Diversion			
Prioritize 3R education funding for Industrial, Commercial and Institutional sector	Yes (1C, 9A)	N/A	
Give awards to companies who are waste prevention leaders	Yes (1F)	N/A	

FEEDBACK	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Enforce mandatory source separation for the Industrial, Commercial and Institutional sector through fines	Yes (9F, 9G)	N/A	Municipalities have the authority to regulate activities in multi-family buildings. Licensing programs identified for exploration in the plan have the potential to regulate this activity through the service provider.
STRATEGY 10: Support Existing and New Extended Producer Responsibility Programs			
Demand that Extended Producer Responsibility programs be expanded and fees be raised	Yes (10A/D)	N/A	Point-of-sale recycling fees are province-wide and established by the obligated producers and their stewardship agencies.
Advocate for the Right to Repair, mandatory warranties, time frames for parts availability, requirements for online manuals and plans	Yes (10 A/D)	N/A	The CRD can advocate for this when commenting on Extended Producer Responsibility program plan reviews.
Reduce the amount of plastic being landfilled, including microplastics	No	No	Production and distribution of plastic products and packaging are regulated by Federal and Provincial governments.
Fund curbside pick-up of recyclable materials not included in the current recycling program	No	No	Packaging and printed paper materials collected in curbside vs depot programs is determined by Recycle BC.
Fund curbside pick-up of soft plastics	No	No	
Enhance access to soft plastic recycling options, especially for rural communities	No	No	
STRATEGY 11: Increase Organics Diversion and Processing Capacity			
Do not build an organics processing facility at Hartland Landfill	No	No	Enabling language in the Solid Waste Management Plan (11B) is there to allow for exploration in this area.
Partner with local farmers to supply compost from organic processing	Yes (Action 11C)	N/A	
STRATEGY 12: Increase Construction, Renovation and Demolition Material Diversion			
Include a section in the plan for the recycling of fibreglass from marine debris	Yes (Action 12A)	N/A	Construction, Renovation & Demolition material pilots will consider the inclusion of types of structures, including boats
Ask the Province for a building code that incorporates future deconstruction needs and factors in embodied carbon and to create a deconstruction step code	Yes (12C/D)	N/A	The CRD has an advocacy role in this area.
Develop a program that encourages the renovation of buildings over demolition	Yes (Action 12 B/C/D)	N/A	

FEEDBACK	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Support building design and demolition regulations that require re-use/recycling	Yes (12D)	N/A	
Prioritize demolition permits for companies doing deconstruction/salvage work vs. straight disposal	No	No	Municipalities are responsible for building/demolition permits.
Consider attaching a build-it centre to the potential free store at Hartland Landfill	Yes (Section 4.2.6)	No	CRD support for existing organizations/facilities that encourage reuse of building materials is outlined in Section 4.2.6
Develop a construction and demolition materials hub at Hartland	Yes (Section 4.2.6)	No	
STRATEGY 13: Encourage Proper Public Space Waste Management Activities			
Support municipal big/bulky item pick-up day programs	Yes (Action 13F)	N/A	
Ensure all parks and recreational areas in the region have recycling bins	No	No	While the CRD has limited authority in this area, Strategy #13 broadly supports responsible waste management in public spaces
STRATEGY 14: Optimize Landfill Gas Management			
Develop a strategy to optimize landfill gas at Hartland that doesn't require input from new organic material	Yes (Strategies 2, 3, and 14)	N/A	The approach to landfill gas utilization was developed in alignment with Solid Waste Management Plan waste diversion targets and goals — including organic material diversion strategies.
STRATEGY 15: Enhance Hartland Disposal Capacity			
Implement/increase the CRD's fine system for banned materials	Yes (Action 15A)	N/A	
Increase tipping fees to incentivize waste prevention	No	Revised (Action 15A)	Revised action to capture regular review of tipping fee structure.
Incinerate garbage instead of landfilling it	Yes (Action 15D)	Revised (Action 15D)	Revised action to clarify investigation of landfilling alternatives.
Explore gasification options to create energy from solid waste	Yes (Action 15D)	Revised (Action 15D)	
Explore disposal options that integrate organic, solid and liquid waste (integrated resource management)	Yes (Action 15D)	Revised (Action 15D)	
Consider Esquimalt's waste-to-energy plan in the Solid Waste Management Plan	No	Revised (Action 15D)	
Report progress on exploring alternatives to landfilling to the CRD Board annually	Yes (Action 15D)	Revised (Action 15D)	Revised action to include a reporting component.
Mine Hartland Landfill for recyclable materials	Yes (15D)	No	Investigation of emerging technologies may include this activity in the future

FEEDBACK	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Include an action that addresses mountain bike trail loss due to the Hartland 2100 design	No	Revised (Section 4.2.2.1.7)	Revised this section to discuss actions related to trail loss.
Do not design options to extend the use of Hartland Landfill to 2100 and beyond	No	Revised (Section 4.2.2.1.6)	Revised this section to clarify rationale for and potential impact and decision making process for Hartland 2100
Do not remove trees to extend the use of Hartland Landfill to 2100 and beyond	No	Revised (Section 4.2.2.1.6)	
Delay approval of the Hartland 2100 design concept	No	Revised (Section 4.2.2.1.6)	
Conduct an Environmental Impact Assessment before extending the life of Hartland Landfill	No	No	The CRD will adhere to all applicable regulatory requirements. Based on current provincial feedback, the Hartland 2100 design concept does not require an Environmental Impact Assessment.
Build a new landfill in the Western Communities	No	No	Siting and building a new landfill facility has a much higher environmental impact than using the existing landfill and transfer station infrastructure network as efficiently as possible.
Explore how the CRD will move past its reliance on tipping fees for funding, including potential future taxation	No	Maybe require adjusting wording in plan	Revenue received each year currently exceeds expenditures and the remaining funds are placed in a sustainability reserve for future needs when garbage volumes significantly decrease. Alternative funding methods will need to be explored as reserve fund depletes.
Do not accept cruise ship waste at Hartland Landfill	No	No	In Canada, solid waste from cruise ships is managed according to the International Waste Directive under the authority of the Canada Border Service Agency and the Canadian Food Inspection Agency. At Hartland, international waste is received at a higher rate than general refuse.
FEEDBACK UNRELATED TO SPECIFIC STRATEGIES OR ACTIONS IN THE DRAFT PLAN			
Include a regional greenhouse gas emissions calculation in the Solid Waste Management Plan	No	Yes	*Added language to talk about fugitive emissions/portion of regional greenhouse gases that solid waste management and/or the landfill contributes?

FEEDBACK	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Adopt a more aggressive waste reduction target (e.g. the Regional District of Nanaimo's plan)	Yes (Goal 1)	N/A	An aspirational goal to reduce per capita waste volume to 125kg/year was included in the draft plan based on public feedback
Align the regional plan's targets with the City of Victoria's Zero Waste strategy	Yes (plan targets)	N/A	The City of Victoria's Zero Waste strategy target is aligned with the CRD's target. With both following the same trajectory.
Include population growth considerations in the Solid Waste Management Plan	Yes	N/A	Population growth projections are included in Section 3.1.
Do not landfill Class A biosolids	No	No	Management of biosolids is within the scope of the CRD's Liquid Waste Management Plan.
Move commercial access to Hartland Landfill from Hartland Avenue to Willis Point Road	No	No	This is an operational decision and is not part of the formal plan.
Do not move commercial access to Hartland Landfill from Hartland Avenue to Willis Point Road	No	No	
Include a section in the plan on the management of closed contaminated sites (e.g. Blackburn Landfill on Salt Spring Island)	No	No	Closed landfills are not within this Solid Waste Management Plan based on advice from the Province.
Include specific plans to support a circular economy toward carbon neutrality	No	No	As identified by the Province, solid waste management plan's should be guided by the 5R hierarchy. In doing so, plans support reuse, recycling and, ultimately, a circular economy.
Include a section in the plan for the beneficial use of gravel extracted from Hartland Landfill	No	No	Use of aggregate at Hartland is addressed in the Operating Plan
Include an action to reduce wildlife/human conflict by educating the public about solid waste as a wildlife attractant	No	No	Educational information related to this issue exists on the CRD website
Ensure residents are aware of the region's per capita waste rate on an annual basis	Yes (Section 11)	N/A	
This plan should rigorously pursue the 5R waste hierarchy with top emphasis on reduction, reuse and recycling.	Yes	N/A	The strategies and actions in the plan have been designed to emphasize the first 3Rs of the pollution prevention hierarchy

Solid Waste Management Planning — PHASE II FEEDBACK – *Advocacy Groups*

FEEDBACK	STAKEHOLDER	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Plan Direction				
Adopt zero waste as a the goal and engage all sectors of society in pursuing this	Zero Waste BC	Yes (Guiding Principle 1)	Revised (Glossary)	A zero waste definition has been added to the plan
Adopt the zero waste hierarchy as a guide	Zero Waste BC	No	No	The existing pollution prevention hierarchy in the plan aligns with the Ministry guide.
Adopt stronger targets (similar to the Regional District of Nanaimo)	Zero Waste BC	Yes (Goal 3)	No	The Ministry requires regional districts set targets that are achievable, time-bound and demonstrate continuous improvement. The adjustment to the plan's goals provides opportunity to work towards 125kg/yr while implementing the actions identified in the plan over the 10-year time frame.
Amend the Solid Waste Management Plan and submit in 2025 with a target of 125kg/person/year by 2040.	Mount Work Coalition	No	No	
Gather information and add targets for reduced waste generation and waste diversion that at least match the C40 Zero Waste Declaration	Zero Waste BC	Yes (Goal 3)	No	The aspirational goal in the CRD plan exceeds that in the C40 plan. Numerous waste reduction actions have been incorporated into the plan.
Reduce (Rethink/Reconsider)				
Increase tipping fees to align with neighbouring regional districts, ensure kitchen scraps are at a lower fee than the waste and add a mixed waste fee at	Zero Waste BC	No	Revised (Action 15A)	Fees and fines associated with garbage disposal and kitchen scraps processing will be reviewed as part of the implementation of

FEEDBACK	STAKEHOLDER	IN DRAFT?	ADDED TO PLAN?	RATIONALE
double or more the regular waste tipping fee to encourage waste diversion				the plan's actions to maximize waste diversion.
Work to address fees on rimmed tires	Zero Waste BC	No	No	The Extended Producer Responsibility program in place in BC for tires excludes tires on rims. The fee associated with the drop off of rimmed tires at the Hartland depot limits quantities and directly reflects the cost of preparing them for management through the program.
Add a fee for unsecured loads	Zero Waste BC	No	No	Unsecured loads arriving at Hartland Landfill are already subject to a double charge.
Add an action to promote the local circular economy potential	Zero Waste BC	Yes	No	Many of the actions in the plan are intended to promote a circular economy. The grant money identified in Action 2B would be available to support local circular economy initiatives.
Develop a program for the CRD corporate entity to model zero waste actions	Zero Waste BC	Yes (5A,6A)	No	Could be considered as part of the corporate climate action plan.
Join the Canadian Collaboration for Sustainable Procurement	Zero Waste BC	No	No	Could be investigated with implementation of 6A.
Have the CRD lead by example	Zero Waste BC	Yes (5A,6A)	No	
Work with federal and provincial government on policies to reduce material throughput and waste.	Zero Waste BC	Yes (2E,2F,10A, 10D)	No	
Strengthen the plan's zero waste initiatives by adding concrete plans such as dedicated funding to create business incentives for entrepreneurs; create a public education campaign to draw awareness to Zero Waste, and use tipping fees to incentivize waste reduction instead of encouraging continued use of landfilling as a source of revenue	Mount Work Coalition	Yes (Action 1 A/B/D/E; 2B)	No	
Reduce				

FEEDBACK	STAKEHOLDER	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Developing common regional signage to assist in correct sorting of materials. This should be done in conjunction with member municipalities, businesses and Extended Producer Responsibility programs. An example of this has been done by the Squamish-Lillooet Regional District.	Zero Waste BC	Yes (1A,B,E,7A, 7D,8A,9A)	No	Standardized signage opportunities could be explored with implementation of the plan.
Banning materials before Extended Producer Responsibility programs exist. For example, Metro Vancouver have banned mattresses from their facilities and this ensures materials for the mattress recycling businesses that have arisen.	Zero Waste BC	Yes (5C, 15A)	No	This is a long-standing ongoing practice, landfill bans are implemented when viable alternatives are in place regardless of whether a product is regulated under EPR.
Working with service providers to provide bi-weekly service for curbside garbage collection and weekly service for organics pickup. This has proven to reduce waste in other regions.	Zero Waste BC	No	No	CRD does not have authority to regulate collector's frequency of services.
Targeting funding towards recycling materials that are not currently recycled by encouraging non-profit and private sector innovation such as in the Regional District of Nanaimo's plan.	Zero Waste BC	Yes (2B, 5C)	No	
Educate around and enforce the bans. Feedback at each step of the process (at collection, at transfer and at the landfill) is essential to help educate waste generators on how to reduce their waste. This will require partnership with other organizations that deliver these waste collection and management services. This could require friendly waste educators monitoring collection runs and cameras on waste trucks checking each tip.	Zero Waste BC	Yes (15A)	No	Approaches for executing actions associated with landfill ban education and enforcement will be further explored as plan implementation develops.
Organics				
Consider decentralized composting for high generation areas.	Zero Waste BC	No	No	See revised Section 6. Existing on island processing capacity to be

FEEDBACK	STAKEHOLDER	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Processing scaled to consider the reduction in volumes through reduced food waste generation and backyard composting activity	Zero Waste BC	No	No	utilized and the need for a facility at Hartland will be monitored.
Education and enforcement for bans.	Zero Waste BC	Yes (9G,11A, 15A)	No	
Identify and develop other end market.	Zero Waste BC	Yes (11C)	No	
Hartland Capacity				
Conduct regular waste audits and bi-annual waste composition studies. Work with Extended Producer Responsibility programs to have them pay for their share of waste composition studies. Make the data public. Make changes based on results.	Zero Waste BC	No	No	The next audit is scheduled for 2022. As in the past, Extended Producer Responsibility program stewards will be approached, study's results will be public and initiatives (actions) will be prioritized based on findings.
Understand and restrict waste flows outside of the region.	Zero Waste BC	No	No	While waste flow management is not a specified action in the plan, licensing and policy actions will provide an opportunity to explore opportunities to manage waste material within the region.
Delay any approval for landfill expansion until an updated and amended plan is adopted in 2025.	Mount Work Coalition	No	Revised (Section 4.2.2.1.6)	Revised this section to clarify rationale for and potential impact and decision making process for Hartland 2100
Delay work on landfill expansion and pursue Zero Waste actions instead.	Zero Waste BC	No	No	Provincial legislation requires the CRD to provide disposal needs for the community into the future. While planning for the future is an ongoing item, the work to build out the remaining landfill area wouldn't begin until approximately 2030, a time when this plan's actions are scheduled to have been implemented.
Mandate clear bags for waste as soon as possible.	Zero Waste BC	Yes (5E)	No	Could be considered as a priority when developing a more detailed plan implementation schedule
Ensure the public is aware of the progress (or not to date) through publishing the	Zero Waste BC	Yes (Strategy 1)	No	Annual progress and plan monitoring reports are public

FEEDBACK	STAKEHOLDER	IN DRAFT?	ADDED TO PLAN?	RATIONALE
annual report along with advertising and creative means such as a waste thermometer at the landfill.				documents. New public engagement opportunities will be reviewed as part of implementation of the plan's actions.
Notify the Ministry of Environment & Climate Change Strategy that the CRD intends to submit an amendment to the plan by 2025 with strategies for attaining this target including an aggressive Zero Waste program, and an independent analysis and testing of alternative technologies such as integrated resource management/gasification/Waste to Energy.	Mount Work Coalition	No	Revised (Action 15D)	Revised action to clarify investigation of landfilling alternatives.
The amended plan by 2025 would be subject to full public consultation during its development to ensure the public has ample opportunity to engage in accordance with Ministry policy.	Mount Work Coalition	No	No	Any future plan amendments would be subject to full public consultation according to Ministry guidelines for solid waste management planning
The Plan submitted in 2021 should contain a placeholder for the Esquimalt waste-to-energy project, subject to a business case being completed.	Mount Work Coalition	Yes	Revised (Action 15D)	Revised action to clarify investigation of landfilling alternatives.
Conduct an independent environmental assessment prior to any plans to expand or alter the design of the landfill, including the spread of biosolids, to protect the natural ecosystem, wildlife, community health and the recreational users of the area.	Mount Work Coalition	No	No	The CRD will adhere to all applicable regulatory requirements. Based on current provincial feedback, the Hartland 2100 design concept does not require an Environmental Impact Assessment.
Burning of Waste				
Include clear language to prevent the use of destructive thermal technologies for managing waste.	Zero Waste BC	No	No	Investigation of emerging technologies will be explored as they relate to the 5R hierarchy.
Supporting Systems				
Outline what the five-year plan review will include like the Regional District of Nanaimo plan.	Zero Waste BC	No	No	Plan monitoring will be reported annually.

FEEDBACK	STAKEHOLDER	IN DRAFT?	ADDED TO PLAN?	RATIONALE
The climate strategy also notes many outreach programs and campaigns with other partners - the same needs to happen for the Solid Waste Management Plan.	Zero Waste BC	No	No	Roles and partnerships will be further explored through implementation of the plan's actions.
Value the remaining landfill space.	Zero Waste BC	No	No	There is no standardized methodology for valuing landfill space.
Increase funding and staff time to support this plan to ensure it can achieve higher targets.	Zero Waste BC	No	No	There is a $5.8 million annual budget already in place to divert materials from disposal. An additional $360,000 in new funding will also be added to the budget with the approval of the plan and resource requirements will be monitored and adjusted as plan implementation unfolds.
Funding				
Fund part of the solid waste system through property taxes and utility fees.	Zero Waste BC	No	No	As outlined in Section 9, the plan's investments including associated garbage reductions can be funded from existing sources. Future funding needs will continue to be monitored and will take into account new funding opportunities and reduced garbage volumes and associated revenue.
Raise tipping fees to match the Cowichan Valley Regional District rates.	Zero Waste BC	No	No	
Adjust funding sources as waste levels change.	Zero Waste BC	No	No	
Consider a levy and discount system similar to the Regional District of Nanaimo's.	Zero Waste BC	Yes (5C,6C,6D,12F)	No	
Ensure Extended Producer Responsibility programs pay their way.	Zero Waste BC	No	No	The CRD has a long history of developing waste diversion programs in advance of products being added to Extended Producer Responsibility. Transition to fully producer funded programs has historically lead to a reduction in service for the community.

FEEDBACK	STAKEHOLDER	IN DRAFT?	ADDED TO PLAN?	RATIONALE
Apply for grants and support other local partners applications as well.	Zero Waste BC	No	No	This is an ongoing item and there is further opportunity for this built into existing actions.
Ensure fines are applied after education measures and that they are sufficient to change behaviour.	Zero Waste BC	No	Yes (15A)	Education is conducted with warnings issued in advance of fines. Action 15A has been expanded to include a review of the Hartland tipping fee structure in addition to ban enforcement levels.
OTHER FEEDBACK				
Ensure protection of species at risk in Mount Work Park, we are requesting the BC Ministry of Environment & Climate Change Strategy reinstate its longstanding ban (2011 and 2013) on the spreading of biosolids, planned to begin in February 2021.	Mount Work Coalition	No	No	Management of biosolids is within the scope of the CRD's Liquid Waste Management Plan.
Delay the decision to reroute landfill traffic to Willis Point Road until decisions are made to have regional municipalities manage their own waste with Zero waste and new waste to energy technologies.	Mount Work Coalition	No	No	This is an operational decision and is not part of the formal plan.

Note:

- Zero Waste British Columbia's report included a significant number of suggestions for implementation of each action, review of feedback focused on the report's recommendations.

COMMERCIAL ACCESS TO HARTLAND LANDFILL

Consultation Results — March 2021

Operational Context

The Capital Regional District (CRD) is required to move Hartland Landfill's commercial vehicle access point from Hartland Avenue to Willis Point Road for a number of operational reasons, including safety considerations for landfill staff, commercial vehicles and residents accessing Mount Work Regional Park.

The eventual need for this vehicle access change was identified in the CRD's first solid waste management plan in 1987. Although this entrance has always been a secondary access point to the site, this permanent change for all commercial vehicle access will be triggered by the location of the active face in approximately 2023.

The internal roads from the south will eventually be buried in waste, and constructing a wide, two-way roadway from the south is not feasible due to both the internal topography of the site and the location of critical underground gas, lagoon and leachate infrastructure. The cost to move this infrastructure and to build an internal perimeter road is exorbitant and would not meaningfully address the safety issues for staff, contractors and patrons. For these reasons, the only viable route for trucks to safely access future filling areas at Hartland Landfill will be from the north off Willis Point Road.

Two independent traffic studies were conducted to understand the implications of these requirements, including both road safety and greenhouse gas emission considerations.

Following these studies, some area residents expressed strong concerns about how this change will impact commute times and safety for a range of Willis Point Road users. As a result, the CRD Board directed staff to consult directly with Hartland neighbours to answer questions, understand concerns and discuss ideas for risk mitigation.

Consultation with Area Residents

CRD staff published information related to this operational change, including the Bunt & Associates traffic study and a list of questions received from the public, to the CRD website when phase two of the broader solid waste management planning consultation process began on November 18, 2020.

Staff then invited input from Highlands District Community Association, Prospect Lake District Community Association and Willis Point Community Association members on this issue through a number of opportunities, including:

- Emails to each community association outlining available materials and feedback opportunities when consultation began in November 2020
- Hartland Landfill tours for area residents (group tours in November 2020 and individual tours by request following public health orders from December 2020 to February 2021)
- Two focused public meetings via Zoom with area residents about Hartland Landfill road access in January 2021

Seven residents participated in tours and 65 residents participated in one or both of the virtual meetings dedicated to this topic.

During these conversations, CRD staff gave a short presentation explaining the rationale for this operational change and invited participants to share their concerns, questions and ideas for potential safety improvements and community benefits.

These conversations generated the following ideas for Board consideration:

Potential Traffic Infrastructure Improvements

- Construction of a passing lane on the uphill portion of Willis Point Road between Wallace Drive and the landfill entrance
- Construction of pull-outs on the uphill portion of Willis Point Road between Wallace Drive and the landfill entrance
- Construction of bicycle lanes on Willis Point Road between Wallace Drive and Ross Durrance Road
- Design and construction of intersection improvements where Wallace Drive meets West Saanich Road
- Design and construction of intersection improvements where Wallace Drive meets Willis Point Road
- Design and construction of trailhead improvements where the Interurban Rail Trail crosses Wallace Drive
- Implementation of electronic signalling to control commercial vehicle flow on Willis Point Road
- Enhanced winter weather condition road maintenance (de-icing, plowing, etc.) on Willis Point Road
- Ongoing communication with commercial customers to ensure they are using designated truck routes to access Hartland Landfill

Potential Community Benefits

- Expansion of parking facilities for Durrance Lake users
- Expansion of parking facilities on Ross Durrance Road for Mount Work Regional Park
- Improvement of parking facilities on Hartland Avenue for Mount Work Regional Park
- Installation of sound barriers between Hartland Landfill, Willis Point Road and Mount Work Regional Park
- Signage and infrastructure improvements near the Mount Work Regional Park trailhead on Meadowbrook Road
- Siting and construction of a community transfer station for West Shore based residents
- Renaming the portion of Willis Point Road between Wallace Drive and Ross Durrance Road
- Additional police enforcement for speeding, illegal dumping and unsecured loads
- Enhanced illegal dumping education for the region and signage in problem areas near Hartland Landfill
- Securing Mountain Road Forest as parkland if the Habitat Acquisition Trust (HAT) fundraising campaign is unsuccessful; support of HAT's fundraising project in the interim

Area residents also requested that the impacts of this operational change be monitored closely following implementation, and that the Prospect Lake District, Highlands District and Willis Point community associations be invited to participate in conversations about area traffic on an ongoing basis.

In addition to generating a number of risk mitigation and community benefit ideas, these conversations presented an opportunity to clarify a number of questions related to this operational change that were also published to the CRD website. These frequently asked questions have been included for reference as Attachment 3.

Additional Feedback

Both the Prospect Lake District Community Association and Willis Point Community Association submitted additional risk mitigation and community benefit ideas following the public meetings on this topic. These letters have been included for reference as Attachment 1 and 2.

A number of comments related to this operational change, both supporting the shift in commercial access from Hartland Avenue to Willis Point Road and opposing it, were received through the solid waste management planning process and have been included verbatim in Appendix A of this summary's covering staff report ('Finalizing the Solid Waste Management Plan'). Several letters on this issue, both in support of and in opposition to this change, were also submitted to the Board for consideration during the consultation period.

Conclusion

Although moving commercial access to Hartland Landfill from Hartland Avenue to Willis Point Road in 2023 has raised both opposition and support from area residents, this operational change utilizing an existing truck route has the potential to generate a number of traffic safety improvements and community amenities that could benefit both road and recreational users in the area of Mount Work Regional Park and Hartland Landfill.

While the CRD's jurisdiction over some of the ideas presented by area residents is limited, the CRD could provide a funding package to the District of Saanich to support priority road safety improvements from this list.

The perspectives and ideas shared by Hartland neighbours during this targeted consultation process will continue to benefit CRD planning in this area as a package of specific options for Committee and Board consideration is prepared.

Prospect Lake District
COMMUNITY ASSOCIATION

February 4, 2021
RE: Commercial vehicle access to Hartland

To: Mr. Russ Smith
Senior Manager, Environmental Resource Management
Capital Regional District (CRD)

Thank-you for hosting the community conversations about commercial vehicle access to Hartland Landfill last month. As previously discussed, we have canvassed our members and compiled a list of concerns and mitigation suggestions for the CRD to consider as this project progresses.

On behalf of our members, we submit the following list of concerns, both directly related to the operational change, and additional concerns the CRD can support within our community:

1. Vehicle, cyclist, and pedestrian safety, specifically at the following locations:
    a. The intersection of West Saanich Road and Wallace Drive
    b. The intersection of Wallace Drive and Willis Point Road
    c. Rural roads in the area that often have illegal truck traffic (Wallace Drive, Prospect Lake Road)
2. Meadowbrook Road concerns:
    a. Increased use of the trail at the end of Meadowbrook Road has led to concerns including dog poop, traffic, parking, speeding, and litter
3. Illegal dumping
    a. Some notable locations include the BC Hydro right-of-way on Prospect Lake Road and several mailbox pull outs on Prospect Lake Road.
4. Roadside litter from poorly secured loads travelling to the landfill
5. The loss of peaceful parkland in our community due to noise and traffic near Durrance Lake

Further to these concerns, we offer the following mitigation ideas for your consideration:

1. The first, and most urgent way the CRD can help our community is to secure the Mountain Road Forest as parkland. While we are grateful the CRD has committed great deal of money from the Land Acquisition Fund, there is still risk the sale will fall through without enough funding. No amount of sidewalks, parking, infrastructure, or litter pick up can replace a natural forest. With the loss of forest in Mount Work Park and the detrimental effects of the construction at Hartland on the Durrance Lake area, we are

losing greenspace. The single most effective thing the CRD can do for our community is to ensure the Mountain Road Forest fundraising goal is reached.

   a. The CRD should spread awareness of the fundraiser on social media and other available outlets to encourage community fundraising support.
   b. The CRD should commit any outstanding money at the culmination of the fundraising efforts. This land is not going to be for sale again; we cannot miss this opportunity. It would be a tragedy if we missed the target by a narrow margin. We need to add greenspace, not remove it.

2. Meadowbrook Road
   a. Speed limit and/or "respect the neighbours" sign on Meadowbrook Road
   b. Signage at the trailhead indicating "pack in, pack out" for trash
   c. Signage reminding dog owners to pick up poop and control their dogs
   d. Garbage receptacle installed and maintained at trailhead
   e. "No parking" signage along right-hand side of Wildview Crescent, or an assessment of parking issues in the area
3. Illegal dumping
   a. Campaign educating people about illegal dumping, something to make them think of how it affects us all. The average mattress or couch is not an expensive as many think it is to dispose of at the landfill; education goes a long way.
   b. Install no dumping signage with threats of fines in problem areas.
   c. Educate people on how to report illegal dumping.
   d. Clean up illegal dumping quicker.
   e. Expand landfill hours to include Sunday, possibly for residents only.
      i. Many people do their clean-ups and junk removal on weekends. This leads to people wanting to take their loads to the landfill on Sunday, finding the landfill closed, and then dumping illegally in our neighbourhoods.
4. Better road cycling infrastructure
   a. Bike lane along Wallace Drive to connect to Interurban Rail Trail
   b. Safe crossing for cyclists at the termination of the Interurban Rail Trail to cross or continue onto Wallace.
   c. A bike repair station in the area (many cyclists experience flat tires due to debris on the road in the area). Either the intersection of Wallace and West Saanich or Sparton and West Saanich would be excellent choices, as they would capture casual riders on the trail as well as road biking enthusiasts who ride along West Saanich Road.
5. Many residents live here for the access to mountain biking. It would serve a great deal of our community to continue to better the mountain biking trails on Mount Work, specifically ensuring a sustainable multi-use trail network throughout the entire park.

Prospect Lake District
COMMUNITY ASSOCIATION

6. Ensuring the safety of the parking situation for Durrance Lake. Residents do not want a huge parking lot encouraging more visitors than the natural space can handle, but they do want to be sure those parking are doing so safely.
7. Increased by-law enforcement for dumping, illegal truck traffic, and unsecured loads.
8. Increased police enforcement for speeding and other unsafe driving.
9. A transfer station serving the continuously growing Westshore community would have positive impacts for GHG emissions, road safety, and general traffic volume in our community. If it is unreasonable to have the landfill open to residents on Sundays, having a transfer station open could serve weekend users, in addition to these other benefits.
10. As the number of young families in the area is increasing, there is always desire for more playgrounds and other outdoor play areas for children. One idea is that the playground at Hamsterly Beach is in need of an overhaul, with plenty of space available.

As a Community Association Board, we are aware that we are not experts on implementing these changes, but we hope to inspire the CRD to help our community in a tangible way. Thank-you for considering these issues.

Sincerely,

Zoe Hole,

Secretary, Prospect Lake District Community Association

The Willis Point Community Association, 6933 Willis Point Road, Victoria BC, V9E 2A1

February 14, 2021

Colin Plant
Chair, Capital Regional District
625 Fisgard Street
Victoria, BC, V8W 1R7

Copies to:

All CRD Board Members
Hon. George Heyman, Minister of the Environment and Climate Change
Hon. Lana Popham, MLA
Adam Olsen, MLA
Russell Smith, CRD Staff
Larisa Hutcheson, CRD Staff

Dear Mr. Plant,

I am writing on behalf of the Willis Point Community Association in response to the invitation for public comment on the CRD's Solid Waste Management Plan (SWMP).

The CRD is to be commended for looking ahead at the waste disposal requirements of the region up to the year 2045 and beyond. This plan needs to take into account a number of variable factors; population growth in the region, particularly on the West Shore, new technologies and strategies targeting zero waste and the climate emergency facing the region, the province, the nation and the globe. Unfortunately, we find the SWMP wanting in several respects with regard to these factors.

Landfill Expansion-Destruction of Natural Habitat

As the community association representing the Willis Point area, we are particularly concerned about the impact that the current plan will have on the Hartland Landfill, particularly the Plan's goal (based on the current waste reduction targets and strategy) to expand the waste disposal cells to the full perimeter of the property, in the process removing 73 acres of forest and engaging in extensive blasting and quarrying. These 73 acres are immediately adjacent to Mount Work regional park, and indeed have been a de facto part of the park for a number of years. They provide recreational opportunities for the community, particularly the mountain bike community, and are home to a number of endangered plant and animal species. Moreover, destruction of 73 acres of mature second-growth trees undermines the CRD's commitments to address climate change by removing a significant area of carbon sequestration. Continued expansion of the Landfill will also create more methane emissions, notwithstanding the intention to capture a portion of the increased emissions as renewable natural gas.

Explore More Aggressive Waste Reduction Alternatives

The alternative to Landfill expansion is to adopt more aggressive waste reduction strategies so that volumes of waste going to Hartland are significantly reduced, thus extending the life of the Landfill without expanding it and destroying part of Mount Work. There are several such initiatives underway in the region, such as the City of Victoria's Zero Waste Strategy, the waste-to-energy project being

explored by Esquimalt and Saanich's ***One Planet Saanich***. The current SWMP takes no account of these initiatives, and instead relies on a series of underfunded "best efforts" campaigns to reduce waste targets to 250kg per person in the region by 2030, in the process continuing to rely of a steady flow of waste in order to generate tipping fees to fund Hartland's operation. The Plan needs to go much further, as has been recommended by your own Solid Waste Advisory Committee.

Postpone Decision on Hartland Expansion

Given these developments, it would be irresponsible in our view for the CRD Board to approve any planned expansion of Hartland at this time. Instead, new more aggressive waste reduction targets and strategies should be explored and adopted. In the meantime, approval of any expansion of Hartland should be put on hold until progress in reducing waste is assessed.

In specific terms, the WPCA would like approval of any expansion of Harland to be Stage-Gated so that both actual waste reduction achieved in the CRD, and the effectiveness of alternative methods of dealing with MSW be reviewed by Hartland staff and the CRD board in 2028 prior to any approval of plans to expand the landfill.

Beyond planning for a Phase or Stage Gated review in 2028 to verify that there is a need for expansion, it would seem **no approval of expansion plans needs to be part of the current SWMP**.

Since no expansion implementation needs to take place before 2030, that allows time to consider expansion if necessary, and the Board and public will have had ample opportunity to apply new waste reduction strategies. We urge you to amend the SMWP accordingly, before it is submitted to the Ministry of the Environment for approval.

Moving Hartland Traffic to Willis Point Road

In addition to opposing the expansion of Hartland Landfill, we have grave concerns over the plan to redirect commercial truck traffic accessing the Landfill from Hartland Avenue to Willis Point Road, beginning in 2023, and diverting all Landfill-bound traffic in 2040. Despite earlier assurances in 2019 received from CRD staff that there were no plans to divert traffic, it would seem that a decision has already been made to do so. Our Association was offered two public consultation sessions to discuss this "proposed" change and was told that the decision was a "fait accompli", with the only thing left to discuss being mitigation efforts. While earlier discussion had argued for a road change based on "safety considerations" (despite the fact that Hartland Avenue has served quite adequately as the point of entry for the past half century), the rationale now put forward is "operational requirements". We have been told that there is "no viable alternative" to changing the access owing to the configuration of the Landfill which makes construction of internal access roads too expensive and challenging.

Safety Concerns

Unfortunately, the process of dealing with the traffic question has been less than transparent. That said, if this change is going to happen regardless of community opposition, then it is important that the CRD address a number of safety, traffic circulation and perception issues that will inevitably arise. The transfer of heavy truck traffic on to Willis Point Road will lead to several safety concerns, notably icy surfaces in winter on the straight 9 percent grade, and the impact of heavy traffic on the numerous

mountain bikers, recreational and competitive cyclists that regularly use the road. A proper bike lane should be constructed up to the point where trucks will enter the Landfill.

Willis Point Road is also heavily used by recreational users of Durrance Lake in Mount Work Park and McKenzie Bight in Gowland Tod Park, by commuters using the route through the Highlands to the West Shore and by residents of Willis Point. Willis Point Road is our only secure means of reaching the rest of the region. While the Bunt traffic study argues that Willis Point Road is designed for a heavier traffic load than Hartland Avenue, it ignores that fact that unless there is smooth traffic flow on to and off Willis Point Road, there will be traffic congestion and safety issues affecting residents, school bus operations, casual users and indeed the trucks accessing the Landfill. The biggest problem is the intersection at the junction of Wallace Drive and West Saanich Road.

Intersection of Wallace Drive and West Saanich Road

This intersection was not designed with heavy traffic loads in mind. It has a pull off area for residential mail collection and is also where the Interurban bike trail terminates. At the same time, it will be where heavy trucks collect to turn either north (left) on to West Saanich Road or south (right). In either case, trucks turning north will block sight lines and vehicles turning right. Wallace Drive joins West Saanich Road at the bottom of a hill where south bound traffic tends to pick up speed. Unless this intersection is redesigned, there will be serious safety and traffic concerns. The response from CRD staff during the traffic consultation was not encouraging. They noted the problems raised but indicated that the responsibility for addressing them lay with the District of Saanich. We are concerned that funding the necessary redesign and reconstruction will not be a priority for Saanich as relatively few Saanich residents will be directly affected. Therefore, it is important that the CRD recognize its responsibility to allocate funding for this work. If internal roads were constructed within Hartland to avoid shifting access to Willis Point Road, this would be feasible but costly. As the CRD will be saving considerable funds by using the public infrastructure of Willis Point Road, provided and funded by Saanich, it should allocate some of these savings to address the imminent real traffic and safety concerns of regular users of Willis Point Road.

Truck Bypass on Willis Point Road Northbound

Given the regular use of this road by Willis Point residents and the likely delays that will occur when traffic is stuck behind a slow moving heavily-loaded truck going uphill, we believe it is essential that a couple of truck pull-offs be created, with appropriate signage to ensure that trucks moving below 40 kph comply. The road speed limit is 60 kmph (although it is constructed for higher speed) and if traffic is impeded, there is a risk that drivers will take chances to pass despite only limited areas to do so. The traffic report, which argued against the construction of a passing lane, claims that traffic will be held up by less than a minute but that assumes that all trucks will maintain a speed of 60 kmph on the uphill grade, which is most unlikely. The provision of pullouts would be a compromise between doing nothing and risking impeding traffic and inviting unsafe driving, and constructing a full passing lane, which has apparently already been ruled out.

Renaming Lower Part of Willis Point Road

In addition to addressing concrete congestion and safety concerns on Willis Point Road and at the intersection of Wallace Drive and West Saanich Road, there is an additional, low-cost measure that the CRD can take to address concerns of Willis Point residents. In the minds of many, there will be an

unfortunate association of Willis Point with the Landfill once the new access point becomes the primary entry for trucks. This could have an impact on public perceptions, ultimately affecting property values, leaving the impression that Willis Point Road is the "access to the dump". We have discussed and support re-naming the lower part of Willis Point Road, the section running from Wallace Drive to Ross Durrance Road. Willis Point Road would begin at Ross Durrance Road and run north to connect Willis Point residences with the southern section of the road. We propose that the new name be connected to the prime function of this section of the road, which is to access Mount Work Park. The name "Mount Work Parkway" has been suggested.

Fortunately there are no residences on the part of the road to be re-named, and only one street sign (at Wallace Drive) to be changed. The new Residuals Treatment Plant is designated as "280 Willis Point Road". It has already been sign-posted so one small address change would be required but otherwise a change of road name would have no postal or property registration implications. While a cosmetic change, this would decouple the name "Willis Point" from the Landfill and is something that the Willis Point Community Association strongly endorses and advocates. We hope the CRD will work with Saanich to effect this name change.

Biosolids

We are one of the communities most affected by changes to the use of Hartland. Our community suffered through two years of construction as the new sewage pipeline was constructed and there continue to be occasional road interruptions. We have been subjected to odour problems arising from the commissioning of the Residuals Treatment Plant (RTP), which are ongoing. We are also concerned about the plan to spread biosolids at Hartland, once the RTP begins to produce them, as this could affect human, plant and animal life in areas adjacent to the Landfill. Given these and other concerns, we are hopeful that the CRD Board will review our input carefully and take action where possible.

Summary and Thank you

The CRD SWMP is important to the WPCA because of both proximity and general love of nature and concern for the environment among Willis Point residents. I believe that the general environmental and climate concerns expressed affect the greater community of the CRD well beyond Willis Point.

I thank you for the opportunity to provide the views of the Willis Point Community Association on the current draft of the Solid Waste Management Plan and related traffic issues.

Yours sincerely,

Daniel J. Kenway, P.Eng
President

Hartland Landfill Access

Frequently Asked Questions

Capital Regional District | January 2021

1. Why will commercial vehicle access to Hartland Landfill be moved to Willis Point Road?

The CRD is required to move the commercial access for Hartland Landfill to Willis Point Road by 2023 for a number of operational reasons, including safety considerations for landfill staff, commercial vehicles and residents accessing Mount Work Regional Park.

Willis Point Road has a single, large hill with a max grade of 8% while current transportation routes to and within Hartland Landfill have grades of up to 15%. BC's Landfill Criteria suggests a maximum grade of 10% for large vehicles in this environment as the probability for trucks to rollover and cause accidents increases when loaded commercial vehicles are travelling excessively steep grades.

Due to its internal topography, the only viable route for trucks to safely access future filling areas at Hartland Landfill will be from Willis Point Road to the north of the landfill. An independent traffic study was conducted to understand the implications of these requirements, including both road safety and greenhouse gas emission considerations.

2. How will road traffic be impacted by this change?

The findings of the independent Hartland Traffic Study suggest that moving commercial access to Willis Point Road will improve overall traffic safety in the area. As a rural collector street, Willis Point Road is designed for higher vehicle use than Hartland Avenue. Willis Point Road's current use is less than half of what it was designed for (up to 5,000 vehicles per day) and this capacity is forecast to remain at least 20% below the typical threshold for this kind of road when landfill access is relocated to Willis Point Road. Landfill-related trucks will account for less than 15% of traffic on Willis Point Road and West Saanich Road when access to the landfill is moved from Hartland Avenue.

Starting in 2023, a daily average of 120 commercial trucks (80-90 large load trucks and 30-40 small load trucks) will access Hartland Landfill via Willis Point Road instead of Hartland Avenue. Starting in 2040, a daily average of 350 vehicles including both commercial haulers (120 per day) and residents (230 per day) will access Hartland Landfill from Willis Point Road when all access is relocated to the north in the future.

3. How has the Willis Point entrance been used in the past?

Originally built to provide access to a composting operation for yard and garden material, this entrance was constructed in the early 1990s. The composting facility operated for approximately 10 years and at its peak served 100 vehicles/day.

Hartland Landfill Access

Frequently Asked Questions

Capital Regional District | January 2021

4. How will GHG emissions be impacted by the relocation of commercial access to Hartland?

The findings of the independent Hartland Traffic Study suggest that moving commercial access to Willis Point Road will reduce greenhouse gas emissions by 2-3% as a result of lessening the steepness and total climb of trucking routes along internal and external roads.

5. How will parks users be impacted by the relocation of commercial access to Hartland?

Commercial vehicles are currently required to access Hartland Landfill through the Mount Work Regional Park trailhead and mountain biking parking lot. Relocating commercial access to Willis Point Road will create the opportunity of a safer, more inviting Hartland Avenue trailhead through the Mount Work management planning process.

6. How long has the CRD known that it would be required to access Hartland Landfill from Willis Point Road?

Future landfilling in the northwest corner of the landfill site was first described in the regional solid waste management plan that was approved by the CRD Board in 1987.

7. When was the need to access Hartland Landfill from Willis Point Road disclosed?

The first solid waste management plan to reference this eventual operational need was made public in 1989 following Provincial approval of the plan. Constructed in the early 1990s, the Willis Point Road entrance has always been a secondary access to the Hartland site yet the requirement to make it the primary access point for commercial vehicles will be triggered by the location of the new active face starting in 2023.

8. Why can't the future filling areas be accessed from the existing road within the landfill that allows access to the new Residuals Treatment Facility?

The Residuals Treatment Facility, part of the region's wastewater treatment infrastructure, is located in the northwest corner of the landfill site and is currently accessed from the Willis Point Road entrance due to the same safety and efficiency reasons being considered for all commercial vehicle access to this part of the Hartland property.

Hartland Landfill Access

Frequently Asked Questions

Capital Regional District | January 2021

9. What would be the cost of ensuring access to the new fill cells from the existing access at Hartland Avenue?

The internal roads from the south will eventually be buried in garbage and constructing a wide, two-way roadway from the south is not feasible due to both the internal topography of the site and the location of critical underground gas, lagoon and leachate infrastructure. The cost to move this infrastructure and to build an internal perimeter road is exorbitant and would not meaningfully address the safety issues for staff, contractors and patrons. For these reasons, the only viable route for trucks to safely access future filling areas at Hartland Landfill will be from the north off Willis Point Road.

10. Since it is planned that non-commercial traffic will continue to access the landfill from Hartland Avenue for the next 20 years, how will this waste reach new filling areas?

Non-commercial vehicles do not access the active face directly—they deposit waste into bins in the residential drop-off area. If bound for the active face, waste collected here is transported in a transfer bin weighing less than 10 tonnes (much smaller than a typical commercial truck that weigh up to 30 tonnes). The daily volume received at Hartland amounts to approximately 8-10 loads per day that will continue to be transported to the active face using internal roads until approximately 2040 when these roads will be buried in garbage. Smaller commercial vehicles that may pose safety concerns will also access the new filling area via Willis Point Road starting in 2023.

11. What additional provisions will be made for the safety of vehicles and cyclists when trucks are diverted to Willis Point Road?

This portion of Willis Point Road is already a designated truck route and, as such, is designed and maintained to a higher standard. Any safety recommendations—for example, the opportunity to reduce the speed of vehicles turning right from Wallace Drive to West Saanich Road—will be submitted to the District of Saanich for consideration by the Traffic Engineer. The CRD currently works with Saanich to increase the level of deicing on Hartland Avenue and a similar program could be explored for Willis Point Road.

12. Will the CRD consider widening and constructing bike lanes on either side of Willis Point Road as far as the turnoff to Hartland?

This suggestion can be included in the mitigation opportunities that will be considered by the CRD Board in spring 2021.

13. What mitigating factors will be undertaken to ensure that vehicles that regularly use Willis Point Road for access to their community are not impeded by this truck traffic?

The current design of this road does not cause commercial trucks to travel below the speed limit. Two passing lane options were analyzed and it was found that their maximum impact would be reducing travel times westbound on Willis Point Road by 15 and four seconds respectively. Even with this operational change in place, landfill traffic will account for less than 15% of all traffic on Willis Point Road.

14. Although a passing lane has been rejected, would consideration be given to one or to pull-outs on the uphill with signage requiring trucks travelling below 50 km/hour to pull over?

This suggestion can be included in the mitigation opportunities that will be considered by the CRD Board in spring 2021.

15. How will the CRD ensure that trucks turning off or on to West Saanich Road from Wallace Drive can do so safely while not impeding through traffic?

The traffic study recommended that Saanich consider options to reduce vehicle turning speed by reducing the turning radius while still providing sufficient space for large vehicles at this location.

16. Will the CRD provide assurance that the entry and exit point to the landfill from Willis Point will not provide priority right of way to trucks, and that through traffic (north or south bound) will not be impeded or forced to yield to turning truck traffic?

The CRD has no plans to provide priority right-of-way to trucks turning on to Willis Point Road from the landfill site. There is a turn lane for trucks turning off of Willis Point Road into the landfill site.

17. What measures or amenities is the CRD considering to mitigate the impact of this change on residents of Willis Point?

The CRD is currently seeking public feedback on this operational change to understand concerns and potential mitigation opportunities. Suggested measures from residents will be considered by the CRD Board in spring 2021.

18. What are your safety plans for the start and end of Interurban trail as there is no safe way to cross Wallace Drive?

Wallace Drive and the Interurban Trail are owned and managed by the District of Saanich. The CRD does not have any authority to make changes to these roads and trails. The traffic study for the landfill identified the opportunity to create a

Wallace Drive crossing either at the West Saanich Road intersection or at a safe location further from West Saanich Road than the existing trail entrance.

19. How do you conclude that Willis Point Road has more capacity than Hartland Avenue?

Willis Point Road has been designated as a truck route by the District of Saanich and is designed to accommodate more vehicles than Hartland Avenue since it has milder grades, paved shoulders, wider curves and fewer driveways.

20. What is the time of day that you measured the number of vehicles on each road for the traffic study?

Vehicle use on Willis Point Road was measured for nine full days. Vehicle use on Hartland Avenue and West Saanich Road was measured for three full weekdays. Additional data was collected at the study intersections on weekdays from 7:30 - 9:30 am and 3:30 - 5:30 pm as well as on Saturdays from 1:00 - 3:00 pm.

21. If the Hartland 2100 design concept isn't needed, will traffic access still need to move to Willis Point Road?

Yes, the Willis Point Road entrance for Hartland Landfill will need to become the primary access point for commercial vehicles by approximately 2023 to ensure safe access to existing filling areas in the northwest corner of the landfill.

22. Willis Point Road was never designed to accommodate 300 cars on the side of the road for parking—how was this traffic accounted for in the independent study?

The transportation study accounted for all vehicles travelling on Willis Point Road between Wallace Drive and the existing landfill entrance. All cars that travelled along this road section were measured including those that parked on the side of Willis Point Road to access the nearby regional parks. Managing parking at nearby regional parks is not included in the scope of the Solid Waste Management Plan but can be addressed as part the ongoing Mount Work Park Management Plan.

23. Who has the overall traffic and design information for both Willis Point Road and Hartland Avenue?

Both roadways are managed and maintained by the District of Saanich.

Hartland Landfill Access

Frequently Asked Questions

Capital Regional District | January 2021

24. There is a much higher frequency of accidents on Willis Point Road than Hartland Avenue. Why was this not considered in the traffic study and how do you consider what is safer without doing so?

The traffic study considered the frequency of collisions and identified potential safety improvements for the District of Saanich to consider. A variety of factors was considered to evaluate the vehicle access routes including collision frequency, a street design and safety review, vehicle capacity, street grades, active transportation, vehicle emissions and vehicle circulation on the landfill property. Design changes to the intersection of Willis Point Road and Wallace Drive can be discussed with the District of Saanich to ensure drivers are making safe decisions as they move through that area.

25. Why is it not possible to build a new internal road to access future landfilling areas? Could CRD staff please confirm whether or not it is possible to engineer a road on site from Hartland Rd that meets the grade requirements?

The internal roads from the south will eventually be buried in garage and constructing an alternate wide, two-way roadway from the south is not feasible due to both the internal topography of the site and the location of critical underground gas, lagoon and leachate infrastructure. Landfill sites produce significant volumes of landfill gas and leachate and any damage to the required buried infrastructure will pose significant risk to road users as well as the environment. The cost to move this infrastructure and to build an internal perimeter road is exorbitant and would not meaningfully address the safety issues for staff, contractors and other users. Significant roads are not typically constructed on top of waste and hence the only viable route for trucks to safely access future filling areas at Hartland landfill will be from the north side off Willis Point Road.

26. Given the traffic levels and safety concerns on Hartland are already high, why wait until 2023 to move the access to the safer route?

Moving commercial access to the north right now would make it difficult to access the current active face of the landfill which is closer to the south end of the property. Implementing use of the north access in 2023 aligns with our timeline for landfilling of the new cells along the northwest portion of the site.

27. Given the bins are currently sitting outside of the Landfill's berm, are they not technically sitting exposed to the Prospect Lake watershed?

The CRD will move the bins from their current location to a new space within the landfill footprint in summer 2021.

28. Will CRD commit to ensuring excellent winter road safety on Willis Point Road?

The CRD currently works with the District of Saanich to increase the level of de-icing on Hartland Avenue and a similar program could be explored for Willis Point Road.

29. Would it be reasonable to consider the other road users, number of residential driveways and side roads as factors in assessing the safety of Willis Point Road?

Additional provisions will be made for the safety of other road users when trucks are diverted to Willis Point Road.

30. What measures will be taken to decrease the risk to bike park users as they cross Hartland Avenue in front of the public access to Hartland Landfill?

Significant safety improvements were made at this intersection near the Hartland Landfill entrance in 2018 and 2019, including a new stop sign for downhill traffic leaving the landfill and additional parking to alleviate congestion. Staff will continue to monitor the safety and performance of this intersection.

31. Is there any possibility that a change of name for the lower part of Willis Point Road might be considered?

This suggestion can be included in the mitigation opportunities that will be considered by the CRD Board in spring 2021.

32. Why can't a road to Hartland Landfill be built from the Western communities?

The construction of a new road to Hartland Landfill from the Western communities would be very challenging to build, both from a land availability perspective and due to the extremely high cost of this type of project—particularly when access to the landfill is already available via a designated trucking route along Willis Point Road.

33. If Willis Point Road didn't exist what would your plan be?

CRD staff would consider the needs of all potential road users, study alternate route options and build a trucking route similar to Willis Point Road..

APPENDIX F

Motions from April 9, 2021 Solid Waste Advisory Committee

Organics

That Capital Regional District staff, as part of the Solid Waste Management Plan implementation, report back on an annual basis on on-island organics processing capacity.

Solid Waste Management Plan

With the plan approval, as part of the Solid Waste Management Plan implementation and monitoring, the Solid Waste Advisory Committee will look for the following information:

1. disposal estimates for each waste strategy and action in order to confirm that the annual solid waste disposal target of 250 kg per capita is indeed achievable by 2030, following the progress indicated on page 46 of the SWMP;

2. evidence of the interest and ability of waste recyclers and processors to support the CRD solid waste disposal target by 2030;

3. outlines of the fate of each major waste component diverted from the Hartland Landfill, including components diverted for export from the CRD;

4. a description of the Circular Economy concept, together with its strengths and limitations, and the applicability of the concept to the major waste components identified in the CRD SWMP;

5. information from other cities on solid waste innovations with applicability to the CRD, stating also where the CRD would benefit from innovation through research and advanced professional practice; and

6. more definitive strategic options for the Hartland Landfill that address its capacity limitations, potential capacity extensions, and neighbourhood impacts, referenced to total waste disposal estimates.

Making a difference...together

REPORT TO THE FINANCE COMMITTEE
MEETING OF WEDNESDAY, MAY 05, 2021

SUBJECT Bylaw No. 4421: 2021 to 2025 Financial Plan Bylaw, 2021, Amendment No. 1, 2021

ISSUE SUMMARY

The 2021 to 2025 Financial Plan was adopted on March 24, 2021. Amendments to the Plan are required to authorize revised operating and capital expenditures.

BACKGROUND

The Capital Regional District (CRD) Board approved the 2021 to 2025 Financial Plan (Bylaw No. 4409) on March 24, 2021. Amendments are required in accordance with Section 374(2) of the *Local Government Act* (LGA), which states that the financial plan may be amended at any time by bylaw to incorporate changes in budget, for certainty. As new information becomes available and pursuant with Section 374 of the LGA, the CRD Board may further revise the financial plan.

The following table highlights the 2021 impact of the proposed amendments to the five-year 2021-2025 Financial Plan.

SERVICE	DESCRIPTION	BUDGET	FUNDING	NET IMPACT	COMMITTEE / COMMISSION APPROVAL
Corporate Emergency	COVID-19 Safe Restart Grants for Local Governments	Operating	Provincial Grant Revenue	$250,000	CRD Board 14-Apr-21
Salt Spring Island – Pool, Parks & Land, Art & Recreation Program	Pool Ductwork and HVAC maintenance	Operating	Reserve Fund	$8,500	Salt Spring Island Parks and Recreation Commission 16-Mar-2021
Salt Spring Island – Community Parks	Centennial Park Playground Donation project	Capital	Donation	$70,000	
Panorama Recreation	Jumpstart Multi-Sport Court and Playground Relocation	Capital	Reserve Fund, Grants	$1,268,238	Peninsula Recreation Commission 25-Mar-2021 CRD Board 14-Apr-2021

SERVICE	DESCRIPTION	BUDGET	FUNDING	NET IMPACT	COMMITTEE / COMMISSION APPROVAL
Regional Parks	Lochside Trail Paving (700m) – phase 1	Capital	Donation, Capital Funds on Hand	$150,000	Regional Parks Committee 28-Apr-2021

The proposed Financial Plan amendment Bylaw No. 4421 incorporates these changes, and is attached as Appendix A, inclusive of an updated Schedule A and Schedule B.

ALTERNATIVES

Alternative 1
The Finance Committee recommends to the Capital Regional District Board:
1. That Bylaw No. 4421, "2021 to 2025 Financial Plan Bylaw, 2021, Amendment Bylaw No. 1, 2021" be introduced and read a first, second, and third time; and
2. That Bylaw No. 4421 be adopted.

Alternative 2
That Bylaw No. 4421 be deferred pending further analysis by CRD staff.

IMPLICATIONS

Financial Implications

Corporate Emergency
In November 2020, the province of BC distributed $415 million of the $425 million of the Safe Restart Grants for Local Governments. The program was intended to assist local government operations that had been impacted by COVID-19. In March 2021, the Province announced the remaining $10 million would be allocated to regional districts. In November 2020, the CRD received $1.4 million for this program. Through the incremental allocation, the CRD is receiving an additional $0.6 million for a total of $1.9 million.

The Board approved apportioning the incremental $0.6 million between Corporate Emergency and the Electoral Areas services. The amendment will increase grant revenue by $250,000 within the Corporate Emergency service, and staff will advance the Electoral Area amendments following consultation from each EA director.

Salt Spring Island – Pool, Parks & Land, Art & Recreation, and Community Parks
The facility ductwork and HVAC have been identified as a concern at the Rainbow Road Aquatic Centre and recommended to be cleaned and serviced. It is unknown when this work was last completed over the 12 years of the aquatic centre's operations; the CRD began management of the aquatic centre in 2018. It is recommended that ductwork be cleaned every three to five years. The Salt Spring Island Parks and Recreation Commission has recommended this work be funded from the Salt Spring Island Pool and Park Land Operating Reserve Fund in 2021, at $8,500.

The Commission also endorsed that a donation of $70,000 be accepted, and the financial plan be amended to add the Centennial Park Playground Donation project. This donation was made

known to the Commission in mid-February, and has been accepted to fund upgrades to the Centennial Park Playground, including additional toddler play features.

Panorama Recreation
The Peninsula Recreation Commission has endorsed the inclusion of the Jumpstart Multi-Sport Court and Playground Relocation project to the capital plan for 2021. The Canadian Tire Jumpstart Charities has proposed the project to build a multi-sport court located at Panorama Recreation, for a total cost of $1,268,238. The charity will provide grant funding and in-kind donation of $604,277, while the balance of the project, including relocation of the playground, is to be funded by the capital reserve fund.

The multisport facility would allow for inclusive programming for all ages and could include fitness classes, childminding, designated drop-in sport times for youth and adults, children's multisport programs and inclusive sport party options.

Regional Parks
A private organization, via the Victoria Foundation, has offered to fund a large portion of the cost to pave a gravel section of the Lochside Trail. For 2021, they have offered $115,000, which would be matched with $35,000 in capital funds from Regional Parks to pave approximately 700 meters of trail. A budget amendment of $150,000 in 2021 allows Parks to conduct the paving during the summer or fall.

CONCLUSION

In compliance with the *Local Government Act*, the proposed amending Bylaw No. 4421 authorizes the changes required to the 2021 to 2025 Financial Plan Bylaw No. 4409, which the CRD Board approved on March 24, 2021.

RECOMMENDATION

The Finance Committee recommends to the Capital Regional District Board:
1. That Bylaw No. 4421, "2021 to 2025 Financial Plan Bylaw, 2021, Amendment Bylaw No. 1, 2021" be introduced and read a first, second, and third time; and
2. That Bylaw No. 4421 be adopted.

Submitted by:	Rianna Lachance, BCom, CPA, CA, Senior Manager, Financial Services
Concurrence:	Nelson Chan, MBA, FCPA, FCMA, Chief Financial Officer
Concurrence:	Kristen Morley, J.D., General Manager, Corporate Services & Corporate Officer
Concurrence:	Robert Lapham, MCIP, RPP, Chief Administrative Officer

ATTACHMENT(S)

Appendix A: Bylaw 4421, with Schedule A and Schedule B

CAPITAL REGIONAL DISTRICT

BYLAW NO. 4421

****

A BYLAW TO AMEND THE FIVE YEAR FINANCIAL PLAN FOR THE YEARS 2021 – 2025

****

The Board of the Capital Regional District in open meeting assembled enacts as follows:

1. Bylaw No. 4409, "2021 to 2025 Financial Plan Bylaw, 2021", is hereby amended by replacing Schedules A and B with the attached schedules hereto.

2. This Bylaw may be cited as “2021 to 2025 Financial Plan Bylaw, 2021, Amendment Bylaw No. 1, 2021”.

READ A FIRST TIME THIS	th	day of	202__
READ A SECOND TIME THIS	th	day of	202__
READ A THIRD TIME THIS	th	day of	202__
ADOPTED THIS	th	day of	202__

REPORT TO REGIONAL PARKS COMMITTEE
MEETING OF WEDNESDAY, APRIL 28, 2021

SUBJECT **CRD Regional Parks Mountain Biking Guidelines**

ISSUE SUMMARY

To seek direction on the proposed Capital Regional District (CRD) Regional Parks Mountain Biking Guidelines.

BACKGROUND

A Notice of Motion was introduced at the October 23, 2019 Parks & Environment Committee meeting recommending that the CRD Board approve a budget, provide staffing and request that staff develop a Terms of Reference (TOR) for an advisory committee with the goal of developing a mountain biking policy for CRD Regional Parks within a defined timeframe.

On October 30, 2019, the CRD Board, at a special meeting, recommended the approval of $40,000 in the 2020 Financial Plan to support the creation of an advisory committee to support the development of a mountain biking policy. The Notice of Motion was approved by the CRD Board on November 13, 2019.

In response to the Notice of Motion, staff developed a draft TOR for an advisory committee to provide advice and guidance for the use of developing mountain biking guidelines in CRD regional parks. On May 27, 2020, the TOR for a Mountain Biking Advisory Committee was approved by the CRD Board.

The Mountain Biking Advisory Committee (MBAC) is comprised of people in the capital region with an interest in recreation and a knowledge of the regional park system. The members of the advisory committee represent a variety of stakeholders with diverse backgrounds, interests and geographical locations. The MBAC developed an advice and guidance report (Appendix B) to support staff in the development of the CRD Regional Parks Mountain Biking Guidelines (Appendix A). The MBAC was provided the draft guidelines for review and CRD staff further refined the mountain biking guidelines after receiving their feedback. Advice and guidance that fell outside of the MBAC terms of reference has been considered for further action and based on this, a set of short-term actions have been identified (Appendix C). A longer-term vision for mountain biking in the CRD will be addressed during the upcoming Regional Parks Strategic Plan update.

Implementation of the guidelines is forward-looking. They do not automatically apply retroactively to regional parks or trails. The guidelines will be used to bring about consistency and structure to decisions regarding mountain biking within the regional park system.

ALTERNATIVES

Alternative 1

The Regional Parks Committee recommends to the Capital Regional District Board:

That the CRD Regional Parks Mountain Biking Guidelines and the Short-term Actions to support the Mountain Biking Advisory Committee Advice and Guidance Report be approved.

Alternative 2

That this report be referred back to staff for additional information.

IMPLICATIONS

Social Implications

The mountain biking guidelines provide a transparent process for identifying the most appropriate mountain biking areas within regional parks and acknowledges that there is a desire for more quality mountain biking experiences in the system. As of 2020, Regional Parks has 239 kilometres of trails that allow mountain biking. Although not necessarily optimized or rated for mountain biking, they offer some form of mountain biking or cycling. Out of these trails, 67 kilometres have been assessed and given a difficulty rating for mountain biking.

Environmental & Climate Implications

With 8.5 million visits to the regional parks system in 2020, it is important to manage and minimize possible ecological impacts caused by recreational activities on parks ecosystems. Protecting sensitive ecosystems and biodiversity are key factors to creating resiliency towards climate change. The mountain biking guidelines will provide the CRD additional tools that it needs to establish quality mountain biking opportunities while ensuring adequate and ongoing protection of cultural and environmental values, such as species, habitats and ecosystems within the regional parks system.

Intergovernmental Implications

CRD regional parks are part of a network of local, regional, provincial, federal and private mountain biking opportunities across the landscape. Given that the CRD is not able to meet the current demand for mountain biking opportunities, a region-wide approach is required in order to provide a diversity of cycling experiences and opportunities within the larger capital region for regional residents and visitors. CRD regional parks play a role in providing mountain biking opportunities as well as optimizing existing trails/trail networks that contribute to the overall mountain biking experience.

Service Delivery Implications

The CRD recognizes there is a gap between the demand for mountain biking and the outdoor recreation offered in the region. Although the full demand may never be met within regional parks, the CRD will continue to play a role in providing mountain biking areas and opportunities when identified through a park management planning process.

Any land altering works need to be carefully assessed with the lens of protecting both ecological and cultural values. To minimize impacts to cultural resources, CRD will be working with local First Nations, where possible, to better understand the cultural values on the landscape and ensure that recreational uses are compatible. The CRD follows cultural heritage policies and legislation during planning processes and land altering works to protect archaeological, cultural and heritage values in the CRD.

Recognizing that mountain biking groups play a key role in championing mountain biking etiquette and sanctioned trails, monitoring and advocating for safe and quality experiences and celebrating the recreational community, mountain biking experiences in the region are likely to be more successful when involving a local mountain biking group.

Alignment with Existing Plans & Strategies

The 2012-2021 Regional Parks Strategic Plan identifies some of the challenges facing the regional park system. One challenge is placing the right activity in the right area, within the context of the vision and designated purpose of the regional park system and of specific parks or trails. Given that mountain biking guidelines cannot supersede other planning processes, these guidelines have been drafted with the purpose of providing specific direction and a systematic and consistent decision-making process for planning, developing and managing mountain biking activities throughout CRD regional parks. These guidelines do not provide a plan for where, how and when mountain biking opportunities should occur in regional parks, rather guide established decision-making processes that identify mountain biking opportunities, such as the park management planning processes.

It's important to note that the guidelines document will never be one size fits all for addressing all the experiences and expectations of stakeholder groups. As such, there are some aspects of the advice provided by MBAC which are not reflected in the guidelines as they were out of scope of the TOR. This should not be perceived as a lack of commitment to addressing the advice and guidance provided by the MBAC.

To that end, a series of short-term actions have been provided (Appendix C) to support and enhance mountain biking in regional parks where mountain biking is identified as an acceptable use.

Staff see the guidelines as the first step towards the CRD and the various stakeholders working closer together to continue to build better and more sustainable quality mountain biking experiences in the regional parks system.

CONCLUSION

A Notice of Motion was approved by the CRD Board on November 13, 2019 to create an advisory committee to support the development of a mountain biking policy. With the advice and guidance from the Mountain Biking Advisory Committee, staff have developed and sought approval for the CRD Regional Parks Mountain Biking Guidelines. The guidelines are forward-looking and will provide a consistent approach to assessing and managing the provision of mountain biking opportunities within CRD regional parks over time.

RECOMMENDATION

The Regional Parks Committee recommends to the Capital Regional District Board:

That the CRD Regional Parks Mountain Biking Guidelines and the Short-term Actions to support the Mountain Biking Advisory Committee Advice and Guidance Report be approved.

Submitted by:	Jeff Leahy, RPF, Senior Manager, Regional Parks
Concurrence:	Larisa Hutcheson, P.Eng., General Manager, Parks & Environmental Services
Concurrence:	Robert Lapham, MCIP, RPP, Chief Administrative Officer

Traditional Territory Acknowledgement

We acknowledge that we are on the traditional territory of WSIKEM (Tseycum), WJOŁEŁP (Tsartlip), STÁUTW (Tsawout), BOḰEĆEN (Pauquachin), MÁLEXEŁ (Malahat), Songhees, Esquimalt, T'Sou-ke, Sc'ianew (Beecher Bay), Cowichan, Penelakut, Lyackson and Pacheedaht First Nations. Indigenous culture, land, food, medicine and storytelling are all inextricably tied to the surrounding lands and waters.

As we explore these Mountain Biking Guidelines, let us be mindful of the potential implications that our decisions have on Indigenous peoples and their territories and thank them for sharing this land with us.

Glossary

Activity Optimized Trails allow two or more distinct activities to occur on the trail, but have been designed and incorporate activity optimized features that elevate the experience for only one of the activities.

Board means the Board of the Capital Regional District.

CRD means the Capital Regional District.

Constructed Technical Training Features are human-made structures that often require the use of artificial materials such as processed lumber and metal fasteners.

Engagement means communicating with stakeholders through a variety of means. This can be through, but not limited to, conversations, workshops, surveys or information circulated/distributed by CRD staff.

Enhanced Technical Training Features manipulate natural materials to increase the challenge.

Flow Trail (*Flowy*) is a trail that is usually machine-built or constructed and typically contains berms, rollers and potentially jumps, designed to emphasize rhythm and meander through the landscape, connecting features that use the rider's momentum to minimize pedaling and braking.

IMBA Standards refers to the International Mountain Biking Association's guide for trail building[1].

Linear Disturbance refers to straight or curvilinear movement corridors that usually contrast with the adjacent landscape. In a regional context these are often old logging roads or hydro line paths.

Mountain Biking Experience is defined as the ability for a rider to take part in their desired discipline on a trail that provides their desired level of difficulty within a desired recreation setting and landscape.

Mountain Biking is an outdoor recreation activity involving riding bicycles off-road, often over rough terrain, using specially designed mountain bikes. It is an umbrella term used to refer to a variety of more specific mountain biking disciplines (such as cross country, all mountain, downhill and adaptive mountain biking) that seek out different terrain, trail design characteristics, technical trail features and supporting infrastructure.

Multi-use Trails allow two or more distinct activities to occur on a single trail but the experience and amenities have not been optimized for any particular activity.

Natural Technical Training Features incorporate the use of existing natural features into the trail design – these highlight the landscape of the area.

[1] Felton, V. (2004) *Trail Solutions: IMBA's Guide to Building Sweet Singletrack*

Park Values means the value of regional parks to the residents of the CRD, as outlined in the Regional Parks Strategic Plan[2], including the parks' contribution to regional sustainability, environmental protection, building healthy communities, contributing to the regional economy, and reflecting local cultural heritage.

Pedal Assist is a mode of power engagement that requires pedaling feedback/input from the user to engage the motor.

Recreational Setting is made up of the characteristics of the area (i.e., developed vs pristine wilderness) along with the distinct ecosystem in which it exists.

Self-Propelled is the propulsion by pedals using human power. This includes pedal-assist cycles which enhance the effort of the rider only when they are pedaling.

Single-use Trails allow only one recreation activity and have been designed to optimize the experience for that activity.

Single-track Trails are a type of mountain biking trail approximately the width of the bike.

Special Use is any commercial or non-commercial service, activity or event that attracts participants or spectators, for which a park permit is required, and includes but is not limited to festival, competition, tournament, show or outdoor ceremony. A park use permit is required for all special use.

Technical Trail is a trail that integrates rough terrain, such as roots, rocks and obstacles and can require a greater degree of skill to ride as they involve a greater degree of pedaling and braking.

Technical Trail Features (TTFs) are obstacles or design elements on a mountain biking trail that improve trail flow or add difficulty in order to challenge the skill of trail users. The three TTFs are natural, enhanced and constructed.

Technical Training Area is a special use area that features a variety of technical trail features. The focus is on riders' skill development.

Trail is a type of infrastructure that is purposefully designed, constructed, and used to facilitate one or more recreational activities. To be recognized as a trail, the route must be approved by the landowner/land manager, mapped, marked or signed, and actively managed and maintained.

[2] https://www.crd.bc.ca/docs/default-source/crd-document-library/plans-reports/parks-recreation/regional-parks-strategic-plan-2012-21.pdf?sfvrsn=b19788c9_2

Mountain Biking Guidelines

Application

The Mountain Biking Guidelines apply to all mountain biking activities taking place within the CRD regional parks system. This includes mountain biking as an activity as well as the construction and maintenance of mountain biking trails and related facilities and infrastructure.

The guidelines are forward-looking and intended to be applied by CRD staff, Committees and the Board during:

- Strategic planning
- Park management planning
- Land acquisition
- Capital planning
- Sustainable service delivery
- Operations and facility maintenance
- Compliance and enforcement
- Collaboration and partnership opportunities

The guidelines serve as a tool for standardized language and common understanding as we work with stakeholders. These guidelines are to be implemented in a manner consistent with overarching legal requirements and strategic policies applicable to CRD Regional Parks. The key documents related to these guidelines may be updated and changed from time to time. The current list of documents can be found in Appendix 1.

Background

Visitation to regional parks is growing yearly, with an increase from 5.2 million in 2010 to 8.6 million in 2020. The increase in park users and uses has resulted in more demand for outdoor recreation opportunities for a range of experiences and activities, including mountain biking. As of 2020, CRD Regional Parks has 239 kilometres of trails, although not necessarily optimized or rated for mountain biking, that offer some form of mountain biking or cycling. Out of these trails, 67 kilometres have been assessed and given a difficulty rating for mountain biking.

Regional Parks recognizes that mountain biking is a mainstream outdoor recreation activity that has increased in popularity throughout North America and is enjoyed by a diversity of people of all ages and abilities for the physical, mental and social benefits. Mountain biking creates an opportunity to connect riders with nature, as well as, provides the excitement and challenge that the riders are seeking. The capital region's temperate climate, together with its growing network of trails and suitable terrain, make the region appealing for mountain biking year round.

Recognizing that mountain biking groups play a key role in championing mountain biking etiquette and sanctioned trails, monitoring and advocating for safe and quality experiences, and celebrating the recreational community, mountain biking experiences in the region are likely to be more successful when involving a local mountain biking group.

The regional parks system currently offers a mountain biking trail network in two regional parks: Mount Work and Sea to Sea. The trails in these locations are assigned with a trail difficulty rating adopted from the International Mountain Biking Association standards. At this time, mountain biking trails include all trail designations, including multi-use trails and/or access roads. These trails may not be optimized for mountain biking. The proportion of each trail difficulty rating on designated trails, although not necessarily optimized, is outlined as follows:

Regional Park	Green	Blue	Black	Double Black	Total
Mount Work – Hartland	20.7% (9.5 km)	18.3% (8.4 km)	49.9% (22.9 km)	11.1% (5.1 km)	100% (45.9 km)
Sea to Sea – Mount Manuel Quimper	39.5% (9.4 km)	17.7% (4.2 km)	37.8% (9.0 km)	5.0% (1.2 km)	100% (23.8 km)

Figure 1: Based on CRD Regional Parks & Environmental Services GPS regional park trail data (2019).

The CRD recognizes there is a gap between the demand for mountain biking and the outdoor recreation offer in the region. Although the full demand may never be met, CRD Regional Parks can play a role in providing mountain biking opportunities as well as optimizing existing trails/trail networks that contribute to the overall mountain biking experience.

In order to improve the mountain biking experience in regional parks, a Mountain Biking Advisory Committee (MBAC) was established in 2020. This committee developed the *Mountain Bike Guidelines: Advice and Guidance to CRD Regional Park*s which supported staff in the development of these guidelines.

Regional parks are part of the mountain biking offer within the entire region and are not able to provide all mountain biking experiences in all locations for all users. A region-wide approach is required in order to provide a diversity of mountain biking experiences for regional residents and visitors, see map (Appendix 2) when considering a regional approach to the mountain biking offer within the greater region.

Purpose

The purpose of the Mountain Biking Guidelines is to provide clear direction and a systematic and consistent decision-making process for planning, developing and managing mountain biking activities throughout CRD regional parks. These guidelines do not provide a plan for where, how and when mountain biking opportunities should occur in regional parks, nor do they make any commitments.

Principles

The following principles guide the application of the guidelines:

- The CRD acknowledges that opportunities for sustainable and safe mountain biking will be provided within the regional park system.
- CRD Regional Parks will continue to provide mountain biking opportunities that allow for quality experiences for a range of ages and abilities.
- CRD Regional Parks allows for mountain biking as a self-propelled, including pedal assist, outdoor recreation activity on designated trails.
- The CRD recognizes that mountain biking is an activity that cannot be supported in all regional parks.
- As per the CRD's commitments to First Nations' reconciliation within the regional park system, mountain biking decisions will honour First Nation relationships with the land and water and help ensure protection of important cultural values.
- The CRD recognizes that engagement with the mountain biking community is key to success.
- CRD Regional Parks will continue working with mountain bikers to better understand the range of desired mountain biking experiences in regional parks (i.e., supply, discipline, and difficulty level).
- CRD Regional Parks will plan for and manage for recreational activities in a way that prevents or minimizes the potential for conflicts and safety risks.
- CRD Regional Parks will close and remediate mountain biking trails that are considered unsafe, unauthorized, redundant or have an unacceptable level of impact to park values.
- CRD Regional Parks will ensure that building and maintaining mountain biking infrastructure is compatible with sustainable service delivery.
- Proposed mountain biking events will have to be applied for through the park permitting process.
- CRD Regional Parks will commit to ongoing staff training on construction/development and design of mountain biking facilities to stay current, increase expertise and collaborate with the mountain biking community.

Disciplines

Context

Mountain biking is an umbrella term that is used to refer to a variety of more specific mountain biking disciplines. Each of these disciplines seek out different terrain, trail design characteristics, technical trail features and supporting infrastructure. With the exception of adaptive mountain biking, most mountain bike disciplines seek single-track, purpose-built and mountain bike optimized trails. In general, these single-track trails can be designed to provide a "flow" experience and/or a "technical" experience.

Though mountain bike disciplines continue to evolve, the most typical mountain biking disciplines referenced today include:

- Cross country (as well as gravel riding & cyclocross which use cross-country trails): involving off-roading through a variety of terrain. Trails incorporate long climbs and flowing descents, and sometimes will incorporate technical trail features like rock gardens.

- All mountain: this discipline entails overcoming extreme natural obstacles and is more of a technical ride and less flowy than cross-country trails. These trails have more of a focus on downhill sections of the trail with a number of technical trail features.
- Downhill: trails are designed to take riders down rough and steep hills that incorporates technical trail features along the descent. This discipline is focused on one direction riding using gravity to propel a rider down the hill and other means of transportation such as vehicle or lift to bring the rider back to the top.
- Adaptive Mountain Biking: for riders who require a certain type of bike and trail to be ridden. These bikes can vary from trike bikes to hand bikes and wheelchair bikes. Properly designed and constructed adaptive mountain biking trails are required to accommodate the specifications of these bikes.

Guidance

Regional Parks will focus on the development of cross country and all mountain disciplines and will further research best practices for creating opportunities for Adaptive Mountain Biking in regional parks.

Trail Designations

Context

A trail is a type of infrastructure that is purposefully designed, constructed, and used to facilitate one or more recreational activities. Trail designations influence how people experience the trail and determine if it is intended for one or multiple user groups. There are a number of factors determining how a trail will be designated, including the park management zone, recreational setting, ecological and cultural heritage considerations, range of recreational users, potential for user conflicts, visitation levels, and maintenance requirements among others.

The most common trail designations are:

Multi-use Trails

Multi-use trails or shared-use trails allow for two or more distinct recreation activities to access and share a trail. The characteristics of a multi-use trail are:

- Accommodates a range of recreational activities.
- Creates opportunities to develop mutual respect and build awareness among different recreational activities and users.
- Takes advantage of limited space when there are many different activities and allow access to unique destinations for all users.
- Limits ecosystem impacts by concentrating recreational impact on a single trail.

Single-use Trails

Single-use trails allow for one recreation activity to access and use a trail. The characteristics of single-use trails are:

- Helps alleviate crowding on the trails.
- Helps avoid trailhead crowding by separating access points for specific recreation activities.
- Targets the desired experience of the specific recreation group.
- Allows specific recreational users to travel at their desired speed without worry of affecting others.
- Provide skill areas that allow specific recreational activities to focus on and improve their abilities.

Activity Optimized Trails

Activity optimized trails allow for two or more recreational activities to access and share the trail but are designed to optimize the experience of only one recreational activity. The advantages of activity optimized trails are:

- Combine many of the benefits of multi-use and single-use trails.
- Can utilize optimized features that enhance the experience for a specific recreational activity.

Guidance

Trail designations can greatly influence the user experience. Trails that have been optimized for mountain biking may look and feel quite different from those that are designed for multiple activities. The trail designation needs to consider what activities will be using the trail, the mountain biking discipline the trail is being designed for as well as the direction of travel of a rider. The trail designation must also consider if it lies within a regional parks management zone (Appendix 3) or special use area (Appendix 4), such as a mountain biking area, as these speak to the acceptable trail density as well as influence the experiences the trail can offer.

Trail Difficulty Rating

Context

A trail difficulty rating system enables visitors to understand the nature of the trail(s) before beginning their ride and allows them to plan their ride for the experience that they are seeking.

Guidance

When trails will be designated for mountain biking opportunities, the CRD will apply the trail difficulty rating included in Appendix 5. Only mountain bike single-use and activity optimized trails will be rated.

Technical Trail Features

Context

Technical trail features (TTFs) are obstacles or design elements on a mountain biking trail that improve trail flow or add difficulty in order to challenge the skill of trail riders. TTFs are an important part of mountain biking trails and are meant to enhance the mountain biking experience. Typically, a mountain biker has the option to ride or bypass TTFs. Work constructed solely for the purpose of enhancing trail safety or access (e.g., a bridge crossing a stream) or to maintain ecological integrity or cultural values are not considered TTFs.

Below are three categories of TTFs with examples of features under each:

Natural	Enhanced	Constructed
Drop	Rock garden	Wooden berm
Rock face / slab	Dirt berm	Bridge (used for play)
Rock roll	Switch berm	Wall ride
Exposure	Small rollers	Skinny
Roots	Log ride	Jumps that are human built
Natural rock garden	Table top	Gap jump
	Step up/down	Pump track
	Jump using existing natural features	

Figure 2: Based on information from IMBA.

Guidance

For CRD Regional Parks, the focus will be to incorporate natural trail features along with enhanced trail features. TTFs should be developed using natural materials as they are more durable and blend into the surrounding landscape. The use of constructed TTFs should be kept to a minimum and will mostly be considered for the use in technical training areas. CRD staff will review proposed features in order to determine their acceptability based on risk, sustainability, difficulty rating as well as any other factors that go into the trail development process. Professional engineers may have to design the more technical features.

Risk Management

Context

Mountain biking carries a certain amount of risk that most riders come to expect. They feel the associated potential hazards contributes to the enjoyment of the activity (i.e., uneven ground; steep slopes; cliffs).

It is important to recognize the potential safety hazards associated with mountain biking in order to minimize/mitigate the impact of this outdoor recreation activity on the riders and other park visitors. Risk management focuses on identifying, assessing, mitigating, communicating and documenting risks to illustrate reasonable action has been taken to minimize the negative consequences.

As trails are developed, appropriate mitigation measures will be developed to lower the risk to all regional park users. Some of the key risks related to mountain biking in regional parks are:

- Absent, inadequate or misleading signage – trails will be clearly identified, evaluated, rated and marked. Trails need to be identified as recreational infrastructure and users assume all risk when using the trails.
- Unauthorized trails and structures/features developed by users, expanding and changing trails and trail networks, creating unsafe paths for other users – all these changes create safety concerns as they are not identified in the formal trail network. These changes do not adhere to site emergency plans, and

are not regularly inspected or maintained. Regional Parks will close and remediate unauthorized trail construction or trail modification.
- Other considerations such as rider safety and trail design must be considered during the trail planning process.

Guidance

Mitigation measures that are used to reduce risk are:

- Applying trail difficulty ratings to inform users of potential hazards associated with mountain biking use.
- Minimizing constructed TTFs, especially wood features, and following approved regional parks standards or sound engineering design. This minimizes the level of maintenance involved with upkeep and potential liability associated with substandard structures.
- Developing properly designed trails that include design standards for specific uses, with associated operational, monitoring and maintenance activity. Have ongoing monitoring and maintenance documented by staff or the license agreement holder who will provide such documents at specified intervals to the CRD. Extremely hazardous conditions should be reported immediately (i.e., dangerous trees, fallen trees, unstable terrain, etc.) to the CRD.
- Conducting independent evaluations at specified intervals (approximately every 5 years) to formally assess the maintenance, evaluate the difficulty levels for each trail and recommend changes/modifications where appropriate. Review by an Engineer where required or an IMBA certified trail builder is necessary to ensure the work/maintenance/design comply with CRD standards.
- Including all mountain biking areas in the park emergency plan for that location. Key features to identify are: risks, emergency response organizations, responsibilities and coordination between agencies, and maps of the area with key access points and key infrastructure among others.
- All special use events on CRD land require a permit with the CRD and the appropriate insurance requirements identified. Accompanying permit applications should include a site safety plan, identify attendee conduct, parking requirements, emergency planning, crowd control, etc.

Quality Experience

Context

A mountain bike experience relies on a number of elements, including the mountain biking discipline, the level of difficulty of the trail and the recreational setting in which it takes place.

The recreational setting is important to consider in relation to experience. Is the setting backcountry or urban, what topography is present, what is the dominant ecosystem type and are there desirable vistas? These factors contribute to the overall type of recreational setting available in any given location and in turn what kind of experience those settings will provide for mountain bikers.

Mountain bikers are typically looking for experiences that test their endurance, develop their skills and abilities, and provide the element of risk while enjoying nature and reducing stress. The social experiences of mountain biking can range from seeking solitude and independence to being with family and friends. A quality mountain biking trail relies on factors such as play, technical challenge, skills progression and trail rhythm. These experiences can vary from rider to rider or day to day depending on the objectives the rider is looking for. Below is a list of mountain biking objectives to be considered and discussed when defining what type of experience is being provided on an existing mountain biking trail or when planning for future trail development.

Mountain Biking Objectives	Description
Nature	Connection to nature. This can be anything from being among a few trees in the middle of an urban area to remote wilderness. Nature is an important factor to many riders.
Escape	Something that takes a person away from their daily routine and allows them to get lost in the experience of riding. It often means getting away from the urban environment, but can be escaping to purpose built trails.
Solitude	Getting away from the urban environment to be active but alone in the quiet of the outdoors.
Challenge	Seeking to improve technical ability, to solve a problem and reach a sense of accomplishment.
Risk	Exposure to danger, harm, or loss and the intentional interaction with uncertainty. The perception of risk creates a thrill for many trail users. It can be a positive or negative part of the trail experience depending on expectation and risk tolerance.
Play/Playfulness	Engaging in the activity purely for enjoyment, bringing a childlike wonder to the pursuit with no destination. This often means seeking features to enhance/alter the experience rather than simply riding from point to point. Play/playfulness is a very important factor that distinguishes mountain bikers from many other trail users.
Exercise	Health and fitness are part of the sport of mountain biking. For some this is a primary goal, for others it is a result of other factors and objectives. Exercise can also be an obstacle.
Efficiency	Efficiency is about getting to a destination or accomplishing a task with the least amount of time or effort expended. Road climbs are very efficient, as are trails that ascend directly to a destination. Efficiency sometimes means compromising sustainability and fun/play.
Education	Sometimes learning is the objective, such as the case with interpretive trails for nature, culture, or historical topics.

Figure 3: List of mountain biking objectives to be considered and discussed[3]

Guidance

The mountain biking objectives establish a common language that should be used in describing/discussing all the factors that go into a mountain biking experience. These objectives should be used when looking at new trails and trail networks, along with evaluating the existing offer. These objectives can vary along

[3] Adapted from https://www.blm.gov/sites/blm.gov/files/Guidelines-for-a-Quality-Trail-Experience-2017.pdf

a spectrum and can change from rider to rider; engaging with the local mountain biking community, when possible, will create a better understanding of the desired objective for each trail.

Assessment Criteria

Context

An Assessment Checklist (Appendix 6) has been developed to help guide the careful consideration of mountain biking trails/infrastructure in regional parks. As the guidelines are intended to help inform other decision-making processes, such as park management plans, this checklist is a means to promote systematic and consistent approaches to determining the scale, location, objective and density of mountain biking trails and related infrastructure within the regional parks system. The checklist is not exhaustive and other factors may be considered during planning processes.

Planning and Land Acquisition

Mountain biking will be permitted within specific regional parks as directed through the park management planning process. Specifically, in developing a park management plan, or interim management guidelines, opportunities for mountain biking will be considered when compatible with the objectives and vision of the park.

Through the development of park management plans or interim management guidelines, park zoning is determined. Park zoning helps specify, where appropriate, the types of mountain biking experiences, trail configurations and related infrastructure that are deemed permissible. Park management planning processes undergo extensive First Nations, stakeholder and public consultation. A zoning matrix table (Figure 4) provides a framework for assessing the compatibility of mountain biking in each park zone type and is to be used to support the management planning process.

		Park Management Zones				
		Environmental Protection	Cultural Heritage Protection	Regional Wilderness	Natural Environment	Outdoor Recreation
Discipline	Cross Country					
	All Mountain					
	Adaptive Mountain Biking					
	Technical Training Area					
Trail Network Density	Dense Network					
	Dispersed Network					
	Stand Alone Trail					
	Long Distance Regional Connector Trails					

Compatible Use	Uses that are considered to be consistent with the intent of the park management zone under normal trail design and visitor management practices
May Be Permitted	Uses that may be compatible with the intent of the park management zone under certain circumstances and under special conditions and controls where necessary
Not Permitted	Uses that are not compatible with the intent of the park management zone

Figure 4: Mountain biking zoning matrix table.

The *Mountain Bike Guidelines: Advice and guidance to CRD Regional Parks* report developed by the Mountain Biking Advisory Committee identified gaps in the mountain biking offer in both the greater region and in CRD regional parks specifically. Along with this guidance and an internal gap analysis, the CRD will work to address the gaps through future land acquisition and other planning initiatives. It is important to note that future land acquisition is determined through the land acquisition strategy and the land acquisition criteria as approved by the CRD Board and that any proposed acquisition must fit within this larger strategy.

Conservation Values

One of the missions of CRD Regional Parks is to "establish and expand a diverse and connected system of regional parks that protect the region's biodiversity, varied ecosystems and landscapes" (Regional Parks Strategic Plan 2012-2021, p. 9)[4]. In order to align the mountain biking offer with this mission, the CRD's Impact Assessment Process will be used to ensure that trails are sited away from sensitive habitats and areas of potential conflict with wildlife (i.e., riparian corridors, known wildlife corridors, den sites, etc.). The assessment will be conducted by a qualified professional prior to the approval or development of mountain biking infrastructure and events. To minimize environmental fragmentation, existing linear disturbances such as power lines and logging roads will be assessed for mountain biking. If utilized, these linear disturbances will be improved to offer quality mountain biking experience or serve the purpose of

[4] https://www.crd.bc.ca/docs/default-source/crd-document-library/plans-reports/parks-recreation/regional-parks-strategic-plan-2012-21.pdf?sfvrsn=b19788c9_2

connectivity as a multi-use trail or as key emergency access routes. Due to conservation values and species at risk, mountain biking may not be supported in some parks or park zones.

Recreational Values

Another key mission of Regional Parks is to "provide a range of compatible and accessible non-motorized outdoor visitor experiences and activities, for people of all ages and abilities, throughout the regional parks and trails system that foster enjoyment of and appreciation and respect for the region's natural environment" (Regional Parks Strategic Plan 2012-2021, p. 9). In order to align the mountain biking offer with this mission, the quality of recreational use will be assessed through visitor use surveys, resident surveys and engagement with the mountain biking community.

Using the assessment checklist will be key to ensure that the mountain biking objectives and desired mountain biking experience are considered and to determine if there is a demonstrated gap to be filled or a priority to be addressed.

Cultural Heritage Values

It is the mission of Regional Parks to "integrate the interests of First Nations in park management" (Regional Parks Strategic Plan 2012-2021, p. 10). The CRD follows cultural heritage policies such as First Nations engagement during planning processes and archaeological assessments, to better protect cultural heritage values in regional parks.

In order to align the mountain biking offer with this mission, the CRD's Impact Assessment Process will be used to ensure that trails are sited away from areas of cultural importance (i.e., sacred sites, middens, etc.). The assessment will be conducted by a qualified professional prior to the approval or development of mountain biking infrastructure and events as required. To minimize impacts to cultural resources, CRD will be working with local First Nations, where possible, to better understand the cultural values on the landscape and ensure that recreational uses are compatible. Due to cultural heritage values, mountain biking may not be supported in some parks or park zones.

Trail Sustainability

A sustainable trail is an authorized trail that allows visitors to have a quality experience while creating the least amount of adverse impacts to the environment and cultural heritage values, minimizes visitor conflicts, maximizes safety and requires only routine maintenance.

Any proposed trail/trail networks should also be considering if there is adequate supporting infrastructure such as parking, washrooms, etc. If there is a need for supporting infrastructure, the land base should be assessed to ensure that there is appropriate space available to develop this infrastructure.

By only developing trails which have been assessed using the CRD's Impact Assessment Process, trails will aim to be properly situated to ensure greater sustainability over time. Trails will be monitored through

staff observations, trail counts, park steward observations, and feedback from park users to help assess their ongoing sustainability.

Trails need to be continually assessed though the lens of sustainable service delivery to ensure the cost of maintaining mountain biking trails, at specific standards, are weighted against maintenance and service delivery costs.

Guidance

CRD Regional Parks should use the assessment criteria to support management planning, land acquisition evaluation for recreational values, new mountain biking trail development and the evaluation of existing mountain biking trails. The assessment checklist is to be used along with the criteria to support decision making. The assessment checklist can be used as a whole or to address specific questions or concerns in the decision-making process.

Further Considerations to Support Decision Making

The following considerations influence the decision-making process and align with the guiding principles of the mountain biking guidelines.

The mountain biking guidelines are designed to support decision making, documents and processes developed by Regional Parks. The mountain biking guidelines will be nested within the broader outcomes of the latest Regional Parks Strategic Plan and Board priorities.

The mountain biking offer in regional parks needs to align with Board priorities, strategic priorities and commitments as well as meet sustainable service delivery and CRD bylaws (see Appendix 1). While Regional Parks recognizes the importance of mountain biking as one of the recreational opportunities offered in regional parks, it also needs to balance the demands of other recreational users, parks values, and previous commitments.

The financial cost of building and/or enhancing mountain biking trails and supporting infrastructure can represent a limitation. Budgeting for those activities needs to be planned ahead and included in the appropriate budget cycle accordingly. The service delivery criteria will help CRD place the planning for, and implementing of, mountain biking trails and supporting infrastructure within the larger context of sustainable service delivery.

As mountain biking is an evolving discipline, so are the decision-making tools developed by CRD Regional Parks. Trails standards are currently being developed by Regional Parks and will be used to assess all trails, including mountain biking trails. All trails will be assessed and maintained following the latest standards adopted by CRD Regional Parks.

All special use events on CRD land require a permit, along with appropriate insurance requirements. The permit application requires a site safety plan which may include projected attendee numbers, parking

requirements, safety measures, emergency planning, crowd control, repair/replacement of any damaged infrastructure, etc.

The guidelines are forward-looking and will be applied during the park and trail management planning processes undertaken after this document's approval.

Monitoring

Specific performance indicators, monitoring, and reporting requirements should be described in the individual park management plans or other planning documents that are supported by these guidelines.

The guidelines are developed to address current issues and challenges while recognizing that mountain biking is ever evolving. As such, these will be reviewed for effectiveness every 5 years by CRD Regional Parks. Staff will revise the guidelines as needed to ensure they are relevant and cohesive with other CRD documents and that they are keeping up with emerging trends in the region and with the evolution of mountain biking disciplines. Engagement for reviewing the guidelines will be undertaken only if major changes will be considered for these guidelines.

Appendix 1: Relationship to other Documents

Regional Growth Strategy

The Regional Growth Strategy is a framework, developed by municipalities and the regional district in partnership, for identifying social, economic and environmental objectives. The vision of the Regional Growth Strategy is that in 2038, Capital Regional District residents enjoy a healthy and rewarding quality of life within a region that is economically vital, where communities are livable and where the environment and natural resources are stewarded with care.

CRD Regional Parks Strategic Plan

The CRD Regional Parks Strategic Plan 2012-2021 sets out the vision and strategic direction of regional parks and establishes a park classification system. It guides the development of policy documents to align them with the purpose of regional parks. The strategic plan indicates that the purpose of regional parks is to protect the natural environment and provide a range of compatible outdoor visitor opportunities and experiences that connect people with nature. These guidelines were developed to reflect the Regional Parks Strategic Plan 2012-2021 and will be reviewed periodically to ensure consistency.

Park Management Plans

Parks management plans are, or will be, developed for each park in the regional parks system and include policies and direction to guide visitor experiences, environmental conservation, cultural heritage protection, and park facilities.

Impact Assessment Process

The Regional Parks impact assessment process assesses an action's potential impact on the environment and social, cultural and/or recreational values so that appropriate decisions can be made. Actions can range from minor to extensive/major in terms of the potential impact on regional parks values.

CRD Corporate Plan

The CRD Corporate Plan identifies services and strategies to deliver on the CRD's vision. The Corporate Plan captures the CRD's service mandates, Board priorities, and corporate priorities.

Protection and Conservation of Heritage Sites Policy

This policy is used to guide staff when undertaking land altering works on the appropriate steps to ensure the protection of cultural heritage. The policy uses the *Heritage Conservation Act* as a baseline and has additional measures in place to guard against accidental damage to First Nations' heritage sites.

Land Acquisition Strategy

The Land Acquisition Strategy (LAS) provides the Regional Parks Committee and the Board with a roadmap for acquiring land for regional parks and trails. The LAS defines the principles that guide land acquisition, the process for acquiring land, and sets the acquisition priorities.

Regional Parks Sign Standards

Consistent sign standards present an immediate and recognizable CRD brand throughout the regional parks system. They are a significant way visitors experience parks and convey everything from directional, regulatory and safety information to educational, conservation and interpretive information.

CRD Parks Regulation Bylaw No. 1, 2018

Regional Parks Regulation Bylaw No. 1, 2018 regulates the use of regional parks and trails. Schedule 18 to the Capital Regional District No. 1857 provides the ticketing authority for the Regional Parks Regulation Bylaw.

Sustainable Service Delivery

The Sustainable Service Delivery report provides the Regional Parks Committee and the Board with an overview of the services provided through regional parks, the status of built infrastructure needed to support service delivery, and the capacity for Regional Parks to fund infrastructure renewal needs. The report is an important step for achieving financial sustainability.

Appendix 2: Map of Mountain Biking Offer in the Capital Region

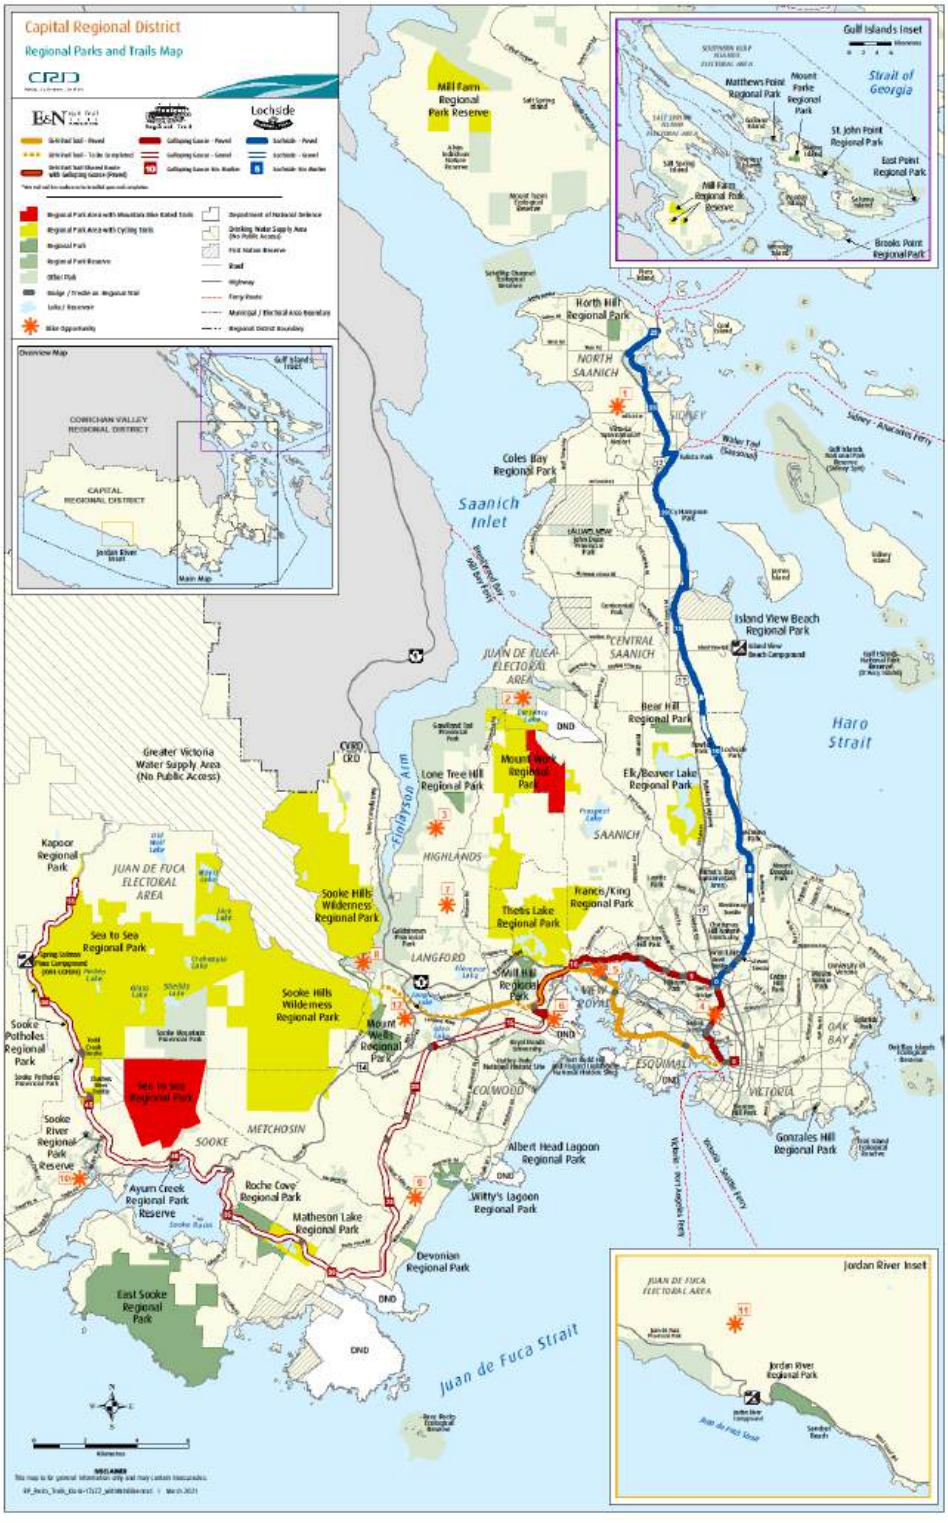

Figure 5: Map offers a region wide scan of the mountain biking offer in 2021.

Map ID	Municipality/ Electoral Area	Name	Description & Notes
1	North Saanich	Free Ride Park	Recently developed North Saanich park for riders of all ages and abilities
2	Central Saanich	Gowlland Tod Provincial Park	Multi-use trails from all three trailheads at the park
3	Highlands	Twinflower Park	Bike jump trail
4	Victoria	Cecelia Ravine Bike Park	Bike skills park
5	View Royal	View Royal Park Bike Pump Track	Paved, continuous circuit track with rollers, berms and jumps
6	Colwood	Greater Victoria BMX Track	BMX bike park
7	Langford	Highlands Valley Loop	Family-friendly loop for intermediate riders. 5 km distance, 1 m or more width
7	Langford	Skirt Mountain Lookout Trail	Family-friendly loop for intermediate riders. 5 km distance, 1 m or more width. Sections of loose gravel & steep ascents/descents
7	Langford	Canada Cup Trail	Used for hosting Canada Cup XC Race. 1.5 km, intermediate, single track. Steep ascents/descents, natural surface trail
7	Langford	Flow Trail	Directional descent, machine groomed trail starting near the north side of the Langford Recreation Centre. 1.3 km distance, intermediate difficulty with 1.5-2 m wide trails
7	Langford	"The Chainsaw" Downhill Trail	"Black Diamond Advanced Level", 688 m downhill only rocky, technical terrain
8	Langford	Goldstream Provincial Park Pump Track & Skills Trails	240 m of beginner and intermediate skills trails with small obstacles. Helmets mandatory, eye protection, gloves and pads recommended
9	Metchosin	Bike Jump Park	Bike jump park
10	Sooke	Sooke Bike Park	Pump track and circular hard-dirt surface with hills and jumps. Designed to entertain and challenge all levels of riders
11	Juan de Fuca	Tansky Recreation Riding Area	Recreational dirt bike and mountain bike recreation area
12	Langford	Cyclocross	*Not yet open* 3 km distance, 3 m width, with obstacles on track (April 2021)
12	Langford	Dirt Jump	*Not yet open* Intermediate and expert lines (April 2021)
12	Langford	Pump Track	*Not yet open* Graduated paved tracks (April 2021)
12	Langford	Singletrack	*Not yet open* Mountain bike trails for all ages and abilities (April 2021)

Figure 6: Index of Mountain Biking Offer Outside of CRD Regional Parks in the Greater Capital Region.

Appendix 3: Regional Parks Management Zone Guidelines

MANAGEMENT ZONES	OBJECTIVES	ENVIRONMENTAL VALUES	VISITOR EXPERIENCE AND ACTIVITIES	TYPICAL INFRASTRUCTURE
Environmental Protection Zone	To protect ecologically significant areas within regional parks through long-term science-based land stewardship	• Areas with rare or endangered species and ecosystems needing the highest degree of ecological protection • In some areas, visitor access may be restricted	• Nature study • Environmental interpretation • Visitor experience is centered on appreciation of natural features	• Low-impact nature trails and other infrastructure that enhance appreciation of the natural feature(s)
Cultural Heritage Protection Zone	To protect culturally significant areas and features through a long-term cultural resource management strategy	• Ecological features associated with culturally significant sites may be protected as part of the culturally significant features of the park or trail (e.g., heritage orchards)	• Cultural appreciation and interpretation • Historical appreciation • Visitor experience is one of appreciating and understanding the cultural context of the feature	• Low-impact nature trails and other infrastructure that enhance appreciation of the cultural feature(s)
Regional Wilderness Zone	To keep large natural systems functioning and provide a regional wilderness experience for park visitors	• Contiguous land areas large enough to protect the natural values • Areas with outstanding natural features that create a memorable visitor experience • Ecosystems are functioning in a sustainable fashion	• Activities dispersed over a wide area • Some backcountry areas could be available for hiking, cycling, and horseback riding • Visitor experience is one of being in a wilderness setting • Backcountry camping may be permitted	• Long-distance hiking, equestrian and cycling trails • Trails to viewpoints
Natural Environment Zone	• To provide easily-accessible natural areas within the parks • To provide areas within the parks that can be used for more active recreational pursuits	• Areas where outdoor activities take place in conjunction with protection of natural features • Less remote than wilderness	• Activities less dispersed than in wilderness zone, & more accessible to visitors • Horseback riding, cycling, hiking, shoreline activities • Visitor experience is one of participating in outdoor activities in a natural setting	• Hiking, walking, equestrian, cycling trails • Viewpoints • Pathways • Picnic areas • Open fields

MANAGEMENT ZONES	OBJECTIVES	ENVIRONMENTAL VALUES	VISITOR EXPERIENCE AND ACTIVITIES	TYPICAL INFRASTRUCTURE
		• Can act as a buffer between wilderness and recreation zones		
Outdoor Recreation Zone	To provide areas within a regional park that can accommodate concentrated recreation use	• Outstanding recreation features • Natural values may be compromised to allow higher level of activity	• Activities more concentrated (e.g., beach activities, swimming, boating, fishing, picnicking, multi-use trails, group picnic areas • Visitor experience includes active participation in outdoor recreation activities	• Change rooms • Concessions • Boat launch sites • Beaches • Group picnic shelters • Nature houses
Park Services Zone	To provide areas within a park needed to support park services	• Natural values secondary to park service needs • Considerable landscape modification allowed	• Visitor-oriented and park operation services	• Parking lots • Storage areas • Washroom buildings • Park operations buildings

Appendix 4: Special Use Areas

CRD Regional Parks has some geographically defined areas that may have a set of specific rules, regulations, or agreements in place. These special use areas are still subject to the CRD Regulation Bylaw.

Mountain Bike Area

A sanctioned mountain bike area includes official mountain bike trails with trail difficulty ratings and warnings about risk and liability. The area may also include a technical training area and/or other features that support the activity of mountain biking.

Campgrounds

The regional park system includes three vehicle accessible campgrounds. Each of these campgrounds existed at the time of park acquisition and have been continued to provide an affordable recreational activity for park visitors. The campgrounds are managed to promote visitor convenience, safety, and enjoyment.

Other Areas to Be Determined

Regional Parks may from time to time designate other types of special use areas according to need and management focus. These areas will be identified through strategic planning or policy documents, park management planning processes, legal agreements, land acquisitions, or other means.

Appendix 5: Trail Difficulty Rating System

	Easiest ○	Easy ●	More Difficult ■	Most Difficult ◆	Expert ◆◆
General Description	Fairly flat, suitable for all users	Gentle climbs with easily avoidable obstacles	Challenging riding with steep slopes and/or TTFs; trails may be narrow with poor traction; requires riding experience	A mixture of long loose trail surfaces; numerous TTFs and sharp corners; requires considerable experience; can be physically demanding	Exceptional bike control skills and balance essential to clear many challenging TTFs; expert riders only
Surface	Hardened or paved	Firm and stable	Mostly stable, some loose	Considerable variation	Considerable variation and unpredictable
Average Trail Grade	<5%	≤8%	≤10%	≤15%	20%
Maximum Trail Grade	10%	15%	≥15%	≥25%	≥30%
Technical Trail Feature (TTF) *All TTF's must contain a ride around or roll down *Multi-Pitch TTF's only approved on an individual basis *All jumps to have a safe landing zone	None	•Small roots and logs •Embedded rocks (avoidable)	•Small rock rolls •Small jumps •Medium sized logs •Some sections may exceed criteria	•Max. Length of 2m •Max. Slope of 45deg. •Large rock rolls •Large logs •Table top •Large jumps (Max. Ht. 0.6m) •Steep descents with sharp transitions	•Max. Length of 3m •Max. Slope of 60deg. •Large jumps (Max. Ht. 1.0m) •Includes and may exceeds criteria in "Most Difficult" category due to height, width and exposure to TTFs •Fall zones may not meet fall zone standards

Figure 7: The trails difficulty rating system enables visitors to understand the nature of the trail(s) for single use and activity optimized trails before beginning their ride and allows them to plan their ride for the optimal experience that suits them. These standards are in line with IMBA standards.

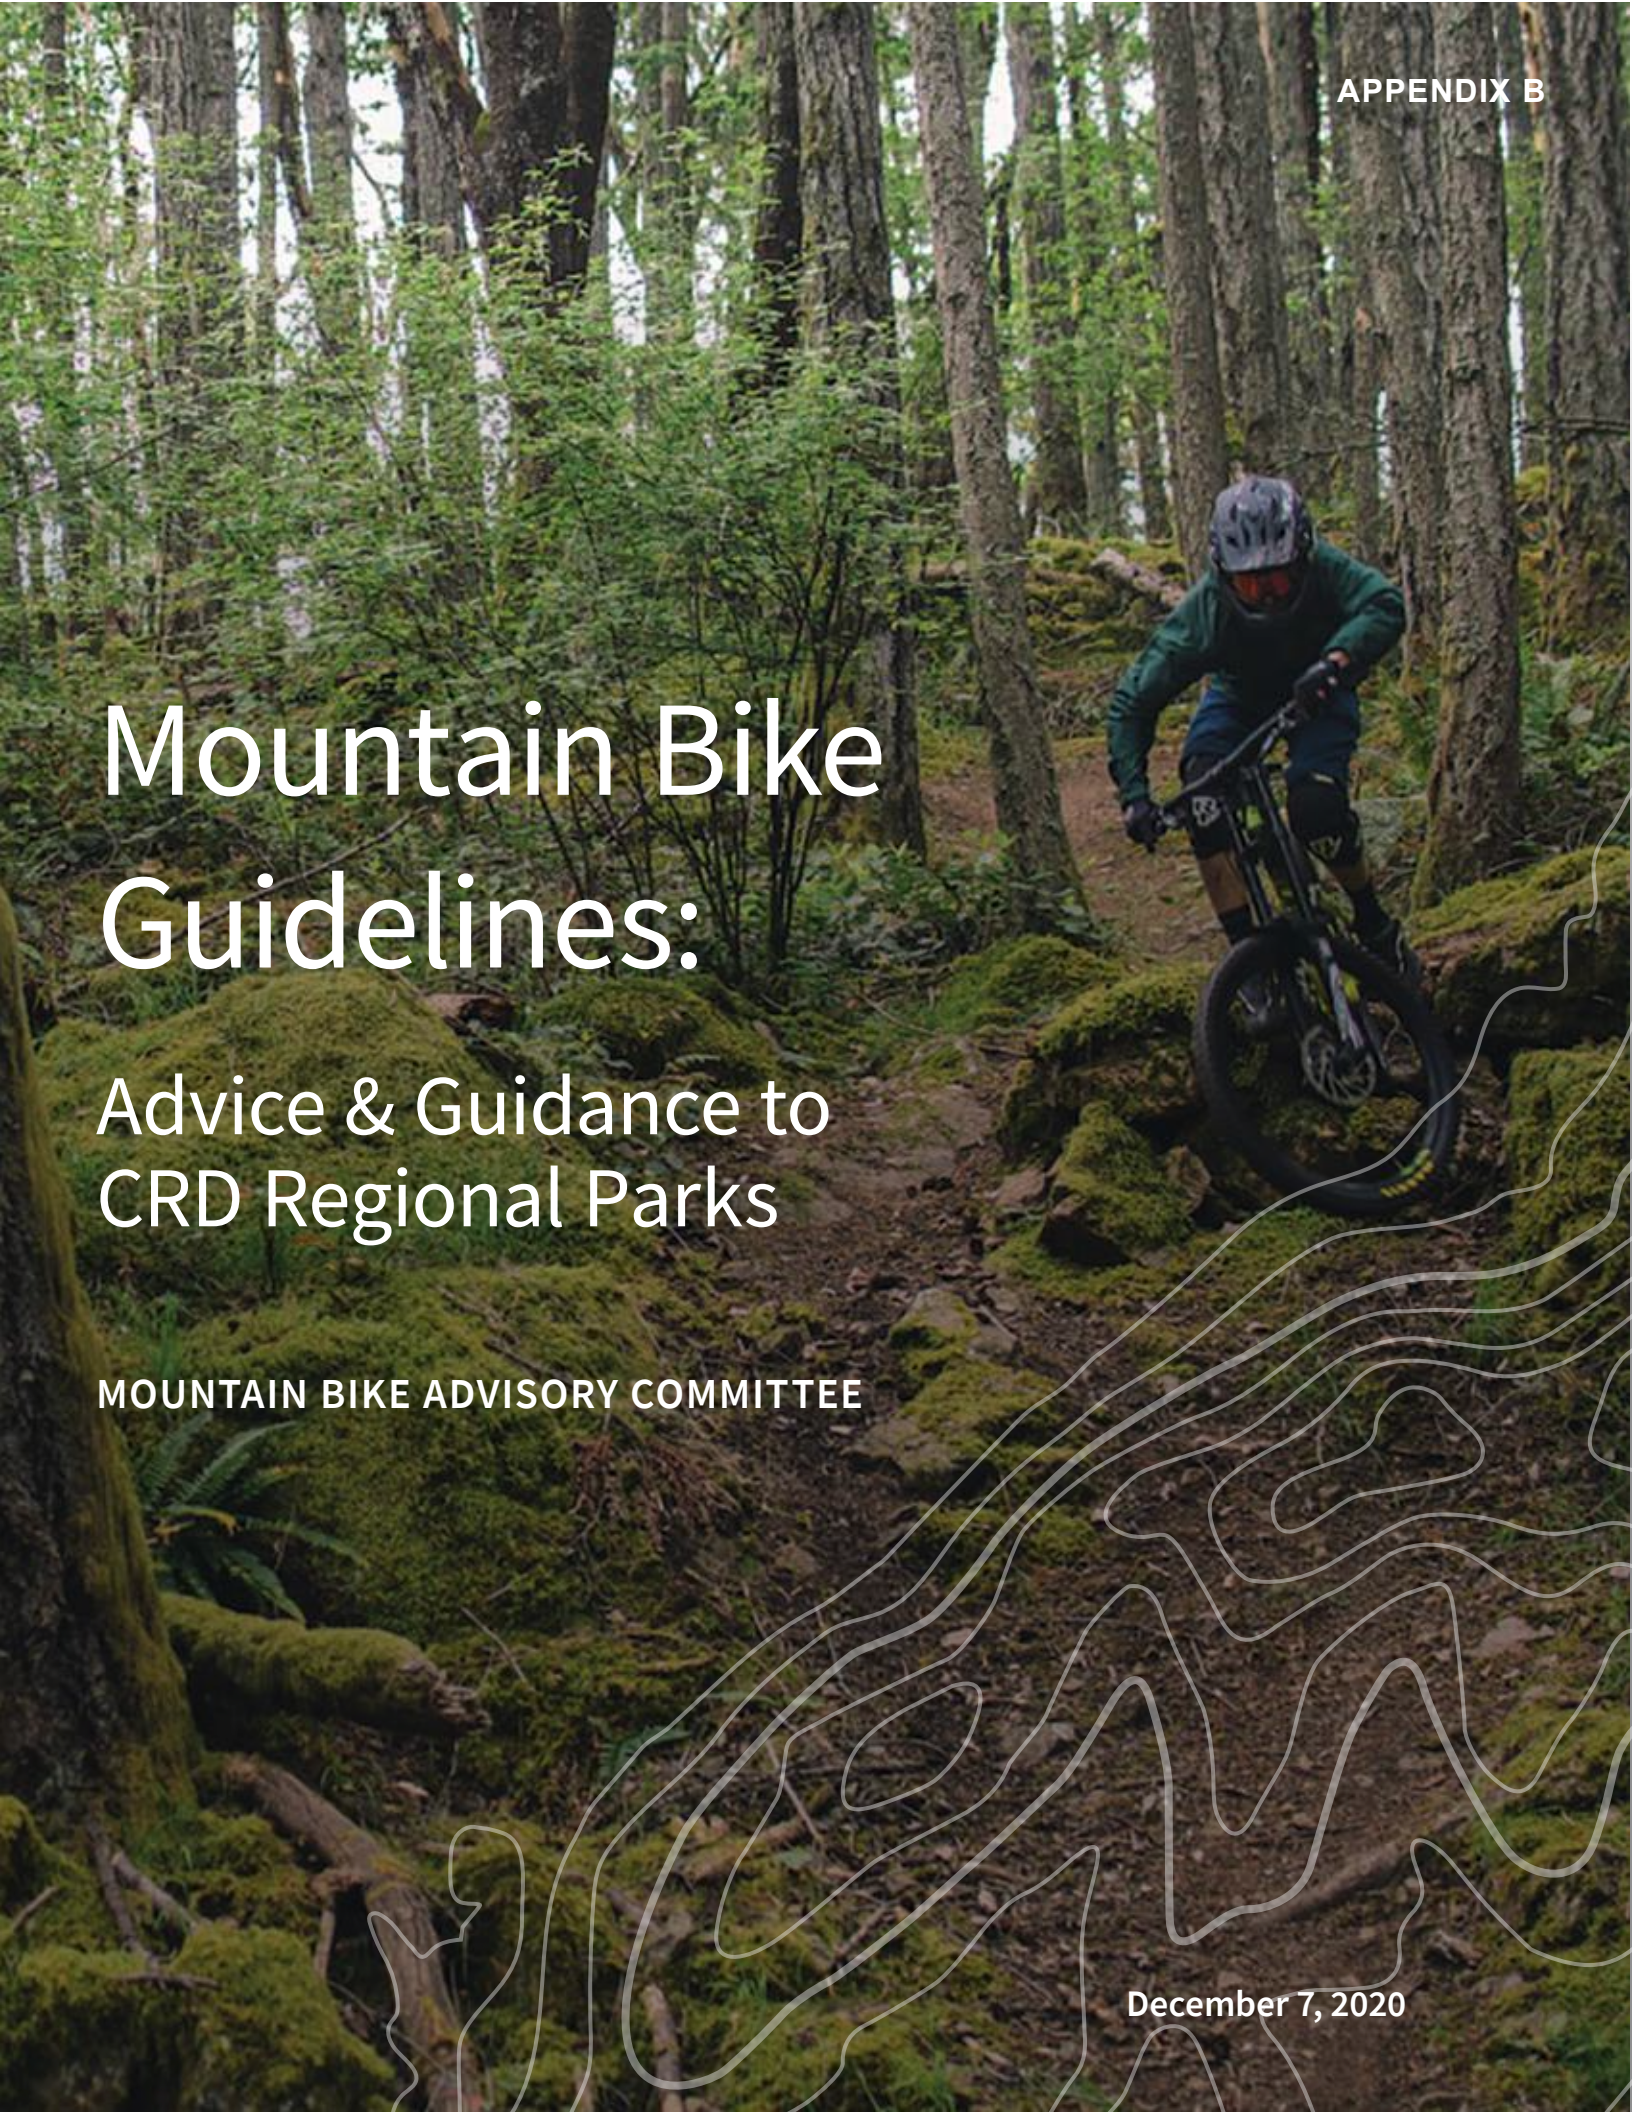
Appendix 6: Assessment Checklist

This assessment checklist encompass a variety of the factors that should be considered in the decision-making process for upgrading existing mountain biking trails as well as considering new offerings.

Key questions to consider	Yes/No	Potential impacts or risks (positive & negative)	Are the impact(s) minor/moderate/major (if moderate or major, it is mandatory to complete the next column)	Proposed mitigation action (or further work/ investigation required)	Satisfied (can the impact be adequately addressed)
Planning and Land Acquisition					
Is mountain biking in the park consistent with the park zoning and management planning objectives? (see matrix)					
Does this trail network complement the offering to the trails within the CRD?					
Are there existing and popular (consistently well used) mountain biking trails within the CRD that can adequately service the desired experience?					
Are you aware of any documents that restrict mountain biking in this regional park? (e.g. CRD policy, covenants, bylaws, management plans, regional plans or strategies)					
Does the trail/trail network connect to the					

Key questions to consider	Yes/No	Potential impacts or risks (positive & negative)	Are the impact(s) minor/moderate/major (if moderate or major, it is mandatory to complete the next column)	Proposed mitigation action (or further work/ investigation required)	Satisfied (can the impact be adequately addressed)
CRD regional trails system?					
Are there other recreational activities whose experiences may be effected in the area that need to be considered?					
Does the land base provide a regionally significant opportunity or address a gap for mountain bike rec experience (based on topographic features, soil type, etc.?) in the region					
Conservation Values					
Will there be any known impacts to critical habitat, species at risk, sensitive ecosystems, etc.?					
Will the trail location allow for minimizing ecological impacts?					
Will there be any impacts to water bodies, watercourses, wetlands, and natural drainage systems?					
Does the trail network go through any wildlife corridors?					

Key questions to consider	Yes/No	Potential impacts or risks (positive & negative)	Are the impact(s) minor/moderate/major (if moderate or major, it is mandatory to complete the next column)	Proposed mitigation action (or further work/ investigation required)	Satisfied (can the impact be adequately addressed)
Can existing linear disturbances be utilized in the development of a quality mountain biking experience or for the purpose of connectivity?					
Has the area been assessed for hazard trees?					
Recreational Values					
Are the mountain biking objectives and experiences being met by the trail/trail network?					
Has the local mountain biking community been engaged in the project?					
Has the recreational setting (ie quality of the landscape for intended rec use) been identified?					
Has the desired volume of trails for the area been established?					
Is the trail/trail network discipline and difficulty suitable to what has been identified by the mountain biking community?					
Are there existing or proposed technical trail					



Key questions to consider	Yes/No	Potential impacts or risks (positive & negative)	Are the impact(s) minor/moderate/major (if moderate or major, it is mandatory to complete the next column)	Proposed mitigation action (or further work/ investigation required)	Satisfied (can the impact be adequately addressed)
features or other built elements?					
Cultural Values					
Will there be any known impacts to cultural heritage resources?					
Will the trail location allow for minimizing cultural heritage resource impacts?					
Have the First Nations of this traditional territory been engaged in the project?					
Trail Sustainability					
Is there supporting infrastructure for the activity in place? (Parking, Washrooms, etc.)					
Is there an appropriate space for supporting infrastructure?					
Has an Impact Assessment been conducted on the site?					
Would this trail replace any trails that have greater impact on ecological, and/or cultural heritage values?					

Key questions to consider	Yes/No	Potential impacts or risks (positive & negative)	Are the impact(s) minor/moderate/major (if moderate or major, it is mandatory to complete the next column)	Proposed mitigation action (or further work/ investigation required)	Satisfied (can the impact be adequately addressed)
Are there available trail counts as indicators for current use?					
Is there a demonstrated interest in the trail by recreational users? If so, which activities?					
Are there any known or identified risks?					
Is there potential for visitor conflict between users with an introduction or increase in the proposed activity?					
Does unauthorized trail building occur in the area?					
Have there been any reports or notifications regarding the trail?					
Are there service delivery implications to building and maintaining the trail?					

Appendix 7: Regional Parks Classification Description

WILDERNESS AREA	CONSERVATION AREA	NATURAL AREA	RECREATION AREA
A Regional Wilderness Area is characterized by: • A large land base, generally more than 1,000 hectares; • The conservation of ecosystems, with minimal human interference; • Opportunities for visitors to experience, firsthand, the park's ecosystems; • Opportunities for backcountry recreation and camping; • The provision of few, if any, rudimentary services and facilities; • The experience of remoteness, solitude and harmony with nature. Maintaining wilderness areas in the region is an important part of the regional parks function. Wilderness is critical to sustain wildlife and plants that rely on sizable natural areas for their survival and to provide wilderness outdoor experiences and activities. They are places where residents can experience wilderness close to their home.	A Regional Conservation Area protects regionally significant natural environments that contain sensitive and threatened ecosystems (e.g., they will have significant Garry oak, old-growth forest, salt marsh, or estuary ecosystems). They contain rare or endangered plant and wildlife species and their supporting ecosystems. The size of a Regional Conservation Area should be sufficient to ensure that natural features can be protected and remain viable over the long-term. Outdoor activities will be permitted in a Regional Conservation Area, provided they have minimal impact on the natural environment. In most cases, the main activity will be hiking. These areas will generally have basic facilities, such as trails, parking areas, toilets and signage.	A Regional Natural Area protects the natural environment and provides opportunities for a range of appropriate outdoor experiences and activities. These natural areas are not as ecologically sensitive or diverse as those found in a Regional Conservation Area, although they may contain some sensitive and threatened ecosystems. These ecosystems will be identified in the park management plan and conservation will be the priority in those areas. Regional Natural Areas also protect key greenspaces that are important to the natural character of the region. These areas will try to accommodate a range of appropriate outdoor experiences and activities. The exact uses will be outlined in the park management plan.	A Regional Recreation Area provides opportunities for many outdoor experiences, activities and events, and will be managed to accommodate a relatively high number of visitors. Facilities will be developed to support this level of use. The area must lend itself to development for a variety of uses that meet recreational needs, and it must be able to withstand intensive public use. This classification is distinct from other parks classifications in a number of ways: • The emphasis is on outdoor experiences and activities, although protecting the natural environment will be addressed in all decisions about visitor use & facilities. • The range of acceptable recreational activities is the widest within the regional parks & trails system. • Recreation activities may include competitive sports. • Recreation facilities operated by non-profit groups may be permitted. • Opportunities and facilities may be provided for celebrations (festivals and group functions like picnics).

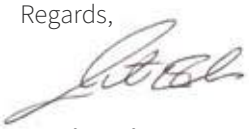
Tracey Moss
Manager, Visitor Services & Community Engagement
CRD Regional Parks

Dear Tracey,

On behalf of the Mountain Bike Advisory Committee, it is my sincere pleasure to submit our advice and guidance to the CRD for the development of mountain bike guidelines for regional parks. Participating in six meetings and multiple online surveys, the MBAC worked incredibly hard over the past 8 weeks to prepare this advice and guidance. Developed through exceptional collaboration and extensive deliberation, this report represents the consensus of the committee. We were able to reach agreement on all advice and guidance and no minority reports were required. Though the committee was unable to address all topics of importance to mountain biking in regional parks, we studied and have prepared effective advice and guidance on the following topics:



- Considering the existing supply of mountain bike experiences throughout the Capital Region, and thinking about current and future demands and trends, what type of mountain bike experiences (discipline, level of difficulty, LTAD etc.) are most needed and most appropriate to be provided in regional parks?
- What is the preferred service delivery model for the planning, design, construction, management and monitoring of mountain bike trails and mountain bike use in regional parks (direct, indirect, enablement)?
- What criteria should the CRD use to determine in which regional parks it is appropriate to support mountain biking, and therefore mountain bike trails?
- How can mountain biking and mountain bike trails be integrated with and managed to avoid / minimize negative impacts on other approved recreational users of regional parks?
- Rogue, or unauthorized trail building, is on the rise in regional parks. What promising practices can be implemented to avoid or limit unauthorized trail building?
- The popularity of electric mountain bikes (e-MTB) continues to grow. Are e-MTBs appropriate in regional parks and how should they be managed?
- How can mountain biking and mountain bike trails be managed to avoid/minimize impacts to ecological, Indigenous, and cultural heritage values in regional parks?
- What criteria should the CRD use to determine which existing authorized and unauthorized trails are appropriate to permit sanctioned mountain biking and provide a desired mountain biking experience?
- What, if any, existing design guideline manuals or documents should be adopted and implemented by the CRD to guide the planning and design of mountain bike trails and related trail infrastructure?

We strongly encourage CRD Regional Parks to consider our advice and guidance and integrate it into the CRD's Mountain Bike Guidelines for Regional Parks. Though we recognize that the guidelines will provide direction for implementation during management planning, we encourage the CRD to recognize the urgency of the situation for mountain biking and pursue meaningful quick wins that can be advanced outside of the management planning processes.

The committee appreciates the opportunity to provide our advice and guidance and we look forward to reviewing the draft guidelines and many of the committee members look forward to strengthening their partnerships and relationships with the CRD. It has been a true pleasure working with the MBAC and members should be commended for their impressive participation and spirit of collaboration and understanding.

Please do not hesitate to contact me if you require any clarity about our advice and guidance.

Regards,

Justin Ellis
MBAC Chair

1 INTRODUCTION

Mountain biking, as a recreational activity, a sport and a tourism product has and continues to experience rapid growth throughout the Country, the province, and the Capital Region (the region). Mountain biking is enjoyed by a wide diversity of people of all ages, abilities and genders for the physical, mental and social benefits the activity provides and for the opportunity it creates to connect riders with nature while generating excitement, challenge and competition. The Capital Region's temperate climate together with its growing network of trails and appealing terrain have made the region a sought-after year-round mountain bike destination that attracts riders of all abilities from across the country. In fact, the Capital Region has attracted and generated some of the country's top mountain bike athletes and Olympians and is now home to Canada's national mountain bike team.

The region is blessed with an incredible network of 31 regional parks totalling 13,187 hectares and 3 regional trails totalling nearly 101 kms in length. Regional parks and trails have been established to protect and restore the region's biodiversity, ecosystems and landscapes while providing a range of compatible and accessible non-motorized outdoor recreation activities for people of all ages and abilities that foster enjoyment of and appreciation and respect for the region's natural environment.

In response to the intensifying demand for mountain biking in regional parks, and recognizing the need to balance mountain biking demands with other visitation demands and environmental, Indigenous and cultural values in regional parks, the Capital Regional District (CRD) is developing mountain bike guidelines for regional parks. These guidelines will be used to inform regional park planning, management, operations and capital investment decisions that ensure all park values are considered.

1.1 Mountain Bike Advisory Committee

To inform the development of the Mountain Bike Guidelines, the Capital Regional District Board established the Mountain Bike Advisory Committee (MBAC) on May 27, 2020. In accordance with the MBAC's Terms of Reference, the purpose of the MBAC was "to bring together a group of people with interest in recreation in the Capital Region and a knowledge of the regional park system in order to provide advice and guidance to Regional Parks staff for use in developing mountain biking guidelines for regional parks".

The scope of the MBAC's advice and guidance was focused on:

- Mountain biking,
- Regional Parks in the Capital Region,
- Regional parks system-wide advice, and
- Reviewing & commenting on the draft guidelines.

The following areas were out of scope for the committee:

- Site-specific concerns,
- Development of infrastructure in regional parks,
- Operational budgeting,
- Labour relations matters,
- Direction on other types of recreation not associated with mountain biking, and
- Capital Regional District Board-approved park management plans.

The committee was composed of representatives from mountain biking organizations, other outdoor recreational interests, the conservation and naturalist community, First Nations and the CRD Regional Parks Committee. The MBAC was chaired by RC Strategies – an independent professional facilitation and recreation management and trails planning firm. Members of the committee included:

Member	**Organization**
Alon Soraya	South Island Mountain Bike Society
Hazel Prince	Dirty Girlz Mountain Bike Club
Heather Rose	Sooke Bike Club
Daniel Cammiade	Nature Trails Society
Isabelle Charles	Beecher Bay First Nation
Doris Leong	Trail Runner
Tara J Fenwick	Outdoor Club of Victoria & Victoria Club Tread
Torrey Archer	The Land Conservancy
Barb von Sacken	Habitat Acquisition Trust
Colin Plant	CRD Board Chair
Justin Ellis	MBAC Chair – RC Strategies

1.1.1 DECISION MAKING PROCESS

While guided by the CRD Board Procedures Bylaw, the committee committed to reaching its recommendations by consensus. Consensus was defined as unanimous agreement by all committee members or lack of expressed objection and a desire to block the recommendation by any committee member. MBAC members were afforded the opportunity to prepare minority reports on any matters where most committee members supported a recommendation while an individual or minority of members did not but did not wish to block the recommendation from proceeding. The recommendations contained within this report reflect the consensus of the MBAC.

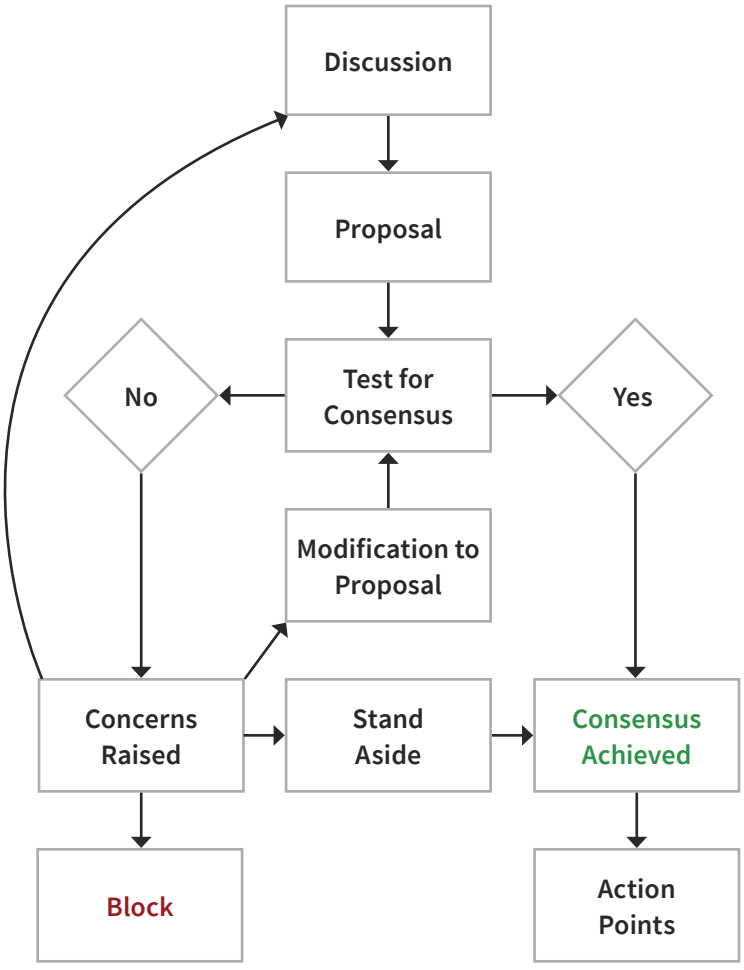


Figure 1. Consensus Decision-Making Process

1.1.2 PROCESS FOR GENERATING ADVICE & GUIDANCE

The committee began its deliberations on September 30, 2020. In total, members participated in six three-hour long meetings and took part in two online surveys. At the first meeting, MBAC identified and prioritized the discussion topics on which advice and guidance would be provided. The next three meetings were used to deliberate and prepare draft advice and guidance on each of the priority discussion topics. The final two meetings focused on refining, finalizing, and achieving consensus on the advice and guidance contained within this report.

Meeting Date	Discussion Topics
September 30, 2020	► Committee terms of reference & procedures ► Introduction to mountain biking ► Introduction to Regional Parks ► Confirmation & prioritization of discussion topics
October 7, 2020	► Most needed & most appropriate mountain bike experiences in regional parks ► Delivery role of Regional Parks staff in mountain biking ► Criteria to determine which regional parks are appropriate to support mountain biking in
October 21, 2020	► Integrating mountain biking with other approved recreational users ► Promising practices to avoid or limit rogue trail building ► Appropriateness and management of electric mountain bikes
November 4, 2020	► Avoiding and minimizing the impacts of mountain biking on environmental, Indigenous, and cultural values ► Criteria to determine when authorized and unsanctioned trails should permit mountain biking ► Adoption of existing planning and design manuals
November 18, 2020	► Review draft advice and guidance report
December 2, 2020	► Finalize advice and guidance report

The range of discussion topics that could have been addressed by the MBAC far exceeded the time available to the committee. As such, the MBAC deliberately prioritized which topics they would provide advice and guidance on. To do so, the Chair tabled 23 potential discussion topics with the committee (see Appendix A) and, using an online survey, sought input on which topics were of greatest priority. The results of the survey (Appendix B) were presented to the MBAC and priorities were agreed to. Through consensus, the following discussion topics were selected as the greatest priorities:

- Considering the existing supply of mountain bike experiences throughout the Capital Region, and thinking about current and future demands and trends, what type of mountain bike experiences (discipline, level of difficulty, LTAD etc.) are most needed and most appropriate to be provided in regional parks?
- The CRD can play a variety of roles in the delivery of mountain biking in regional parks. What is the preferred service delivery model for the planning, design, construction, management and monitoring of mountain bike trails and mountain bike use in regional parks (direct, indirect, enablement)?
- What criteria should the CRD use to determine in which regional parks it is appropriate to support mountain biking, and therefore mountain bike trails?
- How can mountain biking and mountain bike trails be integrated with and managed to avoid / minimize negative impacts on other approved recreational users of regional parks?
- Rogue, or unauthorized trail building, is on the rise in regional parks. What promising practices can be implemented to avoid or limit unauthorized trail building?
- The popularity of e-MTB (electric mountain bikes) continues to grow. Are e-MTBs appropriate in regional parks and how should they be managed?
- How can mountain biking and mountain bike trails be managed to avoid/minimize impacts to ecological, Indigenous, and cultural heritage values in regional parks?
- What criteria should the CRD use to determine which existing authorized and unauthorized trails are appropriate to permit sanctioned mountain biking and provide a desired mountain biking experience?
- What, if any, existing design guideline manuals or documents should be adopted and implemented by the CRD to guide the planning and design of mountain bike trails and relative trail infrastructure (e.g. technical trail features)?

Recognizing their limited time, the MBAC identified additional topics that were deemed to be important. Though the committee was unable to provide advice and guidance on these topics, the MBAC recommends that the CRD address the following additional topics in the draft Mountain Bike Guidelines for Regional Parks:

- How should mountain bike trails and mountain biking be monitored in regional parks?
- What research should be undertaken to understand mountain biking (e.g., visitation, origins, satisfaction, impacts) in regional parks?
- How can risks/impacts to personal and public safety from mountain biking be managed in regional parks?
- Should, and if so, how should commercial mountain biking businesses be managed and promoted in regional parks?
- Should, and if so, how should mountain-bike-based special events (e.g., races), group rides, etc., be managed and promoted in regional parks?

2 MOUNTAIN BIKING

Before developing advice and guidance regarding mountain biking in regional parks, the MBAC worked to develop a foundational understanding of mountain biking, mountain bikes, mountain bike disciplines and mountain bike experiences.

2.1 What is Mountain Biking?

Mountain biking is an outdoor recreation activity involving riding bicycles off-road, often over rough terrain, using specially designed mountain bikes. Mountain bikes share similarities with other bikes but incorporate features designed to enhance durability and performance in rough terrain (https://en.wikipedia.org/wiki/Mountain_biking).

Mountain biking is an umbrella term that is used to refer to a variety of more specific mountain biking disciplines. Each of these disciplines seek out different terrain, trail design characteristics, technical trail features and supporting infrastructure. Though mountain bike disciplines have and continue to evolve, the most typical mountain biking disciplines referenced today include:

- Cross-country (and gravel riding & cyclocross which use cross-country trails)
- All-mountain
- Downhill
- Adaptive Mountain Biking

Cross-Country

All Mountain (Tourism Cowichan)

Downhill

ADAPTIVE MOUNTAIN BIKE TRAILS (aMTB)

> Trails that are designed to support adapted mountain bikes for riders who cannot ride a standard mountain bike. These trails are purposefully designed to support these riders' physical, intellectual, neurological and sensory abilities.

Adaptive Mountain Biking (Loam Wolf)

Though not technically considered mountain biking, gravel riding and cyclocross are riding disciplines that seek out easier (green and blue) cross-country mountain bike trails from time to time.

With the exception of adaptive mountain biking, most mountain bike disciplines seek "single-track" purpose-built mountain bike optimized trails. In general, these single-track trails can be designed to provide a "flow" experience or a "technical" experience. The term "flow" trail is used to describe a trail, usually machine made, that is smooth, and uses the rider's momentum to minimize pedaling and braking. These trails emphasize rhythm and typically contain berms, rollers and potentially jumps (Figure 3) (Mountain Bikers of Santa Cruz). Flow trails are among the most desired trails amongst riders. A "technical" trail is one that integrates rough terrain, roots, rocks, obstacles and can require a greater degree of skill to ride. These trails rely less on momentum and rhythm and require pedaling and braking (Figure 4).

Figure 2. Single-track Trail

Figure 3. Flow Trail (Mike Kazimer)

Figure 4. Technical Trail (Bike Radar)

2.2 Understanding a Mountain Bike Experience

A mountain bike experience is defined as the ability for a rider to take part in their desired discipline, on a trail that provides their desired level of difficulty within a desired recreation setting and landscape (Figure 5). Each of these elements is essential to defining the mountain biking experience. Changes to any single element changes the entire mountain bike experience and, in turn, the riders that will be interested in it. For example, all-mountain riding on a blue trail in the remote backcountry of the mountains is an entirely different experience than all-mountain riding on a double black diamond trail in an urban environment in the grasslands. It is essential that current and future trails be purposefully designed with specific riders or markets and their desired experiences in mind. To enable this, the MBAC strongly encourages the CRD to adopt this definition and use it to help define and communicate mountain bike experiences, understand mountain bike demands and plan and design mountain bike trails.

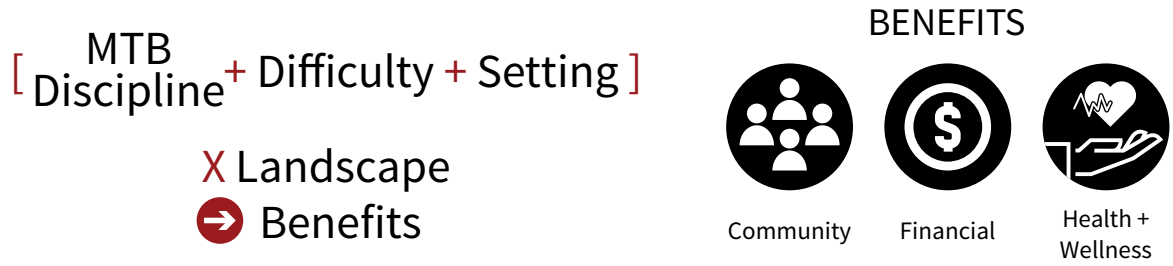

Figure 5. Elements of a Mountain Bike Experience

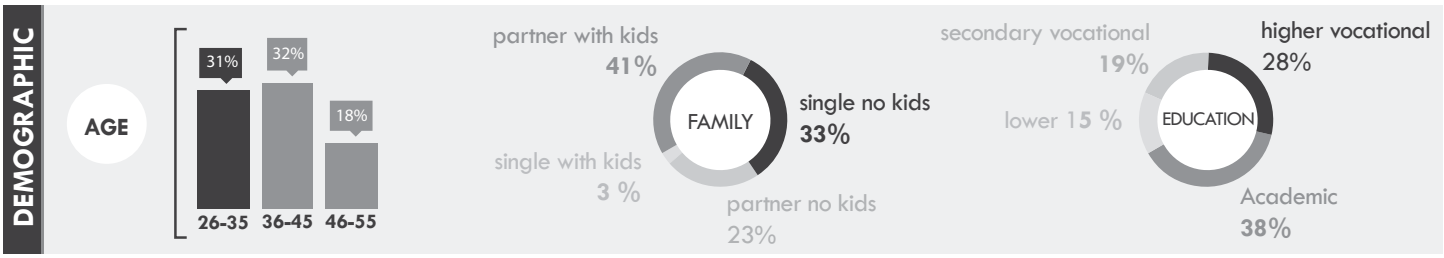


The MBAC understands, and would like the CRD to recognize, that quality mountain bike trails and experiences do not "just happen". It requires a clear understanding of the rider's objectives and intentional planning and design. A quality mountain bike experience occurs when the trail design delivers the rider objectives at the difficulty the rider seeks within the setting and landscape most desired by the rider.

> "Quality is never an accident; it is always the result of high intention, sincere effort, intelligent direction and skillful execution; it represents the wise choice of many alternatives"
>
> — William A Foster

2.3 Who are Mountain Bikers?

Primary research on mountain bikers in the Capital Region is not available. However, the MBAC reviewed literature from IMBA[i] and the Mountain Bike Tourism Association of BC[ii]. Insights from available literature indicate:

- Mountain biking participation is about half of hiking participation, but much larger than other trail activities
- 9:1 (male v female participation) but, female participation is growing significantly
- 47% make $100k or more, 84% make above $50k
- 84% of riders ride between 10-30km / day, 4.81 hrs is the average ride time / day (tourism)

REASONS TO RIDE

1. TO ENJOY NATURE
2. TO ESCAPE EVERYDAY LIFE
3. FOR EXCITEMENT
4. TO IMPROVE SKILLS
5. SOCIALIZING, HAVING FUN

TYPE

- 63% ENDURO
- 52% TRAIL
- 36% XC / MARATHON
- 21% FREERIDE / DH

DID YOU KNOW . . .

We are good for **82.8 rides per year,** spending more than **215 hours** on the saddle. We're riding all year long, an average of **6.9 times per month** with a duration of **2h36.** The average age is **24 years** We **love all kinds of outdoor** activities. Top 3 of other sports practiced by mountain bikers: hiking (56%), alpine skiing / snowboard-ing (46%) and (trail) running (33%)

82% MOST RIDING TIME IS SPENT ON LOCAL & REGIONAL TRAILS (UP TO 50 KM)

93% IT IS IMPORTANT TO HAVE THE OPPORTUNITY OF RIDING SINGLETRACK

TRAIL PREFERENCE

1. SINGLETRACK (NATURAL SURFACE, WIND AROUND OBSTACLES)
2. MORE DIFFICULT TRAILS WITH NATURAL OBSTACLES AND TECHNICAL TRAIL FEATURES
3. FLOW TRAILS (LITTLE PEDALING & BRAKING, ROLLING TERRAIN, PREDICTABLE SURFACES)

Trail user objectives are the "why" a rider chooses a trail. Different trails provide different combinations of user objectives. But, these objectives can be hard to describe. The MBAC believes it is important to create a common shared language between riders and the CRD so that the user objectives for trails can be clearly defined. And, by defining these objectives trail designers and CRD staff can deliberately include trail features and designs that will deliver the user objectives. The most common mountain bike user objective terms include:

TRAIL USER OBJECTIVES	DESCRIPTION
Nature	Connection to nature. This can be anything from being among a few trees in the middle of the city to remote backcountry. Nature is an important factor for many riders.
Escape	Something that takes you away from your daily grind, allows you to get lost in the experience of riding. Often means getting away from the urban environment, but a bike park, even indoors, can provide this as well.
Solitude	Getting away from the urban environment and people; being active, alone, and quiet in the outdoors.
Challenge	Seeking to improve technical abilities, to solve a difficult problem, "clean" a trail feature or segment; sense of accomplishment.
Risk	Exposure to danger or harm, or loss; intentional interaction with uncertainty. The perception of risk creates a thrill for many trail users. It can be a positive or negative part of the trail experience, depending on user expectations and risk tolerance.
Play/Playfulness	Engaging in the activity purely for the enjoyment, bringing a childlike wonder to the pursuit, no destination. On a trail, this often means seeing features to enhance, alter the experience, rather than simply riding from point to point. Playfulness is a hugely important characteristic in mountain bike trails, and distinguishes trail experiences from many other trail user goals (hikers, equestrians).
Exercise	Health and fitness are part of the sport. For some this is a primary goal, for others a bonus, for some an obstacle. Defining the physical fitness needed for a particular ride is important in setting user expectations appropriately. Recognition that some riders have high skill and low fitness (and vice versa) plays a role in trail planning.
Efficiency	Getting to a destination or accomplishing a task with the least amount of time or effort expended. Road climbs are very efficient, as are trails that ascend directly to a destination. Efficiency sometimes means compromising sustainability and fun/play. Hiking trails tend to be much more efficient than biking trails.
Education	Sometimes learning is the objective, such as is the case with interpretive trails for natural, cultural, or historical topics.

Figure 6. Mountain Biker User Objectives adopted from BLM Quality Trails

2.4 Benefits of Mountain Biking

Mountain biking can drive significant health, community, economic, and environmental benefits for residents that take part in the activity and communities that enable the activity to flourish. Some of the most common benefits from mountain biking and mountain bike trails include:

Quality of Life & Health

- Improve physical and mental health and reduce health care costs.
- Build positive self-esteem and confidence.
- Increase social interaction and connection.
- Enhance individuals' sense of achievement.
- Provide opportunities for skill development, challenge and competition, achievement, and leadership.

Economic

- Stimulate increased visitor spending through mountain bike tourism in the local economy – especially important in rural areas.
- Grow and diversify local economies through tourism, gear purchase and services.
- Create new direct and indirect jobs as new enterprises are developed to support mountain biking, skill development, and mountain biking infrastructure.
- Generate local and provincial taxation revenues.
- Help communities attract and retain employers and skilled labour seeking lifestyle communities.

Community

- Strengthen family relationships as families ride together.
- Build community and friendships as the riding community expands.
- Stimulate investment in community infrastructure, amenities and facilities that benefit both residents.
- Elevate resident awareness and community pride as riders become stewards of their trails and ambassadors for their community.
- Mobilize volunteerism and passion for regional parks.

Environmental & Cultural

- Deepen rider's understanding and appreciation of the unique Indigenous and non-Indigenous history, culture, and heritage in regional parks.
- Build a strong culture of conservation and appreciation of nature as riders learn about and appreciate the wildlife, ecosystems, and ecosystem processes in regional parks.
- Raise the profile of and local advocacy for regional parks as riders establish deeper connections to the parks.
- Enhance the rationale for expanding new parks based both on their conservation importance and the economic impact that can come from sustainable mountain biking.
- Improve the management of recreational use and mitigate impacts from recreational use by attracting visitors to high quality, sustainably designed trails which will help to keep riders out of, off, or away from sensitive areas.

2.5 Mountain Biking Trends

Mountain biking, and indeed outdoor recreation, has evolved rapidly over the past decade and all indications suggest that mountain biking will continue to evolve. The MBAC would like to stress that the guidelines should be developed to address the issues and challenges of today while considering the trends and potential future needs of tomorrow. As such, the MBAC would like the CRD to consider the following future trends and drivers as the guidelines are developed.

COVID-19

The COVID-19 pandemic has led to dramatic increases in participation in outdoor recreation, including mountain biking. People have turned to outdoor recreation to manage personal stress, undertake physical activity, and enjoy the company of their friends and family in a physically distanced way. Participation at levels well above pre-pandemic periods are expected to be the norm for the foreseeable future. Participation levels may intensify even more as the tourism industry actively turns to promoting and growing domestic outdoor recreation and adventure tourism in an attempt to offset lost revenues and business due to closures and loss of long-haul domestic and international travel. Even as the pandemic is controlled, outdoor recreation professionals anticipate that participation levels in activities such as mountain biking will remain higher than pre-pandemic levels as many new people have been introduced to the activity and will keep with it.

Bike Evolution & Price Points

Mountain bikes have and will only become more capable of navigating the terrain and obstacles encountered on the trail meaning the level of challenge sought in trails will also evolve. Manufacturers will continue to develop lighter, stronger, and more efficient bikes. More capable bikes will be made available at much more affordable prices expanding the markets away from high-end products that are only affordable by the very wealthy or sponsored riders and into the mid to low cost markets that are accessible to a much broader range of recreational riders.

Expanding Participation

Mountain bike organizations, riding schools, active transportation are all helping to expand the demographic of mountain bikers. Once skewed towards males, we are seeing the rapid expansion of mountain bike participation by women, youth and by all ages and a much wider array of income levels. The evolving demographics of mountain bikers will continue to increase mountain bike participation and ensuing demands for more trails and greater active management to avoid crowding.

Communication Technology

Mountain bikers have proven to be enthusiastic adopters of communication technology. Websites, apps, and other social media tools are a mainstay of the mountain bike community. Whether it be using technology for mobilizing volunteers and advocacy, reaching the community with stewardship education, helping find the right trails for their desired experiences or keeping them on the right trail, the mountain bike community is among the most advanced recreational community in their use of technology.

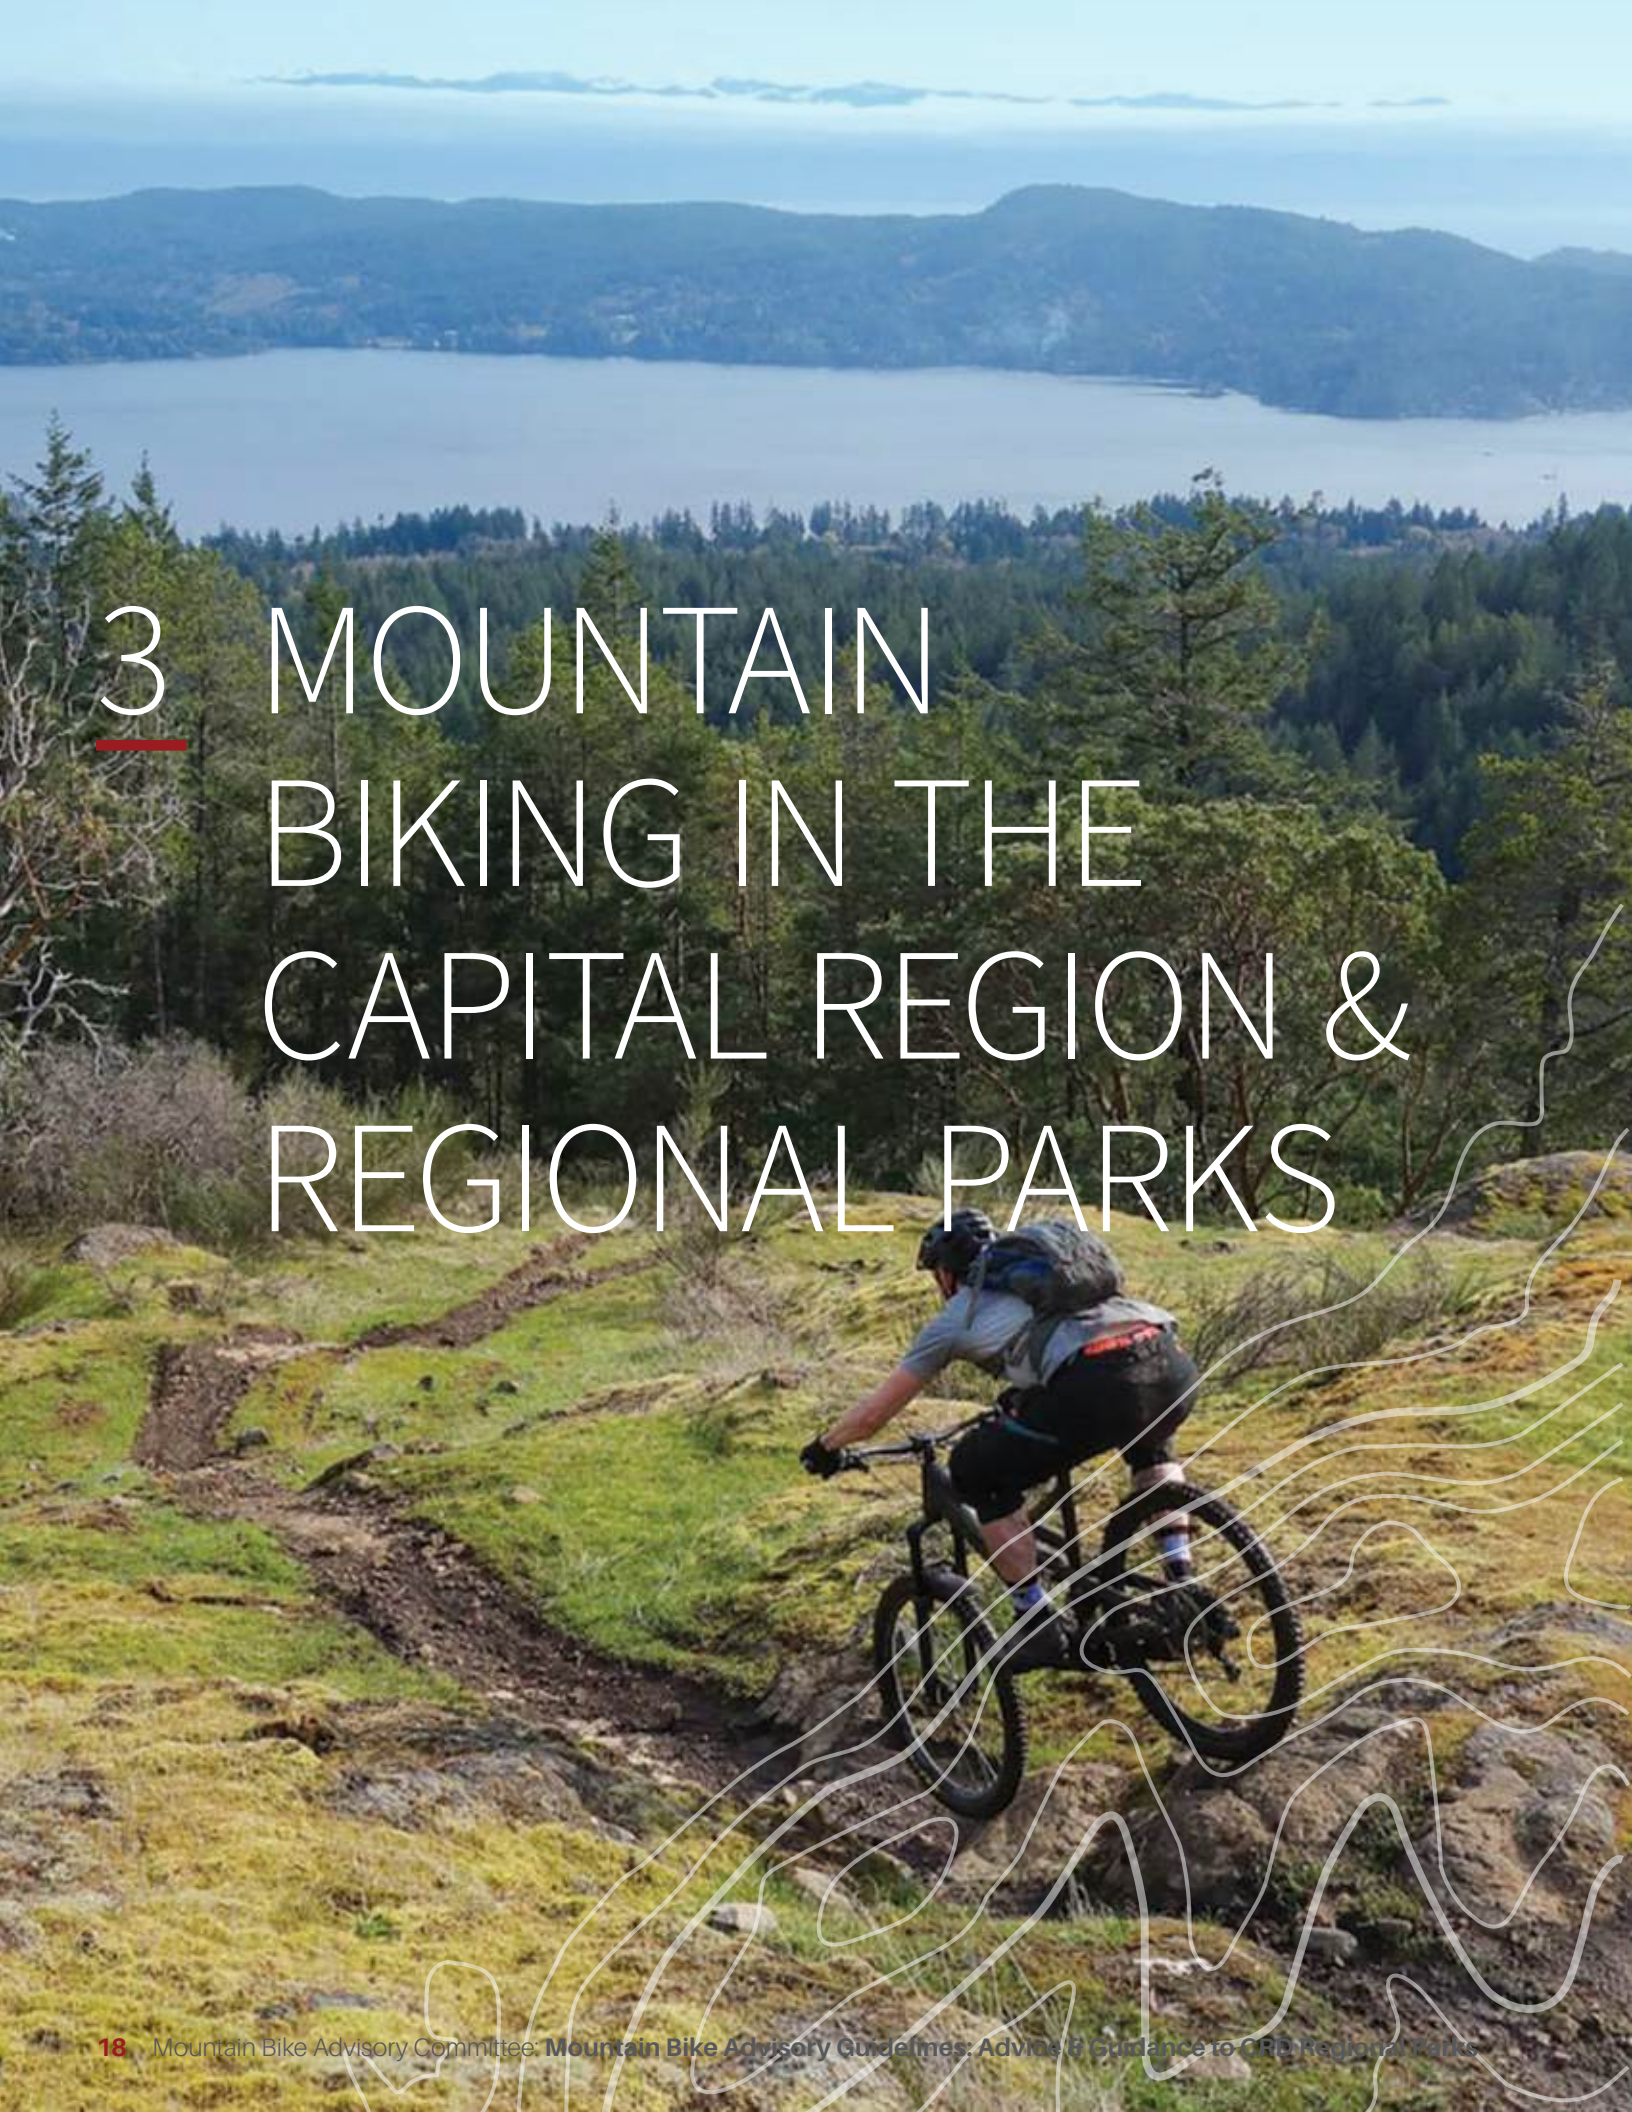
Climate Change

Climate change will have significant implications, some good and some bad, on mountain biking. In many locations, climate change is increasing the length of the riding season as some jurisdictions experience later starts to winter and an earlier spring. But more intense summer temperatures and greater forest fire smoke are creating more difficult and potentially unsafe riding conditions. In addition, warmer summers may create greater wildfire risk which may lead to more closures of forested areas to help prevent wildfires. These collective actions may shift riding patterns and cause intense riding periods to be focused on early and late season margins and potentially elevate crowding and conflict and will also shift when trail maintenance is able to be completed. The extreme weather events will also bring challenges for mountain bike trail design and maintenance. Major storms may deliver more intense precipitation events elevating impacts such as erosion to the trail tread. These events will demand more time and more money to respond to. This will make marginally or poorly designed trails entirely unsustainable.

Trail Development Capacity

There has been a rapid and exponential growth in the number of professional and volunteer mountain bike trail organizations, planners, designers and builders – both trained and untrained. Unlike other recreational activities, mountain biking is experiencing a relative surge in volunteerism with an interest in helping build and maintain trails. In fact, the mountain bike community has developed an underlying social expectation that to ride one must also help maintain and should be a part of a local mountain bike organization. This expanded generation of trail organizations and builders are focused on creating mountain bike-optimized designs and features that exponentially increase the enjoyment of trails.

Outdoor Recreation Culture



Today's youth, our newest generation of outdoor recreation enthusiasts for whom these guidelines are truly being developed, have always known the outdoor recreation sector to include mountain biking whereas for the older generations, some may still consider mountain biking to be "new". Mountain biking is now mainstream and part of the range of activities that are expected and anticipated to be available to outdoor recreation enthusiasts in parks and recreation areas.

Mountain Biking is Economic Development

One need not look any further than British Columbia and Vancouver Island to know that mountain biking can be an important economic development strategy. Communities and destination marketing organizations across the province, including Indigenous communities, see the potential for mountain biking to help grow, strengthen, and diversify economies especially in rural communities. And these communities know that quality trails are the foundation of this tourism economy. This trend will certainly continue and is likely to expand greatly. The Capital Region is no different. The region holds tremendous potential that has yet to be unlocked and organizations such as Tourism Greater Victoria are working to expand nature based and adventure tourism especially considering recent COVID-19 implications.

3 MOUNTAIN BIKING IN THE CAPITAL REGION & REGIONAL PARKS

The delivery of mountain biking trails and opportunities in the Capital Region occurs through an intertwined delivery system made up of various landowners and managers. Each of these land managers and owners have different land management objectives and priorities for those lands. In general, the system is comprised of:

- Regional Parks (e.g. Mount Work, Harbourview)
- Private Forestry Lands (e.g. Tansky Recreation Site)
- Private Resort Lands (e.g. Bear Mountain)
- Municipal Lands (e.g. Jordie Lunn Bike Park)
- BC Provincial Parks (e.g. Goldstream Bike Park)

There is both an opportunity and a need to purposefully coordinate the delivery of mountain biking across this system of land managers. Improved and deliberate coordination will help ensure the region provides the right mix of mountain bike trail experiences in the right locations and in a way that aligns with the objectives of the respective lands. Recognizing the diverse management objectives and realities of each land manager in the system, it is also important to know that the mountain bike community does not expect a single land manager to meet all the demands of the mountain bike community on one particular land base. Instead, the MBAC believes that a broader systems approach to planning this network is needed and will enable the most suitable mountain bike experiences to be developed on the lands that are most appropriate and hold the greatest potential to support those experiences.

Regional parks have become popular mountain bike destinations and are looked at as an important land base to support the future of mountain biking for a variety of reasons:

- Incredible scenery and beauty of regional parks,
- Regional parks contain a variety of terrain that is appealing and suitable for mountain biking,
- The proximity of regional parks to regional population centers and connectivity to transit and regional trails make these lands relatively easy to access, and
- Most of the land in the Capital Region is owned by private forestry companies meaning there is limited public land parcels on which mountain biking can be supported.

The regional parks system provides visitors with 315 km of authorized trails. But only 67 km, or 21%, of the authorized trail system have been assigned a difficulty rating specifically for mountain biking indicating that these trails are intended to deliver a quality mountain bike experience. Currently, two of the existing 31 regional parks (just 6% of all regional parks) – Mount Work and Sea to Sea – provide authorized mountain bike opportunities through a purpose-built mountain bike optimized trail network (Figure 7). Most of these mountain bike optimized trails also accommodate other activities such as hiking.

What is a Trail?

A trail is a type of infrastructure that is purposefully designed, constructed, and used to facilitate one or more recreational activities. To be a recognized trail, the route must be:

- Approved by the landowner / manager,
- Mapped,
- Marked (e.g. signage), and
- Actively managed and maintained.

If one of the above criteria are missing, the route is not a trail. It is linear access.

The CRD should adopt this definition of a “trail”.

What is a Mountain Bike Optimized Trail?

A trail that permits multiple activities (multi-use) but has been designed specifically to, and contains natural and built features that, optimize the trail experience for mountain bikers.

315 km of authorized trail in regional parks

2 of 31 regional parks provide mountain bike optimized trails

21% of authorized trails in regional parks have been assigned a difficulty rating for mountain biking

According to TrailForks, Mount Work Regional Park provides riding for all levels of difficulty though the network heavily favours blue and black diamond rated trails that provide for technical riding and limited flow (Table 1). Though all of these trails exist within Mount Work Regional Park, the mountain bike community identifies two distinct sub-areas in the park including 1) Hartland Mountain Bike Park and 2) Mount Work Regional Park. In Mount Work, the management plan has designated a specific zone in the park for mountain biking, horse riding and hiking. The trails in this portion of the park are developed, maintained, managed, and monitored by the South Island Mountain Bike Society through a license agreement with the CRD.

Sea to Sea Regional Park, which is referred to as the Harbourview riding area, contains a number of mountain bike trails with most segments favouring the more difficult black diamond trails which provide technical riding and limited flow. Unlike Mount Work, a license agreement does not exist between the Sooke Mountain Bike Club and the CRD for the development, maintenance, management, and monitoring of the mountain bike trails in this area and many of the trails are not regularly maintained.

Table 1. Proportion of Trail by Trail Difficulty Rating (TrailForks)

Park & Riding Area	Proportion of Trail by Trail Difficulty Rating (TrailForks)			
	Green	Blue	Black	Double Black
Hartland Mountain Bike Park	0%	45.3%	41.3%	13.3%
Sea to Sea Regional Park - Harbourview	4.2%	29%	54%	8.3%

Source: TrailForks

** For further detail and characteristics on each trail difficulty rating, please see Appendix C*

Growing Pressure & Demands

Hosting over 7 million visits annually, the MBAC understands that regional parks are facing growing pressure and demands from both the mountain biking community and other outdoor recreation activities. The demand for mountain biking and the provision of a diverse supply of high-quality purpose-built mountain bike optimized trails in the Capital Region has grown dramatically since the original network of mountain bike trails in regional parks were developed or sanctioned. The MBAC believes there is a need to expand the quantity, diversity, and quality of mountain bike experiences within regional parks. At the same time, MBAC recognizes that visitation to regional parks by other trail users and visitors has also grown. And, this increase in visitation, which has only been intensified through the COVID-19 pandemic, is happening at a time when land development pressures and the loss of ecosystems and biodiversity in the region have elevated the need for protected areas to protect the Capital Region's biodiversity, ecosystems, and ecosystem processes.

Recognizing the pressures and demands that regional parks face, the advice and guidance prepared by MBAC has considered how the supply of mountain bike experiences can be enhanced and evolved to better meet the needs of the mountain bike community but in ways that will minimize impacts to and conflicts with other visitors and the important Indigenous, biodiversity and ecosystem values that regional parks are helping to protect.

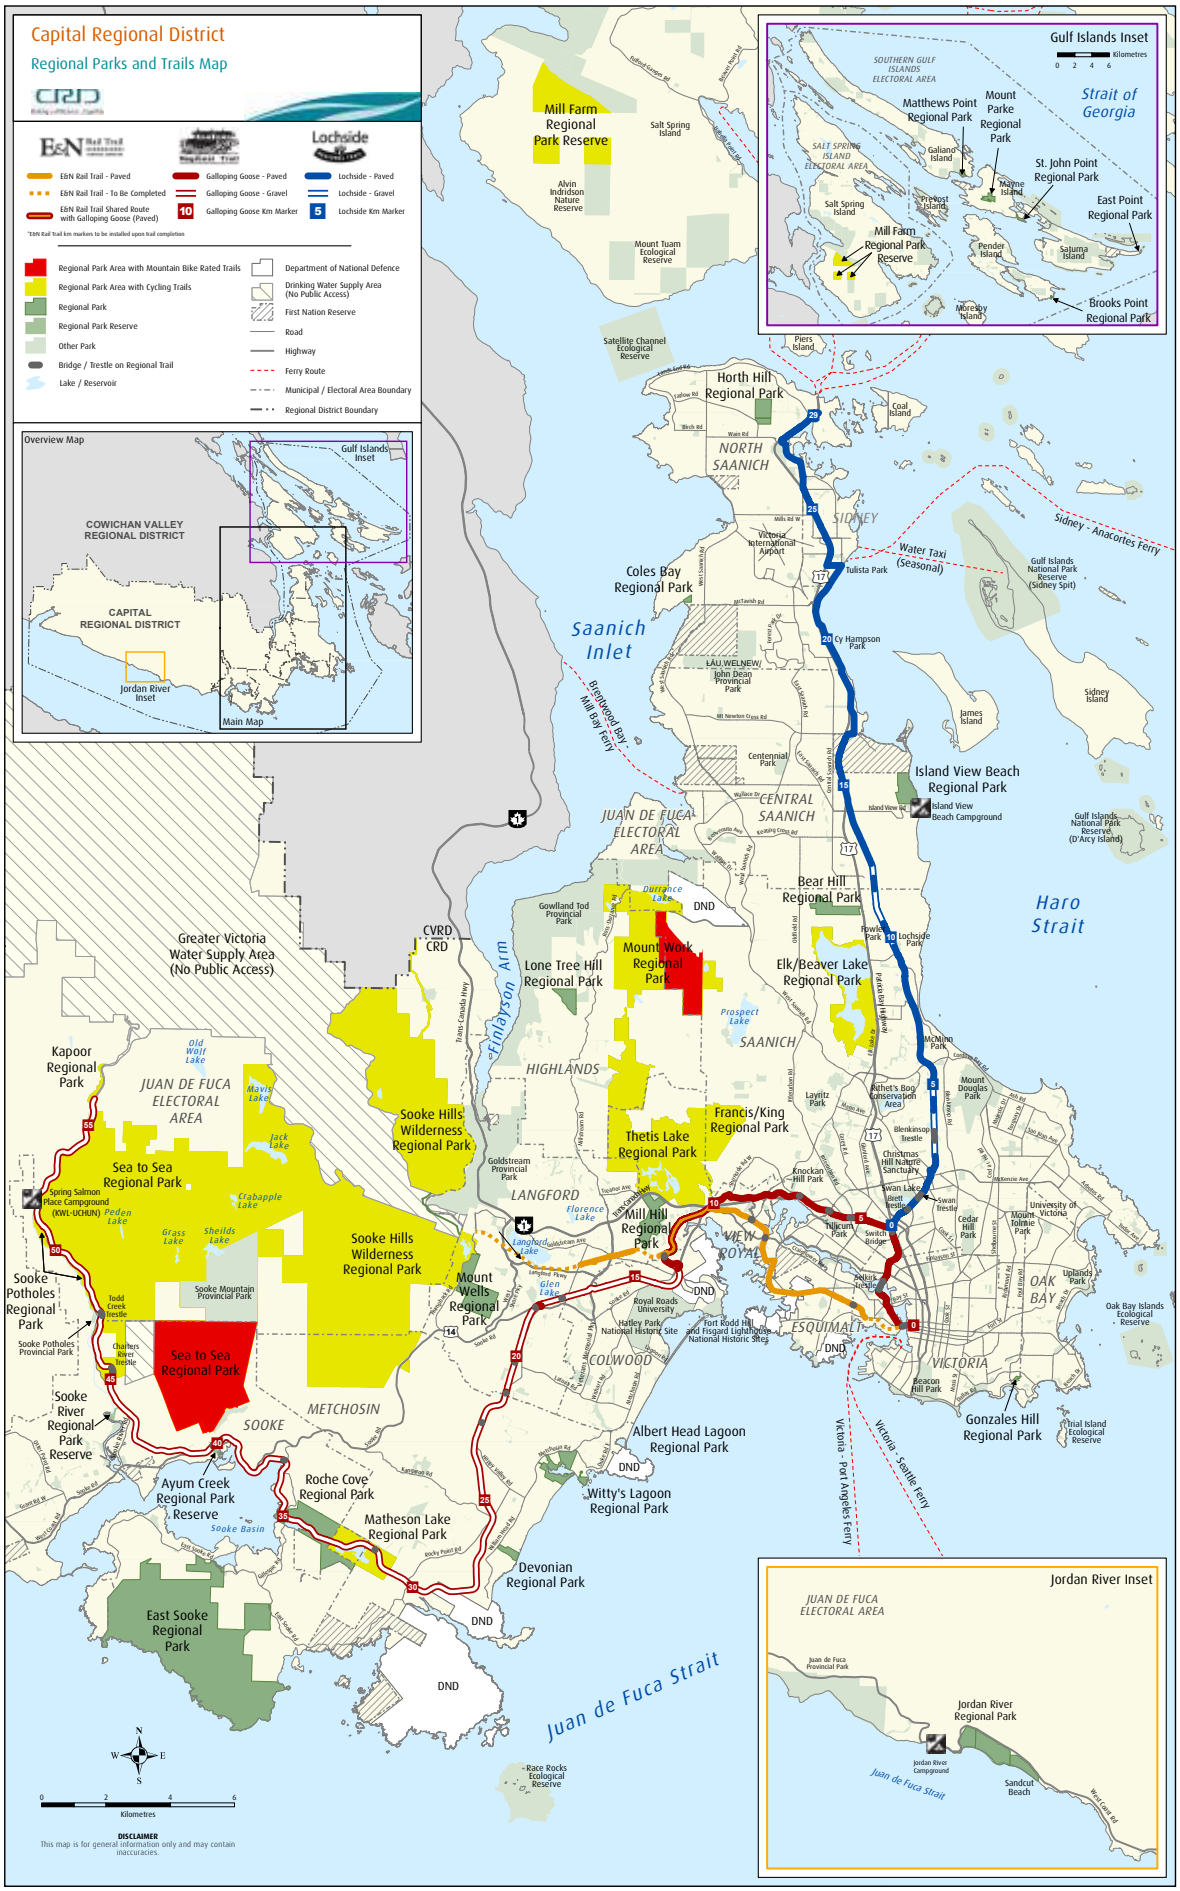

Figure 7. CRD Regional Parks – Biking & Cycling Opportunities

4 ADVICE & GUIDANCE

Photo Cred: Dirty Girlz Bike Club

The following sections present the advice and guidance from the MBAC to the CRD. Each of the priority focus topics discussed by the MBAC have been organized under one of the following four topic themes:

- Mountain Biking Experiences
- Regional Parks Classification & Zoning
- Service Delivery Model
- Planning, Design & Management

An introduction and supporting context are provided for each discussion topic which is followed by clear recommendations to the CRD. The MBAC respectfully requests that the CRD consider and integrate this advice and guidance in the development of Mountain Bike Guidelines for Regional Parks.

4.1 Mountain Biking Experiences

4.1.1 GAPS IN MOUNTAIN BIKE EXPERIENCES IN THE GREATER VICTORIA REGION

Context

As indicated earlier, mountain biking is a remarkably diverse activity. Residents of and visitors to the Capital Region are seeking a wide range of mountain biking experiences. Though specific research into the mountain biking demands in the region are not available, mountain bike organizations have been clear that the supply of existing experiences have not necessarily evolved in line with demands. There are three primary reasons for this:

- The approval of new trail construction has been constrained,
- The unsanctioned trails that have been built may not align with the experiences that are of highest demand by the broader range of riders, and
- Terrain in the Capital Region and in regional parks makes development of less difficult trail experiences and flow trails more challenging but not impossible.

The committee would also like to identify that, currently, there are no purpose-built adaptive mountain bike trails or opportunities in the region for riders who cannot ride a standard mountain bike.

It is the opinion of the MBAC that the current supply of mountain-bike optimized trails does not meet the region's current needs, is not positioned to meet anticipated future needs and is not positioned to capture the true tourism potential that mountain biking can bring to the Capital Region and our economy. The committee believes that deliberate efforts should be taken to increase the supply and diversity of purpose-built mountain bike optimized trails in the Capital Region in general and in regional parks more specifically.

Advice & Guidance

To address the gaps in the diversity and volume of trail experiences in the Capital Region generally, the MBAC recommends that:

1. The system of mountain bike trail providers as a whole, should focus on developing new trails that provide the following mountain bike trail experiences:

- All-mountain flow and tech trails at the green, blue and double black diamond levels of difficulty as well as supporting green and blue climbing trails.
- Cross-country (including gravel riding / cyclocross) at the green and blue levels of difficulty.
- Downhill trails with shuttle opportunities ranging from blue to double black levels of difficulty.
- Adaptive Mountain Bike (aMTB) at the green and blue levels of difficulty.

4.1.2 MOST APPROPRIATE MOUNTAIN BIKE EXPERIENCES IN REGIONAL PARKS

Context

Though there are gaps in the current supply of mountain biking experiences in the Capital Region, the MBAC recognizes that mountain biking is delivered through a regional system comprised of different providers and land managers. The committee agrees that a single provider cannot, and should not attempt to be, all things to all riders. Providers, whether it be Regional Parks or others, should provide the experiences that are best enabled by their lands and aligned with their respective mandates. As such, the MBAC is not suggesting that regional parks should attempt to address all mountain bike experience gaps identified above. The committee recognizes the conservation and outdoor recreation mandate of regional parks and acknowledges that the overarching role of the public sector in the provision of recreation, including mountain biking, is to maximize the "public good". The committee recognizes that the investment of public tax revenues must occur in a way that will maximize the benefit, directly or indirectly, to the majority of the residents in the Capital Region rather than a small few. To this point, the committee understands that as the level of excellence in any recreational activity, including mountain biking, increases, the number of people engaged in the activity, and therefore the public good derived from investments in delivering the activity, typically decreases (Figure 8). Sport for Life's "Long-term Athlete Development Model" (Figure 9) was adopted by the committee as a framework for informing recommendations about the "level of play". In accordance with the above, the MBAC has identified the mountain bike experiences, level of difficulty and level of play that should be the priority focus in regional parks.

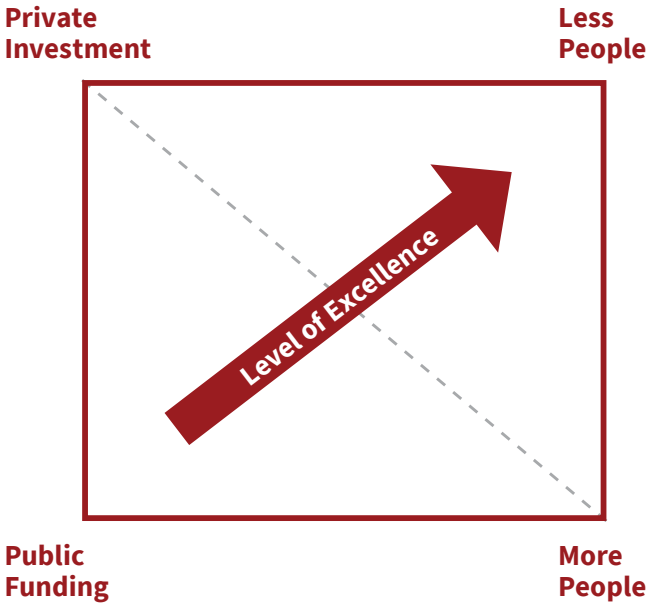

Figure 8. Public Funding & Level of Excellence Model

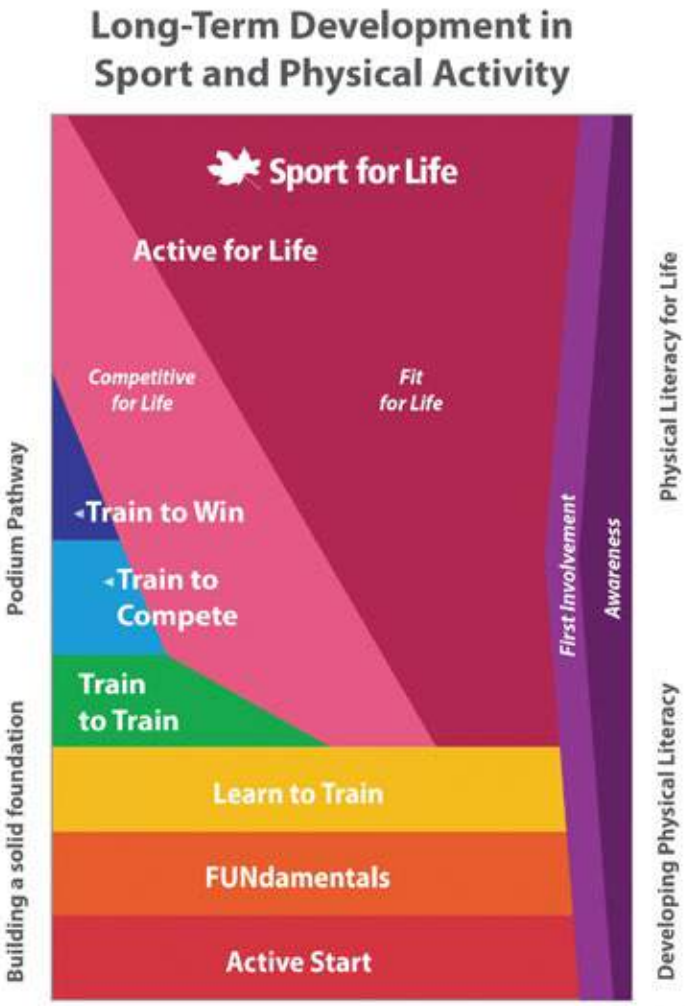

Figure 9. Sport for Life Long-term Athlete Development Model

Advice & Guidance

The MBAC recommends that:

1. The CRD should enable the development of mountain bike optimized trails, including technical trail features and visitor infrastructure, that support the following disciplines:

- All-mountain flow trails at the green, blue and double black diamond levels of difficulty as well as supporting green and blue climbing trails.
- Cross-country (including gravel riding / cyclocross) at the green and blue levels of difficulty (see recommendation #4 as well).
- Adaptive Mountain Bike (aMTB) at the green and blue levels of difficulty.

2. The CRD should prioritize providing, or enabling the provision of, mountain bike trails and programs that will:

- Help introduce new mountain bikers to the activity,
- Enable riders to develop the fundamentals and learn to train, and will
- Keep riders active and fit for life through mountain biking.

The committee supports the region as being the national hub for elite mountain bike training and recognizes that many of the trails developed in Regional Parks are also likely to be used by these athletes for training. However, the MBAC recognizes that CRD priority is unlikely to focus on providing higher level of service trails and facilities that are focused on meeting the expectations of national and international racing standards or programs to develop elite athletes.

3. Regional Parks develop a new, or update the existing, trail classification system to include "activity-optimized" trails as a new classification in addition to typical single use and multi-use class trails and that the classification also include level of difficulty and recreation setting.

4. Regional Parks actively seek opportunities to support the creation and connection of long-distance interconnected natural surfaced single track loops throughout the region that support bike packing, connect riders to existing mountain bike trail destinations and to other adjacent jurisdictions.

Multi Use Trails – allow two or more distinct activities to occur on a single trail but the experience and amenities have not been optimized for any particular activity type.

Single Use Trails – allow only one recreation activity and have been designed to optimize the experience for that activity.

Activity Optimized Trails – allow two or more distinct activities to occur on the trail but have been designed and incorporate activity optimized features that elevate the experience for only one of the activities.

5. Though the MBAC acknowledges the growth in popularity of downhill riding, dirt jumping and gravity parks, the MBAC recommends that these activities are less appropriate to be developed within regional parks due to their intensive footprints and elevated levels of risk and liability. These experiences are important and needed and more appropriate for municipal park settings or private resort lands.

6. During the update of the CRD Regional Parks Strategic Plan, Regional Parks should identify and include the mountain biking experience gaps, as identified in this report, as high outdoor recreation priorities for regional parks to address and affirm the commitment to supporting these experiences in appropriate parks and appropriate locations within parks. In addition, the suitability of land to deliver and support new mountain bike trails should be added as an additional criterion in Regional Parks' parkland acquisition criteria.

7. CRD work with the mountain bike organizations to prepare Trail Management Objectives for each new mountain-bike optimized trail, and where necessary, existing mountain bike optimized trails in order to clearly define the trail user objectives, level of difficulty, technical trail features to be included, trail classification, permitted uses, design parameters and inspection and maintenance standards. The CRD should require TMOs to be submitted as part of all trail development applications.

Trail Management Objective…

> Documents and synthesizes, in a single form, the management intention for the trail in a clear, consistent and understandable way. TMOs should guide all future trail planning, design, construction, maintenance, and management decisions for the trail and are used to help public land managers understand, communicate and, ultimately, approve the development of the trail

4.2 Regional Parks Classification & Zoning

Context

Upon acquisition, each regional park is assigned a park classification (see Appendix DD.1). This classification indicates the high-level management priority and focus for the park. Through the management plan process, zoning (see Appendix DD.2) is used to refine and provide more specific management direction for certain areas within a park. Neither the park classification nor the park zones provide clear direction on what specific recreational activities are deemed to be compatible in the park / zone which are considered incompatible. Without this clarity, it is difficult for the mountain bike community, other recreational users and Regional Parks staff to make clear decisions about the permissibility of mountain biking and where future mountain bike trails could be developed.

Advice & Guidance

To improve clarity and clearly communicate appropriate uses in regional parks and park management zones, the MBAC recommends that:

1. Regional Parks prepare a matrix or framework that provides system wide direction on what activities, trail configurations and visitor amenities are deemed to be compatible, compatible with conditions or incompatible with the management intent of each park management zone. Specific to mountain biking, the framework should clearly articulate which mountain bike disciplines, which trail system configuration (e.g. destination areas with higher density of trails versus single or low density trail network), which technical trail features and which supporting visitor infrastructure is deemed compatible with each management zone. Table 2 is provided as an example and, where necessary, should be refined by Regional Parks and included in the Mountain Bike Guidelines.

TECHNICAL TRAIL FEATURES (TTFs)...

Are constructed or natural obstacles that are purposefully integrated or built into a trail to deliver specific user objectives and require riders to negotiate them. There are 3 categories of TTFs:

Natural

- Drop
- Rock face / slab
- Rock roll
- Exposure
- Roots
- Natural rock garden

Enhanced

- Rock garden
- Dirt Berm
- Switch berm
- Small rollers
- Log ride
- Table top
- Step up / down

Constructed

- Wooden Berm
- Bridge (*that is used for play vs trail infrastructure*)
- Wall ride
- Skinny
- Jump
- Gap Jump
- Roller coaster
- Pump track

Table 2. An Example of Compatible, Permitted and Not Permitted Mountain Bike Uses by Park Management Zone

		PARK MANAGEMENT ZONE					
		Environmental Protection	Cultural Heritage Protection	Regional Wilderness	Natural Environment	Outdoor Recreation	Park Services
DISCIPLINE	Cross country						
	All mountain						
	a-MTB						
	Regional Connections						
TRAIL SYSTEM CONFIGURATION	Dense Network						
	Dispersed Network						
	Single Trail						
TTF'S	Natural						
	Enhanced						
	Constructed						
AMENITIES	Signage						
	Bike wash station						
	Parking						
	Washroom (un-serviced)						
	Washroom (serviced)						
	Day use / picnic areas						
	Bike Play Park / Skills Training Area						

Compatible Use	Uses that are considered to be consistent with the intent of the park management zone under normal trail design and visitor management practices.
Permitted	Uses that may be compatible with the intent of the park management zone under certain circumstances and under special conditions and controls where necessary.
Not Permitted Use	Uses that are not compatible with the intent of the park management zone.

4.3 Service Delivery Model

Context

As demonstrated in jurisdictions such as Cumberland, North Cowichan, Regional District of Nanaimo and on Crown Lands, mountain bike trails and mountain biking opportunities can be delivered through a variety of service delivery models. The MBAC believes that it is imperative that a clear mountain biking service delivery model be established for regional parks.

To inform the MBAC's recommendations, the committee discussed delivery models that are applied in other jurisdictions as well as the mandate of Regional Parks as a public sector recreation provider. Land managers, such as Regional Parks, can and do play a variety of roles in the delivery of mountain biking including:

- **Direct Provider** – the land manager identifies community needs and plans, designs, constructs and operates mountain bike trails and delivers programs and services through public funding.
- **Enabler / Indirect Provider (e.g. community development)** – the land manager initiates and enters into mutually beneficial and collaborative partnerships and alliances and may provide various supports such as capacity building, leadership, facilitation and / or funding to community groups and organizations that plan, design, construct and operate mountain bike trails.
- **Cost Share (Patron)** – the land manager provides financial support through a formal cost share agreement to an existing entity such as another government agency who already offers mountain biking opportunities in their jurisdiction but not in the land manager's jurisdiction.

In accordance with other jurisdictions, the role that the CRD chooses to play in the service delivery model could vary depending on the following service areas:

- Trail planning,
- Trail design,
- Trail construction,
- Trail maintenance,
- Trail and visitor monitoring, and
- Visitor management.

The current service delivery model for mountain biking in regional parks is unclear, inconsistent between parks (e.g. Mountain Work Hartland Area versus Harbourview) and is leading to confusion and frustration for the mountain bike community and CRD staff. It is also directly challenging the ability for the region to meet the current demands for mountain biking and is resulting in growing unauthorized trail building and undesirable environmental and other impacts.

Benefits of a Clarified & Consistent Service Delivery Model

- Certainty for the mountain bike community, the CRD and staff
- Improved partnerships and relationships
- Ability to leverage limited financial and staff capacity
- Enhanced capacity to deliver on regional mountain bike needs
- Stronger stewardship commitment and connection to regional parks
- Improved management, maintenance, and sustainability
- Reduced conflicts and public complaints
- Improved quality of trails and riding experiences
- Improved environmental integrity

Advice & Guidance

Recognizing that Regional Parks will remain a direct provider of policy development, regional park management planning and trail development application review and approvals, the MBAC recommends that:

1. The CRD deliberately adopt an "Indirect Provider" role for the following service areas relating mountain bike optimized trails (Figure 10):

- Trail planning
- Trail design
- Trail construction
- Trail maintenance
- Trail monitoring

2. The CRD deliberately adopt a direct provider role, with support from mountain bike organizations, for:

- Planning, design, construction, and maintenance of supporting visitor infrastructure (e.g. parking lots, bike wash stations, day use areas, washrooms)
- Visitor management activities specific to mountain biking.

3. The CRD establish a consistent license agreement template, performance criteria and process for enabling mountain bike organizations to assume the service delivery roles outlined above.

4. The CRD consider the establishment of a dependable and sustainable granting program to support mountain bike organizations with implementing the service delivery roles outlined above (e.g. contracting professional trail designers) and act as partners in leveraging other funding sources as is done in other jurisdictions such as the Cowichan Trails Stewardship Society in North Cowichan, District of Squamish, Whistler.

5. The CRD provide trail planning, management, and monitoring training for volunteer organizations who enter into a license agreement and others who are authorized to provide trail maintenance activities to build and maintain capacity. And, Regional Parks staff and volunteer leaders participate in trail design, construction and maintenance training provided by third party industry experts.

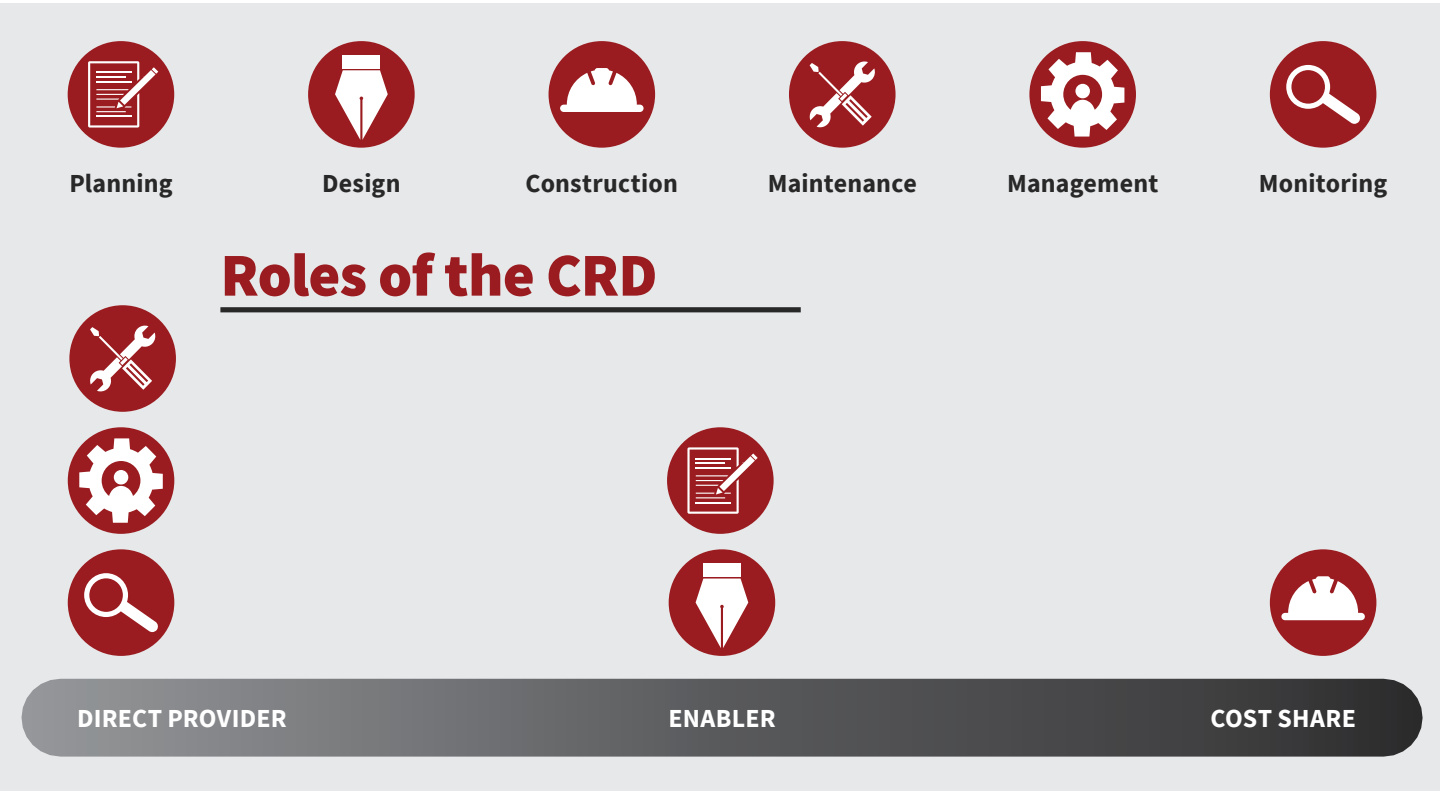

Figure 10. Recommended Service Delivery Role of the CRD

4.4 Planning, Design & Management

4.4.1 AVOIDING & MINIMIZING ECOLOGICAL, INDIGENOUS & CULTURAL IMPACTS

Context

All outdoor recreation activities, including mountain biking, create undesirable environmental impacts and, potentially, adverse effects on areas of cultural and spiritual significance to local Indigenous communities. It is the opinion of the MBAC that each outdoor recreation activity has an obligation and responsibility to take steps to avoid and mitigate the adverse effects of their activity regardless of how their activity might compare to others. Prior to developing advice, the MBAC worked to understand what impacts occur from mountain biking, why they occur, what elements influence the severity and extent of the impacts and how the impacts of mountain biking compare with other typical recreation activities permitted in regional parks. It is essential that the mountain bike guidelines be founded upon the best available research and insights into how mountain biking impacts environmental, Indigenous, and cultural values and how those compare with other activities that are already supported in regional parks.

The committee examined a range of literature reviews on the impacts of outdoor recreation generally and mountain biking more specifically[iii iv v]. Though the science into the impacts of mountain biking continues to evolve, the literature clearly suggests that mountain biking, like any outdoor recreation activity, can adversely impact:

- Soil – erosion, compaction
- Vegetation – damage, loss, introduction and spread of invasive species
- Water – sedimentation, pollution, contamination
- Wildlife – distribution and abundance, disturbance and anti-predator response, mortality, habituation, shift species populations to generalist species and away from specialist species
- Ecological processes and habitat – habitat loss, fragmentation, increase edge effects
- Indigenous values & traditional uses – interference with traditional and spiritual practices, loss / damage / theft of traditional values

Though many of impacts outlined above occur directly on the trail and within the immediate trail corridor, the committee understands that some impacts can also extend well beyond the trail corridor (e.g. wildlife disturbance, edge effects, species displacement). The MBAC recognizes that mountain biking in the Capital Region is a year-round activity which leaves little seasonal reprieve for wildlife in popular areas. And, the MBAC recognizes that night-riding has grown in popularity placing even greater pressures on wildlife that depend on night time for feeding, foraging and movement or for species that have altered their behaviours to favour evening periods where they can avoid human disturbance.

The literature indicates that the severity and extent of environmental impacts from mountain biking specifically, and outdoor recreation more generally, can vary. Several factors combine to influence the overall severity and extent of the impacts including:

- Type of activity and behaviours of visitors,
- Intensity, duration, and timing of the use,
- Weather including precipitation,
- Soil type, slopes, vegetation, and ecosystem types the activity occurs in,
- Species that inhabit the area the activity occurs in, and
- Design and siting of infrastructure and implementation of management practices

A sustainable trail…

> is a trail that allows the visitors to optimize their experience while creating the least amount of adverse impacts to the environment and cultural values, minimal visitor conflicts and safety concerns and requires only routine maintenance. Trails that do not do this are not sustainable.

In general, the committee understands that the activity type, visitor behaviour and location of use is a greater determinant of the severity and extent of environmental and Indigenous and cultural impacts than volume of use. The literature reviewed by the committee suggests that:

- Equestrian use creates the greatest impacts to the trail tread conditions (e.g. soil loss, erosion),
- Hiking and Mountain biking (including class 1 e-bikes) appear to have similar impacts on trail tread conditions,
- Equestrian use creates the least disturbance to wildlife, and
- Mountain biking and other quiet but fast-moving activities (e.g. trail running) create greater disturbance of wildlife due to the element of surprise[vi].

Many park managers may conclude that with greater visitation comes greater impacts. The committee would like to stress that the literature indicates that, though increased use can lead to increased environmental impacts, the magnitude of the increased impacts can be quite small particularly when well designed and maintained trails and infrastructure are in place (**Figure 11**). The greatest degree of impacts to soil and vegetation occurs in the early stages of use (e.g. during the construction of the trail) with impacts levelling off over time. This said, the committee recognizes that impacts to wildlife may follow a different pattern pending the nature of species in the park and the transport and spread of invasive species are also likely to be tied more closely to the volume of use and visitor behaviours.

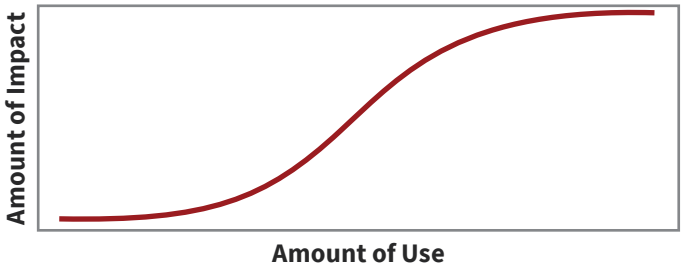

Figure 11. Sigmoid curve that characterizes the relationship between amount of recreation use and resultant intensity of environmental impact

Though the committee acknowledges that mountain biking creates adverse impact, it is the opinion of the MBAC that occurrence of an adverse impact doesn't necessarily mean that the impact results in a significant ecological effect. Leading recreation ecology researchers suggest that overall significance of an impact(s) is a function of a) the impact characteristics (e.g. extent, longevity, intensity) and b) the characteristics of the attribute (e.g. rarity, irreplaceability) that is being impacted[vii] (Figure 12). With all recreation comes adverse impacts. Therefore, it is essential for the CRD to define and understand what degree of impacts are unacceptable and exceed the limits of acceptable change. It is the MBAC's understanding that, at this point in time, the CRD does not have a process for determining which degree of impacts are within the organization's tolerances or limits of acceptable change for a particular park and, therefore, which extent of impacts are deemed to exceed the limits of acceptable change.

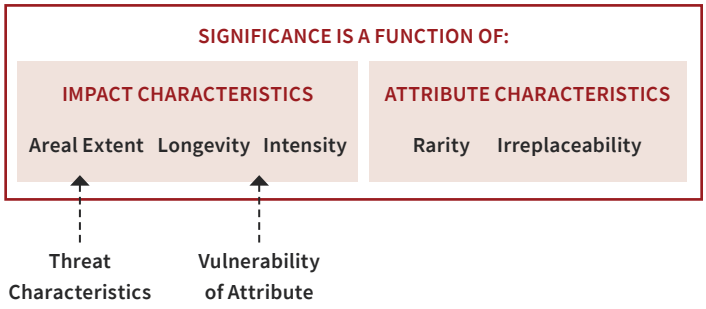

Figure 12. Criteria that help to define the significance of an ecological effect (Cole & Landres 1996)

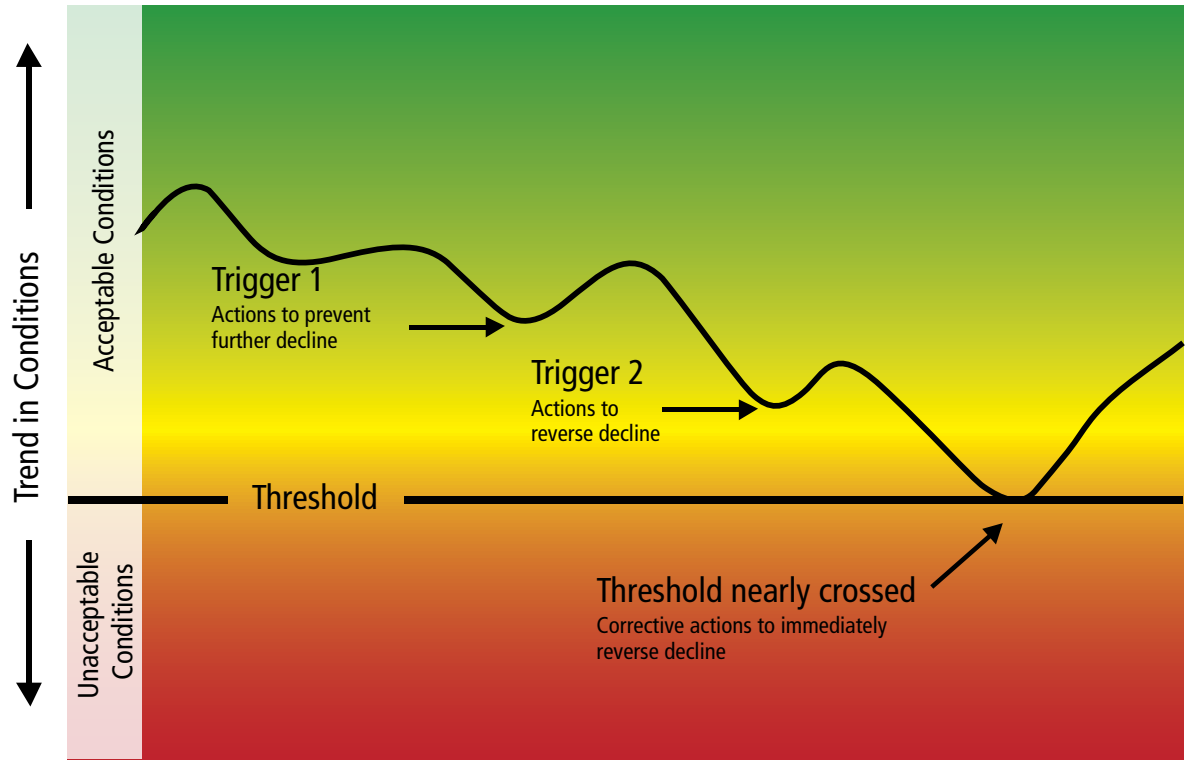
Advice & Guidance

Based on the above outlined understanding, the committee has prepared the following recommendations on how the impacts of mountain biking on environmental, Indigenous, and cultural values in regional parks can be avoided or minimized. The MBAC recommends that:

1. The CRD adopt, or develop, a visitor use management framework (https://visitorusemanagement.nps.gov/VUM/Framework) to establish clear indicators, triggers and thresholds that define the limits of acceptable change for recreation impacts. The CRD should select and integrate these indicators, triggers, and thresholds of the limits of acceptable change into park management plans and establish a clear structure of what direct and indirect management actions will be taken as / if triggers are reached in relation to the indicators.

2. The CRD ensure all future trails, including the authorization of currently unauthorized trails, are sited to minimize their impacts on environmentally sensitive areas (e.g. species at risk habitat, nesting / den sites, riparian areas, sensitive soils, steep slopes, watercourses, wetlands, unfragmented intact habitat), and areas that are culturally and spiritually important to local Indigenous communities to the extent possible. It is important the CRD balance the protection of environmentally sensitive areas against the need to locate mountain bike trails where they will provide riders with a quality trail experience. Failure to create a quality trail experience due to overly strict environmental limitations is likely to lead to riders seeking their desired experience off-trail. This reality makes it essential that skilled environmental professionals work together with skilled trail planners and designers to achieve this delicate balance. The CRD should maintain, or undertake, appropriate biophysical inventories, archeological overview assessments and archeological impacts assessments to fully understand the environmental and archeological values in areas proposed for trail development as required by the CRD's current policies and provincial, regional, and municipal legislation and bylaws.



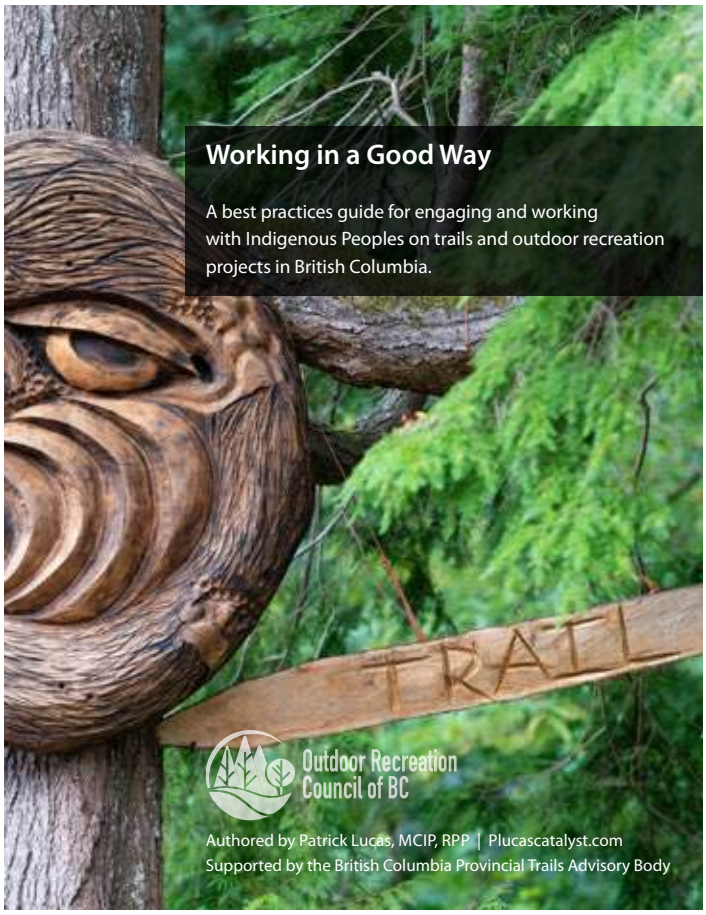


Figure 13. Example Relationship between Triggers and Threshold for Visitor Management Indicators

3. Engage local Indigenous communities with overlapping territories early in the trail planning and design process to ensure Indigenous values in the area of interest are understood, actions to mitigate impacts to Indigenous values can be jointly determined and opportunities to support reconciliation and visitor education about local Indigenous communities (e.g. education and interpretation) directly on the trails can be identified. The CRD should encourage mountain bike organizations to adopt and follow the best practices outlined in the Outdoor Recreation Council of BC's "Working in a Good Way" guide during trail planning.

4. Recognizing the CRD's desire to minimize further linear disturbance and fragmentation, the CRD should thoroughly evaluate whether existing linear disturbance (e.g. historic industrial access roads) and unauthorized trails are suitable to become mountain bike trails. The past practice of the CRD is to utilize existing linear access as the foundation for a park's trail system. However, it is the opinion of the MBAC that this practice is often not the most sustainable nor does it provide the desired mountain biking experience. Past linear access was not designed to provide long-term quality recreational experiences nor were they designed in accordance with sustainable trail design practices. The CRD should incorporate existing linear disturbances into the mountain bike trail system cautiously and only when the access:

- Will deliver a quality mountain bike trail experience and can be upgraded to contain features that optimize the route for mountain biking,
- Meets, or can be easily upgraded to meet, sustainable trail design guidelines (e.g. tread widths, slopes, grades, half rule, sight lines),
- Is intended to serves as a connection between purpose-built mountain bike trails rather than a destination trail or a climb trail, and when
- Creating a new purpose-built trail is simply not feasible or will create unacceptable environmental or cultural impacts.

5. The CRD work with the mountain bike community to apply an integrated mix of direct and indirect visitor management actions to manage the adverse impacts of mountain biking and mountain bikers. The CRD should recognize that direct management actions are effective at creating short-term changes in visitor behaviours especially for those that are uncaring and intentionally non-compliant. However, indirect management actions have been demonstrated to be more successful in shifting the long-term behaviours of recreation enthusiasts - especially those who are unskilled, uninformed and careless - and are known to result in better relationships with land managers and a stronger stewardship ethic. The following direct and indirect management strategies should be integrated into park management plans and visitor management plans and implemented by the CRD and mountain bike organizations:

Indirect Management Actions:

- Provide the right volume and mix (discipline and difficulty level) of purpose-built mountain bike trails to meet the range of mountain bike experiences demanded in the region and appropriate in regional parks (section 4.1.2). Ensure all trails are designed and maintained in accordance with established sustainable mountain bike trail design guidelines (see section 4.4.6).
- Through the proposed volunteer license agreement process (see section 4.3), enable, encourage and ensure that mountain bike organizations are regularly inspecting and maintaining their respective trails to avoid and minimize environmental impacts. Enable these organizations to re-route existing trails that are deemed to be unsustainable.
- Adopt and utilize the Leave No Trace program (www.leavenotrace.ca / www.lnt.org) as the foundation of the CRD's visitor education and skills and ethics program. Building on Leave No Trace, develop and implement education messaging and materials that reach visitors at every stage of the "visitor journey" (see Figure 14) and at key decision making points during their rides (e.g. parking lot, environmentally sensitive areas, unauthorized trails, day use areas, places where multiple activities mix). Engage key mountain bike influencers and organizations to distribute the educational messages to the mountain bike community through social media, mountain bike websites, mobile applications, and stewardship days. Train CRD staff and mountain bike club leaders as Leave No Trace trainers and encourage the staff and club leaders to deliver awareness workshops.

Figure 14. Visitor Journey Process (adapted from Destination Canada)

- Develop a clear mountain bike focused signage typology including trail classification (e.g. discipline, difficulty) signage, trailhead / kiosk, visitor education and information signage, regulatory signage, wayfinding and way markers, warning / safety signage, technical trail feature signage and interpretive signage as well as signage siting guidelines. Support the mountain bike organizations in the development and implementation of deliberate signage plans for mountain bike optimized trails and mountain bike areas (e.g. Mount Work).

- Working with recreation organizations in the region, develop and implement a Regional Parks Trail Guardian or Steward program to help maintain a stewardship presence on the trails, promote Leave No Trace practices and good etiquette to visitors and to monitor visitor use.

Trail Classification & Wayfinding Sign

Trailhead Kiosk

Direct Management Actions:

- Review, and if needed, update the CRD Parks Bylaw to ensure undesirable visitor behaviours that create environmental impacts and visitor conflicts are prohibited and enforceable and any seasonal or temporal closures are enforceable.
- Apply seasonal and time of day trail closures where needed to prohibit mountain biking in specific areas or on specific trails during sensitive periods for wildlife.
- Apply weather-based closures during inclement weather or seasons where the trails become overly susceptible to degradation and impacts from visitation.
- During management planning, identify existing trails that could be decommissioned (e.g. unsustainable, poor quality) to reduce linear disturbance. Pursue decommissioning and restoration to minimize the potential that the trail will continue to be used and continue to create impacts (e.g. erosion).
- Rapidly decommission unauthorized trails as they are constructed. However, ensure that all decommissioning actions and rationales are communicated to the mountain bike organizations and to the public in advance of decommissioning. Erect signage warning of decommissioning and ensure that appropriate decommissioning practices are applied to minimize safety risks to riders and other park visitors.
- Maintain CRD bylaw officer presence in mountain bike areas to promote compliance and pursue enforcement as a last resort, for the most serious of offences and for repeat offenders.

6. The CRD develop a trail and visitor impact monitoring training program and train the mountain bike organizations on how to monitor and report on changes in the visitor management indicators established in the management plans / visitor management plans. The program should also include practices on how to monitor visitation on the mountain bike trails (e.g. Traf-x counters, cameras).

7. The CRD work with established recreational organizations (e.g. hiking, mountain biking, equestrian, trail running etc.) and conservation organizations to develop annual opportunities for these organizations to interact, share education and develop an understanding of each others' interests, perspectives and concerns about recreation and conservation priorities in regional parks.

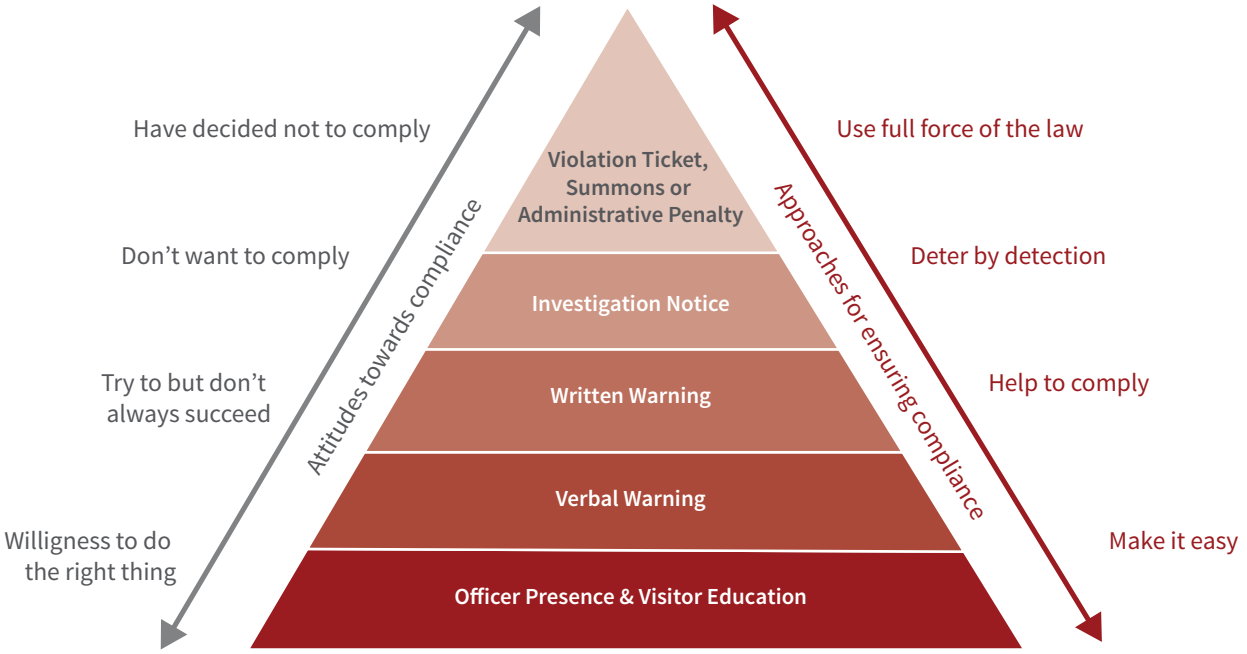

Figure 15. Compliance Pyramid Adapted from John Braithwaite

4.4.2 INTEGRATING MOUNTAIN BIKING WITH OTHER TRAIL ACTIVITIES

Context

Conflicts between recreational activities and between visitors of the same activity can create significant adverse effects on the quality of visitor experiences. It is essential that all recreation activities, including mountain biking, be planned, their infrastructure designed, and the visitors managed to mitigate the potential for conflicts between visitors and activities. The MBAC understands that conflict in outdoor recreation settings is best defined as "goal interference attributed to another's behavior"[viii]. Conflicts can occur between visitors of the same activity (e.g. varying skill levels, e-assist versus non e-assist, riders with dogs versus riders without dogs) and visitors undertaking different activities. Conflicts can even occur when no physical interaction takes place between visitors (e.g. perception of impacts, opinion on what is or is not appropriate).

The MBAC understands that conflicts are most often related to differences in:

- Activity styles (e.g. mode of travel, degree of technology, noise, smells),
- Focus of and goals for the outing,
- Visitor behaviours,
- Expectations of visitors (what is expected vs experienced),
- Attitudes towards and perceptions about the environment,
- Personal norms (beliefs on what is right or wrong),
- Level of tolerance toward other activities, and the
- "Last Settler Syndrome" where the first users of an area want that area to remain the way it was when they first arrived.

Important Note

> The degree to which one recreational activity experiences conflict is often asymmetrical to how another recreational activity experiences it.

From the MBAC's experience, the most common conflicts occurring between mountain bikers and other regional park users include:

- Speed and control of mountain bikers can create actual and perceived safety issues,
- Poor etiquette by a few creates perceptions for the many (e.g. yielding right of way, large groups dominating the trail, nudity, profanity, noise),
- Off-trail travel,
- Riding in, or a trail being developed (unsanctioned and sanctioned) in, areas that are or are perceived to be environmentally sensitive is creating perceptions that there is a lack of education, understanding and appreciation of nature,
- Failing to follow COVID-19 physical distancing guidelines,
- Some riders are unwelcoming to other visitors, are territorial or entitled and do not understand what other activities are permitted on trails that are used for mountain biking,
- Using trails that do not permit mountain biking,
- Scaring/startling horses, and
- Dogs on the trails.

The MBAC recognizes that visitors respond to actual and perceived conflicts in different ways. In response to conflicts, visitors may:

- Change their personal expectation of what is acceptable,
- Change their visitation behaviours and patterns (e.g. visit less often, visit at different times), or they may be
- Displaced from the area and go somewhere else for their recreation.

The MBAC believes it is incredibly important to minimize conflicts and negative encounters given that the outdoor recreation community is small and even a single negative experience can have a stronger impact and last longer than a positive experience. It is important to recognize that when negative interactions occur, some people can hold onto the memory of those conflicts and experiences and share them widely with others which can foster negative perceptions.

The MBAC recognizes and wishes to stress that the degree to which one recreational activity experiences the conflict is often asymmetrical to how another recreational activity experiences it. For example, the MBAC recognizes that some hikers, as an example, may experience greater negative impacts to their experience because of encounters with mountain biking than mountain bikers may experience because of encounters with hiking. The MBAC understands that just because one activity may be willing to share a trail(s) with another, it does not mean that the quality of the experience for those other activities will be maintained. At the same time, MBAC does not believe that providing single use trails is realistic or warranted in most cases. It is the opinion of the MBAC that the CRD and trail users need to find ways to ensure activities can co-exist on multi-use trails though some trails may be, and should be, deliberately optimized for specific activities.

Advice & Guidance

To avoid and mitigate the risk of conflicts between mountain biking and other approved recreation activities in regional parks, the MBAC recommends that:

1. The CRD work with the mountain bike community and other recreational users to develop an etiquette education program as part of a broader regional parks visitor education program (see section 4.4.1).
2. Ensure all trails are designed in accordance with established guidelines for safety, sustainability, and quality (section 4.4.6). In areas where multiple activities cannot mix safely, develop bypass routes to minimize conflicts.
3. Provide and maintain well placed and appropriate regulatory, education, wayfinding, and interpretive signage. Ensure that signage clearly communicates the trail classification, permitted uses, level of difficulty, etiquette and responsible skills and ethics and visitor preparedness. Ensure signs are purposefully sited to reach riders at key decision-making points and, where appropriate, incorporate QR codes to link riders to further information.
4. Adopt, utilize and promote an existing mobile device application to help riders identify sanctioned trails from unsanctioned trails, connect riders with trails that will meet their desired experiences, support wayfinding while on the trail, educate riders on responsible skills and ethics and etiquette and connect riders to mountain bike organizations.
5. Ensure CRD bylaws regulate unauthorized trail use and unsafe, reckless, and undesirable behaviours.

4.4.3 FORMALIZING MOUNTAIN BIKING ON AUTHORIZED AND UNAUTHORIZED TRAILS

Context

The committee recognizes that, as management plans are updated, new trail development proposals are prepared and regional initiatives to create interconnected mountain bike opportunities continue, the CRD is going to be asked to consider a) approving mountain biking as a permitted use on specific trails that currently prohibit mountain biking and / or b) to formally sanction and endorse specific unsanctioned trails. The MBAC believes that these decisions need to be made cautiously and transparently. The committee discussed and developed several transparent criteria that can be used to inform and structure decisions about which existing trails should permit mountain biking and which unauthorized trails should be formalized as sanctioned trails.

Advice & Guidance

1. The MBAC recommends that the CRD adopt the following criteria to enable an objective evaluation of whether an existing trail could be a good candidate to permit mountain biking or an unsanctioned trail may be a good candidate to be formalized as a sanctioned trail where:

- Mountain biking on the proposed trail is consistent with permitted uses in the park's classes and park zone that the trail occurs within.
- The trail provides, or enables the provision, of mountain bike experiences that are recognized as gaps in the region (4.1.1) or would provide a quality mountain bike experience.
- The trail generally adheres to established mountain bike trail and technical trail feature design guidelines (see section 4.4.6) while recognizing the unique biophysical conditions in the Capital Region.
- Permitting mountain biking does not create unacceptable safety risks for mountain bikers or other trail users.
- The trail improves the interconnectivity between established mountain bike trail networks in the region.
- The trail serves as a quality climb trail to access approved mountain-bike optimized trails.
- Permitting mountain biking does not introduce new, or exacerbate existing, unacceptable impacts to environmentally sensitive areas or further habitat fragmentation.
- Permitting mountain biking does not introduce new, or exacerbate existing, unacceptable impacts to sites of spiritual and cultural importance to local Indigenous communities.

4.4.4 UNAUTHORIZED TRAIL BUILDING

Context

The construction of unauthorized trails, also known as "rogue trails", is a management challenge in most jurisdictions. The MBAC recognizes, and would like to make it clear, that the development of unauthorized trails is not confined solely to the mountain bike community. In addition to mountain bikers, unauthorized trails and social trails are frequently created, whether intentionally or unintentionally, by many different activity types including hiking, horse back riding, dog walking, off-road vehicle use, among others. Regardless of which activity is creating trails, the MBAC recognizes the importance of and need to limit unauthorized trail development.

Unauthorized trail development can lead to a wide range of undesirable impacts such as:

- Increased risk & liability for the CRD and the trail builder,
- Elevated rider safety concerns especially when trails are not designed to accepted guidelines,
- Potential environmental, Indigenous, and cultural / historic resource impacts as unauthorized trail locations have not been studied for environmental and Indigenous or cultural values,
- The supply of trails becomes aligned more with what the builder wants to build rather than the trail experiences that are most needed in region to meet rider demands,
- Tenure conflicts,
- Conflicts with other recreational activities and visitors,
- Degraded relationship and trust between the land managers and the mountain bike community,
- Taking limited money and resourcing away from sanctioned trail building to fund the decommissioning and restoration of unsanctioned trails, and
- Degrading the mountain bike community's social license and support from non-mountain bikers for advancing sanctioned mountain biking.

The MBAC's and the CRD's experience shows that unauthorized trail building can be led by people of all ages and for a wide range of reasons. Though there is no known empirical research into why people build unauthorized mountain bike trails, anecdotal discussions between MBAC members and the riding community suggest the following:

- There is a perception that there is a significant amount of land in regional parks and the watershed,
- The process for developing sanctioned mountain bike trails does not exist, is unclear and uncertain and is slow and the likelihood of approval is uncertain. Some have a sense of hopelessness whereby they believe that there will not be any more authorized trails in the parks – they have given up on the sanctioned trail building,
- The current supply and diversity of mountain bike trails is insufficient to meet current needs especially as more historical unsanctioned trails are being decommissioned,
- There have been very few new mountain bike trails and riders are beginning to get bored of the current supply,
- The mountain bike community in the Capital Region is witnessing the success and growth of other mountain bike destinations on the Island and around BC and have a vision for what "mountain biking could be" here in the region,
- The current location and distribution of trails may not be sited close to where riders are living (e.g. youth want to be able to ride from where they live and access trail without the need for cars, even if the trails are small),
- There are issues with overcrowding on trails and in parking lots in the current riding areas and more capacity is needed, and
- Creating new experiences that are enjoyed by so many creates a great sense of satisfaction, enjoyment & reward for the builders.

Figure 16. European Mountain Bike Survey, 2015

Advice & Guidance

Though the MBAC understands that mountain biking, and indeed some of the top mountain bike destinations in the Province, exist because of a significant unsanctioned trail building movement that occurred over the past decade, the MBAC would like to be clear with the riding community that unauthorized trail building is not supported by the organized mountain bike community and, due to the impacts it can create, the MBAC supports the CRD in taking reasonable actions to safely decommission unsanctioned trails after the guidelines are released and following the implementation of a process to review if those trails should become sanctioned. A "shovel first and beg forgiveness" approach is not an approach that will advance mountain biking in the Capital Region and certainly in regional parks.

To avoid or limit the building of unauthorized mountain bike trails in regional parks, the MBAC recommends that:

1. CRD work with the entire mountain bike community to develop a sufficient volume and diversity of trails that meet users' needs as outlined earlier in these recommendations.
2. Establish a clear, transparent and easy to follow mountain bike trail development application and approval process that will enable the development of new, redevelopment of existing or sanctioning of existing unauthorized trails in regional parks in line with park management plans. This process should be clearly communicated to local mountain bike organizations and should be appropriately resourced to enable timely reviews and decisions.
3. Building on best practices in other jurisdictions, the CRD should provide a clear and consistent mechanism for allowing and supporting volunteer organizations to build and maintain mountain bike trails as long as those organizations can demonstrate the capacity to do so. This will allow the mountain bike organizations to engage many of the unauthorized trails builders and direct their talents and passion toward sanctioned projects.
4. Once a clear development and approval process is in place, judiciously pursue compliance assurance (officer presence, verbal / written warnings, enforcement) tactics against frequent offenders.
5. Engage and partner with mountain bike organizations to proactively:
   - Educate the riding community on the impacts of and actively discourage unsanctioned trail building,
   - Support, promote and educate the riding community on the application and approval process and sanctioned trail building, and
   - Provide training on sustainable and quality trail design, construction, and maintenance.

4.4.5 ELECTRIC MOUNTAIN BIKES

Context

An electric bicycle is a bicycle with an electric motor mounted either at the bottom bracket (mid-drive) or at either wheel hub, which provides power to the bicycle's drivetrain. Electric bicycles use an electric motor to either assist with propulsion or fully propel the user. The MBAC recognizes that the popularity of electric bicycles and electric mountain bikes has grown rapidly over the past 5 years and that electric bicycles are an emerging activity with many similarities and some important differences to conventional mountain biking.

The committee understands that the CRD has not developed an explicit policy regarding the classification of or use of electric bicycles in regional parks or regional trails. Currently, the CRD has adopted the definition of a Motor Assisted Cycle (MAC) as defined by the *British Columbia Motor Vehicle Act's Motor Assisted Cycle Regulation.* Motor Assisted Cycle:

- Have continuous power output ratings that in total do not exceed 500 watts,
- Not be capable of propelling the cycle faster than 32 kilometers per hour on level ground without pedaling,
- Must be equipped with a mechanism that either allows the driver to turn the motor on and off, or prevents the motor from turning on or engaging before the MAC attains a speed of 3 kilometers per hour,
- Must disengage when the operator stops pedaling or releases the accelerator or applies a brake,
- Cannot be gasoline or other fuel powered, must be electric powered, and
- Must be capable of being propelled by muscular power using the pedals, but it is not necessary to always be pedaling (RSTBC E-Bike Policy, 2019).

Bicycles that meet the definition of a MAC are currently permitted on any regional trails or trails in regional parks that currently permit cycling.

The MBAC recognizes that both throttle controlled, and e-assist mountain bikes have become a point of contention on trails throughout the region and the sport in general. A variety of concerns have been expressed, but not necessarily proven through science, regarding this emerging activity. Electric bicycles may:

- Elevate safety concerns by:
  - Enabling less experienced riders to travel at faster speeds with potentially less skill to manage their bicycles at increased speeds which may pose greater safety risks to the rider and other trail users.
  - Removing some physical limitations and allowing more riders to travel further and more quickly which may lead to safety concerns due to malfunctions, accidents that happen further into remote area and riders being unprepared for more remote riding.
- Increase the levels of use a trail receives which can create the need for additional maintenance requirements,
- Increase the level of visitation and use in more remote areas which may add greater stress and strain on wildlife populations and limited visitor infrastructure (e.g. washrooms, rest areas), and
- Create inter-activity conflict with conventional mountain bike riders as some conventional riders may see e-bikes as motorized recreation instead of non-motorized, as a form of cheating, as lazy or may have assumptions that they create greater environmental and trail impacts.

Though many of the above concerns have yet to be studied academically, research undertaken by IMBA does conclude that impacts on the amount of soil displacement and erosion on a trail from conventional mountain bike and electric-assist (class 1) mountain bikes are not significantly different[ix]. However, the body of science into the range of environmental and social impacts is limited, given the novelty of this activity, and understanding of the impacts of electric bicycles, e-assist bicycles and how these impacts compare to conventional mountain bikes will continue to evolve over time.

The MBAC also recognizes that there are several positive benefits that may arise from electric mountain bikes. Electric mountain bikes may:

- Allow more people to enter activity who might not have otherwise,
- Allow disparate riders and families to ride together strengthening relationships and social bonds,
- Improve physical and mental health of a segment of the mountain bike population who would not have received these benefits otherwise, and
- Allow segments of the population to connect with and appreciate our parks that might not have otherwise.

The MBAC is aware of the electric bicycle policies that agencies such as Parks Canada, BC Parks and Recreation Sites and Trails have developed. These policies differentiate between the classifications of electric bicycles and explicitly indicate which classification of trails, park classes and zones each classification of electric bicycle is permitted to be operated in. In these jurisdictions, it is consistently agreed that electric bicycles that are capable of being propelled without pedaling are considered to be more similar to a motorized motorcycle or dual-sport motorcycle than they are a conventional mountain bike and are deemed incompatible on trails, or in environments, that prohibit motorized recreation (e.g. 4x4, Off-road vehicles).

Advice & Guidance

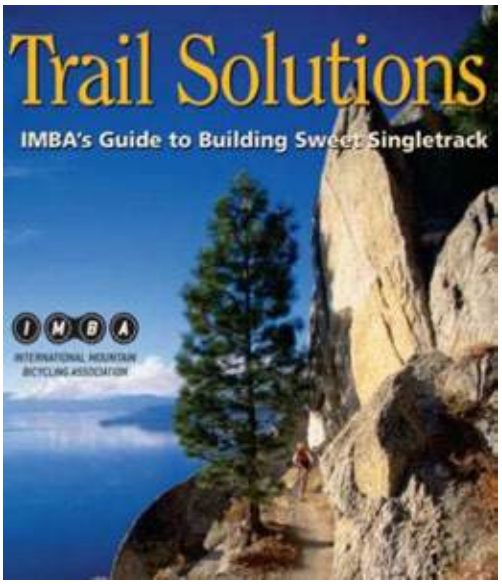
The committee reviewed the policies used in other jurisdictions and feels there is great merit in remaining consistent with these other provincial and federal jurisdictions as many visitors to regional parks also frequent national parks, provincial parks, and crown lands. However, the committee did not have sufficient time to develop a policy recommendation on electric bicycle use for the Capital Region.

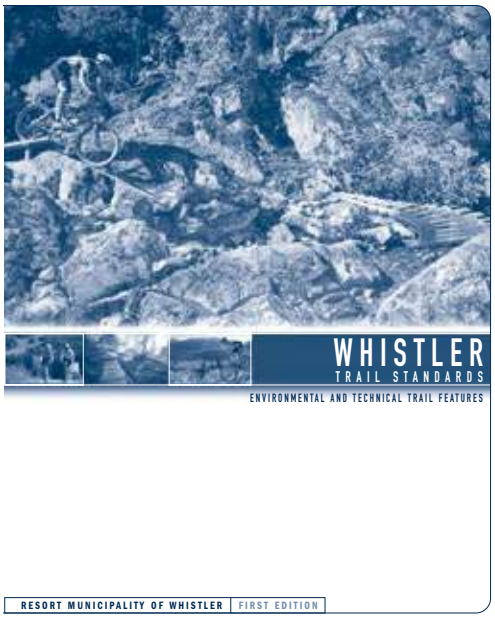
To appropriately manage electric bikes in regional parks, the MBAC recommends that:

1. The CRD recognize that its current policy approach to electric bicycle use on trails in the Capital Region, through the adoption of the motor assisted cycle definition, is inadequate to address the concerns that have and will continue to arise over electric bicycle use in regional parks.
2. The CRD recognize that off-road vehicles such as motorcycles, all-terrain vehicles and side by sides are being electrified and that a clear policy is required to ensure clear and deliberate management of these recreational activities along with electric bicycle use.
3. The CRD develop a clear policy statement on the use of electric bikes on regional trails and on trails in regional parks and that this policy utilize existing classifications of electric bikes, clearly identify what trail types each classification of electric bicycle is permitted on as well as what park classifications and zones each classification of electric bicycle is permitted in. It is imperative that any policy developed by the CRD can be easily understood by the riding community, can be easily communicated through park and trail signage and trip planning information and can be readily enforced when and where needed.

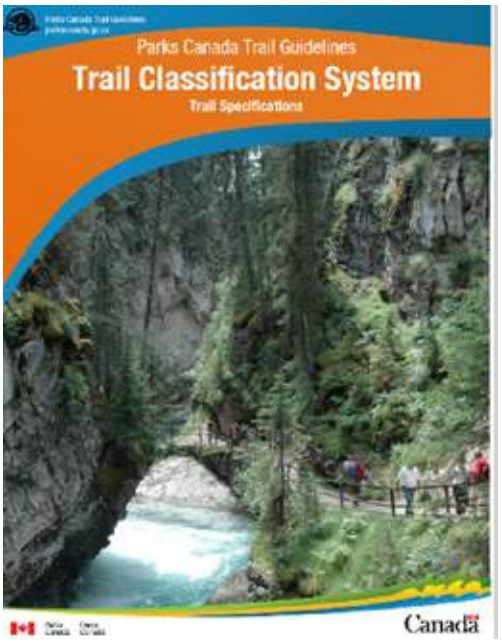
Table 3. Example Alignment of Electric Bicycle Class with Trail Classification - RSTBC

E-Bike Class	Mixed Use Trail	Non-Motorized Trail that Permits Cycling	Non-Motorized Trail that Prohibits Cycling	Active Transportation Trails
Class 1	Yes	Yes	No	Maybe
Class 2	Yes	No	No	Maybe
Class 3	Yes	No	No	Maybe
a-MTB (met criteria)	Yes	Yes	No	Yes





4.4.6 TRAIL PLANNING & DESIGN GUIDANCE

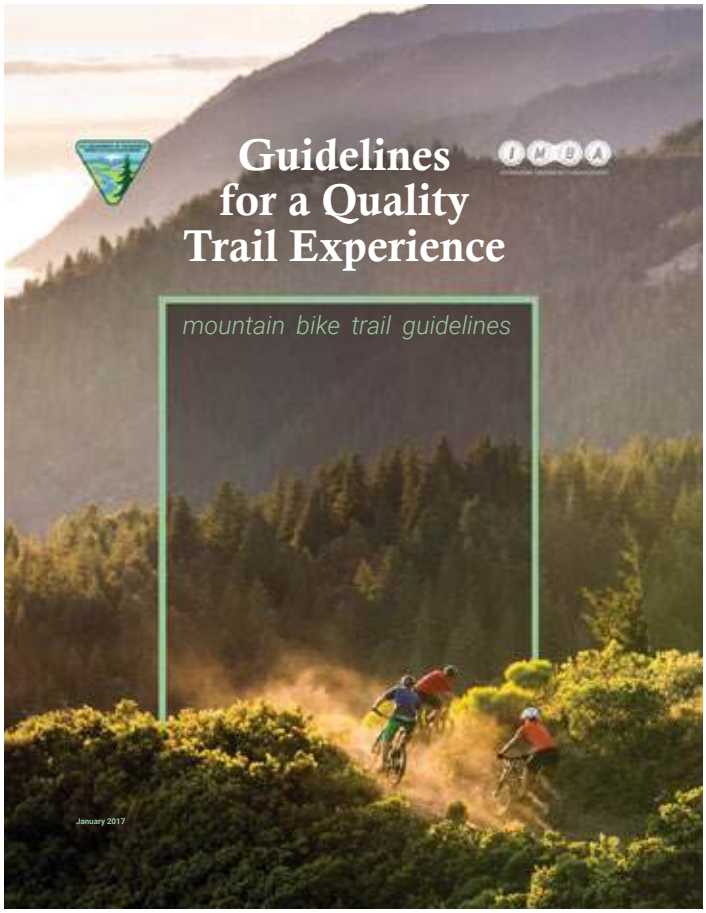


Context

Development of quality, sustainable and safe mountain bike trails do not happen by accident, it is the result of applying good planning, design, construction, and maintenance practices. Many planning and design guidance manuals and documents have been developed by mountain bike and trail organizations and other park and land management agencies. The MBAC understands that the CRD currently relies on the following planning and design guidance documents:

- International Mountain Bike Association (IMBA) Trail Solutions
- Whistler Trail Standards: Environmental & Technical Trail Features
- Parks Canada Trail Guidelines – Trail Classification System & Trail Specifications

Advice & Guidance



To ensure mountain bike trails are planned, designed, constructed, maintained and managed in accordance with best practices, the MBAC recommends that:

1. CRD continue to apply the classification, planning, design, construction, and maintenance manuals from IMBA, Whistler and Parks Canada. However, the CRD should recognize that some of these manuals are general in nature, not specific to the conditions in the Capital Region and are aging. Though the MBAC does not recommend that the CRD should develop its own trails planning, classification, design, construction and management manual at this time, the CRD should actively review new and refreshed guidance documents as they are released in other leading jurisdictions.

2. In addition to the above listed resources, the MBAC also recommends that the CRD adopt and apply the following newly released manuals as they provide more refined understanding of mountain bike user objectives and allow the CRD to understand what trail features can deliver which user objectives and how those features align with the desired recreation setting and typical land management classifications. These manuals also uniquely address new insights on eMTB:

- Bureau of Land Management's Guidelines for a Quality Trail Experience
- eMTB Land Manager Handbook

4.5 Implementation & Review of Guidelines

Context

While cognizant of the capacity and resourcing and significant demands on CRD staff, the MBAC recognizes the considerable anticipation and expectation that this process has generated in the mountain bike community. There is considerable hope and expectation that reasonable action will be taken in a reasonable time period to advance the implementation of the guidelines and improvement of mountain biking opportunities in regional parks. The MBAC also recognizes that there will be a period of learning and likely refinement once the guidelines are released and implemented and that further dialogue and input with the mountain bike community and other regional parks stakeholders will be needed to ensure the guidelines are effective.

Advice & Guidance

Recognizing this, the MBAC recommends that:

- CRD immediately identify multiple easy wins opportunities implementing the guidelines and enhance mountain biking opportunities where mountain biking is not explicitly prohibited by a management plan and the criteria presented earlier in this report can be met.
- CRD expedite the development of the internal and operational policies and structures needed to allow the effective and timely implementation of the guidelines (e.g. mountain bike trail development approval process, operation, and maintenance agreements).
- CRD expedite the review and update of park management plans for parks that hold the greatest mountain biking potential and suitability to support mountain biking and / or will allow the trail connection between other established or under development mountain bike trail networks.
- Recognizing that mountain biking is evolving rapidly and new parks continue to be acquired by the CRD, the CRD should review and, if necessary, update the guidelines after 2 years in collaboration with the mountain bike community and other park stakeholders and Indigenous peoples.
- CRD Regional Parks staff review and recommend an ongoing stakeholder process for feedback and advice on mountain bike management in regional parks, and procedures and policies relating to mountain bike trail development, maintenance, and management.

APPENDICES

APPENDIX A POTENTIAL DISCUSSION TOPICS FOR MBAC

The following topics were tabled with the MBAC for review and prioritization.

Mountain Biking & Mountain Bike Experiences

- Recognizing that "mountain biking" is a diverse recreational activity, what are the different segments of mountain bikers and their expectations in terms of trail experiences, trail length and size of riding area, amenities, and infrastructure? And what type of mountain bike experiences do riders expect in regional parks?

- Currently, mountain biking opportunities are delivered through a system of different lands and providers (e.g. BC Parks, private lands, regional parks, municipal parks). The system should work together and be planned to ensure the diversity of desired mountain biking experiences can be met. Thinking about the mandate of CRD Regional Parks, ***what role does CRD Regional Parks currently play in meeting residents' mountain biking needs and what role should it play moving forward?***

- What are the most **significant future trends** in mountain biking that CRD Regional Parks need to consider as it develops the Mountain Biking Guidelines? How should the CRD plan for addressing these trends?

- What are the benefits of mountain biking in regional parks?

- How is mountain biking and its varying disciplines defined?

Appropriateness of Mountain Biking in Regional Parks & Service Delivery

- What are the most significant challenges associated with mountain biking in regional parks, and the CRD's ability to achieve their environmental and cultural heritage (e.g. for archaeological sites, First Nations village sites) protection mandate?

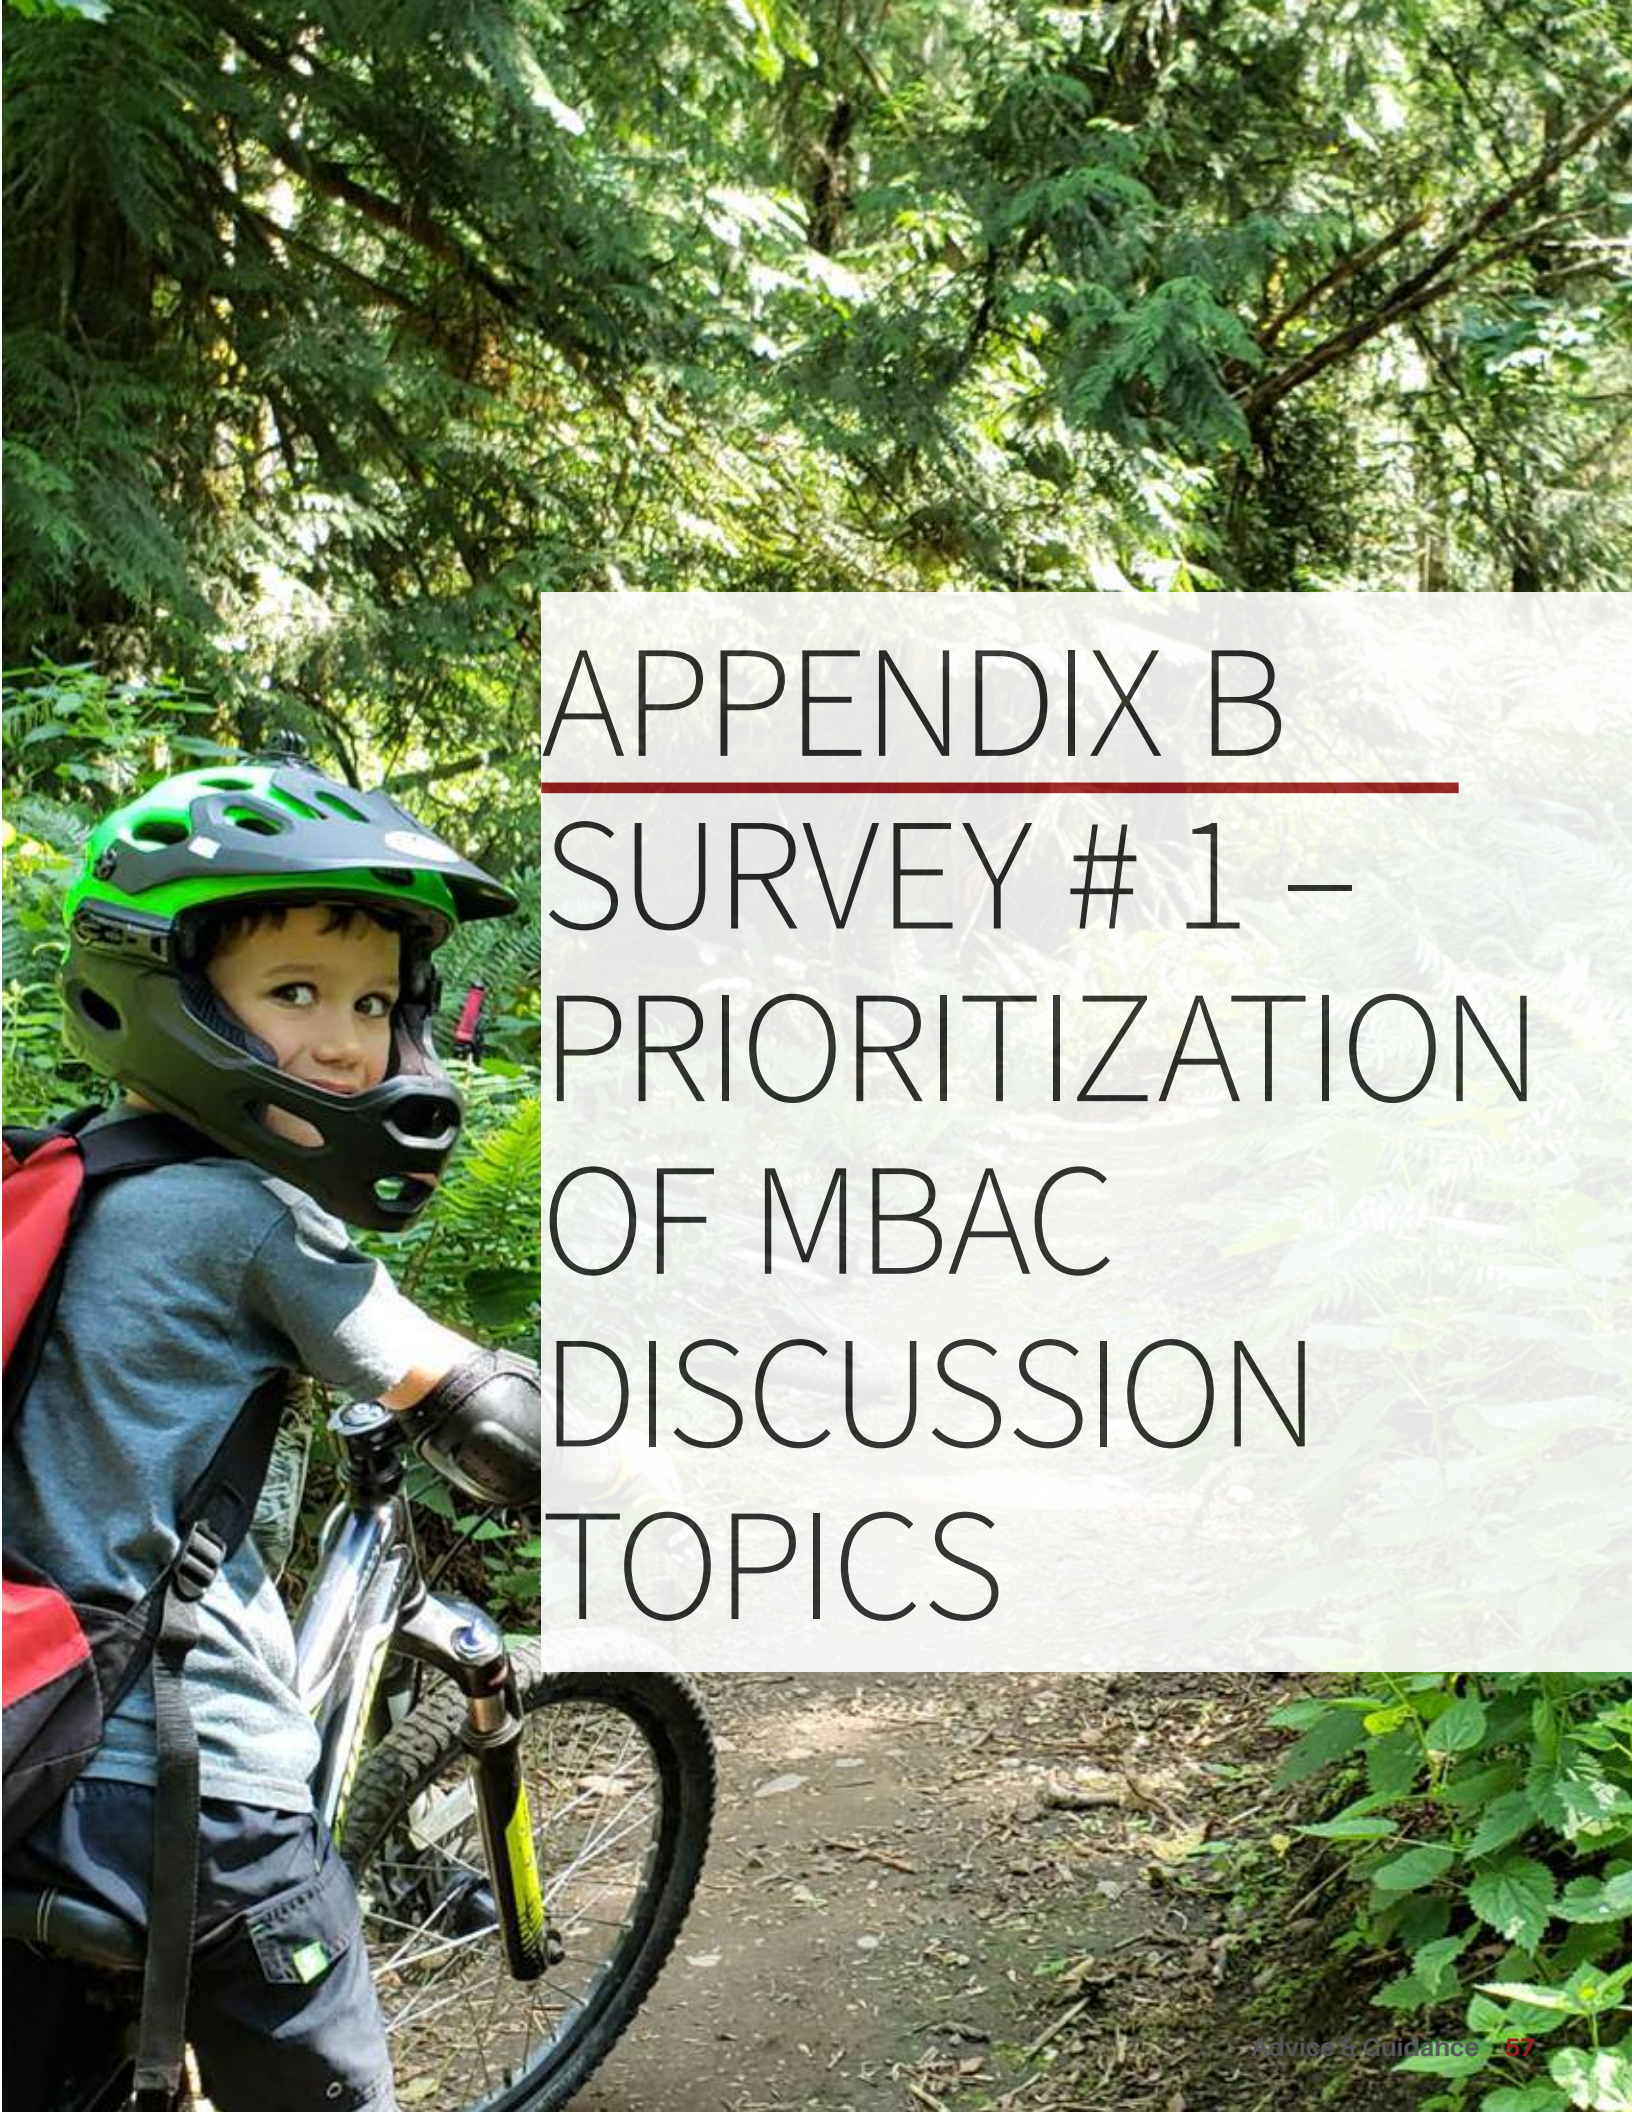
- What are the ***criteria that should be used to determine when and which existing trails (e.g. multi-use trails) are appropriate to permit mountain biking*** and which will provide a desired mountain biking experience? And, what activities tend to be more compatible with mountain biking and what management actions are required to increase compatibility?

- Planning, design, construction, monitoring and management of mountain bike trails in regional parks can happen in a number of ways. ***What is the preferred service delivery model for the planning, design, construction, management and monitoring of mountain bike trails and mountain bike use in regional parks (direct, indirect, enablement)?*** How can relationships between CRD Regional Parks and the riding community be strengthened and data and information sharing enhanced?

- Recognizing the range of mountain bike segments and their expectations, ***what type of mountain bike experiences are most appropriate to provide / enable in regional parks?*** And, thinking about park management planning at an individual park scale, ***what are the criteria that should be used to determine/ evaluate where mountain bike areas should be developed and for which mountain bike experiences*** (i.e. # hectares, elevation/topography/slope, trail distances, variety of route options, mix of styles and levels of difficulty)?

- Moving forward, of the total amount of approved mountain bike trails in regional parks, generally what proportion should be allocated to each mountain bike experience type?

Mountain Bike Trail Planning & Design



- How can the trail planning process ensure that mountain biking does not create undesirable environmental and cultural impacts and conflicts?
- Thinking about the design of mountain bike trails in regional parks, are there any ***existing design guideline manuals or documents that should be adopted and implemented by the CRD to guide the design of mountain bike trails and related trail infrastructure*** (e.g. Technical Trail Features) and signage?
- What are the characteristics of a high quality, safe and sustainable mountain bike trail and experience?
- There are many benefits to a mountain bike trail classification system. The system can create consistency in how mountain bike trails are described and understood between the mountain bike community, the CRD, trail designers and other visitors. The classification system allows the accurate and consistent communication of essential information about the trail to allow visitors to self-select the appropriate trail. Should, and if so, wow should mountain bike trails and mountain bike experiences be classified in regional parks?
- What type of trail configurations (e.g. linear, loop, stacked loop, maze etc.) are most desirable for mountain bikers by discipline? And, what practices can be implemented to determine an appropriate density of mountain bike trails at a park level?

Mountain Biking & Mountain Bike Trail Management

- How can mountain biking be effectively integrated with other approved recreational uses of regional parks in order to minimize impact to the environment as well as social impacts?
- How can mountain biking and mountain bike trails be managed to avoid / minimize impacts to ecological, Indigenous, and cultural heritage values in regional parks?
- Rogue, or unauthorized trail building, is on the rise in regional parks. What promising practices can be implemented to avoid or limit unauthorized trail building?
- How can mountain biking and mountain bike trails be managed to avoid / minimize impacts on the experience of other visitors?
- How should mountain bike trails and mountain biking be monitored in regional parks?
- What research should be undertaken to understand mountain biking (e.g. visitation, origins, satisfaction, impacts) in regional parks?
- The popularity of e-MTB (electric mountain bikes) continues to grow. Are e-MTB's appropriate in regional parks, what class and how should they be managed?
- How can risks/impacts to personal and public safety from mountain biking be managed in regional parks?
- Should, and if so, how should commercial mountain biking businesses be managed and promoted in regional parks?
- Should, and if so, how should mountain bike based special events (e.g. races), group rides etc. be managed and promoted in regional parks?

Members of the MBAC were invited to identify other topics of importance for consideration. The following topics were identified by the MBAC:

- How will CRD provide the amount of mountain bike trail opportunities (design, build, maintain) needed by our region?
- I hope the committee to have plenty space for the discussion focused around the benefits that MTB brings to the region. I'm concerned that question 5 in particular seems to focus on challenges without consideration for how to promote the many positives of welcoming MTB in regional parks. As I write this, I am realizing that the many benefits of the sport (physical & mental health, love of nature/environmental stewardship, community involvement to name a few) should be addressed as an additional fundamental topic. I'm concerned that there are some persistent misconceptions and biases against the mountain bike community, but optimistic that this committee can serve to find the common interests and passions (and I truly believe there are plenty!) between all the stakeholders involved.
- In consideration of CRD mandate to protect environment and current park classification systems should existing trails and use be reconsidered in where there are sensitive, rare or endangered ecosystems, plants or animals (e.g. Night hawk nesting sites Mt. Quimper).
- It was very difficult to prioritize the questions in the survey, as I find them all very important and necessary to a robust and multi-faceted management plan. It would be worth considering, when we approach the end of this committee's objective, the creation a standing committee that provides feedback and suggestions about the management plan on an ongoing basis.
- Other regional districts have implemented mountain biking plans in parks with varying rates of success; what qualities of these plans have created successes or failures? Which mountain bike societies/communities are active within CRD Parks, are they involved in this discussion, and if not at what stage will they be consulted with? Which CRD Parks currently see the most and least mountain bike use and does that correlate with ecological sensitivity (i.e. are sensitive species/ecosystems avoided)? What is/will be the CRD's strategy for preventing, restoring and otherwise mitigating unauthorized trail building?
- What models adopted in other similar park systems (Canada/US) have implemented a successful balance among concerns of mountain bikers, hikers, and conservationists?
- Who maintains and clears trail? CRD or volunteer organizations. How is this contract developed? How is training provided?

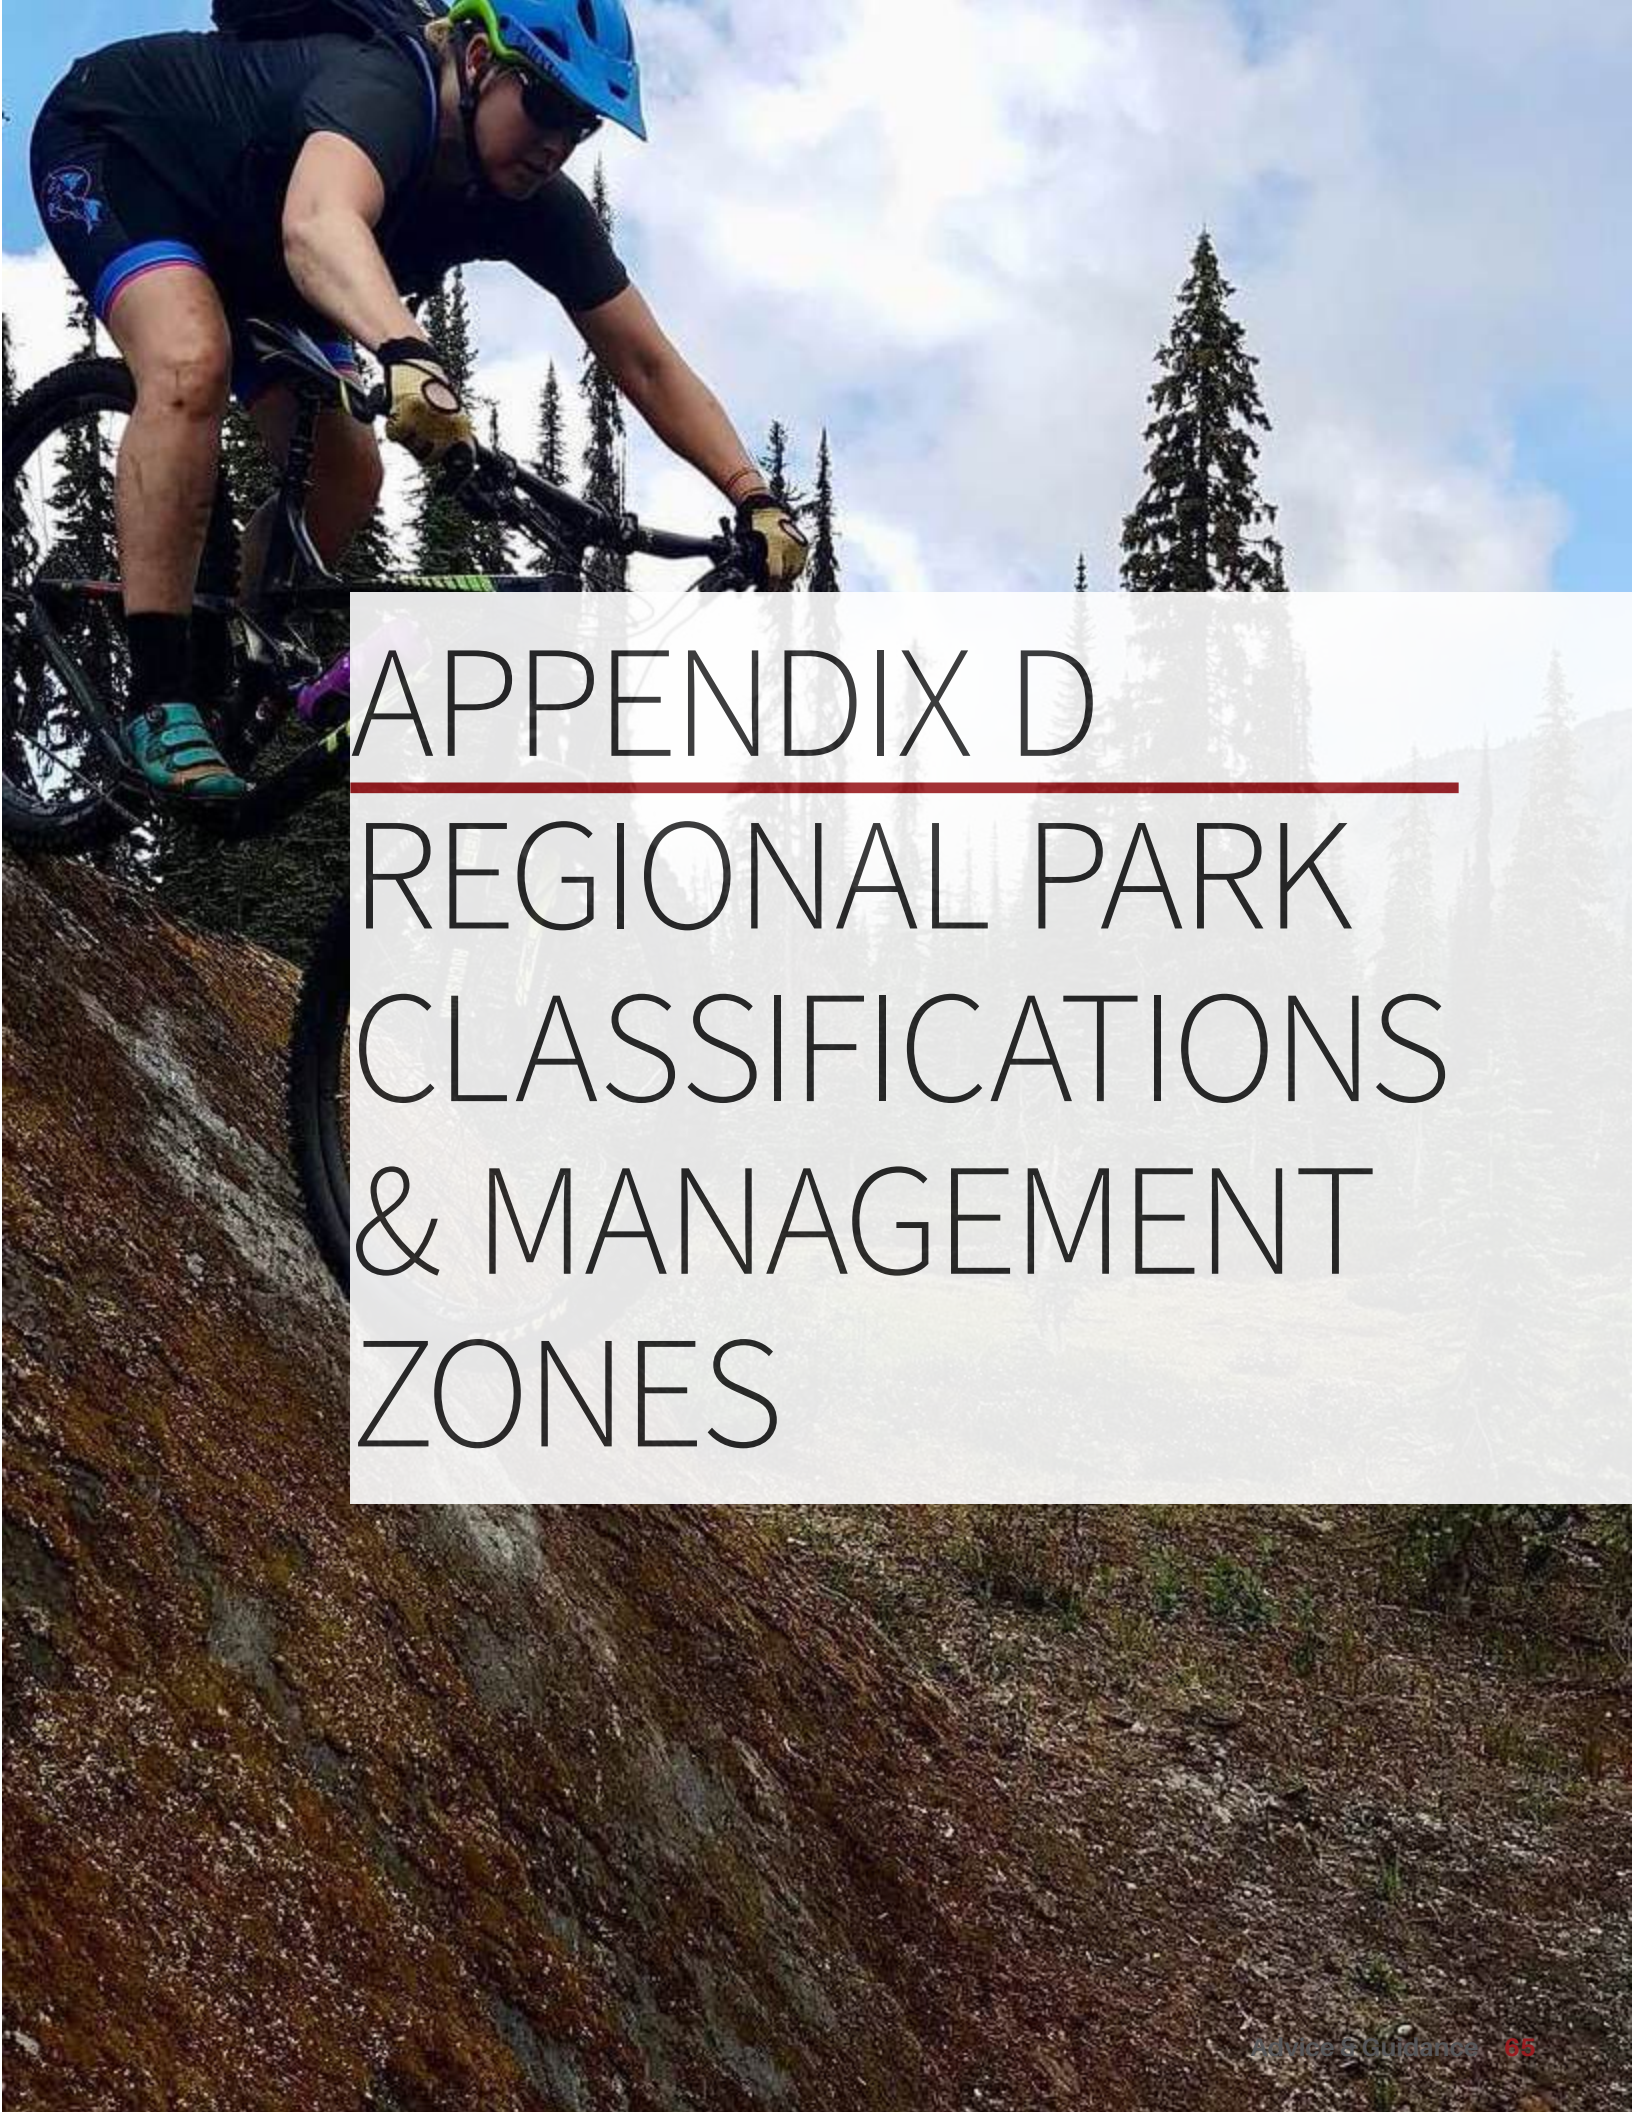
Should, and if so, how should mountain bike based special events (e.g. races), group rides etc. be managed and promoted in regional parks?	10	23	6

5. We likely missed some other questions that may you feel are important for MBAC to consider and provide advice to the CRD on. If so, please identify and describe the question(s) in the space below.

Response
How will CRD provide the amount of mountain bike trail opportunities (design, build, maintain) needed by our region?
I hope the committee to have plenty space for the discussion focused around the benefits that MTB brings to the region. I'm concerned that question 5 in particular seems to focus on challenges without consideration for how to promote the many positives of welcoming MTB in regional parks. As I write this, I am realizing that the many benefits of the sport (physical & mental health, love of nature/environmental stewardship, community involvement to name a few) should be addressed as an additional fundamental topic. I'm concerned that there are some persistent misconceptions and biases against the mountain bike community, but optimistic that this committee can serve to find the common interests and passions (and I truly believe there are plenty!) between all the stakeholders involved.
In consideration of CRD mandate to protect environment and current park classification systems should existing trails and use be reconsidered in where there are sensitive, rare or endangered ecosystems, plants or animals (e.g. Night hawk nesting sites Mt. Quimper).
It was very difficult to prioritize the questions in the survey, as I find them all very important and necessary to a robust and multi-faceted management plan. It would be worth considering, when we approach the end of this committee's objective, the creation a standing committee that provides feedback and suggestions about the management plan on an ongoing basis.
Other regional districts have implemented mountain biking plans in parks with varying rates of success; what qualities of these plans have created successes or failures? Which mountain bike societies/communities are active within CRD Parks, are they involved in this discussion, and if not at what stage will they be consulted with? Which CRD Parks currently see the most and least mountain bike use and does that correlate with ecological sensitivity (i.e. are sensitive species/ecosystems avoided)? What is/will be the CRD's strategy for preventing, restoring and otherwise mitigating unauthorized trail building?
What models adopted in other similar park systems (Canada/US) have implemented a successful balance among concerns of mountain bikers, hikers, and conservationists?
Who maintains and clears trail? CRD or volunteer organizations. How is this contract developed? How is training provided?



APPENDIX C TRAIL DIFFICULTY RATING

TRAIL DIFFICULTY RATINGS

TRAIL SIGN ICONS	 Easiest White Circle	 Easy Beginner Green Circle	 More Difficult Intermediate Blue Square	 Very Difficult Advanced Black Diamond	 Extremely Difficult Expert Double Black Diamond	 Extremely Dangerous Professional Double Orange Diamond
BASIC DESCRIPTION	Fairly flat, wide, possibly paved but can be a hardened surface. Suitable for users of all skill levels.	May have gentle climbs and avoidable or optional obstacles such as rocks, roots, and small drops. Trail is relatively wide.	Steeper slopes and some unavoidable obstacles such as roots, rocks, and medium drops. Trail is beginning to narrow.	Increasingly steeper slopes on a much narrower trail. Trail surface may be loose and have many difficult obstacles such as roots, rock gardens, larger drops, jumps, and sharp corners.	Very steep and technical, requiring highly advanced skills and balance to clear obstacles safely.	Very dangerous conditions requiring very highly advanced skills, balance, and bike control to traverse safely. Not recommend for most riders—even seasoned mountain bikers.
TRAIL WIDTH	72" or wider	36" or wider	24" or wider	12" or wider	6" or wider	3" or wider
TRAIL SURFACE	Hardened or paved	Firm and stable	Mostly stable with some variability	Widely variable	Widely variable and unpredictable	Extremely variable and unpredictable
TRAIL GRADE	Average: Less than 5% Max: 10%	Average: 5% or less Max: 15%	Average: 10% or less Max: 15% or greater	Average: 15% or less Max: 15% or greater	Average: 20% or more Max: 15% or greater	Average: 20% or more Max: 20% or greater
TECHNICAL TRAIL FEATURES (TTFs)	None	Avoidable obstacles may be present Some unavoidable obstacles 2" tall or less Unavoidable bridges 36" or wider	Avoidable obstacles may be present Unavoidable obstacles 8" tall or less Unavoidable bridges 24" or wider TTFs 2" high or less, width of deck is greater than 1/2 the height	Avoidable obstacles may be present Unavoidable obstacles 15" tall or less Unavoidable bridges 24" or wider TTFs 4" high or less, width of deck is less than 1/2 the height May include loose rock Short sections may exceed above criteria	Avoidable obstacles may be present Unavoidable obstacles 15" tall or greater Unavoidable bridges 24" or narrower TTFs 4" high or greater, width of deck is unpredictable May include loose rock Many sections may exceed above criteria	Avoidable obstacles may be present Unavoidable obstacles 20" tall or greater Unavoidable bridges 12" or narrower TTFs 8" high or greater, width of deck is highly unpredictable May include loose rock Most sections may exceed above criteria

APPENDIX D
REGIONAL PARK CLASSIFICATIONS & MANAGEMENT ZONES

D.1 Current Park Classifications

The CRD defines the purpose of each park classification as follows:

WILDERNESS AREA	CONSERVATION AREA	NATURAL AREA	RECREATION AREA
A Regional Wilderness Area is characterized by: - a large land base, generally more than 1,000 hectares; - the conservation of ecosystems, with minimal human interference; - opportunities for visitors to experience, firsthand, the park's ecosystems; - opportunities for backcountry recreation and camping; - the provision of few, if any, rudimentary services and facilities; and - the experience of remoteness, solitude and harmony with nature. Maintaining wilderness areas in the region is an important part of the regional parks function. Wilderness is critical to sustain wildlife and plants that rely on sizable natural areas for their survival and to provide wilderness outdoor experiences and activities. They are places where residents can experience wilderness close to their home. East Sooke, Sea to Sea Green Blue Belt and Sooke Hills Wilderness regional parks are the sole examples of Regional Wilderness Areas in the capital region.	A Regional Conservation Area protects regionally significant natural environments that contain sensitive and threatened ecosystems (e.g., they will have significant Garry oak, old-growth forest, salt marsh, or estuary ecosystems). They contain rare or endangered plant and wildlife species and their supporting ecosystems. The size of a Regional Conservation Area should be sufficient to ensure that natural features can be protected and remain viable over the long-term. Outdoor activities will be permitted in a Regional Conservation Area, provided they have minimal impact on the natural environment. In most cases, the main activity will be hiking. These areas will generally have basic facilities, such as trails, parking areas, toilets and signage. Examples of a Regional Conservation Area are Witty's Lagoon, Mill Hill, Francis/King, Matthews Point and Island View Beach regional parks.	A Regional Natural Area protects the natural environment and provides opportunities for a range of appropriate outdoor experiences and activities. These natural areas are not as ecologically sensitive or diverse as those found in a Regional Conservation Area, although they may contain some sensitive and threatened ecosystems. These ecosystems will be identified in the park management plan, and conservation will be the priority in those areas. Regional Natural Areas also protect key greenspaces that are important to the natural character of the region. These areas will try to accommodate a range of appropriate outdoor experiences and activities. The exact uses will be outlined in the park management plan. Examples of a Regional Natural Area are Mount Parke, Coles Bay and North Hill regional parks.	A Regional Recreation Area provides opportunities for many outdoor experiences, activities and events, and will be managed to accommodate a relatively high number of visitors. Facilities will be developed to support this level of use. The area must lend itself to development for a variety of uses that meet recreational needs, and it must be able to withstand intensive public use. This classification is distinct from other parks classifications in a number of ways: - The emphasis is on outdoor experiences and activities, although protecting the natural environment will be addressed in all decision-making about visitor use and facilities. - The range of acceptable recreational activities in these areas will be the widest within the regional parks and trails system. - Recreation activities may include competitive sports. - Recreation facilities operated by non-profit groups may be permitted. - Opportunities and facilities may be provided for celebrations such as festivals, and group functions (e.g., picnics). Elk/Beaver Lake is an example of a Regional Recreation Area. It is the only regional park in the capital region with this classification.

The classification assigned to each park is as follows:

Albert Head Lagoon	6.960	Regional Conservation Area
Ayum Creek	6.403	Regional Conservation Area
Bear Hill	48.764	Regional Natural Area
Brooks Point	6.041	Regional Conservation Area
Coles Bay	3.598	Regional Natural Area
Devonian	13.526	Regional Conservation Area
East Point	0.883	Regional Natural Area
East Sooke	1456.806	Regional Wilderness Area
Elk/Beaver Lake	443.168	Regional Recreation Area
Francis/King	107.333	Regional Conservation Area
Gonzales Hill	1.796	Regional Natural Area
Horth Hill	36.359	Regional Natural Area
Island View Beach	51.064	Regional Conservation Area
Jordan River	147.036	Regional Natural Area
Kapoor	12.591	Regional Natural Area
Lone Tree Hill	31.401	Regional Conservation Area
Matheson Lake	157.148	Regional Natural Area
Matthews Point	24.730	Regional Natural Area
Mill Farm Reserve	315.266	Regional Natural Area
Mill Hill	71.654	Regional Conservation Area
Mount Parke	49.085	Regional Natural Area
Mount Wells	120.827	Regional Conservation Area
Mount Work	728.823	Regional Natural Area
Roche Cove	159.984	Regional Natural Area
Sea to Sea	3979.793	Regional Wilderness Area
Sooke Hills Wilderness (total)	4120.073	Regional Wilderness Area
Sooke Potholes	71.886	Regional Natural Area
Sooke River Road Reserve	6.968	Regional Natural Area
St. John Point	27.467	Regional Conservation Area
Thetis Lake	923.060	Regional Natural Area
Witty's Lagoon	56.233	Regional Conservation Area

D.2 Park Management Zones

The following management zones are applied through the management planning process and set more specific management direction for specific areas of the park:

Environmental protection zone

To protect ecologically significant areas within regional parks through long term science-based land stewardship

Cultural heritage protection zone

To protect culturally significant areas and features through a long term cultural resource management strategy

Regional wilderness zone

To keep large natural systems functioning and provide a regional wilderness experience for park visitors

Natural environment zone

To provide easily-accessible natural areas within the parks. To provide areas within the parks that can be used for more active recreational pursuits

Outdoor recreation zone

To provide areas within a regional park that can accommodate concentrated recreation use

Park services zone

To provide areas within a park needed to support park services

The following regional parks have been assigned a recreation zone:

- **Elk Beaver Lake -** has both general outdoor recreation and intensive outdoor recreation zones.
- **Island View Beach -** has outdoor recreation zone in the existing management plan.
- **Thetis Lake** - has a Natural Area Recreation zone in the existing management plan.
- **Francis King -** has a natural area recreation zone in the existing management plan.
- **East Point** - had a recreation zone included in management plan, but CRD no longer manages the portion of land that it was on (it is now part of Gulf Islands National Park Reserve)

rcs+

SHORT-TERM ACTIONS TO SUPPORT THE MOUNTAIN BIKING ADVISORY COMMITTEE ADVICE AND GUIDANCE REPORT

Short-term Actions

- Focus on improved relationships between the CRD, mountain biking community, and various stakeholders.
- Build on the success of the MBAC relationship by continuing to better understand the needs of the mountain biking community.
- Develop a communication campaign for summer 2021 to bring awareness to the new guidelines, trail etiquette and mountain biking opportunities in the regional parks system.
- Create a new mountain biking steward volunteer position.
- Explore an additional licence agreement at Mount Manuel Quimper within Sea to Sea Regional Park.
- Continue to improve the mountain biking trails within the mountain bike area of Mount Work Regional Park such as upgrades to the technical training area, an overall mountain biking area plan, working with South Island Mountain Bike Society on trail improvements and improved wayfinding signage.
- Develop mountain biking specific sign standards.
- Organize a training session for key CRD staff with a certified IMBA trail builder to improve capacity and to provide quality mountain biking trails within our existing authorized trail network.
- Work with local agencies for improved connectivity and consistency of the trail networks.
- Create a new sign standard for closing off ecologically sensitive areas for trail rehabilitation.
- Develop an impact assessment process to identify planned land altering work to ensure regional park values are protected.
- Review mountain biking opportunities in Thetis Lake Regional Park that fit within the existing management plan.

Making a difference...together

REPORT TO THE TRANSPORTATION COMMITTEE
MEETING OF WEDNESDAY, APRIL 21, 2021

SUBJECT **Identification of Regional Transportation Priorities**

ISSUE SUMMARY

To review municipal, electoral area and partner agency input on regional transportation priorities, and to set priorities and direct next steps based on a consideration of policy context and regional transportation and climate action needs.

BACKGROUND

On December 9, 2020, the Capital Regional District (CRD) Board directed staff to work with municipalities, electoral areas and agency partners to develop a list of regional transportation priorities, informed by the CRD's declaration of a climate emergency, and report back to the Board for prioritization. The Board also directed staff to consider options to improve coordination and governance for transportation.

In directing this work, the Board confirmed three core transportation issues affecting the region:

1. **Congestion:** Traffic congestion in the AM and PM peak periods increases travel time and decreases residents' quality of life.
2. **Mode Share:** The regional road network is largely built out, constraining infrastructure solutions because of cost and geography; as a result, there is a need to focus on solutions that shift mode share.
3. **Climate Change:** Transportation is the largest source of greenhouse gas (GHG) emissions in the region and with the declaration of a climate emergency, the region needs to act by substantially reducing GHG emissions from transportation.

As reported to the Board on March 10, 2021 the 2014 Regional Transportation Plan (RTP) sets out a framework for addressing the above issues. The RTP identifies a multi-modal transportation network and eight outcomes for regional transportation. The RTP catalyzed the development of municipal level transportation plans and has supported the integration of multi-modal facilities in key infrastructure projects.

Full realization of the multi-modal transportation network will require additional infrastructure investments and a concerted effort to direct growth to designated centres and corridors. The development of travel demand management policies and programs is also needed to support mode shift. As noted in the December 9, 2020 staff report, there are four key implementation gaps that need to be resolved in order to progress action on regional transportation issues:

1. Develop a list of agreed-upon regional priorities to further catalyze action and attract funding;
2. Identify an agency that can act as a champion for regional priorities;
3. Incentivize regional prioritization of infrastructure projects through new funding sources; and,
4. Based on the agreed-upon priorities, identify whether a formal coordination or governance mechanism is needed to consider regional impacts of local or agency transportation decisions.

Priority Identification Process
Per Board direction, CRD staff worked collaboratively with staff from the following partners having jurisdiction over a transportation function to prepare a list of regional transportation priorities:

- 13 CRD municipalities
- 3 CRD Electoral Areas
- BC Transit
- Ministry of Transportation and Infrastructure (MoTI)
- BC Ferries
- Island Corridor Foundation

Partners were asked to identify their top three to four regional transportation priorities and assign points to indicate the relative level of importance *for their own respective priorities*. In collaboration with partners, CRD staff confirmed that priority areas accurately reflect all input. The summary of weighted partner input and a description of the priority identification process is available in Appendix A.

Key Findings
Partner input reveals several key themes to consider when reviewing the draft list of priority areas:

1. Two transportation priorities received broad levels of regional support – BC Transit's RapidBus initiative and active transportation / regional trails.
2. All other transportation priorities received varying levels of sub-regional support, reflecting the different needs of communities across the region; rural and remote communities require different solutions than the urban core and more densely populated centres.
3. Partners clearly identified that their internal point allocation was intentional to drive focus on the transportation priorities of most significance to them.
4. Partners noted that they support areas to which they did not allocate points, indicating some priorities have broader levels of support than the summary suggests.

Priority Areas
Given the different transportation needs of communities across the region, consideration of sub-regional priorities will build trust and consensus.

Staff have prepared a draft list of priority areas that seeks a viable path forward to resolve regional transportation issues and address implementation gaps. The proposed approach categorizes priority areas into the three types of action that will advance regional and sub-regional priorities, as shown below.

1. **Advocacy:** Priority areas related to multi-modal infrastructure investments garner cross-regional support or respond to sub-regional needs. These priority areas require action by agency partners (i.e., MoTI and BC Transit) and the CRD role is to advocate for the region's fair share of these investments.
    - **RapidBus (Bus Mass Transit)**: Accelerate RapidBus Implementation.
    - **Highway Safety Improvements**: Advance highway projects that focus on multi-modal infrastructure and safety.
    - **SSI / SGI Connectivity**: Seek multi-modal and safety improvements to enhance connectivity to Salt Spring Island (SSI) and the Southern Gulf Islands (SGI).
    - **Transit – General**: Improve local transit service in rural areas.

2. **Action:** Several priority areas require regional direction or local action to implement, and all but active transportation reflect the sub-regional variations in priorities. The CRD role is to act where it has authority, coordinate where needed, and set direction on matters that are currently not the responsibility of any partner.
   - **Active Transportation**: Complete the regional trail network and seek dedicated active transportation funding.
   - **TDM**: Undertake transportation demand management (TDM) policy and programming.
   - **Safety Policy**: Develop and implement a "Vision Zero" policy approach that aims to keep all road users safe from the risk of being seriously injured or killed on the road network.
   - **Strengthen Land Use**: Continue to implement the Regional Growth Strategy (RGS) Settlement Concept by directing growth to places that encourage walking, cycling and efficient use of public transit
   - **Parking and Access Upgrades**: Improve access to transit park-n-rides and parks.

3. **Pivot:** A few priority areas require careful consideration of context. These priority areas could be challenging for the region to advance successfully in the short- to medium-term given existing senior government policy direction, current context and costs, and could detract from advancing other priorities. The CRD role is to support a balanced consideration of needs before advancing this work.
   - **Governance**: Consider initiating a process to change governance and/or authorities once the region has been able to evaluate the success of prioritization.
   - **Light Rail Link and Westshore Passenger Ferry**: Consider taking action on these alternative mass transit approaches once ridership capacity can accommodate both bus rapid transit and light rail and / or passenger ferry.

The above approach balances the distinct needs of the region and focuses on actions that can address transportation issues in the short-term. Moving forward, this approach allows for priorities to be updated as they are successfully delivered. High-level implementation actions and fact sheets that describe each priority area are provided in Appendix B.

ALTERNATIVES

Alternative 1
The Transportation Committee recommends to the Capital Regional District Board:
1) That the categorized priority areas listed in Appendix A be confirmed;
2) That the list of confirmed regional transportation priority areas be shared with the Minister of Transportation and Infrastructure, all CRD municipalities, CRD electoral areas and agency partners; and
3) That staff be directed to develop implementation strategies for each of the approved transportation priority areas and report back to the Board on the findings, including a consideration of cooperation mechanisms.

Alternative 2
That the Identification of Regional Transportation Priorities report be referred back to staff for additional information based on Transportation Committee direction.

IMPLICATIONS

Environmental & Climate Implications
The CRD Board has declared a climate emergency. Partners clearly identified the importance of taking action to mitigate the effects of climate change throughout priority identification. All priorities have been considered against climate criteria, informed by senior government policy frameworks. These policy frameworks prioritize increasing the number of zero-emission vehicles available for purchase, greening fuel sources and improving multi-modal transportation. The priority areas align to this policy framework, as summarized in Appendix *C*.

From a regional transportation perspective, priority areas focus on improving multi-modal transportation. Jurisdictions such as BC Transit and BC Ferries have mandate direction to pursue fleet greening through electrification or use of alternate fuel. The CRD's Climate Action Service is investigating how to support priorities related zero-emission vehicles from a community-focused perspective and greening the CRD fleet from a corporate-focused perspective. While these actions help reduce GHG emissions, they will not address the transportation problems of congestion and mode shift.

Intergovernmental Implications
Responsibility for transportation policy, decision making and operations is shared across a number of jurisdictions, each with authority for different functional aspects of the transportation system. Given this context, a regional approach to transportation requires significant and ongoing collaboration to balance the needs of local, regional and higher levels of government. See Appendix D for a summary of regional priorities by transportation function.

Prior to this priority setting process most attention has been focused on the development of an authority to lead transportation decisions in the region. The region has not been able to reach consensus on the establishment of such an authority. Lessons learned from this experience is that municipalities and the electoral areas need assurance that they will not lose control over localized transportation decisions and that the potential for cost impacts are mitigated. Further, governance reviews and correspondence with the Province clearly state that the region must first establish agreed-upon transportation priorities before any consideration is given to a change in authorities. Governance did not receive high levels of partner support through this process.

Given the lessons learned and the current context, staff suggest:
1. Explore cooperation or governance mechanisms as an output of the prioritization process, rather than a priority in itself. This work could be undertaken, at a conceptual level, should staff be directed to report back on implementation strategies. Staff will be better able to provide meaningful input for consideration with a confirmed list of priorities.
2. Acknowledge that transportation solutions vary by sub-region, driven by the different needs of communities across the region. The proposed categories attempt to provide a path to success. If the region cannot reconcile sub-regional differences, any viable governance mechanism would need to significantly alter existing local government authorities to make a meaningful difference in transportation decision making.

Confirmation of regional transportation priorities follows from the 2020 release of the South Island Transportation Strategy (SITS). The Minister of Transportation and Infrastructure has indicated that the findings of the regional prioritization work will help inform ongoing priority setting and resource allocations within MoTI.

Regional Growth Strategy Implications
A mode share target of 42% is identified in the RGS. Land use patterns that support transit and active transportation – the densification designated centres and corridors – are needed to achieve mode share and climate change targets. The RGS sets out a settlement concept in Map 3(b) and policies to support such land use patterns.

The need for integrated land use and transportation was identified as a priority area by the region's two most populous municipalities. Generally local official community plans and transportation plans reflect the need for this integration. The 2020 RGS Indicators Report highlights that recent growth in the region has largely gone to parts of the region that do not have a high active transportation and transit mode share. Realizing the desired land use patterns set out in policy requires that growth be directed to designated locations and on-going monitoring to track progress against objectives.

Social Implications
A multi-modal transportation network supports equitable access to transportation options across the region. Different approaches, from infrastructure investment to TDM, is critical to delivering affordable and readily available transportation options. The regional priority areas reflect the needs of the people who live in the communities that make up the region.

Financial Implications
The CRD does not requisition any dedicated funding towards transportation other than for regional trails, regional information services and the Traffic Safety Commission.

Achieving the targeted mode share shift will require the investment of resources across all levels of government, as well as a strong commitment to change in terms of status quo. Some of the priority areas call on MoTI and BC Transit to fund significant infrastructure projects, while other priority areas require the identification of funding sources to drive regional and local action. The development of a funding strategy could be undertaken should staff be directed to report back on implementation strategies.

Within its authority for regional trails, the CRD would need to dedicate more or reallocate existing staff and financial resources to fast track improvements on the regional trail network and associated parking infrastructure. Within its authority for regional transportation planning, the CRD would need to adjust work planning to develop implementation strategies for each of the priorities.

Service Delivery Implications
The CRD has the service authority to manage regional trails, collect and analyze transportation data and collaborate with partners to plan for the region's transportation needs including the identification of regional priorities. The CRD does not have a mandate to operate transit, ferries or rail, build road infrastructure, prioritize regional grant applications or dictate road standards. No single agency has the responsibility or direction to develop TDM policies and programs, including incentives, or safety policy. The CRD would need to expand its transportation service function to deliver regional policies and programs related to TDM or safety.

As a regional government, the CRD Board is in a unique position to:
1. Advocate for regional priorities that would achieve objectives in its regional plans such as the RGS and the RTP; and
2. Develop and possibly implement region-wide TDM and safety policy.

The CRD can be most effective at addressing these gaps by undertaking strategic advocacy only once priorities have been confirmed, and driving regional action in areas where there is an agreed-upon need for regional action.

The RTP established mode share targets for the region at 15% for cycling, 15% for walking and 12% for transit. This total 42% target was seen as being ambitious. Since the adoption of these mode share targets and pre-pandemic, BC Transit increased its mode share target to 15%.

The region's mode share is currently 26.6%. The status quo will not deliver these mode share targets for several generations. Achieving these targets will require substantial investment and commitment to change across all priority areas. It should be noted that the full long term impacts of the pandemic on travel behavior and public transportation services are not yet fully understood. It is expected that it will take considerable effort and time to bring transit ridership back to pre-pandemic levels let alone surpass it. As such it is unlikely that mode share increases to transit will be seen in the short to medium term.

Alignment with Board & Corporate Priorities
The 2019-2022 Board priorities identify two priority transportation initiatives:
1. Work with government/community partners to increase use of public transit, walking and cycling and to plan for and deliver an effective, long-term regional multi-modal transportation system.
2. Protect the E&N Corridor as a transportation corridor and participate in a provincial working group to come to agreement on the future use of the E&N corridor.

Both of the above Board priorities have informed the prioritization process.

Alignment with Existing Plans & Strategies
Identification of the regional transportation priorities was largely based on priorities identified in existing plans, strategies and bylaws at local, regional and provincial levels. See Appendix C for additional policy context. At the regional level, priorities align well with the RGS, RTP and the Regional Trails Management Plan. The priorities also align to plans and policies from other agencies and senior governments, including the BC Transit Future Plan, BC Transit's RapidBus Strategy, SITS and CleanBC.

CONCLUSION

Confirmation of regional transportation priority areas would be the first step to resolving a number of implementation gaps in the region. This would help all partners address transportation problems related to congestion and mode shift. The proposed list of transportation priority areas reflects input from partners around the region, organized by the type of action required for implementation. Once priorities are confirmed, CRD staff can inform partners and report back to the Board on implementation strategies. Taking action on these priorities will continue to require significant and ongoing coordination, in which the CRD plays a critical role.

RECOMMENDATION

The Transportation Committee recommends to the Capital Regional District Board:
1. That the categorized priority areas listed in Appendix A be confirmed;
2. That the list of confirmed regional transportation priority areas be shared with the Minister of Transportation and Infrastructure, all CRD municipalities, CRD electoral areas and agency partners; and
3. That staff be directed to develop implementation strategies for each of the approved transportation priority areas and report back to the Board on the findings, including a consideration of cooperation mechanisms.

ATTACHMENTS

Appendix A: Summary of Partner Input and Priority Setting Process
Appendix B: Regional Transportation Priority Areas
Appendix C: Transportation and Climate Action Policy Context
Appendix D: Summary of Regional Priorities by Transportation Function

Overview

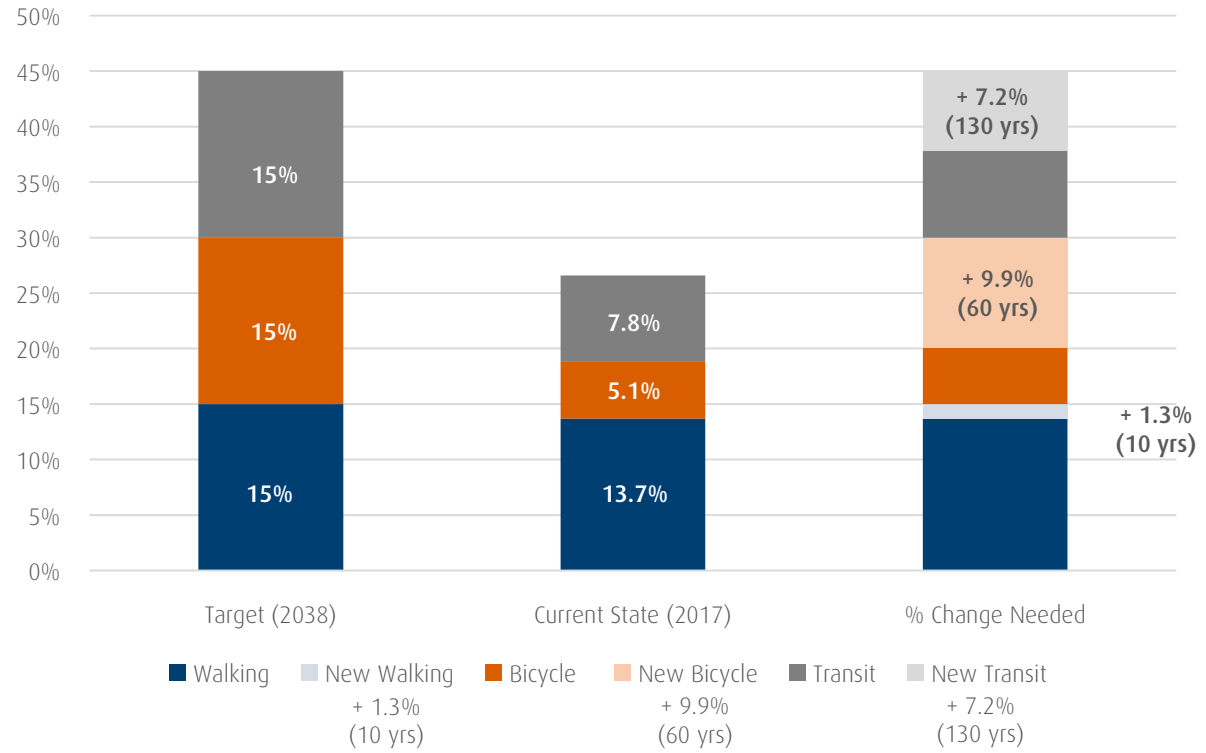
Purpose

- Review input on regional transportation priorities.
- Consider regional needs and outcomes.
- Agree to priorities and direct next steps.

What Staff Evaluated

1) Partner input
2) Regional needs & outcomes
3) Policy context & performance against criteria

Filling our Implementation Gaps



1) **Prioritize:** Agree to priorities that advance the RTP
2) **Champion:** Opportunity to speak with one regional voice
3) **Attract Funding:** Opportunity to leverage new funding streams
4) **Coordinate:** Future areas requiring coordination identified

Current State

Problem Statements

1. Traffic congestion in peak periods
2. Mode shift – improve mode choice and change behaviour
3. Reduce GHG emissions from transportation

Mode Share Context

Gathering Partner Input

Partners

- 13 CRD Municipalities
- 3 CRD Electoral Areas
- BC Transit
- Ministry of Transportation and Infrastructure (MoTI)
- BC Ferries
- Island Corridor Foundation

1

Identify Partner Priorities

- Focus on short-term, regional-scale matters
- Identify top 3-4 regional priorities
- Indicate relative importance

2

Collate and Analyze

- Group priorities by transportation function
- Analyze against performance criteria
- Confirm grouping and adjust priorities

3

Validate

- Gather feedback from Local Area Administrators
- Finalize list for Committee consideration

4

Board Prioritizes

- Report on priorities and next steps
- Seek confirmation of priorities
- Seek direction on implementation

Generating the Priority List

Analysis	**Step 1: Priority Function & Performance** Group priorities by transportation function. Individually evaluate against performance criteria.	If performs well →	**Step 2: Action to Implement Priority** Categorize priority areas by type of action required to deliver on the priority.
Output	Partner Input Summary Priority Area Fact Sheets		Priority Area List for Board Approval

Findings

1. **Region-Wide Support:** RapidBus and active transportation
2. **Sub-Regional Support:** All other priorities - communities have different needs
3. **Significance:** Point allocation focuses attention on what is most important
4. **Not Mutually Exclusive:** Partners support other priorities, even if didn't allocate points

Summary of Partner Input

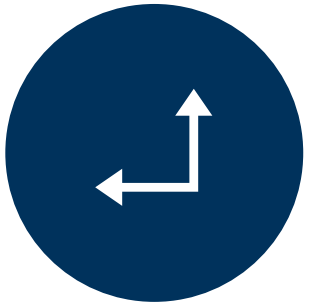
Priority Areas

Advocate



Take action now to leverage funding and project delivery. Initiatives in this category require action by agency partners. The CRD role is to advocate for the region's fair share.

Act

Provide regional direction or take local action to deliver the work. The CRD role is:

- act where it has authority
- coordinate where needed
- set direction if no lead agency

Pivot

Consider context carefully. Senior government policy direction, current context and costs are not favourable. The CRD role is to support balanced consideration of needs before advancing this work.

Advocate: Funding & Implementation

RapidBus: Accelerate RapidBus implementation.

- Faster delivery
- Corridors that link to centres

Highway Safety Improvements: Advance highway projects that focus on multi-modal infrastructure and safety.

- Multi-modal in all projects
- Prioritize safety
- Free-flow on corridors

SSI / SGI Connectivity: Enhance connectivity to SSI and SGI.

- Ferry electrification
- Terminal upgrades
- Prioritize reducing vehicle volume

Transit – General: Improve local transit service in rural areas.

- Service standardization
- Improve service frequency & span

Act: Regional Direction / Local Action

Active Transportation: Focus on regional trails and dedicated funding.

- Complete regional trail network
- Develop standards & complete upgrades
- Seek dedicated funding

TDM: Develop regional policy and programming.

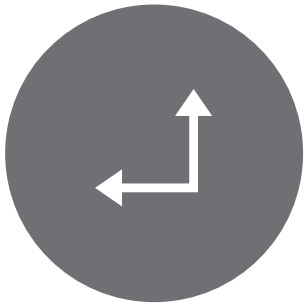
- Identify lead organization
- Seek ways to incent behaviour change

Safety Policy: Develop & implement a "Vision Zero" policy approach.

- Identify lead organization
- Develop regional safety policy

Strengthen Land Use: Continue to implement RGS Settlement Concept.

- Direct growth to places that encourage walking, cycling and efficient use of public transit
- Incent transit oriented development



Parking & Access: Improve access to transit park and rides and parks.

- Increase availability in rural areas
- Improve parking & road safety at regional parks

Pivot: Consider Regional Context

Governance: Consider once region has evaluated success of prioritization.

- Province and partners have identified the region must agree to priorities before governance is considered.
- Address concerns about insufficient municipal council support, loss of control over transportation decisions, possible local cost impacts and legislative implications for partner authorities.

Light Rail Link and Westshore Passenger Ferry: Consider once ridership share is greater.

- Investigate once ridership capacity can accommodate both bus mass transit and these alternative modes.
- Address concerns about cost, efficiency, competiveness, density and lack of connectivity (e.g., no downtown terminus for rail, difficult to access ferry by active modes).

Policy Context

Senior levels of government set policy that shapes funding, infrastructure and grants. Policy on climate, economic recovery and transportation will shape what gets built in the region.

- Pan-Canadian Framework on Clean Growth and Climate Change (2016 – Federal)
- CleanBC (2019 – Provincial)
- South Island Transportation Strategy (2020 – Provincial)
- Regional Growth Strategy (2018 – CRD)

Policy Direction	Priority Area Response
Transition to lower emitting vehicles	RapidBus Integrated roads and highways General transit investments Parking and access upgrades
Multi-Modal Transportation	RapidBus Dedicated active transportation funding Regional trail network completion Continue to implement RGS settlement concept SSI / SGI connectivity
Affordability	RapidBus Dedicated active transportation funding Regional trail network completion General transit investments Continue to implement RGS settlement concept
Safety	SSI / SGI island connectivity Safety policy – Vision Zero Integrated roads and highways Continue to implement RGS settlement concept

Priorities by Transportation Function

	Capital Regional District	Municipalities	BC Transit	MoTI
Regional and Multi-Use Trails	**Primary Service Provider** Complete regional trail system (incl. standardization). Upgrade parking at regional parks.			**Funder** Provide secure funding for active transportation infrastructure (trails).
Regional and Local Roads		**Primary Service Provider** Upgrade roads near regional and local parks. Build active transportation infrastructure once funded.	**Primary Service Provider** Add park and ride stations.	**Funder** Provide secure funding for active transportation infrastructure (on-road).
Land Use – Corridors & Nodes		**Primary Service Provider** Continue to implement RGS growth concept. Adopt policies to incentivize transit-oriented development.	**Advocacy - Policy** Adopt policies to incentivize transportation-oriented development.	
Regional Transit Network			**Primary Service Provider** Accelerate RapidBus. Ensure RapidBus directly links to centres.	**Funder** Provide secure funding for ridership recovery.
Provincial Highways				**Primary Service Provider** Upgrades / improvements. Include transit & active modes in all highway improvements.
Outcomes	Take action once funding is secured.	Take action once funding is secured.	Consensus on these items provides advocacy leverage with BC Transit.	Consensus on these items provides advocacy leverage with MoTI.

Responsibility for transportation in the region is shared. The table shows how each priority area would be implemented by function and jurisdiction.

Priority areas requiring regional direction or careful consideration are shown outside the table as they are either a new function or do not belong to an existing jurisdiction.

Requires Regional Direction

1) Develop TDM policies and programs
2) Develop regional vision zero program

Requires Consideration of Context

1) Regional transportation governance
2) Phased introduction of rail service on E&N corridor
3) Ferry service between the Westshore and Esquimalt

Recommendations

1. Confirm the categorized priority areas listed in Appendix A.

2. Share the list of confirmed regional transportation priority areas with the Minister of Transportation and Infrastructure, all CRD municipalities, CRD electoral areas and agency partners.

3. Direct staff to develop implementation strategies for each of the approved transportation priority areas and report back to the Board on the findings, including a consideration of cooperation mechanisms.

Priority Areas

Priority areas are categorized by the type of action needed to advance each priority recognizing that communities across the region have different transportation needs. This proposed approach seeks a viable path forward to resolve transportation issues and address implementation gaps.

Advocacy	Priority areas related to multi-modal infrastructure investments garner cross-regional support or respond to sub-regional needs. These priority areas require action by agency partners (i.e., MoTI and BC Transit) and the CRD role is to advocate for the region's fair share of these investments.	• **RapidBus (Bus Mass Transit):** Accelerate RapidBus implementation. • **Highway Safety and Multi-modal Improvements:** Prioritize highway improvements that deliver multi-modal infrastructure and safety, while advancing regional mode share and climate targets. • **SSI / SGI Connectivity:** Seek multi-modal and safety improvements to enhance connectivity to Salt Spring Island (SSI) and the Southern Gulf Islands (SGI). • **Transit – General:** Improve local transit service in rural areas. • **Westshore Passenger Ferry (Non Bus Mass Transit):** Plan for long term need by conducting a service feasibility study. • **E&N Corridor (Non Bus Mass Transit):** Plan for long term need by maintaining and upgrading the E&N right of way for future use as a transportation corridor.
Action	Several priority areas require regional direction or local action to implement, and all but active transportation reflect the sub-regional variations in priorities. The CRD role is to act where it has authority, coordinate where needed, and set direction on matters that are currently not the responsibility of any partner.	• **Active Transportation:** Complete the regional trail network and seek dedicated transportation funding for green transportation alternatives. • **TDM:** Undertake transportation demand management policy and programming. • **Safety Policy:** Develop and implement a "Vision Zero" policy approach that aims to keep all road users safe from the risk of being seriously injured or killed on the road network. • **Strengthen Land Use:** Continue to implement the RGS Settlement Concept by directing growth to places that encourage walking, cycling and efficient use of public transit. • **Parking and Access Upgrades:** Improve access to transit park and rides and parks.
Pivot	A few priority areas require careful consideration of context. These priority areas could be challenging for the region to advance successfully in the short- to medium-term given existing senior government policy direction, current context and costs, and could detract from advancing other priorities. The CRD role is to support a balanced consideration of needs before advancing this work.	• **Governance:** Consider initiating a process to change governance and/or authorities once the region has been able to evaluate the success of prioritization. • **Rail Link and Westshore Passenger Ferry:** Consider taking action on these alternative mass transit approaches once ridership capacity can accommodate both bus rapid transit and light rail and / or passenger ferry.

Priority Areas

Priority areas are categorized by the type of action needed to advance each priority recognizing that communities across the region have different transportation needs. This proposed approach seeks a viable path forward to resolve transportation issues and address implementation gaps.

Advocacy	Priority areas related to multi-modal infrastructure investments garner cross-regional support or respond to sub-regional needs. These priority areas require action by agency partners (i.e., MoTI and BC Transit) and the CRD role is to advocate for the region's fair share of these investments.	• **RapidBus (Bus Mass Transit):** Accelerate RapidBus implementation. • **Highway Safety Improvements:** Advance highway projects that focus on multi-modal infrastructure and safety. • **SSI / SGI Connectivity:** Seek multi-modal and safety improvements to enhance connectivity to Salt Spring Island (SSI) and the Southern Gulf Islands (SGI). • **Transit – General:** Improve local transit service in rural areas.
Action	Several priority areas require regional direction or local action to implement, and all but active transportation reflect the sub-regional variations in priorities. The CRD role is to act where it has authority, coordinate where needed, and set direction on matters that are currently not the responsibility of any partner.	• **Active Transportation:** Complete the regional trail network and seek dedicated transportation funding for green transportation alternatives. • **TDM:** Undertake transportation demand management policy and programming. • **Safety Policy:** Develop and implement a "Vision Zero" policy approach that aims to keep all road users safe from the risk of being seriously injured or killed on the road network. • **Strengthen Land Use:** Continue to implement the RGS Settlement Concept by directing growth to places that encourage walking, cycling and efficient use of public transit. • **Parking and Access Upgrades:** Improve access to transit park and rides and parks.
Pivot	A few priority areas require careful consideration of context. These priority areas could be challenging for the region to advance successfully in the short- to medium-term given existing senior government policy direction, current context and costs, and could detract from advancing other priorities. The CRD role is to support a balanced consideration of needs before advancing this work.	• **Governance:** Consider initiating a process to change governance and/or authorities once the region has been able to evaluate the success of prioritization. • **Light Rail Link and Westshore Passenger Ferry:** Consider taking action on these alternative mass transit approaches once ridership capacity can accommodate both bus rapid transit and light rail and / or passenger ferry.

Summary of Partner Input

	TRANSIT			GOVERNANCE	AUTO		ACTIVE	TRANSPORTATION DEMAND MANAGEMENT, POLICY AND ADVOCACY

MoTI						100			

Priority Setting Process

On December 9, 2020, the CRD Board directed staff to develop a list of regional transportation priorities. Staff worked collaboratively, following an iterative process, with partners having jurisdiction over a transportation function to prepare the list.

In order to generate priorities that reflect the regional and sub-regional needs of all CRD communities, and against which the CRD can act, staff used a two-step evaluation process:

Analysis	**Step 1: Function & Performance** Group priorities by transportation function and individually evaluate against performance criteria.	If performs well →	**Step 2: Action** Categorize functional priority areas by type of action required to deliver on the priority.
Output	Summary of Partner Input Priority Area Fact Sheets		Priority Area List for Board Approval

Partners Responsible for a Transportation Function
- 13 CRD Municipalities
- 3 CRD Electoral Areas
- BC Transit
- Ministry of Transportation and Infrastructure (MoTI)
- BC Ferries
- Island Corridor Foundation

Criteria
- Climate action
- Congestion
- Mode share
- Safety
- Affordability

Key findings
1. Two transportation priorities received broad levels of regional support – BC Transit's RapidBus initiative and active transportation / regional trails.
2. All other transportation priorities received varying levels of sub-regional support, reflecting the different needs of communities across the region; rural and remote communities require different solutions than the urban core and more densely populated centres.
3. Internal point allocation was intentional to drive focus on the transportation priorities of most significance to partners.
4. Partners noted that they support areas to which they did not allocate points, indicating some priorities have broader levels of support than the summary suggests.

Process Steps

1

Identify Partner Priorities
- CAOs / senior executive identify staff technical expert (staff) as contact
- Staff identify top three or four transportation priorities
- Staff assign points to indicate the relative level of importance for their own respective priorities
- Submit priorities to CRD staff

2

Collate and Analyze
- CRD staff grouped like priorities by transportation function to produce the input summary table
- CRD staff analyzed the priorities against criteria to evaluate how each performs in relation to achieving transportation objectives
- CRD staff worked collaboratively with partners to confirm groupings and adjust weighting of their respective priorities
- Some partners sought Council approval of priorities, as required by their own internal processes

3

Validate
- CRD executive validated input with local area administrators
- Proposed list of priorities prepared for Board consideration

4

Board Prioritizes
- CRD staff reports back with draft priorities list and coordination mechanisms
- Seek Board confirmation of priorities
- Seek Board direction to develop implementation strategies for each of the approved priorities

Advocate: Funding & Implementation

Advocate

Take action now to leverage funding and project delivery

The Province expects that regional priorities will drive the implementation of projects and actions set out in the South Island Transportation Strategy (SITS).

The proposed priority areas:

- Reflect projects with regional and sub-regional support.
- Perform well against all criteria to address regional transportation problems and take action on climate change.

Proposed Priority Area	Implementation Action
RapidBus	Seek accelerated implementation from BC Transit / MoTI. Seek dedicated corridors with direct links to designated growth centres.
Integrated Highway Improvements	Leverage multi-modal improvements from any highway work. Seek projects that prioritize safety improvements. Support free-flow of traffic along highway corridors.
SSI / SGI Island Connectivity	Seek ferry electrification and implementation of terminal safety upgrades. Seek policy and infrastructure to prioritize reduction in vehicle volumes.
General Transit	Seek service standardization in rural areas (weekend / evening service). Seek improved frequency and span of service (incl. SGI/SSI ferry).

BUS MASS TRANSIT / RapidBus

REGIONAL SUPPORT

- Esquimalt
- Oak Bay
- Saanich
- Victoria
- Langford
- Colwood
- Metchosin
- Sooke
- Central Saanich
- Sidney
- SGI

RapidBus is a BC Transit initiative to provide frequent, high-capacity service along key corridors. With buses removed from general traffic, the initiative aims to significantly reduce travel times compared to single occupancy vehicle travel.

RapidBus consists of dedicated bus lanes, branding and priority measures for transit with a focus on Highway 1, Highway 17 and McKenzie Avenue. RapidBus includes the requirement for an exchange at Uptown and a new transit operations facility.

Key Features / Key Partner Asks

- Accelerate RapidBus implementation.
- Create direct links to designated growth centres.

CRD	BC Transit (Victoria Regional Transit Commission)	MoTI
Advocacy	Service Operator	Funding
If directed, develop an integrated advocacy strategy: • MoTI – funding • BC Transit – facility planning	• Set operational policy, priorities and facility design (e.g., accelerate implementation) • Set fares • Seek fair share of funding • Set mode share targets	• Provide funding • Approve new service hours • Adopt and adhere to provincial policy and regulations (e.g., CleanBC prioritizes bus rapid transit and fleet greening)

PERFORMANCE EVALUATION

CLIMATE ACTION

- Shift to electric vehicles
- Reduce GHG by encouraging more people to use transit instead of single occupancy vehicles

CONGESTION

- Potential to reduce the number of personal vehicles on the road - particularly during peak periods

MODE SHARE

- Offers capacity for mode shift change towards regional targets
- Offers greater appeal than general transit, particularly to riders who have the capacity to use other modes (non captive)

SAFETY

- A very safe mode facilitated by trained safety teams and transit supervisors

AFFORDABILITY

- Offers an affordable alternative when compared against single occupancy vehicles

AUTO / INTEGRATED SAFETY FOCUSSED APPROACH TO HIGHWAY PROJECTS AND ARTERIALS

REGIONAL SUPPORT

- Sooke
- Highlands
- Central Saanich
- North Saanich

The highway system in the CRD consists of three major highways (1, 14 and 17) connecting major centres across the region with gateways to the rest of Vancouver Island, the mainland via ferries, and internationally via the airport. The MoTI is responsible for the highway system which allows for both freight and passenger movement.

An integrated approach to highways was a cornerstone of the South Island Transportation Strategy. Highway upgrades in the region consider the safety and movement of people across all modes. Arterial roads, which connect to the highway system, are the responsibility of local governments and often accommodate strategic employment and service centres as well as increased housing density. Support for highway improvements came from communities in the region which rely on highways to access services and employment opportunities.

Key Features / Key Partner Asks

- Maintain arterials and highways as the dominant traffic corridors.
- Prioritize improvements based on safety.
- Integrate transit and active transportation in all highway improvements.
- Support free flow of traffic along highway corridors.

CRD	Local Government	MoTI
Advocacy	Arterial road design and maintenance	Highway design and maintenance
• Continue to provide data and technical expertise on a project basis • If directed, develop an advocacy strategy	• Set arterial policy direction • Plan, operate, maintain and fund arterial connections to the highway system • Collaborate with BC Transit and CRD Regional Trails	• Set policy direction • Plan, operate, maintain and fund integrated highway system • Collaborate with BC Transit, CRD Regional Trails and local governments

PERFORMANCE EVALUATION

CLIMATE ACTION

- Gradual shift to electric vehicles
- Reduce GHG by encouraging more people to use transit and active transportation by fast tracking improvements

CONGESTION

- Potential to reduce queuing / idling through improved traffic flow
- Potential to move some single occupancy vehicle users to transit and active transportation

MODE SHARE

- Leverages significant provincial spending power to support mode shift by providing improved transit and active transportation infrastructure at time of highway improvements

SAFETY

- Prioritizes safety improvements
- Single occupancy vehicle travel is statistically more dangerous than transit

AFFORDABILITY

- Single occupancy vehicles are a high cost option due to up front and ongoing costs of use
- Road improvements and maintenance are expensive

POLICY - BC FERRIES / ISLAND CONNECTIVITY

REGIONAL SUPPORT

- SGI
- SSI

The region is dependent on the ferry system to access vital goods and services and connect with the rest of the province. This is particularly significant for the Electoral Areas of Salt Spring Island (SSI) and the Southern Gulf Islands (SGI), whose residents rely heavily on ferries to access the region.

Ferries generated little discussion amongst municipal partners, but were dominant discussion points for the SSI and SGI Electoral Areas.

Key Features / Key Partner Asks

- Electrify ferry and implement terminal safety upgrades.
- Advocate to the Province to amend mandate letter to prioritize reduction in vehicle volumes and emphasize active transportation passenger volumes.
- Advocate for MoTI to include 1.5m to 1.8m bike lanes as a part of every repaving project.

CRD	BC Ferries	MoTI
Advocacy	Service Operator	Mandate & Funding
If directed, develop an integrated advocacy strategy: • MoTI – policy • BC Ferries – facility planning	• Act as the operating company to meet the scope of service mandated by the Province • Set operational policy	• Set BC Ferries operating mandate • Set policies and priorities • Provide funding

PERFORMANCE EVALUATION

CLIMATE ACTION

- Shift to electric fleet
- Vehicle movement a priority over passenger only

CONGESTION

- Limited potential to reduce the number of personal vehicles on the road particularly during peak periods

MODE SHARE

- Limited capacity for mode shift change towards regional targets

SAFETY

- A very safe mode facilitated by trained safety teams

AFFORDABILITY

- Cost of ferry travel is seen as a deterrent for many

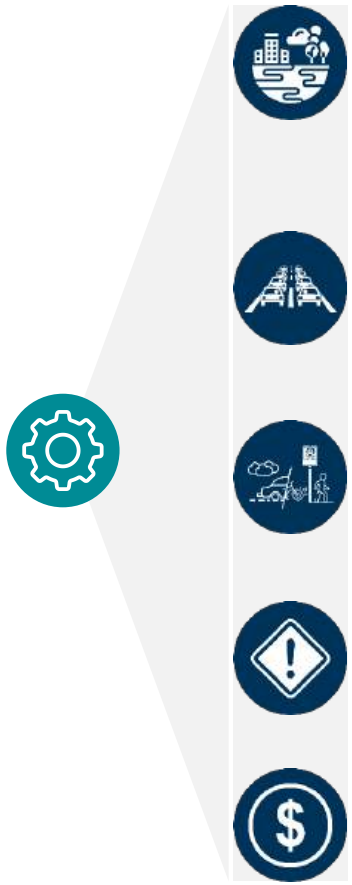
GENERAL TRANSIT

REGIONAL SUPPORT

- Juan de Fuca
- Victoria
- SSI

BC Transit provides local bus service, connecting residents to destinations via local-serving routes. Transit provides transportation choice for significant numbers of residents and visitors. Local transit service operates buses in mixed traffic, with closely spaced stops.

Transit is working towards the greening of its fleet through the introduction of LNG and electric busses in the region.



BC Transit has seen significant passenger losses as a result of the pandemic. The next few years will require significant work to build passenger confidence and volumes back. This rebuild offers potential to reexamine how routes, service span and frequency across the region represent the needs of the community.

Key Features / Key Partner Asks

- Service standardization in communities across the region to include weekend and evening services.
- Improved frequency and span of service.
- Better integration between SGI and SSI ferries and Swartz Bay transit.

CRD	BC Transit (Victoria Regional Transit Commission)	MoTI
Advocacy	Service Operator	Funding
• If directed, develop an advocacy strategy	• Set operational policy and priorities • Approve service levels, frequency and routing • Set transit mode share targets	• Provide funding • Approve new service hours • Adopt and adhere to provincial policy and regulations (e.g., CleanBC prioritizes fleet greening)

PERFORMANCE EVALUATION

CLIMATE ACTION

- Adopt renewable energy sources
- Reduce GHG by encouraging more people to use transit instead of single occupancy vehicles

CONGESTION

- Potential to reduce the number of single occupancy vehicles on a limited road corridor particularly during peak periods

MODE SHARE

- Offers capacity for mode shift away from single occupancy vehicles based on improved service quality and comfort

SAFETY

- A very safe mode facilitated by trained safety teams

AFFORDABILITY

- Offers a more affordable way to travel when compared against single occupancy vehicles

Act: Regional Direction / Local Action

Advocate | **Act** | Pivot

Needs Regional Direction or Local Action

Consider options to initiate work

A number of priority areas require regional or local action, or a decision to take new action. These priority areas reflect matters requiring varying levels of regional coordination.

The proposed priority areas:

- Reflect initiatives that require regional coordination and/or action to be effective.
- Require additional direction from the CRD Board to move forward as it would change aspects of CRD service delivery.

Proposed Priority Area	Implementation Action
Regional Trails and Active Transportation	Complete regional trail network. Develop trail standards and complete safety upgrades. Seek dedicated active transportation funding.
Transportation Demand Management (TDM)	Identify a lead organization. Seek ways to incentivize behaviour change. Develop and implement TDM policies and programs.
Safety Policy (Vision Zero)	Identify a lead organization. Develop and implement a regional traffic safety policy.
Strengthen Land Use	Continue to implement the RGS Settlement Concept by directing growth to places that encourage walking, cycling and efficient use of public transit. Incentivise transit oriented development.
Parking and Access Upgrades	Increase parks & rides in rural areas to make transit use more convenient. Improve parking and road safety at regional and provincial parks.

ACTIVE TRANSPORTATION INCLUDING REGIONAL TRAILS

REGIONAL SUPPORT

- SSI
- Langford
- Esquimalt
- Colwood
- Central Saanich
- SGI
- Saanich
- Victoria
- Sidney

The region's active transportation network is composed of three regional trails – the Galloping Goose, Lochside and E&N Rail Trail – and local active transportation infrastructure. Significant progress by both the CRD and municipalities has been made towards the implementation of this network with the construction of all ages and abilities pedestrian and cycling infrastructure throughout the region.

Cycling and walking are well documented as being the most climate friendly form of transportation options with the added bonus of health benefits to the user.

There is no longer a stable, dedicated funding pool for active transportation outside of established budgets for the general operation and maintenance of regional trails.

Key Features / Key Partner Asks

- Standardize the regional trail network to reflect its year round use.
- Seek dedicated regional active transportation funding.
- Provide for safety upgrades.
- Complete the E&N Rail Trail.

CRD	Local Governments	MoTI
Operations and Advocacy	Operations and Advocacy	Land Owner
• Plan, operate and maintain the three regional trails, per the Regional Trails Management Plan • Set regional mode share targets • Seek funding for new trail construction and improvements	• Plan, operate and maintain local active transportation infrastructure • Set local mode share targets • Prioritize local service delivery	• Critical funding partner • Active transportation policy direction • Land Owner (E&N)

PERFORMANCE EVALUATION

CLIMATE ACTION

- Most climate friendly of transportation options

CONGESTION

- Potential to reduce the number of single occupancy vehicles on the road particularly during peak periods

MODE SHARE

- Offers capacity for mode shift change towards regional targets

SAFETY

- Generally offers safe options particularly through the development of an all ages and abilities network

AFFORDABILITY

- Offers the most affordable transportation option, for both the user and the funder

TRANSPORTATION DEMAND MANAGEMENT

REGIONAL SUPPORT

- Colwood
- Highlands
- Victoria
- Langford
- Sidney
- Central Saanich

Transportation Demand Management (TDM) includes a range of incentives and deterrents that encourage people to make travel choices that shift modes, reduce congestion or mitigate the need for travel. The objective of TDM is to remove pressure during peak periods from high volume transit routes and road networks.

The pandemic has offered a unique trial of how some TDM measures can alter peak travel times and spread traffic volume across a longer time horizon. Other measures include incentives such as affordable passes for transit or deterrents such as parking fees or congestion charges. The most appropriate TDM measures for the region would need careful evaluation.

Key Features / Key Partner Asks

- Strong belief from many partners that working from home and staggered work and school hours will continue after the pandemic and that the impact of this will assist in decreasing congestion.
- Incentivize active transportation, transit and high-occupancy vehicles and dis-incentivize the use of single occupancy vehicles and the need for travel.

CRD	Local Governments	MoTI/ BC Transit
• If directed, develop collaborative policy • Implement policy at a workforce level	• Provide and funds localized incentives (e.g., Victoria Youth Pass, pay parking) • Develop collaborative policy • Implement policy at a workforce level	• Develop collaborative policy • Implement policy at a workforce level • Provide incentives (e.g., bus passes and promotions)

PERFORMANCE EVALUATION

CLIMATE ACTION

- Potential to significantly reduce the need for travel
- Significant potential to decrease the average vehicle kilometres travelled per person

CONGESTION

- Potential to reduce the number of personal vehicles on the road during peak periods

MODE SHARE

- Offers capacity to shift modes towards regional targets
- Incentivise use of active travel and transit modes

SAFETY

- Development of TDM measures by trained experts prioritizing safety of all road users

AFFORDABILITY

- Offers affordable options
- Could result in making travel by personal vehicle more expensive

POLICY – SAFETY VISION ZERO and DEFAULT SPEED PILOT

REGIONAL SUPPORT

- Saanich
- Oak Bay

Vision Zero is a traffic safety policy with an aim for all road users to be safe from the risk of being killed or seriously injured on the road network.

British Columbia has a default speed limit of 50km/h, where no speed limit sign is posted. The provincial government amended the *Motor Vehicle Act* to allow pilot projects that would research, test and evaluate new regulatory approaches to support active transportation and increase safety. A number of municipalities have expressed an interest in participating in a pilot of a lowered default speed.

Key Features / Key Partner Asks

- Develop a regional Vision Zero program.
- Pilot lowered default speed.

CRD	Local Governments	Province
Advocacy	Infrastructure and Policy	Support and collaboration.
If directed: • Develop an advocacy strategy • Collaborate to develop and set policy direction	• Fund planning and engineering solutions to align with Vision Zero principles • Collaborate to develop policy direction	• Set provincial legislation, policy and plans • Fund and plan for safety upgrades on MoTI road networks • Provide educational campaigns and disincentives such as fines for not obeying rules

PERFORMANCE EVALUATION

NOTE: Vision Zero would have little direct impact in the short term advancement of four of the five criteria but significant potential to improve user safety.

CLIMATE ACTION

CONGESTION

MODE SHARE

SAFETY

- Pedestrian and cyclists are at higher risk of injury but the development of all ages and abilities infrastructure can mitigate the higher likelihood of potential injury
- Decreasing vehicle kilometres travelled reduces the likelihood for injury

AFFORDABILITY

POLICY - LAND USE

REGIONAL SUPPORT

- Saanich
- Victoria

Land use and transportation are intrinsically linked. The Regional Growth Strategy (RGS) provides the vision for sustainable growth including such areas as population growth, transportation and settlement patterns. Settlement patterns that densify designated centres and corridors support efficient transit service and connected active transportation networks that get people to the places they want to go.

Key Features / Key Partner Asks

- Continue to implement RGS vision and adopt regional land use policy that supports transit oriented development.
- Develop settlement patterns that minimize the use of automobiles and encourage walking, cycling and the efficient use of public transit.

CRD	Local Governments	Province
Regional Growth Strategy	Official Community Plan	Legislation
• Draft and approve the RGS • Approve local government regional context statements	• Prepare and implement Official Community Plan • Direct and approve growth in designated centres and corridors to support efficient transit and active transportation	• Develop and approve legislation under the *Local Government Act* that sets requirements for content and adoption of Regional Growth Strategies and OCPs

PERFORMANCE EVALUATION

CLIMATE ACTION

- Potential to significantly reduce the need for longer trips to access services and employment
- Significant potential to decrease the average vehicle kilometres travelled per person

CONGESTION

- Potential to significantly reduce the number of personal vehicles on the road particularly during peak periods

MODE SHARE

- Potential to shift a significant number of trips away from single occupancy vehicles to active modes of transportation and transit

SAFETY

- Support a greater number of people walking and cycling places
- Greater levels of active travel, when combined with all ages and abilities infrastructure, can mitigate the potential of injury

AFFORDABILITY

- A shift to active transportation and transit mode share could reduce household spending on personal vehicle use

AUTO / PARKING AND ACCESS UPGRADES

REGIONAL SUPPORT

- Juan de Fuca
- Central Saanich
- Metchosin
- Langford
- Highlands

Numerous partners identified a concern for user safety at access points to regional and provincial parks. Often the available parking is full and users are forced to park on the edge of busy roads and highways that offer no pedestrian infrastructure. It was felt strongly that access to parks needed to be available to all and that transportation options needed to reflect this.

Park and Rides linking to high quality transit were seen as an important way of attracting riders to transit particularly in areas where local transit connections are poor or non-existent.

Key Features / Key Partner Asks

- Increased availability of Park and Rides in the outlying areas of the region to make transit more convenient and accessible.
- More parking and road access safety upgrades at regional and provincial parks, particularly in those locations where it is challenging or not possible to access by public transit or active transportation.

Local Governments and EAs	CRD/MoTI/BC Transit	BC PARKS
Advocacy & Infrastructure	Operations & Funding	Operations
• Advocacy • Collaborate with BC Transit on Park and Rides • Collaborate on road safety upgrades	• Plan, design and maintain parking at regional parks (CRD) • Plan, design and maintain access points on MoTI road network (MoTI) • Plan, design and operate Park and Rides in collaboration with local governments (BC Transit and VRTC) • Various funding sources	• Plan, design and maintain parking at provincial parks • Funding source

PERFORMANCE EVALUATION

CLIMATE ACTION

- Incentivizes driving
- Park and rides encourage use of transit for part of a trip

CONGESTION

- Park and rides have the potential to decrease the vehicle kilometres travelled per person

MODE SHARE

- Offers limited capacity for mode shift change towards regional targets

SAFETY

- A relatively safe mode or combination of modes
- Dedicated parking areas decrease likelihood of crashes
- Provides a safe and convenient option for people with mobility and health challenges

AFFORDABILITY

- Offers a more expensive option as reliant upon use of a personal motor vehicle

Pivot: Consider Context

Needs Careful Consideration

Consider delaying initiation in short- and medium-term

A few priority areas require careful consideration before advancing. These matters would be better addressed in the long-term, once conditions are more favourable for success and the effectiveness of other priorities have been evaluated.

The proposed priority areas:

- Would be difficult to implement / achieve success in the short- and medium-term given the existing senior government policy direction, current context and costs.
- Could detract from the success of priority areas receiving higher levels of support.

Proposed Priority Area	Implementation Action
New Governance Authority	Investigate once it is possible to evaluate the relative success of establishing and implementing regional priorities as an approach. Address previously raised concerns about insufficient municipal council support, loss of control over transportation decisions, possible local cost impacts and legislative implications for partner authorities.
Light Rail Link and Westshore Passenger Ferry	Investigate once ridership capacity is competitive to bus mass transit. Address concerns about cost, efficiency, competiveness, density and lack of connectivity (e.g., no downtown terminus for rail, difficult to access ferry by active modes).

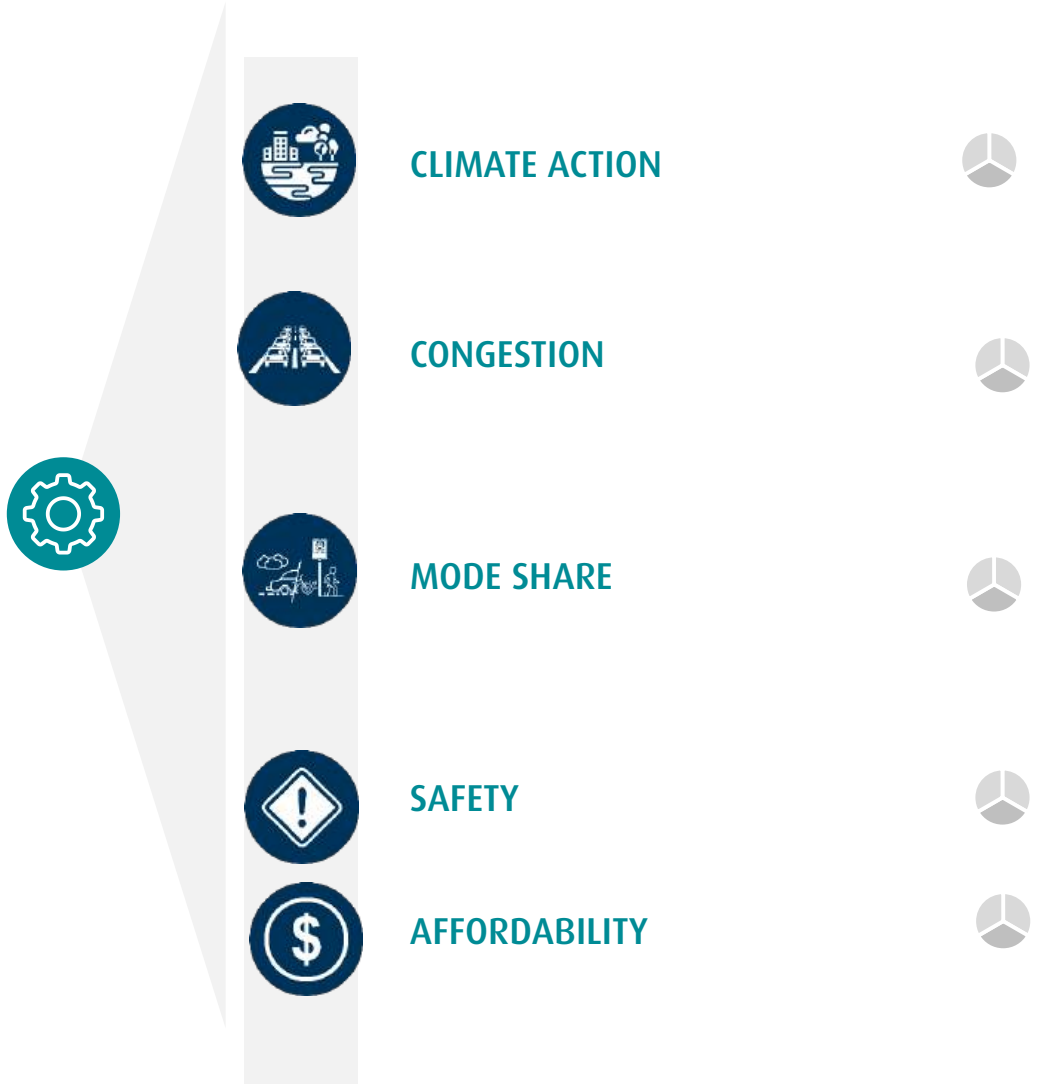
GOVERNANCE

REGIONAL SUPPORT

- View Royal
- Juan de Fuca

Governance refers to the decision making body and process related to the delivery of transportation services. In the CRD, transportation governance is multi-jurisdictional: the CRD is responsible for regional trails, local governments for local roads and active transportation infrastructure, BC Transit for bus transit and the Province for highways and BC Ferries. The federal government also sets regulations for some waterways and airports.

Historically, transportation governance has not received consensus support at the CRD Board. Governance can only be examined once priorities have been agreed upon and there is a demonstrated gap that cannot be addressed within existing jurisdictional roles.



Key Features / Key Partner Asks

- The creation of a new regional transportation authority.
- If and when a new governance model is discussed, the impacts to and contributions from smaller isolated electoral areas and municipalities needs to be examined.

CRD	Local Governments	BC Transit / MoTI
Advocacy and priority setting	Advocacy and priority setting	Advocacy and priority setting
• Set policy, plan, operate and maintain regional trails • Provide data and technical expertise on regional transportation	• Set policy, plan, operate and maintain local roads and active transportation	• MoTI: Set policy, plan, operate and maintain highways • MoTI: Set mandate for BC Ferries • BC Transit: Set policy, plan and operate transit

PERFORMANCE EVALUATION

Governance changes would have little direct impact in the short term advancement of the five performance criteria.

NON BUS MASS TRANSIT / RAIL & PASSENGER FERRY

REGIONAL SUPPORT

- Esquimalt
- View Royal
- Metchosin
- Colwood
- Langford

Non bus mass transit refers to the introduction of rail along the E&N corridor and a passenger ferry from the Westshore to Esquimalt and Victoria.

Numerous rail studies indicate that ridership capacity would be uncompetitive to bus transit and that costs are prohibitively expensive. Island Corridor Foundation have questioned the findings of these reports and believe that the costs could be substantially reduced. Rail service would be unable to enter the employment and service hub of downtown Victoria.

Preliminary investigation of a passenger ferry shows that ridership capacity would be significantly smaller than other modes of transit and that population density and land use patterns would be challenged to sustain a viable passenger ferry service.

Key Features / Key Partner Asks

- Phased introduction of rail in the region and up island.
- Further investigate a Westshore passenger ferry.
- Consider Light Rail Transit.

Island Corridor Foundation	BC Transit (Victoria Regional Transit Commission)	MoTI
Advocacy	**Service Operation**	**Funding**
• Manage the former E&N rail corridor • Set vision and advocates for connected rail service along the corridor	• Set policy and priorities for land-based modes of transportation • Set mode share targets	• Fund studies and implementation • Adopt and adhere to provincial policy and regulations (e.g., CleanBC prioritizes bus rapid transit and fleet greening)

PERFORMANCE EVALUATION

CLIMATE ACTION

- Operates using largely non renewable fuel sources (as identified in plans)
- Could reduce GHG by encouraging more people to use a mode of public transit

CONGESTION

- Potential to reduce the number of personal vehicles on a limited road corridor particularly during peak periods

MODE SHARE

- Offers some capacity for mode shift change towards regional targets
- Reliant upon other forms of transportation for first and last mile travel
- Offers greater appeal than general transit particularly to riders who have the capacity to use other modes (non captive)

SAFETY

- A very safe mode facilitated by trained safety teams

AFFORDABILITY

- More expensive than RapidBus in terms of passenger fares and subsidies

Policy Context

Senior levels of government set policy that shapes funding, infrastructure and grants. Policy on climate, economic recovery and transportation will shape what gets built in the region.

Table 1 shows the regulatory and planning frameworks by transportation function.
Table 2 summarizes how the proposed priority areas deliver on key policy commitments.

Table 1: Policy Framework Summary

Focus Area	Legislative Framework	Policy and Regulatory Framework
Land Use	*Local Government Act*	Regional Growth Strategy, Official Community Plans, Local Area Plans, regional and municipal bylaws
Highway and Road Network	*Motor Vehicle Act*	South Island Transportation Strategy, Regional Transportation Plan, municipal transportation plans, regional and municipal bylaws
Transit	*BC Transit Act*	BC on the Move, Victoria Transit Future Plan, Transit Local Area Plans RapidBus Strategy, regional and municipal bylaws
Active Transportation	*Motor Vehicle Act*	CRD Pedestrian and Cycling Master Plan, Regional Trails Management Plan, municipal active transportation plans, regional and municipal bylaws
Climate Change	*Carbon Tax Act* (2008), *Climate Change Accountability Act* (2007), *Zero-Emission Vehicles Act* (2019), *Greenhouse Gas Reduction (Renewable and Low Carbon Fuel Requirements) Act* (2008/2009), Community Charter, *Local Government Act, BC Climate Action Charter*	Pan-Canadian Framework on Clean Growth and Climate Change (2016), CleanBC (2019), Regional Growth Strategy, Official Community Plans, Local Area Plans, regional and municipal climate action plans, regional and municipal bylaws

KEY FEATURES OF STRATEGIC POLICY DOCUMENTS

PAN-CANADIAN FRAMEWORK ON CLEAN GROWTH AND CLIMATE CHANGE (2016 – Federal)

The Pan-Canadian Framework is the national plan that sets out how the federal government will take action on climate change. The federal approach to addressing emissions from transportation is to create the economic conditions needed to transition to lower emitting vehicles: (1) improve vehicle emission standards, (2) expand the number of zero-emission vehicles on the road, (3) invest in infrastructure that supports mode shift and (4) use cleaner fuels.

CLEANBC (2019 – Provincial)

CleanBC is the provincial plan sets BC's climate action visons and targets. Informed by the federal approach, the Province will take action on emissions from transportation by: (1) making zero-emission vehicle use more convenient and affordable, (2) increasing the supply of green fuels and (3) investing in infrastructure that supports mode shift, focusing on bus rapid transit and integrated active transportation.

SOUTH ISLAND TRANSPORTATION STRATEGY (2020 – Provincial)

SITS is the most recent provincial planning document related to transportation on the South Island. The strategy takes an integrated multi-modal approach to transportation in the region. It is aligned with CleanBC and sets clear goals for the integration of transit and active transportation in the overall transportation network. It has a strong focus on safety, reliability of transportation and connections between modes and communities.

REGIONAL GROWTH STRATEGY (2018 – CRD)

The RGS establishes a vison and targets for the growth management of the region under the authority of the *Local Government Act*. The strategy focuses on reducing GHG emissions and improving multi-modal connectivity and mobility by setting out a compact settlement concept that directs growth to designated nodes and corridors.

Table 2: Priority Area Alignment to Key Policy Priorities

Priority Area Alignment

- The proposed priority areas align to senior government policy frameworks. Senior government focus on greening fuel sources will significantly help reduce GHG emissions, but will not address the transportation problems of congestion and mode shift.
- The region needs to agree to these priority areas to leverage maximum access to investments.

Senior Government Policy Priorities	Proposed Regional Priority Areas
Transition to Lower Emitting Vehicles - Expand charging infrastructure - Make zero-emission vehicles more affordable - Expand the low-carbon fuel standard - Increase the supply of renewable fuels	RapidBus Integrated roads and highways General transit investments Parking and access upgrades
Multi-Modal Transportation - Invest in integrated infrastructure - Improve public transit by investing in bus rapid transit	RapidBus Dedicated active transportation funding Regional trail network completion Continue to implement RGS settlement concept SSI / SGI connectivity
Affordability - Pandemic recovery - Integrate transportation into an economic vision for the South Island (SITS) - Promote investment, economic development and job opportunities near affordable housing (SITS)	RapidBus Dedicated active transportation funding Regional trail network completion General transit investments Continue to implement RGS settlement concept
Safety - Explore trail enhancements - Focus on intersection improvements - Protect vulnerable road users (i.e. Vision Zero) - Implement highway safety improvements - Target investments to improve network connectivity	SSI / SGI island connectivity Safety policy – Vision Zero Integrated roads and highways Continue to implement RGS settlement concept

Priorities by Transportation Function

	Capital Regional District	Municipalities	BC Transit	MoTI
Regional and Multi-Use Trails	**Primary Service Provider** Complete regional trail system (incl. standardization). Upgrade parking at regional parks.			**Funder** Provide secure funding for active transportation infrastructure (trails).
Regional and Local Roads		**Primary Service Provider** Upgrade roads near regional and local parks. Build active transportation infrastructure once funded.	**Primary Service Provider** Add park and ride stations.	**Funder** Provide secure funding for active transportation infrastructure (on-road).
Land Use – Corridors & Nodes		**Primary Service Provider** Continue to implement RGS growth concept. Adopt policies to incentivize transit-oriented development	**Advocacy - Policy** Adopt policies to incentivize transportation-oriented development.	
Regional Transit Network			**Primary Service Provider** Accelerate RapidBus. Ensure RapidBus directly links to centres.	**Funder** Provide secure funding for ridership recovery.
Provincial Highways				**Primary Service Provider** Upgrades / improvements. Include transit & active modes in all highway improvements
Outcomes	Take action once funding is secured.	Take action once funding is secured.	Consensus on these items provides advocacy leverage with BC Transit.	Consensus on these items provides advocacy leverage with MoTI.

Responsibility for transportation in the region is shared. The table shows how each priority area would be implemented by function and jurisdiction.

Priority areas requiring regional direction or careful consideration are shown outside the table as they are either a new function or do not belong to an existing jurisdiction.

Requires Regional Direction

1) Develop TDM policies and programs
2) Develop regional vision zero program

Requires Consideration of Context

1) Regional transportation governance
2) Phased introduction of rail service on E&N corridor
3) Ferry service between the Westshore and Esquimalt

NOTICE OF MOTION TO CAPITAL REGIONAL DISTRICT BOARD
MEETING OF MAY 12, 2021

SUBJECT **Partnerships to Protect Fairy Creek and Other At-Risk Old-Growth Forests**

ISSUE

This report provides a recommendation that the Capital Regional District work with the Pacheedaht First Nation and the Government of British Columbia to pursue protection of Fairy Creek and other at-risk old-growth forests on southern Vancouver Island.

BACKGROUND

Local governments including the City of Powell River, the City of Port Moody, the City of Nanaimo and the City of Victoria have joined the chorus of voices calling for protection of remaining stands of original high-productivity old-growth forests on Vancouver Island.

Local governments in the Capital Region have consistently advocated for protection of old-growth rainforests through the immediate and just transition to sustainable management of second-growth forests, improving outcomes including biological diversity, water quality, sustainable employment and community resilience.

Current controversy surrounding proposed logging in the upper headwaters of Fairy Creek – the last unlogged watershed in the San Juan River system in the Capital Regional District – has demonstrated the need for action on recommendations in the Provincial government's Old Growth Strategic Review (2020).

It is therefore recommended that the Capital Regional District Board endorse the following resolution and support potential partnerships to protect Fairy Creek and other at-risk old-growth forests on southern Vancouver Island.

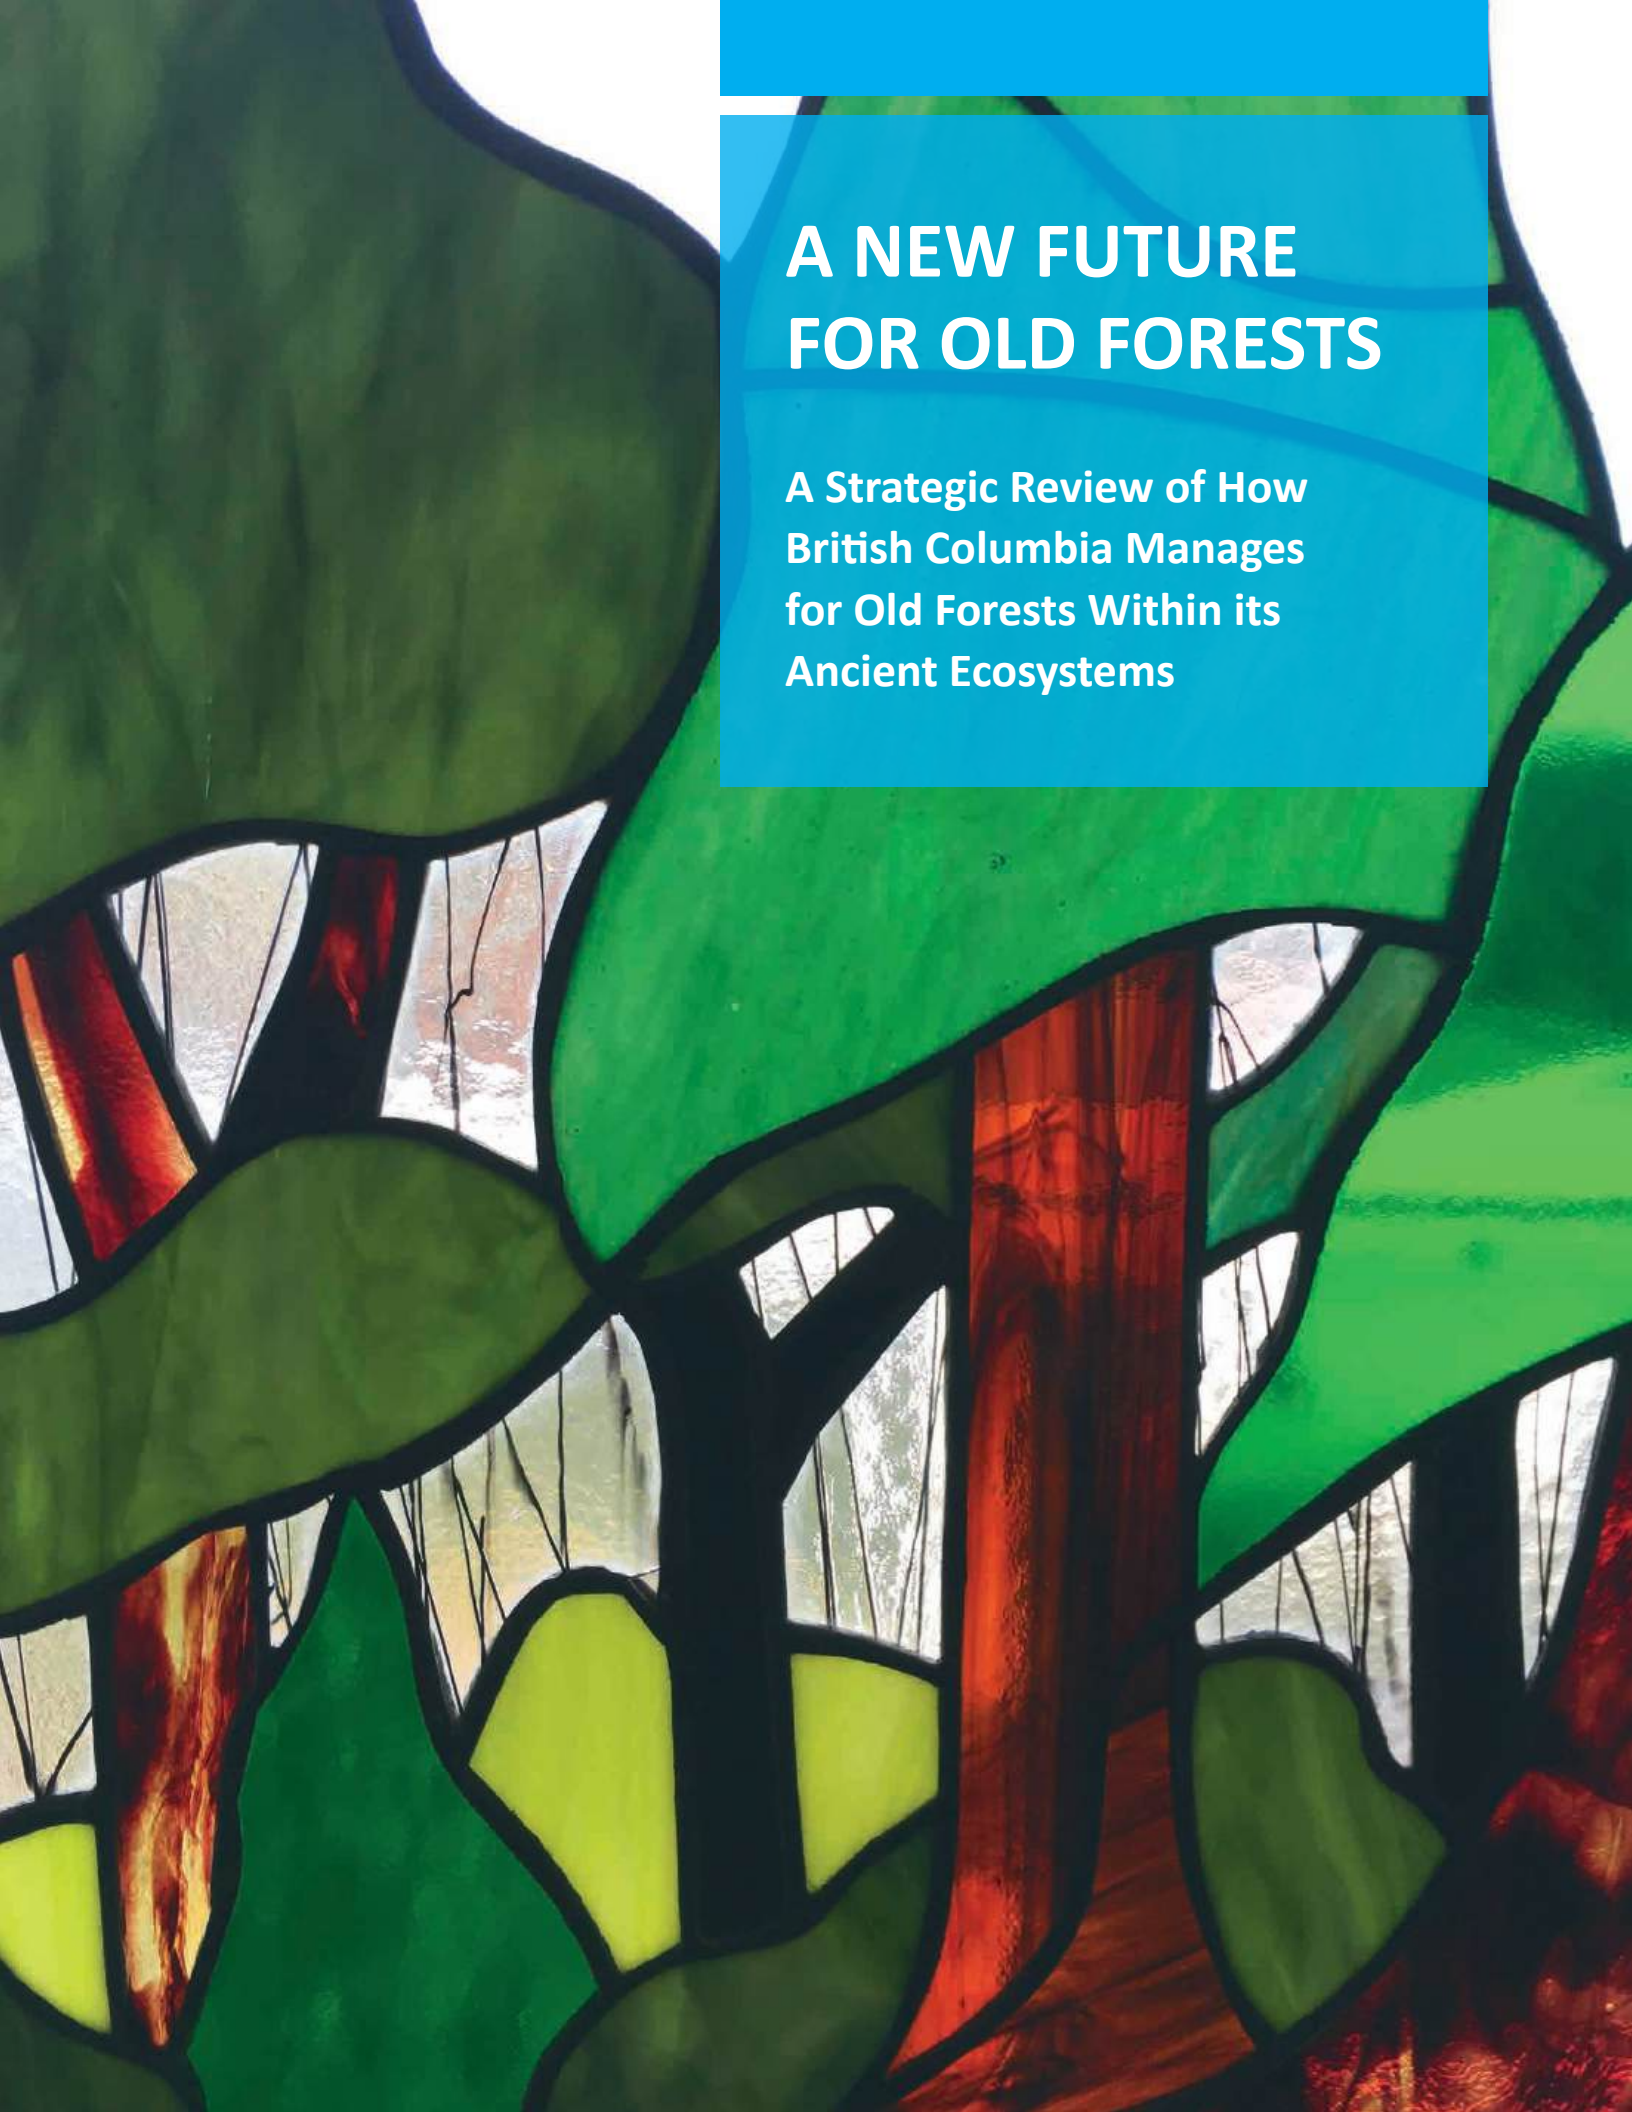
RECOMMENDATION

That the Board endorse the following resolution and direct staff to forward copies to the Premier of British Columbia, Members of the Legislative Assembly representing constituencies on Vancouver Island, the Capital Regional District Board, municipalities in the Capital Region, and the Association of Vancouver Island and Coastal Communities, requesting favourable consideration:

> *Resolution: Partnerships to Protect Fairy Creek and Other At-Risk Old-Growth Forests on Vancouver Island*
>
> WHEREAS Ancient high productivity old-growth ecosystems are globally one of the most valuable climate mitigation and resiliency assets in terms of carbon storage, sequestration, protection against wildfire, storage of water and preservation of biological diversity;
>
> AND WHEREAS Less than 3% of the original high productivity (big tree) old-growth forests in British Columbia remain standing, and of this residual land base, 75% is slated to be eliminated through industrial logging operations;

AND WHEREAS Alternatives exist to increase protection of biological diversity and employment, through the immediate and just transition to sustainable management of second-growth forests with expanded value-added processing and manufacturing;

THEREFORE BE IT RESOLVED THAT the Capital Regional District expresses its willingness to work with the Pacheedaht First Nation, the Government of British Columbia and other entities to protect Fairy Creek and other at-risk old-growth forests on southern Vancouver Island, including consideration of establishing Indigenous Protected and Conserved Areas;



AND BE IT FURTHER RESOLVED THAT the Capital Regional District calls on the Government of British Columbia to defer logging in high-productivity old-growth forests on Vancouver Island, as recommended by the Old Growth Strategic Review, until the panel's 14 recommendations have been implemented;

AND BE IT FURTHER RESOLVED THAT the Capital Regional District calls on the Government of British Columbia to allocate funding to enact deferrals in an economically just manner, in the full spirit of reconciliation and to support the economic transition of affected First Nations and non-First Nation workers, communities and companies from unsustainable old-growth logging toward the development of long-term sustainable local economies.

Submitted by:	Director Ben Isitt, Victoria

A NEW FUTURE FOR OLD FORESTS

A Strategic Review of How British Columbia Manages for Old Forests Within its Ancient Ecosystems

Old Growth Review Panel (2020)

April 30, 2020

Honourable Doug Donaldson
Minister of Forests, Lands,
Natural Resource Operations
and Rural Development
Room 248 Parliament Buildings
Victoria, BC V8V 1X4

Dear Minister,

We are pleased to submit this report detailing the results of our independent strategic review of old growth forest management in British Columbia. We have been honoured to co-chair this work, and to have had the opportunity to engage with and hear from British Columbians directly about how they value old forests, and how they believe they should be managed.

In addition to scientific studies and data, people shared their personal observations, perspectives, and ideas about what needs to be done. In many cases, their information and ideas were about broader land use policies, or sometimes they focused on how to manage a specific plot of land. We particularly appreciated the constructive approach taken by nearly every participant in the dialogue, and the common sentiment that we need to find better ways to manage old forests for a broad spectrum of benefits and reasons.

Our recommendations are shaped by a recognition that society is undergoing a paradigm shift in its relationship with the environment, and the way we manage our old forests needs to adapt accordingly. In the government's upcoming deliberations about how to implement our recommendations, we encourage you to engage with Indigenous leaders and organizations from the outset, and to involve local communities and stakeholders throughout the process.

We also encourage you to consider our recommendations as a whole. Had previous old forest strategies and recommendations been fully implemented, we would likely not be facing the challenges around old growth to the extent we are today, i.e., high risk to loss of biodiversity in many ecosystems, risk to potential economic benefits due to uncertainty and conflict, and widespread lack of confidence in the system of managing forests.

We would finally like to thank you and your government for putting your trust in us to carry out this review. We have done our best to capture the passion and many good suggestions that were provided in the hopes that the results of our deliberations will help you as your government determines the future management of old forests in British Columbia.

Al Gorley, RPF
Co-Chair

Garry Merkel, RPF
Co-Chair

ACKNOWLEDGEMENTS

Many people care about appropriately conserving and managing British Columbia's old forest ecosystems. We spoke directly with nearly 800 people and heard from thousands more through our survey, written submissions and emails. We thank everyone for sharing their knowledge and opinions. Viewpoints were often expressed with passion and a sincere interest in old forests and land stewardship. In addition to scientific studies and data, people shared their personal observations, perspectives, and ideas about what needs to be done. In many cases, the information and good ideas we received were about broader land use policies, or sometimes they focused on how to manage a specific plot of land. We particularly appreciated the constructive approach taken by nearly every participant in the dialogue, and the common sentiment that we need to find better ways to manage old forests for a broad spectrum of benefits and reasons.

The written input we received has been provided to the provincial government, with the survey results, a specially commissioned technical report, and a summary of the written submissions is also provided in a What We Heard report. Please note that original versions of the written submissions we received are available on the Province's Old Growth Strategic Review website. This report does not cite every comment or idea we received, but we have attempted to bring together the essence of what we learned in our recommendations and implementation suggestions.

As many of you reminded us, it is important to recognize that old forests are more than old or big trees. They are a product of ancient and unique ecosystems, and their characteristics vary greatly across the province. They can only be effectively managed in the context of broader public priorities, including the interests of current and future generations.

We would also like to thank the people who directly supported our work on this endeavour:

- Project management: Steve Kachanoski (BC Ministry of Forests, Lands, Natural Resource Operations and Rural Development)
- Logistics and record keeping: Sacha Chin and Trevor Pancoust (Pace Group Communications)
- Report preparation and editing: Greg Descantes (Pace Group Communications)
- Report graphic design: Myron Advertising + Design
- Survey design and results Elevate Consulting

Al Gorley and Garry Merkel

FOREWORD

Almost three decades ago, over a hundred people from various walks of life, including government, worked for 18 months to find consensus on *An Old Growth Strategy for British Columbia* (B.C. Ministry of Forests, May 1992): In that report the development team said:

> *"Members of the public, public interest groups, professional resource managers and representatives of industry have expressed increasing concern about management of old growth forests in British Columbia. Not only does the forest industry depend heavily on old growth for its current wood supply, but many new demands are being placed on the remaining old growth to satisfy a broad range of forest values.* ***In parts of the province, meanwhile, opportunities to reserve representative samples of old growth are dwindling rapidly*** *(emphasis added). These pressures are leading to increased instances of conflict among supporters of competing land uses."*

Although many subsequent measures were taken under the auspices of land-use planning and the forest practices code (some of which carried forward to the current legislation), many critical aspects of the strategy laid out in that report were either discarded or only partly implemented. Had that strategy been fully implemented, we would likely not be facing the challenges around old growth to the extent we are today:

- High risk to loss of biodiversity in many ecosystems.
- Risk to potential economic benefits due to uncertainty and conflict.
- Widespread lack of confidence in the system of managing forests.

While some of the immediate old forest issues we face can be addressed within the existing policy framework, continuing to apply the approaches that brought us to this point will not provide a sustainable solution. Our underlying assumption is that the government feels it is in the public interest to conserve long-term ecosystem health by maintaining forest biodiversity, so this priority will therefore be the foundational goal of any new strategy. We also assume that a new strategy and supporting policies and programs will be developed through dialogue with Indigenous governments, communities, and stakeholders in a manner that reflects the ecological, historical, and socio-economic uniqueness of each region.

Many of the people we heard from during our engagement process expressed optimism for a positive change to managing old forests, however we also heard a considerable amount of skepticism. We frequently heard about examples where current and past governments were perceived as having not followed through on initiatives or recommendations, including: full implementation of the previous Old Growth Strategy (1992); monitoring and updating land-use plans; reviewing, monitoring and updating biodiversity guidance; and implementing the recommendations of the Forest Practices Board (2012) on old growth management, and the Auditor General's (2013) report on biodiversity, to name just a few.

Therefore, we have suggested that if the government accepts our recommendations, it develop a formal implementation plan to accompany its public response. We advise that this be developed in collaboration with Indigenous governments, and in consultation with many others. We hope this approach provides an avenue to simultaneously build good policy and practices, a stable timber industry as well as public trust.

11. Inventory and Old Forest Classification 62
12. Innovative Silviculture Systems 64

Orderly Transition 66
13. Transition Planning at the Provincial and Local Levels 66
14. Transition Support for Communities 68

IN CLOSING 70

DEFINITIONS

Aspatial – Used to describe targets set for the amount of old forest to be retained within a management area as a whole, but not at a specifically define location.

Biodiversity Conservation – To maintain ecosystem, species and genetic diversity, and the processes that shape them, in the face of human development.

Climax condition or climax vegetation communities – A forest community of plants, animals, and fungi which, through the process of ecological succession in an area over time, have reached a state where they are subject to very little overall change.

Forest Stewardship Plan – A plan which guides forest operations for a timber tenure required under the *Forest and Range Practices Act* which is prepared by a forest licensee and approved by government.

Land Use Plans – Plans sanctioned by the provincial government, including those arising from the Commission of Resources and the Environment (CORE), Land and Resource Management Plans (LRMPs), and those developed through government-to-government processes such as for the Great Bear Rainforest and Haida Gwaii.

Legal / Non-legal OGMA – Individual Old Growth Management Areas that are either legally established or are not legally established but still identified in the planning process.

Natural range of variability – Describes the disturbance processes and ecosystem variability that these disturbances create, typically defined by the period before European settlement.

Old growth – A generic term to describe forests with old trees. In British Columbia, for management purposes, this is usually described according to the age of the trees (usually 250+ years on the coast and 140+ years in the interior).

Primary forest – Forests of native tree species, where there are no clearly visible indications of human activities and the ecological processes are not significantly disturbed.

Second growth forest – Forests regenerated on native forests that were cleared by natural or human causes.

Seral stage - An intermediate stage found in ecological succession in an ecosystem advancing towards its climax community. In many cases more than one seral stage evolves until climax conditions are attained.

Site Index – An indicator of site productivity described by the height that a stand of trees reach in a given time, e.g., SI_{50} means the height at 50 years.

Site series – A finer stratification of a biogeoclimatic sub-zone based on soil moisture and nutrients.

Spatial vs Aspatial – OGMAs that are identified spatially on maps (spatial) or are tracked in overall statistics but not specifically identified on a map (aspatial).

ACRONYMS

AAC – Allowable Annual Cut: The number of cubic meters that are allowed for harvest each year in a given area.

BEC – Biogeoclimatic Ecological Classification: A system of classification that categorizes the landscape into zones, each with its own with unique biological, geological and climatic properties.

CORE – Commission on Resources and Environment: A government-appointed commission that was in place from 1992-1996 and lead a variety of land initiatives including various regional land use plans.

ENGO – Environmental Non-Government Organization

FRPA – Forest and Range Practises Act: Legislation (2002) that regulates forest practises in British Columbia.

FSP – Forest Stewardship Plan

LRMP – Land and Resource Management Plan: A local land use plan that engages a number of local stakeholders in the preparation and ongoing monitoring and updates to that plan.

NGO – Non-Government Organization

NRV – Natural Range of Variability

OGMA – Old Growth Management Area: An area that is set aside and specially managed for old forest values.

LU – Landscape Unit: The base area for operational forest planning.

LUP – Land Use Plan

SI – Site Index

THLB – Timber Harvesting Land Base: The area that is operationally feasible to be accessed for timber harvesting.

TSA – Timber Supply Area: An administrative area that is used to set the AAC.

TSR – Timber Supply Review: The process for establishing the AAC in a TSA.

VQO – Visual Quality Objective: A mechanism for protecting the visual quality of a forested landscape.

TERMS OF REFERENCE AND PROCESS

On July 17, 2019, the Government of British Columbia announced that we, Al Gorley and Garry Merkel, would be appointed as an independent panel to undertake a province-wide Old Growth Strategic Review and provide a report to the Minister of Forests, Lands, Natural Resource Operations and Rural Development by April 30, 2020. The purpose is to inform the development of broad public policy regarding old growth forests. The government committed to releasing the report to the public within six months of us submitting it.

In British Columbia, the term "old growth" is officially defined by the age of trees in a forest using specific thresholds (often over 250 years on the coast and 140 years in the Interior). However, we did not limit ourselves to that timber-based definition because it would not have adequately captured the many values, interests and circumstances surrounding conservation and management of old forests.

We were asked to examine the subject from a variety of perspectives, including employment, economic, social, cultural, environmental and climate change, and to consider the interplay between them. To ensure we were aware of these perspectives, we undertook a four-month process of engagement which was substantially completed on January 31, 2020. We did not characterize our outreach as "consultation" because that will be the job of government after it receives our recommendations. Our aim was to learn as much as we could from a wide spectrum of people throughout the province so that we could hopefully make as fulsome a set of recommendations as possible. We also wanted to make sure every British Columbian had an opportunity to express their views.

Without limiting who we heard from, our commitment was to ensure we connected with:

- Indigenous governments and communities
- Local governments and communities
- The forest industry
- The tourism and recreation industries
- Environmental non-government organizations
- Professional associations
- Professionals, academics, and other experts
- Forest and resource stewardship organizations
- Stakeholder groups
- Members of the public

Engagement Techniques	
In-person, teleconference, and videoconference	We participated in over 200 meetings in 45 communities with close to 800 people. To ensure we received input from a wide variety of perspectives, we reached out directly to some groups and individuals, and through our Province of BC website invited everyone interested to request a meeting. Due to the time available, we were unable to accommodate all meeting requests. We kept informal notes of these meetings to help us write this report, but they will not be published. A list of in-person meeting locations can be found in our *What We Heard* report.
Written submissions	We invited individuals and organizations to make formal written submissions. We received more than 300 submissions along with more than 400 published articles, scientific papers, and reports. With a few exceptions where confidentiality was requested, we have asked that these submissions be accessible on the government's website. A synopsis of the written submissions is available in our *What We Heard* report.
Survey responses and emails	We encouraged people to complete our on-line survey, which was open for just over three months, or to send us an email. We received 18,523 survey responses, and approximately 9,000 emails to our electronic mailbox. The results of the survey are summarized and available with this report. The original submissions are also available on the government's website.
Technical and scientific briefings	We received an initial technical briefing from a group of over 30 government staff to ensure we were informed about the status of current forest management processes and initiatives relevant to our task. Several follow-up briefings were also held to address specific information requirements. We also commissioned a report from the Department of Forest Resources Management at the University of British Columbia to tell us how other jurisdictions manage old forests and what we can learn from them. That document is available in the What We Heard report.

The variety and number of contributors exceeded our expectations. We heard from and met with elementary school children, high-school and college students, leading researchers, small and large business from all areas of the timber and non-timber forest sector, practising and retired professionals, elders, parents and grandparents, forest and service sector workers, environmental advocates, self-described average citizens, government employees, and political leaders to name a few. Many people talked about the broader system for managing old forests, whereas others offered up specific local examples to explain their point of view.

Executive Summary

Grizzly Den Trail — High-elevation forest east of Prince George
Photo by Al Gorley

Old forests, especially those with very large trees, are the product of ancient ecosystems, icons of British Columbia's landscape, and a key aspect of the province's unique identity. In addition to their intrinsic value, the timber they provide is important to the provincial economy, and a primary source of income in many communities. These same forests anchor ecosystems that are critical to the wellbeing of many species of plants and animals, including people, now and in the future. The conditions that exist in many of these forests and ecosystems are also simply non-renewable in any reasonable time frame.

Facing diminishing available timber supplies, ecosystems at risk of biodiversity loss in several areas, and significant public concern, the Government of British Columbia announced that an independent panel (Al Gorley and Garry Merkel) would carry out a province-wide Old Growth Strategic Review to inform the development of new management policies and strategies.

In order to understand the range of perspectives (employment, economic, social, cultural, environmental, climate change and more) and consider the interplay between them, we undertook a four-month engagement process to hear from as wide a spectrum of people and organizations as possible throughout BC. This was achieved through a combination of meetings, written submissions, and an online survey. The review looked beyond the timber-based definition of "old growth" so we could adequately capture the many values, interests and circumstances surrounding the conservation and management of old forests. This is one of three reports, and contains a situation overview, our recommendations, and implementation advice. There are two companion documents: *A New Future for Old Forests: Summary Report and Old Growth Strategic Review: What We Heard.* All three reports and the written submissions we received are posted on the Province's Old Growth Strategic Review website.

Our strategic review of the management of old forests led us to conclude that despite the good intentions and efforts of many people, including government personnel associated with forest management development and implementation, the overall system of forest management has not supported the effective implementation or achievement of the stated and legislated public objectives for old forests. This has not come about because of any one group or decision, but through a pattern of many choices made over several decades, within an outdated paradigm.

While our report cannot possibly reflect the full breadth and depth of the information provided to us, our key observations are:

1. Ecosystems with large, old trees are important to British Columbians for many different reasons.
2. Retaining and managing forests of old trees is a key strategy for maintaining biological diversity and cannot be done in isolation.
3. The extent and condition of ecosystems with old trees, relative to natural condition, is highly variable across the province.
4. The economy is heavily dependent on trees harvested from primary forests of old trees.
5. The current system for retaining old forest and managing their attributes has issues arising from incomplete implementation of previous strategies, social trade-offs and a changing landscape.
6. There are opportunities to create greater certainty for forest-dependent communities by formally zoning timber harvesting areas; generating more sustainable and longer-term non-timber economic benefits from old forests; and developing innovative silviculture systems.
7. Climate change will become an increasingly bigger factor in choices about forest management.
8. Information around the types, condition and current status of old forests and information provided to the public about old forests is highly variable across the province.
9. There is widespread support for the provincial government and Indigenous governments to collaboratively create updated strategies and policies for the management of old forests.

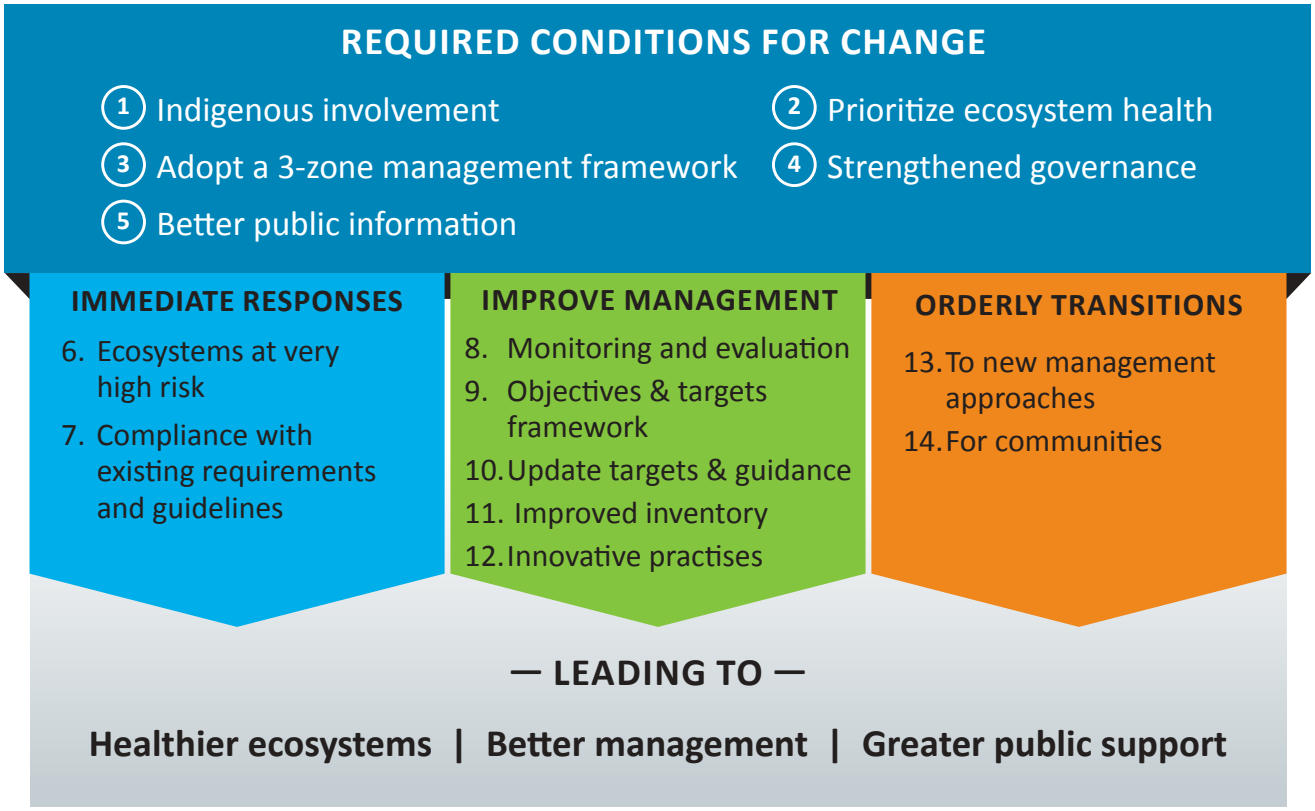
There is a near-unanimous agreement that managing the health of old ecosystems, especially those with old trees provides many benefits. We believe the fundamentals to success for the Province's forest management system are ecosystem health, effective forest management and public support. Our review identified weaknesses in each of these areas. To adequately manage and protect BC's old forest biodiversity, attributes, values and benefits for future generations, these weaknesses will have to be addressed. Our recommendations are shaped by that understanding, and the recognition that society is undergoing a paradigm shift in its relationship and interaction with the environment, and the way we manage our old forests needs to adapt accordingly.

Recommendations

On conditions required for change:

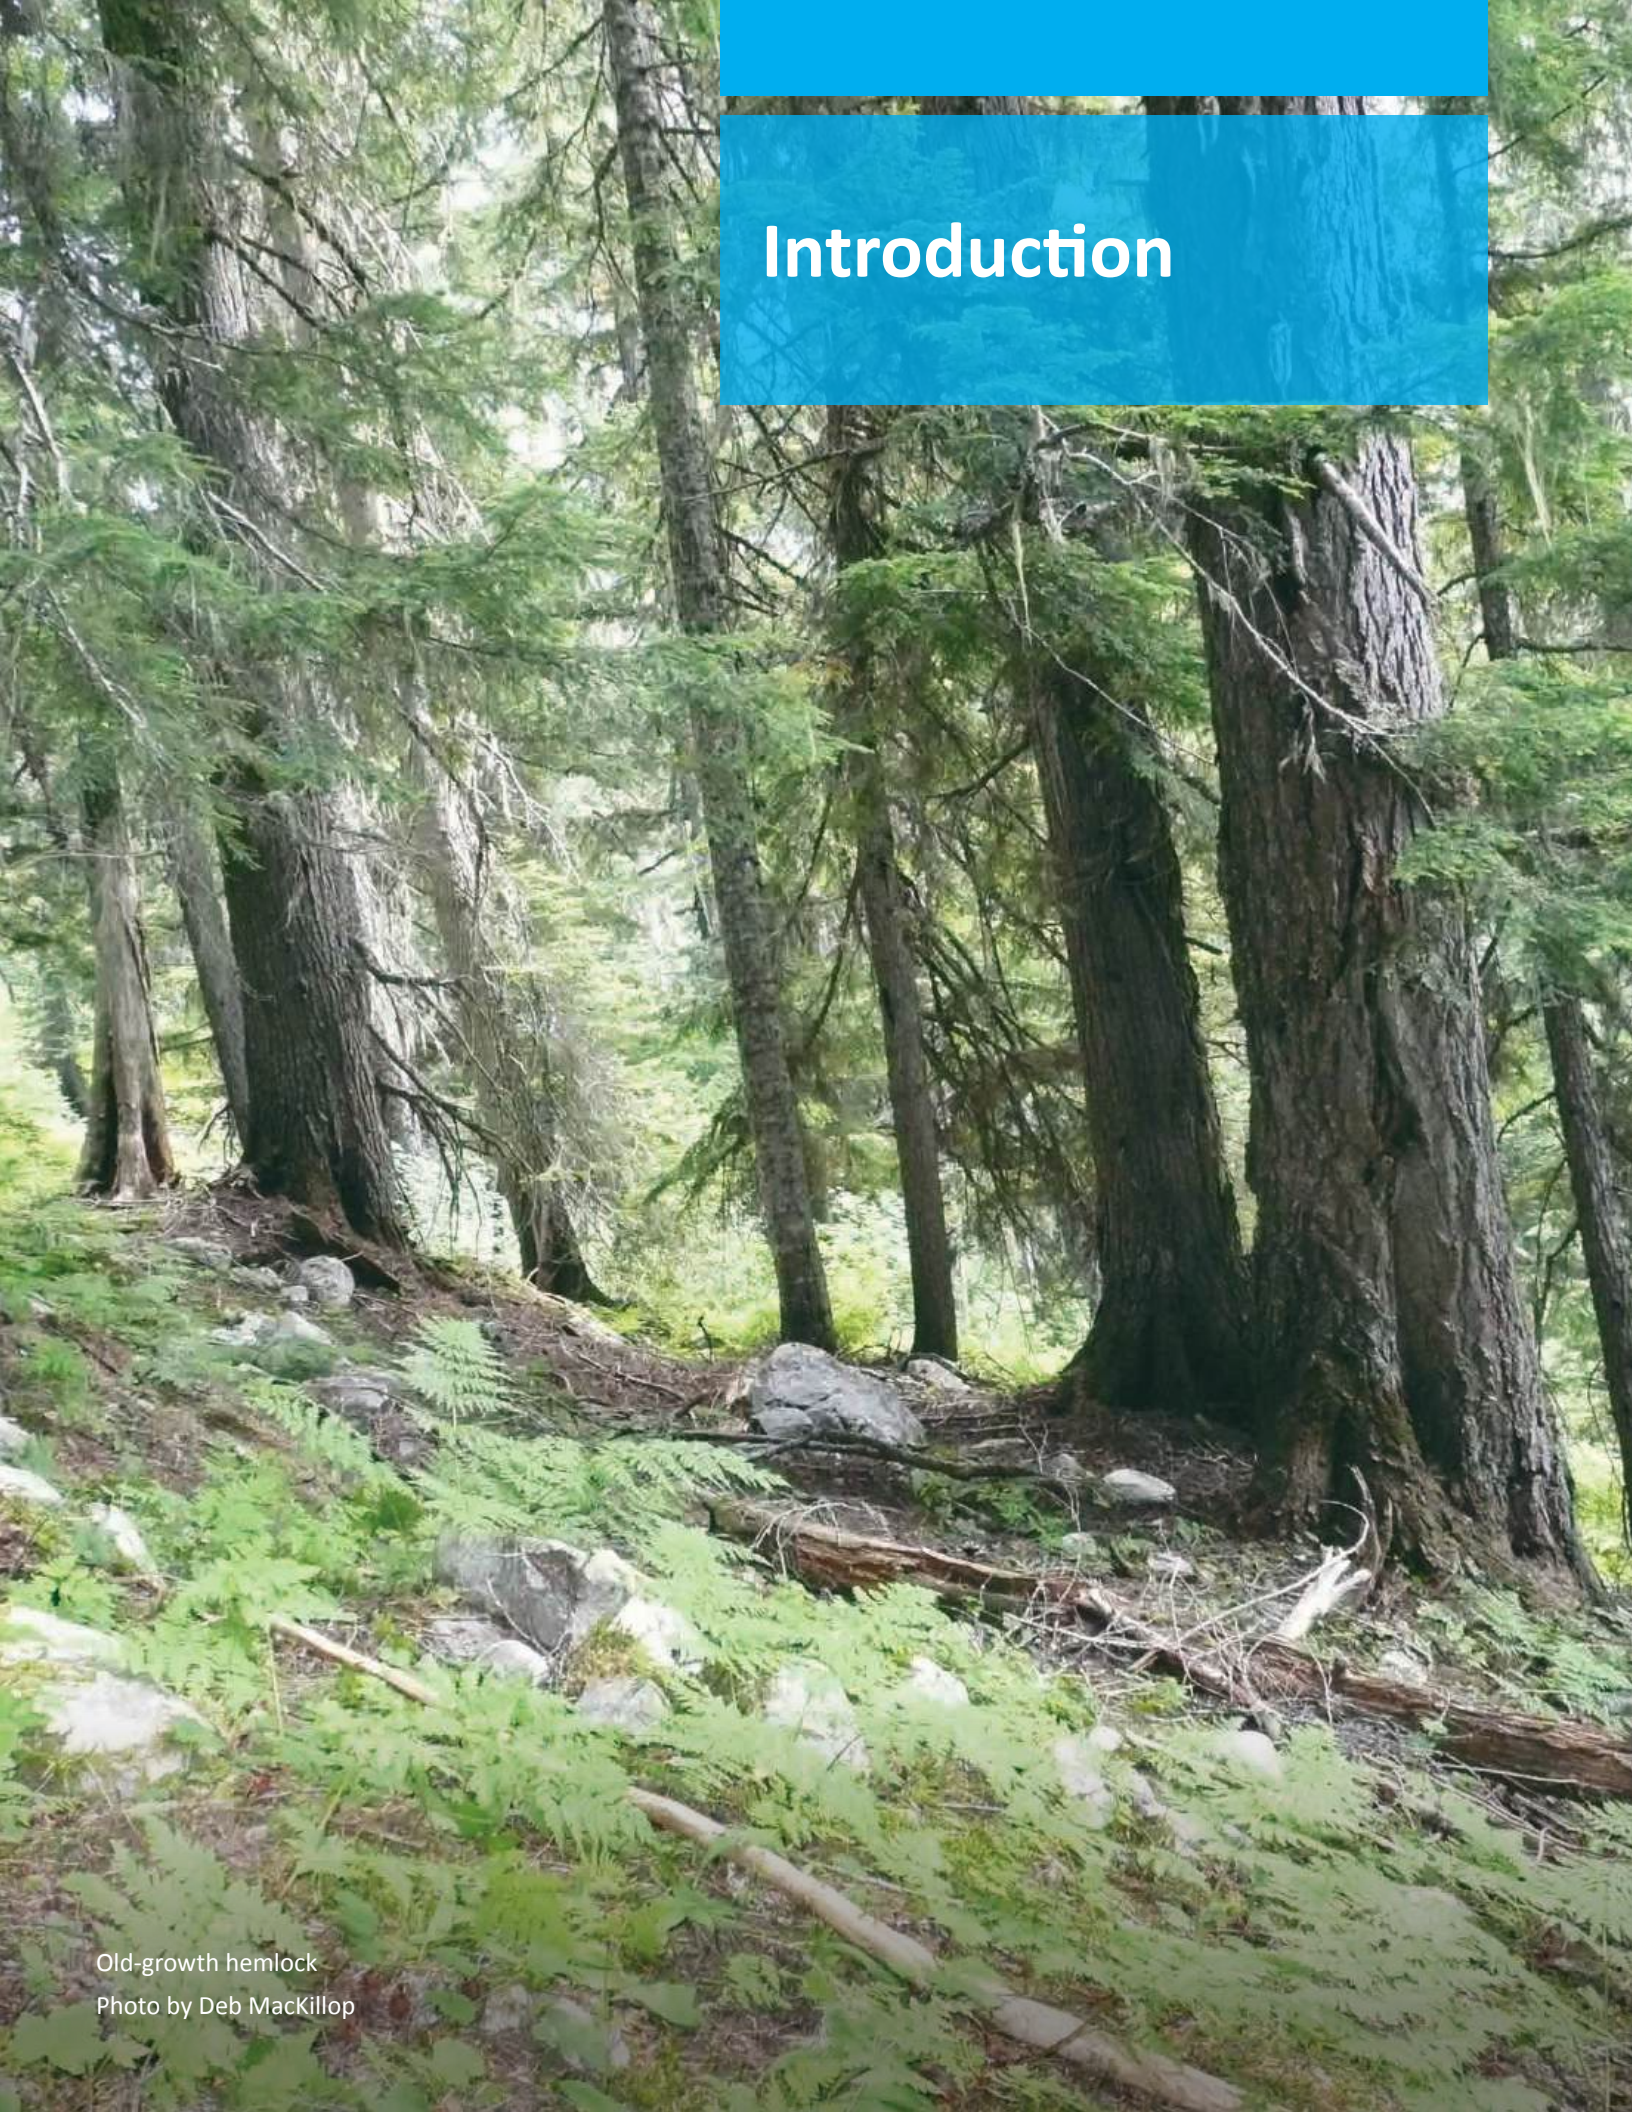
1. Engage the full involvement of Indigenous leaders and organizations to review this report and any subsequent policy or strategy development and implementation.
2. Declare conservation of ecosystem health and biodiversity of British Columbia's forests as an overarching priority and enact legislation that legally establishes this priority for all sectors.
3. Adopt a three-zone forest management framework to guide forest planning and decision-making.
4. Adopt a more inclusive and stable governance model that gives local communities and stakeholders a greater role in forest management decisions that affect them.
5. Provide the public with timely and objective information about forest conditions and trends.

For immediate response:



6. Until a new strategy is implemented, defer development in old forests where ecosystems are at very high and near-term risk of irreversible biodiversity loss.
7. Bring management of old forests into compliance with existing provincial targets and guidelines for maintaining biological diversity.

For improving management:



8. Establish and fund a more robust monitoring and evaluation system for updating management of old forests.
9. Establish a standardized system and guidance that integrates provincial goals and priorities to local objectives and targets.
10. Update the targets for retention and management of old and ancient forest.
11. Improve the mapping and classification of old forests to recognize multiple values.
12. Create a silviculture innovation program aimed at developing harvesting alternatives to clearcutting that maintain old forest values.

For orderly transitions:

13. Once developed, implement the new policies and strategies for for the management of old forests through mandatory provincial and local transition plans that define, schedule and monitor the process.
14. Support forest sector workers and communities as they adapt to changes resulting from a new forest management system.

Introduction

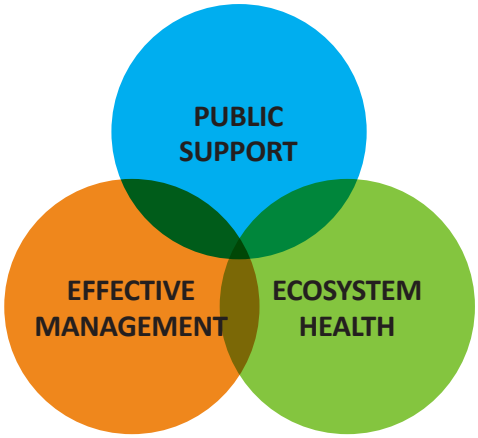
Photo by Deb MacKillop

INTRODUCTION

Old forests, especially those with very large trees, are the product of ancient ecosystems, an icon of British Columbia's landscape, and a key aspect of the province's unique identity. In addition to their intrinsic value, the timber they provide is an economic mainstay, and was once the province's main economic driver. The same forests anchor ecosystems that are critical to the wellbeing of many species of plants and animals, including people, now and in the future.

In recent years, the government has been under pressure to protect old forests from degradation by industrial development. At the same time, there is pressure to maintain viable resource industries at a scale that can compete in global markets. This has led to increasing tension and uncertainty about what will happen to both the forest and the industry. There have been large-scale public demonstrations demanding an end to logging "old growth" and others demanding the government protect jobs by protecting "the working forest" in the face of diminishing timber supplies. The challenge for government is further complicated by the tremendous diversity of the province. Not only are forest types different, but the history of development and economic dependence of communities on forestry varies vastly from one part of the province to another.

The purpose of this report is to inform the development of provincial policies and strategies regarding old forests. In British Columbia the term "old growth" is officially defined by the age of trees in a forest using specific thresholds (often over 250 years on the coast and 140 years in the interior). However, we have not limited ourselves to that definition because it would not have adequately captured the many values, interests and circumstances surrounding the conservation and management of old forests.



It is important to acknowledge that old forests do not exist in a vacuum. Effective management of old forests can only be properly addressed in the context of their role within the larger ecosystem, and as one component of the larger management system. While our review focussed on how we manage old forests, a significant number of people we heard from during our engagement process told us they have lost confidence in our broader forest management system. Many communities expressed strong concerns about the negative effects of current practices on their forests, ecosystems, water supplies, community safety and other forest-related businesses with little benefit in return. Others told us they are very frustrated because they think that too much harvestable timber is being set aside or made cost-prohibitive, leading to the loss of jobs and essential revenue to the community. Recognizing all these concerns, we feel that orientation of the broader forest management policy, as well as some specific interdependent components, also need to be addressed and we have identified them accordingly.

We received many submissions that identified threats to old forests and their values, and a sense of urgency was often expressed. We also received a number of submissions telling us that old forests are well managed and should be left to the professionals. While some of this is likely the result of different perspectives, interests and beliefs, it also depends a lot on location and scale. One notable observation is that very few groups or individuals fully trusted the information they see on forest management and the state of old forests, regardless of the source.

The panel believes that the fundamentals of success for the Province's forest management system are ecosystem health, effective forest management and public support. Not effectively addressing any one of these elements creates an almost certain risk of failure.

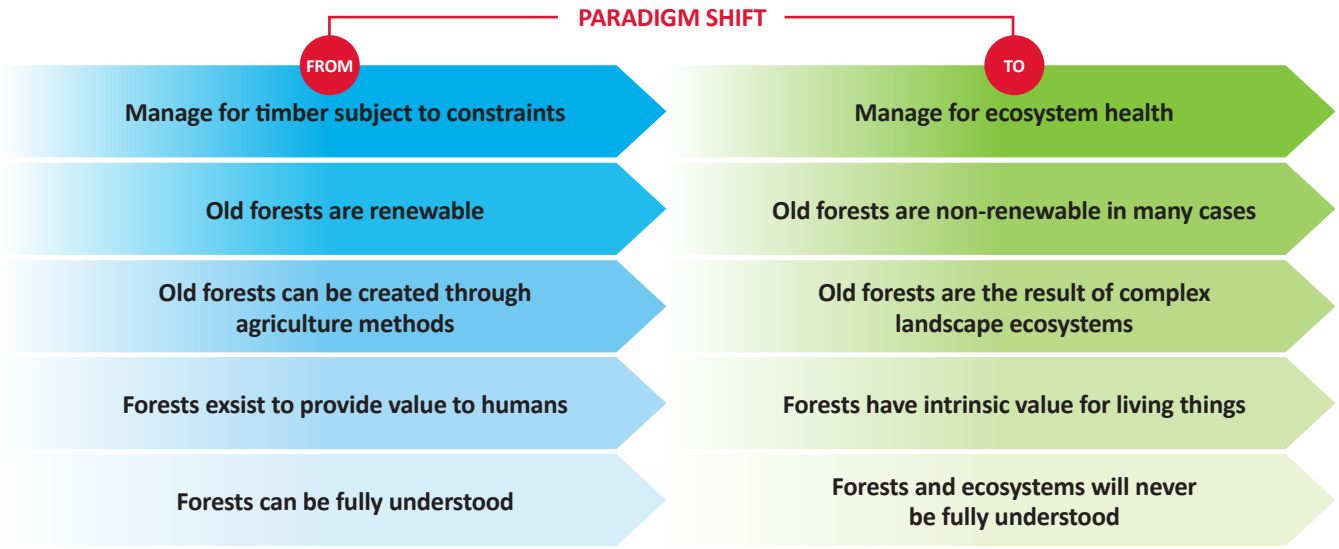
“If we take care of the land — the land will take care of us!”

A comment made to the Panel many times throughout the engagement process

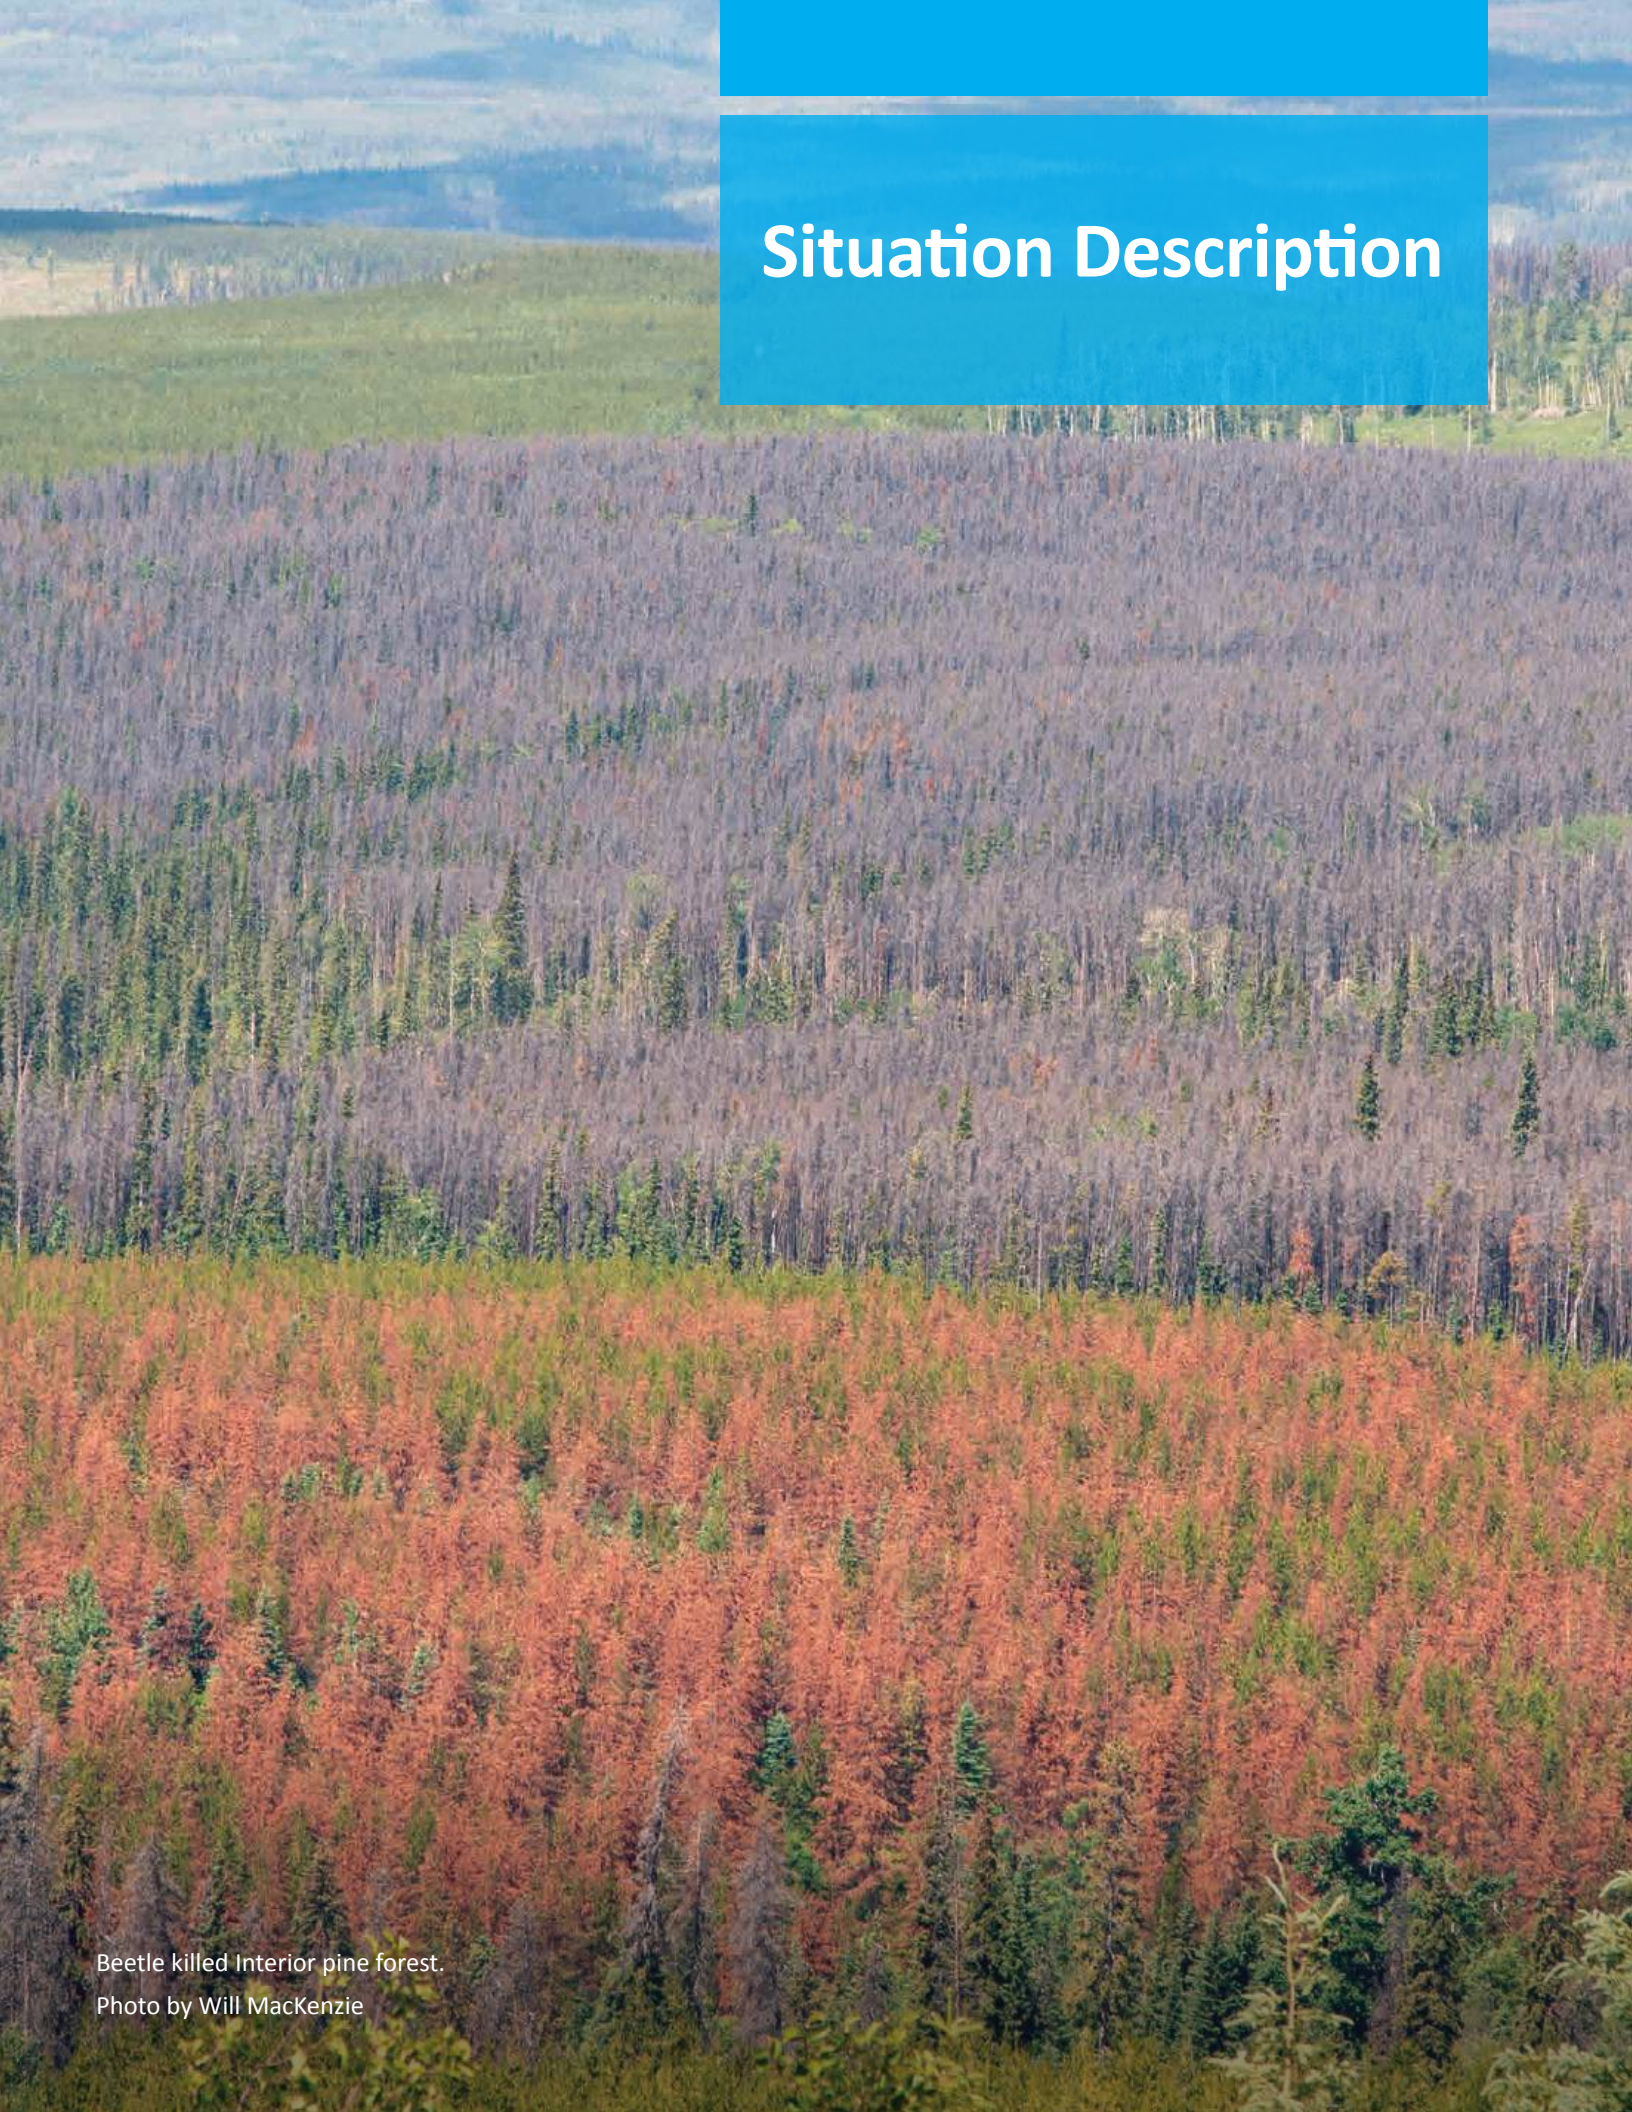
Ecosystem Health: Ecosystems provide a multitude of services essential to the health of all living things, including humans. Ecosystems are very complex and have many individual components which all have some interdependence at a local or landscape level. We will never fully understand ecosystems or how much they can be put under stress before they collapse. Science gives us some direction, but we need to continually improve our understanding and translate that understanding into practise while leaving room for error in the face of uncertainty.

Effective Management: An effective management system has clear and transparent publicly driven goals and objectives; programs and methods designed to achieve them; resources, authority, and management controls necessary to implement them; and monitoring of efficiency and effectiveness to adapt and improve over time.

Public Support: We believe that deep and meaningful public engagement and a highly informed public are important factors in gaining public support and associated forest management stability. The confidence and trust of the general public is the biggest determinant in how much freedom government and industry have to manage our forests. If the public feels that the system is not looking after their interests, the predictable response is increased mistrust and opposition to many activities carried out by that system, demands for increased participation and control over decision-making, along with large swings in support for political parties. These reactions are intensified when communities feel that values and conditions important to their survival are threatened — a theme that we heard from a wide range of individuals and groups.



Interior spruce - Boer Mountain near Burns Lake.
Photo by Sacha Chin



These fundamental requirements for success underly our conclusions and recommendations.

Many of the recommendations in this report are also shaped by our recognition that society is undergoing a paradigm shift, and public policy related to forest management will need to adapt accordingly:

1. BC's Indigenous communities will be key players as one of the most important participants in our future forest management system.
2. Moving to an effective management system for old forests will require a shift in its underlying assumptions. Many other countries are experiencing a similar shift, some proactively and some reactively, largely because of public pressure. Some aspects of this new paradigm are illustrated in the adjacent diagram.
3. There is no one-size-fits-all solution. A new system can establish updated standards, but the application of those standards will need to vary throughout the province depending on ecosystem type, existing and potential ecosystem impacts, local socio-economic conditions and other factors.
4. The full suite of proven scientific methods, e.g., reliable vetted information, targeted research, adaptive management, monitoring and effective technology transfer (research to practise), are essential foundational elements. Properly incorporated, these elements provide a known, reliable, and replicable foundations upon which to build.

Situation Description

Photo by Will MacKenzie

SITUATION DESCRIPTION

This section describes several of the major factors affecting management of old forests in British Columbia, as we have come to understand them. What we have written here cannot possibly reflect the full breadth and depth of the information provided to us, but we have attempted to capture the highlights. Additional detail can be found in our companion *What We Heard* document, and in the many written submissions and technical papers posted on the project website. We encourage individuals desiring a more complete understanding of the situation to access that material.

One of several interrelated government initiatives.

In undertaking this review, we quickly became aware of several other government initiatives that are in various stages of completion (See figure below). Many of these touch on some of the same general issues as our review, i.e., How do we create more effective systems to manage forest lands throughout the province, and how do we manage the social, economic and environmental transition to these new systems of land management? We attempted to gain a general familiarity with these and other related ongoing initiatives so as to avoid creating unnecessary confusion or inadvertently getting at cross purposes.

"Old growth" means many things.

The definitions used for forest inventories and planning are based on the age of the dominant trees in a forest ecosystem (often over 250 years on the coast and 140 years in the Interior). However, those definitions were of little relevance to most people outside the forestry sector, and often seen as too narrow by those within it.

In many ways, old growth is in the eye of the beholder. If we mean old forest, then we need to recognize that nearly all of British Columbia's forests (and a host of species and ecosystems services) have evolved within ecosystems that have been developing since glaciation, around 10,000 years ago, and although the trees die and regrow, most areas have continuously been occupied by forest. In other parts of the world, these would be called "ancient forests" regardless of the age of the trees. If we are talking simply about old trees, then a sub-alpine forest comprised of 200-year-old, 20-meter-tall hemlock or balsam is every bit as much old-growth as the giant spruce, cedar, and fir on coastal lowlands. The photos below illustrate a few types of old forests in British Columbia.

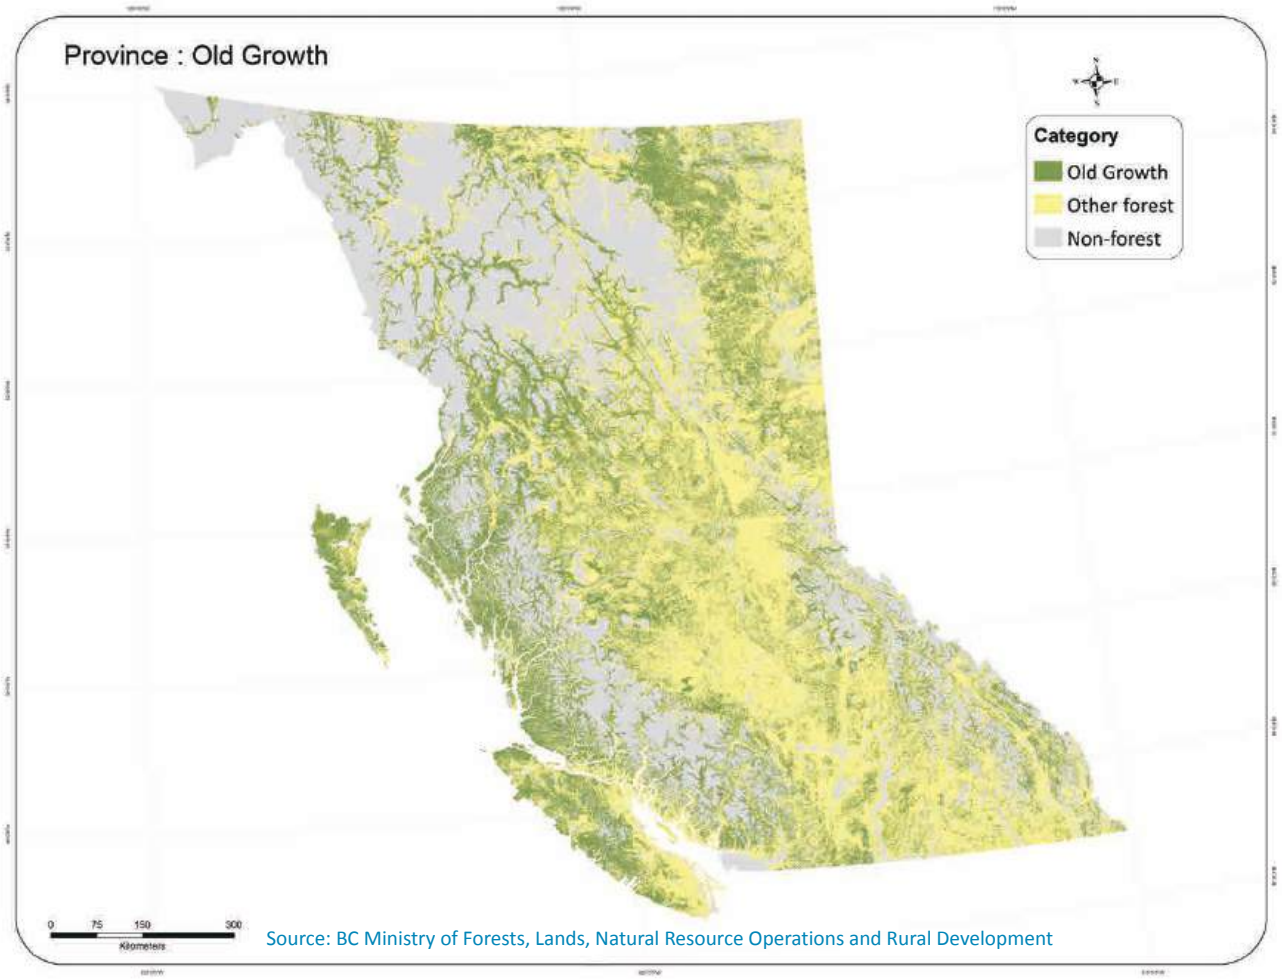
strategy for managing the risk to biological diversity from industrial development, particularly logging.

Although scientists and professionals have developed working definitions for old growth, often based on the relative age of the dominant tree species, or sometimes on physical characteristics and ecological function, no single approach has been universally applicable. For example, according to An Old Growth Strategy for British Columbia (B.C. Ministry of Forests, May 1992): "*Old growth forests are natural stands of old and young trees and their associated plants, animals, and ecological relationships which have remained essentially undisturbed by human activities".* The authors of that strategy recognized their definition required considerable refinement to reflect the diversity of the province's forests, a notion repeated by others in subsequent years. The issue may be best described by an article in the Journal of Forestry (2004), which said: *"An ecological understanding of old growth requires a multi-scale perspective, ranging from individual trees to regions. A consensus on a single general ecological definition of old growth will never be reached, but that should not preclude the development of specific definitions need by managers."*

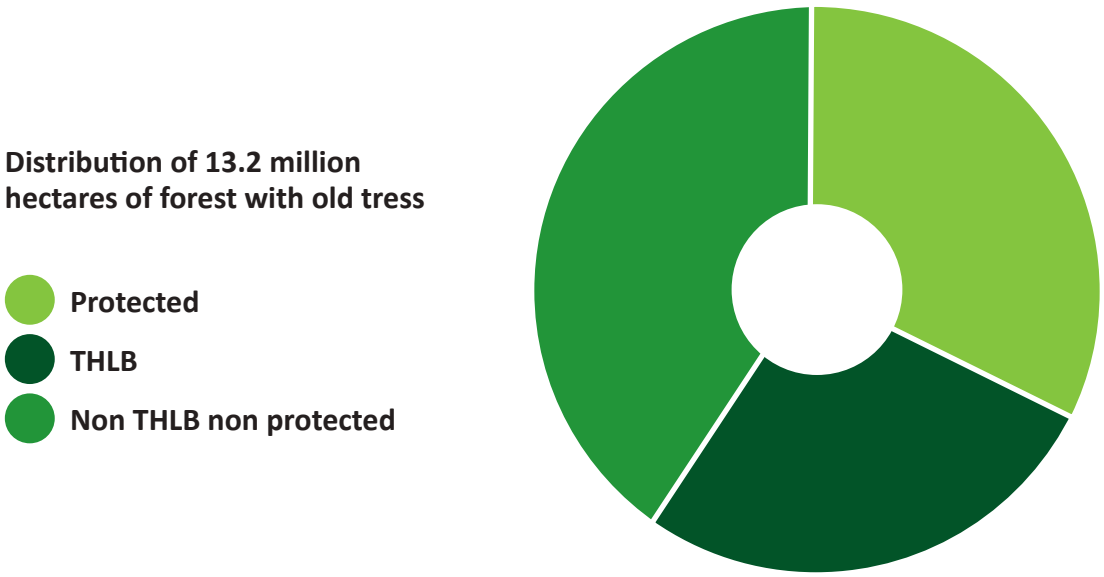


We heard from significant numbers of people who think of old growth as: exceptionally large trees worthy of travelling some distance to see; old or large trees near their home or school; accessible areas where they can enjoy a forest that doesn't have obvious evidence of human disturbance; forests that feel old; areas of mostly older dead and dying trees; and forests with big trees that can be made into high-value products. Others didn't differentiate by age or other characteristics specifically but were more interested in the ecosystem services mature forests provide, especially in relation to climate change, hydrology, and wildlife habitat. Many also made some reference to the value of old growth to conserving biological diversity. A common description was that it is original forest in its natural state, not altered by human activity. In our view, none of them are wrong. Through our recommendations we encourage more clarity in classifying and communicating about old forests, by being more specific about the management objectives and desirable attributes for a particular area of forest.

The amount of forest with old trees.

The total area of British Columbia is nearly 95 million hectares, of which 60% is forest. Based on the government's forest inventory definitions, about 23%, or 13.2 million hectares is "old growth".

Forests with “mature” trees, but not classified as old growth constitute another 46% or 26 million hectares.Except at a very broad scale, the overall provincial statistics are of only limited value because there are vast differences in the amount and character of forest ecosystems with old trees across regions and on individual landscapes (naturally and because of human disturbance). And since the province is so biologically, ecologically and climatically diverse, with many different ecological zones, this means the distribution and representation of various types of forest is very uneven. The map below provides an overview of where old trees exist in the province.



We have not attempted to include specific information about the amount, distribution, and quality of old forest at the regional or local level in this report, but our recommendations will encourage the government to proactively make more information publicly available at relevant scales.

About 4.5 million hectares, or 5% of the province is private land. Of that, approximately 818,000 hectares are in the Managed Forest Land Program. Although only a small portion of the total land area, this is important regionally, and is concentrated in the Kootenay area and southeastern Vancouver Island. Our review focused on public lands; but we heard various concerns that practices on private lands do influence adjacent public forest conservation and management objectives and are not integrated with the overall forest management system.

An important consideration, especially for managing risk to biological diversity, is how much of an area has old trees now relative to what would occur naturally — a proportion that varies by ecosystem and historical natural disturbance. Not all old forest is the same, and old does not necessarily mean big trees.

As much as 80% of the area of old forests consists of relatively small trees growing on lower productivity sites, such as Black Spruce bogs in the North, high elevation sub-alpine forests, or Cedar-Hemlock forests on the outer coast. Those forests remain in relatively great abundance, and are important ecologically, but they are not what many people typically envision as "old growth", and although they may be disturbed by some industrial activities such as mining or oil and gas development, many are not likely to be extensively logged in the foreseeable future. Less abundant are ecosystems that are more productive from a timber perspective and have not already been heavily logged.

Of the 13.2 million hectares of old forest, 33% (4.4 million ha) is protected and 67% (8.8million ha) is not. Protected means the old forest is in parks, ecological reserves, ungulate winter range no-harvest areas, private conservation lands, regional water supply, wildlife management areas, OGMAs (legal and non-legal) and retention VQOs. Of the old forest that is not protected, 38% is within the THLB, while 62% is not as it is assumed to be currently inoperable.

One of the challenges we found early in the engagement process was how information about these statistics is communicated. We consistently heard concerns about the information available to the public. The issues were not so much about data, which has become much more widely available in recent years, but about how it is interpreted and communicated, and by whom. We have seen numerous examples of information put into the public realm that is fact-based but lacking in context or explanation of assumptions or scale.

Many people said they felt the government is largely absent in the discussion about old forest management. This perception is a problem, because the void leads some to believe that the government is bending to corporate interests, while others fear the government will acquiesce to the demands of environmental advocacy groups. If there was unanimity in the comments we received, it was around the need for the provincial government to take a stronger leadership role in facilitating an informed discussion about what is in the best long-term interest of the public, with a strong emphasis on Indigenous communities. In the past, the Province published State of the Forest reports through the Chief Forester's office. The last such report was in 2010. On its website, the government does provide reports on environmental indicators, but not on forest conditions or on old forests specifically. The Forest Practices Board investigates and reports publicly on specific forest practices, but not on forest conditions.

British Columbians expressed a strong desire to participate in informed decisions about how old forests are managed. This was especially the case for those who will be most directly affected by changes to forest management strategies. We believe the public is not only looking for factual information, but also for objective analysis and context that explains what the collective statistics, indicators and trends are telling us.

Forests with old trees have many values

Forests with old and ancient trees contain unique combinations of attributes that grow from ecosystems that have formed over centuries or millennia. These attributes can rarely, if ever, be replicated in younger or compromised ecosystems, even if they contain old trees. It is also important to understand that the age and characteristics of old forests vary greatly between ecosystem types and therefore their descriptions and values are relative. In other words, a forest on the coast may have several species and many ages of trees, whereas drier Interior forests may have only one or two species and be relatively evenly aged. Of course, forest values go far beyond just the trees, as forests also contain other plants, insects and animals, many of which require old forest to survive.

Some of the many values found in forests with old and ancient trees are:

- Unique conditions and processes that are important to conservation of biodiversity;
- Unique species, many of which are still undiscovered;
- Banks of genetic material for future use or adaptation strategies;
- High value timber with qualities not found in younger forests;
- Resistance to fire;
- Interception and storage of water;
- High carbon storage and sequestration capacity;
- Botanical forest products, including medicinal, edible, decorative, and ceremonial plants;
- Fish and wildlife habitats, including essential attributes for nesting or denning, thermal protection and hiding from predators;
- Spiritual and cultural uses, including carvings, canoes, and ceremonial poles;
- Aesthetics such as resident viewing and tourism;
- Commercial and non-commercial recreation; and
- Knowing they are there for their own sake — intrinsic value.

Many of these values can be realized concurrently on the same landscape, or even in the same forest stand, but accessing them can also put them in conflict. The degree of risk depends on how much of the old forest is disturbed and what attributes remain and in what state.

Many people identified specific highly diverse and complex ecosystems that support very large, old trees, and have persisted in a relatively stable climax condition for centuries. These “ancient forests” are globally unique, rare, and contain species as yet undiscovered, and many of these ecosystems and old forests are simply non-renewable within any reasonable time frame . They promote protecting these areas from human disturbance to conserve a wide range of benefits, and particularly for their intrinsic value.

Economic Benefits.

Note that while we have provided examples of statistical information for the forestry and tourism sectors, we caution against direct comparisons as the information sources and their assumptions may vary. We also acknowledge that not all economic benefits are captured here, such as trapping, mushroom collecting, decorative plants, and others that are important sources of income for some individuals.

1. Timber harvesting

For over 100 years, the timber industry has been a central part of the provincial economy, exporting large quantities of lumber, pulp and other wood products to world markets, providing jobs in communities throughout British Columbia, and generating government revenue through stumpage fees and taxes. The industry depends heavily on cutting trees in old primary forests, and although its relative contribution to the overall provincial economy has declined in recent years, many communities, including an increasing number of Indigenous communities rely heavily on the jobs and revenue it generates.

According to statistics compiled in 2016 report for the Council of Forest Industries, harvesting of timber in British Columbia generates over 100,000 direct and indirect jobs, contributes $12.9 billion to provincial GDP, and generates over $2.5 billion to provincial tax revenues. Many of the jobs are spread across 140 forestry-dependent communities and urban centres, including Vancouver and the lower mainland.

According to Statistics Canada, forest product exports have made up 30% to 36% of B.C.'s commodity export value since the recession in 2009, and in 2018 was 32%. While service exports have been growing, commodities still make up the bulk of exports, making the forest sector an important source of foreign currency.

In BC, most of the industry is configured to harvest and manufacture existing primary old forest. There is a substantial interdependency between sub-sectors of the industry: harvesting; primary, secondary and tiertiary manufacturing; transportation; and services. There are also regional interdependencies, with fibre moving between geographic locations at different stages of processing. For example, logs may be harvested in one area, sawn into lumber in another, with the byproduct chips being shipped to a pulp mill somewhere else. Some of the lumber may be shipped to a different region altogether for further manufacture.

According to provincial government data, the non-lumber sector made up 46% of wood product manufacturing sales and more than 47% of wood manufacturing employment in 2018. The non-lumber industries include shingles and shakes, wood preservation, veneer, plywood and engineered wood products, millwork, container and pallet manufacturing, and other activities. The majority of non-lumber goods are consumed domestically, whereas the majority of lumber is exported (82% in 2018).

Concerns around log export and fibre utilization were raised in a number of outreach sessions. Several groups expressed frustration about logs being exported rather than used locally, valuable waste being left in the woods and the amount of old forest residue that is being burned because it is cheaper to burn it than use it. Some licensees and contractors told us that being forced to take poor quality timber, especially in isolated locations, would make their business uneconomical and cause them to shut down. We also heard from a few businesspeople that they could support a viable business if they could get access to these materials but are restricted by either the license holder or government regulations. We did not address this directly in this report however do note that it is an important matter with respect to continued social license.

2. Tourism and recreation

According to a report in 2017 by Destination British Columbia, tourism employs 137,00 people and contributes $9 billion to provincial GDP. Export revenue is reported to be $5.4 billion and provincial tax revenue $1.2 billion. The BC tourism industry is largely anchored in the "Super, Natural British Columbia" brand which invites visitors to enjoy activities in our wild and remote landscapes. While we have not seen province-wide data that states what portion of the economic impact of tourism and recreation is attributable to old forests, and perhaps it isn't possible to know, we know old forests play a key role in tourism. Some individual tourism businesses have done studies on the economic value of old forests for tourism compared to timber in their specific area of operation. We are also aware of a recent (unpublished) study done in the area near Port Renfrew that found the net economic benefit is projected to be higher when the trees are left standing for tourism, than if they are logged.

Information provided by the Adventure Tourism Coalition states that adventure tourism directly or indirectly supports 32,000 families and generated $3.2 billion in visitor spending in 2018. A 2014 analysis of coastal tourism opportunities provides some insight to the dependence of the sector on forests; 78% of surveyed marine tourism operators indicated that their business is "somewhat or very dependent on the natural environment," and 37% cited viewscapes as the primary motivator for nearly all their clients.

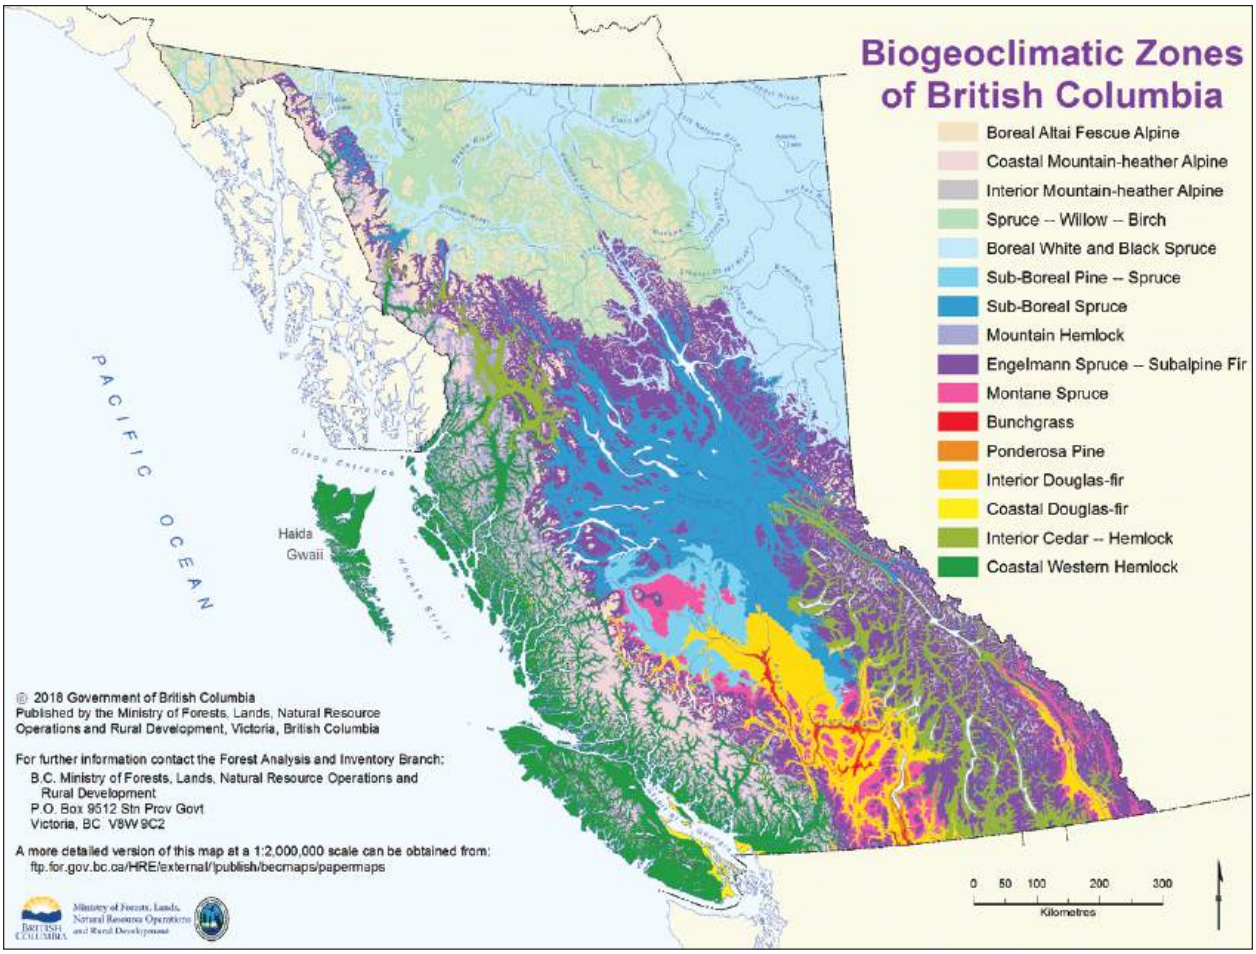
There are many other examples of economic interdependence between tourism activities and old or mature forests, including:

- Hunting, fishing, and guiding
- Wildlife viewing
- Mountain biking
- Backcountry hiking, skiing, and snowmobiling
- Canoeing, camping, and horseback tours
- Touring

Perhaps the most obvious examples of tourism dependence on old forests are those activities centred around unusually large trees reasonably close to public access. The best known of these on the coast is probably Cathedral Grove in McMillan Provincial Park near Port Alberni, or in the Interior, the Ancient Forest Recreation Trail east of Prince George. Public and visitor interest in seeing and experiencing these and other big-tree forests is increasing and is being promoted.

3. Natural infrastructure.

Not an entirely new concept to many communities, this is an emerging area of economics and we feel it bears mention, particularly because of climate change. According to the World Resources Institute: *"Natural ecosystems like forests and wetlands provide essential services to water utilities, businesses, and communities — from water flow regulation and flood control to water purification and water temperature regulation. To ensure these ecosystem functions and associated benefits continue, communities can strategically secure networks of natural lands, working landscapes, and other open spaces as 'natural infrastructure.' While concrete-and-steel built infrastructure will continue to play a critical role in water storage and treatment, investing in natural infrastructure can reduce or avoid costs and enhance water services and security as part of an integrated system to cost-effectively deliver safe drinking water."* Some communities are already starting to incorporate the concept of natural infrastructure in community plans.

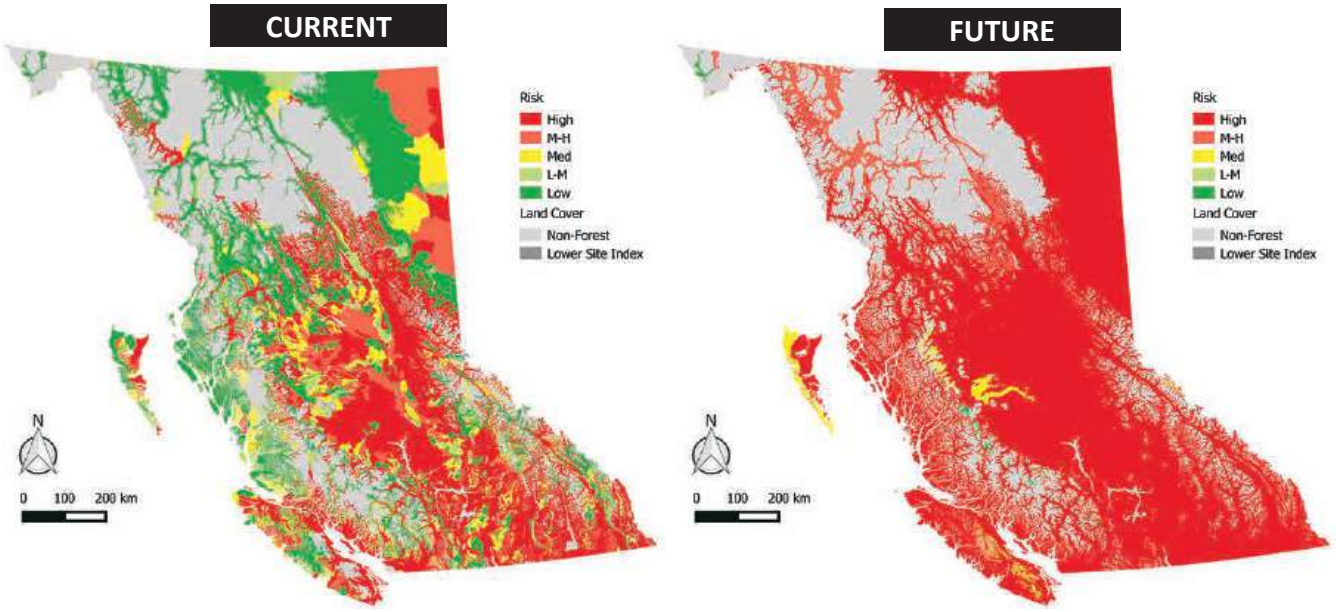


Biological Diversity

Old forest conservation in BC has focused mainly on maintaining biological diversity. A key assumption guiding our current forest management system is that, if biological diversity is maintained, other values will often be accommodated concurrently. This assumption is imperfect, however, since the preferred wildlife habitat, tourism site, or other old forest value being considered is often not physically located where the biodiversity representation is needed.

To describe our diverse ecosystems, British Columbia uses the Biogeoclimatic Ecosystem Classification (BEC) system to stratify the province into zones based on climax vegetation communities that reflect the combined ecological effects of climate and soil.

This is a hierarchical system, with each of the province's 16 major zones divided into climatically distinct sub-zones, some of which are further divided according to climatic variations within the sub-zone. The variety of growing sites that occur in each sub-zone or variant are described using site classification, based on soil moisture and nutrients (site series).



In addition to the variety of ecosystems (as defined by BEC), forests exist in various stages of succession (seral stages) as the trees advance from young to middle age, mature and eventually climax community stages. In some cases, a climax community has persisted without any widespread disturbance for many centuries, resulting in unique, ancient forests. Each site classification may host a different mix of plants, animals, and insects, at each seral stage. Science tells us that if we want to have the greatest chance of conserving our natural biological diversity, we need to keep enough old forest to have a viable, representative sample of every BEC zone at the site-series level.

Source: BC Ministry of Forests, Lands, Natural Resource Operations and Rural Development

Knowing how much to maintain as forest with old trees is guided by the notion that mimicking nature is the approach that presents the least risk to biodiversity. The concept used to measure this is called “natural range of variability” (NRV). This is typically based on a description of ecosystems as they existed before major changes brought about by extensive industrial or agricultural activity. Conservation science provides us with a general risk rating, telling us that if we retain 70% or more of the natural abundance of forest with old trees the risk of species loss, compromised ecosystem services, and losing ecosystem resilience is low. If we retain below 30%, the risk is high. At between 30% and 70%, the risk varies by ecosystem.

Consistent with what we heard from several provincial government staff, a recent report submitted to the panel by a group of independent scientists illustrates that we are in situations of high risk to biodiversity in many areas in the province, particularly in high-productivity, low elevation ecosystems. More troubling is the future projection where almost all of the province will be in high biodiversity risk once our current management approach harvests most of the available old forest. The time to complete this transition depends on the available old forest and various industry and economic factors in each region.

Source: Price, K., R.F. Holt and D. Daust. 2020. BC’s Old Growth Forest: A Last Stand for Biodiversity

Their research also provided the following list of BEC zones that contain less than 10% of their original old forests - CDFmm (all CDF), CWHxm1,2, dm,CHxw, mk3,4, mw1,2,3,4,IDFxc, xh1,2,4, xk, xm, xs, xx2, dc, dk1,2,3,4,5, dm1,2, mw1,2, PPxh1,2,3 (all PP), SBPSmk, SBSwk1,2,3a, and possibly: ESSFxv2, dc1, mh, mv1,2,3,4, wc3,4, wh3, wk1 and wm1,2,3,4. They note that there is some uncertainty because of potential misclassification of age in some of these units, and also recommend that these areas be deferred from further development until we have brought them back enough to meet current legislated targets.

Several practitioners also raised the issue of our current management system combining old forests and using their aggregated data when making assessments for managing biodiversity risk and planning for old forest retention. One example was parks and protected areas, where an initial net down estimate is removed at the landscape level and then netted out again at the detailed operations level, resulting in double counting. A related concern is that many parks and protected areas contain low-productivity old forests, which are deducted from total old growth aggregate targets without identifying which ecosystem they represent. These types of aggregation calculations overlook distribution and spatial considerations that are crucial in managing for effective ecosystem health.

Managing for forests with old trees

On public lands, which comprise about 95% of the province, Land Use Plans (LUPs) provide the basic framework for management of forest lands, of which old forest is only one component. While LUPs vary by area and when they were completed, most use some sort of system of land-use priorities to guide management. This includes parks and protected areas which, while often not specifically designed for the purpose of managing forests, do include significant areas of forest with old trees.

Three distinct areas (Clayoquot Sound, Haida Gwaii and the Great Bear Rainforest) are managed under ecosystem-based management regimes, and although we heard about implementation challenges in those areas, the required level of conservation in ecosystems with forests of old trees is much higher than in other areas of the province. Therefore, we have focused our discussion on management outside of those areas.

Most public forested areas outside parks and protected areas are available for logging through various types of licences issued by the Province. Most licences make the holder responsible for planning where to log within the license area, subject to constraints set out under the *Forest and Range Practices Act* (FRPA). Other activities such as oil and gas development, mining, or tourism development are subject to different legislation and requirements.

Under current regulations governing forest licensees, the objective set by government for wildlife and biodiversity at the landscape level is, to the extent practicable, design areas on which timber harvesting is to be carried out that resemble, both spatially and temporally, the patterns of natural disturbance that occur within the landscape "without unduly reducing the supply of timber from British Columbia's forests". The objective set by government for wildlife and biodiversity at the stand level is to retain wildlife trees, "without unduly reducing the supply of timber from British Columbia's forests". We note potential changes to FRPA are being considered by the Province, which should remove this overall constraint.

Forest licensees are required to submit a Forest Stewardship Plan (FSP) describing how they will meet these and other objectives. Once an FSP is approved by government, timber harvesting can be authorized provided it is consistent with the plan. We heard consistent concerns about a lack of monitoring to see whether these guidelines are being met, and if they are effective. We also heard that where monitoring has occurred, the commitments approved in the FSPs are too vague to enforce.

The Biodiversity Guidebook was completed in 1995 as part of implementing the *Forest Practices Code Act*. The guidebook was developed using the best available science at the time, with an expectation that it would be refined as new knowledge was obtained. The original team of senior ecologists drafted the Guidebook using what they felt were the minimum requirements considered to have a good probability of maintaining biodiversity within a landscape unit. Many of the scientists we talked with during our engagement process told us that the original guidance provided by the Guidebook is still sound. However, the Landscape Unit Planning Guide (1999), introduced the concept of biodiversity emphasis options (different levels of risk). This resulted in a deduction from old forest retention targets to account for old forest presumed to already be protected in parks and it limited targets for representation to the BEC variant, rather than the finer site series level. We heard that, from the outset, implementation has fallen so far short of the original guidance that it could not be expected to meet the goals established at that time.

Since 1995, the policy direction has been to limit the impact of biodiversity conservation on timber supply to approximately 4% across the province, and to locate old forest retention areas preferentially in areas with a low priority for harvest. While this seems logical from a timber supply perspective, it weakens the original intent, by biasing representation to lower productivity ecosystems, often at higher elevations.

This trade-off between risk to biological diversity and protecting timber supply is an example of government policy attempting to balancing competing interests. Although old growth targets are a compromise, there was a clear expectation and commitment by government that the risks would be reviewed and future adjustments would occur, if required. We are not aware of a review and adjustment happening, but we believe the circumstances are sufficiently changed, that it needs to be done now.

Old forest retention in BC is administered in one of three ways:

1. Legal, spatially-defined Old Growth Management Areas (OGMAs).
2. Non-legal, spatially-defined OGMAs.
3. Aspatial old forest management.

During our engagement process, we heard a great deal of concern about how these approaches are being implemented. In some ways, the details about the size and condition of OGMAs, how they are located, and rules for incursions and amendments have diverted attention from their original purpose, as a tool in the broader biological diversity conservation strategy. Several forest managers expressed the opinion that the term OGMA is misleading because they are actually used to retain intact areas rather than for proactive management.

Although these retention mechanisms may be working in some areas, examples of the complaints we heard are illustrated in the figure below.

OGMA Concerns

- Poor or unjustifiable location (e.g., doesn't contain old trees, fire hazard)
- Too small
- Not flexible enough to accommodate forest dynamics
- Flexibility abused for roads or development
- Should all be spatial and legally delineated
- Should all be aspatial
- Should all be spatial but not legally delineated
- Unclear objectives
- Inconsistent or unclear rules regarding implementation, or retaining/replacing OGMAs destroyed by wildfire or bark beetles
- poor mapping or inadequate detail in the forest inventory to identify key areas.
- inadequate change reporting

One notable concern was from recent research on edge effect in OGMAs that were established to maintain intact old forests. It showed that old forest dependent species had disappeared, and many old forest functions were often compromised, on average, up to 100 meters from the edge of the adjacent opening (logging, roads, etc.) depending on the OGMA shape, topography and the nature of adjacent openings or other features. When this edge effect was applied to sample local areas, soon to be published research submitted to the panel found that there were almost no intact old forests that retained their original function in those areas.

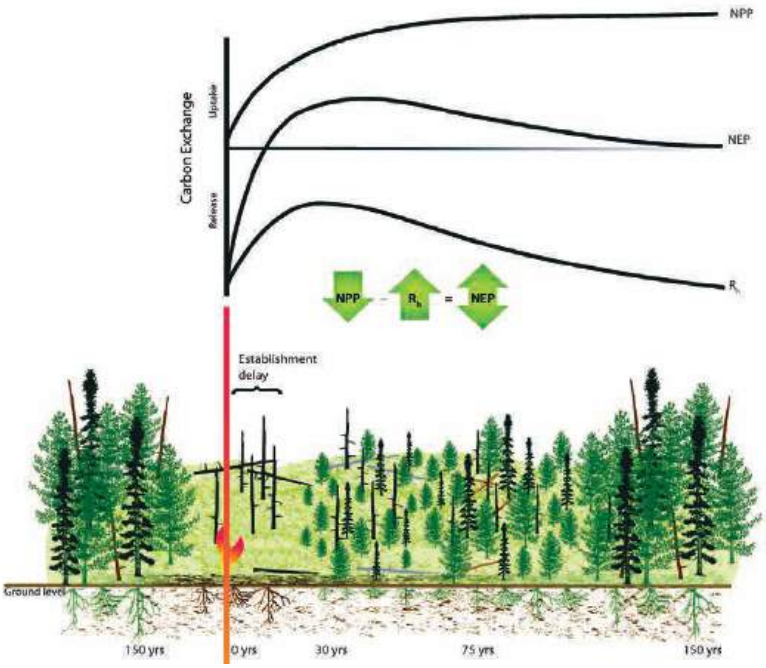
We also found that, despite having been already reduced to protect timber supply, old growth targets are not being met in some areas. It's difficult know how widespread the problem is because only a few areas have been monitored to determine if targets are being met. In some of these areas, forest licensees said they are challenged to find enough unconstrained timber to harvest their allowable cut. Something clearly isn't working when neither objective is being met.

What was committed/planned/assumed/ recommended…	What we have now…
Adaptive management through continuous monitoring and regular updates	No substantial monitoring or updates since implementation in 1995
Periodic reviews of the entire old growth and biodiversity management system	None to date
Maintain old forest (both the mature and overmature age classes) at acceptable targets	OGMAs focus primarily on overmature in most of the province (mature is not included)
Tracking implementation and achievement of mature and overmature targets	No consistent system to track compliance with targets except in areas of the province where government staff have led special projects
Biodiversity targets for retention of old forests was set at various levels above the minimum threshold of 30%	Some areas were lowered by subsequent political decisions — some lower than the minimum threshold
Old growth would contain old forests, and preferably some of the best.	Many OGMAs do not contain old forests and some contain forests less than 40 years old

Despite commitments made to formally evaluate their effectiveness as a policy tool on an ongoing basis, no review of the OGMA system has taken place since it was implemented more than 20 years ago. Furthermore, there has been no formal, consistent monitoring program to determine whether there is compliance with the current targets, or if they are achieving the intended results. That makes it impossible for the public to know if it is getting good value. The government has small pockets of work underway that may help to alleviate some of these problems. For example, over the last decade, effort has been put into developing methods to assess cumulative effects, including for old growth and biodiversity values. Also, following a special investigation by the Forest Practices Board in 2012 the government formed a working group to address the Board's recommendations. Our impression is that, while these initiatives could lead to some improvements, they have not been a high priority for government and are not presently well enough resourced to have any meaningful impact on management of old forests, at least in the near future.

While the foremost goal of science and practices to conserve and manage forests with old trees is maintaining biodiversity, there are many other objectives that can also be achieved. Managing for most values is quite site-specific. The amount of forest with old trees and the conditions we require depend on the objective. For example, if we're protecting the character of a spiritual or historical site, it may only be necessary to delineate a small area, but it has to be at a very particular location. If the objective is protecting mule deer winter range, we may be able to distribute areas in several suitable places on the landscape. If our objective is preserving visual quality, our actions will be based on attributes as they appear from certain viewpoints or travel corridors.

It is often possible to manage the same area for a multitude of old forest values, provided the objectives are clear and compromises are not so great that critical values (e.g., biological diversity or water quality) are put at high risk in order to accommodate values where we have more discretion (e.g., timber or tourism). This suggests the need for the Province to have clear priorities and objectives for managing old forest values at all scales.



Carbon balance and climate

Many people we heard from linked forests with old trees to climate change, often with conflicting perceptions about its value for absorbing and storing carbon.

The impact of the forest on net atmospheric carbon is complicated. We heard evidence for and against old forests as carbon sinks (taking up more carbon than they release). The answer can vary considerably depending on the circumstances and the timeframe. Forests accumulate carbon in new plant material when they are green and growing. The carbon is returned to the atmosphere when plant material decomposes and combusts (whether it burns in the forest or as wood products).

Carbon can be stored in trees, soil, and long-lived wood products for decades, or even centuries. This storage is considered an important factor in the effort to curb climate change. Of course, we need to keep in mind that not all old forest is the same: in coastal Douglas Fir or cedar-hemlock forests, trees are very long lived and have a relatively low risk of natural disturbances, while many interior forests have shorter lived tree species, and more frequent large natural disturbances (e.g., fire). In other areas, such as the Interior NDT4 Douglas Fir forests can be maintained in a relatively stable old-forest condition through frequent low-intensity fires that burn the understory and keep the forest spaced.

The ability of a forest to absorb and store carbon is age dependent.

NPP net amount of carbon that enters the ecosystem.
Rh respiration from decay
NEP net ecosystem production – total amount of organic carbon

Source: Kurz et al, Carbon in Canada's boreal forest — A synthesis, Environmental Reviews Vol. 21, 2013 (Courtesy NRC Research Press)

- Immediately after disturbance it is a carbon source because post-disturbance organic materials are decaying more quickly, and very young trees are not accumulating high biomass volumes.
- Young forests that begin to accumulate high biomass volumes are strong carbon sinks because they are quickly accumulating biomass.
- The amount of carbon sequestered declines with old age but the amount of carbon stored is very high.
- The timing of maximum amount that is stored and the maximum sink differs.

Timber harvesting causes short-term emissions from the activity itself (e.g., from equipment to harvest, transport and manufacture), and when forest debris (e.g., slash) is burned. We can expect harvested stands to be net carbon sources for several years, until the capacity of new trees to capture carbon overtakes the emissions from the forest floor, soil, and decay of woody debris. The relative carbon impact of harvesting the primary forest depends upon a number of factors, including:

1. Condition of the primary forest at the time of harvest (storing, sequestering, or emitting carbon);
2. The method of harvesting, level of wood utilization, and method of slash disposal;
3. Longevity of the products the wood is used for (e.g., pellets or paper compared to lumber or timbers);
4. How quickly and completely new trees occupy the site and grow;
5. How long the new trees are allowed to grow before being harvested again (rotation age); and
6. The substitution value of using wood over an alternative (e.g., concrete, steel, or plastic).

A report prepared in 2019 entitled Forestry and Carbon in BC suggests that a managed secondary forest could-in principle-recapture the lost forest carbon if allowed to regrow long enough to fully recover its carbon stock, which could be achieved more quickly and easily in most interior forests than in coastal or interior wetbelt forests. It also emphasized that underlying carbon budget calculations are complex and depend on assumptions about a future with much uncertainty.

Another team of BC researchers recently wrote, *"Every old-growth forest is made up of a unique history of management choices and disturbances. Furthermore, their carbon storage value is dependent on future climatic changes specific to the region in question. There seems to be sufficient evidence indicating that many old-growth forests already protected in BC are likely carbon sinks."* And *"more research is needed into which old growth forests are carbon sinks and which are sources, and under what conditions."*

Photo by Al Gorley

Many of the old trees in the forest on the left are dead or dying and it would likely be better from a carbon management perspective to recover the salvageable wood and establish a crop of young trees. The old trees in the forest on the right, on the other hand, are relatively healthy, and are still absorbing and storing significant quantities of carbon.

In addition to the function of forests with old trees in the carbon cycle, old trees also play a role in mitigating the impacts of climate change on ecosystems, human communities and infrastructure. For example:

- Regulation of air temperatures (cooler in summer, warmer in winter) and local climate that can be critical to the health of other plant communities, wildlife, and humans.
- Regulation of water temperature, evaporation, cleanliness, flow volume and timing.
- Resistance to fire due to cooler, moister internal forest conditions.

These mitigation functions require having enough mature and old trees in a forest to carry out the hydrological functions and provide canopy. How much primary forest needs to be retained in an older-tree state to influence micro-climates will depend on the local circumstances and objectives.

History of forest conversion

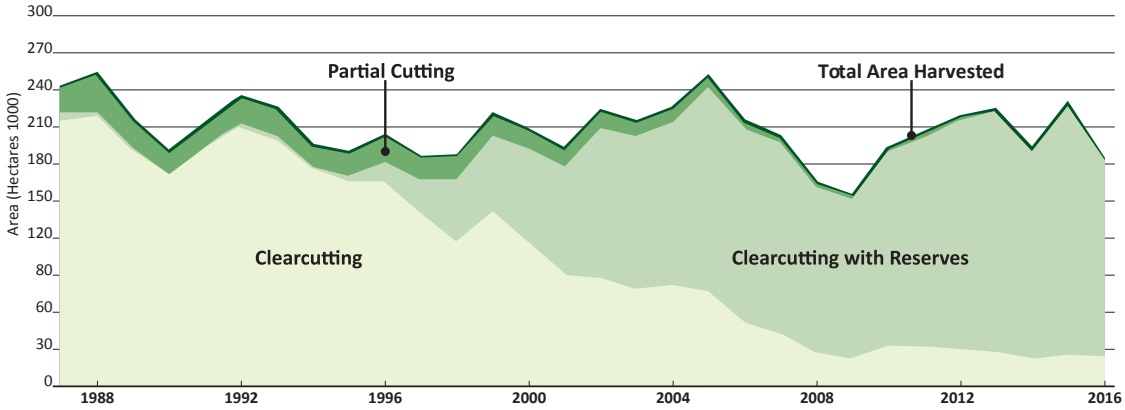
Until the early 1900s, BC's old forests were so extensive that few people would likely have anticipated the circumstances we are in today. The early years of industrial timber harvesting were limited by access — there were few roads, so cutting took place in areas where timber could be manufactured close-by or economically moved by water. Most of the forest was left alone. The scope and scale of harvesting increased considerably though the middle of the 20th century, reaching nearly every region of the province. This led to public concern that the timber supply was exhaustible, and the encouragement of "tree farming".

The result was a policy of "sustained yield", the idea being, that over a period of about 80-120 years, subject to economics, the natural (primary) forest would be logged and converted to managed (farmed) forest, mostly by clearcutting. The subsequent crops of timber would be harvested at their economic culmination age (depending on species, usually 60 – 100 years), thus creating an even, perpetual supply of timber. It is important to note that this is not a typical agrarian model. The intent has always been to conduct forestry with indigenous species on the sites where they would naturally occur.

Under this model of conversion to managed forest, we would expect to transition over a period of time from harvestable primary forest to areas that have another crop ready after harvesting. However, many regions will have a decline in harvest for several decades because of a disproportional amount of young forest. In some regions of the province, mainly on the South Coast, conversion has been underway long enough, and trees grow fast enough that some of the timber being harvested now is from previously converted areas, or "second growth". In some of these, the transition from harvesting old primary forest to second growth will likely be complete within 20 to 30 years. However, in other areas it will be several decades before previously harvested areas are ready to cut again. This means that the situation is highly variable across the province. (We note that some of the areas where harvesting only began at a large scale in the late 1960s or early 1970s have accelerated conversion due to salvaging Mountain Pine Beetle-killed timber and some of these areas have neither an abundance of remaining old forest nor second growth approaching harvestable age).

Areas with the best timber and typically closest to access were often the first to be converted, and few remain in their natural state. These are not only the best timber growing sites, they are also high in biological diversity, often critical to water and fish, and many other values. A recent study tells us: *"Sites with the potential to grow very large trees (Site Index >25) cover less than 3% of the province. Old forests on these sites have dwindled considerably due to intense harvest so that only 2.7% of this 3% is currently old."* We found near unanimous agreement for conserving more of these areas.

Many things have changed since the inception of sustained yield, but it remains the underlying premise for most of our forest management system, except perhaps in the areas under ecosystem-based management regimes. Beginning sometime in the 1980s and following global trends, the public became more aware of the importance of forests for a wide range of ecological values. This led to the creation of more parks and other conservation areas through the Protected Areas Strategy and various forms of land use plans, thus reducing the areas available for conversion to managed forest. It also gave rise to new constraints on forest practices to protect a variety of "non-timber" values, such as water, wildlife, visual quality, and biological diversity — including old forest, within the areas still open to harvesting.



Harvesting methods

Traditionally, most forest harvesting in BC was done by clearcutting, which is the most efficient and least expensive method. Generally speaking, clearcutting removes all trees from an area of one hectare or more, and greater than two tree heights in width, in a single harvesting operation. A new even-aged stand is obtained by planting, natural or advanced regeneration, or by direct seeding. It is most appropriate in forest ecosystems where tree species require an abundance of sunlight or naturally grow in large, even-age stands. Social concerns about large clearcuts have led to a decrease in their average size from 45 hectares on public lands in 1989 to 30 hectares in 2006. We were told that, in some areas, the average size is now 2-3 hectares, but we are also aware of extensive clearcuts carried out in salvage areas during the last several years, and of cutting adjacent to recently harvested areas before they reach the full green-up (continuous clearcut).

Clearcutting with reserves began in the early 1990s and is a variation of the conventional clearcutting silvicultural system in which trees are retained, either uniformly or in small groups. The trees retained may be combinations of small and large trees. They may be chosen to provide wildlife habitat, nesting and den trees, future sources of snags or coarse woody debris, or some level of visual quality.

In 1995, a system of variable retention was adopted for some coastal harvesting as an alternative to conventional clearcutting. This system has two approaches: distributed, where retained individual trees are distributed relatively evenly across the area; or aggregate, where groups of trees are retained to maintain structural diversity over the cutblock. The generally accepted parameters for variable retention are that the retained trees distributed throughout the cutblock, must remain for at least one rotation and be configured to leave more than half the total cutblock area within one tree height from the base of a tree or group of trees including the edge of the cutblock. Note that many scientists and industry advocates of variable retention argue that clearcut with reserves generally does not meet the parameters for variable retention.

Partial cutting is a general term for silvicultural systems (which includes variable retention) in which some trees are left standing after logging. Compared to other systems, the distribution of remaining trees will typically be fairly even across the cut area. Depending on the management objectives, the selection of trees to be retained may be based on their value to a future timber crop, mimicking natural processes to maintain biodiversity, wildlife habitat, aesthetics, or some other purpose.

Source: Trends in Silviculture in B.C. (1987-2016). Ministry of Forests, Lands, Natural Resource Operations and Rural Development, 2018

Until the mid-1990s, most harvesting on public lands in British Columbia involved conventional clearcutting. Government reports show that from 1970 to 1998, clearcutting systems were applied on 87% of the area harvested on public lands. By 2015-2016, harvesting on public lands was by clearcutting with reserves (85%), clearcutting (11%), retention cutting (3%) and other cutting methods (1%). One of the challenges for the public is often to differentiate between conventional clearcutting and clearcutting with reserves, especially in some of the salvage areas in the Interior, where very large contiguous areas have been logged and reserves constitute only small forest remnants.

More use of systems that emulate natural ecological processes may allow us to continue harvesting timber from forests with old trees without converting them to unnaturally uniform managed stands. However, that approach is influenced by a complex combination of numerous factors, such as: government leadership and support, timber value, operating costs, stumpage rates, desired profitability, terrain, technology, blowdown risk, stand condition, forest health, worker safety, expertise, and other land use objectives for the area.

Scientists and professionals use a broad system of natural disturbance types (NDT) to differentiate these processes:

NDT1: Ecosystems with rare stand-initiating events
NDT2: Ecosystems with infrequent stand-initiating events
NDT3: Ecosystems with frequent stand-initiating events
NDT4: Ecosystems with frequent stand-maintaining fires
NDT5: Alpine tundra and subalpine parkland

We heard from several forest managers who said they would like to change their harvest systems to better reflect natural processes but are constrained by these factors, or by the Province's forest practices and timber pricing policies. We also heard about various partial cutting silviculture systems having been applied in the past, but many have been discontinued, except in the case of a few select companies. The results of these experiments need to be better understood.

Generally speaking, under the present system, an area is either reserved from harvesting or available to be converted to managed forest. We heard from many people who are frustrated that the managed forest lacks many of the previously existing natural attributes and they oppose further conversion. We also heard from many forest managers about the costs of uncertainty due to incremental reductions in area available for harvesting. Concerns about this have led many forest-dependent communities to repeatedly call for the designation of a "working forest" to provide greater certainty for on-going access to timber.

The 1992 Old Growth Strategy proposed a conservation framework with:

- A system of reserves to conserve old growth values;
- Commodity emphasis areas supporting sustainable economic activity;
- Special management areas where forest practices maintain old growth attributes.

The current management system has gone part way to this three-zone conservation framework by assigning biodiversity emphasis areas for the setting of old growth targets, but there is no definitive, legally established zoning as was originally envisioned. We believe there is an opportunity to bring greater certainty to the management system, achieve a more optimal mix of public benefits, and encourage innovation, by formalizing this three-zone concept.

The role of the provincial government

We heard a lot of dissatisfaction with government from people on all sides of the issues. While some of that is inevitable in an exercise like ours, this was largely non-partisan, focused on policy and priorities, and had a lot of commonality. We observed widespread concern that the government lacks an "on the ground" presence and needs to have a more active role in ensuring the public's interests are met. The views were not always specific to management of old forests but were offered in that context.

We frequently heard:

1. We need a clear and legally supported long-term vision and set of priorities for our forests.
2. The vision and priorities need to be supported by a principles-based management framework that will meet the needs of the province and provide the flexibility to accommodate the diversity of ecosystems and communities. The principle of proximity, (those who are most directly affected by a decision should have a proportional say) should be embedded in the framework.
3. Government policies for forestry tenures, stumpage, and forest practices discourage the innovation necessary to meet the optimum mix of public values.
4. The management framework needs to be supported by efficient and adequate policies and resources (capacity) to enable implementation.
5. The province has to take a much more active role at all levels to ensure the public's interests are being met. This includes oversight, monitoring, enforcement, and objectively and regularly informing the public about forest conditions and trends.
6. Where the government has direct control (e.g., BC Timber Sales) it should show leadership in developing and demonstrating best practices for sustainably managing forest values.
7. The government's rules for regulating the industry should not oscillate between "command and control" and "hands off" based on the ideology of the government of the day.
8. The government should facilitate a planned and orderly transition from harvesting primary forests to second growth, on timelines suited to specific areas.

Indigenous involvement

Support for Indigenous involvement was heard from every sector and the majority of people who submitted input to the panel. This is obviously top of mind for a variety of legal, social, and environmental reasons: legal with the Crown's duty of consultation and accommodation plus the recent passing of the province's Declaration of the Rights of Indigenous Peoples Act; social with the Province's commitment to a New Relationship; and environmental where many are looking to Indigenous communities for guidance on how to establish land management that achieves a higher standard of land care.

The panel heard a mix of Indigenous perspectives, ranging from calls for increased involvement of Indigenous communities in the timber industry and continued access to old forests for harvesting, through to increased protection for the range of other values from the forest. One common theme was the necessity for increased involvement of local Indigenous communities in the planning and oversight of forest use in their local areas.

Many of the Indigenous groups that were interviewed are actively involved in planning in their own forest management areas and many have developed very innovative, practical, and effective approaches to the management of old forests. These approaches were developed and are continually monitored with close involvement of the local Indigenous community, particularly the Elders in those communities. However, at a provincial level, the capacity of Indigenous communities to do this is very uneven and in some areas underdeveloped. We believe supporting the development of capacity and extending learning amongst Indigenous communities presents an opportunity to support effective forest management and advance reconciliation.

Public and community involvement

Just as we heard almost universal support for government collaboration with Indigenous communities, we also heard from local governments and stakeholders who said that they want more meaningful roles in forest planning and decision-making. We believe their current level of involvement contributes to a significant amount of uncertainty and discontent.

In previous sections, we touched on concerns about a lack of trusted information and process for the public to engage in a meaningful dialogue about forest management, including for forests with old trees. We did encounter a small number of areas in the province where community and stakeholder groups are engaged with government and industry on an ongoing basis, however this was the exception. Yet almost every local government, community organization, and often individuals, expressed a need for a place to learn, exchange ideas and perspectives, and develop useful input to forest management.

In several areas, we heard about the positive experiences with land use planning committees, and the benefits of bringing together experts and civil society with a variety of interests in a collaborative forum where provincial and local priorities could be addressed. Despite an expressed intent, when plans were completed (most during the 1990s), to maintain monitoring committees and have a periodic plan updates, government support declined, and most were disbanded. In some cases, government-facilitated groups were replaced by public advisory groups struck under the auspices of various market certification programs. Convened by forest licensees, these groups helped fill the gap, but many of them ceased operating when companies changed certification systems.

Lessons from other jurisdictions

The panel explored experience from other areas in the world to see if there were any lessons that could be learned around the management of old forests from those areas. Some of the main points were:

- Every jurisdiction's reasons for moving towards the management of old forests were different but most of the areas that adopted a system of significant old forest protection did so as a response to overwhelming public pressure that included either civil disobedience or legal actions;
- Many of the jurisdictions that responded to public pressure went through public policy swings that alternated between favoring the timber industry and favoring protection groups before landing on protection;

- Well-organized ENGOs were deeply involved in almost every jurisdiction's shifts to greater protection;
- The term "old growth" is relatively recent term used primarily in North America: Other jurisdictions use a variety of terms such as old forest, primeval forest, primary forest, virgin forest, ancient forest, wildwood, etc.;
- The trend towards greater protection for old forests had less to do with the age of the timber industry and the associated forest management system in each country and more to do with increased public understanding of issues related to biodiversity, ecosystems and climate change, the use of civil disobedience and legal tactics, and increased public involvement in forest management (generally within with the last few decades);
- Some jurisdictions went to protection measures applied only to old forests while others went to a more comprehensive zoning system to identify measures for lands are protected, managed for ecosystem health or intensively managed for timber production;
- Some countries that have gone through multiple rotations under intensive management are dealing with significant biodiversity loss and associated forest health issues; and
- Many jurisdictions have committed to detailed forest monitoring although in practise many defaulted on those requirements.

Compared to much of the world, our situation in BC is somewhat unique in that:

1. Large-scale commercial cutting of primary forests in BC began less than 100 years ago in southern and coastal regions, and 50 years ago or less in much of the central and northern interior;
2. The vast majority of cutting has been done with the expectation of managing the area for a perpetual crop of timber, rather than forest removal;
3. We have maintained a policy of reforesting with native species that are ecologically suited to the area logged.

This means that although much of the forest is altered from its natural condition, most of the original components still exist somewhere on the landscape. We can't go back and replace the primary forest, but we do have the opportunity to maintain viable examples of the remaining ecological attributes, and possibly restore others.

Summary of key points

1. Ecosystems with large, old trees are important to British Columbians for many different reasons.

- The term "old growth" has become a generic label for forests or trees that hold a variety of different values beyond the definitions used in timber management. OG means different things to many people and has a diverse array of sometimes conflicting values, all of which warrant consideration.
- Old forest values and objectives need to be clearly articulated, with less emphasis on the generic "Old Growth" label.

2. Retaining and managing forests of old trees is a key strategy for maintaining biological diversity and cannot be done in isolation.

- The ability of ecosystems to support species, including humans, and adapt to change is dependent upon their resilience, which comes largely from the natural diversity they harbour.
- Old forests are part of complex multi-scaled, interdependent ecosystems, and are also impacted by complex interdependent forest management policies.

- The total amount of old forest in the province is not as important as the distribution and ecosystem representativeness.
- There are many impacts to old forest arising from various activities in almost every resource sector.

3. The extent and condition of ecosystems with old trees, relative to natural condition, is highly variable across the province.

- The risk to biodiversity is extremely high in some ecosystems and there is a wide-spread call to protect them.
- The forests' ecological conditions, history of natural and human disturbances, and social, cultural, and economic importance are too variable to suggest a single sweeping approach, although there is strong support for a common management framework.
- In many areas, we are not meeting the intent of the biodiversity conservation strategy adopted 25 years ago.
- The approaches to managing old forest have to be adaptable to the ecosystem and natural disturbance regimes.

4. The economy is heavily dependent on trees harvested from primary forests of old trees.

- The degree of economic reliance differs amongst regions and individual communities. For example, some have undergone a transition to greater reliance on tourism, or other sectors, while many others have not.
- In some areas, a transition to second-growth forests is well underway, while in most of the province that transition will require decades of forest growth.
- There is widespread support for assisting workers and communities negatively affected by reduced access to timber supplies, for whatever reason.

5. The current system for retaining old forest and managing their attributes has issues.

- The original intent of the science-based guidance has not been fully implemented.
- The approaches to managing, tracking, and reporting on old forest retention and management requirements are inconsistent and, in some cases, absent.
- Old Growth Management Areas (OGMAs) are applied inconsistently and sometimes ineffectively.
- The use of clearcutting silviculture systems limits the ability to manage for old forest attributes and conserve biological diversity, especially in ecosystems that don't naturally experience large stand-replacing disturbances.

6. Opportunities have been identified to provide greater economic certainty about the blend of benefits from old forests:

- Formalizing designation of forest areas outside reserves to be either managed primarily for commercial production (conversion) or managed for key ecosystem attributes with compatible forestry practices.
- Analysis and pursuit of an optimal blend of public benefits from a wide range of uses (timber, tourism, natural infrastructure, botanical forest products, recreation, etc.).
- Transition to silviculture systems that more closely emulate natural process on remaining unconverted forest.

7. Climate change will become an increasingly bigger factor in choices about forest management.

- The role of old forests in climate change is complex.
- Mitigating climate change through carbon sequestration and storage needs to be fully analyzed and integrated into forest management decision-making.

8. Information around the types, condition and current status of old forests is highly variable across the province.

- There is no regular, objective public reporting about forest condition and trends.
- Classification based on timber inventory criteria, which does not necessarily reflect other old forest values.
- The existing inventory is not well suited to stand-level identification of many old forest attributes.

9. There is widespread support for the provincial government and Indigenous governments to collaboratively create updated strategies and policies for the management of old forests that include:

- Transparent expressions of the public's long-term interests, priorities, and policies;
- Ongoing public involvement in planning and strategic decisions, supported by objective and comprehensive information regarding related issues, risks and opportunities;
- Economic analysis tools to inform public discussion and choices;
- Clear and measurable objectives at meaningful scales, supported by well-resourced enforcement and evaluation of long-term effectiveness;
- Oversight that ensures public interests are considered and incorporated in forest planning and practices, monitoring, compliance and enforcement;
- Ongoing research, innovation and information sharing to foster continual learning and expand the province's collective forest management expertise;
- Adequate monitoring and objective reporting of forest conditions and trends, including the cumulative effects on all values and transparent communication of risks and benefits; and
- The means and authority to address risks to critical values.

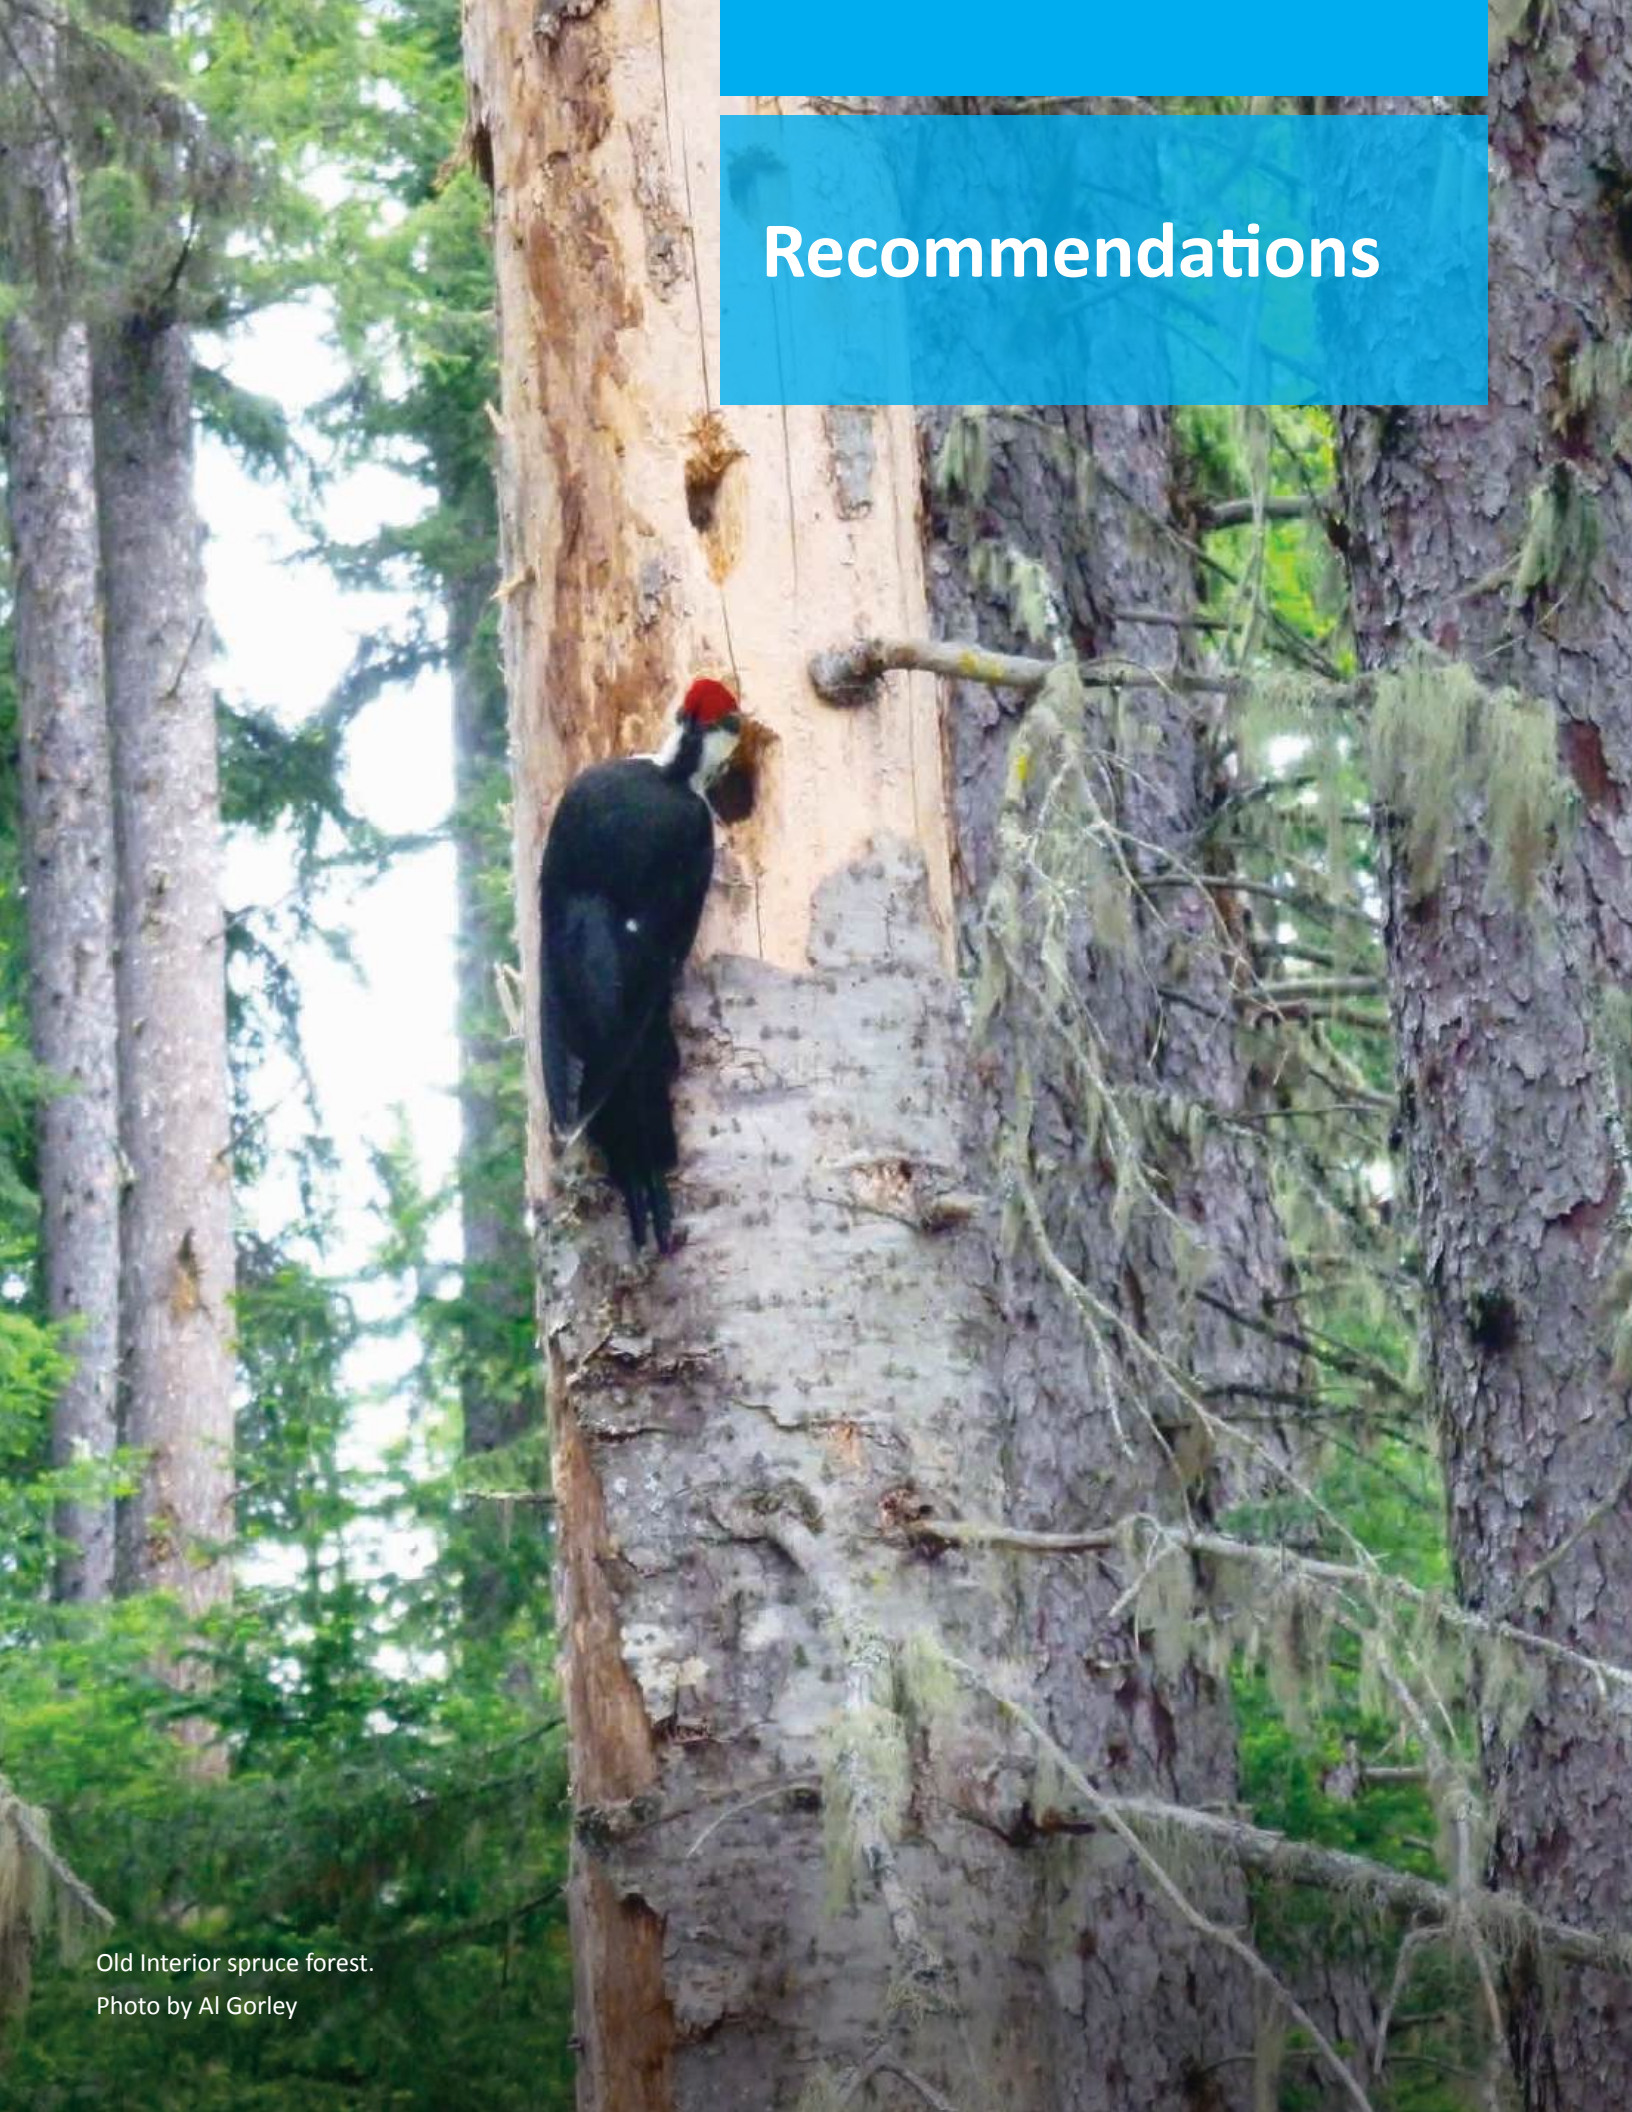
KEY FINDINGS

Based on the situation overview and key points above we find that, while there may be debate about how much old forest we have and where, there is a near-unanimous agreement that managing and protecting ecosystems for forests with old trees provides many benefits. However, there are serious concerns about the ability of our current management policies and implementation of old forest strategies to achieve that in the long-term. We observed what we believe to be fundamental weaknesses in the system relating to the core foundations for forest management success identified earlier in this report: ecosystem health; public support; and effective management.



1. **Ecosystem Health:** The priorities that currently drive our forest management system are backwards. Rather than determine what must be done to maintain ecosystem health and resilience, and then what social and economic benefits we can derive within that guidance, we often do the opposite. We consistently refer to measures required to protect ecosystem values as "constraints" on timber. An example is the policy for implementation of biodiversity conservation, which has a fixed ceiling on timber supply impact, reinforced by the objectives in the *Forest and Range Practices Act*. Many members of the public and government staff expressed concerns about this bias in the current system.

2. **Effective Management:** Many aspects of the system are seriously lacking and are not anchored in sound management theory. In particular, our system does not measure the performance of policy implementation relative to clear and measurable objectives and then adapt accordingly. The panel is also not convinced that government has demonstrated a serious, and sustained commitment to applying science-based methods to implementing management policies for conserving and managing old forest.

   Significant recent examples of this are: in 2012, the Forest Practices Board conducted a special investigation resulting in six recommendations about tracking, monitoring, enforcing, and evaluating implementation of old growth management areas, and in 2013, the Auditor General conducted an audit to assess the effectiveness of key tools for managing biodiversity in BC. Although these investigations concluded there was a lack of adequate measuring and reporting within our current forest management system, little has changed as a result of those reports.

3. **Public Support:** Much of the public is not well informed or engaged regarding old forests and forest management. This appears to be contributing to a pervasive lack of supportive for the current system. We frequently heard from individuals, organizations and communities that they have no reliable source of information about the condition and trends in local forests, and little influence over decisions that directly affect them. Over the past several years, direct ongoing involvement of communities in forest management has declined. A lack of confidence in the system was also reflected in concerns about a lack of clear long-term priorities, inconsistent policies for land users, and a lack of government oversight.

Recommendations

Old Interior spruce forest.

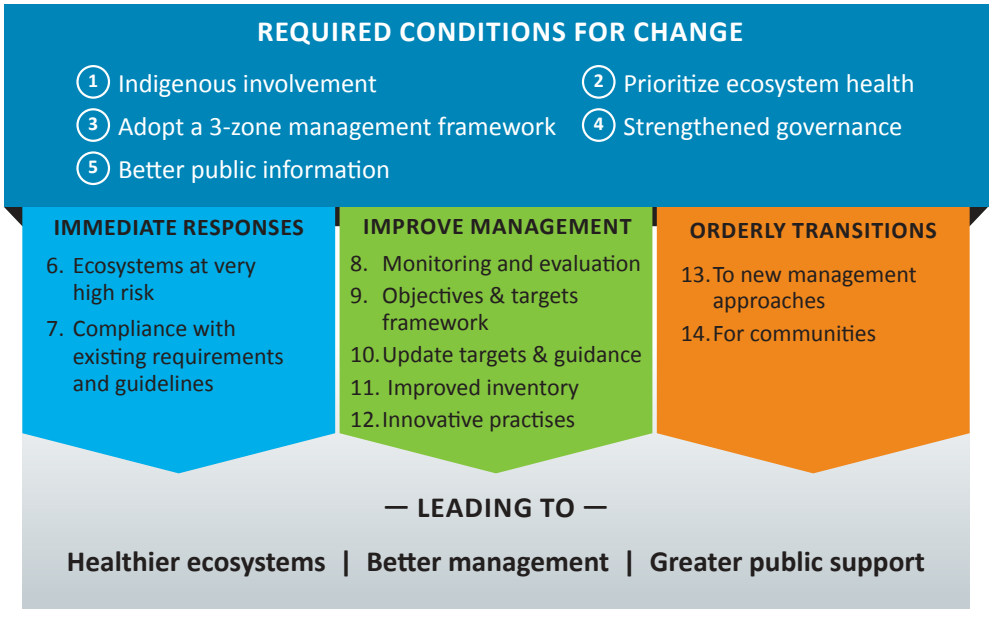
RECOMMENDATIONS

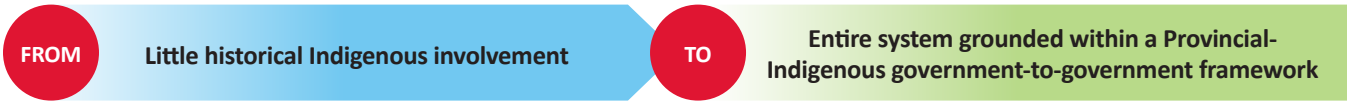


Our recommendations address the conditions we believe are needed for successful long-term management of old forests, the actions needed now to prevent irreversible loss of biodiversity, improvements to the management processes, and transition requirements to ensure change happens. The implementation advice supporting each recommendation is offered as a starting point for the government to consider, with the understanding that other approaches will likely emerge through dialogue with Indigenous leaders, input from stakeholders, and analysis by government staff.

Old forests do not exist in isolation. They are part of a complex ecosystem that has evolved over thousands of years. Similarly, our forest management system has also evolved over the long term, often in response to changing economic conditions and community needs. While we recognize that it is sometimes necessary to deal with a specific management component such as old forests, this must be done with the whole system in mind. To do otherwise would be a fundamental error. Therefore, our recommendations, although developed with a focus on old forests, by necessity extend to the broader forest management system in order to support healthy ecosystems, and by extension, healthy people, as well as old forests.

In our introduction, we identified a paradigm shift in the way we approach managing forests. We found widespread support for a new way of thinking during the engagement phase of our review. We believe that if our recommendations are implemented with this new paradigm in mind, they will be more likely to succeed, and will contribute to facilitating the desired paradigm shift over time.

As illustrated in the figure below, we have structured these recommendations to start with those that we believe are necessary to create the proper conditions for management of old forests in the future and important to ensuring the subsequent recommendations achieve their intended results for the long-term. The remaining recommendations focus on responding immediately to curbing biodiversity loss, improving the management system, and transition requirements. We believe that implementing these recommendations will lead to healthier ecosystems, better long-term land management and greater public support for forest management.



We recognize that these recommendations will be refined and adjusted through engagement with Indigenous communities and stakeholders, and with additional technical and scientific input.

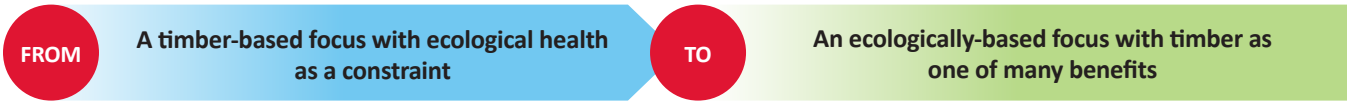
Required conditions for change

1. Indigenous Involvement

Engage the full involvement of Indigenous leaders and organizations to review this report and any subsequent policy or strategy development and implementation.

Rationale:

The panel understands that Indigenous involvement is built into almost every provincial land-based activity, especially a policy review of this scale, however we feel it is worth reinforcing because it is essential to creating conditions for successful and sustainable implementation of both the shorter- and longer-term actions proposed.



1. **Widespread support and expectation:** The panel heard support or acknowledgement of this priority from every sector and the majority of those who provided input to the panel.
2. **Legal imperative:** BC has legal consultation and accommodation obligations with respect to possible infringements on Indigenous rights, which is now even more strongly affirmed with the BC government's recent passing of the *Declaration on the Rights of Indigenous Peoples Act*.
3. **Social Imperative:** The Province has committed to a New Relationship where the Indigenous population has the opportunity to achieve the same economic, environmental and social societal goals as the rest of the population in the province.
4. **Environmental Imperative:** Recognizing Indigenous commitment to environmental stewardship, which has extended for millennia, many are looking to Indigenous communities for guidance on how to establish a land management regime that achieves a higher standard of land care.
5. **Address the Gap:** Indigenous peoples were not involved creating most of the higher-level plans and orders that dominate the management of old forests. This is a significant source of frustration among Indigenous communities and could also mean that most of these historic plans and orders do not conform to the Province's current legal consultation and accommodation requirements or DRIPA legislation.
6. **Sustenance Dependence:** Many Indigenous communities still depend on the natural resources of their traditional territories for a significant portion of their sustenance and livelihood.
7. **Practical Working Models:** Indigenous communities are becoming more active in most economic and management aspects of the forest sector and are leading many interesting and potentially valuable on-the-ground approaches to land stewardship and management of old forests.
8. **Develop Readiness:** Many Indigenous communities need support to develop their internal readiness to accept a leadership position in forest management and the Province also needs to build its internal readiness so that it can effectively participate in these new government-to-government relationships.

Implementation Advice:

1. As soon as practicable, engage provincial Indigenous governments in developing a policy response to these recommendations.
2. In collaboration with Indigenous leadership, develop provincial guidelines for implementation:
    a. Develop criteria for establishing government-to-government planning relationships between the Province and Indigenous groups, including appropriate involvement and associated criteria for third-party participation in these planning relationships;
    b. Establish planning units that conform to local Indigenous group's territories while still adhering to ecologically and administratively practical planning units; and
    c. Establish mechanisms for local Indigenous groups to meet provincial targets and standards for biodiversity protection, and ecosystem representation, etc.
3. Establish support programs for Indigenous groups to build their land/forest management expertise and capacity including:
    a. Direct support to establish G2G land management relationships in accordance with point 2.a above;
    b. Programs to support the development of internal management capacity; and
    c. Opportunities to share experiences among Indigenous groups.
4. Develop focused training for government staff to support the establishment of appropriate G2G relationships and develop provincial government capacity to meet its responsibilities under these relationships.

2. Prioritizing Ecosystem Health and Resilience

Declare the conservation and management of ecosystem health and biodiversity of British Columbia's forests as an overarching priority and enact legislation that legally establishes this priority for all sectors.

Rationale:

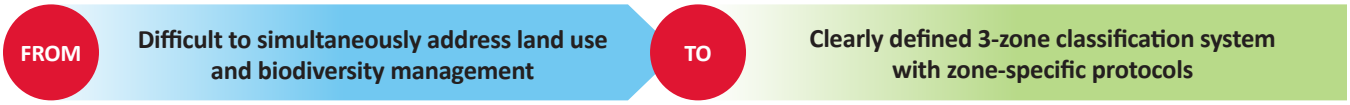
Conserving and managing old forests is a cornerstone of the Province's biodiversity conservation strategy. We believe that strategy has underperformed in several areas due to competing pressures.

1. Outdated Thinking: An overriding theme heard throughout our engagement phase was that we need to change the way that we think about our forests and that we need to preserve the integrity of our natural systems as much as possible, particularly the old forests component. Individuals with international experience and our own research on other jurisdictions indicate that this sentiment is consistent with global trends.

2. Focus on the right priorities: Managing forests in a way that does not unduly compromise timber supply puts our focus on the wrong thing. This treats ecosystem resilience and reducing biodiversity risk as constraints, which, over time, are constantly being eroded by compromises. Making choices about risk to biodiversity in return for another defined benefit might be a necessity but those choices need to be made with the overarching goal of maintaining ecosystem health in mind.

3. **Ecosystem Risk:** Several scientists project that under our current management strategy, much of the province, especially the areas covered with productive forest, will be in a high biodiversity risk situation in the near future. It is time to reorient and integrate the system towards an overarching priority that applies to all incursions in the forest, i.e., to maintain ecosystem health by managing biodiversity risk. Without this reorientation, we are losing old forests and possibly ecosystems that are non-renewable.

4. **Complete Implementation:** The original old forest management strategy contemplated a number of components that were never fully implemented or were addressed ad hoc, e.g., seral stage distribution, site series representation, landscape connectivity, and adaptive management, which has compromised the effectiveness of that strategy.



5. **Multiple Sectors:** There is only one land and every land-based sector has some potential to compromise that land, some to the point of undermining provincial ecosystem health goals, if they do not adhere to a common standard. Aligning all sectors towards an overarching goal improves our chances of achieving our ecosystem health goals, reduces conflict between sectors and fosters a common target for everyone involved.

Implementation Advice:

1. The province should declare that managing for ecosystem health and minimizing biodiversity risk are key priorities of its provincial land management framework.
2. This priority should be reinforced through overarching legislation that:
    a. Formalizes this priority and sets a broad framework to work towards that commitment (similar to the DRIPA construct);
    b. Includes principles that will guide the overall shift to this new framework, e.g.:
        i. Province-Indigenous government-to-government foundation;
        ii. Science-based;
        iii. Monitoring, evaluation and regular updates;
        iv. Planning and oversight involving a range of interests; and
        v. Accountability, particularly to the public; and
    c. Establishes a commitment to align all other land-related provincial legislation, management systems and processes to this overarching goal.

3. A Formalized Three-Zone Forest Management Framework

Adopt a three-zone forest management framework to guide forest planning and decision-making.

Rationale:

We believe that the Province can better focus its management efforts if it partitions the forest into three overarching and distinct management zones. The concept is already partially used to apply biodiversity emphasis zones for setting old forest targets but needs to be formalized and communicated. Other jurisdictions have moved in this direction to try and create greater certainty for both conservation and economic activities.

We suggest the following categories (the names can change but we feel their substance should remain relatively the same.)

1. **Protected:** These are forests that will be largely left alone, although there may be some management activities within them to maintain ecosystem health and manage risk from fire, disease or insects (depending on their designation and associated jurisdiction). One example of a Protected area that might allow some management activities are fire-maintained forests, where fire regularly removes the understory while maintaining the overstory. If fire is excluded from these areas and no other intervention is allowed, then they tend to become dense pockets of unhealthy forests that support the development of pest or pathogens or have increased susceptibility to catastrophic wildfire.

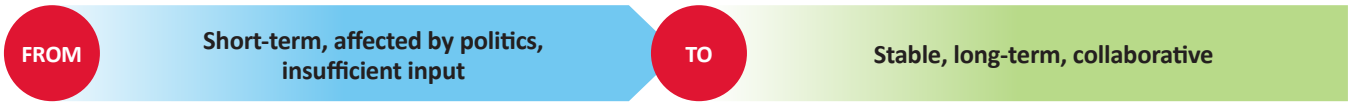
2. **Converted:** Converted forests are those that we have already or intend to change from their natural state to intensive management areas as industrial timberlands. Although these lands do not provide all the same services as old and ancient primary forests, they can still provide a number of important ecosystem services in addition to timber, such as water, recreation, carbon sequestration, wildlife, tourism, etc.), especially since many are close to communities. Conversion areas may have multiple objectives compatible with industrial timber production.

3. **Consistent:** These are forests and forest landscapes that are managed for ecosystem health and biodiversity risk by using planning and practises that result in forest landscapes that are reasonably consistent with the attributes of the original forests and forest landscapes. We recognize that we can never fully replicate what nature creates over time, but with careful management we can plan and use practises at a forest or forest landscape level that are reasonably consistent to what the original forest or forest ecosystem would have created.

The following are reasons that we feel that we need to move in this direction.

1. **Reduced confusion:** Despite the existence of land use plans, there is significant confusion or misperception about which forests should be managed for which goals, particularly outside parks and protected areas. Partitioning the forest, focussing on goals for each partition and having clear rules about if and when partitions can contribute to another partition's goals (e.g., protected areas contributing to ecosystem health) or when an area can move from one partition to another can significantly reduce this confusion.

2. **Reduced conflict:** Our current system also entrenches the idea that we need to either completely protect or allow use of an area. This all-or-nothing mentality oversimplifies management, does not allow us to focus on the right thing for the right area, fosters an "us versus them" behavior and ultimately narrows our focus as land stewards. To paraphrase an Indigenous Elder's perspective, "The reason that we create parks is because we don't trust ourselves to look after land." Many people expressed frustration about second growth forests that are managed like plantations because they think these forests should be more like their iconic undisturbed counterparts. Having them zoned as "Converted" provides clear direction on the goals for these areas and transparency for the public.



3. **More focused management:** We have forests that are already in the Converted category but we still try to manage them as part of an ecosystem to reduce biodiversity risk, we have forests that are protected for ecosystem biodiversity reasons but are promoting landscape ecosystem health problems because of our no-touch policy, and we have mixed biodiversity targets across the province which in many cases may not be able to achieve their intended ecosystem resilience goals because of their location and ongoing levels of disturbance.

Implementation Advice:

1. Use a collaborative process under the umbrella of a Provincial-Indigenous government-to-government framework to support ongoing designation of these areas.
2. Develop criteria for:
    a. Slotting parcels of land into each of the three management zones (e.g., Areas that are already under intensive management and in close proximity to population centers are high candidates for Converted Forests);
    b. How Protected Forests or Converted Forests might contribute to Consistent Forest objectives; and
    c. Moving areas from one zone to another.
3. Prioritize the designation process in management units (e.g., TSAs and TFLs) that have already logged a high percentage of their operable land and are facing the greatest risk to ecological and economic values. Areas with existing plans and legal orders like Clayoquot Sound, Haida Gwaii, and the Great Bear Rain Forest may be deferred from this process for now.
4. Where possible, coordinate the designation of forest areas with active land use planning, but do not wait for the renewal of land use planning to designate zones in high priority management units.
5. Where applicable, consider the implications to public safety and infrastructure (e.g., wildfire, floods).
6. In addition to the any other information required, support the collaborative decision-making process and stakeholder input by:
    a. Conducting objective, government-led multi-value assessments in remaining areas of primary old and ancient forest;
    b. Identifying special features (e.g., large, and unique trees or stands, unique ecosystems) that are close to communities and presently or foreseeably provide important recreational, cultural, spiritual, or educational opportunities; and
    c. Developing and analyzing various risk-benefit scenarios and options, including the probabilities.
7. Establish the zones formally through legislation.
8. Establish mandatory transition plans to implement changes on a scheduled basis, specific to the management unit(s) involved.

4. A More Inclusive and Stabilizing Approach to Governance

Adopt a more inclusive and stable governance model that gives local communities and stakeholders a greater role in forest management decisions that affect them.

Rationale:

British Columbia needs a forest management governance system that is more inclusive and grounded in the long-term vision of local communities in order to create strategies that are more consistent with long-term ecosystem timeframes. This is needed for the following reasons:

1. **Stability:** We are managing ecosystems that often take thousands of years to form with policies that can change based on election cycles. We have seen how frequent changes in priorities due to the ideologies of different governing parties can cause uncertainty and loss of continuity. Frequent changes in management direction and emphasis do not align well with most forest management activities. While changes will be inevitable, they should be based more on science-based adaptive management than short-term pressures. We believe the combination of collaborative management with Indigenous communities and formal ongoing participation of local communities, within a provincial science-based framework, can provide a stabilizing effect on policy by ensuring the local and provincial impacts of change are thoroughly considered and understood before decisions are made.

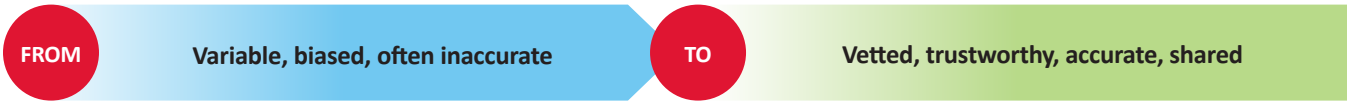
2. **Accumulation of Wisdom:** There is often high turn-over amongst forest managers, especially in government, and frequently the professionals working in a forest do not reside in local communities. This results in varying levels of knowledge about local forests and community interests and can put communities and forest managers at cross purposes.

   Managing forests to achieve a spectrum of community and provincial interests requires an understanding that benefits from local knowledge, continuity, and accumulated wisdom. Involving more people in the process of informing and making decisions increases the opportunity to retain and pass on knowledge.

3. **Proper Link to Public Policy:** Forest management has less to do with forests and more to do with translating pubic expectations around forests into policy that drives how we manage those forests. A governance system that more effectively integrates public knowledge and priorities also integrates a much closer link to support developing effective and timely policy.

4. **Public Trust:** The panel heard consistently from across the province that local communities do not have confidence that the government or large corporations will manage their forests properly, and that they want to better understand what's happening in their forests and be more involved in managing them. This was particularly true among Indigenous communities, many of whom are already assuming that role in their respective territories.

Implementation Advice:



1. The governance system should exist under the umbrella of Provincial–Indigenous government-to-government relationships.
2. Redefine planning areas considering:
   a. Existing administrative boundaries, e.g., TSAs, LUs;
   b. Indigenous territories (likely multiple Indigenous groups in one planning area);
   c. Biogeoclimatic Ecosystem Classification (BEC) / ecosystem boundaries;
   d. Administrative practicality; and
   e. Other factors.
3. Establish local forest boards/planning tables that may be formalized through the overarching legislation described earlier (Recommendation 2).
4. Local forest boards for each planning area could include a range of groups, potentially including:
   a. Scientific experts;
   b. Land planners;
   c. General public;
   d. Resource professionals (foresters, biologists, ecologists, hydrologists); and
   e. All land-based sectors (e.g., mining, oil & gas, tourism, highways, etc.).
5. Responsibilities of local forest boards may include:
   a. Tailoring provincial goals and priorities to their planning area;

b. Monitoring adherence to and reporting on their region's status and progress towards provincial goals and priorities;
c. Overseeing transition to an updated management system;
d. Participating in and possibly overseeing implementation of regional land use planning processes;
e. Establishing and monitoring (possibly involved with approving changes) in regional partitions, e.g., Protected, Converted, Consistent; and
f. Supporting public reporting.

6. Provide local forest board with appropriate support to meet their responsibilities including:
   a. Mapping;
   b. Scenario development;
   c. Training & education of participants;
   d. Scientific methods; and
   e. Others?
7. Adopt formal Terms of Reference for each local forest board that conform the overarching legislation and provincial guidelines.
8. Although this recommendation has much broader application, it could be used as a mechanism to help implement other aspects of this report.

5. Public Information

Provide the public with timely and objective information about forest conditions and trends.

Rationale:

As we indicated earlier in this report, we frequently found local governments, organizations, and individuals that wanted to be better informed about the condition of old forests but were not sure where to go for accurate and objective information.

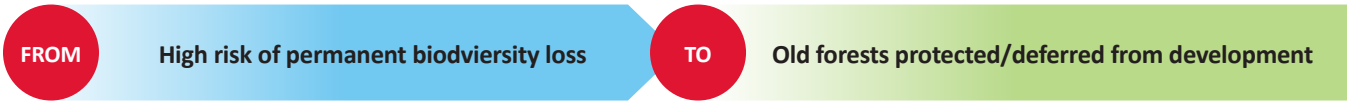
1. **Build Trust & Reduce Bias:** As stated before, very few people we heard from said they trust information regarding the condition of BC's forests. Many feel the information provided to the public around BC's forests is biased, regardless of its source.

2. **Reduce Polarization:** There are very strongly held views regarding how best to manage BC's forests and those views are largely based on where people are getting their information. Although opposing viewpoints may never be fully reconciled, we can reduce the level of conflict and improve the quality of dialogue with greater access to unbiased science-based information.

3. **Foster Engagement & Wisdom:** Having an informed public can foster increased public engagement and hopefully bring more wisdom and stability to the forest management process.

Implementation Advice:

1. Provide the public with proactive reporting on forest condition through an objective, professional voice, free from political influence. Options for this may include:



a. Formally expanding the role of the Forest Practices Board;
b. Creating a statutory provision for independent reporting by a senior public servant with an ombudsperson-type role;
c. Reporting through an independent scientific panel; or
d. Establishing a new office.

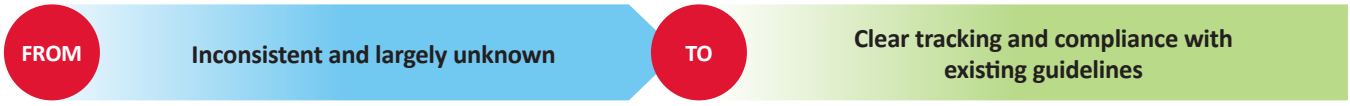
2. Significantly enhance public reporting on forest conditions by producing regularly scheduled updates, including:
   a. Local scale reports, perhaps building on the Multiple Resource Values Assessment (MRVA) approach;
   b. Regional scale or value-themed reports (e.g., biodiversity), possibly by expanding the work already underway through the Cumulative Effects Assessment initiative; and
   c. Periodic Provincial Forest Condition reports (e.g., every five years).
3. Where available, utilize existing internal data gathering and analysis processes to inform reporting that is specifically aimed at the public.
4. Ensure reports provide context and relevant commentary to make them meaningful to the public. (Answer the contextual "so what?" question).
5. Have this new public reporting function provide an annual report on its activities and how it achieved its goals during that year.

Immediate Responses

6. Immediate Response to Ecosystems at Very High Risk

Until a new strategy is implemented, defer development in old forests where ecosystems are at very high and near-term risk of irreversible biodiversity loss.

Rationale:



There are some areas of the province where failure to act now could lead to the permanent loss of rare or unique ecosystem components contained in old and ancient forests. Many of these areas are the primary subject of a public call for protection of old forests. They tend to be iconic stands in relatively close proximity to public access or population centers and have a number of other economic, ecosystem services and intrinsic values that are important to a wide range of the general public. A system of new, more sustainable, and effective approaches to managing biodiversity and other old-forest values will take some time to fully develop and implement. In the meantime, any of these stands that are intended for harvesting or other significant disturbance should be deferred from development.

Implementation Advice:

1. Act on this recommendation as quickly as possible.
2. Use the information already compiled by FLNRORD staff, supplemented by other information available in the scientific community, to identify the ecosystems at highest risk to permanent biodiversity loss.
3. Consider the following old forest areas (and possibly others) for short-term deferrals:
    a. Any BEC variant with less than 10% old forest remaining today;
    b. Old forest in any BEC – Landscape Unit combination that has less than 10% old forest today;
    c. Ancient forests (e.g., forests >500 years on the coast and wet ICH) and forests > 300 years in ecosystems with higher disturbance intervals);
    d. Areas with a high potential to contribute towards larger ecosystem resilience; and
    e. Areas with a Site Index of >20m.
4. Determine which of those areas are subject to harvesting or other significant disturbances within the next two years. We would expect the FLNRORD staff to have this information or be able to collect it from licensees.
5. Establish a prioritized and spatialized list of potential deferral areas and verify them on the ground and with recognized experts.
6. Use various mechanisms as needed for deferrals, for example:
    a. Instruct BCTS to cease development and defer selling timber in the areas;
    b. Request authorized tenure holders to voluntarily defer development;
    c. Decline to authorize new permits or licences in deferral areas; and
    d. If necessary, establish regulatory provisions and incentives to enable deferrals.
7. Carry out an economic impact analysis of deferrals.
8. Establish a fair and equitable process to mitigate economic impacts to holders of small area-based timber tenures (e.g., replacement area or compensation).
9. Provide a public progress report on how these priority areas have been addressed at the end of the first year after this report.
10. After two years, confirm which temporary deferral areas will be subject to protection or further management measures.
    a. For each identified area, determine whether biodiversity conservation requires full exclusion from development or special management.
    b. Establish legal protection for areas confirmed to be critical for biodiversity conservation.

7. Compliance with Existing Requirements

Bring management of old forests into compliance with existing provincial targets and guidelines for maintaining biological diversity.

Rationale:

The existing targets for retention of old forest reflect policy decisions that balanced risk to biodiversity with economic considerations more than two decades ago. While we feel these should be revisited

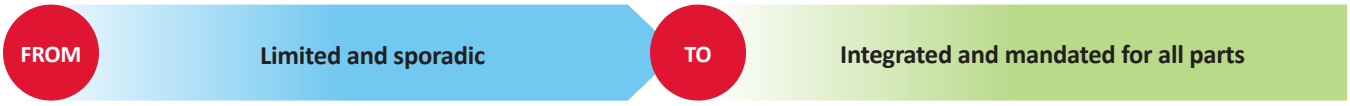
and updated to reflect current circumstances (see recommendation 10), we have been shown by government staff and scientists that some regions are below the approved targets, and at higher biodiversity risk than current policy allows. We also learned that some of the existing provisions are not enforceable because legal commitments are vague and an approved FSP takes precedence over discretionary decision-making.

1. **Reputation:** The province's reputation as a forest land steward is at risk if it has failed to comply with or enforce its own legal orders and targets, even if this is largely because it didn't implement an adequate system to track those targets. This is not about effectiveness or changing management approaches – it is simply about knowing what is happening and taking corrective actions.

2. **Unknown Compliance:** Although there are existing guidelines and legal orders and targets for protection of old forest, we don't have an adequate system of tracking compliance with, and enforcing those requirements.

3. **Urgency:** Many of the existing targets already reflect a negotiated compromise, where a high risk to biodiversity was accepted in favour of economic benefits. These targets are already below scientifically accepted minimums and failure to achieve them increases the risk of moving into critical biodiversity risk situations and possible irreversible losses.

4. **Setting a Base:** An accurate assessment of where we are at with respect to our targets and how we are managing OGMAs now is essential to future decision-making.



Implementation Advice:

1. Determine a schedule for completing this work starting with priority areas, e.g., Kootenay, Vancouver Island and Central Interior regions, moving towards less urgent areas over time, e.g., Muskwa-Kechika, Haida Gwaii, Clayoquot and the Great Bear Rain Forest.
2. Using the current work occurring under the auspices of the Cumulative Effects Assessment initiative (e.g., October 2018 Biodiversity Analysis for Arrow and Kootenay) as an example or template, complete an evaluation for all priority regions of the province by the end of 2020 and the entire province by the end of 2021 to answer the questions:
    a. Are legal targets being met with the OGMA layer?
    b. Is there enough old forest to meet aspatial old seral targets?
3. Where the analysis shows non-compliance, take the necessary steps to bring the area into compliance as soon as practicable, including:
    a. Deferring development in any BEC variant/Landscape Unit/Site series old forests that are below targets (including existing development permits);
    b. Amending OGMAs where necessary to ensure that they contain old forest, have enough area to meet both mature and old targets, and are adequate (functional shape, size and level of incursions);
    c. Clarifying, strengthening, and standardizing the OGMA amendment requirements and procedures;
    d. Ensuring the provincial government has the necessary tools (tracking and regulatory) and capacity to enforce the requirements.

Improve Management

8. Monitoring and Evaluation

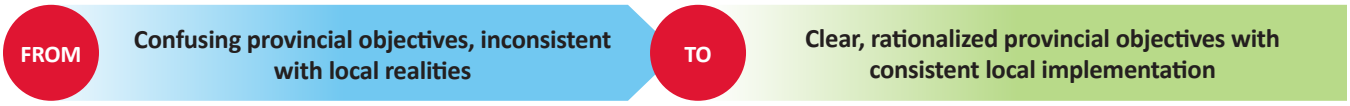
Establish and fund a more robust monitoring and evaluation system for updating management of old forests.

Rationale:

There is little value in setting objectives and targets if they are not monitored. Without monitoring we cannot know if they are being complied with or if they are effective. We heard from nearly every region of the province that there has been no formal monitoring plan for old growth management, even though the guidelines have been in place for more than two decades.

Sound, science-based management requires monitoring and evaluation of results. It also establishes the basis for adapting to what is learned, and to changing circumstances, which is especially important in view of the current pace of environmental change. Public confidence requires reporting and acting on those results.

This is a significant and relatively straightforward opportunity to improve management and demonstrate excellence.



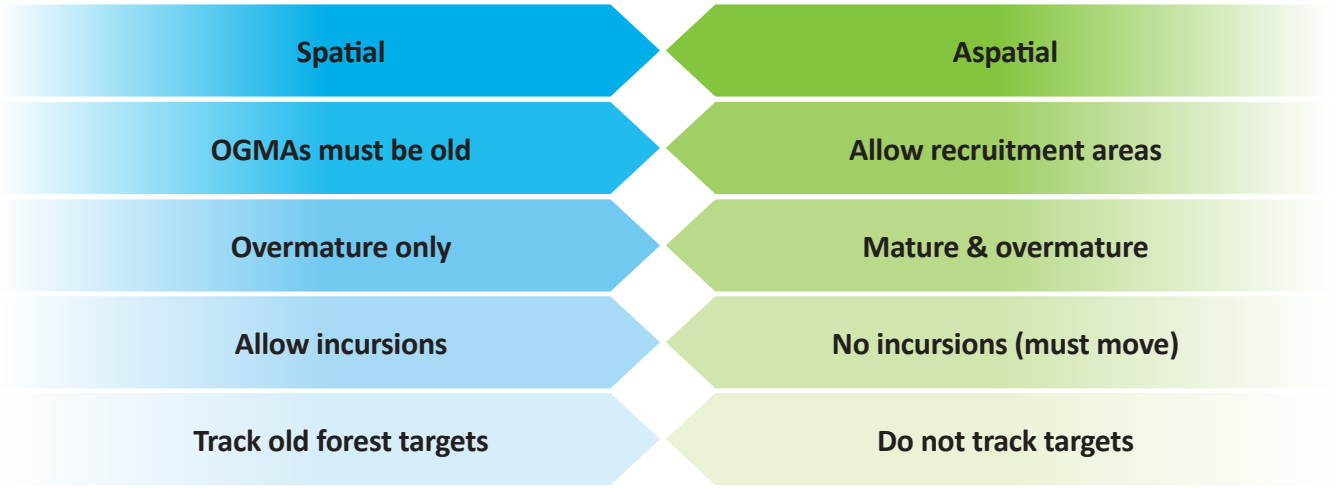
Implementation Advice:

1. Adopt a formal management discipline, such as adaptive management or continuous improvement, as the underpinning to monitoring, evaluation and update, but do not stall implementation of this objective choosing and adopting a discipline (note that scientists are generally more familiar with the adaptive management methodology).
2. Ensure that this system includes the core elements required for success, i.e.:
    a. dedicated research function;
    b. dedicated monitoring function;
    c. link to operations;
    d. regular updates; and
    e. objectivity.
3. Publicly report on activities undertaken in response to previous recommendation to update the monitoring and evaluation of old forests such as the FPB (2012) report and the assessments underway through the Cumulative Effects Framework, as soon as practicable.
4. Establish a dedicated organization, possibly building on the existing FREP program by expanding its mandate and resources to:
    a. Monitor implementation of and adherence to old forest orders, targets, and guidelines on an ongoing (scheduled periodic) basis across the province;
    b. Evaluate the effectiveness of old forest (and seral stage) management at all scales; and
    c. Update the management system for old forests based on the latest research and effectiveness audits on a periodic basis, e.g., minor updates every two years, major updates every six years.

5. Integrate government and external scientists, operations specialists, management experts and other specialists into this system to support information gathering and analysis, evaluation and providing options for updating the system.
6. Continue to develop and utilize standardize protocols for monitoring and evaluation of both compliance and effectiveness at achieving objectives (which may be multiple, including socio-economic).
7. Establish and maintain strong linkages between monitoring and evaluation results, research and inventory priorities, innovative practices trials (discussed elsewhere), periodic updates to practise guidelines and public reporting. This can be achieved through:
    a. Information protocols;
    b. Clear decision processes, authorities, and timelines; and
    c. Others means.
8. Use the information collected from this system to enhance public reporting of results and management responses (also see recommendation on forest condition reporting).
9. Ensure that regional planning tables drive regional reporting.

9. Setting and Managing Objectives and Targets

Establish a standardized system and guidance that integrates provincial goals and priorities to local objectives and targets.



Rationale:

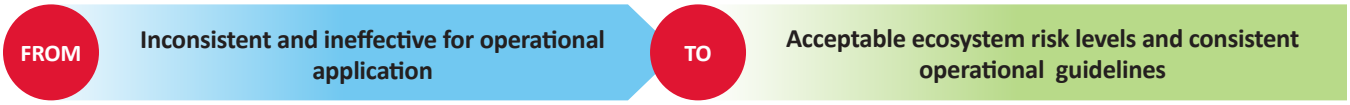
1. Local flexibility within a clearly defined framework: The current management system for old forests is applied inconsistently and often ineffectively across the province and is not achieving its original intent. Many areas have different methodologies, often arising from a higher-level plan, e.g., CORE, LRMP, or when they were applied. The figure below illustrates some aspects of the variation across the province. Local areas want flexibility and feel that the current system often sets inflexible rules that do not work in their local situation. However, almost all local areas did recognize (and support) that their local management strategies had to conform to some larger objectives and in a manner that allows the Province to track how each area was conforming and contributing to these larger objectives.

2. Changed circumstances: The original guidance for the management of old forests set out in the Biodiversity Guidebook and the Landscape Planning Unit Guide two decades ago were not fully and consistently implemented. Since that time, some ecosystems have been heavily disturbed, circumstances have changed due to climate change, and risk to biodiversity has increased. The introduction of FRPA in 2002 reduced the ability of government managers to directly control and coordinate activities on the landscape, and many current managers and professionals were not involved in the creation of the current guidance and likely don't fully understand its intent.

3. **Incorporate what has been learned:** Many managers expressed frustration because they feel the OGMA approach is not working and that many OGMAs are ineffective and sometimes managed inconsistently with natural forest processes (e.g., Interior Douglas Fir NDT 4, where lack of management is resulting in a considerable increase in the risk for insects, disease and catastrophic wildfire). These managers need support to have an informed voice in the system, which will in turn make the overall system more effective. We have also seen modified approaches taken in some regions, such as the Great Bear Rain Forest and Haida Gwaii, which can inform update provincial approaches.

4. **Consistent Implementation:** A new government policy that prioritizes conservation and management of forest biodiversity will require the existing guidelines to be adjusted, and implementation of some of the original intent to be reinforced. Having an operational framework that regularly provides the latest guidance to front-line workers and effectively engages those workers in developing this new guidance, helps to ensure that the management of old forests is implemented consistently across the province on an ongoing basis. The following illustrates a sampling of the range of OGMA approaches.

Implementation Advice:



1. Clearly define and communicate the government's overarching objective(s) and priorities for the management of old forests in guidance or standards that provide:
    a. clear direction on the intent; and
    b. provide flexibility for local adaptation.
2. Establish a scientific and technical panel to provide oversight and advice to developing updated guidance, including government and external experts, and incorporating operational knowledge and experience.
3. Establish a scheduled review and update process for guidance.
4. Review the Biodiversity Guidebook (1995) and the Landscape Unit Planning Guide (1999) and determine whether it would be better to update or replace them. In doing so, decide where and how to place:
    a. Biological diversity: Should be addressed for the whole landscape, including seral stage distribution and grasslands; and
    b. Old forest: Focus on categories of old, ancient, and rare forests and the various values and objectives assigned to them.
5. Provide for consistent processes and administrative requirements across the province, while accommodating the diversity of ecosystems, disturbance history (natural and anthropogenic), and community values, e.g.:

a. Reporting requirements, i.e., content, geographic unit, timing;
b. How to buffer for unplanned events, e.g., wildfire, disease pests, slides, etc.;
c. Assign clear objectives to every OGMA);
d. Consistent, rigorous, objective and transparent processes for assessing options, including risk to ecological values and economic costs and benefits; and
e. Adopt a standardized, responsive process for amending (moving) spatial designations.

6. Incorporate an extension and education component tailored to practitioners, managers, and decision-makers.

10. Update Biodiversity Targets and Guidance

Update the targets for retention and management of old and ancient forest.

Rationale:

Implementation of the aforementioned recommendations will ensure we are meeting current targets, establishing a more inclusive and informed governance process and providing updated guidance to managers. Establishing the recommended overarching commitment to ecosystem health will also require us to update our retention targets and improve our guidance for retention and management of old forests.

1. **Ecosystem Health:** Scientific research provided to the panel projects that almost all of the province's most productive forest ecosystems are, or very shortly will be, in a high biodiversity risk scenario and the rest of the ecosystems will move into a similar situation under the current old forest policies and practices. This will result in lower ecosystem resilience, loss of species and compromised ecosystem services in many areas.

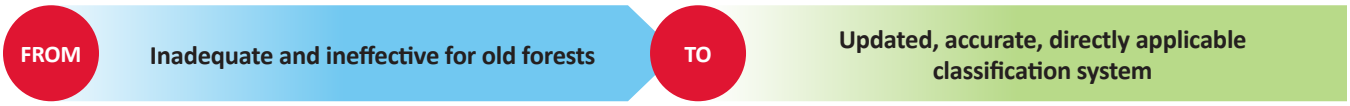
2. **Use Best Science:** Developing new guidance is of little value if it is not incorporated into both our targets and practices. Current targets have been in place for up to 25 years and no longer reflect today's reality. It is time to reset them to incorporate the latest research and practises and recognize the impacts to old forests that have occurred in the intervening time.

3. **Shifting Paradigm:** The survey conducted as part of our review and the panel's outreach process suggests there is widespread support for conserving and maintaining biodiversity and other old forest values. Many argue that increased retention of old forest is necessary to achieve this, and to provide a buffer against uncertainty. We heard concurrently the sentiment that families and communities that depend on harvesting and manufacturing timber from old forests need to be considered in any change.

4. **Conserve Future Options/Choices:** Very old and ancient primary forests have evolved over a long time, including some that have not experienced significant stand-replacing events. As a result, these forests are repositories of biota and process we may not even know or understand. This makes them an extremely important buffer against species extinction, climate change, and lost future opportunities. Many of these irreplaceable forests are in the THLB and are subject to harvesting. Harvesting them would mean their inherent value and future options will also be lost.

Implementation Advice:

1. Re-evaluate the assignment of biodiversity risk in light of overarching commitments to ecosystem health and managing biodiversity risk.
    a. Develop a schedule that prioritizes areas where we have the greatest risk to biological diversity under the current targets and management regime.
    b. Utilize information and advice from evaluation work and updated guidance to inform implementation.
    c. Formally incorporate the importance of very old or ancient forests and ecosystems by adding new classifications and specific management targets and guidelines.
    d. Be specific about whether the objectives of each area identified are required to be left undisturbed or managed to maintain attributes.
    e. Address connectivity and multiple-scale objectives.
2. Where there is a deficit of old forest necessary to meet the updated targets, incorporate a formal recruitment strategy.
    a. Conduct analysis of the expected socio-economic benefits and costs, both short and long term.
    b. Involve local communities in making decisions and choosing options.
3. Verify that OGMAs have the intended attributes through LIDAR, ground-truthing, or other means.
4. Adopt a standard set of provincial guidelines for OGMAs in each OGMA category as illustrated in the figure below.



OGMA GUIDELINE CONSIDERATIONS

1. What is an old forest (OGMA), i.e., must be old, must be big, etc.
2. Guidelines for the size and shape for old forest areas to achieve the objectives of that area.
3. Types of management activities that are allowed in those areas, e.g., stand treatments to maintain NDT properties.
4. Incursions — when allowed, what type of incursion.
5. Requirements for unavoidable incursions (e.g., need replacement areas).
6. How to move an OGMA.

5. Eliminate generalizing, including ensuring that Protected and Conversion zones (see recommendation 3) are allocated to the proper BEC/LU/SI category.

11. Inventory and Old Forest Classification

Improve the mapping and classification of old forests to recognize multiple values.

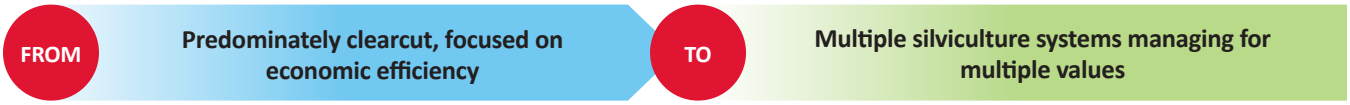
Rationale:

1. Refine Guidance: The current system uses age class as a proxy for old forest — over 140 years in the interior and over 250 years on the coast. Only using age class does not recognize the inherent complexity in old forests and the range of values that they contain. We cannot separate whether an area was categorized as an OGMA because of its biodiversity, spiritual, recreation or other values and

it is very difficult if not impossible to set parameters on how to manage the area to protect its values. Even full protection can fail if the value being protected requires some level of intervention, e.g., maintaining structure in old fire-maintained ecosystems.

2. **Recognize Variation:** The mature and over-mature age classes were created from a timber perspective and are valuable from that perspective, however, these age classes need to be further refined when managing for genetic or biological diversity. A 250-year-old Douglas Fir stand that has regrown after a disturbance is completely different than a 250-year-old Douglas Fir stand in a 3,000-year-old undisturbed ecosystem in terms of genetic, scientific, ecological, ecosystem function and intrinsic values.

3. **Protect Values:** Our current classification does not allow us to identify important values that we may all want to protect. It is impossible to differentiate between an area that has old big trees that has value for recreation and some minor habitat from another area that contains ancient genetic material that may help save landscapes or contain cures for diseases that help save mankind, or have critical habitat necessary for the survival of an important species.



4. **Improve Management:** The quality and even existence of forest and BEC mapping in the province is highly variable ranging from very good (not excellent) to poor or non-existent. While this mapping has improved over time, most OGMAs and strategies for the management of old forests were implemented 25 years ago when much of this information was of a much poorer standard. Numerous errors have been found where old forests that were incorrectly labeled or mapped or in some cases don't even have old trees. Some regions have undergone adjustments, but many areas still have poor information or haven't updated their old forest strategies to the new information.

Implementation Advice:

1. Refine the Province's Natural Disturbance Types (NDTs) to a finer classification system. For example, one submission said that there could be as many as 8 refinements to fire regime NDTs.
2. Work with a team of inventory and habitat mapping specialists and scientific experts in the management of old forests and classification to develop a new classification system for old forests.
    a. It might be something like habitat mapping, i.e., considers a number of factors to assign a classification.
    b. Refine the OGMA name to reflect the objective, e.g., biodiversity, iconic, ancient, recreation, spiritual, etc.
3. Add new age classes to the current inventory system.
    a. Recommend 250-500 years, 500-1,000 years and 1,000 years plus (confirm these new age class definitions with old forest experts).
4. Refine mapping of all old forest in the province:
    a. 100+ years for the interior, 140+ years for the coast;
    b. Do at a relatively detailed level;
    c. Ideally this would adopt the use of LIDAR for these areas; and
    d. Continually verifying that OGMAs have the intended attributes through LIDAR, ground-truthing, or other means.
5. Establish a program with industry to acquire their inventory information for public use.

12. Innovative Silviculture Systems

Create a silviculture innovation program aimed at developing harvesting alternatives to clearcutting that maintain old forest values.

Rationale:

1. **Improve Acceptance:** The clearcut (including clearcut with reserves) silviculture system is the mainstay of the BC forest industry because, as numerous industry representatives told the panel, it is the most cost-effective. However, this system is also the most contentious because it often significantly compromises many other values on the land (e.g., biodiversity, tourism, Indigenous sustenance use) and many ecosystem services. Most of the communities, local governments, local organizations and citizens we interviewed from across the province told us they were frustrated that their landscapes were being cleared, their local values were being compromised (particularly water supply) and they were getting little or no local return or compensation for these impacts. Areas that used gentler silviculture systems to mimic NDT patterns or enhance ecosystem services (e.g., water retention, visual, and habitat), were generally deemed more acceptable.

2. **Ecosystem Heath:** Managing for ecosystem health and low biodiversity risk requires maintaining a percentage of the ecosystem in as close to its original state as possible, but very few of BC's NDTs yield stands look or function like clearcut systems. Even the fire-dominated northern NDT 3 areas (frequent stand replacing events) yield landscapes that are a mixture of species, standing dead and live trees and varying structure. Managing for attributes that mimic the NDT type can support ecosystem health at a stand and a landscape level plus preserve the integrity of many ecosystem services.

3. **Increase Access:** Using silviculture systems that are more gentle and manage for multiple values are generally more acceptable to the wider public because they tend to be gentler on the land, have a higher chance of protecting important community ecosystem services and result in forests that are more appealing because they look more like the pre-harvest forests. As the public gains trust with these systems, they should generally become more amendable to timber harvesting thus increasing access to the forest land base.

4. **Reduce Conflict:** In much of British Columbia, the forest industry has played out as clearcut or no-cut, often with little attempt to manage for multiple values. This tends to foster an all or nothing approach, i.e., allow or don't allow industrial activity, which leads to tensions and compromises that may not be necessary if more balanced options were available. The variable retention system used on parts of the Coast starts to move away from this hard distinction, as do selective systems in the Interior Douglas Fir zone. While conventional clearcut harvesting (with appropriate measures to protect water, soil, and critical habitat) may still be appropriate in a few areas (e.g., second growth plantations), other approaches are needed to achieve additional public objectives across the land base.

5. **Operational Efficiency:** There are pockets that use, and there have been sporadic attempts at creating, silviculture systems that manage for multiple values and are more acceptable to the public, but they generally didn't get the appropriate support, have a longer-term program framework and/or become adopted a wider scale. Having a dedicated program that designs, operationally tests,

measures, and reports on silviculture systems aimed at optimizing a suite of ecological and socio-economic objectives at an operational level increases options available to forest managers.

6. **Increase Overall Returns:** The current clearcut systems preserve relatively few valuable ecosystem services. There are examples of alternate systems such as Interior Douglas Fir on dry sites, where continuous shelterwood systems are needed because clearcut sites are generally too hot for seedling survival. Due to climate change, this same condition may also be true of Cedar-Hemlock sites in the near future. Alternate silviculture systems tend to preserve more of the inherent ecosystem services (e.g., Shelter for seedlings, filtered water, cooler streams for fish, carbon storage, habitat), make the area more conducive for other forest sector businesses, and reduce mitigation costs for other sectors, all of which in turn tend to increase overall net returns from those areas.

Implementation Advice:

1. Implement a program that supports a collaboration of industry, operations practitioners and scientists to develop and implement a set of silviculture systems that are cost-effective and maintain or enhance other values, e.g., maintain each NDTs old forests as close as possible to their inherent states, water retention, habitat, etc.
2. Develop partnerships with:
    a. Other governments (e.g., Forestry Canada and Indigenous);
    b. Existing research organizations (e.g., FP Innovations, universities, non-profits);
    c. Forest licensees (especially community forests and other area-based licensees);
    d. BC Timber Sales program;
    e. Local governments and water purveyors;
    f. Wildlife management programs;
    g. BC Climate Action Secretariat; and
    h. Other potential public and private sector collaborators.
3. Test a series of silviculture systems and variations to achieve the previous goals, i.e., manage old forests to effectively achieve a defined suite of values and objectives, recruit and encourage old forest attributes where required to meet long-term objectives; and demonstrate and encourage new practises.
4. Once tested, make these proven silviculture systems the default requirement for each NDT and/or ecosystem type and provide clear guidance on when these systems might be varied because of local operational constraints.
5. Ensure that there is support for operations to effectively utilize these systems, such as:
    a. Facilitate communication and collaboration across jurisdictions and disciplines;
    b. Facilitate knowledge transfer to practitioners;
    c. Involve local residents and stakeholders; and
    d. Ensure that the stumpage system provides appropriate offsets to cover extra costs.

Orderly Transition

13. Transition Planning at the Provincial and Local Levels

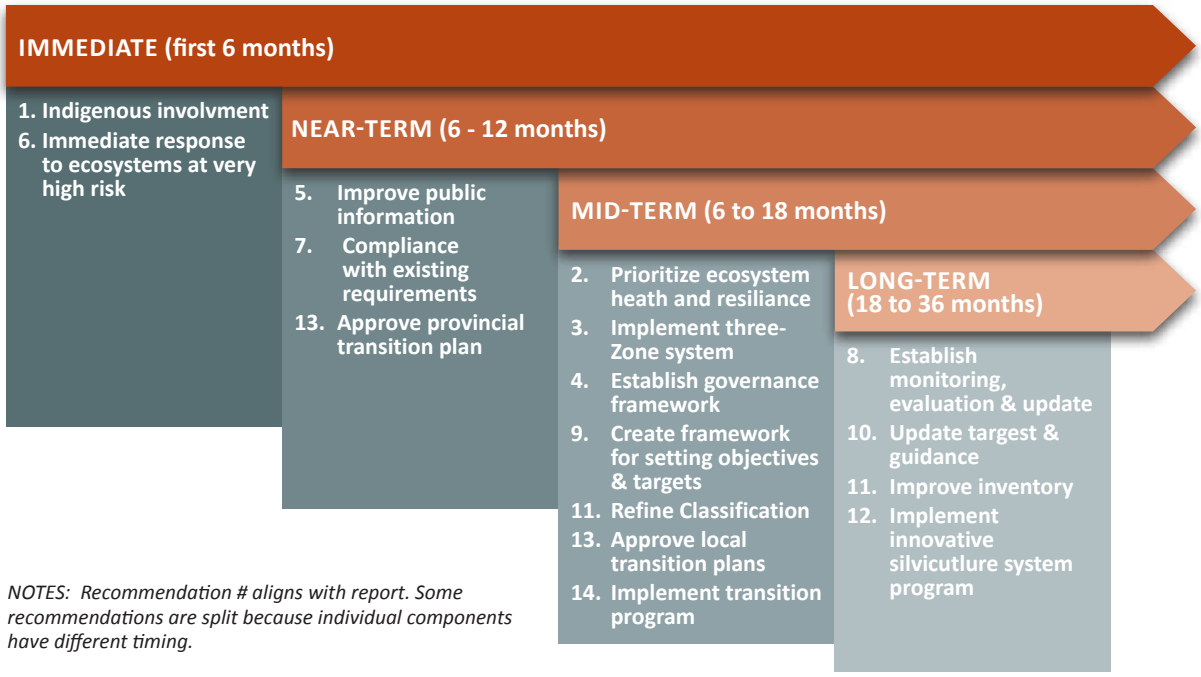
Once developed, implement the new policies and strategies for the management of old forests through mandatory provincial and local transition plans that define, schedule and monitor the process.

Rationale:

1. **Credibility**: Past attempts at changing the management system for old forests have not been as effective as they could have been because they lacked formal implementation plans, comprehensive implementation, appropriate resourcing and effective public accountability mechanisms. In light of this history, there is significant skepticism about this current Old Growth Management review process. This can be mitigated to some degree by planning for results with mandatory, publicly accountable transition plans.

2. **Avoid Unnecessary Harm**: In the absence of mandatory, publicly accountable transition plans, history has shown us that we tend to fall back to old habits, further compromise ecosystem health, continue to impact other forest values and create more negative socio-economic impacts.

3. **Proactive:** The primary forest is finite and diminishing, and each area's transition requirements vary depending on how much primary forest currently exists, economic conditions (expansion or contraction of the THLB) and land-use decisions. Areas that proactively plan for this transition generally have more options than areas that only react to the situation when they run out of available timber.



4. **Stability:** At a larger scale, these transitions are attempting to address destabilizing events, but it is possible to provide some level of stability by proactively planning ahead, being accountable for achieving targets in mutually supported mandatory plans and having the ability to adjust those plans as circumstances evolve. These parameters improve an area's ability to adjust their trajectory and work their way through inevitable economic cycles.

Implementation Advice:

1. Recognize that transitions will occur at:
    a. The provincial level from the resultant old forest policy and strategy that will arise from these recommendations; and at
    b. The local level from:
        i. Deferrals and long-term strategies to address immediate threats to ecosystems;
        ii. Moving to compliance with current biodiversity targets; and
        iii. adopting updated biodiversity targets, OGMA guidelines and practices.
2. Immediately engage Indigenous leadership at the appropriate level (provincial and/or local) in each of these transitions (this includes developing a quick response plan to recommendation #6).
3. Review the government's internal organization to ensure that the strategies and priorities for management of old forests will be successfully implemented:
    a. Inter-ministry accountabilities, authorities, and coordination;
    b. Clear cross-government priorities and direction to staff;

c. Adequate staffing and resources;
d. Support for the new planning systems; and
e. Effective multi-disciplinary processes.

4. Develop and formally approve an overall implementation plan that will accompany the provincial old forest policy and strategy that will result from this report's recommendations. Implementation recommendations include:
   a. Done under a Province-Indigenous government-to-government umbrella;
   b. Needs to engage various government, scientific, operational and planning experts; and
   c. Should include a clear schedule (the following provides an overview of the panel's view on prioritization and broad scheduling of the recommendations in this report).

NOTES: Recommendation # aligns with report. Some recommendations are split because individual components have different timing.

5. Provide for local transition plans in legislation (perhaps initially in FRPA and the Old & Gas Activities Act, but eventually in the new proposed overarching legislation).
   a. Make transition plans a mandatory consideration in AAC determinations by including a new clause in the *Forest Act* Section 8(8)(a).
   b. Provide direction and authority to statutory decision makers to consider the impact of authorizations on the objectives of a transition plan.
6. Develop government-led local transition plans on a scheduled, prioritized basis.
   a. Begin immediately in management units with the:
      i. Highest risk to biodiversity;
      ii. Most constrained timber supply (hard to find the AAC); or
      iii. High public values in the primary forest that are not compatible with conventional timber harvesting.
   b. Complete remaining plans in conjunction with scheduled TSRs.
7. Recognize the unique ecological, social, economic, and timber supply circumstances of each management unit and its dependent communities and develop a plan specific to its needs.
   a. Develop implementation plans collaboratively with the most directly affected communities.
   b. Recognize and address the potentially disproportional impact on small area-based tenures.
   c. Conduct a realistic assessment of economic diversification opportunities and options, including the time required to realize them, and the probability of success (could be value-added manufacture of wood products, botanical forest products, tourism, and commercial recreation, etc.). Ensure they are viable options — not just ideas.

d. Assess the opportunities/suitability of the forest to alternative silviculture systems outside the Converted zone.
e. Assess timber operations' dependence on old forests for economic viability and possible transition to second growth.

8. Review the stumpage system to evaluate: the true direct and indirect costs and effects of silviculture systems that are carried out; its effect on the Province's ability to meet biodiversity targets and other established old forest objectives; and its effect on potential silviculture innovation.
9. Explore the potential of a land acquisition fund to enable the purchase of land or covenants to retain or recruit old forest in ecosystems at high biodiversity risk, or otherwise of high public interest.
10. Report publicly on implementation of transition plans.

14. Transition Support for Communities

Support forest sector workers and communities as they adapt to changes resulting from a new forest management system.

Rationale:

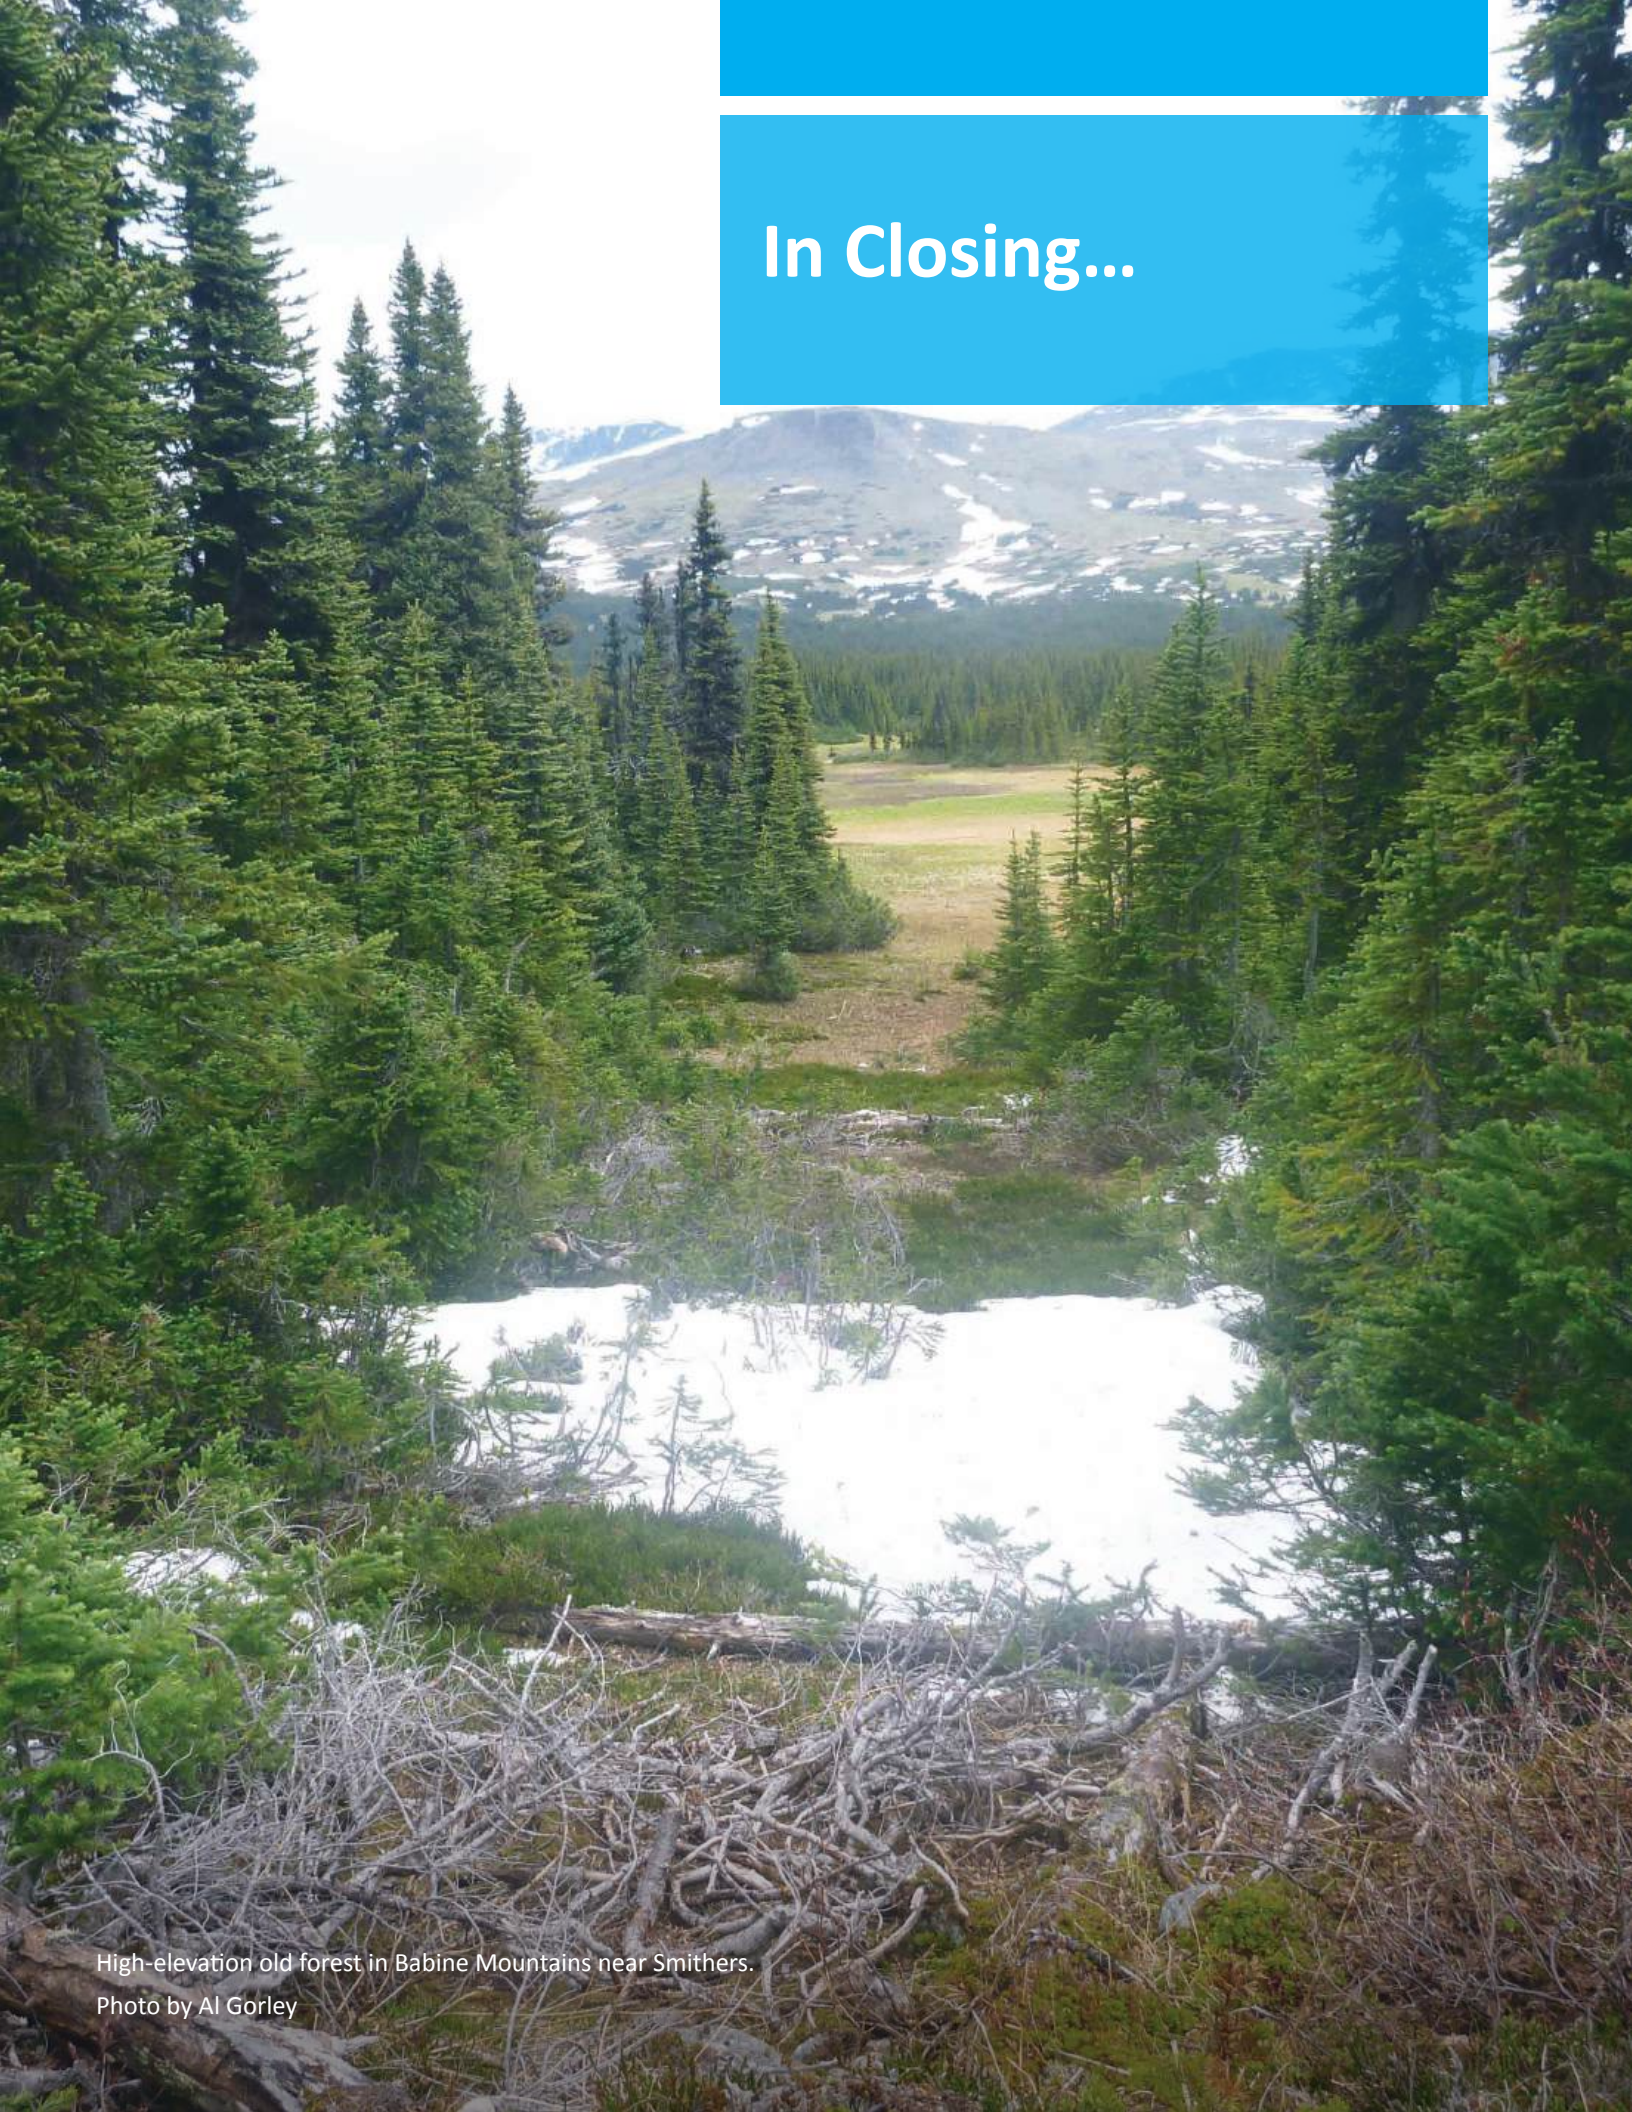
1. Proactive versus Reactive: There are already a number of areas in the province that are facing significant economic restructuring because they are at or near the point of diminished timber supply. It is much better to be proactive and manage this transition when we still have options versus reacting to a crisis when it is upon us, e.g., a mill shutdown.

2. Local Dependence: The importance of the forest sector to the economy and social well-being of the province as a whole is diminishing but still important. This broader picture belies the fact that there are still a significant number of local areas that are highly dependent on this sector and any transition away from a timber-based economy will drive deep into the core and possibly even the economic survival of those areas. Those communities will need support to reform themselves now and develop other options while they still have choices.

3. Fairness: We live in a society where the generally accepted convention is to support communities that bear a disproportional share of the negative consequences from broader societal decisions. The support we provide them should be sufficiently substantive to meaningfully mitigate the effects of those consequencess.

4. Foster Confidence: There is a tremendous amount of local uncertainty and lack of confidence within the timber sector, and it is too late to pretend that things are fine or to try to avoid the inevitable shortages of timber. Areas that are facing economic changes are generally aware that negative changes are coming, and they need support in planning a scheduled change. This will help foster confidence and support for the larger system in those areas.

5. Improve Local Economies: There are still forest-based economic options that can be realized in many areas. On their own, these options may not offer the same level of local employment or economic spin-offs as the timber sector in the short-term, however they may be much more sustainable in the long-term. There are still probably significant opportunities for continued local timber sector benefits if new innovative systems can be used.



Implementation Advice:

1. Require a socio-economic transition plan for every area where the forest transition plan may result in a higher negative impact than a defined threshold to local, regional or provincial social and economic values.
2. Provide adequate funding for plan implementation, including:
    a. Capacity to investigate and facilitate local and regional economic opportunities;
    b. Bridge financing assistance for businesses;
    c. Workforce adjustment; and
    d. Conservation funding (e.g., carbon, biodiversity).
3. Develop and implement policies and programs aimed directly at promoting local manufacture, especially for value-added specialty and high-value products.
4. Develop and implement policies and programs aimed directly at generating sustainable economic benefits from forest-focused tourism, e.g., Improved access, facilities and interpretation for visiting big trees and unique ecosystems (e.g., Similar to Cathedral Grove, Ancient Forest Recreation site etc.) and other non-timber forest businesses.
5. Review existing administrative practices, including the stumpage system, to ensure they do not inhibit local economies.

IN CLOSING…

Our strategic review of the management of old forests led us to conclude that despite the good intentions and efforts of many people, including government personnel associated with forest management development and implementation, the overall system of forest management has not supported effective implementation or achievement of the stated public objectives for old forests. This has not come about because of any one group or decision, but by a pattern of many choices made over several decades, within an outdated paradigm.

Our current system of forest management emerged in the middle of the of the 20th century, when the provincial policy was focused on generating economic wealth and "building the province" by monetizing the vast natural supplies of timber and converting them to tree farms. Only later, especially through the 1990s, did conservation and management for ecological values across the landscape receive serious attention. Since that time, a great deal of effort has gone into creating protected areas, planning for multiple uses of forest lands, and designing systems to manage forest practices that respect a range of values including biological diversity. The underlying timber policy remained oriented toward a sustained yield of timber but was now somewhat constrained by these new policies and practices.

Our ever-expanding understanding of forest behavior and management, as well as the effects of climate change, have made it clear that we can no longer continue to harvest timber and manage forests using the approaches we have in the past while also conserving the forest values we cherish. We therefore have to be honest with ourselves and collectively and transparently make the difficult choices necessary to ensure future generations of British Columbians can enjoy and benefit from our magnificent forests, as we have done.

Forest Stewardship Within Pacheedaht Territory
Pacheedaht Chief & Council, Port Renfrew, BC
April 12th, 2021

Pacheedaht First Nation holds unceded Aboriginal title and rights in our Territory, which is located on the southwest coast of Vancouver Island. We have a spiritual connection with our Territory, and our culture is based on our relationship with our lands and resources. We have inherent governance rights and sacred responsibilities to manage the human use of resources in our Territory.

Pacheedaht is concerned about the increasing polarization over forestry activities in our Territory. Decisions about the use of our forestry resources in our Territory need to be made by Pacheedaht. Pacheedaht has always harvested and managed our forestry resources, including old-growth cedar, for cultural, ceremonial, domestic and economic purposes. Our constitutional right to make decisions about forestry resources in our Territory, as a governing authority in our Territory, must be respected.

We are in the process of undertaking an Integrated Resource Stewardship Plan that will be developed by our community, for our community and will be led by our hereditary and elected leaders. Our Stewardship Plan will include the identification of special sites, traditional use areas and places where conservation measures will be in place. Given our governance rights, this Stewardship Plan must guide forestry activities in our Territory. To provide our community with the time necessary to develop our Stewardship Plan, we have secured commitments from tenure holders and the government of British Columbia to suspend and defer third-party forestry activities within specific areas identified by Pacheedaht. This will result in the implementation of an immediate interim conservation measure. We are also engaged in treaty and other government-to-government negotiations with British Columbia and Canada to recognize our Aboriginal rights, including governance rights.

Our rightful ownership and management of forest resources within our Territory need to be acknowledged. All parties need to respect that it is up to Pacheedaht people to determine how our forestry resources will be used. We do not welcome or support unsolicited involvement or interference by others in our Territory, including third-party activism. Pacheedaht needs to be left in peace to engage in our community-led stewardship planning process so that we can determine our own way forward as a strong and independent Nation.

A LETTER FROM ELDER BILL JONES

Hello all defenders of our sacred forests.

I am an elder in the community of Pacheedaht. We all have a role and a part in this and we need to appreciate and honour our differences. Difference is a good thing. Different strategies are a good thing. People of all ages and genders and races and cultures and classes need to walk together in order to help heal the wounds of colonialism and environmental destruction.

Get out to the woods.

Talk to each other, listen to each other. If you feel like somebody is not honourable take the time to communicate directly with them and meet them face-to-face to discuss your concerns.

We must trust that people involved in this movement are taking time out of their short lives and doing their very best to make positive change in this world. If people are willing to put themselves in this vulnerable position – of standing on a logging road or speaking out on the internet about the damage to our mother earth and the destruction of our sacred places – then we must trust that although we might not always say the right things or walk the right path we still deserve to be treated with respect.

The Fairy Creek watershed is a sacred place for many reasons. I have many stories about this area, from my own experiences as a child and young man and also stories that were told to me by my elders. It breaks my heart in half when I see these last remaining stands being ravaged so a few people can have jobs for a few more months.

For any of you who are non-indigenous or do not identify with your indigeneity, do your best to follow the protocols of the land and culture where you live but also know that lifelong learning happens for everybody, in every culture. You will make mistakes, as we all do, and you, like myself, will continue to learn until the day you die.

For those of you who are indigenous, remember that there are many voices within our communities and many different priorities and many different paths to take. Some of us have committed our entire lives to upholding or reviving our cultures and traditions and some of us [illegible] to that place early in life and some of us came to it late. We are men and women of all ages. Some of us live in cities, some of us live in the bush. Some of us live on reserves, and some of us live thousands of miles away from our homeland. We work in offices, we are loggers, we are miners, we are healthcare providers and teachers and students and activists. We, like everyone else, are wonderfully diverse.

These forests bring us the clean air that we need to breathe and the clean water that we need to drink and all the plants and animals that we need to sustain not only our bodies but also our spirits.

Be humble and remember why you have all crossed paths in the first place.

I'll say this again. Go for a walk in the woods.

Thank you all.

City of Port Moody

Council Resolution

March 23, 2021

RC21/164 (moved, seconded, CARRIED)

WHEREAS ancient high productivity (big tree) old growth ecosystems are one of the most valuable tourism, First Nations culture, wild salmon enhancing, biodiversity banking, and climate resiliency assets;

AND WHEREAS only a miniscule fraction of the planet's original, high productive, ancient forests remain in BC, the vast majority of which is slated to be eliminated through logging; including the headwaters of Fairy Creek, the last unprotected intact old-growth watershed on southern Vancouver Island; THEREFORE BE IT RESOLVED:

THAT the City of Port Moody formally oppose the logging of at-risk old growth forests as recommended in the report dated March 12, 2021 from Mayor Rob Vagramov regarding Old Growth Logging;

AND THAT the City of Port Moody call on the Government of British Columbia to immediately and permanently protect the Fairy Creek watershed from further logging;

AND THAT the City of Port Moody call on the Government of British Columbia to immediately defer logging in all at risk old growth forests, including all remaining high-productivity old growth forests, as identified by the independent Old Growth Strategic Review Panel, until all 14 of the panel's recommendations have been implemented;

AND THAT the City of Port Moody call on the Government of British Columbia to allocate funding to support the economic transition of affected communities away from unsustainable old growth logging, in the full spirit of Indigenous reconciliation where applicable, for the development of long term sustainable local economies and Indigenous Protected and Conserved Areas where applicable;

City of Port Moody

Council Resolution

March 23, 2021

RC21/164 (moved, seconded, CARRIED)

AND THAT the following resolution be sent to the Lower Mainland Local Government Association and the Union of BC Municipalities with this report, dated March 12, 2021 from the Office of Mayor Rob Vagramov regarding Old Growth Logging:

WHEREAS ancient high productivity (big tree) old growth ecosystems are one of the most valuable tourism, First Nations culture, wild salmon enhancing, biodiversity banking, and climate resiliency assets;

AND WHEREAS only a miniscule fraction of the planet's original, high productive, ancient forests remain in BC, the vast majority of which is slated to be eliminated through logging; including the headwaters of Fairy Creek, the last unprotected intact old-growth watershed on southern Vancouver Island;

THEREFORE BE IT RESOLVED THAT the Government of British Columbia immediately defer logging in all at risk old-growth forests, as identified by the independent Old Growth Strategic Review panel until all 14 of the panel's recommendations have been implemented, and support the transition of affected local communities toward more sustainable jobs.

AND BE IT FURTHER RESOLVED THAT the Government of British Columbia allocate funding to support the economic transition of affected communities away from unsustainable old growth logging, in the full spirit of Indigenous reconciliation where applicable, for the development of long-term sustainable local economies and Indigenous Protected and Conserved Areas where applicable.

OFFICE OF THE MAYOR
CITY OF NANAIMO, BRITISH COLUMBIA

March 31, 2021

Sent via email: premier@gov.bc.ca

The Honourable John Horgan
Premier of British Columbia
PO Box 9041 STN PROV GOVT
Victoria, BC V8W 9E1

Dear Premier Horgan,

Re: City of Nanaimo Councillor Ben Geselbracht Motion
Call For Immediate Protection Of All At-Risk Old-Growth Forests In BC

At the Regular Council meeting of the City of Nanaimo held on March 29, 2021, Council passed the following motion:

It was moved and seconded that:

WHEREAS ancient high productivity (big tree) old growth ecosystems are globally one of the most valuable climate mitigation and resiliency assets in terms of carbon storage, sequestration, protection against wildfire, storage of water and bank of biodiversity;

AND WHEREAS, of the miniscule amount (2.7%) of the original high productivity (big tree) old-growth forests that are left (less than 1% of BC's total current forested area), 75% are still slated to be eliminated through logging; BE IT RESOLVED

THAT the City of Nanaimo call on the provincial government to immediately defer logging in all high productivity, rare, oldest, and most intact old-growth forests as recommended by the Old-Growth Strategic Review, until all 14 of the panel's recommendations have been implemented; including deferrals in such at-risk old-growth forests as, the head waters of Fairy Creek, the Upper Walbran Valley, Nahmint Valley, Eden Grove, Edinburgh Mountain, Upper Tsitika Valley, East Creek, Klaskish Valley, Nimpkish Lake and the Inland Old-Growth Temperate Rainforest.

AND THAT the City of Nanaimo formally oppose the logging of at-risk old-growth forests;

AND THAT the City of Nanaimo call on the Government of British Columbia to allocate funding to enact deferrals in an economically just manner, in the full spirit of reconciliation and to support the economic transition of affected First Nations and non-

First Nation communities from unsustainable old-growth logging for the development of long-term sustainable local economies.

AND THAT the following resolution be sent to the Union of BC Municipalities and as a late submission to AVICC.

Immediate Protection for all at-risk Old-growth Forests in BC

WHEREAS ancient high productivity (big tree) old growth ecosystems are globally one of the most valuable climate mitigation and resiliency assets in terms of carbon storage, sequestration, protection against wildfire, storage of water and bank of biodiversity;

AND WHEREAS, of the minuscule amount (2.7%) of the original high productivity (big tree) old-growth forests that are left (less than 1% of BC's total current forested area), 75% are still slated to be eliminated through logging; BE IT RESOLVED

THAT the UBCM and AVICC call on the provincial government to immediately defer logging in all high productivity, rare, oldest, and most intact old-growth forests as recommended by the Old-Growth Strategic Review, until all 14 of the panel's recommendations have been implemented; including deferrals in such at-risk old-growth forests as the head waters of Fairy Creek, the Upper Walbran Valley, Nahmint Valley, Eden Grove, Edinburgh Mountain, Upper Tsitika Valley, East Creek, Klaskish Valley, Nimpkish Lake and the Inland Old-Growth Temperate Rainforest.

AND THAT the UBCM and AVICC call on the Government of British Columbia to allocate funding to enact deferrals in an economically just manner, in the full spirit of reconciliation and to support the economic transition of affected First Nations and non-First Nation communities from unsustainable old-growth logging for the development of long-term sustainable local economies.

The motion carried.

Opposed: Mayor Leonard Krog, Councillors Armstrong, Thorpe, Turley

Sincerely,

Leonard Krog

The Honourable Katrine Conroy
Minister of Forests, Lands, Natural Resource Operations
& Rural Development Contacts
FLNR.Minister@gov.bc.ca

Dear Minister Conroy:

Re: Old Growth Strategic Review Recommendations

At the March 2, 2021 Committee of the Whole meeting, Powell River City Council put forward a resolution endorsing the recommendations in the Old Growth Strategic Review Report, with particular emphasis on recommendations 1 (Indigenous Involvement) and 6 (Immediate Response to Ecosystems at Very High Risk).

As was outlined in your November 26, 2020 mandate letter, we encourage the Province and your Ministry to follow through on the expectation to "Implement the recommendations of the Old Growth Strategic Review in collaboration with Indigenous leaders, labour, industry, and environmental groups to protect more old growth stands – in addition to the 353,000 hectares protected in September 2020".

Thank you for your consideration.

Yours truly,
CITY OF POWELL RIVER

THE CITY OF VICTORIA

OFFICE OF THE MAYOR

April 9, 2021

The Honourable John Horgan
Premier of British Columbia
PO Box 9041 Stn Prov Govt
Victoria, BC V8W 9E1

Dear Premier Horgan,

On behalf of Victoria City Council, I am writing today to request favourable consideration of the motion below passed at the April 1, 2021 Council meeting:

> WHEREAS Ancient high productivity old-growth ecosystems are globally one of the most valuable climate mitigation and resiliency assets in terms of carbon storage, sequestration, protection against wildfire, storage of water and preservation of biological diversity;
>
> AND WHEREAS Less than 3% of the original high productivity (big tree) old-growth forests in British Columbia remain standing, and of this residual land base, 75% is slated to be eliminated through industrial logging operations;
>
> AND WHEREAS Alternatives exist to increase protection of biological diversity and employment, through the immediate transition to sustainable management of second-growth forests with expanded value-added processing and manufacturing;
>
> THEREFORE BE IT RESOLVED THAT the City of Victoria calls on the Government of British Columbia to immediately defer logging in all high-productivity old-growth forests on Vancouver Island, as recommended by the Old Growth Strategic Review, until all 14 of the panel's recommendations have been implemented, including the Fairy Creek watershed in the Capital Regional District and all other at-risk old-growth forests on Vancouver Island;
>
> AND BE IT FURTHER RESOLVED THAT the City of Victoria calls on the Government of British Columbia to allocate funding to enact deferrals in an economically just manner, in the full spirit of reconciliation and to support the economic transition of affected First Nations and non-First Nation communities from unsustainable old-growth logging toward the development of long-term sustainable local economies.

MEMORANDUM

Date: May 10th, 2021.

To: Capital Regional District Board of Directors.

From: Pacheedaht First Nation.

Re: NOTICE OF MOTION TO CAPITAL REGIONAL DISTRICT BOARD MEETING OF MAY 12, 2021 CONCERNING FOREST MANAGEMENT.

Pacheedaht strongly urges the CRD Board to take into account the following, show an appropriate level of respect to the sovereignty and wishes of our Nation, respect our desire for self-determination, and act appropriately by rejecting the proposed motion:

1. Please read, digest and understand the statement provided by Pacheedaht First Nation dated April 12th 2021. A copy is attached to this memorandum for your convenience. We believe that the statement makes our Nation's position abundantly clear. CRD has had ample time to inquire and seek clarification. If there is any residual confusion or lack of clarity about the meaning and intent of the statement, please inquire in writing.

   To summarise, reiterate and clarify the key points in the April 12th Pacheedaht statement:

   i. Pacheedaht First Nation is concerned that third-party interference on our Nation's interests and affairs including resource stewardship is polarizing and harming our community, and we have asked for it to cease.
   ii. Pacheedaht is conducting an inclusive Integrated Resource Stewardship Plan (IRSP) involving our entire community to guide the future management of our Traditional Territory.
   iii. Pacheedaht does not welcome unsolicited interference or involvement from others.

2. Please provide in the form of written evidence, confirmation of the extent to which the legal jurisdiction and capacity of BC Regional Districts (including the CRD) includes:

   i. Forest management.
   ii. First Nations matters including landscape planning, community planning, economic development.
   iii. Park designation and acquisition.

3. Please explain in writing how CRD is compelled to develop policy or otherwise take action that will affect CRD residents in response to lobbying received from distant, unrelated municipal governments, and please explain how such lobbying could compel

CRD to continue to ignore the clearly-articulated positions of First Nations, including Pacheedaht.

4. Pacheedaht First Nation strongly encourages CRD to continue to focus on policy, planning and service delivery, and to work with our Nation and the nearby communities on priority matters within CRD jurisdiction.

5. In the event that Pacheedaht First Nation determines at some point in the future that our Nation would benefit from increased involvement from CRD in the stewardship of our Traditional Territory, we will contact you.

Forest Stewardship Within Pacheedaht Territory
Pacheedaht Chief & Council, Port Renfrew, BC
